cy-cl ti a (sigh klo shuh, -shee-uh) [*kyklos*; G *ous*, ear]. Cyclopia associated with more or less complete bsence of the lower jaw (gnathia) and pproximation or fusion of the ears (synotia)

cy'clo tome [*kyklos*; G *tomos*, cutting]. A knife used i cyclotomy

cy-clot' my (sigh-clot o-mee, si-clot) [*kyklos*; G. *tomē*, cutting]. An operation for the relief of glaucoma, consisting of an incision through the ciliary body

cy clo tron [*kyklos*; *ēlektron*, amber] A device for imparting high speeds to protons or deuterons by combination of constant powerful magnet and an alternating high-frequency charge. These high-speed particles can be directed to target in order to produce neutrons, or they may be made to bombard various substances in order to make them artificially radioactive.

cy"clo-tro pi a [*kyklos*; G *tropein*, to turn]. Permanent or essential cyclophoria.

cy clo'ture (sigh klo tua) A monster with cyclotia

cy'cri mine hy"dro-chlo ride. Generic name for 1-phenyl 1-cyclopentyl-3-piperidino-1-propanol hydrochloride, drug used in the symptomatic treatment of parkinsonism. See *pagitane hydrochloride*

cy-d ni um (sigh-do nee-um) [L. *cydonia*, quince]. Quince seed. The seeds of *Cydonia oblonga*; employed mainly for the bland demulcent mucilage contained in the covering

cy"e-si og no sis [G. *kyēsis*, conception; *gnōsis*, knowledge] Diagnosis of pregnancy

cy-e si ol' gy (sigh ee see ol lee) [*kyēsis*; G. *logos*, word]. The science of gestation in its medical aspects.

cy-e'sis (sigh-ee sis) [*kyēsis*]. Pregnancy

Cyl. Cylinder cylindrical lens.

cyl'in-der [G *kylindros*, cylinder]. 1 An elongated body of the same transverse diameter throughout and circular on transverse section. 2. A cylindrical cast. 3. A cylindrical lens. Abbreviated. C Cyl. —**cylin dric, cylin drical,** *adj* **axis c.** See *axon*.

Bence Jones's cyli ders. Long, cylindrical formations derived from the seminiferous tubules, sometimes seen in the urine.

crossed cylinders. Two cylindrical lenses placed in pposition to each other with their axes at right ngles used by oculists to determine the strength and the axis of astigmatism.

cy lin dri form [*kylindros*; L. *forma*, shape]. Shaped like cylinder

cy-lin'dro-, **cylindr-** [*kylindros*]. A combining form denoting *cylindrical*.

cyl"in-droid [*kylindros*; G. *eidos*, form]. Resembling cylinder or tube; i.e., resembling cylinder with elliptic right sections.

cyl"in-droids. 1 Certain bodies sometimes seen on microscopic examination of urine, which resemble hyaline casts but differ by tapering to slender tail. They are seen most frequently along with hyaline casts, especially in cases of circulatory failure and inflammation of the kidney 2. Microscopic mucous threads seen in normal urines erroneous usage.

cyl"in-dro'ma [*kylindros*; G. *-ōma*, tumor]. Any neoplasm characterized by cylinders of hyaline or hyaline connective tissue containing the epithelial tumor. Two types occur: **cylindromas of the mucous membrane**, which are carcinomas, recur frequently and often metastasize terminally; and **cutaneous cylindromas**, which are nevoid in their growth, benign, and characterized by single or multiple round growths located in the scalp or about the face or upper chest. The cutaneous tumors may cover the entire scalp like turban. Transitions to or association with trichoepithelioma and syringoma occur Also called *nevus epitheliomato-cylindromatosus, turban tumor Spiegler' tumor sarcoma capitis, endothelioma capitis.*

c. of bronchus. See *adenoma* of bronchus.

cyl"in-dro'sis [*kylindros*; G. *-ōsis*, condition]. A type of articulation which is produced by the approximation of bones on the sides of cleft or groove in such manner as to form tube or canal which contains blood vessels, nerves, or duct, as the infraorbital fissure.

cyl"in-dru'ri [*kylindros*; G. *ouron*, urine]. The presence of casts in the urine.

cyl"lo-so'ma [G. *kyllos*, lame; *sōma*, body]. A variety of bdominal fissure (gastroschisis) in which lateral eventration occupies principally the lower portion of the abdomen, with absence or imperfect development of the lower extremity on that side.

cyl"lo-so'mus [*kyllos*; *sōma*]. A monster with an eventration in the side of the lower bdominal region and imperfect development of the corresponding leg.

cy mar'in. A glycoside, $C_{30}H_{44}O_9$ from apocynum. On hydrolysis it yields sugar cymarose, and strophanthidin. It is used as cardiac tonic and diuretic. Dose, 0 3 mg. (1/200 gr.) orally repeated until 1 2 mg. are given daily; 0.5–1.0 mg. (1/120–1/60 gr.) intravenously or intramuscularly daily Syn., *see* apocynamarin.

cy mar'ose. $C_7H_{14}O_4$; the sugar resulting when certain cardioactive glycosides, as cymarin, undergo hydrolysis; it is 3-methyl ester of digitoxose.

cym'ba [G. *kymbē*, boat]. *I biology*, boat-shaped sponge spicule.

c. conchae. The upper part of the concha of the ear above the root of the helix. *O.T*

cym'bi form [*kymbē*; L. *forma*, shape]. *I biology* boat-shaped.

cym'bo- [*kymbē*]. A combining form denoting *cymbiform, boat-shaped.*

cym"bo-ceph -ly [*kymbē*; G *kephalē*, head]. The condition of having boat-shaped head. See *scaphocephaly*. —**cymbocephal'ic, cymbocephalous,** *adj*

cy'mene [Ar *kammūn*]. $C_{10}H_{14}$ 1 Methyl-4-isopropylbenzene, hydrocarbon that occurs in Roman caraway thyme, Monarda, and other volatile oils. Syn., *cymol* —**cymic,** *adj*

cy'me-nyl. Cymyl; the radical $C_{10}H_{13}-$ derived from cymene.

cy'mol. Cymene.

cy'myl Cymenyl.

cy nan che (si nang'kee, sigh-nang'kee) [G *kyōn*, dog; *anchein*, to strangle]. An old name for any acute affection of the throat in which the patient struggles for breath. *Obs.*

cy nan'thro py (si-nan thro-pee, sigh nan) **cyn"an thro pi** [*kyōn*; G *anthrōpos* man]. A mania in which the patient believes himself to be dog and imitates the actions of one.

cyn"i-a'tri-a (sin ee-ay'tree-uh, -at'ree-uh, si-nigh uh-try uh, sin ee-uh-tree'uh) [*kyōn*, G *iatreia*, treatment]. That branch of veterinary medicine dealing with diseases of dogs and their treatment.

cyn'ic [G. *kynikos*, doglike]. Doglike, as cynic spasm.

cyn'o- (sin o-, sigh no-) **cyn-** [*kyōn*]. A combining form denoting *dog*.

cyn"o-ceph'a lous [*kyōn*; G. *kephalē*, head]. With the head shaped like dog's.

cyn"o-don'tes (sin o-don teez, sigh no-) [*kyōn*; G *odous*, tooth]. The canine teeth, so called from their resemblance to the grasping teeth of dog.

Cyn"o-glos'sum (sin o-glos um, sigh no-) [*kyōn*, G *glōssa*, tongue]. A genus of plants of the Boraginaceae. The powdered herb, **C. officinale**, common hound s-tongue, has been used as demulcent and sedative.

cyn"o-lys'sa [*kyōn*; G *lyssa*, rage]. Hydrophobia; rabies.

cyn o pho'bi-a (sin o-fo'bee-uh, sigh no-) [*kyōn*; G. *phobos*, fear]. 1. Morbid fear of dogs. 2. A psychotic reaction reproducing the symptoms of rabies.

cyn" -rex'i-a. Bulimia.

cyn"u renic ac'id. A crystalline acid found in dog urine. It is decomposition product of proteins.

cyn'u rin. A base derived from cynurenic acid.

Cyon, Élie de [*Russian physiologist* 1843–1912]. Remembered for his discovery with K. F W Ludwig, of the vasomotor reflexes (1866)

cy" -pho ri-a [G *kyos*, fetus; *phoros*, bearing]. Pregnancy; gestation.

cy-oph o-ria (sigh-off' ria) Gravidin; kyestein.

cy-ot ro-phy (sigh-ot ro-fee) [*kyos*; G. *trophē*, nourishment]. Nutrition of the fetus.

Cy pe rus (sigh-peer'us, sigh per-us) [G *kypeiros*, galingale]. A genus of sedges.

C. articulatus. Jointed flat sedge species of South America, whose root is reputedly antiemetic and tonic.

cy prid"o-pho'bi (si-prid o-f 'bee-uh, sigh prid-o-) [G. *Kypris*, Aphrodite; *phobos*, fear]. A morbid fear of acquiring venereal disease.

cyp ri pe'di-um [*Kypris*; G *pedilon*, slipper]. Ladyslipper The dried rhizome and roots of *Cypripedium calceolus* (*pubescens*) It contains volatile oil, resins, tannin, etc. Has been used as an antispasmodic and stimulant tonic.

cy'prome ther Cyclopropyl methyl ethyl.

cyren. Trade name for brand of diethylstilbestrol.

cyr'to- (sur'to-) [G. *kyrtos*, curved]. A combining form meaning *curved* or *convex*, as in cyrtometer.

cyr"to-ceph -lus [*kyrtos*; G. *kephalē*, head]. A person having skull which is deformed or distorted in some manner.

cyr"to-cor y-phus [*kyrtos*; G. *koryphē*, crown of the head]. A person having a skull with parietal bones markedly convex in the midsagittal plane. The absolute convexity is measured by the parietal angle of 132° 131°

cyr'to-graph [*kyrtos*; G *graphein*, to write]. An instrument used to measure and record the curves of the chest and head.

cyr toid (sur'toyd) [*kyrtos*; G *eidos*, form]. Resembling hump or swelling.

cyr tom ter [*kyrtos*, G *metron*, measure]. An instrument for measuring or delineating the curves of parts of the body Used to demonstrate the dilation and deformation f the chest in certain diseases, or to measure the shape and size of the head. —**cyrt metry** n.

cyr"t me-to pus [*kyrtos*; G *metōpon*, forehead]. A skull with highly convex frontal bone or frontal angle f 120° 130.5°

cyr"t pis"tho-cra ni us [*kyrtos*; G *episthokranion*, the back part of the skull]. A skull with very convex occipital bone, or with an occipital angle of 117° 129.9°

cyr to sis [*kyrtos*, G *-osis*, condition]. A curvature or deformity especially of the vertebral column more commonly known as kyphosis.

cyr"tu ran'us (surt yoo-ran us, -ray'nus) [*kyrtos*; G *ouranos*, roof of the mouth]. A skull with palate highly arched longitudinally or with uranal angle of 132° 147.5°

cyst [G *kystis*, bladder]. A sac with distinct wall, containing fluid or other material. M y be normal or pathologic structure.

adventitious c. One enclosing foreign body or substance.

al c. One containing air

allantoic c. Cysti dilatati of the urachus.

amniotic c. An uncommon placental cyst formed by adhesions of amniotic folds.

apoplectic c. A sac containing the remnants of blood extravasated in cerebral hemorrhage.

atheromatous c. Derived from distention of sebaceous glands and ducts and filled with greasy or cheesy semisolid material occasionally pplied to cystic masses of atheromatous material in the walls of the arteries.

Baker's c. See popliteal *bursitis*.

Bartholin c. A cyst resulting from chronic bartholinitis, containing clear fluid which replaces the suppurative exudate.

blood c. One filled with degenerated blood following hematoma.

blue dome c. See cystic *disease* of breast.

bone c. A tumor distending and thinning bone, filled with serum or bloody fluid an osteogenic sarcoma.

branchial, branchiogenic c. One due to anomalous development of the embryonal visceral pouches or grooves. Also called *branchial cleft c.*, *branchial inclusion* cervical c.

bronchogenic, bronchial c. A thin-walled cyst near the bifurcation of the trachea, lined by pseudostratified ciliated columnar epithelium Cysts of this type may produce signs of tracheobronchial obstruction early in lif Also called *ciliated epithelial c.*, *red plication of respiratory tract.*

carinal c. A bronchogenic cyst attached at the ridge demarcating the trachea from its bifurcation (carina) and often to the anterior esophageal wall it may lead to death in infancy due to tracheobronchial compression

cervical c. A closed, epithelial sac in the neck arising by retention of branchial groove, of pharyngeal pouch, or of the cervical sinus. Also called *branchial* *branchiogenic*

chocolat c. (a) Any cyst filled with degenerated blood. (b) The lesion characterist of endometriosis

chorionic c. An uncommon cyst of the placenta, arising in the chorionic plate sually near the umbilical cord bulging toward the fetus. Histologically it is lined by cells of trophoblastic origin.

chylous c. One found in lymphatics, containing chyle.

ciliated columnar c. See thymic c.

ciliated epithelial c. See bronchogenic, bronchial c.

colloid c. One containing hyaline material resembling the colloid of the thyroid gland.

colloid c. of choroid plexus. A thin-walled cyst located on the anterior part of the third ventricle. It produces hydrocephalic disturbances consisting of increasing intracranial pressure, sudden coma, and organic dementia. Headache is also present and is often affected by changes in posture. Treatment consists of surgical removal of the cyst.

compound c. See multilocular c.

conjunctival c. A rare congenital cyst occurring near the corneal margin.

corpus albicans c. A cystic corpus luteum remnant.

corpus luteum c. Cysti distention of corpus luteum. Also called *luteal c.* *lutein c.*

Cowper's c. A retention cyst of the bulbourethral glands.

c. f broad ligament. One developing within the broad ligament; derived from embryonal tubules in the ligament or from cysts of adherent ovary also called *epoophoral* *fimbrial c.*, *functional* *Kobelt' c.*, *parotubal c.*, *parovarian c.*, *periampullary c.*, *Wolffian c.*

c. of joint capsule. A ganglion, 2.

c. of semilunar cartilage. A ganglion, 2.

daughter c. A satellite cyst in or near larger cysts.

dentigerous c. One originating in the enamel organ f developing tooth. Syn., *follicular c.*

dermoid c. See *teratoma*.

distention c. A collection of fluid in serous cavity

Dubois c. See thymic c.

echinococcus c. (a) A cyst formed by growth of the larval form of *Echinococcus granulosus*, usually in the liver (b) The cysticercus stage of the life cycle of *Echinococcus granulosus*.

ectopic endometrial c. See *endometriosis*.

endocardial blood c. Small, circumscribed, nodular dark-red, cystlike lesions usually seen on the atrial surface of the mitral and tricuspid valves, occurring frequently in newborn infants, occasionally in children, and rarely in adults.

ndometrial implantation c. See chocolate (b)

endothelial-lined c. See pericardial c.

nteric c. See gastroenteric c.

nterogenous c. See gastroenteric c.

pidermal c. Cystic lesion in the epidermis, seen in pemphigus and other bullous disorders.

pidermoid c. A cyst lined by stratified squamous epithelium without associated cutaneous glands

epithelial c. A cyst of epithelial origin.

epoophoral c. See of broad ligament.

esophageal c. One, most ften found in adults, in th lower half of the esophagus between the muscle layers of the esophageal wall Histologically it is lined with ciliated cuboidal and occasional groups of squamous cells.

extravasation c. A cyst formed by encapsulation of extravasated fluid, usually blood, as hematoma.

fibrosed c. Any nonspecific cyst in which the usual structures have been partially replaced by connective tissue.

fibrous-walled c. (a) One developing in connective tissue such as ganglion, 2. (b) One in which the epithelial lining has been destroyed leaving fibrous wall.

fimbri l c. See c. of broad ligament.

follicular c. (a) A cyst due to retention of secretion in follicular space, as in the ovary (b) A dentigerous cyst.
Gartner's c. Localized cystic dilatation of Gartner' duct.
gas c. One containing gas, such as gas from the intestinal canal.
gastroenteric c. An intrathoracic cyst, usually found in the posterior mediastinum near the pulmonary hilus, usually producing symptoms at an early age, and frequently accompanied by associated congenital anomalies and intestinal diverticula. Histologically the cyst wall may resemble either that of the stomach or of the intestine, respectively also called *gastric c.*, *gastrogenic c.*, *mediastinal c. of gastric origin*, *accessory stomach*, or *enteric c.*, *enterogenous c.*, *enterocystoma*, *mediastinal c. of enteric origin*.
germinal inclusion c. One located near the surface of an ovary arising from inclusions of germinal epithelium.
glandular proliferous cysts. See *cystosarcoma phylloides*.
globulomaxillary c. Cystic embryonal inclusions in the alveolar process between upper lateral incisor and canine teeth.
hairy c. See *teratoma*.
hemorrhagic c. See extravasation c.
hidradenocystic c. A benign cyst, sometimes occurring in the breast, lined by hidradenocytes and derived from sweat or apocrine gland.
hilar c. A bronchogenic cyst attached to one of the main or lobar bronchi, most commonly seen in older children or adults.
hydatid c. See echinococcus c.
hypophyseal c. See Rathke' pouch c.
inclusion c. A cyst due to embryonal or traumatic implantation of epithelium into another structure as an epidermoid cyst.
intraligamentous c. See c. of broad ligament.
involutional c. Cystic dilatation of glands or ducts during the course of involution of gland, as in the mammary gland in abnormal involution.
junctional c. See c. of broad ligament.
Kobelt' c. See c. of broad ligament
luteal, lutel c. See corpus luteum c.
malignant hemorrhagic bone c. See *osteosarcoma*.
median maxillary c. Cystic dilatation of embryonal inclusions in the incisive fossa, (b) between the roots of the central incisors Syn., *nasopalatine c.*
mediastinal c. of enteric origin. See gastroenteric c.
mediastinal c. f gastri origin. See gastroenteric c.
Meibomian c. See *chalazion*.
mixed c. See *teratoma*.
Morgagnian c. A vesicle derived from the paramesonephric duct ttached to the oviduct or head of the epididymis.
mucoid c. An encapsulated mass of mucoid material produced by mucoid degeneration of mesodermal tissues. Also see pseudomucinous cystadenoma.
mucous c. A retention cyst of gland, containing secretion rich in mucin Also called *mucinous c.*
Müllerian duct c. A congenital cyst arising from vestiges of the Müllerian ducts, usually quite large, and always situated in the midline Such cysts occur in an area between the lobes of normal prostate
multilocular c. One with several more or less separate compartments
Nabothian c. Cystic distention of the mucous (Nabothian) glands of the uterine cervix. Syn., *Nabothian follicle*.
nasopalatine c. A cyst occurring in the incisive canal or at its oral orifice.
neural c. One occurring in the brain or the spinal cord.
nevoid c. A cyst whose walls contain congeries of blood vessels.
odontogenic c. A cyst originating in tissues associated with teeth of two main types. See dentigerous c.; radicular c.
pancreatic c. A retention or congenital cyst in the pancreas.
papillary c. of ovary See serous cystadenoma.
papillary serous c. See serous cystadenoma.
paraesophageal c. A bronchogenic cyst intimately connected with the esophageal wall, containing cartilage, and usually filled with mucoid material and desquamated epithelial cells.
paraphyseal c. A cyst of undetermined origin projecting into the third ventricle of the brain.
parasitic c. One formed by larval stages or cysticerci of animal parasites.
paratracheal c. A bronchogenic cyst attached to the tracheal wall.
paratubal c. See c. of broad ligament.
parovarian c. See c. of broad ligament.
periapical c. See radicular c.
pericardial c. A cyst adherent to the parietal pericardium, having thin fibrous wall and lined by flattened endothelial or mesothelial cells also called *endothelial-lined c.*, *pericardial celomic c.*, *spring water c.*
pericoronal c. See dentigerous c.
periodontal c. See radicular c.
perisalpingeal c. See c. of broad ligament.
pilonidal c. Cystic distention of congenital tract, opening on the skin of the sacrococcygeal region lined by stratified squamous epithelium, often contains hairs and the products of bacterial contamination; it may extend as deeply as the spinal dura Syn., *sacrococcygeal c.*
proliferative c. One in which the lining epithelium proliferates and produces projections from the inner surface of the cyst.
proligerous c. Cyst formation in an adenocarcinoma.
pseudomucinous c. See pseudomucinous cyst *adenoma*.
pyelogenic c. See calyceal *diverticulum*.
radicular c. One arising from a granuloma of the root of tooth also called periapical c.
Rathke' pouch c. Cystic distention of the remnants of Rathke pouch. Also see *craniopharyngioma*.
reduplication c. of the respiratory tract. See bronchogenic ; bronchial c.
retention c. A cyst due to obstruction of outflow of secretion from gland.
sacral perineurial c. One found on the posterior sacral or coccygeal nerves or nerve roots in the extradural portion of the cauda. It arises as an outpouching between the arachnoid and the perineurium and may produce such symptoms as urinary retention, low backache, and hypalgesia of the lower extremities.
sacrococcygeal c. See pilonidal c.
salivary duct c. A cyst caused by obstruction of salivary duct and retention of the secretion of the gland.
Sampson c. See *endometriosis*.
sanguineous c. One containing blood-stained fluid.
sebaceous c. A retention cyst of sebaceous gland.
secondary c. A cyst within cyst.

seminal c. A cyst of the epididymis or the spermatic cord containing semen.
septal c. A cyst of the septum pellucidum.
simple serous c. See serous *cystadenoma*.
"spring water" c. See pericardial c.
sterile c. An echinococcus cyst in which the larvae of the worm have died.
sublingual c. See *ranula*.
suprasellar c. A cyst of the stalk of the hypophysis, above the sella turcica.
synovial c. One lined by synovia, as in joints or bursas. Also see *ganglion*, 2.
teratoid, teratomatous c. See *teratoma*.
thecal c. Localized distention of a tendon sheath, often called ganglion.
theca-lutein c. A cyst due to distention of the corpus luteum but with well-developed theca in the wall. See *thecoma*.
thymic c. A cyst, usually small and embedded in the thymus, which may be lined by flattened or ciliated columnar cells; also called *Dubois c.*
thyroglossal c. Cystic distention of the remnants of the thyroglossal duct, filled with secretion of lining epithelial cells.
tubo-ovarian c. A cyst involving an ovary and its oviduct.
umbilical c. See vitello-intestinal c.
unilocular c. One with but a single cavity.
urinary c. A retention cyst in the kidney.
vitello-intestinal c. Localized cystic dilatation of a part of the persistent vitelline duct.
Wolffian c. See c. of broad ligament.

cyst-. See *cysto-*.

cyst-ad"e-no-car"ci-no'ma. Cystic adenocarcinoma. Sometimes called *cystocarcinoma*.
papillary c. See serous c.
papillary c. of thyroid. See under *adenocarcinoma*.
pseudomucinous c. An ovarian tumor, the malignant variant of the pseudomucinous cystadenoma; also called *mucinous c., pseudomucinous papillary c., mucoid adenocarcinoma, mucinous carcinoma, pseudomucinous carcinoma* or *cystocarcinoma, carcinomatous pseudomucinous cystoma*.
serous c. An ovarian tumor, the malignant variant of the serous cystadenoma; also called *papillary c., papillary serous carcinoma, carcinomatous serous cystoma*.

cyst-ad-e-no'ma [*kystis*; G. *adēn*, gland; *-ōma*, tumor]. An adenoma containing cysts.
c. adamantinum. Cystic adamantinoma.
c. cylindrocellulare colloides ovarii. See pseudomucinous cystadenoma.
c. papilliferum. An adenoma containing cysts with papillae on the inner aspect of the cyst walls.
c. of thyroid. See papillary *adenoma* of thyroid.
gelatinous c. See pseudomucinous.
mucinous, mucous c. See pseudomucinous c.
papillary c. lymphomatosum. See Warthin tumor.
pseudomucinous c. A common tumor of the ovary, uni- or multilocular, lined with columnar secretory epithelium. It may attain great size, and may rupture, leading to pseudomyxoma peritonaei. It has a marked tendency to undergo malignant transformation. Also called *c. cylindrocellulare colloides ovarii, gelatinous c., mucinous c., mucous c., mucinous papillary c., pseudomyxomatous c., pseudomucinous adenofibroma, pseudomucinous (solid) adenoma, pseudomucinous tubular adenoma, pseudocolloid adenoma of ovary, mucoid cyst, multilocular cyst of ovary, pseudomucinous cyst, colloid ovarian cystoma, cystoma ovarii pseudomucinosum, microcystic pseudomucinous cystoma, pseudocolloid ovarian cystoma, pseudomucinous racemose cystoma, ovarian pseudomyxoma, pseudomucinous papilloma, colloid ovarian tumor, perilobular pseudomucinous tumor, pseudocolloid ovarian tumor*.
pseudomyxomatous c. See pseudomucinous c.
serous c. Cystic tumor of the ovary, often intraligamentous, not infrequently bilateral. It is lined by a single layer of low cuboidal epithelium with centrally placed nuclei and is commonly ciliated. On the basis of certain structural differences, it is sometimes subdivided into **simple serous cyst** (no papillae), **papillary serous cyst** (some luminal papillae and psammoma bodies) and *serous cystadenoma* proper, with numerous papillae and epithelial cells in the stroma. There is a marked tendency toward malignant transformation. Also called *papillary c. of ovary, papillary adenoma of ovary, serous cystoma, endosalpingioma, papillocystoma, psammomatous papilloma*.

cyst ad"e no-sar-co'ma [*kystis*; *adēn*; G. *sarkōma*, fleshy excrescence]. Combined cystadenoma and sarcoma. See *cystosarcoma* phyllodes.

cys tal'gi a [*kystis*; G. *algos*, pain]. Pain in the urinary bladder. *Obs.*

cys"ta thi'o nine. A mixed thio ether, COOH.CH(NH₂).CH₂.CH₂.S.CH₂.CH(NH₂).COOH, formed from homocysteine and serine as an intermediate in the conversion of methionine to cysteine.

cyst"ec ta si-a (sis teck-tay'zhuh, -zee-uh, -shuh, -see-uh), **cys tec'ta-sy** [*kystis*; G. *ektasis*, extension]. Dilatation of a bladder.

cys tec'to-my [*kystis*; G. *ektomē*, excision]. 1. Excision of the gallbladder or part of the urinary bladder. 2. Removal of a cyst.

cys te'ic ac'id. COOH.CH(NH₂).CH₂.SO₃H. A crystalline acid obtained by the oxidation of cysteine or cystine.

cys'te-ine (sis'tee-een, -in, sis-tee'in). 2-Amino-3-mercaptopropanoic acid; HS.CH₂.CH(NH₂).COOH, obtained by reduction of cystine and important as a constituent of many proteins. A crystalline powder soluble in water.

cys"te in yl. The univalent radical, HSCH₂CH(NH₂)CO—, of the amino acid cysteine.

cyst'ic [*kystis*]. 1. Pertaining to or resembling a cyst. 2. Pertaining to the urinary bladder or to the gallbladder.

cys"ti-cer'coid [*kystis*; G. *kerkos*, tail; *eidos*, form]. A larval tapeworm, differing from the cysticercus in that it has a slightly developed bladder and a solid posterior; a stage in the life cycle of *Hymenolepis nana*.

cys"ti cer-co'sis [*kystis*; *kerkos*; G. *-ōsis*, condition]. Infestation by cysticerci (the larval stage of *Taenia*) accompanied by muscular pain, general muscular weakness, fatigue, loss of weight, and nervousness. In severe cases, where the infestation is general and the brain is invaded, general paralysis, epileptic attacks, and convulsions.

cys ti-cer'cus (pl. *cysticerci*) [*kystis*; *kerkos*]. The larval tapeworm; develops in man after ingestion of the ova of *Taenia solium* or *T. saginata*. The ova infective to man develop only into the larval forms, complete development failing to take place.
c. cellulosae. See *Taenia solium*.

cys'ti form [*kystis*; L. *forma*, shape]. Encysted, cystomorphous.

cys'tine (sis'teen, -tin) [*kystis*]. [S.CH₂.CH.NH₂.COOH]₂. Di-(α-amino-β-thiopropionic) acid. An amino acid component of many proteins, especially keratin. It may be reduced to cysteine. Syn. *dicysteine*.

cys"ti ne'mi a [*kystis*; G. *haima*, blood]. The occurrence of cystine in the blood.

cys"ti no'sis. A condition, generally considered to be a congenital metabolic disorder of sulfur-containing amino acids, usually cystine, characterized by deposits of cystine crystals in the body organs; it may be accompanied by aminoaciduria.

cys"ti nu'ri a [*kystis*; G. *ouron*, urine]. The presence of cystine crystals in the urine. This may occur in cystinosis or in some forms of renal dwarfism.

cys-ti'tis [*kystis*; G. *-itis*, inflammation]. Inflammation of the urinary bladder involving principally the mucosa and submucosa. It may be of bacterial or other origin, and may be acute and self-limited or chronic.

allergic c. A nonspecific type of inflammation of the urinary bladder characterized by discrete or diffuse areas of hyperemia and edema, often without pus or bacteria in the urine and apparently due to local sensitivity reaction to certain antigen or antigens.

bullous c. An inflammation of the urinary bladder with pale, edematous polypoid projections of the mucous membrane; also called *bullous edema*.

chemical c. Inflammation, usually acute, of the mucosa and submucosa of the urinary bladder which, in contrast to bacterial invasion of the organ, is secondary to either local or systemic chemical trauma.

chronic glandular c. An unusual type of nonspecific chronic inflammation of the urinary bladder characterized by papillary or bleb-like projections on the vesical mucosa, chiefly in the region of the trigone and lower segments of the vesical wall. Microscopically these projections consist of tracts of stratified columnar epithelium with mucus-secreting or goblet cells. The condition apparently is secondary to chronic infection and metaplasia of the vesical epithelium.

c. cystica. A type of nonspecific chronic inflammation of the urinary bladder characterized by the presence of minute translucent vesicles, usually with clear homogeneous mucoid contents scattered over the surface of the vesical mucosa.

c. emphysematosa. One in which cystic spaces in the urinary bladder wall are filled with gas; this may result from bacterial fermentation of sugar in the urine, as in diabetes or after glucose infusion.

c. follicularis. One in which there are lymphoid nodules or masses of lymphoid cells beneath the epithelium.

c. glandularis. A chronic form, of unknown cause, in which mucus-secreting glands are seen microscopically.

gangrenous c. An acute, severe, diffuse inflammation of the urinary bladder involving principally the mucosa and submucosa, characterized by gross suppuration, necrosis, and gangrene of the involved tissues.

granulomatous c. A type in which the urinary bladder has been affected by granulomatous reaction, commonly tuberculosis.

incrusted c. A chronic inflammation of the urinary bladder in which crystalline material is deposited on the vesical wall; also called *alkaline incrusted c.* because of the constant alkalinity of the urine.

interstitial c. A chronic form in which the inflammation is principally in the subepithelial connective tissue and extends in variable degree into the deeper tissues. Ulcers frequently accompany the process and are known as *Hunner ulcer* or *elusive ulcer*.

irradiation c. Inflammation of the urinary bladder, usually in females, following roentgen-ray, radium, or other isotopic therapy of the pelvic organs.

schistosomal c. A granulomatous cystitis caused by the ova of *Schistosoma haematobium*.

cys-tit'o my [*kystis*; G. *tomē*, a cutting]. 1. Incision into the capsule of the lens of the eye; capsulotomy. 2. Incision into the urinary bladder or gallbladder; cystotomy.

cys'to-, **cyst-** [*kystis*]. A combining form denoting *likeness to* or *connection with* a *bladder* or *cyst*.

cys"to-bu-bon'o-cele [*kystis*; G. *boubōn*, groin; *kēlē*, hernia]. Hernia of the urinary bladder through the inguinal ring. *Obs.*

cys"to-car"ci no'ma. Cystadenocarcinoma.

cys'to-cele [*kystis*; *kēlē*]. Herniation of the urinary bladder into the vagina.

cys"to-co-lec'to-my. See *cholecystocolostomy*.

cys"to-dyn'i a [*kystis*; G. *odynē*, pain]. Old term for cystalgia.

cys"to fi-bro ma pap"il lar'e. See *cystosarcoma phylloides*.

cys"to gen'e sis, cys"to-gen'i-a [*kystis*; G. *genesis*, production]. The formation or genesis of cysts.

cys'to gram [*kystis*; G. *gramma*, letter]. Radiograph of the urinary bladder made after the injection of a contrast medium, either of greater or lesser density than the surrounding soft tissues.

cys tog'ra phy [*kystis*; G. *graphein*, to write]. Radiography of the urinary bladder after the injection of a radiopaque medium. —**cystograph'ic**, *adj.*

cyst'oid [*kystis*; G. *eidos*, form]. 1. Having the form or appearance of a bladder or cyst. 2. Composed of a collection of cysts. 3. A pseudocyst.

cys"to-lith-ec'to-my [*kystis*; G. *lithos*, stone; *ektomē*, excision]. Old term for cystolithotomy.

cys"to-li thi'a sis [*kystis*; *lithos*; NL. *-iasis*, condition]. Calculus in the urinary bladder.

cys"to-li thot'o-my [*kystis*; *lithos*; G. *tomē*, a cutting]. The removal of a calculus from the urinary bladder by surgical excision.

cys-to'ma [*kystis*; G. *-ōma*, tumor]. A cystic mass, especially in or near the ovary; may be either neoplastic, inflammatory, or due to retention.

carcinomatous pseudomucinous c. See *pseudomucinous cystadenocarcinoma*.

carcinomatous serous c. See *serous cystadenocarcinoma*.

colloid ovarian c. See *pseudomucinous cystadenoma*.

c. ovarii pseudomucinosum. See *pseudomucinous cystadenoma*.

mesonephric c. A cyst, probably of mesonephric origin, at the hilum of the ovary.

microcystic pseudomucinous c. See *pseudomucinous cystadenoma*.

parovarian c. Dilation and sometimes proliferation of the tubules of epoophoron, a remnant of the mesonephros, situated in the mesosalpinx.

pseudocolloid ovarian c. See *pseudomucinous cystadenoma*.

pseudomucinous racemose c. See *pseudomucinous cystadenoma*.

serous c. See *serous cystadenoma*.

simple c. Dilated ovarian follicles with associated proliferation suggestive of neoplasia.

tubo-ovarian c. A cyst formation which may occur when an ovarian cyst communicates with a fused oviduct.

cys tom'e ter [*kystis*; G. *metron*, measure]. An instrument used to determine vesical pressure under standard conditions.

cys"to-met'ro-gram [*kystis*; *metron*; G. *gramma*, letter]. Graphic demonstration of vesical pressure under various conditions, as obtained by cystometry.

cys"to·mor'phous [*kystis*; G. *morphē*, form]. Having the structure of, or resembling, a cyst or bladder.

cys'to·pex"y [*kystis*; G. *pēxis*, fixing]. Surgical fixation of the urinary bladder, or a portion of it, in a new location.

cys"to·pho·tog'ra·phy [*kystis*; G. *phōs*, light; *graphein*, to write]. Photographing the interior of the urinary bladder for diagnostic purposes.

cys'to·plas"ty [*kystis*; G. *plassein*, to mold]. Plastic operation upon the urinary bladder.

cys"to·pros·ta·tec'to·my. Surgical excision of the urinary bladder and the prostate.

cys"to·py"e·li'tis [*kystis*; G. *pyelos*, trough; *-itis*, inflammation]. Inflammation of the urinary bladder and the pelvis of the kidney.

cys"to·py"e·lo·ne·phri'tis [*kystis*; *pyelos*; G. *nephros*, kidney; *-itis*]. Cystopyelitis plus involvement of the kidney.

cys·tor'rha·phy [*kystis*; G. *rhaphē*, suture]. Suture of the urinary bladder.

cys"to·sar·co'ma [*kystis*; G. *sarkōma*, fleshy excrescence]. Term introduced by Johannes Müller (1838) to describe a fleshy mass, then called sarcoma, which contained cysts.

c. phyllo'des, c. phyllodes. A tumor of the mammary gland, which grows slowly but may attain great size, with nodular proliferation of connective tissue and lesser adenomatous proliferation. It probably develops from preexisting adenofibroma, but is rarely malignant. Variously called *arborescens*, (*polyposum*) *intracanaliculare*, *c. papillare*, *proliferum*, *c. simplex*, *gelatinous adenocystosarcoma*, *adenoma pseudosarcomatodes*, *Brodie's serocystic disease of breast*, *Brodie's tumor*, *cystadenosarcoma*, *cystofibroma papillare*, *giant fibroadenoma of breast*, *fibromyxosarcoma of breast*, *fibrosarcoma of breast*, *giant intracanalicular fibroadenomyxoma*, *giant mammary myxoma*, *intracanalicular myxoma*, *myxosarcoma of breast*, *pseudosarcoma of breast*, *intracanalicular sarcoma*, *serocystic sarcoma*, *periductal sarcoma*, *mixed tumor of breast*, *tuberous cystic tumor of breast*.

cys'to·scope [*kystis*; G. *skopein*, to examine]. An instrument used in diagnosis and treatment of lesions of the urinary bladder, ureter, and kidney. *It consists of an outer sheath bearing the lighting system*, a well-fitted obturator, space for the visual system, and room for the passage of operative devices to be used under visual control.

cys·tos'co·py [*kystis*; *skopein*]. The procedure of using the cystoscope.

cys·tos"te·a·to'ma [*kystis*; G. *stear*, fat; *-ōma*, tumor]. A sebaceous cyst.

cys·tos'to·my [*kystis*; G. *stoma*, mouth]. The formation of a fistulous opening in the urinary bladder wall.

cys'to·tome [*kystis*; G. *tomos*, cutting]. 1. A knife used in cystotomy. 2. A knife used in rupturing the capsule of the lens in cataract operations.

cys·tot'o·my [*kystis*; G. *tomē*, cutting]. Incision of the urinary bladder.

cys"to·u·re'thro·gram [*kystis*; G. *ourēthra*, urethra; *gramma*, letter]. A radiograph of the urinary bladder and urethra, made following injection of an opaque contrast medium.

cys"to·u·re·throg'ra·phy [*kystis*; *ourēthra*; G. *graphein*, to write]. Radiography of urinary bladder and urethra. —**cystourethrograph'ic**, *adj.*

cys"to·u·re'thro·scope [*kystis*; *ourēthra*; G. *skopein*, to examine]. An instrument for inspecting the urinary bladder and posterior urethra.

cys'tyl. The divalent radical, —COCH(NH₂)CH₂SSCH₂CH(NH₂)CO— of the amino acid cystine.

cy'tase (sigh'tace, -taze). Metchnikoff's name for complement.

cy·tas'ter (sigh·tas'tur, sigh'tas·tur) [G. *kytos*, cell; *astēr*, star]. 1. The same as aster, the starlike system of cytoplasmic radiations surrounding the central body during mitosis. 2. Especially an accessory aster not associated with chromosomes, appearing under certain experimental treatment.

-cyte (-sight) [*kytos*]. A suffix denoting a cell.

cyth"(a)e·mo·ly'sis (sith"ee·mo·lye'sis, sigh"thih·mol'i·sis, sigh"tuh-) [*kytos*; G. *haima*, blood; *lysis*, loosing]. Dissolution of erythrocytes and leukocytes.

cyth"er·o·ma'ni·a [G. *Kythereia*, Cytherea; *mania*, madness]. Nymphomania.

cy'ti·dine. A nucleoside containing cytosine and D-ribose; it is obtained by hydrolysis of cytidylic acid.

cy"ti·dyl'ic ac'id. A nucleotide composed of cytosine, D-ribose, and phosphoric acid.

cy'ti·sine (sit'i·seen, ·sin). $C_{11}H_{14}ON_2$. A poisonous alkaloid from *Laburnum anagyroides*, goldenchain laburnum, *from baptisia and other plants*. It stimulates, then paralyzes, autonomic ganglions. In large doses may produce convulsions and death by asphyxiation. Syn., *baptitoxine*, *sophorine*, *ulexine*.

cy'to-, cyt- [*kytos*]. A combining form denoting *connection with, relation to, or derivation from a cell, cells, or cytoplasm*.

cy"to·ar"chi·tec·ton'ic [*kytos*; L. *architectura*]. Pertaining to the cellular arrangement of a region, tissue, or organ.

cy"to·ar'chi·tec"ture [*kytos*; *architectura*]. The cell pattern typical of a region, as of an area of the cerebral cortex.

cy'to·blast [*kytos*; G. *blastos*, germ]. 1. Schleiden's term for the nucleus of a cell. 2. One of the hypothetical ultimate vital units of the cell. *Obs.*

cy"to·blas·te'ma [*kytos*; G. *blastēma*, offshoot]. The hypothetical formative material from which cells arise. See *blastema*.

cy"to·cen'trum. Centrosome.

cy"to·chem"ism (sigh"to·kem'iz·um) [*kytos*; G. *chymos*, juice]. The reaction of the living cell to chemical reagents, antitoxins, etc.

cy"to·chem'is·try [*kytos*; *chymos*]. That science dealing with the chemical constitution of cells and cell constituents.

cy'to·chrome [*kytos*; G. *chrōma*, color]. 1. A nerve cell which has only a small amount of cytoplasm and no Nissl bodies. 2. A mixture of three chromogens (cytochromes A, B, and C) widely distributed in animal tissues, and found also in yeast; the prosthetic group of cytochrome C is practically identical with that of hemoglobin. Cytochrome C functions as a reversible oxidation-reduction carrier, its iron atom being alternately oxidized and reduced, and is intimately concerned with cell respiration.

c. oxidase. An iron-containing oxidase which oxidizes the reduced form of cytochrome C so that the latter may again function as an oxidizing agent (hydrogen acceptor).

c. reductase. One or more enzymes, of the flavoprotein type, which serve as hydrogen acceptors and then react with cytochrome C to reduce it.

cy"to·chy·le'ma (sigh"to·kigh·lee'muh) [*kytos*; G. *chylos*, juice]. The interreticular portion of protoplasm; cell juice.

cy'to·cide [*kytos*; L. *caedere*, to kill]. An agent that is destructive to cells. —**cytoci'dal**, *adj.*

cy·toc'la·sis (sigh·tock'luh·sis, sigh"to·clay'sis) [*kytos*; G. *klasis*, breaking]. Cell necrosis. —**cytoclas'tic**, *adj.*

cy"to·crin'i·a [G. *kytos*, from cell *krinein*, to separate]. The transfer of pigment from melanoblasts to other cells, melanin from basal to intermediate cells of the epidermis in sunburn.

cy'tode [kytos; G. *eidos*, form]. Haeckel hypothetical simplest form of cell, without nucleus or nucleolus.

cy"to·den'drite. Lenhossék' term for dendrite.

cy'to·derm [kytos; G. *derma*, skin]. *In botany*, cell wall.

cy"to·di"ag·no'sis [kytos; G. *diagnōsis*, deciding]. The determination of the nature of pathogenic liquid by the study of the cells it contains. See *cytological cancer techniques*.

cy"to·di·er'e·sis (sigh to-dye err'i-sis) See *cytokinesis*.

cy"to·dis'tal [kytos; L. *distare*, to be distant]. Of or pertaining to that portion of nerve fiber farthest removed from its cyton.

cy'to·gene [kytos; G. *gennethai*, from *gignesthai*, to be produced]. Any self-reproducing particle of the cytoplasm which is direct product of the genes of the nucleus.

cy"to·gen'e·sis [kytos; G. *genesis*, production]. The genesis and differentiation of the cell. —cytogenet'ic, *adj*

cy·tog'e·ny (sigh-todj'i-nee) [kytos; G. *gennethai*, from *gignesthai*, to be produced]. Cytogenesis. —cytogenous, cytogen'ic, *adj*.

cy"to·glob'u·lin [kytos; L. *globulus* little ball]. A protein obtained from leukocytes and lymph nodes in the form of white soluble powder.

cy'toid [kytos; G. *eidos*, form]. Resembling cell.

cy"to·ki·ne'sis (sigh to-ki-nee'sis, kigh-nee sis) [kytos; G. *kinēsis*, motion]. The changes in the cytoplasm during cell division. Syn., cytodieresis.

cy·tol'er·gy (sigh tol'ur-jee) [kytos; G. *ergon*, work]. Cell activity.

cy"to·log'i·cal can'cer tech niques'. Procedures in which cells are obtained by aspirations, washings, smears, or scrapings. After fixation and staining, the cells are studied for malignancy on the basis of nuclear and cytoplasmic changes, and changes of the cell as whole.

cy·tol'o·gy (sigh-tol'o-jee) [kytos; G. *logos*, word]. The subdivision of biology which deals with cells. —cytolog'ic, *adj*. cytologist, *n*.

exfoliative c. The study of cells desquamated from tissues.

cy"to·ly'sin (sigh"to-lye sin, sigh-tol'i sin) [kytos, G. *lysis*, loosening]. An antibody produced by injection of foreign cells, which causes dissolution of cells. May be specific or nonspecific.

cy·tol'y·sis [kytos, lysis]. The disintegration or dissolution of cells. —cyt lyt'ic, *adj*

-cy·to·ma (-sigh-to mah) [kytos; G -ōma, tumor]. Suffix meaning *neoplasm made up of cells*.

cy·tom'e·ter (sigh-tom i-tur) [kytos; G. *metron*, measure]. A device for counting cells, especially blood cells. Also see *hemacytometer*. —cytom'etry, *n*; cytomet'ric, *adj*

cy"to·mi'cro·some [kytos; G. *mikros*, small; *sōma*, body]. 1. Any small granule in the cytoplasm. 2. A mitochondrion.

cy"to·mi'tome (sigh to-my'tome, sigh tom'i tome) [kytos; G. *mitos*, thread]. The fibrillar part of cytoplasm; the cytoreticulum. See *mitome*.

cy"to·mor"pho·sis (sigh to mor fo-sis, mor-fo sis) [kytos; G. *morphōsis*, bringing into shape]. All the structural alterations which cells or successive generations of cells undergo from the earliest undifferentiated stage to their final destruction.

cy"to·my·co'sis (sigh to-migh-ko sis). See *histoplasmosis*.

cy'ton [kytos]. 1. A cell. 2. A nerve cell exclusive of its processes.

cy"to·path o gen'ic. Pertaining to the destruction of cells (in tissue culture) by transmissible agent, such as virus.

cy"to pa thol'o·gy [kytos; G. *pathos*, disease; *logos*, word]. The branch of pathology concerned with alterations within cells.

cy top thy (sigh-top'uth-ee) [kytos, pathos]. Disease of the living cell.

cy toph'a·gy (sigh-tof'uh jee) [kytos; G. *phagein*, to eat]. The engulfing of cells by other cells. Syn., *phagocytosis*. —cytophagous, *adj*

cy"to pe ni·a [kytos; G *penia*, want]. A cell count less than normal. See *leukopenia*, *anemia*, *thrombocytopenia*, *pancytopenia*.

cy'to phil [kytos; G *philein*, to love]. A chemical group, like those of antibodies, capable of combining with the receptor of cell.

cy"t phys"i·ol'o·gy [kytos; G *physis*, growth; *logos*, word]. The physiology of cell unit.

cy'to·plasm (sigh to-plaz-um) [kytos; G *plasma*, from *plassein*, to mold]. The protoplasm of cell other than that of the nucleus, as opposed to *nucleoplasm*. —cytoplas'mic, *adj*

cy"to·plas'tin [kytos; *plastin*]. The plastin of cytoplasm.

cy"to·poi·e'sis [kytos; G *poiēsis*, making]. The formation and development of cell.

cy"to·prox'i mal [kytos; L. *proximare*, to draw near]. Denoting that portion of nerve fiber near its cyton.

cy"to·re tic'u·lum [kytos; L. *reticulum*, little net]. 1. The network of cells in reticular tissue. 2. Cytomitome. See *mitome*.

cy"to·ryc'tes [kytos; G. *oryktēs*, digger]. Old term for inclusion body. Used originally as the genus name for inclusion bodies in virus diseases under the false assumption that these bodies were protozoan parasites.

cy tos'co·py (sigh-tos'ko-pee) [kytos; G *skopein*, to examine]. Cytodiagnosis. —cytoscop'ic, *adj*

cy"to·sid'er in. Any of group of iron-containing lipid pigments found in various tissues.

cy'to·sine (sigh to-seen, -sin) C_4H_5ON 2-Oxy-6-amino-pyrimidine. A pyrimidine base found in nucleic acid.

cy"to·skel'e·ton [kytos; G *skeleton*, dried body]. The structural framework of cell, probably consisting of proteins which precipitate as fibers.

cy'to·some [kytos; G *sōma*, body]. A cell body exclusive of the nucleus.

cy"to·spon gi um (sigh to spon'jee-um, -spon jee-um) [kytos; G *spongos*, sponge]. The fibrillar protein network of the cytoplasm.

cy'tost [kytos]. A substance, not histamine, which is secreted by injured cells and is capable of modifying cellular activity.

cy"to·ste a to ne·cro'sis. See *adiponecrosis neonatorum*.

cy'to·stome [kytos; G. *stoma*, mouth]. The oral aperture of unicellular organism.

cy"to·tax'is [kytos; G. *taxis*, arrangement]. The movement of cells toward or way from stimulus. —cytotac'tic, *adj*

cy·toth' ·sis (sigh toth'i sis, sigh to-theess'is) [kytos; G *thesis*, placing]. Cell repair.

cy"to·tox'in [kytos; G *toxikon*, poison]. A serum, natural or immune, capable of injuring certain cells without lysis (a toxic action). —cytotoxic, *adj*

cy"to·troph o·blast (-trof'o-blast, -tro'fo-blast) [kytos; G. *trophē*, nourishment; *blastos*, germ]. The inner cellular layer of the trophoblast, cov the chorion and the chorionic villi during half of pregnancy. Also called *Langhans'*

cy tot'ro·phy [kytos; *trophē*]. Growth and sustentation of cell life.

cy tot ro-pism (sigh-tot ro-piz um) [*kytos*; G. *tropē*, turning]. The tendency of cells to move toward or away from stimulus. —**cytotrop'ic**, *adj*

cy"to-zo'on [*kytos*; G. *zōion*, animal]. A protozoan, intracellular parasite.

cy't zyme [*kytos*; *zymē*, leaven]. A substance in various tissues, capable of activating thrombin, the fibrin ferment. Also see *thrombokinase*.

Czermak, Johann Nepomuk [*Bohemian physiologist* 1828–73]. Discovered that pressure on a point in the inferior carotid triangle of the neck causes slower heart beat (1865). Explored the nasopharynx with small mirrors (1859). Said to have been first to demonstrate the value of the laryngoscope in clinical diagnosis, although Türck used the instrument in the same year (1858).

Czerny, Adalbert [*German pediatrician*, 1863–1941]. Remembered for his concept of the exudative diathesis (1907), which plays a part in the pathogenesis of children's diseases.

Czerny, Vincenz [*German surgeon*, 1842–1916]. Known for being the first to perform total hysterectomy by the vaginal route (1879). Introduced the operation of enucleation of uterine fibroids by the vaginal route (1881). His suture of the intestine is a modification of Lembert's; first placing an inner row of interrupted sutures passing through the mucous coat of the bowel, he then secured the cut edges of the muscular and serous coats, called *Czerny's suture*. His name is also associated with operations for tonsillar tumors and for the radical cure of inguinal hernia.

D

D Deuterium.

2,4-D Dichlorophenoxyacetic acid.

D- 1. *chemistry* A prefix, written as a small capital letter, used to indicate the structural configuration of a particular asymmetric carbon atom, with reference to the standard substance D-glyceraldehyde, so designated because its asymmetric carbon atom has the configuration represented by HCOH rather than by HOCH, which is the configuration of the asymmetric carbon atom in L-glyceraldehyde. When more than one asymmetric carbon atom is present in a compound, the configuration of the atom which is assigned the highest number in the case of carbohydrates, or the lowest number in the case of amino acids, determines whether the compound is designated as D- or L-. In D-amino acids the configuration of the relevant asymmetric carbon atom is represented as HCNH₂, while that of L-amino acids is represented as H₂NCH. When the prefix is used according to current rules of nomenclature, there is no correlation between the configuration represented by D- and the optical activity of the compound. If it is desired to indicate optical activity the symbol + signifying *dextrorotation*, or − signifying *levorotation*, may also be used, as D(+)- or D(−). In cases where it is not apparent if the numbering of the carbon atoms of a compound follows the rule for carbohydrates or that for amino acids, the prefix may be modified to D_g- or D_s-, the former indicating that the rule for carbohydrates is used, while the latter signifies that the rule for amino acids is used; the subscripts g and s refer to the carbohydrate glyceraldehyde and to the amino acid serine, respectively.

D., d. Abbreviation for da (L., give), day, days, dead, density, detur (L., let it be given), dexter, died, diopter, dose, duration.

d Deuteron.

d- 1. *chemistry* an abbreviation for *dextrorotatory*, referring to the direction in which the plane of polarized light is rotated by a substance. This usage not to be confused with the following. 2. *chemistry* A prefix formerly used to indicate the structural configuration of a particular asymmetric carbon atom in a compound, in the manner that the small capital letter D- is now used.

da boi, **da boy'** (da boy uh, dab oy uh). See *Vipera russellii*.

Da Costa, Jacob Mendes [*American surgeon*, 1833–1900]. Remembered as a distinguished clinician and teacher who gave one of the first adequate descriptions of irritable heart (1871), a condition known later as neurocirculatory asthenia. See under *asthenia*. Also called *Da Costa's syndrome*, *soldier's heart*, *effort syndrome*.

dac'ry-. See *dacryo-*.

dac ry ad"e no scir'rhus (dack ree ad i-no-skirr us) [G. *dakryon*, tear; *adēn*, gland; *skirros*, hard]. An indurated tumor of the lacrimal gland.

dac ry ag" ge tro si-a (dack"ree ag ge trow-shuh, -sih-uh, -see-uh, -see uh) [*dakryon*; G. *agōgos*, leading; a- not, *trēsis*, boring]. Obstruction of a tear duct.

dac'ry agogue (dack ree uh-gog), **dac ry-a gog'ic** [*dakryon*, *agōgos*]. An agent causing a flow of tears. Syn., *lacrimator*. —**dac'ryagogue**, *adj*

dac"ry ge-lo'sis [*dakryon*, G. *gelōs*, laughter; -*ōsis*, condition]. A condition marked by alternate weeping and laughing. *Obs.*

dac ry-o-, **dac ry-** [*dakryon*]. Combining form meaning *tear* or denoting *relation to tears or to the lacrimal apparatus*.

dac"ry-o ad"e-nal gi a [*dakryon*; G. *adēn*, gland, *algos*, pain]. Pain in a lacrimal gland.

dac"ry o ad"e nec'to my [*dakryon*, *adēn*, G. *ektomē*, excision]. Excision of a lacrimal gland.

dac"ry-o ad"e ni'tis [*dakryon*; *adēn*, G. -*itis*, inflammation]. Inflammation of a lacrimal gland. Syn., *lacrimal adenitis*.

dac ry-o blen nor rhe'a [*dakryon*, G. *blennos*, mucus; *rhoia*, flow]. Chronic inflammation of and discharge of mucus from the lacrimal sac.

dac ry-o-cyst" [*dakryon*, G. *kystis*, bladder]. Old term for the lacrimal sac.

dac ry o-cys-tec'to-my [*dakryon*, *kystis*; G. *ektomē*, excision]. Excision of any part of the lacrimal sac.

dac ry-o-cys ti'tis [*dakryon*, *kystis*, G. -*itis*, inflammation]. Inflammation of the lacrimal sac. Syn., *dacryocystoblennorrhea*.

blennorrheal d. Purulent inflammation of the lacrimal sac. Syn., *dacryocystoblennorrhea*.

phlegmonous d. Inflammation of the tissues composing the lacrimal sac and of the surrounding soft parts.

dac"ry -cys"to-blen"nor-rhea. Blennorrheal dacryocystitis.

dac"ry-o-cys'to-cele [*dakryon*, *kystis*; G *kēlē*, hernia]. Protrusion of a lacrimal sac. Also called *dacryocele*.

dac"ry-o-cys"top to sis [*dakryon*, *kystis*; G. *ptōsis*, falling]. Prolapse or downward displacement of lacrimal sac.

dac ry-o-cys"to rhi nos'to-my (dack ree-o-sis" to-rye nos to-mee) [*dakryon*, *kystis*; G *rhis*, nose; *stoma*, mouth]. An operation to restore drainage into the nose from the lacrimal sac when the nasolacrimal duct is obliterated.

dac"ry-o-cys-tos to-my [*dakryon*; *kystis*; *stoma*]. Incision into the lacrimal sac particularly to promote drainage.

dac"ry o-cys to-tome [*dakryon*; *kystis*; G. *tomos*, cutting]. Instrument for dividing strictures of the lacrimal passages.

dac ry-o-cys tot'o-my [*dakryon*, *kystis*; G *tomē*, cutting]. Incision of the lacrimal sac.

dac'ry-o-lin [*dakryon*]. The albuminous material in tears.

dac ry-o-lith", dac'ry lite [*dakryon*; G. *lithos*, stone]. A calcareous concretion in the lacrimal passages.

dac"ry-o-li thi'a sis [*dakryon*, *lithos*; NL. *-iasis*, condition]. The formation and presence of dacryoliths.

dac"ry-o ma [*dakryon*, G. *-ōma*, tumor]. 1. A lacrimal tumor 2. Obstruction of the lacrimal puncta, causing epiphora.

dac'ry on [*dakryon*]. The point where the frontomaxillary the lacrimomaxillary and the frontolacrimal sutures meet.

dac'ry-ops [*dakryon*; G *ōps*, eye]. 1. Watery eye. 2. A cyst of an excretory duct of lacrimal gland. *Rare.*

dac"ry-op to sis [*dakryon*, G. *ptōsis*, falling]. See *dacryocystoptosis*.

dac"ry-or-rhe' [*dakryon*, G *rhein*, flow]. An excessive flow of tears.

dac"ry-o-so"le ni'tis [*dakryon*, G *sōlēn*, pipe; *-itis*, inflammation]. Inflammation of the lacrimal drainage system.

dac"ry-o-ste no sis [*dakryon*, G *stenōsis*, being straitened]. Stenosis or stricture of the lacrimal drainage system.

dac ry-o-syr'inx (dack"ree-o sirr'inks) [*dakryon*, G. *syrinx*, pipe]. 1 A lacrimal fistula. 2. A syringe for use in the lacrimal ducts.

dac tyl [G *daktylos*, finger]. I *zoology* digit finger or toe. —dactylar dactylate *adj*

dac"ty-lif'er-ous [*daktylos*; L. *ferre*, to bear]. Having fingers or fingerlike parts, organs, or appendages.

dac-tyl'i-on. Syndactyly

dac"ty li'tis [*daktylos*; G. *-itis*, inflammation] Inflammation of finger or toe.

d. syphilitica. A rare tertiary syphilitic affection of the fingers or toes, consisting of gummatous infiltration of the subcutaneous connective tissue and of the fibrous portions of the joints and bones.

tuberculosa d. Spina ventosa.

dac'ty lo- dactyl- [*daktylos*]. A combining form meaning *finger*, *toe* or *digit*.

dac'ty lo-gram" dac tyl'o-gram [*daktylos*; G. *gramma*, letter]. A fingerprint, generally used for purposes of identification.

dac"ty lol'y-sis spon ta ne-a. Ainhum.

dac"ty lo-meg ly [*daktylos*; G. *megas*, large]. A condition in which one or more of the fingers or toes is abnormally large.

dac"ty lo-sym phy-sis [*daktylos*; G. *symphysis*, growing together] Syndactyly

dac ty lus [*daktylos*]. 1 A finger or toe. 2. A toe, in opposition to *digitus*, finger

Dae-mon' rops (dee-mon' rops) [G *daimōn*, devil *rhōps*, shrub] A genus of plants of the Palmae. The resin prepared from the scale of the fruit of D draco and other species of palms native to the East Indies, constitutes dragon's blood.

dagenan. Trade-mark for a brand of sulfapyridine.

Dahl'ia (dahl'yuh, dal yuh, dayl'yuh) [after A. *Dahl*, Swedish botanist]. A genus of the Compositae whose tuberous roots yield inulin.

dahl'ia pa per A purple test paper made from species of *Dahlia*. Acids change its color to red; alkalies, to green.

dahl'ia vi'o-let. See *methylrosaniline chloride*.

dah'lin. Inulin.

dahl'lite. The compound $CaCO_3 \cdot 2Ca_3(PO_4)_2$, said to be the chief inorganic constituent of bones and teeth.

Dakin, Henry Drysdale [*English chemist in the United States*, 1880–1952] W th Carrel, developed method of treating open wounds by irrigation with solution of chlorinated soda and sodium bicarbonate called Carrel-Dakin treatment. See also diluted *sodium hypochlorite solution*, called *modified Dakin solution*.

dak'ry on. Dacryon.

dak ry-ops. Dacryops.

Dale, Henry Hallett [*English physiologist*, 1875–]. With George Barger and Frances Howard Carr isolated ergotoxine (1906) Made studies of pituitrin (1909); of histamine, with Patrick Playfair Laidlaw (1910) and Alfred Newton Richards (1918–19); of histamine shock, with Laidlaw (1919) With Harold Ward Dudley isolated acetylcholine from the spleens of animals (1929) N bel laureate with O Loewi (1936) See also Schultz-Dale test.

Dalton, John [*English chemist and physicist*, 1766–1844]. Developed the atomic theory Discovered *Dalton laws*. (1) The pressure of mixture of gases equals the sum of the partial pressures of the constituent gases. (2) So long as no chemical change occurs, each gas in mixture of gases is absorbed by given volume of solvent in proportion not to the total pressure of the mixture but to the partial pressure of that gas.

Dal'ton ism (dawl tun-iz-um, dal'tun-) [after John *Dalton*]. Colorblindness.

dalyde. Trade-mark for 3,5-dibromosalicylaldehyde, $C_7H_4Br_2O_2$ used as fungicide and antisepti for certain infections of the ear

dam [ME.]. I *dentistry* or *surgery* thin sheet of rubber used to keep fluids away from part; also, piece of dam used as drain.

Dam, Henrik Carl Peter (1895–) Danish biochemist, known for his researches in the biochemistry of sterols, fats, and the vitamins K and E; N bel prize winner in physiology and medicine with Edward A. Doisy (1943) See also Dam unit.

da mal u'ric ac'id (day"mal-yoor'ick, dam al) $C_7H_{12}O$ An acid found in human urine.

dam"i an' (dam ee an ah, -ay nuh, dah mee-ah nuh) [Sp., of Mex. Ind. origin]. The dried leaves of *Turnera diffusa*, found in Mexico and Lower California contains volatile oil, resins, tannin, and bitter principle. Formerly used as stimulant and laxative, and by the laity as an aphrodisiac.

dam mar dam ar [Malay *damar*]. A resinous exudate from *Shorea wiesneri* (Dr and other related genera. C dammar resins, volatile

A solution of dammar is mounting medium used in microscopy. Also called *dammara*.

Damoiseau, Louis Hyacinthe Céleste [*French physician*, 1815–91]. Remembered for his description of an S-shaped curved line showing the upper limit of a pleuritic effusion of the chest. Called *Damoiseau curve*, *Ellis' curve*; see under Calvin Ellis.

Dana, Charles Loomis [*American neurologist*, 1852–1935]. Known for his contributions to the study of surgery of the spinal nerves and nerve roots. Made many contributions to public health knowledge and to medical history. The operation of section of the posterior spinal nerve roots for the relief of spastic paralysis once bore his name. Subacute combined degeneration of the spinal cord is known as *Putnam-Dana syndrome*.

Dance's sign. See under *sign*.

D and C Dilatation of the cervix and curettage of the cavity of the uterus used as diagnostic and therapeutic procedure in obstetrics and gynecology.

dan'd II"en. See *taraxacum*.

dan der [E. dial. *dan*, scurf]. Scales of the hairy skin of any animal; dandruff. May act as an allergen, dog, cat, and horse dander being the most common.

dan druff [apparently from *dander* dandruff; ON *hrufa*, crust]. Scales formed upon the scalp in seborrhea. dander.

Dandy, Walter Edward (1886–1946). American surgeon who introduced ventriculography and pneumoencephalography as an aid in the diagnosis of cerebral disease, and devised numerous neurologic procedures, including operations for ruptured intervertebral disk.

Daniell, John Frederic [*English physicist and chemist*, 1790–1845]. Inventor of the metallic zinc and copper electrical cell known frequently by his name.

Danielssen, Daniel Cornelius [*Norwegian physician*, 1815–94]. With C. W. Boeck, described leprosy (1847) called *Danielssen-Boeck disease*. Regarded as the inaugurator of the modern treatment of leprosy.

Danlos, Henri Alexandre [*French dermatologist*, 1844–1912]. First to use radium in the treatment of lupus, with P. Bloch (1901). Described the *Ehlers-Danlos syndrome* (1908); see under *syndrome*.

dan'thron. $C_{14}H_8O_4$. 1,8-dihydroxyanthraquinone; an orange-colored powder practically insoluble in water; it is laxative and cathartic, being used especially in veterinary practice. Syn., *chrysazi*. See *istizin*.

Danforth stain. See under *stain*.

Danysz, Jean [*Polish pathologist in France*, 1860–1928]. Remembered for his early studies of the value of radium in malignant disease, for his description of the bacillus *Salmonella typhimurium* which he isolated (1900), and for his description of the *Danysz phenomenon*, when toxin is added to antitoxin in an equal amount at once, the mixture is nontoxic; if added at intervals in fractions, the final mixture is generally toxic.

Danzer and Hooker's method. See under *method*.

Daph ne (daf'nee) [G. laurel]. A genus of shrubs of the mezereon family; some species are used medicinally. See *mezereum*.

daph'ne tin, daph ne'tin. $C_9H_6O_4$. Dihydroxycoumarin, obtained by hydrolysis of the glycoside daphnin or by synthetic methods.

daph nin. $C_{15}H_{16}O_9 + 2H_2O$. A glycoside from the bark of some species of *Daphne*.

daraprim. Trade-mark for the antimalarial substance *pyrimethamine*.

Darier, Jean Ferdinand [*French dermatologist*, 1856–1938]. Described dermatofibrosarcoma, tumor of the skin occurring singly or as multiple nodules, with wide variation in malignancy; called *Darier-Roussy sarcoid*. Described keratosis follicularis (1889) known as *Darier' disease*. Made many contributions to the knowledge of cutaneous tuberculosis (1896) and described acanthosis nigricans (1893).

dark -field" il lu"mi na tion, dark'-ground" il lu"mi na tion. See under *illumination*.

Darkshevich, Liverii Osipovich [*Russian neurologist*, 1858–1925]. Described the nerve fibers extending from the optic tract to the habenula. See also *nucleus* of Darkshevich.

Darling, Samuel Taylor [*American physician*, 1872–1925]. Known for his description of histoplasmosis, disease caused by *Histoplasma capsulatum*, called *Darling' histoplasmosis*.

Darnall, Carl Roger [*American Army medical officer*, 1868–1941]. Discoverer of practical means of water purification in the field by means of sodium hypochlorite; called *Darnall' method*.

dar"son val"i za'tion. See *arsonvalization*.

darstine bromide. Trade-marked name for 1-(3-hydroxy-5-methyl-4-phenylhexyl) 1-methylpiperidinium bromide or mepiperphenidol bromide, visceral anticholinergic agent.

dar'tos [G. flayed]. The thin layer of smooth muscle in the subcutaneous tissue of the scrotum.

dar'trous [F. *dartre*, eruption, dandruff]. Of the nature of herpes; herpetic.

darvisul. Trade-mark for phenosulfazole.

Darwin, Charles Robert [*English naturalist*, 1809–82]. One of the great thinkers of all time; author of *On the Origin of Species* (1859) and *The Descent of Man* (1871). The word *Darwinism* denotes adherence to his theory of evolution by natural selection. He described the tuberculum auriculae, called *Darwin tubercle*, which he considered evidence of the simian connections of the human species. See under *tubercle*.

Dattner Thomas concept. A theory concerning the treatment of neurosyphilis. If after treatment, cell count and total protein content of the cerebrospinal fluid become normal, treatment may be discontinued. If the cell count and protein content do not reach constant normal level, treatment must be continued. Evidence of clinical improvement on the part of the patient is not considered.

Datura [Skr. *dhattūra*]. A genus of Solanaceae. Stramonium is produced by the *D. stramonium*. Alkaloids of the solanaceous group chiefly scopolamine, hyoscyamine, and atropine, are yielded by several species of *Datura*.

da tu rine (dat-yoor'een, -in, dat yoo-reen, -rin). $C_{17}H_{23}NO_3$. A poisonous alkaloid from *Datura stramonium*; identical with hyoscyamine and isomeric with atropine.

dat u rism, da tu'rism [*dhattūra*]. Stramonium poisoning.

Daubenton, Louis Jean Marie [*French physician and naturalist*, 1716–99]. Remembered for his description of the line passing through the points opisthion and orbitale, or orbitale projected upon the midsagittal plane, known as *Daubenton line*; the plane of the foramen magnum, passing through the points basion and opisthion, called *Daubenton plane*; and the occipital angle formed by the intersection of Daubenton's line with Daubenton plane at opisthion, called *Daubenton angle*.

Dau'cus (daw'kus) [G. *daukos*, carrot]. A genus of plants of the Umbelliferae.

D. carota. The wild carrot. The root of the cultivated plant contains sugar, starch, pectin, malic

acid, albumin, volatile oil, and crystalline coloring matter (carotene) The aromatic seeds (fruit) have been used by the laity as diuretic and anthelmintic for threadworms.

dau'er schlaf" (dow'er-shlahf") [Ger *Dauer* duration; *Schlaf* sleep]. Prolonged, induced sleep therapy

daughter In *radiochemistry*, radioactive or stable nuclide resulting from the disintegration of radioactive nuclide, called the *parent*.

Davaine, Casimir Joseph [*French physician*, 1812–82]. Studied entozoa and verminous diseases (1860) Cultivated the *Bacillus anthracis*, called *Davaine's body*, and transmitted the disease from one animal to another (1863) Demonstrated that anthrax is caused by specific microorganism, and thus was among the first to give proof of the germ theory of disease.

Da-vai'ne-a (da vay nee-uh) [after C. J *Davaine*]. A genus of cestode worms.

D formosana. Synonym for *Raillietina celebensis*.

D madagascariensis. (a) Synonym for *Raillietina madagascariensis*. (b) Synonym for *Raillietina quitensis*.

David, Jean Pierre [*French physician*, 1737–84]. Remembered for his excellent description of tuberculosis of the spine (1779) in which he is said to have excelled Pott, who described the disease in the same year and for whom it was named

David, Vernon Cyrenius (1882–) American surgeon, who described operations for repair of rectovaginal fistula, and for anal incontinence. He developed one of the first means of measured transfusion of blood, and contributed to the study of lymphatic spread of carcinoma of the large intestine.

Davidsohn, Hermann [*German physician*, 1842–1911]. Known for his technic of illuminating pupil by placing an electric light in the mouth. His sign of tumor or fluid of the maxillary sinus is lessening of the pupillary illumination on the suspected side known as *Davidsohn's sign*

Davidsohn's tests. See under *test*.

Daviel, Jacques [*French ophthalmologist*, 1693–1762]. Considered the outstanding ophthalmologist of his period. Originated the modern method of treating cataract by extraction of the lens (1745)

Davis, John Staige [*American surgeon*, 1872–1946]. Widely known for his ingenuity in plastic surgery especially of the face. Devised number of methods for the repair of facial defects. The *Davis graft* is thick pinch graft.

Davis, Nathan Smith [*American physician*, 1817–1904] An outstanding leader in American medicine. Assisted in organizing the American Medical Association (1846) and edited the journal of the Association (1883–89) Widely known for his *History of Medical Education and Institutions in the United States* (1851)

Davy Edmund William [*Irish physician*, 1826–99]. Remembered for his discovery of test for phenol in which molybdic acid in concentrated sulfuric acid is added to the solution to be tested, positive reaction being yellowish brown coloration passing to deep purple.

Davy Humphry [*English chemist and physicist*, 1778–1829]. Widely known for his contributions to science, especially to industrial hygiene by the invention of coal miner's safety lamp (1815) which revolutionized mining methods and saved many lives. Discovered the anesthetic properties of nitrous oxide and suggested its use in surgery as early as 1800.

Dawson, James Walker (1870–1927) English neuropathologist, known for his work on disseminated sclerosis, osteitis fibrosa, and pigmented tumors (melanomas)

Day Kenneth Mosier [*American otolaryngologist* 1896–]. The operation which bears his name consists of destroying the function of labyrinth by electrocoagulation. It is used in the treatment of hydrops of the labyrinth, form of Ménière disease.

day blind ness. Hemeralopia. Also see under *blindness*.

day'mare [AS. *daeg*; *mare*, incubus]. A state of temporary distress and terror resembling nightmare which comes on when the patient is awake. *Obs.*

day rods. Elements of the fovea postulated to be of the nature of rods and to depend on visual purple for their photochemical properties though unable to accumulate it in sufficient quantity to subserve twilight vision.

DBE $(C_2H_5OC_6H_4)_2C{:}C(Br)C_6H_5$ α,α-Di-(p-ethoxyphenyl)-β-phenyl bromoethylene; synthetic estrogen bsorbed from the alimentary tract but differing from other orally active estrogens in having prolonged action because of its storage in the fatty tissues of the body

D C. Doctor of Chiropractic, direct current, Dental Corps.

DDD Dichlorodiphenyldichloroethane more specifically 1,1-dichloro-2,2-bis (p-chlorophenyl) ethane an insecticide similar to DDT

D.D.O. Doctor of Dental Orthopedics (orthodontics) British.

D D S. Doctor of Dental Surgery

DDT 1,1 1, Trichloro-2,2-bis (p-chlorophenyl) ethane, an insecticide the medicinal grade of which is called *chlorophenothane*.

de- [L]. A prefix denoting *down*, *away from*, *separation*, *off* *away*; *intensification*, *completely* *quite*; or *the reversing* or *undoing* of an action, *depriving* or *ridding of* or *freeing from*.

de-ac"ti-va'tion [L. *de-* indicating reversing of an action; *actus*, from *agere*, to act]. 1. Process of becoming inactive or of making inactive. 2. Loss of radioactivity

dead [AS. *dead*]. Without life destitute of life.

dead'ly night'shade. Belladonna.

dead time. The time interval, after recording count, during which Geiger counter tube and its circuit are completely insensitive and thus incapable of detecting other ionizing events.

deaf'ened. Rendered deaf after previously having heard normally especially after having learned to comprehend and produce speech

de-af"fer-en-ta'tion [L. *de-* indicating separation, *afferre*, to carry to]. The process of interrupting afferent nerve (sensory) fibers.

deaf'-mut'ism. Inability to speak, due to congenital deafness or loss of hearing before establishment of speech. —**deaf-mute,** n.

deaf'ness [AS. *deaf*]. Loss, lack, or impairment of the sense of hearing. It may be due to disease of the external auditory canal, the middle ear the internal ear the auditory nerve, or the brain. —**deaf,** *adj*

adventitious d. Loss of hearing after speech is established.

aviator's d. A nerve type of deafness, temporary or permanent, found in moderate percentage of fliers; audiogram studies usually show marked depression of hearing in the 2000–5000 cycles per second range.

bass d. Deafness to certain bass notes, while higher notes are heard.

boilermakers' d. *Deafness* resulting from working among loud noises; characterized by inability

A solution of dammar in mounting medium used in microscopy. Also called *dammara*.

Damoiseau, Louis Hyacinthe Céleste [*French physician*, 1815–91]. Remembered for his description of an S-shaped curved line showing the upper limit of pleuritic effusion of the chest. Called *Damoiseau's curve*, *Ellis' curve*; see under Calvin *Ellis*.

Dana, Charles Loomis [*American neurologist*, 1852–1935]. Known for his contributions to the study of surgery of the spinal nerves and nerve roots. Made many contributions to public health knowledge and to medical history. The operation of section of the posterior spinal nerve roots for the relief of spastic paralysis once bore his name. Subacute combined degeneration of the spinal cord is known as *Putnam-Dana syndrome*.

Dance's sign. See under *sign*.

D and C Dilatation of the cervix and curettage of the cavity of the uterus used as diagnostic and therapeutic procedure in obstetrics and gynecology.

dan'de-li"on. See *taraxacum*.

dan der [E. dial. *dan*, scurf]. Scales of the hairy skin of any animal; dandruff. May act as an allergen, dog, cat, and horse dander being the most common.

dan'druff [apparently from *dander* dandruff. ON *hrufa*, crust]. Scales formed upon the scalp in seborrhea; dander.

Dandy Walter Edward (1886–1946) American surgeon who introduced ventriculography and pneumoencephalography as an aid in the diagnosis of cerebral disease, and devised numerous neurologic procedures, including operations for ruptured intervertebral disk.

Daniell, John Frederic [*English physicist and chemist*, 1790–1845]. Inventor of the metallic zinc and copper electrical cell known frequently by his name.

Danielssen Daniel Cornelius [*Norwegian physician*, 1815–94]. With C. W. Boeck, described leprosy (1847) called *Danielssen-Boeck disease*. Regarded as the inaugurator of the modern treatment of leprosy.

Danlos, Henri Alexandre [*French dermatologist*, 1844–1912]. First to use radium in the treatment of lupus, with P. Bloch (1901). Described the Ehlers-Danlos syndrome (1908); see under *syndrome*.

dan'thron. $C_{14}H_8O_4$; 1,8-dihydroxyanthraquinone, an orange-colored powder practically insoluble in water; it is laxative and cathartic, being used especially in veterinary practice. Syn., *chrysazin*. See *istizin*.

D Antoni stain. See under *stain*.

Danysz, Jean [*Polish pathologist in France*, 1860–1928]. Remembered for his early studies of the value of radium in malignant disease; for his description of the bacillus *Salmonella typhimurium* which he isolated (1900); and for his description of the *Danysz phenomenon*, when toxin is added to antitoxin in an equal amount at once, the mixture is neutral. If added at intervals in fractions, the final mixture is generally toxic.

Danzer and Hooker's method. See under *method*.

Daph ne (daf'nee) [G., laurel]. A genus of shrubs of the mezereon family; some species are used medicinally. See *mezereum*.

daph'ne-tin, daph-ne'tin. $C_9H_6O_4$. Dihydroxycoumarin, obtained by hydrolysis of the glycoside daphnin or by synthetic methods.

daph nin. $C_{15}H_{16}O_9 + 2H_2O$. A glycoside from the bark of some species of *Daphne*.

daraprim. Trade-mark for the antimalarial substance *pyrimethamine*.

Darier Jean Ferdinand [*French dermatologist* 1856–1938]. Described dermatofibrosarcoma, tumor of the skin occurring singly or as multiple nodules, with wide variation in malignancy; called *Darier-Roussy sarcoid*. Described keratosis follicularis (1889) known as *Darier's disease*. Made many contributions to the knowledge of cutaneous tuberculosis (1896) and described acanthosis nigricans (1893).

dark' field" il lu"mi na'tion, dark'-ground" il lu"mi na'tion. See under *illumination*.

Darkshevich, Liverii Osipovich [*Russian neurologist*, 1858–1925]. Described the nerve fibers extending from the optic tract to the habenula. See also *nucleus* of Darkshevich.

Darling, Samuel Taylor [*American physician*, 1872–1925]. Known for his description of histoplasmosis, disease caused by *Histoplasma capsulatum*, called *Darling's histoplasmosis*.

Darnall, Carl Roger [*American Army medical officer* 1866–1941]. Discoverer of practical means of water purification in the field by means of sodium hypochlorite; called *Darnall's method*.

dar"son val"i za tion. See *arsonvalization*.

darstine bromide. Trade-marked name for 1-(3-hydroxy-5-methyl-4-phenylhexyl) 1-methylpiperidinium bromide or mepiperphenidol bromide, visceral anticholinergic agent.

dar'tos [G. flayed]. The thin layer of smooth muscle in the subcutaneous tissue of the scrotum.

dar'trous [F. *dartre*, eruption, dandruff]. Of the nature of herpes; herpetic.

darvisul. Trade-mark for phenosulfazole.

Darwin, Charles Robert [*English naturalist*, 1809–82]. One of the great thinkers of all time; author of *On the Origin of Species* (1859) and *The Descent of Man* (1871). The word *Darwinism* denotes adherence to his theory of evolution by natural selection. He described the tuberculum auriculae, called *Darwin's tubercle*, which he considered evidence of the simian connections of the human species. See under *tubercle*.

Dattner Thomas concept. A theory concerning the treatment of neurosyphilis. If, after treatment, cell count and total protein content of the cerebrospinal fluid become normal, treatment may be discontinued. If the cell count and protein content do not reach a constant normal level, treatment must be continued. Evidence of clinical improvement on the part of the patient is not considered.

Datura [Skr. *dhattūra*]. A genus of Solanaceae. Stramonium is produced by the *D. stramonium*. Alkaloids of the solanaceous group, chiefly scopolamine, hyoscyamine, and atropine, are yielded by several species of Datura.

da tu'rine (dat-yoor'een, -in, dat'yoo-reen, -rin). $C_{17}H_{23}NO_3$. A poisonous alkaloid from *Datura stramonium*, identical with hyoscyamine and isomeric with atropine.

dat u rism, da tu'rism [*dhattūra*]. Stramonium poisoning.

Daubenton, Louis Jean Marie [*French physician and naturalist*, 1716–99]. Remembered for his description of the line passing through the points opisthion and orbitale, or orbitale projected upon the midsagittal plane, known as *Daubenton's line*, the plane of the foramen magnum, passing through the points basion and opisthion, called *Daubenton's plane*, and the occipital angle formed by the intersection of Daubenton's line with Daubenton's plane at opisthion, called *Daubenton's angle*.

Dau'cus (daw'kus) [G. *daukos*, carrot]. A genus of plants of the Umbelliferae.

D. carota. The wild carrot. The root of the cultivated plant contains sugar, starch, pectin, malic

cancelli, lattice]. The removal of cancellous bone either for use as bone chips in grafting operations or for correcting deformity.

dec'ane. $C_{10}H_{22}$. A hydrocarbon of the paraffin series.

dec'a-nor mal [*deka*; L. *norma*, rule]. Having 10 times the strength of the normal; said of solutions.

de-cant' [ML. *decanthare*, to pour from the edge of a vessel]. Gently pour off a liquor or solution without disturbing the sediment. —**decanta'tion**, *n.*

de-cap"i-ta'tion (dee-cap"i-tay'shun) [L. *de-*, indicating separation; *caput*, head]. Beheading; removal of the head of a person, fetus, or bone; decollation. —**decap'itate**, *v.*

de-cap'i-ta"tor (dee-cap'i-tay tur) [*de-*; *caput*]. Instrument used in performing decapitation in embryotomy.

decapryn succinate. Trade-marked name for the antihistaminic substance *doxylamine succinate*.

de-cap"su-la'tion (dee-cap suh-lay'shun, -cap-sue-lay'shun) [*de-*; L. *capsula*, little box]. Removal of a capsule or enveloping membrane, as the capsule of a kidney.

de-car'bon-ate (dee-kahr'bun-ate) [*de-*; L. *carbo*, coal]. Deprive of carbon dioxide or carbonic acid. —**decarbonated**, *adj.*

de-car"bon-i-za'tion (dee-kahr bun-i-zay shun, -eye-zay'shun) [*de-*; *carbo*]. Removal of carbon. —**decar'bonize**, *v.*

de car-box'yl-ase. See *carboxylase*.

de"car-box"y-la'tion, de"car-box"yl-i-za'tion. The splitting off of one or more molecules of carbon dioxide from organic acids, especially amino acids. —**decarbox'ylate**, *v.*

de-ca-thex'is. In *psychiatry*, the process of dissolving or removing a specific or ambivalent affect directed toward a thing or person.

dec"a-vi'ta-min. A U.S. Pharmacopeia formulation of vitamins, containing not less than 1.5 mg. (5000 U.S.P. Units) of vitamin A, 10 micrograms (400 U.S.P. Units) of vitamin D, 75 mg. of ascorbic acid, 5 mg. of calcium pantothenate, 5 mcg. of cyanocobalamin, 2 mg. of folic acid, 20 mg. of nicotinamide, 2 mg. of pyridoxine hydrochloride, 3 mg. of riboflavin, 3 mg. of thiamine hydrochloride or thiamine mononitrate. One capsule or tablet supplies the recommended daily requirement of the vitamins contained therein.

de-cay' [L. *de*, down; *cadere*, to fall]. 1. In *bacteriology*, the progressive chemical decomposition of organic matter in the presence of atmospheric oxygen; due generally to aerobic bacteria. 2. Decline in health or strength. 3. Senility. 4. Dental caries; lay term.

radioactive d. The disappearance of an element because of its radioactive disintegration; the sum total of the processes by which unstable nuclear configurations are spontaneously converted into stable ones. The term as distinguished from radioactivity usually implies the statistical laws which govern these processes.

dec'em- [L., ten]. A combining form meaning *ten*.

de-cen'tered (dee-sen terd) [L. *de-*, indicating separation; G. *kentron*, center]. Out of common center; said of a lens in which the visual axis and the axis of the lens do not coincide. —**decentra'tion**, *n.*

de-cer"e-bel-la'tion (dee-serr"i-beh-lay'shun) [*de-*; L. *cerebellum*, small brain]. The experimental removal of the cerebellum for the study of cerebellar functions.

de-cer"e-bra'tion (dee-serr"i-bray'shun) [*de-*; L. *cerebrum*, brain]. Removal of the brain in physiologic experiments. —**decer'ebrated**, *adj.*; **decer'ebrate**, *adj.*, *v.t.*, **decer'ebrize**, *v.t.*

decerosol OT. Trade-mark for dioctyl sodium sulfosuccinate used as a wetting agent.

de-chlo"ri-da'tion (dee-klor" day shun) [*de-*; G. *chlōros*, pale-green]. Reduction of the quantity of chlorides in the body by the removal of salt from the diet.

de-chlo"ru-ra'tion (dee-klor"oo-ray shun) [*de-*; *chlōros*; G. *ouron*, urine]. Reduction of the amount of chlorides excreted in the urine.

decholin. Trade-mark for dehydrocholic acid.

dec'i- (dess i-) [L. *decimus*, tenth]. A combining form meaning *tenth*, used in the metric system to indicate a *measure one-tenth as large as the unit*.

dec'i-bel [*decimus*; *bel*, after A. G. *Bell*, inventor of the telephone]. A tenth of a bel. Abbreviated db.

de-cid'u-a (pl. *deciduae*) [L. *deciduus*, falling off]. The mucous membrane (endometrium) of the uterus, especially that part subject to special modification in preparation for and during pregnancy and which is cast off at parturition and menstruation. Also called *membrana d.*, *tunica d.* —**decidual**, *adj.*

d. basalis. That part of the endometrium between the chorionic vesicle and the myometrium that forms the maternal part of the placenta. Also called *d. serotina*.

d. capsularis. That part of the endometrium between the chorionic vesicle and the uterine lumen; the outer investing envelope of the fetus. Also called *d. reflexa*.

d. marginalis. That part of the endometrium at the junction of the decidua basalis, decidua parietalis, and decidua capsularis.

d. menstrualis. The outer layer of the uterine mucosa which is shed during menstruation.

d. parietalis. The endometrium exclusive of the region occupied by the embryo. Also called *d. vera*.

d. reflexa. See *d. capsularis*.

d. serotina. See *d. basalis*.

d. vera. See *d. parietalis*.

de-cid'u-ate [*deciduus*]. 1. Having, or characterized by, a decidua. 2. Formed in part from the decidua.

de-cid"u-a'tion [*deciduus*]. Act or process of dropping off or shedding.

de-cid"u-i'tis [*deciduus*; G. *-itis*, inflammation]. An acute inflammation of the decidua, frequently the result of attempts to induce abortion.

de-cid"u-o'ma [*deciduus*; G. *-ōma*, tumor]. 1. Decidual tissue produced in the uterus by mechanical or other methods in the absence of an embryo, so named by its discoverer, Leo Loeb (1908). 2. An intrauterine tumor containing decidual relics, and believed to arise from some hyperplasia of a retained portion of the decidua. —**deciduomal**, *adj.*

d. malignum. O.T. for *choriocarcinoma*.

de-cid"u-o'sis. A condition in which decidual tissue develops in an ectopic site, such as vagina or cervix of the uterus.

de-cid'u-ous [*deciduus*]. Falling off or shed at maturity.

dec'i-gram (dess'i-gram) [L. *decimus*, tenth; G. *gramma*, scruple]. One-tenth of a gram.

dec'i-li"ter (dess'i-lee tur) [*decimus*; G. *litra*, pound]. One-tenth of a liter.

dec'i-me"ter (dess'i-mee tur) [*decimus*; G. *metron*, measure]. One-tenth of a meter.

dec"i-nor'mal (dess"i-nor'mul) [*decimus*; L. *norma*, rule]. Having one-tenth the strength of the normal.

de-cip'a-ra [L. *decem*, ten; *parere*, to bring forth]. A woman who has borne ten children.

de-clive [L. *declivis*, sloping]. A lower or descending part.

d. of the cerebellum. The first portion of the vermis behind the primary fissure, which with the

basophilic d. ( ) See mucoid *d.* (b) Basophilic stippling of erythrocytes such as occurs i lead poisoni g.
calcareous d. Not true degeneration, but rather deposit of calcareous material in degenerate or necrotic tissue.
caseous d. See *caseation.*
cerebellofugal d. Progressiv degeneration of the dentate ucleus and the superior cerebellar peduncles, manifested as taxia, asthenia, and intention tremor Syn., *progressive cerebellar asynergy* or *dyssynergy.*
cerebromacula d. Amaurotic familial idiocy
colloid d. Abnormal production of colloid, as in the thyroid gland.
cortical d. See general *paresis.*
cystic d. Any form of degeneration with cyst formation.
cystoid d. of retina. A condition i which cystic spaces are found in the retina. When it occurs t the periphery of the etina, the condition is also called *Blessig-Iwanov cystoid d. of retina.*
descending d. Deterioration of myelin sheath and axons of descending tracts progressing caudally from the point of injury
disciform d. Degeneration of Bruch membrane of th choroid in the region of the macula lutea with the deposition of connective tissue under this membrane.
fascicular d. Degeneration, usually with necrosis, in fascicles of muscle supplied by diseased or interrupted motor neurons.
fatty d. A deteriorative process in which the cytoplasm of the cell contains microscopically visible, small droplets of fat, accompanied by other lipids. The fat is derived partly from lipids and proteins of the cell and partly from transported fat.
fibrinoid d. A form of degeneration in which the tissue involved is converted to homogeneous or granular acellular mass with bright acidophilic staining reaction resembling that of fibrin.
fibrofatty d. of placenta. F tty necrosis of placenta, usually the result of infarction.
fibroid d. Sometimes used to indicate localized fibrosis.
glycogenic d. A form of degenerative change resulting from excess deposition of glycogen within cells.
granular d. Cloudy swelling. See *basophilia.*
hepatolenticular d. A motion dyskinesia resulting from degenerative changes in the lenticular nucleus with associated similar changes in the remaining parts of the basal ganglia, thalamus, cerebellum, and other regions of the central nervous system. Associated with the neurological manifestations are postnecrotic cirrhosis and characteristic circumcorneal pigmentation of the limbus (*Kayser-Fleischer ring*). Aminoaciduria is present copper content is elevated in the tissues, depressed in serum, and increased in urine This condition, first described by S A. K. Wilson (1912) is inherited as an autosomal recessive. Also called *progressive lenticular d.* *Wilson disease.*
hyaline d. A form in which there is produced clear structureless or homogeneous, translucent change in tissues or cells
hydropic d. Cellular degeneration with imbibition of so much water into the cytoplasm that microscopically visible droplets of water are formed.
keratinous d. See *keratinization,* 1
lardaceous d. Amyloid degeneration. Also see *amyloidosis.*
liquefactive d. See liquefactive *necrosis.*
mucinous d. Mucous *d.*
mucoid d. A retrogressive change in mesodermal tissues in which mucoid is produced.
mucous d. Degeneration of epithelial cells or structures associated with abnormal production of mucus.
myelin d. A deterioration or necrosis of myelin sheaths of nerves.
myxomatous d. See mucoid *d.*
Nissl d. Degeneration of ganglion cells.
parenchymatous d. Cloudy swelling.
pigmentary d. A retrogressive change especially in nerve cells, with bnormal deposit of pigmentary substances.
primary d. Degeneration of nerves at the point of injury or disease also called *axon reaction, primary reaction of Nissl.*
progressive lenticular d. See hepatolenticular *d.*
red d. Red discoloration of fibromyoma due to degeneration, necrosis, and edema of the neoplasm.
reticular d. A process in which intracellular edema of the epidermis causes rupture of the cells with formation of multilocular bullae.
secondary d. Ascending or descending degeneration of nerves or tracts. Also called *Wallerian d.*
subacute combined d. of spinal cord. Combined degeneration of posterior and lateral columns of the spinal cord, with relatively little gliosis, such as occurs in pernicious anemia. also called *funicular myelitis, funicular myelosis, neuro-anemia, Putnam-Dana syndrome, Putnam type of sclerosis* Syn., *combined system disease dorsolateral or posterolateral sclerosis, subacute combined sclerosis, subacute combined system disease.*
traumatic d. The degeneration of the ends of nerves t the point of section, extending to the nearest node of Ranvier after which fatty degeneration occurs.
vitreous d. Hyaline degeneration.
W llerian d. Usually pplied to degenerations as described under ascending and descending degenerations; due to interruption of nerve fibers.
waxy d. See amyloid *degeneration.* This term has also been used as synonym for Zenker' hyaline *necrosis.*
Zenker' hyaline d. See under *necrosis.*
de gen"i tal'i ty (dee jen"i tal'i tee) [L. *de-*, indicating separation *genitalis*, genital] *I psychoanalysis,* condition wherein genital instincts are expressed through activities of nongenital character
de glu ti'tion (dee gloo-tish un, deg"loo-) [L. *deglutire,* to swallow down] The act of swallowing. —**deglu titive deglu'titory** *adj*
deg"ra-da tion [*de-* L. *gradus*, step]. The conversion of one organic compound to another containing smaller umber of carbon toms.
de-grease' (dee grees -grees') [*de-*; OF *gresse,* from L. *crassus,* fat]. Remove fat, as from bones in the preparation of keletons.
de-gree [ME. *degre,* from L. *de-* down; *gradus,* step] 1 A position in graded series. 2. One of the units or intervals of thermometric or other scale 3 The unit for measuring arcs or angles One degree is $\frac{1}{360}$ of circle. A right angle is 90° or one quarter of circle. 4 A rank or title conferred by college or university in recognition of attainment. 5. *I law,* the relative amount of guilt. 6. One remove in the direct line of descent; one remove in the chain of relationship, as cousin of fourth degree.
de-gree of free'dom. 1. *I mechanics,* any of the ways in which point, body or system may change or move. 2. *In physical chemistry* system's capacity for variation due to the variability

of one of its factors. **2.** *In biometry*, the number of independent values in a statistical table.

de·gus·ta·tion [L. *degustare*, to taste]. Act of tasting.

Dehio, Karl Konstantinovich [Russian physician, 1851–1927]. *Dehio's test* is a method of ascertaining the cause of bradycardia. If a hypodermic dose of atropine gives relief, the condition is of vagus nerve origin; if not, it is due to pathologic change in the heart muscle.

de·his'cence [L. *dehiscere*, to gape]. 1. The act of splitting open. **2.** A defect in the boundary of a bony canal or cavity.

de·hy'drase (dee-high'drace). See *dehydrogenase*.

de"hy·dra'tion (dee"high-dray'shun) [L. *de-*, indicating separation; G. *hydōr*, water]. The removal of water, as from the body or a tissue. —**dehy'drate**, *v.*

dehydrite. A trade-mark for anhydrous magnesium perchlorate, used in various chemical procedures for absorption of water.

de·hy'dro-, dehydr- [*de-*; *hydr-*]. In *chemistry*, combining form signifying *dehydrated* or *dehydrogenated*.

de·hy"dro·an·dros'ter·one. Old term for dehydroisoandrosterone.

de·hy"dro·as·cor'bic ac'id. The relatively inactive acid resulting from elimination of two hydrogen atoms from ascorbic acid when the latter is oxidized by air or other agents.

7-de·hy"dro·cho·les'ter·ol (·ko-les'tur-ole, ·ol, ·awl). A provitamin of animal origin in the skin of man, in milk, and elsewhere, which upon irradiation with ultraviolet rays becomes vitamin D.

de·hy"dro·cho·lic ac'id (dee-high-dro-ko'lick, kol'ick). $C_{24}H_{34}O_5$; 3,7,12-Triketocholanic acid. The acid resulting when the three hydroxyl groups of cholic acid are oxidized to keto groups. Both the acid and its sodium salt are used for their hydrocholeretic and choleretic effects. Dose of the acid, 0.25–0.5 Gm. (4–8 gr.) two or three times daily for four to six weeks. See *chelon-DH, cholan acid*, [illegible] *decholin, procholon*.

de·hy"dro·cor"ti·cos'ter·one. $C_{21}H_{28}O_4$; 11-dehydrocorticosterone or Δ^4-pregnene-21-ol-3,11,20-trione; a steroid occurring in the adrenal cortex and possessing biologic activity similar to that of corticosterone. Syn., *Kendall's Compound A*. See Table of Hormones in the Appendix.

de·hy"dro·epi·an·dros'ter·one. Dehydroisoandrosterone.

de·hy'dro·gen·ase. An enzyme which catalyzes the oxidation of a specific substrate by removal of hydrogen. Some dehydrogenases (aerobic) can transfer hydrogen directly to gaseous oxygen, whereas other dehydrogenases (anaerobic) require a hydrogen acceptor. Also called *dehydrase*.

alcohol d. An enzyme occurring in yeast; capable of reversibly oxidizing ethanol to acetaldehyde. Coenzyme I is required, and other aliphatic alcohols of low molecular weight are likewise oxidized. A similar but not identical enzyme is found in animal tissues, particularly in liver. Syn., *alcoholase*.

1,3-diphosphoglyceric aldehyde d. The enzyme by which 1,3-diphosphoglyceraldehyde is oxidized to 1,3-diphosphoglyceric acid, in the presence of coenzyme I.

glucose d. The enzyme that dehydrogenates D-glucose to D-gluconic acid in the presence of a hydrogen acceptor.

glutamic acid d. The enzyme that converts L(+) glutamic acid into α-ketoglutaric acid in the presence of coenzyme II.

glycerophosphate d. One of the two enzymes that dehydrogenate glycerophosphate to form 3-phosphoglyceric aldehyde; only one requires coenzyme I, the other transferring hydrogen to cytochrome C.

β-hydroxybutyric d. The enzyme that removes hydrogen from L-β-hydroxybutyric acid to form acetoacetic acid, in the presence of coenzyme I.

isocitric d. The enzyme that, in the presence of coenzyme II, converts L-isocitric acid to oxalosuccinic acid.

lactic d. The enzyme that dehydrogenates lactic acid to form pyruvic acid.

malic d. The enzyme that removes hydrogen from L(−) malic acid in the presence of coenzyme I, to form oxalacetic acid.

phosphogluconic d. The enzyme that oxidizes phosphogluconic acid in the presence of coenzyme II.

Robison ester d. The enzyme that converts the Robison ester to phosphohexonic acid in the presence of coenzyme II.

succinic d. The enzyme that dehydrogenates succinic acid to fumaric acid in the presence of a hydrogen acceptor.

de·hy'dro·gen·ize, de·hy'dro·gen·ate. Remove hydrogen from. —**dehydrogeniza'tion, dehydrogena'tion,** *n.*

de·hy"dro·i"so·an·dros'ter·one. $C_{19}H_{28}O_2$; 3(β)-hydroxy-17-keto-5,6-androstene; an androgenic steroid found in the urine of men and women. Syn., *dehydroepiandrosterone*.

de·hy"dro·stil·bes'trol. See *dienestrol*.

de·i"on·iz"er. An apparatus, charged with suitable ion exchanging and removing substances, which effects removal of ionic constituents from liquids, notably from water. —**dei'onize,** *v.*

Deiters, Otto Friedrich Karl [German physician and anatomist, 1834–63]. Known for his description of the branched flattened cells of the neuroglia, called astrocytes; his study of the cylindrioconical cells resting upon the basilar membrane of the organ of Corti and supporting the hair cells, called *Deiters' cells*; his description of the lateral vestibular nucleus, which once bore his name; his description of the neuraxon, proving that each nerve cell is equipped with an axis cylinder or nerve-fiber process.

dé"jà" vu' [F., already seen]. A feeling of familiarity; a dream state in which experiences seem to have occurred before. A symptom found in tumors or other lesions of the temporal lobe of the brain. Syn., *dreamy state epilepsy*.

de·jec'tion [L. *dejectio*, a throwing down]. 1. Depression, lowness of spirits. **2.** Discharge of fecal matter; defecation. **3.** Feces; excrement.

Dejerine, Joseph Jules [French neurologist, 1849–1917]. Justly famed as one of the greatest European neurologists of his time. With Sottas, gave the first description of progressive hypertrophic interstitial neuropathy (1893), called *Dejerine-Sottas disease, neuropathy*. With Roussy he described the thalamic syndrome (1906), called *Dejerine-Roussy syndrome*; he also described tabes of the nervous system (1887) and is credited with distinguishing types involving the peripheral or central nervous system. He wrote on tabetic muscular atrophies, the parietal lobe syndrome, and many other subjects, and demonstrated that certain aphasias may occur as the result of lesions of the supramarginal and angular gyri. Facioscapulohumeral atrophy is known as *Landouzy-Dejerine atrophy*.

Dejerine-Klumpke, Augusta [French neurologist, 1859–1927]. Wife of Joseph Dejerine, and famous in her own right for her researches in many fields of neurology and, especially, for her contributions to the knowledge of lead paralysis. Gave the first adequate description of the paralysis and atrophy

following lesion of the brachial plexus and the eighth cervical and first thoracic nerves, known as *Klumpke' paralysis* (1885)

Dekkers, Frederik [*Dutch physician*, 1648–1720]. Remembered as early contributor to the knowledge of clinical pathology. Discovered the presence of albumin in urine (1673) by boiling the specimen with acetic acid.

delacillin. Trade-mark for an injectabl preparation of penicillin calcium in peanut oil and beeswax.

de″lac ta′tion [L. *de-*, indicating reversing; *lactare*, to give suck] 1 Weaning 2. Cessation of lactation.

Delafield's hematoxylin See under *stain*.

de-lam″i na tion (dee lam nay shun) [L. *de-* indicating separation; *lamina*, plate]. Separation or splitting into layers, as in the dividing of cells to form new layers.

delapan. Trade name for pollen extract for subcutaneous or intradermal use for hyposensitization to the contained pollens.

Delbet, Paul [*French surgeon*, 1866–1924]. Remembered for his sign that, in patient with aneurysm of the main artery of limb, nutrition of the distal portion shows the status of circulation.

de le Boë. See Franciscus *Sylvius*.

De Lee Joseph Bolivar [*American obstetrician*, 1869–1942]. Known for his contributions in the field of operative obstetrics and modern maternity care and for his textbook, *Principles and Practice of Obstetrics*.

Del′hi boil (del′hee, del′ee) See *oriental sore*.

Delille, Arthur [*French physician*, 1876–1950]. Known for his description, with Rénon, of the syndrome of dyspituitarism, characterized by lowered blood pressure, tachycardia, oliguria, insomnia, and hyperhidrosis (1908) called *Rénon-Delille syndrome*.

De Lima s operation. See transmaxillary *ethmoidectomy*.

de-lim″i ta′tion [L. *delimitare*, to mark out]. The fixing of limits or boundaries.

de lim′it-ed. Marked by bounds having line or lines of demarcation.

de lin′quen-cy [L. *delinquere*, to do wrong]. 1 An offense or violation, especially that committed by minor as truancy vandalism, lying, stealing, overt sex practices. 2. The tendency to commit delinquencies; the committing of such offenses.

de″lip i-da′tion. Removal of lipids by fat solvents from tissue or microscopic sections

del″i-ques′cence [L. *deliquescere*, to melt way]. Process of liquefaction by absorption of water from the atmosphere, or the resultant state. —**deliquescent,** *adj*; **deliquesce,** *v*.

de liq′ui um (di lick′wee um) [L., defect] 1 Fainting or syncope. *Obs.* 2. Mental impairment. *Rare.*

d. animi. Syncope

de lir″i fa cient (di lirr″i fay′shunt, -shee-unt) [L. *delirium*, delirium *facere*, to cause]. Producing delirium. Syn., *deliriant*.

de lir′i-um [L.] A condition of mental excitement, confusion, and clouded sensorium, usually with hallucinations, illusions, and delusions precipitated by toxic factors in diseases or drugs. —**delirious,** *adj*

abstinence d. That occurring upon withdrawal of alcohol or of drug from one addicted to it.

acute d. That form marked by convulsions and occasionally death.

alcoholic d. See *d.* tremens.

asthenic d. See exhaustion *d*

collapse d. Delirium produced by physical collapse.

d. cordis. Fibrillation of the heart, usually atrial.

d. grandiosum. That in which the individual has greatly exaggerated ideas of his own importance or possessions megalomania.

d. mite. See quiet *d*.

d. nervosum. That following severe surgical operations or injuries, or that associated with organic brain disease.

d. tremens. A delirious state marked by distressing delusions, illusions, hallucinations, constant tremor fumbling movements of the hands, insomnia, and great exhaustion Usually associated with alcoholic poisoning, but may ppear in acut inflammatory brain diseases, arteriosclerosis, or senile encephalopathy or in schizophrenia or manic-depressive psychoses. Syn., *alcoholic d*.

emotional d. That in which the state of mind is such that the individual will accept false idea without qualifications.

exhaustion d. That brought bout by fatigue and extreme lowering of psychologic tension. Syn., *asthenic d*.

oneiri d. Dream delirium; one occurring at night, made up of parts of dreams which vary uninterruptedly and may continue after the patient wakes.

quiet d. A mental condition marked by delirious, scarcely udible mumbling. Syn., *d. mite*.

traumatic d. Acute delirium resulting from head or brain injury

de-liv er y [OF *delivrer* from LL. *deliberare*, to set free] 1 Liberation release. 2. Parturition; expulsion or extraction of fetus and its membranes. See Plate 42. 3. Removal of part, as lens in cataract extraction, or of tumor —**deliver** *v*.

post mortem d. Extraction of the fetus after the death of the mother

premature d. Expulsion of the fetus after the twenty-eighth week and before term.

Della Croce Giovanni Andrea (Crocee) [*Italian physician*, 1514–75] Celebrated as the author of works on surgery in which he paid special attention to operations upon the head and skull by trephining His works are well illustrated and contai many details of early operating room technic.

de″lo-mor′phous (dee″lo-mor′fus, del) [G *dēlos*, conspicuous *morphē*, form]. Having conspicuous form, as delomorphous cell, the acid-secreting parietal cell of the fundic glands.

Delorme Edmond [*French surgeon*, 1847 1929] Remembered for his work on pulmonary and thorac surgery and, especially for his operation, now rarely used, of decortication of the lung for chroni empyema (1894) called *Fowler-Delorme operation*. Also devised an operation for the relief of chronic constrictive pericarditis, in which por tion of the pericardium is excised. See also *Rehn-Delorme operation* under *Rehn*.

de-louse (dee-lowce -louse′) [L. *de-* indicating separation ME. *lous*]. Free from lice; destroy lice. —**delous′ing.**

Delpech, Jacques Matthieu [*French orthopedic surgeon*, 1777 1832]. Known as one of the few deserving of the name orthopedist in his day One of the first to practice subcutaneous division of the Achilles tendon in the treatment of clubfoot (1816) Established the tuberculous origin of Pott disease.

del′phi nin. A glycosidal dyestuff obtained from the flowers of *Delphinium consolida*.

del′phi ine (del′fi neen, -nin) An alkaloid btained from *Delphinium staphisagria* or stavesacre larkspur

Del phin′i um [G. *delphis*, dolphin]. A genus of plants of the Ranunculaceae the larkspurs.

D ajacis. The dried, ripe seeds of this species (source of the crystalline alkaloids ajacine and

alaconine) possess an aconitelike toxicity. The tincture and acetic tincture (larkspur lotion) are used externally to destroy lice.

D. consolida. Source of delphinin.

D. staphisagria. Stavesacre; staphisagria.

del·phi·noi'i·dine (del"fi-noy'i-deen, ·din) [illegible] An amorphous alkaloid found in *Delphinium staphisagria*.

del'phi·sine (del'fi-seen, ·sin) An alkaloid from *Delphinium staphisagria* or stavesacre larkspur.

del'ta. 1. The fourth letter of the Greek alphabet (Δ, δ), used as a symbol in various ways, as: (a) *in chemistry*, (δ) the fourth carbon atom starting with the one bearing the characteristic functional group, or in some cases with the adjacent atom; (Δ with superscripts) double bond; (Δ) coefficient of diffusion; (Δ) freezing point lowering; (b) *in mathematics*, (Δ) increment. 2. See delta *rhythm*.

deltalin. Trade-mark for a brand of synthetic vitamin D.

del'toid [G. *delta*, fourth letter of the Greek alphabet; *eidos*, form]. Shaped like a Δ (capital delta) as the deltoid ligament of the ankle joint.

del'toid. The large, thick, delta-shaped muscle covering the shoulder joint. See Table of Muscles in the Appendix.

deltra. Trade-mark for *prednisone*.

de·lu'sion [L. *delusio*, from *deludere*, to deceive]. A belief maintained in the face of incontrovertible evidence to the contrary.

delvinal sodium. Trade-mark for sodium ethyl (1-methyl-1-butenyl) barbiturate, a rapidly acting sedative and hypnotic.

de"mar·ca'tion [L. *de-*, indicating separation; *marcar*, to mark, of Teutonic origin]. Separation, establishing of limits.

d. potential. See *injury potential*.

line of d. A line forming at the edge of a gangrenous area and marking the limit of the process.

De·ma'ti·um. See *Pullularia*.

de·ment'ed [L. *demens*, out of one's mind]. Deprived of reason. —**dement'**, n., v.

de·men'ti·a [L., the being out of one's mind]. Deterioration or loss of the intellectual faculties, the reasoning power, the memory, and the will; characterized by confusion, disorientation, apathy and stupor of varying degrees.

alcoholic d. A dementia more prolonged but less intense than delirium tremens, occurring in late stages of chronic alcoholism.

apoplectic d. Dementia due to cerebral hemorrhage or to softening of brain tissue from other causes.

circular d. That characterized by alternating phases of excitement and depression.

d. agitata. Old term for a form distinguished by great excitement, motor activity, and continuous hallucinations; seen in patients with schizophrenia.

d. paralytica. See general *paresis*.

d. paranoides. Old term for the paranoid form of schizophrenia.

d. precox. The name given by Kraepelin to a form of insanity occurring during adolescence or early adulthood; was formerly thought to be a single psychotic disease, but is now known to be a group of heterogeneous psychoses. Four types are recognized—simple, hebephrenic, paranoid, and catatonic. Now more properly called schizophrenic *reactions*.

epileptic d. Mental deterioration in an epileptic person.

presenile d. Senium precox. See also presenile *sclerosis*.

primary d. Old term for simple dementia precox.

secondary d. Old term for dementia supposedly following an acute attack of dementia, a form of dementia precox not now recognized.

senile d. The progressive cerebral manifestation of deterioration associated with old age. A less intense mental involvement than senile psychosis.

traumatic d. That due directly or indirectly to an injury, usually of the head.

demerol hydrochloride. Trade-mark for a brand of meperidine hydrochloride.

de·meth·yl·a'tion. The removal of one or more methyl (—CH_3) groups from a compound.

dem'i- [F., from L. *dimidius*, half]. A prefix signifying *half*.

dem"i·fac'et (dem"ee-fass'it) [*dimidius*; F. *facette*]. One-half of an articulation surface adapted to articulate with two bones.

dem'i·lune [*demi-*; L. *luna*, moon]. A crescent-shaped aggregation of serous cells capping mucous cells in mixed glands; also called *serous crescent*, *demilune of Gianuzzi*.

dem"i·mon·stros'i·ty [*dimidius*; L. *monstrum*, monster]. A variety of congenital deformity that does not give rise to appreciable disorder of function. See *hemiterata*.

de·min"er·al·i·za'tion (dee-min"ur-al-i-zay'shun, -eye-zay'shun) [L. *de-*, indicating separation; ML. *mineralis*, from *minera*, ore mine]. Loss of mineral salts from the body, as from the bones.

coefficient of d. The quantity of mineral matter as compared with the total solids in the urine.

dem"i·pen'ni·form [*dimidius*; L. *penna*, wing; *forma*, shape]. Applied to structures or organs which have one of two margins wing-shaped.

de'mo-, dem- [G. *dēmos*, deme, populace]. A combining form denoting *populace*.

Democritus of Abdera [*Greek philosopher, ca. 460–370 B.C.*]. Noted for developing the atomic theory. Studied the anatomy of the chameleon and the causes of epidemic diseases.

Dem'o·dex (dem'o-decks, dee'mo-) [G. *dēmos*, fat; *dēx*, worm]. A genus of parasitic mites.

D. folliculorum. Species of mites which are parasites of the sebaceous glands and hair follicles. These parasites rarely cause discomfort, but when unusually numerous may cause a chronic erythema, with scaling of the epidermis, accompanied by burning sensations.

de·mog'ra·phy (dee-mog'ruh-fee) [G. *dēmos*, deme; *graphein*, to write]. The science of peoples collectively considered; social science, including that of vital statistics.

dynamic d. A study of the activities of human communities, their rise, progress, and fall.

de·mon'ni·a (dee-mon'ee-uh). See *demonomania*.

de'mon·o-, de'mon- [G. *daimōn*, demon]. A combining form signifying *demon*.

de·mon·ol'a·try [*daimōn*; G. *latreia*, service]. Worship of a demon or spirit.

de"mon·o·ma'ni·a [*daimōn*; G. *mania*, madness]. A form of madness in which a person imagines himself possessed of a devil. —**demonomaniac**, n.

de"mon·op'a·thy [*daimōn*; G. *pathos*, disease]. Demonomania.

de·mon·o·pho'bi·a [*daimōn*; G. *phobos*, fear]. Morbid fear of devils and demons.

de·mor"phin·i·za'tion (dee-mor"fin-i-zay'shun, -eye-zay'shun) [L. *de-*, indicating separation; G. *Morpheus*, god of dreams, from *morphē*, form, because he calls up forms before the sleeper]. Treatment of morphinism by gradual withdrawal of the drug.

Demours, Antoine Pierre [*French ophthal*

1702–86]. Described the posterior elastic lamina of the cornea; called *Demours' membrane*. See Descemet's membrane.

de·mul'cent [L. *demulcere*, to stroke down]. Soothing; allaying irritation of surfaces, especially mucous membranes.

de·mul'cent. A soothing substance, particularly a slippery mucilaginous liquid.

de Mussy's point. See *Guéneau de Mussy*.

de·my'elin·ate [L. *de-*, indicating separation; G. *myelos*, marrow]. Remove or destroy the myelin sheath of nerves or nerve tracts.

de·nar'co·tized (dee·nahr'ko·tized) [*de-*; G. *narkōtikos*, from *narkē*, numbness]. 1. Deprived of narcotizing qualities. 2. Deprived of narcotine, said of opium.

de·na'tu·rant. 1. A substance added to another to make the latter unfit for certain uses, as when methyl alcohol is added to ethyl alcohol for the purpose of preventing beverage use of the ethyl alcohol. 2. In *nuclear science*, a nonfissionable isotope, which, when added to fissionable material, makes the latter unsuited for use in atomic weapons without considerable processing.

de·na"tur·a·tion. See *denaturization*.

de·na'tured [*de-*; L. *natura*, nature]. Changed, made different from normal.

de·na'tured al'co·hol. Alcohol into which some other substance has been introduced, rendering it unfit for drinking but still useful for other purposes.

de·na·tur·i·za·tion (dee·nay"chur·i·zay·shun, -eye·zay·shun) [*de-*; *natura*]. Alteration in the characteristics of an organic substance, especially protein, by physical or chemical action.

Den"dr·as'pis [*dendron*; G. *aspis*, asp]. Genus of snakes of the Elapidae found in Africa, south of the Sahara. This snake is slender and may be seven feet in length. It possesses a powerful neurotoxic venom.

D. angusticeps. The common mamba.

den'drite [G. *dendron*, tree]. The process of a neuron which carries the nerve impulse to the cell body. It is usually branched, like a tree. Syn., *dendron*.

den·drit'ic, den'droid. Branching in treelike or rootlike fashion; arborescent.

den'dron. See *dendrite*.

den·dro·phag"o·cy·to'sis. The phagocytic action of abnormal microglia cells in cases of brain injury. They envelop and remove the degenerating expansions of the fibrous astrocytes.

den"dro·phil'i·a [*dendron*; G. *philein*, to love]. In *psychiatry*, love of trees; sexual attraction to trees.

Deneke, Theodor Karl August (1860–). German bacteriologist and internist, remembered for his description of a bacterium, *Vibrio tyrogenus*, resembling the bacillus of Asiatic cholera. Called *Denekes' spirillum*.

de·ner'vat·ed (dee·nur'vay·tid) [L. *de-*, indicating separation; *nervus*, nerve]. Having the nerve supply interfered with, or the nerve removed.

de·ner·va'tion [*de-*; *nervus*]. 1. Sectioning or removal of a nerve to interrupt the nerve supply to a part. 2. In *veterinary medicine*, the cutting off of the nerve supply to the lower leg and foot to relieve certain types of lameness in the horse.

den'gue (deng'ghee, deng'gay) [West Indian Sp., after Sp. *dengue*, prudery]. An acute, infectious, endemic, and epidemic disease; caused by a filtrable virus transmitted by mosquitoes, especially by the *Aëdes aegypti*. Dengue is characterized by a febrile paroxysm, severe pains in the bones and muscles, and swelling, reddening, and pain of the joints. At times there is a cutaneous eruption. The period of incubation is from three to five days, and the invasion is sudden. The high fever (106° F.) lasts for three or four days and subsides for an interval, then is followed by a second paroxysm. Convalescence is slow and complications are rare. The disease is widespread throughout the tropics and the subtropics. Also called *breakbone fever*, *dandy fever*.

Mediterranean d. Pappataci fever.

de·ni'al. In *psychiatry*, the unconscious psychic mechanism or process whereby an observation is denied or refused recognition in order to avoid anxiety or pain; the simplest and commonest form of the ego defense mechanisms, and a part of many normal phenomena, as in the phantasies of children who deny the realities of their own lives to enjoy play.

den"i·da'tion (den"i·day'shun, dee·nigh-) [*de-*; L. *nidus*, nest]. Disintegration and ejection of the superficial part of the uterine mucosa.

Denigès, Georges [*French biochemist*, 1859–1935]. Introduced a test for formaldehyde in milk: Dilute hydrochloric acid and fuchsin, sodium bisulfite, and sulfuric acid in distilled water are added to the suspected milk; a violet color indicates a positive reaction.

den"i·gra'tion (den"i·gray'shun, dee·nigh-) [L. *denigrare*, to blacken utterly]. Act or process of rendering black, the state of having become black.

Denis, Jean Baptiste [*French physician*, d. 1704]. Performed the first recorded transfusion of blood into a human being (1667) using the blood of a lamb. Transfused human blood later in the same year without success.

Denis, Willey Glover [*American biochemist*, 1879–]. Both alone and with others, he originated many methods which bear his name, as the *Denis method* for serum magnesium, *Folin and Denis method* for phenols, *Folin and Denis method* for Bence Jones protein, and the *Folin, Cannon, and Denis method* for epinephrine. Also see uric acid reagent of Folin and Denis.

de·ni'tri·fy (dee·nigh'tri·figh). Remove nitrogen.

de·ni"tro·gen·a'tion. A procedure by which one removes nitrogen from his body by breathing nitrogen-free gas.

Denonvilliers, Charles Pierre [*French surgeon*, 1808–72]. Known for his description of the rectovesical fascia between the prostate and the rectum, and for his contributions to plastic surgery. Devised an operation for reconstruction of the upper lip, using two full-thickness grafts raised from the cheeks and sutured in the midline, and one for restoration of the nose, using a triangular flap raised from the side of the nose above the defective ala, with the pedicle of the flap upward.

dens (denz) (pl. *dentes*) [L.]. 1. A tooth. 2. The toothlike process on the body of the axis, going through the front part of the ring of the atlas.

d. acutus. An incisor tooth.

d. adultus. A tooth of second dentition.

d. adversus. An incisor tooth.

d. angularis. A canine or cuspid tooth.

d. bicuspidatus. A premolar or bicuspid tooth.

d. caninus. A canine or cuspid tooth.

d. cariosus. A carious tooth.

d. columellaris. A molar tooth.

d. cuspidatus. A canine or cuspid tooth.

d. exsertus. A tooth which projects or is in front of the dental arch; applied more particularly to the canines.

d. incisor. An incisor tooth.

d. lacteus. A milk, temporary, or deciduous tooth.

d. molaris. A molar tooth.

d. primoris. An incisor tooth; so called because it occupies the front or anterior part of the dental arch.

d. sapientia. A wisdom tooth; a name given to the third molar tooth of each half of each jaw.

d. serotinus. A wisdom tooth.

d. tonsial. An incisor tooth.

den·sim′e·ter [L. *densus*, dense; G. *metron*, measure]. An appliance for ascertaining the specific gravity of a liquid. Syn., *hydrometer*. —**densimet′ric**, *adj.*

dens′ in den′te (dens′ in den′tee). An abnormality of development in which the enamel organ has invaginated within the pulp chamber producing deposition of enamel within the tooth.

den·sit·om′e·ter. 1. An instrument utilizing the photoelectric principle for measuring the opacity of exposed and processed photographic film. 2. See *densimeter*.

den′si·ty [*densus*]. Closeness of any space distribution; for example, electron density signifies the number of electrons per unit volume. Abbreviated, d.

absolute d. (a) The ratio of the mass of a substance to its volume. See *specific gravity*. (b) The light-absorbing power of the silver image in photographic materials.

photographic d. A measure of the opacity of an exposed film, the greater the exposure, the greater the photographic density.

den′so·gram [*densus*; G. *graphein*, to write]. A record of the changes in cardiac density during the cardiac cycle made with the electrokymographic lead completely covered by the heart shadow.

dent-. See *denti-*.

den·tag′ra (den-tag′ruh, den′tag·ruh, den·tay′gruh) [L. *dens*, tooth; G. *agra*, catching]. 1. Toothache. *Obs.* 2. A tooth forceps.

den′tal [*dens*]. Pertaining to the teeth.

den′tal en′gine. In *dentistry*, the apparatus used to operate rotating, cutting, or polishing devices such as burs, abrasive disks or wheels, and brushes. These interchangeable parts are held in a handpiece which is connected by a flexible arm to a controlled driving mechanism, usually an electric motor.

den′tal floss. A soft thread, usually flat and waxed; used to clean interdental spaces and tooth surfaces.

den·tal′gi·a [*dens*; G. *algos*, pain]. Toothache. *Obs.*

den′tal hy′gien·ist. A person trained and licensed in the technique of mechanically removing calcareous deposits and stains from the teeth.

den′tal i·den″ti·fi·ca′tion rec′ord. In *U.S. Army medicine*, an official form for recording every characteristic of the condition of a soldier's teeth used as a means of identification if injuries causing death result in the destruction of other features of the soldier.

dentalone. Trade-mark for chlorobutanol dissolved in essential oils; used as an analgesic and antiseptic.

den′tal serv′ice. 1. That part of the U.S. Army Medical Service staff that provides dental care for military personnel. 2. The detection, treatment, and prevention of dental diseases as part of the medical service provided for military personnel.

den′ta·phone. See *dentiphone*.

den·tar·pa′ga [*dens*; G. *harpagē*, hook]. Instrument for the extraction of teeth. *Obs.*

den′tar·y [*dens*]. 1. A bone found chiefly in fishes, regarded as a phylogenetic component of the mammalian mandible. 2. Dental: incorrect use.

den′tate [L. *dentatus*, toothed]. 1. Having teeth or toothlike projections; in botany, having a toothed or serrated edge. 2. Having a scalloped edge, as the dentate ligament, which has about 21 pairs of dentations or pointed processes. —**denta′tion**, *n.*

den·ta′tum (den-tay′tum, -tah′tum) [*dentatus*]. The dentate nucleus of the cerebellum.

den″ta·la′tion [L. *dens*, tooth]. The state of having toothlike processes.

den′tes (den′teez). Plural of dens.

den′ti-, dent- [*dens*]. A combining form meaning *tooth* or *dental*.

den′tes prae′cox [L.]. The presence of erupted teeth at birth.

den·ti·a·skia′scope [*dens*; G. *skia*, shadow; *skopein*, to examine]. Instrument for examining the teeth and alveoli. It consists of a small fluorescent screen within an aluminum case, so situated that the screen image is reflected upon a mirror which the operator sees through a tube.

den′ti·cle [L. *denticulus*, small tooth]. 1. A small tooth or projecting point. 2. A deposit of dentin-like or calcareous material within the pulp of the tooth, associated with degenerative or retrogressive changes of the pulp; pulpstone; also called *nodular calcification*.

den·tic′u·late [*denticulus*]. Having minute dentations; furnished with small teeth or notches.

den″ti·fi·ca′tion [L. *dens*, tooth; *facere*, to make]. Formation of teeth; dentition.

den′ti·form [*dens*; L. *forma*, shape]. Odontoid; tooth-shaped.

den′ti·frice (den′ti·fris) [L. *dentifricium*, from *dens*; *fricare*, to rub]. A substance or preparation used to aid the mechanical cleaning of the teeth.

den·tig′er·ous (den-tidj′ur·us) [*dens*; L. *gerere*, to carry]. Bearing or containing teeth.

den′ti·lave [*dens*; L. *lavare*, to wash]. A mouthwash or toothwash.

den′tin (den′tin, -teen), **den′tine** [*dens*]. The calcified tissue which forms the major part of a tooth. Dentin is related to bone but differs from it in the absence of included cells. It is covered by the enamel over the crown of the tooth, by the cementum over the roots, and itself surrounds the pulp chamber and root canals which contain the dental pulp. Syn., *substantia eburnea*, *ivory*, *ebur*. —**dentinal**, *adj.*

adventitious d. See *secondary d.*

circumpulpar d. The major part of the dentin which lies next the pulp.

cover d. See *mantle d.*

hereditary opalescent d. See *dentinogenesis imperfecta*.

interglobular d. A small region of poorly calcified dentin found along the course of the incremental lines.

irregular d. See *secondary d.*

mantle d. The thin superficial layer of dentin.

secondary d. The dentin of repair; that which is deposited on the walls of the pulp chamber by the dental pulp in response to loss of tooth substance.

vitreous d. A variety of dentin with but few dentinal tubules. Syn., *vitrodentin*.

den′tine. See *dentin*.

den·tin″i·fi·ca′tion [*dens*; L. *facere*, to make]. See *dentinogenesis*.

den″ti·no·blas·to′ma. A benign odontogenic tumor made up of poorly developed dentin.

den″ti·no·ce·men′tal [*dens*; L. *caementum*, rough stone]. Relating to the dentin and cementum of a tooth.

den″ti·no·gen′e·sis [*dens*; G. *genesis*, production]. The formation of dentin; also called *dentinification*.

d. imperfecta. A hereditary disease of the teeth, sometimes associated with skeletal disorders, in

which the dentin is irregularly arranged and hypocalcific. Th size of the pulp chamber is progressively reduced, ven to obliteration. The crown ppears opalescent bluish gray. Syn. *hereditary opalescent dentin.*

den'ti noid [*dens*; G. *eidos*, form]. A calcified structure having some but ot all f the characteristics of dentin.

den"ti no ma [*dens*; G. *-ōma*, tumor]. A benign odontogenic tumor made p of dentin.

den ti nos te oid [*dens*; G. *osteon*, bone; *eidos*]. A hard, calcified structure having some of the histologic ppearance of both dentin and bone.

den tip rous [*dens*; L. *parere*, to bring forth]. Pertaining to the production of teeth.

den ti phone [*dens*; G. *phōnē*, sound]. A form of audiphone in which the vibrating disk is attached to or held in contact with the teeth, and is thus used to carry vibrations through the bony structures to the ditory nerves.

den'tist [*dens*]. One who practices dentistry.

den tis try [*dens*]. That department of medicine concerned with the prevention, diagnosis, and treatment of diseases of the teeth and adjacent tissues, and the restoration of missing dental and oral structures.

aviation d. That branch of dentistry concerned with the oral care of those who fly at high altitudes.

operative d. The branch of dentistry concerned with actual operations upon the natural teeth or the soft tissues of the oral cavity as distinguished from those operations performed in the dental laboratory.

preventive d. The branch of dental science dealing with prevention of dental diseases by prophylactic and educational methods.

prosthetic d. That branch of dentistry which deals with the replacement of missing teeth or oral tissues by artificial means. Syn., *prosthodontics.*

den-ti'tion [L. *dentitio*, from *dens*]. 1. The process of teething, the eruption of the teeth through the alveolar ridge. 2. The character and arrangement of the teeth of an individual or species.

accessional d. The eruption of those teeth which are not preceded by deciduous teeth in man, the permanent molars.

deciduous d. Primary *d.*

permanent d. Secondary *d.*

postpermanent d. See third *d.*

primary d. (a) The eruption of the deciduous teeth, umbering 20 in man. (b) The deciduous teeth. Syn., *deciduous d.* See also under *teeth.*

secondary d. (a) The eruption of the adult teeth, numbering 32 in man. (b) Th permanent teeth. Syn., *permanent d.* See also under *teeth.*

third d. Eruption of teeth subsequent to loss of teeth of the permanent (secondary) dentition; the postpermanent dentition. Though multiple cases have been reported in man, there is no certain evidence which will rule out delayed eruption of teeth of the permanent dentition or eruption of supernumerary teeth in the pproximate position of lost permanent teeth.

den'to- [*dens*]. Combining form meaning *dental, pertaining to dentistry.*

den"to-al-ve o-lar [*dens*; L. *alveolus*, small hollow]. Pertaining to the alveolus of tooth.

den"to-al"ve-o-li'tis. Periodontal disease of an inflammatory nature. *Obs.*

den"to fa cial (den to-fay'shul) [*dens*; L. *facies*, face]. Pertaining to both the teeth and the face.

den tog'ra-phy [*dens*; G. *graphein*, to write]. A description of teeth.

den'toid [*dens*; G. *eidos*, form]. Toothlike.

den"to-le'gal. Pertaining to dental jurisprudence.

den ton my Classification of the teeth.

den'ture [*dens*]. The natural or artificial teeth of an individual, considered as unit.

artificial d. A dental prosthesis that replaces missing teeth.

full d. One that replaces all of the teeth in an edentulous j w.

partial artificial d. A replacement of less than the full number of teeth in either arch; remov- able ppliance is used, which is attached to the adjoining natural teeth.

de nu cle "ted (dee-new'klee-ay"tid) [L. *de-*, indicating separation; *nucleus*, kernel]. Deprived of nucleus.

de nude' [L. *denudare*, to denude]. T deprive of covering; to strip, lay bare said also of the root of tooth. —**denuda'tion,** *n.*

de-ob stru ent [*de-*; L. *obstruere*, to obstruct]. Any agent or drug which removes an obstruction or obstructive material, as in the alimentary canal.

de dor nt [*de-*; L. *odorare*, to give smell to thing]. A substance that removes or conceals offensive odors. —**deo dorant** *adj.* **deodorize,** *v.*

de o-ral'i ty [*de-*; L. *os*, mouth]. *I psychoanalysis*, the shifting of instinctual activity w y from gratification through oral expression.

de or sum duc'tion [L. *deorsum*, downward; *ducere*, to lead]. A turning downward of part.

de-or"sum-ver'gence [*deorsum*; L. *vergere*, to turn]. A downward inclination, as of the eyes.

de-os"si fi-ca'tion [*de-*; L. *os*, bone; *facere*, to make]. The bsorption of bony material; the deprivation of the bony character of any part.

de-ox'y- dee-ox'y-. *I chemistry* combining form signifying loss of oxygen from compound, frequently by replacement of hydroxyl group by hydrogen atom.

de-ox"y cho'lic ac'id (dee-ock si ko'lick, -kol'ick). Desoxychol ic acid.

de-ox"y cor'tone ac'e-tate British Pharmacopoeia title for desoxycorticosterone acetate.

de-ox"y cos'tone ac' tate. Desoxycorticosterone acetate.

de-ox"y gen 'tion [*de-*; G. *oxys*, sharp *genesthai*, from *gignesthai*, to be produced]. The process of removing oxygen from compound.

dep. *Depuratus*; purified.

De part ment of Health, Ed u ca'tion and Wel'fare A department of the U S. government, created by Congress in 1953 and headed by cabinet officer. It administers the Public Health Service and the Commissions of Food and Drugs, Education, and Social Security.

d per"son l i za ti n (dee-pur sun-ul-i-zay shun, -eye say'shun) [*de-*; L. *personalis*, from *persona*, person]. Loss of the sense of one own reality or identity. *I psychopathology* subjective feeling of estrangement or unreality within the personality. The subject feels changed and not himself his feelings seem dead. Other people and objects often seem unreal; see *derealization*. Current events may seem to have happened before *see déjà vu*. In mild form depersonalization is common occurrence; in severe forms, it is finding in various neuroses, depressive states, and beginning schizophrenia. It is considered to be pathological defense mechanism aimed at protecting the individual from severe outer or inner trauma on the basis that what is seen is unreal and hence not t be feared, or that being not oneself, one bservations are not to be regarded as true, or accordingly dangerous.

de pig"men ta tion (dee pig"men tay'shun) [*de-*; L. *pigmentum*, pigment]. 1. The removal of natural pigments from the skin. 2. The removal

of pigments from microscopic preparations by the action of weak preparations of bleaching or oxidizing solutions.

dep'i late [L. *depilare*, to pull out the hair]. To remove hair. —**depil'atory** *adj* *n*; **depila tion**, *n*.

dep'i lous [L. *depilis*, without hair]. Hairless.

de ple'tion [L. *deplere*, to empty]. 1. The act of diminishing the quantity of fluid in the body or in a part, especially by bleeding. 2. The condition of the system produced by the excessive loss of blood or other fluids; reduction of strength; exhaustion. —**deplete** *v.t.*

de plu ma'tion [L. *de-*, indicating separation; *plumare*, to cover with feathers]. Loss of the eyelashes. *Rare.*

depo-cer-o-cillin. Trade-mark for chloroprocaine penicillin O, a long-acting penicillin preparation especially useful for patients sensitive to penicillin G.

depo-heparin sodium. Trade-marked name for an injectable preparation of heparin sodium, characterized by prolonged effect of the latter achieved through combination with gelatin and dextrose.

de po"lar i za'tion (dee-po"lur i zay'shun, -eye-zay'shun) [*de-*; L. *polus*, pole]. The neutralization of polarity; the breaking down of polarized semipermeable membranes, as in nerve or muscle cells in the conduction of impulses.

de po lym er ase (dee"po lim ur-ace, dee-pol'i-mur-ace) One of a group of enzymes which depolymerize high molecular weight plant and animal nucleic acids, forming mononucleotides without the liberation of phosphoric acid.

de-pol"y mer i za'tion. The cleavage by various means, of a polymer of high molecular weight into simpler units of the same composition. —**depolymerize**, *v.*

de-pos'it [L. *depositum*, from *deponere*, to set down]. A sediment or collection of morbid particles in body.

dental d. Hard or soft material adherent to the surface of a tooth.

de pot. 1. *physiology* the site of accumulation, deposit, or storage of body products not immediately or actively involved in metabolic processes, such as fat depot.

medical d. (dep po) An installation of the defense department for concentrating, storing, and issuing medical supplies.

de-pres'sant [L. *depressum*, from *deprimere*, to depress]. A medicine that diminishes functional activity. —**depres'sant**, *adj*

de-pres sion [L. *depressio*, from *depressum*]. 1. A hollow or fossa. 2. Inward displacement of a part, as of the skull. 3. Lowering of vital functions under the action of some depressing agent. 4. *In psychopathology*, an emotional state of dejection usually associated with manic-depressive psychoses. Mild depression with anxiety and hypochondria is frequently seen in youth of both sexes (adolescent depression) and often occurs whenever the adult sex problem becomes acute, as after engagement or marriage. Depression may also occur as a result of an external situation, being relieved when the external situation is removed (reactive depression). See melancholia. —**depressed, depressive** *adj*

cryptic d. The state of mental depression characterized by sense of guilt, psychomotor retardation, and diurnal variation, patient being most depressed in the morning. It is often accompanied by headache, cardiovascular disturbances, reduction of sexual function, fatigue, and insomnia.

Leao's spreading d. A marked enduring reduction of the spontaneous electrical activity of the cerebral cortex, following repeated local stimulation of any area, and spreading slowly from the region stimulated to involve successively more distant parts of the cerebral cortex.

de-pres'sor [*depressus*]. 1. A muscle, instrument, or apparatus that depresses. 2. A nerve, stimulation of which lowers arterial blood pressure by reflex vasodilatation and by slowing the heart, as the depressor nerve.

d. alae nasi. That which depresses the alae of the nose.

d. anguli oris. The triangularis muscle.

d. epiglottidis. Certain fibers of the thyroepiglottic muscle.

d. labii inferioris. The quadratus labii inferioris muscle.

d. septi nasi A portion of the depressor alae nasi.

tongue d. A spatula for pushing down the tongue during the examination of the mouth and throat.

depropanex. Trade-mark for a deproteinated pancreatic extract used intramuscularly as a vasodilator.

dep'side. Any of a class of compounds characterized by an ester type of union of two or more molecules of phenolic acids, in which the phenolic hydroxyl of one molecule interacts with the carboxyl of another molecule in a manner similar to the combination of amino acids to form peptides. Certain tannins are naturally occurring depsides.

depth [akin to D *diept*] Measurement of distance from top to bottom or from front to back; deepness.

focal d. The power of a lens to give clear images of objects at different distances from it. Also called *field d.*

de pu"li za tion (dee-pew"li-zay'shun, -lye-zay shun) [L. *de-*, indicating separation; *pulex*, a flea]. The destruction or removal of fleas, as from infested animals or premises.

der a del phus [G *derē*, neck; *adelphos*, brother]. A monocephalic dual monster with the body fused above the umbilicus, and with four lower extremities and three or four upper. Syn., *cephalothoracopagus*.

der"an-en"ce-pha'li a [*derē*; G *a-* not; *enkephalos*, brain]. Teratism marked by absence of the head and brain, while the neck is present.

de-range ment [F] Disorder of intellect; insanity.

internal d. of the knee. A condition of abnormal joint mobility with painful symptoms, usually due to injury to the medial semilunar cartilage.

deratol. A proprietary capsule containing vitamin D.

Dercum, Francis Xavier [*American neurologist*, 1856-1931]. Known for his description of adiposis dolorosa (1888) called *Dercum's disease*.

de-re al i za tion. *In psychiatry* a subjective feeling that other people or objects are unreal, changed or changing, or strange in their particular characteristics and configuration often accompanies *depersonalization*.

de re-ism [L. *de-*, indicating separation; *res*, thing]. *In psychiatry*, a mental state in which the subject is lost in phantasy showing no interest in external experiences or reality; autism. —**dereis'tic**, *adj*

der"en-ceph a lus [G. *derē*, neck; *enkephalos*, brain]. A monster showing derencephaly.

der"en-ceph a-ly [*derē*; *enkephalos*]. A monstrosity consisting of rudimentary development of the bones of the cranial vault and a markedly defective brain, which rests in the bifid upper cervical vertebrae the posterior portion of the occiput is absent. A variety of anencephaly. —**derencephalous**, *adj*

der'ic [G. *deros*, skin]. External; pertaining to the skin.

deriphyllin. Trade-mark for theophylline diethanolamine.

der"i va'tion [L. *derivatio*, from *derivare*, to turn aside]. The deflection of blood from one part of the body to another, as by counterirritation; formerly thought to relieve inflammatory congestion. *Obs.*

de riv'a tive [*derivare*]. 1. An agent that produces derivation. 2. A substance derived from another substance. —**deriv'ative**, *adj.*

derm-. See *dermato-*.

-derm [G. *derma*, skin]. Suffix signifying *skin*, *integument*, or *covering*.

der'ma, derm [*derma*]. The layer of the skin between the epidermis and subcutaneous tissue; the connective tissue of the corium. Syn., *corium*, *cutis vera*, *dermis*. —**dermal, dermic**, *adj.*

der'ma-. See *dermato-*.

-der'ma [G.]. A combining form denoting *type of skin*, *type of skin disease*, or *genus characterized by type of skin*.

Der"ma-cen'tor [*derma*; G. *kentōr*, goader]. A genus of ticks some species of which are vectors of disease.

D. andersoni. The wood tick; medically it is the most important North American species, transmitting Rocky Mountain spotted fever and tularemia as well as producing tick paralysis.

D. variabilis. A species widely distributed in North America which has as its principal host the dog, although man and other mammals may be attacked.

Der"ma cen trox'e nus. A genus of rickettsias pathogenic for man, transmitted by ticks and, in rickettsialpox, by mites. On smear from yolk sac films, the organisms appear to be located within both the nucleus and the cytoplasm. The species of this genus are the causative agents of the spotted fever group.

D. akari. The species of *Dermacentroxenus* which is the causative agent of rickettsialpox. Syn. *Rickettsia akari*.

D. pediculi. The species which is the causative agent of trench fever; also called *Rickettsia pediculi*, *R. wolhynica*, *R. quintana*, *R. weigli*.

D. rickettsi. The species which is the causative agent of the North American (Rocky Mountain) and South American (Brazilian and Colombian) spotted fevers.

D. rickettsi conori. The variety of *D. rickettsi* which is the causative agent of the tick-bite fevers of Africa; also called *Dermacentroxenus conori*, *Rickettsia conori*.

der'ma drome. Any skin manifestation of an internal disorder; the cutaneous part of a syndrome.

der"ma my i'a sis lin e a'ris mi'grans oestro'sa (dur mah-migh eye uh-sis lin ee air'iss my'granz ess-tro sah). See *larva migrans*.

der ma an"a plas'ty [*derma*; G. *anaplassein*, to form anew]. Skin grafting.

Der"ma nys'sus [*derma*; G. *nyssein*, to prick]. A genus of itch mites.

D. avium, **D. gallinae.** A species which is a serious pest of poultry and sometimes attacks man.

der"ma tag'ra (dur"muh tag ruh, tay'gruh) [*derma*; G. *agra*, catching]. 1. Pellagra. 2. Dermatalgia.

der"ma tal'gi a [*derma*, G. *algos*, pain]. Pain, burning, and other sensations of the skin, unaccompanied by any structural change; probably caused by some nervous disease or reflex influence.

der"ma ta neu ri a [*derma*, G. *a*-, not; *neuron*, nerve]. Derangement of the nerve supply of the skin, causing any disturbance of sensation.

der"mat he mi a (dur mat hee mee-uh, dur mahtee mee-uh) [*derma*, G. *haima*, blood]. A congestion of the skin. Also called *dermaemia*, *dermahemia*.

der'ma therm [*derma*; G. *thermē*, heat]. A instrument, made up of differential thermocouples, used to measure skin temperature. The apparatus consists of two sensitive thermopiles in parallel with a millivoltmeter with one thermopile maintained at a constant known temperature and the other applied to the skin. The reading in degrees on the millivoltmeter added to or subtracted from the constant gives the skin temperature.

der mat'ic [*derma*]. Relating to the skin.

der mat'ic. A remedy for diseases of the skin.

der"ma ti'tis [*derma*, G. *-itis*, inflammation]. An inflammation of the skin.

allergic d. Dermatitis due to the action of an allergen upon sensitized tissues. It may be atopic dermatitis or contact dermatitis.

atabrine d. A distinctive drug eruption characterized by lichenoid lichen-planus-like papules. In some an eczematoid dermatitis is produced by the drug.

atopic d. That due to sensitization to substances by ingestion or inhalation. There is usually a familial history of some type of allergy.

"autosensitization" d. A generalized eczematoid reaction, most often considered to represent a spread from stasis dermatitis on the theory that the absorption of products from the stasis eczema causes an eczematoid reaction at distant sites.

berlock d. A brownish pigmentation seen on skin exposed to sun after the use of cologne.

blastomycetic d. A skin disease caused by one of the several yeastlike fungi.

carcinomatous d. An inflammation of the skin associated with a carcinoma. Also see *inflammatory carcinoma*.

caterpillar d. A form due to the highly irritating hairs of the larvae of certain Lepidoptera, characterized first by erythematous macules and then by wheals. Syn., *caterpillar urticaria*.

cercarial d. See *schistosome d.*

clam diggers' d. A form of contact dermatitis which has been observed in clam diggers working without protective clothing.

contact d. A dermatitis resulting either from the primary irritant effect of a substance or more frequently from the sensitization to a substance coming in contact with the skin; also called *d. venenata*.

contagious pustular d. A virus disease of sheep and goats characterized by formation of vesicles on the skin of the legs, nostrils, and eyelids, the vesicles being rapidly transformed into pustules. The disease may be transmitted to man, and is then called *orf*.

d. actinica. That due to the action of actinic rays, from sunlight or artificial ultraviolet radiation.

d. calorica. That due to burns and scalds.

d. coccidioides. Valley fever; coccidioidomycosis.

d. congelationis. See *frostbite*.

d. continua. See *d. repens*.

d. contusiformis. Erythema nodosum.

d. dysmenorrheica. An eruption seen during the menstrual period in women having dysmenorrhea. Wheals, vesicles, or erythematous areas are seen over the body. Many eruptions are exaggerated during the menses. Also called *catamenial d.*

d. escharotica. A severe ulcerative type due to exposure to escharotic agents.

d. exfoliativa neonatorum. An acute or chronic inflammation in infants, in which the epidermis

is shed more or less freely in large or small scales first described by Ritter von Rittershain (1870). In distinct form in adults, d. exfoliativa occurs in pityriasis rubra.

d. exulcerans palmaris. A scarring tylotic eczema of the hands which may lead to contracture of the fingers, most frequent in women in Formosa; also called *Formosa eczema*.

d. factitia. An eruption induced by the patient varies from simple erythema to gangrene. Usually produced by some irritant in neurotic or hysterical subjects. Also called *feigned eruptions*, *d. autofactitia*, *hysterical dermatoneurosis*.

d. gangrenosa. Sphacelodermia; gangrenous inflammation of the skin.

d. gangrenosa infantum. A form of ecthyma marked by brown discolorations of the skin, usually surrounded by halo; the center of these efflorescences rapidly become necrotic. Due to *Pseudomonas aeruginosa*.

d. herpetiformis. An inflammatory recurring skin disease of a herpetic character the various lesions showing tendency to group. It is protean, appearing as erythema, vesicles, blebs, and pustules associated with intense itching and burning. Also called *Duhring's disease*.

d. hiemalis. A recurrent inflammation of the skin, associated with cold weather and allied to the erythemas.

d. hypostatica. One occurring in an area of poor blood supply usually the lower legs.

d. medicamentosa. Eruptions due to the action of certain drugs.

d. nodularis necrotica. An entity of indetermined etiology described by Werther in 1910, characterized by polymorphous eruption of vesicles, pustules, hemorrhagic papules, nodules, ulcers, plaques and their sequels, scars and hyperpigmentation.

d. papillaris capillitii. See *folliculitis keloidis*.

d. repens. A subacute peripherally spreading dermatitis due to *Micrococcus pyogenes* (staphyloderma) usually following minor injuries, and commencing almost exclusively on the distal part of the upper extremity marked by vesicles or pustules which dry and crust.

d. rhus. Contact dermatitis due to poison ivy or poison oak.

d. seborrheica. An acute inflammatory form, occurring usually on oily skin in areas having large sebaceous glands; characterized by dry moist, or greasy scales and by crusted yellowish patches, remissions, exacerbations, and itching. Syn., *eczema seborrheicum*, *seborrhea sicca*.

d. traumatica. That resulting from traumatism.

d. vegetans. Elevated, vegetating lesions covered with crusts; very prone to bleeding and believed to be due to some infection.

d. venenata. See contact *d.*

d. verrucosa. Chromoblastomycosis.

eczematoid d. See eczematoid reaction.

extrinsic allergic d. That caused by any external substance capable of penetrating the epidermis, such as that caused by contact with poison ivy.

flexural d. Atopic dermatitis seen primarily in infants and children on the face, anterior neck, antecubital and popliteal spaces, and other flexural areas.

follicular hyperkeratotic papular d. See *phrynoderma*.

hairdressers' d. Contact dermatitis due to the irritating effects of the reducing agents or sensitization to the gums and resins used in cold waving.

hop d. A contact dermatitis due to fresh hop oil, seen in hop pickers.

infectious eczematoid d. A low-grade skin infection produces oozing, erythematous patches.

intrinsic d. That caused by ingested substances most common in infants and young children, and may accompany asthma, allergic rhinitis, or urticaria. A hereditary predisposition is involved.

nummular d. See *eczema nummularis*.

pigmented purpuric lichenoid d. A form of capillaritis usually of the lower extremities, though the upper extremities and trunk may be involved, characterized by elevated papules which become purpuric or telangiectatic or pigmented in varying shades. Its course is chronic, leading to lichenification. Syn. *Gougerot-Blum disease*.

roentgen d. That due to prolonged exposure to roentgen rays, or radium. Also called *radium d.*, *x-ray d.*

schistosome d. One caused by the penetration of the cercariae of schistosomes into the dermis, causing itching and wheal formation. Also called *swimmers' itch*, *dew itch*, *coolie itch*. Syn. *cercarial d.*

seborrheic d. See *d. seborrheica*.

solar d. A general term for skin eruptions caused by exposure to the sun, excluding sunburn; it may be plaquelike, eczematous, papular or erythematous.

stasis d. Chronic eczematoid reaction of the skin of the legs, due to vascular *stasis*.

vegetative d. See *d. vegetans*.

verrucous mycotic d. Blastomycosis.

der'ma·to-, **dermat-** [*derma*]. A combining form meaning skin or hide.

Der"ma·to'bi·a [*derma*; G. *bios*, life]. A genus of botflies whose larvae are obligatory sarcobionts, producing cutaneous myiasis in many animals.

D. hominis. A species found in tropical America, causing dermal myiasis in man. The eggs are deposited by the adult female on the skin of the host. Upon emergence, the larva burrows into the skin, producing swelling very much like an ordinary boil.

der"ma·to·bi·a'sis [*derma*, *bios*; NL. *-iasis*, condition]. Infection with *Dermatobia*.

der"ma·to·cel"lu·li'tis [*derma*; L. *cellula*, small storeroom; G. *-itis*, inflammation]. Acute inflammation of the skin and subcutaneous tissue.

der"ma·to·cha·la'sis [*derma*, G. *chalan*, to become slack]. Diffuse relaxation of the skin, with associated folding and excess of elastic and collagenous fibers.

der"ma·to·co·ni·o'sis, **der"ma·to·ko"ni·o'sis** [*derma*, G. *konis*, dust; *-osis*, condition]. Any skin disease due to dust.

der'ma·to·cyst" [*derma*; G. *kystis*, bladder]. A cyst of the skin.

der"ma·to·dyn'i·a. See *dermatalgia*.

der"ma·to·fi·bro'ma. Firm, single, or multiple slowly growing nodules, reddish, yellow or bluish-black, found most commonly on the extremities in adults. Histologically the nodules are composed chiefly of fibroblasts. Those containing additionally variable number of histiocytes are called *histiocytomas*. Also called *d. lenticulare*, *fibroma durum*, *fibroma simplex*, *fibroma en pastille*, *nodular subepidermal fibrosis*, *noduli cutanei*, *sclerosing hemangioma*.

der"ma·to·fi"bro·sar·co'ma pro·tu"ber·ans. A local sclerotic protruding dermal neoplasm of low grade malignancy which tends to recur repeatedly after inadequate excision. The majority of the tumors are located along or near the mammary ridge.

der"ma·to·glyph'ics [*derma*; G. *glyphein*, to carve]. Study of skin-pattern lines and whorls of

the hands and feet; used for identification purposes. These patterns are individually characteristic and do not change during a person's lifetime.

der"ma-to-graph'ism. See *dermographia*.

der"ma-tog'ra-phy [*derma*; G. *graphein*, to write]. 1. A description of the skin. 2. Dermographia.

der"ma-to-het'er-o-plas"ty. See *graft*.

der"ma-to-ko"ni-o'sis. See *dermatoconiosis*.

der'ma-tol. Bismuth subgallate.

der"ma-tol'o-gist [*derma*; G. *logos*, word]. A skin specialist; a physician who makes a special study of diseases of the skin.

der"ma-tol'o-gy [*derma*; *logos*]. Science of the skin, its structure, functions, diseases, and their treatment. —**dermatolog'ic, dermatolog'ical,** *adj.*

der"ma-tol'y-sis [*derma*; G. *lysis*, loosing]. 1. Abnormal laxation of the skin, usually congenital, producing folds. 2. Fibromas of the skin with masses of pendulous skin. Also called *chalazodermia, cutis pendula, fibroma pendulum, lax skin*.

der'ma-tome [*derma*; G. *tomos*, cutting]. 1. The areas of the skin supplied with sensory fibers from a single spinal nerve. 2. An instrument for cutting skin, as in grafting. 3. The lateral part of an embryonic somite; cutis plate. —**dermatom'ic,** *adj.*

der"ma-to-my'ces (-migh'seez) [*derma*; G. *mykēs*, fungus]. Dermatophyte.

der"ma-to-my'cete. Dermatophyta.

der"ma-to-my-co'sis (-migh-ko'sis) [*derma*; *mykēs*; G. *-ōsis*, condition]. Any skin disease caused by a vegetable parasite; fungus infection of the skin.

der"ma-to-my-o'ma (-migh-o'muh) [*derma*; G. *mys*, muscle; *-ōma*, tumor]. Myoma located in the skin.

der"ma-to-my"o-si'tis [*derma*; *mys*; G. *-itis*, inflammation]. Degenerative changes of skin and muscles causing weakness and pain; the condition may be extensive or minimal, the cutaneous reaction may be severe with edema and erythema or completely absent. Myoglobinuria may occur. Also called *pseudotrichinosis*.

der"ma-to-neu-rol'o-gy [*derma*; G. *neuron*, nerve; *logos*, word]. Study of the nerves of the skin.

der"ma-to-neu-ro'sis [*derma*; *neuron*; G. *-ōsis*, condition]. A skin disease of nervous origin.

hysterical d. A self-produced eruption in a hysterical person.

der"ma-to-pa-thol'o-gy [*derma*; G. *pathos*, disease; *logos*, word]. Pathology of the skin.

der"ma-to-path"o-pho'bi-a [*derma*; *pathos*; G. *phobos*, fear]. Morbid fear of having a skin disease.

der"ma-top'a-thy [*derma*; *pathos*]. Any skin disease. —**dermatopath'ic,** *adj.*

der"ma-to-phi-li'a-sis [*derma*; G. *philein*, to love; NL. *-iasis*, condition]. Infestation by the chigoe flea, *Tunga penetrans*.

Der"ma-toph'i-lus pen'e-trans (pen'i-trans). Synonym for *Tunga penetrans*.

der'ma-to-phyte [*derma*; G. *phyton*, plant]. One of a group of fungi which invade the superficial skin. The dermatophytes are now divided into three genera—*Microsporum*, *Epidermophyton*, and *Trichophyton* (Emmons classification based on differences in morphologic features). Formerly they were classified according to the type of lesion from which they were isolated, without regard to the form or structure of the organisms. Also spelled *dermaphyte*. Syn., *dermatomycete*.

der"ma-toph'y-tid [*derma*; *phyton*]. A rash associated with a skin disease caused by a vegetable parasite.

der"ma-to-phy-to'sis (-figh-to'sis) [*derma*; *phyton*; G. *-ōsis*, condition]. A skin eruption characterized by the formation of small vesicles on the hands and feet, especially between the toes, with cracking and scaling. There is sometimes secondary infection. The cause may be any one of the dermatophytes. Syn., *ringworm, athlete's foot*.

der'ma-to-plas"ty [*derma*; G. *plassein*, to form]. A plastic operation on the skin whereby skin losses or defects are replaced by skin flaps or grafts.

der"ma-to-pol"y-neu-ri'tis. See *erythredema polyneuropathy*.

der"ma-tor-rha'gi-a [*derma*; G. *rhēgnynai*, to burst forth]. Skin hemorrhage.

der"ma-to-scle-ro'sis. See *scleroderma*.

der"ma-tos'co-py [*derma*; G. *skopein*, to examine]. Examination of the skin, particularly microscopical examination of the superficial capillaries of the skin.

der"ma-to'sis (pl. *dermatoses*) [*derma*; G. *-ōsis*, condition]. Any disease of the skin. See also *dermatitis*.

actinic d. A dermatosis due to exposure to sunlight. It may be urticarial, papular, or eczematous.

allergic d. See allergic *dermatitis*.

bullous d. A condition of the skin marked by bullae, as in erythema multiforme, dermatitis herpetiformis, and pemphigus.

cholinogenic d. A dermatosis, usually urticarial or erythematous, produced by efferent cholinergic impulses via the autonomic nervous system.

d. papulosa nigra. An eruption commonly seen in Negroes, usually on the face, consisting of many tiny tumors of the skin; probably nevoid in origin.

occupational d. One that results from chemicals or irritations resulting from the nature of an occupation.

postvaccinal d. A dermatosis following vaccination, marked by lesions similar to those of urticaria pigmentosa except that desquamation is present and dermographia is absent.

precancerous d. A skin disorder that sometimes develops into a malignant skin lesion.

progressive pigmentary d. A reddish, purpuric, papular eruption. It is seen principally on the legs and is progressive in character. Also called *Schamberg's disease*.

stress d. 1. A grouping of morphologically different cutaneous diseases which supposedly have a twofold origin: the variable emotional or psychic factors and the suppression of the pituitary-adrenal mechanism of resistance. 2. Psychocutaneous reaction. Examples are alopecia areata, lichen planus, and psoriasis.

der'ma-to-some [*derma*; G. *sōma*, body]. A thickening or knot in the equatorial region of each spindle fiber in the process of cell division.

der"ma-to-sto"ma-ti'tis (-sto-muh-tye'tis, -st"oh-muh-tye'tis) [*derma*; G. *stoma*, mouth; *-itis*, inflammation]. A severe form of erythema multiforme. See Stevens-Johnson *syndrome*.

der"ma-to-ther'a-py [*derma*; G. *therapeia*, treatment]. Treatment of cutaneous affections.

der"ma-to-thla'si-a (dur"muh-to-thlay'zh b, -see-uh) [*derma*; G. *thlasis*, bruising]. A morbid state marked by an uncontrollable impulse to pinch or rub the skin.

der"ma-tot'o-my [*derma*; G. *tomē*, a cutting]. Anatomy or dissection of the skin.

der"ma-to-zo'on (pl. *dermatozoa*). Any animal parasite of the skin.

der"ma-to-zo"o-no'sis. Any pathologic condition due to a dermatozoon.

der'mis. Derma.

der-mi'tis. Dermatitis.

der'mo-, derm-, der'ma-. See *dermato-*.

der'mo-blast [*derma*; G. *blastos*, germ]. That part of the mesoderm which develops into the corium.

der″mo-cy′ma (dur″mo-sigh′muh) **der″mo-cy′mus** [*derma*; G. *kyma*, fetus]. A type of cryptodidymus in which the parasitic twin is in the body wall of the host.

der″mo-ep″i-der′mal [*derma*; G. *epidermis*, outer skin]. Pertaining to both the superficial and the deeper layers of the skin; said of skin grafts.

der″mo-graph′i-a (dur″mo-graf′ee-uh, -gray′fee-uh) **der-mog′ra-phy** [*derma*; G. *graphein*, to write]. A condition in which the skin is peculiarly susceptible to irritation; characterized by elevations or wheals caused by tracing the fingernail or a blunt instrument over the skin. May or may not be accompanied by urticaria. Also called *dermographism*, *autographism*, *urticaria factitia*. —**dermograph′ic**, *adj.*

d. alba. A white line which briefly precedes the development of the initial reddening along the line of scratch as observed in the triple response.

d. rubra. The red line of the triple response.

der′moid [*derma*; G. *eidos*, form]. Resembling skin.

der′moid. A teratoma.

der″moid ec′to-my [*derma*; *eidos*; G. *ektomē*, excision]. Excision of a dermoid cyst.

der″mo-la′bi-al [*derma*; L. *labia*, lip]. Having relation to the skin and the lips.

der-mop′a-thy [*derma*; G. *pathos*, disease]. Any skin disease. *Rare.*

der″mo-phle-bi′tis [*derma*; G. *phleps*, vein; *-itis*, inflammation]. Inflammation of the cutaneous veins.

der″mo-phyte′. Variant spelling for *dermatophyte*.

der″mo-skel′e-ton [*derma*; G. *skeletos*, dried up]. The exoskeleton, 2.

der″mo-ste-no′sis [*derma*; G. *stenōsis*, being straitened]. A tightening of the skin, due to swelling or to disease.

der″mos-te-o′sis [*derma*; G. *osteon*, bone; *-osis*, condition]. Ossification occurring in the corium.

der″mo-syn″o-vi′tis (-sin-o-vy′tis, -sigh-no-vy′tis) [*derma*; NL. *synovia*, of obscure origin; G. *-itis*, inflammation]. Inflammation of subcutaneous bursae together with the adjacent skin.

der″mo-syph″i-lop′a-thy [*derma*; NL. *syphilis*; G. *pathos*, disease]. A syphilitic skin disease.

der″mo-ty′phus. See *typhus*.

der′o-, der- [G. *derē*, neck]. A combining form denoting *the neck*.

der″o-did′y-mus [*derē*; G. *didymos*, double]. A monster with a single body, two necks and heads, and two upper and lower extremities. Other rudimentary limbs are occasionally present. Syn., *dicephalus*.

de-rom′e-lus [*derē*; G. *melos*, limb]. A monster having an accessory limb attached to the neck or jaw.

der′rid. A highly toxic resin from *Derris elliptica*, leguminous plant of Malaya, used in Borneo as an arrow poison.

des- [L. *de-*, *dis-*, through the French]. A prefix denoting the *reversing* or *undoing* of an action, *depriving* or *ridding of*, or *freeing from*, used before vowels, especially in chemistry. Also see *de-*.

des-am′i-dase. An amidase.

des-am″i-nase. See *deaminase*.

de-sat″u-ra′tion (dee-satch″uh-ray′shun) [*de-*; L. *saturatio*, from *saturare*, to fill]. Conversion of a saturated compound, such as stearin, into an unsaturated compound, such as olein, by the removal of hydrogen.

Desault, Pierre Joseph [French surgeon, 1744–95]. One of the founders of modern vascular surgery; developed the technic of ligating blood vessels for aneurysm (published 1801). Made many contributions to the knowledge of *fractures* and dislocations. Described various splints and dressings.

Descartes, René (**Cartesius**) [French philosopher, mathematician, and anatomist, 1596–1650]. His book *De L'Homme*, posthumously published (1664), is believed to be the first general text in the field of physiology. He has been called the inventor of analytic geometry. A number of rules, laws, and signs, mostly in the field of higher algebra, have received his name.

Descemet's membrane. See under *membrane*.

des″ce-me-ti′tis [after Jean *Descemet*, French anatomist, 1732–1810; G. *-itis*, inflammation]. Inflammation of Descemet's membrane; keratitis punctata.

des″ce-met′o-cele [*Descemet*; G. *kēlē*, hernia]. Hernia of Descemet's membrane.

de-scen′dens (di-send′enz) [L. *descendere*, to descend]. Downward.

d. cervicis. A loop of nerve fibers derived from the second and third cervical nerves which help form the ansa hypoglossi. See Table of Nerves in the Appendix.

d. hypoglossi. A branch of the hypoglossal nerve, which forms, with the descending cervical nerve, the ansa hypoglossi. The fibers come from the first and second cervical nerves and not from the hypoglossal nucleus. See Table of Nerves in the Appendix.

de-scen′sus (di-sen′sus) [L.]. A descent, fall, prolapse.

d. uteri. Prolapse of the uterus.

d. ventriculi. See *gastroptosis*.

de-scent′ [L. *descendere*, to descend]. Derivation from an ancestor, especially in regard to evolutionary origin.

desenex. Trade-mark for a fungicidal ointment or powder that contains undecylenic acid and zinc undecylenate.

de-sen″si-ti-za′tion (dee-sen″si-ti-zay′shun, -tigh-zay′shun) [L. *de-*, indicating separation; ML. *sensitivus*, from *sentire*, to feel]. 1. A condition of insusceptibility to infection or an allergen, established in experimental animals by the injection of an antigen which produces sensitization or an anaphylactic reaction. After recovery a second injection of the antigen is made, bringing about no reaction, thus producing desensitization. Also called *hyposensitization*. See also *antianaphylaxis*. 2. In psychiatry, the alleviation or removal of a mental complex. —**desen′sitize**, *v.*

des′ert sore. See *veldt sore*.

de-sex″u-al′i-ty (dee-seck″shoo-al′i-tee) [*de-*; L. *sexualis*, from *sexus*, sex]. A state in which the sexual impulse is deprived of its sexual quality by being diverted into other activities, as in sublimation.

de-sex″u-al-i-za′tion (dee-seck″shoo-ul-i-zay′shun, -eye-zay′shun) [*de-*; *sexualis*]. Depriving an individual of his sexual powers.

Deshler's salve. See compound *resin cerate*.

des′ic-cant [L. *desiccare*, to dry up]. A drying medicine or application. —**des′iccant**, *adj.*

des″ic-ca′tion [*desiccare*]. Process of drying up.

des′ic-ca″tor [*desiccare*]. A vessel containing some strongly hygroscopic substance, such as calcium chloride or sulfuric acid, used to absorb the moisture from any substance placed therein or to maintain it in a moisture-free state.

desicol. Trade-mark for proprietary choleretic and cholagogue consisting of desiccated whole bile in capsule form.

desivac. A process of drying substances which involves quick freezing followed by dehydration under vacuum while in the frozen state. See *lyophilization*.

des lan'o-side. $C_{47}H_{74}O_{19}$ the desacetyl derivative of lanatoside C, cardiotonic glycoside.

Desmarres, Louis Auguste (1810–1882) French ophthalmologist, remembered for his writings on ophthalmology. He devised an operation for pterygium (1850); is said to have introduced iridectomy in France, and described dacryolith, known by his name, and also invented an ophthalmoscope.

des"mi-o-gnath'us (dess mee-o nath us) [G. *desmios*, binding; *gnathos*, jaw]. A monster with supplementary parasitic head joined to the lower jaw or neck by means of ligamentous or muscular attachment. Also called *dicephalus parasiticus*.

des mi'tis (dess-my tis, dez my tis) [G. *desmos*, band; -*itis*, inflammation]. Inflammation of ligament. *Obs.*

des'mo- (dess mo-, dez mo-) **desm-** [*desmos*]. Combining form meaning *band*, *ligament*, or *fastening*.

des mo-cra ni um [*desmos*; G. *kranion*, skull]. The mesenchymal or membranous anlage of the neurocranium from which the chondrocranium develops.

des'mo-cyte [*desmos*; G. *kytos*, cell]. Any kind of supporting tissue cell.

des"mo gly'co-gen. The bound glycogen of tissues, representing combination of glycogen with protein. Heating the tissue with solution of alkali releases the glycogen.

des'moid [*desmos*; G. *eidos*, form]. Like ligament; fibrous.

des'mo-lase. Any of group of enzymes which catalyze rupture of atomic linkages that are not cleaved through hydrolysis, such as the bonds in the carbon chain of D-glucose.

des'mone. A general term for growth-promoting substances, theoretically present in all cells.

des"mo-pla'si [G. *desmos*, ligament; *plassein*, to form]. 1. The formation and proliferation of connective tissue, especially fibrous connective tissue; frequently prominent proliferation of connective tissue in the growth of tumors. 2. The formation of adhesions. —**desmoplas'tic**, *adj*.

des'mo-some. A thickening in the middle of an intercellular bridge in epidermis.

des-mot omy [*desmos*; G. *tomē*, cutting]. Division of a ligament.

Desnos, Louis Joseph [*French physician*, 1828–93]. Remembered for his description of splenization in lobar pneumonia; called *splenopneumonia*, *Desnos pneumonia*, *Grancher' pneumonia*.

des' gen. A mixture of the methosulfates of group of trimethylammonium bases; it is used as disinfectant.

des o-mor'phine Dihydrodesoxymorphine-D; $C_{17}H_{21}NO_2$ morphine derivative reported to be powerfully analgesic but to have greater addiction liability than morphine.

de-sorp'tion. The process of removing adsorbed matter from an adsorbent; the reverse of the process of adsorption.

11-des ox"o-cor'ti sone. 11 Desoxy-17-hydroxycorticosterone.

des ox y- See *deoxy-*.

des-ox"y-cho'lic ac'id (dess ock si-ko'lick, koh lick) **de-ox y-cho'lic ac'id.** $C_{24}H_{40}O_4$ 3,12-Dihydroxycholanic acid. One of the unconjugated bile acids; in bile it is largely conjugated, with glycine or taurine, to form glycodesoxycholate and taurodesoxycholate salts.

des-ox"y-cor"ti cos'te-rone [L. *de-*, indicating separation; G. *oxys*, sharp; L. *cortex*, bark; G. *stereos*, stiff]. $C_{21}H_{30}O_3$; 11-desoxycorticosterone or Δ^4-pregnene-3,20-dione-21-ol steroid hormone occurring in the adrenal cortex and capable of maintaining the life of an adrenalectomized animal. In man it causes an increase in retention of sodium ion and water and an increase in excretion of potassium ion; it has no demonstrable effect on protein or carbohydrate metabolism. It is of great value in the management of adrenal insufficiency, being administered by subcutaneous or intramuscular injection, or by subcutaneous implantation of pellets; therapy may have to be supplemented with other adrenal cortex hormones. Also called *compound Q* (*Reichstein*). See Table of Hormones in the Appendix.

d. acetate (*desoxycorticosteroni acetas*). The acetate ester of desoxycorticosterone and the form in which the latter hormone is used clinically. Syn., *desoxycortone acetate*, *desoxycortone acetate*. See *cortate*, *doca*, *percorten*.

des-ox"y cor'ti-sone. 1. 11 Desoxycortisone. See *11-desoxy-17-hydroxycorticosterone*. 2. 11-Keto-17-hydroxyprogesterone; gluconeogenic steroid studied in relation to rheumatoid arthritis; also called *21-desoxycortisone*.

11-d. 11 Desoxy 17-hydroxycorticosterone.

des-ox"y-e phed'rine. Methamphetamine.

d. hydrochloride. Methamphetamine hydrochloride.

des-ox"y-eph" dre ni um sul"fa thi' zole. A combination of desoxyephedrine and sulfathiazole which provides vasoconstrictor and antiseptic properties for intranasal use.

11-des ox'y-17 hy drox"y cor ti cos'ter-one. $C_{21}H_{30}O_4$; steroid of the adrenal cortex which influences sodium and potassium metabolism and increases blood pressure and water turnover; also called *Reichstein Compound S*, *11-desoxycortisone*, *11-desoxycortisone*. See Table of Hormones in the Appendix.

des"ox y man nose. The monosaccharide HCO.HCOH.HCOH.HOCH.HOCH.CH_3 more specifically 6-desoxy L-mannose component of many glycosides and of various disaccharides and trisaccharides.

desoxyn hydrochloride. Trade-marked name for methamphetamine hydrochloride, sympathomimetic agent.

des-ox"y pen'tose. Any pentose which contains less oxygen, commonly one atom, than its parent sugar. Biochemically the most important desoxypentose is desoxyribose, in consequence of which the two terms are sometimes used synonymously. Also written *deoxypentose*.

des-ox"y pen"tose nu-cle'ic ac'id. A nucleic acid containing desoxypentose as the sugar component. Since the desoxypentose is commonly if not exclusively desoxyribose, the terms *desoxypentosenucleic acid* and *desoxyribonucleic acid* are often used synonymously. Also written *deoxypentosenucleic acid*.

des ox"y py"ri dox'ine. $C_8H_{11}NO_2$ 2,4-dimethyl-3-hydroxy-5-hydroxymethylpyridine; synthetic antimetabolite which antagonizes the action of pyridoxine in animals and bacteria.

des ox"y ri"bo-nu'cle ase. Streptodornase. Sometimes abbreviated, DNAase.

streptococcal d. Streptodornase.

des-ox"y-ri"bo nu'cle-ic ac'id. A type of nucleic acid, first isolated from animal cells but found also in plant cells, occurring in the nuclei; it contains phosphoric acid, D-2-desoxyribose, adenine, guanine, cytosine, and thymine. The exact composition may vary in different animal species; also, the substance from normal cells appears to differ from that of cancer cells. Also called *desoxyribose nucleic acid*, *thymus nucleic acid*, *thymo-*

nucleic acid, chromonucleic acid. Formerly erroneously called animal nucleic acid. Abbreviated, DNA

des"ox y ri'bose. CHO.HCH.HCOH.HCOH.CH₂OH; 2-desoxyribose pentose found in nearly all cells, particularly in the form of desoxyribonucleic acid also written deoxyribose.

des-ox'y-su"gar A sugar containing one atom of oxygen less than the sugar from which it is derived.

de-spe ci-a'tion (dee-spee shee-ay'shun) [de- L. species, special]. Change in properties characteristic of the species, as alteration of antigenic properties by digestion with taka-diastase. —despe'ciated, adj

D'Espine's sign. See under sign.

des"qua ma tion [L. desquamare, to scale off]. Shedding peeling and casting off as of the superficial epithelium, mucous membranes, renal tubules, and the skin. The horny layer of the epidermis is constantly shed as normal physiologic process. In disease an exaggerated process (desquamatic keratolysis) produces variously sized flakes and scales. Desquamation of newborn infants (desquamatio neonatorum) takes place during the first week of life. —desquam'ative, adj; des'quamate, v.

des-sert'spoon" A spoon of medium size, equal to approximately 2 fluidrachms or 8 cc.

des-thi'o-, *In chemistry*, combining form signifying loss of sulfur from compound.

des"thi-o-bi'o-tin. Methyl 4-methyl-5-imidazolidone-2-caproate. A substance used experimentally as growth stimulant for yeast. It has been postulated that it is converted by the growing yeast cell into biotin, the normal growth-promoting agent. For certain other organisms, it is not satisfactory substitute for biotin.

de-stru'do [L. destruere, to destroy; -do as in libido]. *In psychopathology* the basic energy that is associated with the destructive or death instinct.

de-sul"fu-rase (dee-sul'few-race -sul'fur-ace) An enzyme causing the removal of sulfur from organic compounds.

det. Detur let it be given.

de tach ment. Separation; the act of unfastening structure from its support.

retinal d. See detachment of retina.

de-tec'tor cray'on. A chalklike crayon composed of a material which changes color on contact with liquid blister gas or concentrated blister-gas vapors.

de-tec'tor paint. Paint used as detector for liquid blister-gas spray or drops, subject to certain limitations. Surfaces painted with detector paint change color wherever drops or splashes of blister gas strike.

de-tec'tor pa'per Paper coated on one side with detector paint, used to detect liquid blister gas It changes color wherever drops of blister gas strike it.

de-ter'gent [L. detergere, to wipe off]. A drug, compound, or solution used for cleansing wounds, ulcers, etc. —detur'gent adj

de-ter'mi nant [L. determinare, to limit, determine]. *In biology*, hypothetical unit of the germ plasm which, according to Weismann theory of heredity determines the final fate of the cell or the part which receives it during development.

de-ter"mi-na'tion [determinare] 1 Tendency of the blood to collect in part. 2. Fixation of the embryologic fate of tissue or part of an embryo by an evocator or other agent. 3. The performance of any measurement, as of length, mass, quantitative composition of substance, etc.

sex d. Determination of the sex of an embryo t fertilization by the complement of sex chromosomes.

Detmold, William [*American surgeon*, 1808–94]. Performed the first operation on record in which lateral ventricle was opened for the evacuation of brain abscess (1850)

de tor'sion [L. detorsum, from detorquere, to turn aside]. The correction of torsion, as the twisting of spermatic cord or ureter

de tox"i-ca tion [L. de, from, way G toxicon, poison]. The process, usually consisting of series of reactions, by which substance foreign to the body is changed to compound or compounds more readily excretable; the latter are not necessarily nontoxic. Syn., detoxification. —detox'icant, adj; detox'icate, v.

de tox'i fy (dee-tock'si figh) [de-; toxikon, L. facere, to make]. Detoxicate. —detoxifica'tion, n.

Detre, László [*Hungarian pathologist*, 1875–1939]. Independently of Wassermann, though at almost the same time, he developed nearly identical test for syphilis. Discovered skin reaction, called Detre' reaction, indicating the presence of tuberculosis.

de tri'tion (di-trish un) [L. detritum, from deterere, to wear way]. Wearing way by abrasion.

de-tri'tus [deterere]. 1 Waste matter from disintegration. 2. *In dentistry* waste material adherent to tooth, or disintegrated tooth substance.

de"trun-ca'tion [L. detruncare, to cut off, behead] Decapitation, especially of the fetus.

de-tru'sion [L. detrusum, from detrudere, to thrust down]. An ejection or expulsion; thrusting down or out.

de tru'sor A muscle that detrudes or thrusts down or out.

d. u ri'nae. The smooth muscle of the urinary bladder which acts in emptying the viscus. O T

d. ves'i-cae. The smooth muscle in the wall of the urinary bladder which contracts the bladder and expels the urine pplied to all the muscle layers, since all are involved in the contraction. Also called detrusor urinae. O T

de"tu mes'cence [L. detumescere, to cease swelling]. 1. Subsidence of any swelling. 2. Subsidence of the erectile sexual organs following orgasm.

deu"ter-a nom' ly See partial deuteranopia.

deu"ter a no pi-a (dew'tur-uh-no pee-uh) [G deuteros, second; a- not ōps, eye]. Inadequate green vision red-sightedness.

partial d. Decreased ability to perceive green. Syn deuteranomaly.

deu"ter a'tion. The process of introducing into chemical compound one or more toms of the hydrogen isotope deuterium in place of like number of atoms of ordinary hydrogen (protium) commonly existing in the compound.

deu ter'i um (dew-terr'ee-um) Heavy hydrogen. The isotope of hydrogen of atomic weight pproximately 2.0, symbol H H^2 or D It constitutes approximately 1 part in 6000 of ordinary hydrogen. See heavy water Abbreviated, D

d. oxide. Water of composition D_2O. Syn., heavy water

deu'ter-o- (dew'tur-o-) deuter (dew'tur) [deuteros]. A combining form meaning second or secondary

deu"ter-o-gen'ic [deuteros; G. gennaikos, from gignesthai, to be produced]. Of secondary origin.

deu'ter-on. The nucleus of a heavy hydrogen atom.

deu'ter-o plasm [deuteros; G plasma, anything formed or molded]. 1 The passive or lifeless components of cytoplasm, especially reserve foodstuff such as yolk. 2. The store of nutrient mate-

toms of intense thirst and hunger weakness, and loss of weight. The disease may be further ttended in later life by degenerative changes such as arteriosclerosis, cataract, neuritis.

experimental d. Diabetes mellitus produced in animals by various methods, such as puncture of the diabetic center pancreatectomy injection of extracts f the anterior pituitary or of allo an.

galactose d. See *galactosemia.*

meta d. Permanent diabetes in man, secondary to overstimulation of the pituitary adrenal cortex, or the thyroid (respectively *metahypophyseal d metaadrenal d., metathyroid d.*)

nephrogenic d. insipidus. Diabetes insipidus which is not responsive to the antidiuretic hor mone This is presumed to be the result of lack of end-organ response, i.e the renal tubule. More common in males, it has high familial incidence.

pancreatic d. A variety of diabetes mellitus dependent upon disease of the pancreas.

pitressin resistant d. insipidus. See nephrogenl d. insipidus.

piqûre d. Old term for artificial *glycosuria.*

renal amino acid d. See amino *d.*

renal d. See renal *glycosuria.*

di" bet'ic [*diabeticus*]. A person suffering from diabetes.

di" be"to gen'ic (dye uh bee to-jen'ick, dye uh-bet o-) [*diabetes*, G. *genesthai*, from *gignesthai*, to be produced]. Causing diabetes.

di" be tog'e-nous (dye"uh-bi-tod; nus) [*diabetes, genesthai*]. Produced by diabetes.

di" be"to pho'bi-a [*diabetes*, G *phobos*, fear]. Morbid fear of becoming diabetic.

di b'o-lep sy [G *diabolos*, devil *lēpsis*, seizure]. Diabolical seizure or possession; delusion of supernatural possession. —**diabolep tic**, *n.*

di" ac-e-te mi [G *dis*, twice L. *acetum*, vinegar G *haima*, blood]. Presence of diacetic acid (acetoacetic acid) in the blood.

di" -ce tic ac'id (dye uh-see tick, -set'ick) Acetoacetic acid.

di ac'e tin (dye-ass'i-tin, dye h-see tin) $C_3H_5(OH)(OOC\,CH_3)_2$ Glyceryl diacetate liquid derivative of glycerin with bitter taste. Soluble in water alcohol, or ther

di ac" tu'ri (dye-ass"i-tew ree-uh) **di ac" to-nu'ri** (dye-as to-new'ree- h) [*dis; acetum*, G *ouron*, urine] Presence of diacetic acid (acetoacetic acid) in the urine

di ac" tyl mor'phine (dye-ass -til-mor'feen, fin, -mor-feen') Heroin.

di-ac"e-tyl tan nin. Acetyltannic acid.

di-ac'la sis (dye ack'luh-sis, dye uh-clay'sis) **di" a-cla si** (dye uh-clay sh h, -shuh, see-uh -see-uh) [G. *diaklasis*, breaking up]. 1 Refraction. 2. A fracture produced intentionally —**diaclas'tic**, *adj*

di' -clast [G *diaklan*, to break in twain]. Instrument for breaking the fetal head.

di-ac"o-la'tion [G *dia*, through; L. *colare*, to strain]. A method of drug extraction involving percolation of suitable solvent through long narrow columns packed ith the drug.

di"a-crit'ic, di" crit'i cal [G *diakritikos*, separative] Diagnostic, distinctive.

di"ac tin'ic [G *dia*, through; *aktis*, ray]. Capable of transmitting actinic rays.

diactol. A proprietary capsule containing vitamin D

di'ad [G. *dis*, twice; G *-as*, fem. suffix denoting an aggregate]. 1 An element or radical having valence of two. 2 A bivalent chromosome result ing from synapsis. 2. —**di'ad**, *adj.*

di" derm [G. *dia*, through, originally dividing into two parts; *derma*, skin] A two-layered blastoderm composed of ectoderm and entoderm. *O T*

di d"o-cho-ki ne si a (dye-ad"o-ko-ki-nee zhuh, -see-uh, -zhuh, -see uh, -kigh-nee) **di ad"o-cho-ki ne sis** (dye ad ko ki nee sis, kigh-nee sis) **di ad" ko ki ne si a, di ad" ko-ki ne'sis.** [G *diadochos*, succeeding; *kinēsis* motion]. The normal power of performing alternating movements in rapid succession.

di" g nos' ble. Capable of being diagnosed.

di" g no sis [G deciding]. 1 The art or the act of determining the nature of disease. 2. The decision reached. —**diagnose**

anatomic d. ( ) A diagnosis based upon the recognition of definite anatomic alterations lying back of the phenomena. (b) A postmortem diagnosis.

clinical d. One based pon the history and physical examination of the patient used frequently in reference to diseases (processes) for which no diagnosti or laboratory tests are vail ble.

deductive d. A diagnosis made by physici after consideration of all the manifestations of the disease, and after formal g conception of the disorder in terms of physiology hence of the anatomic localization of the lesion, and, finally by reference, of the pathologic process and its etiology

d. by exclusion. The recognition of disease by excluding all other known conditions.

differential d. The distinguishing between two diseases of similar character by comparing their symptoms.

laboratory d. One arrived t from the results of tests on and examination of various tissues and excretions.

microscopical d. That made by means of microscopical examination of tissues or specimens.

pathologic d. One based on the study of the structural lesions present.

physical d. The determination of disease by inspection, palpation, percussion, or auscultation.

quick-section d. A rapid histological diagnosis during surgical operation, of specimen removed for study and prepared for microscopy by frozen section

Rorschach d. See Rorschach *test*.

topographic d. One determined by the location of lesion

di" g nos'tic [G *diagnōstikos*, bl to distinguish]. Pertaining t or serving as evidence in diagnosis.

di"ag nos-ti'cian [*diagnostikos*]. One skilled in making diagnoses.

di" ki ne sis (dye uh ki-nee sis, -kigh-nee sis) [G. *dia*, through; *kinesis*, motion]. A stage in miosis during which the tetrads take on definitive form preceding the disappearance of the nuclear membrane.

dial. A trade-mark for *diallylbarbituric acid.*

di al"lyl' amine See *allylamine*.

di al"lyl bar"bi tur'i ac'id. $(CH_2\,CHCH_2)_2$-$C\,CO\,NH\,CO\,NH\,CO$ white, crystalline powder slightly soluble in water; it is sedative and hypnotic, being characterized by intermediate duration of action See *dial*.

di-al y-sate (dye-al'i-sayt) See *dialyzate*.

di al'y-sis (dye-al'i sis) [G separating]. Separation of substances from one another in sol tion by taking advantage of their differing diffusibility through porous membranes —**dialyt'ic, di' alyzable** *adj* **di'alyze**, *v.*

di al'y zate di al'y sate [*dialysis*] The portion of the liquid which passes through the membrane in dialysis, and contains the crystalloids in solution.

di'a·ly"zer [*dialysis*]. Apparatus for effecting dialysis; also the porous septum or diaphragm of such an apparatus.

di"a·mag·net'ic. Of, pertaining, or referring to a weakly magnetic substance, having a magnetic permeability less than unity, which is repelled by a magnet. —**di"a·mag'net·ism,** *n.*

di'a·mer·sul·fon'a·mides. The generic name for a mixture of equal weights of sulfadiazine and sulfamerazine.

di·am'e·ter [G. *diametros,* from *diametrein,* to measure through]. A straight line joining opposite points of a body or figure and passing through its center.

anteroposterior d. of the pelvic inlet. That which joins the sacrovertebral angle and pubic symphysis. See internal conjugate *d.*, external conjugate *d.*

anteroposterior d. of the pelvic outlet. That between the lower margin of the symphysis pubis and the tip of the sacrum or the tip of the coccyx. Syn., *sacropubic d.*, *coccygeopubic d.*

anterotransverse d. That joining the tips of the greater wings of the sphenoid. Syn., *temporal d.*

biparietal d. That joining the parietal eminences.

bispinous d. That joining the spines of the ischia.

bitemporal d. That joining the extremities of the coronal suture.

coccygeopubic d. See anteroposterior *d.* of the pelvic outlet.

conjugate d. Any of a number of diameters of the pelvis, especially the anteroposterior diameter of the pelvic inlet.

craniometric d. A line connecting two corresponding points on opposite surfaces of the cranium.

dental d. That of the crown of a tooth joining the buccal and lingual surfaces, that is, the buccolingual diameter.

diagonal conjugate d. That connecting the sacrovertebral angle and the subpubic ligament.

external conjugate d. That connecting the depression above the spine of the first sacral vertebra and the middle of the upper border of the symphysis pubis. Also called *Baudelocque's d.*

fetal cranial diameters. Those including the biparietal, bitemporal, occipitofrontal, occipitomental, and suboccipitobregmatic diameters.

inferior longitudinal d. See sagittal *d.*

intercristal d. That joining the middle points of the iliac crests.

internal conjugate d. That connecting the sacrovertebral angle and the most prominent portion of the posterior aspect of the symphysis pubis. Also called *true conjugate d.*, *conjugata vera*, *anatomic conjugate d.*

interspinous d. That connecting the anterior superior iliac spines.

mean cell d. A measurement of cell size usually calculated by the Price-Jones method. This is valuable in the diagnosis of macrocytosis and in following the course of treatment in pernicious anemia. See also Cecil *Price-Jones.*

mentoparietal d. That joining the chin and the vertex.

oblique d. of the pelvic inlet. That joining the iliopectineal eminence to the sacroiliac articulation on the opposite side.

occipitofrontal d. That joining the root of the nose and the most prominent point of the occiput.

occipitomental d. That joining the occipital protuberance and the chin.

parietal d. See posterotransverse *d.*

pelvic d. Any one of the diameters of the pelvis.

posterotransverse d. That joining the parietal eminences.

pubotuberous d. An external diameter extending perpendicularly from the tuberosity of the ischium to the superior ramus of the pubis.

sacropubic d. See anteroposterior *d.* of the pelvic outlet.

sagittal d. That joining the glabella and the external occipital protuberance. Syn., *inferior longitudinal d.*

suboccipitobregmatic d. That joining the center of the anterior fontanel to the under surface of the occipital bone.

superior sagittal d. That joining the middle of the crest of the frontal bone to the external occipital protuberance.

temporal d. See anterotransverse *d.*

trachelobregmatic d. That joining the center of the anterior fontanel and the junction of the neck and floor of the mouth.

transverse d. of the pelvic inlet. That connecting the two most widely separated points of the pelvic inlet.

transverse d. of the pelvic outlet. That between the two ischial tuberosities. Also called *biischial d.*, *bischiatic d.*, *bituberal d.*, *intertuberal d.*

vertical d. That joining the foramen magnum and vertex.

vertical d. of the cranium. An imaginary line from the basion to the bregma.

di·am'i·dine (dye-am'i-deen, -din). Any compound consisting of two amidine groups, $NH{:}C(NH_2)$— linked together by a hydrocarbon chain. Certain ones, of related chemical structure, have been found to possess, in varying degrees, trypanocidal and antibacterial activity. See *pentamidine, phenamidine, propamidine, stilbamidine.*

di·a·mine (dye"uh-meen', dye'uh-meen, -min, dye-am'in). An amine formed by replacing hydrogen in two molecules of ammonia by a hydrocarbon radical. See *amine.*

d. oxidase. See *histaminase.*

di"a·mi"no·di·phen"yl·sul'fone (-dye-fen"il-sul'fohn, -dye-fee"nil-sul'fohn). $NH_2C_6H_4SO_2C_6H_4NH_2$. A drug of the sulfonamide group especially effective against streptococci.

di·a·mi"no·pro·pa·nol hy"dro·chlo·ride. See *amidol.*

di·a"mi·no·pu'rine. $C_5H_6N_6$. 2,6-diaminopurine or 2-aminoadenine, a compound selectively injurious to certain neoplastic cells in animals, and under investigation found to be a possible chemotherapeutic agent in human neoplastic diseases.

di"a·min·u'ri·a [diamine; G. *ouron,* urine]. Presence of diamine compounds in the urine.

Diamond's method. See Wallace and Diamond's method.

di"a·mor·phine hy"dro·chlo'ride (dye"uh-mor'feen, -fin). Former British Pharmacopoeia title for heroin hydrochloride.

diamox. Trade-mark for 2-acetylamino-1,3,4-thiadiazole-5-sulfonamide;

$$CH_3CO.NH.C{:}N.N{:}C.SO_2NH_2$$
(with S bridging the two ring carbons)

having the generic name *acetazolamide.* The substance, when administered orally, is a powerful inhibitor of renal carbonic anhydrase, thereby inducing alkalinization of urine and increasing excretion of sodium and bicarbonate ions, with enhancement of diuresis. It is used clinically for treating edema of congestive heart failure.

di·am'tha·zole di·hy"dro·chlo'ride. Generic name for 6-(β-diethylaminoethoxy)-2-dimethylaminobenzothiazole dihydrochloride, a water-soluble antifungal agent suitable for topical treatment of superficial fungous infections. See *asterol dihydrochloride.*

diaparene chloride. Trade-marked name for methylbenzethonium chloride, quaternary ammonium salt used for bacteriostasis of urea-splitting organisms involved in diaper dermatitis.

di″a pa son (dye uh-pay′zun, -sun) [G *diapason*, concord of the first and last notes, octave]. A tuning fork; used in the diagnosis of diseases of the ear especially in determining the presence and extent of deafness.

di″ pe de sis [G *dia*, through *pēdēsis*, leaping]. Passage of blood cells, especially erythrocytes, through the unruptured vessel walls into the tissues. —**diapedet′ic**, *adj*

di′ phane [G *diaphainein*, to show through]. 1 The transparent investing membrane of organ or cell. 2. A small electric lamp used in transillumination. 3. A commercial mounting medium for histologic sections.

di ph a-nom e-ter [*diaphainein*, G *metron*, measure]. Instrument for measuring the transparency of gases, liquids, or solids.

di aph no-scope (dye-af′uh-no scope, dye uh-fan o-) [*diaphanous*, G *skopein*, to examine]. Device for lighting an interior body cavity so as to render it visible from the exterior —**diaphanos′copy** n.

di-aph″o-met′ric (dye-af″l-met rick, dye uh-fi) [G *dia*, through *haphē* touch *metron*, measure] Pertaining to measurements of tactile sensibility

di″ pho nol. Vapors of chlorine dioxide passed into ice-cold 50% acetic acid used for softening chitin.

di-aph′ rase. The enzyme which catalyzes the oxidation of reduced coenzyme I

di″ pho-re sis [G perspiration, from *diaphorein*, to carry through]. Perspiration, especially perceptible perspiration.

di″ pho ret′ic [*diaphoretikos*]. Causing an increase of perspiration.

di″ pho ret′ic. A medicine that induces diaphoresis.

di′a phragm (dye uh fram) [G *diaphragma*, partition, diaphragm]. 1. *In anatomy* musculotendinous partition; especially that partition muscular at the circumference and tendinous t the center which separates the thorax and b-domen and is the chief muscle of respiration and expulsion. See Table of Muscles in the Appendix. See Plates 13, 14. 2 A thin septum such as is used in dialysis 3. *I microscopy* an perture placed between the mirror and bject to regulate the amount of light that is to pass through the object. 4 A contraceptive device worn during copulation over the external cervical os for preventing conception or infection it is usually dome-shaped and of thin rubber or plastic material —**di″a-phrag mat′ic**, *adj*

Bucky′ d. *I roentgenography* moving grid of alternate thin strips of lead and wood which per mits only radiation traveling in the direction of the -ray beam t strike the photographic film, thus producing pictures with sharper contrast.

central stop d. *I microscopy* diaphragm having circular slit just ithin its margin, the center remaining opaque.

compression d. A device generally used in conjunction with fluoroscopy particularly of the gastrointestinal tract The compression device often delineates the mucosal pattern which may not be visualized when barium-filled viscus is -rayed or fluoroscoped without external pressure on the patient's body

condensing d. A diaphragm containing lenses for converging the light rays

cylindrical d. *I microscopy*, piece of substage apparatus fitted with perforated stops, each allowing different amount of light to pass.

d. openi g. The opening in the disk or pparatus of microscope through which the rays of light pass.

d. of the sella. The circular layer of dura mater which forms the roof of the hypophyseal fossa, its center is pierced by the stalk of the pituitary gland.

graduati g d. One which allows concentric increase or diminution of light.

iris d. A device for changing or regulating the amount of light directed upon an object under the microscope.

oral d. That formed by the mylohyoid and hyoglossus muscles, separating the sublingual from the submaxillary region.

pelvic d. That formed by the levator ani and the coccygeus muscles; the concave floor of the pelvis, separating it from the perineum.

Potter–Bucky d. See Bucky *d.*

uroge ital d. That stretching across the pubic arch, formed by the deep transverse perineal and the sphincter urethrae muscles. Also called *trigonum urogenitale, triangular ligament.*

di″a-phrag′ma. Diaphragm.

di″a phrag mat o-cele (dye uh-frag-mat o-seel) [*diaphragma*, G. *kēlē*, hernia]. Hernia through the diaphragm.

di″ phrag mi′ti [*diaphragma*; G. *-itis*, inflammation] Inflammation of the diaphragm. *Rare.*

di″aph y-sec to-my (dye af-i-seck to-mee, -seck to-mee) [G *diaphysis*, growing through; *ektomē*, excision]. Excision of portion of the shaft of long bone

di aph y si (pl. *diaphyses*) The shaft of long bone —**diaphys′eal, diaphys′ial** *adj*

di ap′la-sis [G., putting into shape]. Reduction of dislocation or of a fracture.

di″a poph′y sis [G *dia*, through *apophysis*, offshoot, process of bone]. The superior or articular part of transverse process of vertebra. —**dia-pophys′ial** *adj*

di″a rhe mi a, di″ar rhe mi a (dye uh-ree mee-uh) See sanguineous ascites.

di″ar rhe di″ar rhoe [G. *diarrhoia*, flowing through]. A common symptom of gastrointestinal disease characterized by increased frequency and more or less fluid consistency of the tools may be due to various causes from acute infections to psychogenic factors. Also see *dysentery* —**diar-rhe l** *adj*

acute d. Characterized by the sudden onset of frequent liquid stools usually with constitutional symptoms of weakness and pain and often ith fever and vomiting may be of infectious origin (as bacillary dysentery) or noninfectious origin (as arsenic poisoning)

choleraic d. Old term for severe acute type with serous stools, vomiting, and collapse so called because of ts resemblance to cholera.

chronic d. That characterized by frequent stools over an extended period of time, occurring as manifestation of an intestinal lesion or of constitutional disease.

Cochin-China d. Sprue.

epidemic d. of the newborn. A form, seen in newborns in hospital nurseries, which occurs as an epidemic and is of unknown origin.

fermentative d. That associated with fermentation of the intestinal contents.

green d. A form of infantile diarrhea, characterized by the passage of green stools.

hill d. A form occurring in the hill country of India; may be due to low atmospheric pressure.

infantile d. An acute form seen in infants, most

frequently during the summer; due primarily to damage of the intestinal mucosa by infection. Many organisms have been thought to be causative. Seen most frequently in artificially fed infants, and associated with poor hygiene. The cholera infantum of older writers.

inflammatory d. A general term for diarrhea caused by poisons or infections which induce local inflammation of the intestinal mucosa.

lienteric d. That due to achylia gastrica.

membranous d. A form characterized by severe acute inflammation of the mucosa with membrane formation.

mucous d. Mucous colitis.

nervous d. That due to disturbances of the autonomic nervous system.

pancreatic d. A persistent form, due to absence of pancreatic digestive enzymes; characterized by the passage of large, greasy stools having high fat and nitrogen content.

parenteral d. That due to infections outside of the intestinal tract.

putrefactive d. That associated with putrefaction of the intestinal contents.

summer d. An acute form seen during the intense heat of summer; usually caused by bacterial contamination of poorly refrigerated food.

summer d. of children. See infantile d.

white d. of chicks. A disease of chicks caused by *Salmonella pullorum*.

di″ar-rhoe′a (dye″ah-ree′uh). See *diarrhea*.

diarsenol. A brand of arsphenamine.

di-ar′thric [G. *dis*, twice; *arthron*, joint]. Relating to two joints.

di″ar-thro′sis [G., articulation]. A freely movable articulation. See *articulation*. —**diarthrodial,** *adj.*

di″ar-tic′u-lar [G. *dis*, twice; L. *articulus*, joint]. Diarthric.

di-as′chi-sis (dye-ass′ki-sis) [G., division]. An inhibition of function in a region of the nervous system, due to a localized injury in another region with which it is connected by fiber tracts.

di″a-schis′tic (dye″uh-skis′tick, skis′tick) [G. *dia*, through; *schizein*, to cleave]. Splitting transversely; applied to bivalent or tetrad elements.

di′a-scope [*dia*; G. *skopein*, to examine]. Device consisting of a thin piece of glass, used to press against the skin so that superficial lesions may be observed. —**dias′copy,** *n.*

diasone sodium. Trade-marked name for sulfoxone sodium, a substance introduced for treatment of tuberculosis but not found clinically satisfactory, although later found useful in the treatment of leprosy.

di″a-stal′sis [G., from *dia*; *stalsis*, a checking]. The downward moving wave of contraction, occurring in the small intestine during digestion.

di′a-stase [G. *diastasis*, a separation]. An enzyme from malt which converts starch to maltose by hydrolysis; vegetable amylase. Also called *vegetable d.*

animal d. Any of the amylolytic enzymes of animals, such as ptyalin, amylopsin, etc.

pancreatic d. Amylopsin.

salivary d. Ptyalin.

taka-diastase. Trade-mark for a powdered vegetable diastase, obtained by the action of *Aspergillus oryzae* on wheat bran; it is capable of liquefying 450 times its weight of starch in 10 minutes. Used in cases of faulty starch digestion.

di″a-sta′sic, di″a-stat′ic. See *diastatic*.

di-as′ta-sis [G.]. 1. Any simple separation of parts normally joined together, as the separation of an epiphysis from the body of a bone without true fracture, or the dislocation of an amphiarthrosis. 2. The final phase of diastole in which ventricular filling is reduced to the minimum.

d. recti abdominis. Separation in the median line of the two rectus abdominis muscles, usually from repeated childbirth.

di″a-stat′ic, di″a-sta′sic (dye″ah-stay′sick, -stass′ick) [*diastasis*]. 1. Pertaining to diastasis. 2. Pertaining to diastase.

di″a-ste′ma [G. *diastēma*, interval, separation]. 1. A cleft or fissure, especially if congenital. 2. *In dentistry*, an abnormal space between the teeth.

di″a-stem″a-to-my′e-li-a (dye″ah-stem″ah-to-migh-ee′lee-ah, dye″ah-stee″muh-to-) [*diastema*; G. *myelos*, marrow]. A congenital, more or less complete doubling of the spinal cord associated with the formation of a bony or cartilaginous septum from the posterior wall of the vertebral canal, usually in spina bifida. Syn., *diplomyelia*.

di-as′ter [G. *di-*, twice; *astēr*, star]. Old term for *amphiaster*.

di″a-ster″e-o-i′so-mer. One of the isomeric forms of a compound, containing asymmetric carbon atoms, which when compared with another isomer of the same compound differs in the spatial distribution of its component atoms and groups of atoms in such manner as not to have a mirror image relationship with the other isomer. In contrast to enantiomorphs diastereoisomers possess different physical properties. —**di″a-ster″e-o-i″so-mer′ic,** *adj.*; **di″a-ster″e-o-i-som′er-ism,** *n.*

di-as′to-le (dye-ass′to-lee) [G. *diastolē*, drawing asunder]. The rhythmic period of relaxation and dilatation of a chamber of the heart during which it fills with blood; used alone the word means ventricular diastole. —**diastol′ic,** *adj.*

atrial d. The dilatation of the cardiac atria.

ventricular d. That of the cardiac ventricles.

di″a-tax′i-a [G. *dis*, twice; *ataxia*, disorder]. Bilateral ataxia, as opposed to *hemiataxia*.

di″a-ther′ma-nous. Allowing passage of heat rays.

di″a-ther′mi-a. See *diathermy*.

di″a-ther′mic. 1. Pertaining to the ability of a substance to permit passage of heat rays. 2. Of or pertaining to, diathermy.

di″a-ther″mo-co-ag″u-la′tion [G. *dia*, through; *thermē*, heat; L. *coagulare*, to cause a fluid to coagulate]. Coagulation secured by the use of a high-frequency electrosurgical knife.

di″a-ther-mom′e-ter [*dia*; *thermē*; G. *metron*, measure]. *In physics*, an instrument for measuring the heat-conducting capacity of substances.

di″a-ther″my (dye″uh-thur″mee, dye″uh-thur′mee), **di″a-ther′mi-a** [*dia*; *thermē*]. 1. The therapeutic use of an oscillating electric current of high frequency to produce local heat in the body tissues below the surface. 2. The electric current so used. 3. The machine producing it. —**diather′mal,** *adj.*; **diather′mize,** *v.*

conventional d. The use of a current of moderately high frequency, 500–3000 kilocycles per second, at wave lengths of 600–100 meters.

medical d. That form in which the tissues are heated to a point less than destructive temperature.

short-wave d. That form making use of a current of extremely high frequency, 10,000–100,000 kilocycles per second, at wave lengths of 30 to 3 meters.

di-ath′e-sis [G., a placing in order]. Constitution; hereditary influence. A state or condition of the body or a combination of attributes in one individual causing a susceptibility to disease. —**diathet′ic,** *adj.*

exudative d. A condition formerly recognized in children, associated with an irritable skin and chafing, intertrigo, seborrhea, eczema, and

hypersusceptibility t external irritants of the skin and mucous membranes. There are also frequent respiratory infections with resulting lymphoid hyperplasia.

hemorrhagic d. An abnormal bleeding tendency as in hemophilia, purpura, scurvy or vitamin-K deficiency

hereditary hemorrhagi d. A rare, familial, nonthrombocytopenic hemorrhagic disorder that can affect both sexes. It is characterized by prolonged bleeding time but by ormal clotting time and clot retraction. The condition has been ascribed to abnormal capillaries, defective thromboplastin, or both. Syn., *hereditary pseudohemophilia, hereditary hemorrhagic thrombasthenia, constitutional thrombopathy.*

hypersthenic gastri d. A constitutional type in which the individual has short, high stomach associated with rapid peristalsis and evacuation. The theory that such persons have trong tendency toward developing duodenal ulcers is unsubstantiated

hyposthenic gastric d. *The constitution of an* individual with long, low book-shaped stomach, associated with slow peristalsis and evacuation. The claim that such individuals tend t develop gastric ulcers is unsupported.

ulcer d. Susceptibility to ulcer formation.

uratic d. A condition in which there is tendency to the deposition of urates in the joints and elsewhere; gout

di'a tom (dye uh-tom, -tome) [G *diatomos*, cut in two]. Any of the Diatomaceae, small family of microscopic, unicellular algae having cell wall of silica, the keleton persisting after death of the organism.

di" t ma ceous earth. A sedimentary rock composed of the empty shells of diatoms and other Protophyta used as an bsorbent, a filtration aid, and insulating material. See also diatomaceous earth *pneumoconiosis*.

di"a-t m'ic [*diatomos*]. 1 Consisting of two atoms commonly referring to molecule. 2. Containing two replaceable univalent toms or radicals. 3 Bivalent.

diatrin hydrochloride. Trade-marked name for the antihistaminic substance *methaphenilene hydrochloride.*

diaturesin. A proprietary expectorant prepared from *Drosera rotund folia* and *Thymus vulgaris.*

Diaz de Isla, Rodrigo Ruiz [*Spanish surgeon*, 1462–1542]. Said to have been the first to describe syphilis, which he observed in members f Columbus crew (1493); hence the belief that the disease was of New World origin.

di' -zine. 1 A heterocyclic compound having the formula $C_4H_4N_2$ containing two nitrogen and four carbon atoms in the ring Three isomers are possible distinguished as 1,2-diazine, 1,3-diazine, and 1 4-diazine, and commonly known as *pyridazine, pyrimidine*, and pyrazine, respectively 2 Any derivative of any of the compounds in 1

di-az'o- (dye-az'o- dye y zo-) **diaz** [G *dis*, twice; a- not *zōē*, life] *I chemistry* combining form indicating the presence in compound of group involving two nitrogen atoms, usually arranged in the form of R—N═N— where R is an aryl group. —**diazo,** *adj*

di" zo ni um com pound. A diazo compound, so called to emphasize its resemblance to ammonium compounds, presumably through formation

of an R—N≡N group, rather than the isomeric R—N═N— group.

di-az"o-ti za'tion. The process of converting certain compounds, notably aromatic amines, to their respective diazo derivatives, commonly by reaction with nitrous acid. —**diaz'otize** v.

di ba sic (dye-bay sick) [*dis*; G *basis*, foundation]. Of salt, containing two toms of monobasic element or radical; of an acid, having two replaceable hydrogen toms

di ben amine $(C_6H_5CH_2)_2NCH_2CH_2Cl$. N,N-Dibenzyl-beta-chloroethylamine, the hydrochloride of which has been employed experimentally as sympatholytic and adrenolytic agent.

di"ben zan'thra-cene 1,2,5,6-*Di*benzanthracene. A polycycli hydrocarbon, $C_{22}H$ A carcinogen said to be the first pure chemical found experimentally to produce cancer in an animal.

dibenzyline Trade-mark for N-phenoxyisopropyl-N-benzyl-β-chloroethylamine, known also by the generic name *phenoxybenzamine hydrochloride*, an adrenergic blocking agent useful in the treatment of peripheral vascular diseases and possibly in certain types of hypertension.

di both"ri -ceph" l a-sis. Old term for diphyllobothriasis.

Di both ri o-ceph a-lus. *Synonym for Diphyllobothrium.*

dibromin. Trade-mark for dibromobarbituric acid, surgical disinfectant and germicid in 1 1,000 to 1 10,000 solution.

di bro mo-bar"bi tu'ric ac'id. See *dibromin.*

di bu caine hy"dro-chlo ride (dye-bew cane) $C_{20}H_{29}N_3O_2.HCl$ 2 butoxy N-(2-diethylaminoethyl) cinchoninamide hydrochloride, occurring as whit crystals or powder freely soluble in water It is a local anesthetic which acts like cocaine hydrochloride when pplied to mucous surfaces, and like procaine or cocaine hydrochloride when injected. Syn., *cinchocaine hydrochloride* See *percaine hydrochloride.*

dibuline sulfate. Trade-marked name for *dibutoline sulfate*

di bu to line ul'fate. Generic name for the bis [(dibutylcarbamate) of thyl (2-hydroxyethyl)-dimethylammonium] sulfate, having clinically useful spasmolytic, mydriatic, and cycloplegic actions. See *dibuline sulfate.*

di cal'ci um. Containing two atoms of calcium in each molecule.

d. phosphate. See dibasic *calcium* phosphate.

di car"box yl'ic ac'id. An organic compound with two —COOH groups.

di-cen'trine (dye-sen treen, -trin) $C_{20}H_{21}O_4N$ A toxic alkaloid from species of *Dicentra.*

di ceph lism, di-ceph a-ly [G *dis*, twice; *kephalē*, head]. The condition of having two heads.

di ceph lus [*dis*; *kephalē*]. A monster with two heads See Plate 25 —**dicephalous,** *adj.*

d. diauchenos. An individual with two heads and two more or less separate necks.

d. monauchenos. An individual with two heads on single neck.

d. parasiticus. An individual having more or less incomplet parasitic head attached to the normal head or neck.

d. tetrabrachius. Conjoined twins single below the umbilicus, with two more or less separat thoraces, four arms, two heads, and two necks.

d. tribrachius. Conjoined twins single below the umbilicus; thoraces more or less double, with three arms, two necks, and two heads.

di-ceph ly See *dicephalism.*

di hei'lus, di chi'lus (dye kigh'lus) [*dis*; G. *cheilos*, lip]. Double lip due to fold of mucous membrane giving the appearance of duplicity

di hi'lus. See *dicheilus.*

di hi'rus (dye kigh rus) [*dis*; G *cheir* hand]. Partial or complete duplication of the hand.

di"chlor a mine' Dichloramine-T

di"chlor·a·mine' T (dye"klor·ah·meen' tee, klor'ah·meen, min) $CH_3C_6H_4SO_2NCl_2$; p-toluenesulfondichloramide; pale-yellow crystalline powder with the odor of chlorine, almost insoluble in water, soluble in eucalyptol and chlorinated paraffin. It gradually decomposes on exposure to air, releasing chlorine. A surgical antiseptic in 2–10% oil solution. Syn., *dichloramine*. See *chloramine-T*.

dichlor-arsphenamine. Trade-mark for a mixture containing dichlorophenarsine hydrochloride as the active ingredient.

di·chlo"ro·a·ce'tic ac'id. $CHCl_2COOH$. A colorless liquid at ordinary temperatures, crystallizing at lower temperatures; soluble in water and alcohol. Used as an escharotic.

di·chlo"ro·di·eth"yl sul'fide (·dye·eth"il sul'fide, ·fid) $(C_2H_4Cl)_2S$. Mustard gas. A vesicant in chemical warfare. A heavy, somewhat volatile fluid with an odor resembling mustard. Produces severe vesication and slowly healing, painful ulcers.

di·chlo"ro·di·flu"o·ro·meth'ane (dye·klor"o·dye·floo"o·ro·meth'ane) CCl_2F_2. A noninflammable gas of low toxicity used as a refrigerant. See *freon-12*.

di·chlo"ro·di·phen"yl·tri·chlo"ro·eth'ane (dye·klor"o·dye·fen"il·try·klor"o·eth'ane, ·dye·fee'nil). See *DDT*.

sym.-di·chlo"ro·eth'yl·ene. Acetylene dichloride.

di·chlo"ro·phen·ar'sine hy"dro·chlo'ride (dye·klor"o·fen·ahr'seen, ·sin, ·fen·ahr'sin). 3-Amino-4-hydroxy-phenyl-dichlorarsine hydrochloride, $C_6H_6AsCl_2NO.HCl$. A white, odorless powder used as an antisyphilitic. It is supplied as a mixture with buffering agents to render its solution suitable for intravenous use. Dose, 30–60 mg (½–1 gr) at intervals of 4–6 days. See *clorarsen*, *dichlor-arsphenamine*.

di·chlo"ro·phe·nol·in"do·phe·nol so'di·um. Sodium 2,6-dichlorophenol-indophenol. $O{:}C_6H_2Cl_2N.C_6H_4ONa$. Dark-green powder soluble in water and alcohol; used in analytical determination of ascorbic acid.

di·chlo"ro·phen·ox"y·a·ce'tic ac'id. 2,4-Dichlorophenoxyacetic acid; substance regulating plant growth; also found to be an effective herbicide. Abbreviated, 2,4-D.

di·cho'ri·al (dye·kor'ee·ul) [*dis*; G. *chorion*, skin]. Having two chorions.

di·chot"o·mize (dye·kot'o·mize) [G. *dichotomos*, to cut in twain]. Divide a distribution, variable, or series into two parts according to a specified classification, as persons with or without a known disease or characteristic.

di·chot'o·my [*dichotomous*]. 1. Division into two equal branches. 2. The type of branching of plants in which there are repeated equal divisions of the stem.

di·chro'ic [G. *dis*, twice; *chroia*, color]. Having or showing two colors; applied to doubly refracting crystals which show different colors when viewed from different directions, or to solutions that show different colors in varying degrees of concentration. —**di'chro·ism**, *n.*

di·chro'ine. Any of three isomeric alkaloids, designated α-dichroine, β-dichroine, and γ-dichroine, isolated from *Dichroa febrifuga*, which is the probable source of the Chinese antimalarial drug ch'ang shan. α-Dichroine is probably identical with isofebrifugine, while β-dichroine and γ-dichroine appear to be crystalline modifications of febrifugine.

di·chro·ma·sy, di"chro·ma·si·a (dye"kro·may'shuh, ·see·uh). See *dichromatism*.

di'chro·mat, di'chro·mate [*dis*; G. *chroma*, color]. A person affected with dichromatopsia. —**dichromat'ic**, *n.*

di·chro'mate. Any salt characterized by the presence of the $Cr_2O_7^{=}$ anion; also called *bichromate*.

di"chro·mat'ic [*dis*; *chroma*]. 1. *In biology*, exhibiting two colors, regardless of sex or age. 2. *In psychology*, pertaining to that form of color blindness in which only two of the fundamental colors can be seen.

di·chro·ma·tism. A condition in which an individual can perceive only two of the three basic hues (red, green, and blue). See *protanopia*, *deuteranopia*, *tritanopia*.

di·chro"ma·top'si·a [*dis*; *chroma*; G. *opsis*, vision]. See *dichromatism*.

di·chro·mic [*dis*; *chroma*]. 1. Marked by two colors. 2. Containing two atoms of chromium.

di'chro·ism, di·chro'ism [*dis*; *chroma*]. Dichroism; the state of being dichroic.

di·chro·mo·phil [*dis*, *chroma*; G. *philein*, to love]. Characterizing a tissue or cell which takes both an acid and a basic stain.

di"chro·mo·phil'i·a [*dis*; *chroma*; *philein*]. Capacity for double staining. —**dichromophil**, **dichromophile**, *adj.*

di·cin·cho·nine (dye·sin'ko·neen, ·nin, dye·sin·ko·nin). An alkaloid of cinchona bark.

Dick, George Frederick (1881–). American physician, who, with his wife, Gladys Rowena Henry Dick, isolated the erythrogenic (Dick) toxin and originated (1924) a test for individual susceptibility to scarlet fever (see Dick *test*) and with her prepared curative antitoxin and a method of immunizing against the disease.

Dick, Gladys Rowena Henry (1881–). American physician, known for her work on scarlet fever with her husband. See George Frederick *Dick*.

di"cli·dot'o·my. Valvotomy.

dicodid bitartrate. Trade-marked name for *dihydrocodeinone bitartrate*.

di·co·phane. A name sometimes applied to the medicinal grade of DDT. Syn., *chlorophenothane*.

di·co·ri·a. See *diplocoria*.

di·cou'ma·rin (dye·koo'muh·rin). Bishydroxycoumarin.

dicoumarol. British Pharmacopoeia title for *bishydroxycoumarin*.

Di"cro·coe'li·um (dye"kro·see'lee·um, dick"ro·) [G. *dikroos*, forked; *koilia*, belly]. A genus of trematodes.

D. dendriticum. A species of flukes which has as its definitive host sheep and other herbivorous animals, with some cases of human infestation reported.

di·crot'ic notch. A notch in the descending limb of the pulse of a peripheral artery as recorded in a pulse tracing.

di'cro·tism [G. *dikrotos*, double-beating]. A condition of the pulse in which with every wave there is given to the finger of the examiner the sensation of two beats; occurs in fever and after inhalation of amyl nitrite. —**dicrot'ic**, *adj.*

dic'ty·o·cyte [G. *diktyon*, network; *kytos*, cell]. A cell associated with hyperplastic reticulum and excessive proliferation of reticulin fibrils; it is polyhedral and medium-sized with neutrophilic cytoplasm, and has a large nucleus rich in basichromatin and with a prominent nucleolus.

dic"ty·o·cy·to'ma [*diktyon*, *kytos*; G. *-oma*, tumor]. A type of reticulosarcoma in which the dictyocyte is the common cell.

dic"ty·o·ki·ne'si·s [G. *diktyon*, net; *kinesis*, motion]. Division of the Golgi apparatus in karyokinesis.

dicumarol. A collective trade-mark for *bishydroxycoumarin*.

di·cy'clo·mine hy"dro·chlo'ride. Generic name for diethylaminocarbethoxybicyclohexyl hydrochloride; $C_{19}H_{35}NO_2.HCl$; a smooth muscle antispasmodic supplied under the trade-marked name *bentyl hydrochloride*.

di·cys'te·ine. Cystine.

di·dac'tic (dye-dack'tick, di-dack'tick) [G. *didaktos*, from *didaskein*, to teach]. In *medicine*, pertaining to teaching by lectures and textbooks, as opposed to instruction by the clinical method.

di·dac'tyl·ism (dye-dack'til-iz-um) [G. *dis*, twice; *daktylos*, finger]. The congenital condition in which there are but two digits on a hand or foot. See *bidactyly*.

di·del'phic [*dis*; G. *delphys*, womb]. Having a double uterus.

Didot, Alphonse [*Belgian surgeon*, nineteenth century]. Remembered for his description of a standard operation for webbed fingers, in which a dorsal flap is moved from one finger and a volar flap from the other (1849); called *Didot's operation*.

did"y·mi'tis. Orchitis.

did'y·mous [G. *didymos*, twin]. Growing in pairs; arranged in a pair or in pairs.

did'y·mus [*didymos*]. 1. A twin. 2. A double monstrosity. 3. A testis.

die [OF. *de*, from L. *datus*, given]. An exact reproduction in metal of any object or cast. Used in dentistry for the swaging of prosthetic appliances; referred to as the **male die** and is usually made of zinc or Babbitt metal. The **counter-die** is the product of casting a lower fusing metal, lead, or an alloy to fit in opposition to the die. This is known as the **female die**. Prosthetic appliances are constructed by swaging a metal plate between the die and the counter-die.

die [ME. *dien*]. Cease to live; expire.

Dieffenbach, Johann Friedrich [*German surgeon*, 1792–1847]. An early worker in the fields of plastic and orthopedic surgery; succeeded in skin grafting and in treating clubfoot by tenotomy (1829–34). First to treat strabismus successfully by myotomy (1842), which operation later was abandoned because of unsatisfactory end results.

di·el'drin. The assigned common name for an insecticide containing not less than 85% of 1,2,3,4,10,10-hexachloro-6,7-epoxy-1,4,4a,5,6,7,8,8a-octahydro-1,4,5,8-dimethanonaphthalene, a crystalline solid, soluble in many organic solvents but insoluble in water.

di"e·lec·trol'y·sis [G. *dia*, through; *ēlektron*, amber; *lysis*, loosing]. Electrolysis of a compound, the current passing through a diseased portion of the body and carrying one of the elements of the compound with it.

Diels, Otto (1876–) German chemist, known for his research in the field of organic chemistry. In 1950 he shared the Nobel prize in chemistry with Kurt Alder for the development of the **Diels-Alder reaction**, a simple, practical, and inexpensive method for making ring compounds from such chain compounds as butadiene, chloroprene, and other similar rubber ingredients, by forcing them to combine with maleic anhydride.

di·em'bry·o·ny [G. *dis*, twice; *embryon*, embryo]. The formation or production of two embryos from a single ovum; twinning.

di"en·ceph'a·lon [G. *dia*, through; *enkephalos*, brain]. That part of the brain between the telencephalon and the mesencephalon. It includes the thalami and most of the third ventricle. Syn. *betweenbrain*, *interbrain*. —**dienceph·al'ic**, *adj.*

di"en·es'trol. $HOC_6H_4C(:CHCH_3)C(:CHCH_3)C_6H_4OH$. 3,4-Bis(*p*-hydroxyphenyl)-2,4-hexadiene; white crystals, practically insoluble in water. It is a synthetic estrogen, said to be more powerful than diethylstilbestrol and to be less toxic. The British Pharmacopoeia official name is *dienoestrol*. Syn. *dehydrostilbestrol*. See *restrol*.

Di·en"ta·moe'ba (dye-en-tuh-mee'buh) [G. *dis*, twice; *entos*, within; *amoibē*, change]. A genus of parasitic protozoa having two nuclei.

D. fragilis. A species of nonpathogenic intestinal amebas found in the colon of man.

di·es'trum, di·es'trum (dye-ess'trum), **di·es'trus, di·es'trus** (dye-ess'trus) [*dis*; G. *oistros*, gadfly, frenzy]. The period of quiescence or sexual rest of a polyestrous animal; the longest stage of the estrous cycle in which there is a gradual reconstitution of the uterine mucosa or endometrium in preparation for the reception of a fertilized ovum. —**diestrous**, *adj.*

di'et [G. *diaita*, manner of living]. 1. Food and drink regularly consumed. 2. Food prescribed, regulated, or restricted as to kind and amount, for therapeutic or other purposes. —**dietet'ic**, *adj.*; **dietist**, *n.*

acid-ash d. One used to lower the pH of the urine.

alkaline-ash d. One used to raise the pH of the urine.

bland d. One free of stimulating or irritating ingredients.

Coleman d. A high-caloric, largely liquid diet introduced by Coleman for the treatment of typhoid fever.

diabetic d. One used in the treatment of diabetes, usually containing weighed or measured amounts of carbohydrate, protein, and fat.

elimination d. A severely restricted diet designed to demonstrate to what foods, if any, a patient reacts allergically.

gout d. A low-purine, more or less low-protein diet used in gout.

high-caloric d. One containing a large number (3,000–5,000) of calories.

high-protein d. One containing a large amount of protein, used especially in anemia, hypoproteinemia, and obesity.

high-vitamin d. One rich in vitamins, used in vitamin-deficiency diseases, anemia, hyperthyroidism, tuberculosis, etc. It is often combined with a high-caloric diet.

Karell d. A restricted-fluid, low-salt regimen at one time much used in cases with edema, especially when due to myocardial failure.

Kempner rice d. A rigid diet of rice, fruit, and sugar, with no additional salt, and averaging about 2000 calories per day; used in the treatment of hypertension.

ketogenic d. One in which fat is high in relation to carbohydrate, so that ketosis is produced. It was formerly used in the treatment of epilepsy and urinary-tract infections.

Lenhartz d. A low-caloric regimen for the treatment of gastrointestinal ulcer. It consists chiefly of milk and eggs.

low-caloric d. One containing a small number (600–1500) of calories.

low-salt d. One low in its content of sodium salt; once widely used in the treatment of hypertension, this diet has been used chiefly in cases of edema.

Meulengracht d. One especially recommended for patients with bleeding peptic ulcer; it includes liberal amounts of food.

Minot-Murphy d. A diet high in protein, purines, and iron, the chief constituent of which is liver; used in the treatment of pernicious anemia.

necrogenic yeast d. A diet which contains only 7% protein and no tocopherol. The yeast used lacks cystine and methionine.

obesity d. A low-calorie diet, used to reduce weight. Also called *reducing diet*.

Rowe diets. A regimen of elimination diets.

salt-free d. A term used erroneously to describe diets low in sodium chloride. A diet without added salt will contain approximately 3–5 Gm. of NaCl; when salt is not used in cooking, 2–3 Gm.; using only foods containing a minimum of salt may bring the total down to 0.5–1.0 Gm.

Schmidt d. Diet used to study fat metabolism in suspected cases of sprue.

S.H.G. d. Sauerbruch, Herrmannsdorfer, Gerson diet used in the treatment of tuberculosis; characterized chiefly by the exclusion of sodium chloride from the diet.

Sippy d. One used in the treatment of gastric and duodenal ulcer; it combines alkalies with neutralizing foods.

soft d. One consisting of easily consumed, easily digested foods.

di'et. 1. To take food according to a regimen. 2. To cause to take food according to a regimen.

di'e·tar"y [*diaeta*]. 1. A rule of diet. 2. A treatise describing such rule or rules. 3. A fixed allowance of food.

di"e·tet'ics [*diaitētikos*, of diet]. The science of the systematic regulation of the diet for hygienic or therapeutic purposes.

di·eth'a·zine. British generic name for 10-(β-diethylaminoethyl)-phenothiazine, a drug possessing atropinelike actions. The hydrochloride is supplied under the trade-marked name *diparcol*.

Dietlhelm's method. See under *method*.

di"ether. See under *intrarenine*.

di·eth"yl·a·mine (dye·eth"il·uh·meen, -am'een, -am'in, dye·eth·il' h meen, -min) $(C_2H_5)_2NH$. A colorless liquid which is found in putrefying fish.

di·eth"yl·bar"bi·tu'ric ac'id. Barbital.

di·eth"yl·car·bam·azine ci'trate. $C_{10}H_{21}N_3O.C_6H_8O_7$; 1-diethylcarbamyl-4-methylpiperazine dihydrogen citrate; a white, crystalline powder very soluble in water. It is effective in treating wuchereriasis, loiasis, ascariasis, and onchocerciasis. See *hetrazan*.

di·eth"yl·ene·di"amine (dye·eth"il·een·dye·uh·meen', -dye·am'in) See *piperazine*.

di·eth'yl·ene gly'col mon"o·eth'yl ether See *carbitol*, 1.

di·eth'yl·ene ox'ide. Dioxane.

di·eth'yl ether Ether 3.

di·eth"yl·mal"onyl·urea. Barbital.

N,N-di·eth"yl·ni"co·tin·am'ide. Nikethamide.

di·eth"yl·stil·bes'trol (*diethylstilbestrol*) HO $C_6H_4(C_2H_5)C{:}C(C_2H_5).C_6H_4OH$; α,β-diethyl-4,4'-stilbenediol occurs as a white crystalline powder; insoluble in water but soluble in most organic solvents. Diethylstilbestrol is a synthetic compound possessing strong estrogenic properties, but does not have the steroid structure. It is used as a substitute for the natural hormones of this type. It is more readily absorbed from the alimentary canal than most of the natural hormones and hence is suitable for oral use. It is marketed under various trade-marks as *neo-oestranol I*, *synestrin*, *stilbrone*, *estrobene*. Dose, 0.5–2.0 mg ($\frac{1}{120}$–$\frac{1}{30}$ gr.). Syn. *stilbestrol*, *stilboestrol*.

d. dipropionate. Diethylstilbestrol in which both phenolic groups are esterified with propionic acid. When administered intramuscularly in oil, reactions such as nausea and vomiting are less frequent than with free diethylstilbestrol. The dipropionate is relatively slowly absorbed.

di"e·ti'tian, di"e·ti'cian [G. *diaita*, manner of living]. An individual trained in the scientific management of the meals of an individual or group of individuals; in institutions, one who arranges diet programs for purposes of adequate nutrition of the well and therapeutic nutrition of the sick, one trained in the science of dietetics.

chief d. An officer in the U. S. Women's Medical Specialist Corps who acts as an advisor to the commanding officer of a medical installation and is responsible for the supervision of the activities of dietitians and other personnel under her jurisdiction and of training programs as indicated.

Dietl, József (1804–78) Polish physician who described a symptom complex due to angulation of a ureter. See Dietl's *crisis*.

di"e·to·ther'a·py [*diaita*; G. *therapeia*, treatment]. That branch of dietetics which has to do with the use of food for therapeutic purposes.

Dieulafoy, Georges [French physician, 1839–1911]. Devised an apparatus used to evacuate pleural effusion; a glass cylinder or syringe with piston and two-way cock for cannula and trochar. Described a type of gastric erosion which complicates pneumonia; called *Dieulafoy's ulcer*.

dif"fer·en'tial [L. *differentia*, difference]. Pertaining to or creating a difference.

dif"fer·en"ti·a'tion [*differentia*]. 1. The act or process of distinguishing or making different. 2. An increase in complexity and organization of cells and tissues during development.

autodifferentiation. The differentiation of specific function in organs at the time when they are assuming adult proportions and structure.

dependent d. The differentiation of a tissue partly as a response to an inductor or factor external to itself. Also called *correlative d.*

functional d. Differentiation which arises as a result of function. Also called *corporative d.*

histodifferentiation. The differentiation of cell groups into tissues having characteristic cytologic and histologic appearances.

invisible d. Differentiation which is determined but not yet apparent microscopically. Also called *chemodifferentiation*.

regional d. The appearance of regional differences within an individuation field.

self-d. The differentiation of a tissue even when isolated, solely as a result of intrinsic factors after determination.

dif'flu·ence (dif'loo·unss) [L. *diffluere*, to flow in different directions]. Fluidity.

dif·frac'tion [L. *diffractus*, from *diffringere*, to break in pieces]. The separation of light into component parts by means of prisms, parallel bars in a grating, or layers of atoms in a crystal, thus producing interference phenomena such as lines, bands, or spot patterns.

x-ray d. When x-rays are passed through crystals they are diffracted in a manner similar to light rays passed through a ruled diffraction grating. A study of the diffraction of x-rays gives information on the crystal structure.

dif·fus·ate (di·few'zayt, dif'yoo·zayt, -sayt) Dialysate.

dif·fuse (di·fewss') [L. *diffusus*, from *diffundere* to spread by pouring]. Scattered; not limited to one tissue or spot; opposed to *localized*.

dif·fus"i·bil'i·ty (di·few·zi·bil'i·tee) [*diffusus*]. Capacity for being diffused. —**diffus'ible,** *adj.*

d. of gases. Dalton's term for that property by which two or more gases, which have no chemical action upon each other in an enclosed space expand as if the space were occupied by one gas alone; the pressures of the mixture being equal to the sum of the pressures of the combined gases.

diffusin. Trade-mark for a form of lyophilized hyaluronidase.

dif·fu"si·om'e·ter (di·few·zee·om'e·tur) [*diffusus*;

G. *metron*, measure]. A device for estimating the diffusion of gases or liquids.

dif·fu·sion [*diffusum*]. 1. A spreading-out. 2. Dialysis. 3. In optics, the diversion of an appreciable fraction of energy of any one incident light ray into more than a few directions.

di·fla·vine (dye-flay′veen, -vin, -fla′veen, -in). 2,7-Diaminoacridine hydrochloride; an antiseptic related to proflavine and approximately as efficient.

di·fluo·ro·di·phen·yl (dye-flew″or-o-dye-fen′il, -fee′nil) ($C_{12}H_8F_2$). A white powder; insoluble in water, soluble in alcohol or ether. See *antitussin*.

digalen. Trade-mark for a product which represents the cardioactive principles of digitalis as isolated by Cloetta.

di-gal′lic acid. Tannic acid.

di·gas′tric [G. *dis*, twice; *gastēr*, belly]. Having two bellies; said of a muscle having a fleshy part at each end and a tendinous portion in the middle.

di·gas′tric. The digastric muscle. See Table of Muscles in the Appendix.

Di″ge·ne·a [*dis*; G. *genos*, offspring]. A subclass of the Trematoda, which in their life cycle exhibit alternation of generations and alternation of hosts. It includes all the species of flatworms parasitic in man, such as the liver flukes. —**digeneous,** *adj.*

di·gen′e·sis [*dis*; G. *genesis*, generation]. Alternation of generations.

di″ge·net′ic [*dis*; *genesis*]. 1. Relating to alternation of generations. 2. Referring to the Digenetica.

Di″gen·et′i·ca. Digenea. —**digenetic,** *adj.*

di·gen′ic (dye-jen′ick) [*dis*; G. *gennaikos*, from *gignesthai*, to be produced]. 1. Referring to a genetic constitution of nondiploid organisms, which contains two different genes for any given locus. 2. Referring to hereditary characters which are determined by two different genes.

di·gest′ant (di-jest′unt, dye-jest′unt) [L. *digestum*, from *digerere*, to separate, distribute]. Concerning or promoting digestion.

di·gest′ant. An agent that promotes digestion.

di·gest′er (di-jest′ur, dye-jest′ur) [*digerere*]. An apparatus used to subject substances to high temperature and pressure in order to decompose, soften, or cook them; autoclave.

di·ges′tive (di-jes′teev, -tiv) [*digerere*]. An agent that promotes digestion. —**diges′tive,** *adj.*

di·ges′tion (di-jes′chun, dye-jes′chun) [L. *digestio*, from *digerere*, to separate]. 1. The act or process of converting food into assimilable form. 2. The softening of substances by moisture and heat. 3. The disintegration of materials by strong chemical agents. —**digest′ible,** *adj.*; **digestibil′ity,** *n.*; **digest′,** *v.t.*, *v.i.*

artificial d. Digestion carried on outside of the body.

gastric d. Digestion by the action of the gastric juice.

intestinal d. Digestion by the action of the intestinal juices, including the action of the bile and the pancreatic fluid.

pancreatic d. Digestion by the action of the pancreatic juice.

peptic d. See gastric *d.*

primary d. Gastrointestinal digestion.

salivary d. Digestion by the saliva.

secondary d. The assimilation by body cells of appropriate pabulum.

Dighton syndrome. See Adair-Dighton *syndrome*.

dig′i- (didj′i-) [L. *digitalis*, pertaining to a finger]. A combining form signifying *digitalis*.

digifolin. A proprietary preparation of digitalis said to represent the therapeutically valuable constituents of digitalis.

digiglusin. Trade-mark for a product containing digitalis glycosides.

digilanid. Trade-mark for a mixture of the cardioactive glycosides from the leaves of *Digitalis lanata* in the approximate proportion in which they occur in the crude drug. The respective glycosides are known as digilanid A, B, and C, or lanatoside A, B, and C. See *digoxin*.

diginutin. Trade-mark for a product containing digitalis glycosides.

digipoten. A proprietary preparation containing the digitalis glycosides in soluble form. It is said to be of the same strength as digitalis leaf.

dig′it (didj′it) [L. *digitus*, finger]. A finger or toe. Also see *digitus*. —**digital,** *adj.*

dig″i·ta′le·in (didj″i-tay′lee-in, -tal′ee-in). A term used to designate a mixture of active and inactive glycosides of digitalis.

dig″i·ta′lin (didj″i-tal′in, didj″i-tah′lin) [L. *digitalis*, pertaining to a finger]. The original *Digitalinum verum* of Schmiedeberg and Kiliani; a mixture of amorphous alcohol-soluble glycosides from the seeds of *Digitalis purpurea*.

crystallized d. Digitoxin. Also called *Nativelle's d.*

French d. A yellowish, odorless, bitter powder said to consist of digitalin, digitonin, and digitoxin. Also called *chloroformic d.*, *Homolle's amorphous d.*, *insoluble d.*

German d. A white or yellowish powder said to consist of a mixture of glycosides, chiefly digitonin.

soluble d. See German *d.*

dig″i·tal′is (didj″i-tal′is, -tay′lis, -tah′lis) [L.]. Common foxglove. The dried leaf of *Digitalis purpurea*, introduced into medicine by Doctor Withering, of Shropshire, England, in 1785. Its activity is due to a number of glycosides, notably digitoxin. Digitalis is a powerful cardiac stimulant, increasing contractility of heart muscle, but lengthened refractory period and diminished heart rate frequently follow. It also acts indirectly as a diuretic. Employed mainly in diseases of the heart where compensation is lost. A standardized preparation, powdered digitalis should be employed medicinally. *Digitalis lanata* is the European species from which digoxin and other cardioactive glycosides are derived. See *digilanid*.

d. infusion. Represents powdered digitalis, 1.5 Gm.; alcohol, 10 cc.; cinnamon spirit, 0.5 cc.; distilled water to 100 cc. Dose, 4–12 cc. (1–3 fluidrachms).

d. injection. A sterile solution of one or more of the glycosides of digitalis in water for injection.

d. tincture. Represents in each cc. the activity of 1 U.S.P. Digitalis Unit. Dose 0.3–1.8 cc. (5–30 min.)

d. unit. The activity of 0.1 Gm. of U.S.P. Digitalis Reference Standard, as determined by biological assay on the cat.

powdered d. The leaf reduced to powder and standardized to contain 1 U.S.P. Digitalis Unit in each 0.1 Gm.

dig″i·tal·i·za′tion (didj″i-tal-i-zay′shun, -eye-zay′shun) [*digitalis*]. Administration of digitalis in sufficient amount by any of several types of dosage schedules to build up the concentration of digitalis glycosides in the body of a patient. In this way therapeutic effects are attained and thereafter only a maintenance dose is required. —**dig″italize,** *v.*

dig″i·ta′lose (didj″i-tay′lose, didj″i-tah′lose). A methyl pentose; one of the sugars obtained in the hydrolysis of certain digitalis glycosides.

digitan. A proprietary preparation consisting of the active principles of the digitalis leaf, free of digitonin and most of the inactive substances.

dig″i·ta′tion [L. *digitatus*, having fingers]. A fingerlike process, or a succession of such processes, especially that of a muscle attachment.

dig'i-ti-form" [L. *digitus*, finger; *forma*, form]. Finger-shaped.

dig"i-to-gen'in (didj"i-to-jen'in, -todj'uh-nin). The aglycone of digitonin.

digitol. Trade-mark of a fat-free digitalis tincture.

dig"i-to-nin. $C_{56}H_{92}O_{29}$. A glycoside from digitalis, lacking in typical digitalis action and reputedly irritant.

dig"i-tox"i-gen'in. $C_{23}H_{34}O_4$, the aglycone formed by the removal of three molecules of the sugar digitoxose, from digitoxin; also the aglycone of lanatoside A.

dig"i-tox'in. $C_{41}H_{64}O_{13}$. The principal active glycoside of digitalis, introduced as Digitaline Nativelle; it occurs in crystals which are practically insoluble in water. The action is like that of digitalis, 0.1 mg. digitoxin being therapeutically equivalent to about 0.1 Gm. digitalis. Syn., *digitoxoside*. See *unidigin*.

dig"i-tox'ose. $C_6H_{12}O_4$. The sugar resulting when certain digitalis glycosides, notably digitoxin, gitoxin, and gitalin, are hydrolyzed.

dig"i-tox-o-side. International Pharmacopoeia name for *digitoxin*.

dig'i-tus (didj'i-tus) [L.]. A finger or toe; digit.

d. **annularis.** The ring finger.

d. **minimus.** Old term for the little finger.

d. **quintus.** The little finger or toe.

di-glos'si-a (dye-glos'ee-uh) [G. *dis*, twice; *glōssa*, tongue]. A form of schistoglossia in which the lateral lingual swellings fail to fuse, producing a bifid tongue.

di-glos'sus [*dis*; *glōssa*]. A person showing diglossia.

di-glu-ta-thi'one. The known oxidized form of glutathione in which two molecules of the reduced form are united by loss of two hydrogen atoms.

di-gnath'us (dye-nath'us) [*dis*; G. *gnathos*, jaw]. A monster with two lower jaws.

di-gox"i-gen'in. $C_{23}H_{34}O_5$; the aglycone of digoxin and of lanatoside C.

di-gox'in (dye-gock'sin, didj-ock'sin). $C_{41}H_{64}O_{14}$. A cardiotonic secondary glycoside derived from lanatoside C, one of the glycosides of *Digitalis lanata*. On hydrolysis it yields the aglycone digoxigenin and three molecules of digitoxose.

di-hy'brid (dye-high'brid, dye'high-brid) [*dis*; G. *hybris*, outrage]. The offspring of parents differing in two characters.

di-hydranol. Trade-mark for heptylresorcinol.

di-hy'drate. A compound containing two molecules of water.

di-hy'dric. Containing two hydroxyl groups in the molecule.

di-hy"dro-cho-les'ter-ol. Cholestanol, 1.

di-hy"dro-co-dei'none. $C_{18}H_{21}NO_3$; an alkaloid, isomeric with codeine, which may be prepared by a catalytic rearrangement of codeine or from the opium alkaloid thebaine. Its action is similar to that of codeine, but it is more active and more addicting; it is used primarily as an antitussive, though it has no clear-cut advantage for this purpose.

d. **bitartrate.** $C_{18}H_{21}NO_3.C_4H_6O_6.2\frac{1}{2}H_2O$ occurring as white crystals or crystalline powder soluble in water. It is the form in which dihydrocodeinone is commonly used as an antitussive. Usual dose 10 mg. ($\frac{1}{6}$ gr.). See *dicodid bitartrate*, *hycodan bitartrate*.

di-hy"dro-co-en'zyme I. The reduced form of coenzyme I resulting when the latter accepts two hydrogen atoms, these saturating the double bond of the pyridine nitrogen atom of the nicotinic acid amide component of coenzyme I. Abbreviated, DPN.2H, when the coenzyme is referred to as *diphosphopyridine nucleotide* (DPN).

di-hy"dro-co-en'zyme II. The reduced form of coenzyme II resulting when the latter accepts two hydrogen atoms, these saturating the double bond of the pyridine nitrogen atom of the nicotinic acid amide component of coenzyme II. Abbreviated TPN.2H, when the coenzyme is referred to as *triphosphopyridine nucleotide* (TPN).

di-hy"dro-di-eth"yl-stil-bes'trol. See *hexestrol*.

di-hy"dro-er"go-cor'nine. A hydrogenated derivative of the ergot alkaloid ergocornine. See *hydergine*.

di-hy"dro-er"go-cris'tine. A hydrogenated derivative of the ergot alkaloid ergocristine. See *hydergine*.

di-hy"dro-er"go-cryp'tine. A hydrogenated derivative of the ergot alkaloid ergocryptine. See *hydergine*.

di-hy"dro-er-got'a-mine. A derivative of ergotamine, employed intramuscularly in the treatment of migraine. It is less toxic than ergotamine and has no uterine effect. See *DHE-45*.

di-hy"dro-e-ryth"roi-dine (dye-high"dro-e-rith"roy-deen, -dın). $C_{16}H_{21}NO_3$. The hydrogenated derivative of erythroidine; the dihydro-β-erythroidine has pronounced curarelike activity.

di-hy'drol. An associated form of water having the composition $(H_2O)_2$.

di-hy"dro-mor'phi-none hy"dro-chlo'ride (*dihydromorphinoni hydrochloridum*). $C_{17}H_{19}O_3N.HCl$. An alkaloid prepared by the hydrogenation of morphine; a white, odorless crystalline powder soluble in 3 parts of water. A respiratory sedative and analgesic considerably more powerful than morphine. Dose, oral, 2.5 mg. ($\frac{1}{24}$ gr.); hypodermic, 2 mg. ($\frac{1}{32}$ gr.). See *dilaudid hydrochloride*.

di-hy"dro-strep"to-my'cin. A derivative of streptomycin having the antibacterial action of and used clinically like, streptomycin. It is available as the sulfate, for intramuscular use, and is toxic to the eighth cranial nerve.

di-hy"dro-ta-chys'te-rol (dye-high"dro-ta-kis"tuh-role, -rol, -rawl, -tack"i-steer'ole, -ol, -awl). A synthetic steroid derived from ergosterol; possesses some of the biologic properties of vitamin D and some of those of the parathyroid hormone. It produces hypercalcemia and increased urinary excretion of phosphorus. Used in treating hypoparathyroidism. See *A.T. 10*, *hytakerol*.

di-hy"dro-thee'lin (dye"high-dro-thee'uh-lin, thee'lin). Estradiol.

di"hy-drox"y-a-ce'tic ac'id (dye"high-drock"see-uh-see'tick, -a-set'ick). Glyoxylic acid.

di"hy-drox"y-ac'e-tone (dye"high-drock"see-as'e-tone). $CH_2OH.CO.CH_2OH$; a simple ketose sugar derivable from glycerin or dextrose.

d. **phosphate.** Dihydroxyacetonephosphoric acid.

di"hy-drox"y-a-cet-one-phos-phor'ic ac'id. $CH_2OH.CO.CH_2OPO(OH)_2$; phosphoric acid ester of dihydroxyacetone, produced as an intermediate substance in the conversion of glycogen to lactic acid during muscular contraction. Syn., *dihydroxyacetone phosphate*.

di"hy-drox"y-al"u-mi'num a-mi"no-ac'e-tate. A basic aluminum salt of aminoacetic acid, principally $NH_2CH_2COOAl(OH)_2$, containing also small amounts of aluminum hydroxide and aminoacetic acid; it is a white, odorless powder insoluble in water. It acts as a gastric antacid and is useful for control of hyperacidity in the management of peptic ulcer. Dose, 0.5–1 Gm. (8–15 gr.). See *alglyn*, *creamalin*, *alzinox*, *doraxamin*, *robalate*.

di"hy-drox"y-an'thra-nol. $C_{14}H_7(OH)_3$. Anthrarobin. See also *anthralin*.

m-di″hy drox″y ben zene. Resorcinol.

2,5-di″hy drox″y ben′zyl al′co-hol. Gentisyl alcohol, $C_7H_8O_3$, obtained from ethereal mother liquors as metabolic product of *Penicillium patulum* Bainier. It has slight antibacterial activity.

di″hy drox″y-cin nam′ic ac′id. Caffeic acid.

di″hy drox y-es trin. Estradiol.

di″hy drox″y phen yl al nine. (OH) C_6H_3. $CH_2CH(NH_2)COOH$ the 3,4-dihydroxyphenylalanine, formed by oxidation of tyrosine. It is converted by series of biochemical transformations, utilizing the enzyme dopa oxidase, to high-molecular weight, black pigments known as melanins. Syn., *dopa*.

di″hy drox″y pro pa e. Propylene glycol.

di″hy drox″y pro′pyl bis′muth at (dye″high-drock see pro pil bi muth-ate, -bis′m th-ate, mew-thate) $C_3H_5(OH)_2BiO$. An oral antisyphilitic. Dose, 50–100 mg (¾ 1½ gr) t.i.d.

di″hy-drox″y tol′u-ene. Orcin.

di″i-o do an′i line (dye eye-o do-an′i leen, -lin). $C_6H_3NH_2I$. Brown crystals used as antiseptic in skin diseases.

di″i-o do form. I_2C_2Cl. Ethylene tetraiodide. Light yellow crystals which darken on exposure to light. An antiseptic simil to iodoform used as dusting powder or in ointment.

di″i-o do-hy d x″y pro pane (dye eye-o do-high-drock″see-pro pane). See *iothion*.

di″i-o do hy-drox′y quin. U.S.P. XV official title for 5,7-diiodo-8-quinolinol $C_9H_5I_2NO$ colorless or light yellowish to tan, microcrystalline powder almost insol ble in water. It is used as an antiprotozoan agent in intestinal amebiasis and in the treatment of *Trichomonas hominis* (*intestinalis*) infections. Dose, 0.4–2 Gm. (6–30 gr.) daily. Also called *diiodohydroxyquinoline*. See *diodoquin*, *yodoxin*.

di″i ″d hy dr x″y quin o ll Diiod hydroxyquin.

di″i-o″do-sal″i cyl′ic ac′id. $C_6H_2I_2OH.COOH$. A yellowish, crystalline powder which has been used as an antipyreti and analgesic.

di″i-o do-thy ro-nine (dye ye-o do-thigh ro-neen, nin, -thigh ro nin) $C_{12}H_{11}I_2NO_4$. substance obtained as an intermediate product in the manufacture of synthetic thyroxin. It has been used like the latter. Dose, 50–75 mg. (¾ 1½ gr.) orally.

di″i o″d ty ro i (dye eye-o do-tye ro-seen, -sin) $I_2(OH)C_6H_2.CH_2CH(NH_2)COOH$ 3,5-diiodotyrosine; constituent of thyroglobulin thyroxin is apparently formed from two molecules of diiodotyrosine by oxidative condensation. Syn *iodogorgoic acid*. See T bl of Hormones in the Appendix.

di i″so-pro pyl flu″o ro-phos′phate. $[(CH_3)_2CH\,O]_2FPO$ colorless, oily liquid, sparingly sol ble in water but hydrolyzing rapidly miscible with oils. It is powerful inhibitor of cholinesterase, produces marked and prolonged miosis, and is used in the treatment of glaucoma. It is highly toxic. Abbreviated, DFP. Syn. *isoflurophate*. See *floropryl*.

di kar′y-on [G *dis*, twice; *karyon*, kernel]. A phase or stage in the growth of the mycelium of many fungi in which the cells each have two haploid nuclei.

di ke″to-pi per′a zine. Any of class of heterocyclic compounds formed from two molecules of the same or different amino acids by condensa tion of the carboxyl group of each with the amino group of the other: the compounds may be considered to be derivatives of piperazine.

dik″ty-o ma. See *neuroepithelioma*.

di lac er a′ti n (dye-lass uh-ray′shun, dye lass-uh di lass uh) [L. *dilaceratio* from *dilacerare*, to tear apart]. 1. Act of tearing apart; being torn in pieces. *Obs.* 2. *In dentistry* partial alteration of the position of the formative organ during development, resulting in teeth with sharp angulation of the root and crown.

dilantin sodium. A trade-mark for diphenylhydantoin sodium, an anticonvulsant in the treat ment of epilepsy. See *diphenylhydantoin sodium*.

dil″ ta cy A form of thixotropy in which viscous suspension changes to solid under the influence of pressure.

dil″ ta tion (dil uh tay′shun, dye″luh) [L. *dilatatio*, from *dilatare*, to spread out]. 1. The state of being stretched. 2. Enlargement, as of hollow part or organ.

congenital d. of the colon. Megacolon due to congenital defect in innervation. Also called *Hirschsprung′ disease*.

digital d. Dilatation of body cavity or orifice by means of one or more fingers.

d. of heart. An increase in the size of one or more of the cavities of the heart, arising from relaxation or weakening of the heart muscle. It is associated with evidences of failure of circulation, resulting in congestion f the lungs and other viscera.

d. of stomach. Increase in size of the stomach from relaxation f the walls and expansion with gas or liquid.

hydrostatic d. Dilatation of cavity or part by an introduced elastic bag which is subsequently distended with water.

di la′tion (dye-lay shun, di lay′shun) [*dilatare*]. The act of stretching or dilating, as contrasted with dilatation, which is the state of being stretched. The two words are often used synonymously.

di′la tor (dye′lay-tur dye lay′tur di-lay tur) [*dilatare*]. 1. An instrument for stretching or enlarging cavity or passing. 2. A dilating muscle.

d. naris. A dilating muscle of the nostril. See Table of Muscles in the Appendix.

d. pupillae. The set of radiating involuntary muscle fibers in the iris, dilating the pupil. Also called *d. iridis*. See *T ble of Muscles in the* Appendix.

d. tubae. Variant term for tensor veli palatini. See Table of Muscles in the Appendix.

dila did hydrochloride. Trade-mark for dihydromorphinone hydrochloride.

di lec′a nus (dye-leck uh-nus). Dipygus.

dill. See *anethum*.

dil u-ent [L. *diluere*, to wash way]. 1. Agent that dilutes the strength of sol tion or mixture. 2. Medication which dilutes any one of the body fluids. —**dil′uent**, *adj.*

di lut (di lute dye-lut ′) [*diluere*]. Make weaker and thinner by the addition of liquid, especially water- or thin and dissolve.

di lu ted al′co hol (*alcohol dilutum*). Contains 41–42% by weight, or 48.4–49.5% by volume at 15 56° C of C_2H_5OH.

di l tion [*diluere*]. 1. Process of adding neutral fluid to some other fluid or substance, in order to diminish the qualities of the latter. 2. A diluted substance; the result of diluting process.

Di mas″tig a-moe′ba (dye-mass″tig-uh-mee′buh) [G *dis*, twice; *mastix*, whip; *amoibē*, change]. A genus of free-living, coprozoic amebas. The species **D gruberi** has been found in decaying feces by various observers.

dimazon. A trade-mark for diacetylaminoazotoluene, $CH_3C_6H_3N{:}NC_6H_3(CH_3)N(CH_3CO)_2$ compound related to scarlet red, and used as dusting powder with talc or as 2% ointment to

promote epithelial growth in the treatment of burns, wounds, chronic ulcers, etc.

di meg' a ly [*di-*; G. *megas*, large] The condition of having two sizes; applied to spermatozoa.

dimenformon. Trade-mark of a brand of estradiol.

di"men hy'dri nate. Generic name for the drug supplied under the trade-marked name *dramamine.*

di men sion. A measurable extent.
vertical d. In *dentistry* the distance between the upper and lower jaws when the teeth, artificial dentures, or other devices are in centric relation or in the position of rest.

di'mer The compound resulting from combination of two molecules of the same substance and having twice the molecular weight of the single molecule or monomer.

di"mer cap rol. BAL.

di"mer-cap"to-pro pan-ol. BAL.

dim er ous [*di-*; G. *meros*, part]. Consisting of two parts; used especially to describe two-parted tarsi of certain insects.

di meth yl- [*di-*; G. *methy*, wine; *hyle*, material]. A combining form denoting *the presence of two methyl groups.*

di meth'yl ac" tal (dye meth"il ass'i-tal) CH_3-$CH(OCH_3)_2$. A colorless liquid used as an anesthetic alone or combined with chloroform.

di meth'yl ami"no-azo" ben zene (dye-meth il-uh-mee no-as"o-ben zeen, -ay"zo-ben zeen, dye-meth"il-am"i-no-) $C_{14}H_{15}N_3$. Yellow leaflets used for coloring fats and butter and as an indicator for acid-base titrations. Syn., *butter yellow, methyl yellow.*

di meth"yl ami"no eth yl-ben"zyl an'i line (dye meth"il uh-mee no-eth il ben"zil an'i leen, -lin, dye-meth il-am no-) $C_{17}H_{22}N_2$. A synthetic substance shown to be antagonistic to histamine when injected into guinea pigs or rats simultaneously with the latter substance.

dimethylane. Trade-mark for 2,2-diisopropyl-4-hydroxymethyl-1,3-dioxolane, a relaxant drug useful in controlling anxiety states.

di meth"yl ar-sin'ic ac'id. $(CH_3)_2AsO\,OH$. A deliquescent, crystalline solid; soluble in water. Usually employed in the form of sodium cacodylate. Syn., *cacodylic acid.*

di meth"yl ben zene. Xylene.

di meth"yl car'bi nol. Isopropyl alcohol.

di meth"yl di sul"fa nil" amide (dye meth il-dye-sul fuh-nil'uh-mide, -mid) $NH_2C_6H_4SO_2$-$NH.C_6H_4SO_2N(CH_3)_2$. A compound similar to sulfanilamide but used chiefly in the treatment of gonorrhea. Dose, 0.5–1 Gm. (8–15 gr.) See *uleron.*

di-meth"yl-gly-ox'ime. $(CH_3C:N\,OH)_2$. A white crystalline powder used as a reagent for the detection and determination of nickel.

di meth"yl ke'tone. Acetone.

di meth yl pro"pi-o the'tin. $(CH_3)_2S^+CH_2CH_2$-COO^-; a compound analogous to betaine, isolated from a marine alga. It is an active donor of methyl groups.

di meth"yl sul'fate. $(CH_3)_2SO_4$. A colorless liquid used as a methylating agent in chemical syntheses. It is a strong caustic and its vapor is powerfully irritant to the respiratory tract.

di meth yl-the tin. $(CH_3)_2S^+CH_2COO^-$; a compound analogous to betaine; an active donor of methyl groups.

di meth"yl tu"bo-cu-ra-rine i" -dide The iodide of the dimethyl ether of *d*-tubocurarine possessing the curare action of the parent substance but less prone to cause respiratory paralysis and of longer duration of action; used to produce muscle relaxation in surgery. See *metubine iodide.*

di meth yl xan'thine (dye meth"il zan theen, -thin) 1. Theobromine (3,7-dimethylxanthine). 2. Theophylline (1,3-dimethylxanthine).

di me tri a [*di-*; G. *mētra*, womb]. Condition in which the uterus is a double organ. Also called *uterus duplex.*

dimol. Trade name of an intestinal antiseptic composed principally of dimethyl-methoxy-phenol.

di mor'phism [*di-*; G. *morphē*, form]. Property of existing in two distinct structural forms. —**dimorphous,** *adj.*

dim'ple [ME. *dympull*]. A slight depression.
postanal d. See coccygeal *fovea.*
sacral d. See coccygeal *fovea.*

dim'pling [dympull]. An abnormal skin depression from retraction occurring in subcutaneous carcinoma.

dinacrin. Trade-mark for a brand of isoniazid, an antituberculosis drug having the composition of isonicotinic acid hydrazide.

di-n-bu"tyl car"ba myl-cho"line sul'f te (-car" bah-mil ko'leen, -lin) A mydriatic and cycloplegic drug administered by instillation of one drop of 7.5% solution into the conjunctival sac.

di neu'ric (dye new'rick) [G. *dis*, twice; *neuron*, nerve]. Provided with two axons; said of a nerve cell.

di neu'tron. An atomic nuclear particle of neutral electric charge and twice the weight of the ordinary neutron.

din'ic, din'i-cal [G. *dinos*, a whirling]. Pertaining to or relieving vertigo.

di ni"tro-ben'zene (meta-) $C_6H_4(NO_2)_2$. A yellow crystalline substance, sparingly soluble in water, soluble in alcohol; used in chemical manufacturing.

di ni"tro-or"tho-cre sol. $C_7H_6O_5N_2$. Yellow crystals used with considerable danger to increase the metabolic rate in obesity.

di ni"tro phe nol. $C_6H_3(NO_2)_2OH$. A potent but extremely dangerous stimulant to metabolism. Symptoms of toxic effects are fever and profuse sweating. Skin eruptions, acute hepatitis, agranulocytosis, and cataracts have been known to follow its use.

di ni"tro phen"yl hy'dra zine (dye nigh tro-fen"il high druh-zeen, -zin, dye-nigh tro-fee nil-) $C_6H_3(NO_2)_2NH.NH_2$. Red, crystalline powder soluble in dilute acids. Used in identification and analysis of aldehydes and ketones.

di nu'cle-o tide. A nucleotide which upon hydrolysis yields two molecules of mononucleotide, which may be identical or different.

di'nus [*dinos*] Vertigo or dizziness.

Di"o-cles of Ca rys tus [Greek physician, fl. 350 B.C.]. One of the greatest ancient physicians after Hippocrates.

di"o-coele (dye o-seel) Lumen of the diencephalon, especially in the embryo. It forms part of the third ventricle in the adult.

Di-oc"to-phy'me [G. *dioktein*, to distend, blow out; *phyma*, tubercle]. A genus of large nematodes of the superfamily Dioctophymoidea.
D. renale. A species of kidney worms which occasionally infest man.

di-oc'tyl so di um sul"fo-suc ci-nate (sul fo-suck'sin-ate) (*dioctylis sulfosuccinas sodium*) $C_{20}H_{37}O_7SNa$. A white, waxlike plastic solid, soluble in 70 parts of water; employed as a wetting agent in the formulation of lotions, creams, ointments, and shampoos. See *aerosol OT dry, decerosol OT.*

di"o-done in jec'tion. Iodopyracet injection. See *diodrast.*

diodoquin. Trade-mark for diiodohydroxyquin.

diodrast. Trade-mark for the diethanolamine salt of 3,5-diiodo-4-pyridone-N-acetic acid, the active

but unisolated, ingredient of iodopyracet injection, radiopaque medium. See *diodone injection*.

di-oes trum (dye ees trum) See *diestrum*.

di-oes'trus (dye-ees trus) See *diestrum*.

dioloxol. A trade-mark for *mephenesin*.

di'o-nin. Ethylmorphine hydrochloride (*ethylmorphinae hydrochloridum*) $C_{19}H_{23}O_3N \cdot HCl \cdot 2H_2O$. A white or faintly yellow microcrystalline powder soluble in 10 parts of water. An analgesic and hypnotic, somewhat more powerful than codeine, to which it is closely related chemically; a cough sedative, local lymphagogue in 1-10% solution in various inflammations of the eye. Dose, 8-65 mg. (⅛-1 gr.)

di o-nism. Homosexuality.

di"op-sim e-ter [G. *dioptis*, a view through; *metron*, measure]. An instrument for determining the visual field.

di op'ter (dye-op'tur) [G. one who sees through, scout]. Unit of measurement of the refractive power of an optic lens. It is the refractive power of a lens having a focal distance of one meter. Abbreviated, d. —**diopter'ic, dioptral** *adj.*

prism d. A unit of prismatic refractive power; the refractive power of a prism that deflects a ray of light 1 cm. on a tangent plane situated at a distance of 1 meter.

diopterin. A trade-mark for sodium pteroyldiglutamate, a derivative of folic (pteroylglutamic) acid which is being investigated for possible usefulness as an adjunct in the treatment of malignancy.

di"op-tom'e-ter [G. *dioptis*, a view through; *metron*]. Instrument for determining ocular refraction. Syn., *optometer*. —**diopt metry** *n.*

di-op'tric [G. *dioptis*, one who sees through]. Pertaining to transmitted and refracted light.

di-op tric. A diopter.

di-op'trics [G. *dioptrikos*, of the science of dioptrics]. The branch of optics treating of the refraction of light by transparent media, especially by the media of the eye.

di"op-trom e-ter See *dioptometer*.

di-op'try See *diopter*.

di"or-tho'sis [G. making straight]. Surgical correction of a deformity or repair of an injury done to a limb; diaplasis. —**diorthot'ic,** *adj.*

di"os-co're-a [*Dioscorides*, Greek herbalist]. Wild yam root. The dried rhizome of *Dioscorea villosa*, a creeping plant, indigenous to the eastern United States. It yields an acrid resin and a saponinlike principle; has been used as an expectorant, diuretic, and antispasmodic.

Dioscorides, Pedanius [*Cilician botanist and military surgeon*, fl. 54-68]. Considered the founder of materia medica. His work, describing more than 600 plants and plant remedies, is accepted as the authoritative source of information on the materia medica of ancient times.

di-os co-rine (dye-os'ko-reen, -rin) $C_{13}H_{19}O_2N$. An alkaloid obtained from the tubers of *Dioscorea hirsuta*. A bitter and toxic alkaloid resembling picrotoxin. It produces paralysis of the central nervous system.

di'ose (dye'oce, -oze) [G. *dis*, twice; -*ose*, chemical suffix]. A monosaccharide containing only two carbon atoms; it is the simplest form of sugar.

di"os-gen'in. $C_{27}H_{42}O_3$. A steroid aglycone obtained from a saponin in *Dioscorea tokoro* and other sources. It is of interest as a starting compound in the synthesis of cortisone, progesterone, and possibly other hormones.

di-os min (dye-oz'min, -os min). A glycoside found in buchu leaves and other Rutaceae. A white, tasteless, crystalline powder related chemically to hesperidin. Syn., *barosmin*.

di"os-pho nol. A crystalline substance which deposits from chilled oil of buchu leaves. Also called *Barosma camphor*.

Di-os py-ros [G. *Dios*, of Zeus; *pyros*, wheat]. A genus of trees of the Styraceae. The bark of *D. virginiana*, the persimmon tree of the United States, is astringent and bitter and has been used in diarrhea, intermittent fever, and uterine hemorrhage.

diothane hydrochloride. Trade-mark for piperidinopropanediol-di-phenylurethane hydrochloride, a local anesthetic for mucous membranes in 1% solution. See *diperodon hydrochloride*.

di-o tic (dye-o tick, -ot'ick) [*di*-; G. *ous*, ear]. Binaural; pertaining to both ears.

di [illegible] **di ox an.** 1,4-Diethylene dioxide, $(CH_2CH_2)_2O_2$. A colorless liquid miscible with water and many organic solvents. Employed as a solvent, and a dehydrating agent in the process of paraffin-embedding in histologic technic.

di ox'ide. A molecule containing two atoms of oxygen and one of a base.

dioxogen. Trade-mark for a solution of hydrogen peroxide.

di [illegible]**x"y an'thra nol.** Dihydroxyanthranol.

di ox"y ben zene. See *hydroquinone*.

di-ox'y line. Generic name for 6,7-dimethoxy-1-(4-ethoxy-3'-methoxybenzyl)-3-methyl isoquinoline, a synthetic analog of papaverine, possessing vasodilative action useful in affecting relief of vasospasm. The drug is supplied as the phosphate salt, under the trade-marked name *paveril phosphate*.

di-o [illegible]**y tol u ene.** Orcin.

dip [ME. *dippen*]. 1. Preparation for the destruction of skin parasites in animals. 2. A sudden drop or downward inclination, as in the audiometric curve. —**dip,** *v.*

4000-cycle d. A marked dip in the audiometric curve at the 4000-cycle area. Loss of acuity in this area, the most vulnerable in the human hearing, may be due to congenital lesion or to auditory trauma.

di-paralene hydrochloride. A trade-marked name for *chlorcyclizine hydrochloride*, an antihistaminic compound.

diparcol. Trade-mark for 10-(β-diethylaminoethyl)-phenothiazine hydrochloride, a drug possessing atropinelike actions. See *diethazine*.

di pep ti-dase The enzyme which splits dipeptides to amino acids.

di pep tide. A chemical combination of two molecules of amino acids obtained by condensation of the acids or by hydrolysis of proteins.

di per o-don hy"dro chlo ride. Generic name for the local anesthetic substance available under the trade-marked name *diothane hydrochloride*.

di phal'lus [G. *dis*, twice; *phallos*, phallus]. 1. Partial or complete doubling of the penis or clitoris. 2. An individual with such a condition. —**diphal'lic,** *adj.*

di phen an. $C_6H_5CH_2C_6H_4O \cdot CONH_2$; para-benzylphenylcarbamate, a white powder almost insoluble in water, employed in the treatment of oxyuriasis.

di"phen hy'dra mine hy"dro-chlo ride (dye fen high dra-meen, -min). Generic name for 2-(benzhydryloxy)-N,N-dimethylethylamine hydrochloride, $C_{17}H_{21}NO \cdot HCl$, an antihistaminic substance supplied under the trade-marked name *benadryl hydrochloride*.

di phen"yl amine (dye-fen"il uh meen, am een). $(C_6H_5)_2NH$, used as a reagent for nitrates, chlorates, and other oxidizing substances with which, in the presence of sulfuric acid, it gives a blue color.

di phen yl amine chlo-ro-ar'sine (dye-fen il-

ah-meen″klo ro-ahr seen, -ain, dye fee nil) $(C_6H_4)_2NH.AsCl$. Adamsite sternutator used in chemical warfare. See war gas.

di phen yl-car′ba zide. $C_{13}H_{14}ON_4$; an organic compound used for determination of chloride and the detection of iron, mercury and other metals.

di phen″yl chlo″ro-ar′sine. $(C_6H_5)_2AsCl$. A solid used as sternutator in World War I

di phen″yl-cy″a-no-ar′sine $(C_6H_5)_2AsCN$ toxic agent proposed for use in chemical warfare.

di phen″yl hy-dan′to in so′di um (dye-fen il-high-dan to-in, -high-dan toyn, dye-fee nil) (*diphenylhydantoinum sodicum*)

$(C_6H_5)_2\overset{|}{C}.NH.C.ON\ (.N)CO$

A white powder soluble in water An anticonvulsant particularly useful in grand mal seizures and automatisms; it does not produce undesirable lethargy Dose, 0.06–0.12 Gm. (1 2 gr.). See *dilantin sodium*. Syn *phenytoin sodium*.

di pho ni [*dis*; G *phōnē*, sound]. The production of two distinct tones during speech; double voice.

di phos′gene. $ClCOOCCl_3$, gas similar in its effects to phosgene.

di phos″pho gly-cer′ic ac′id. $CH_2OPO(OH)_2.CHOH.C(O){\sim}PO(OH)_2$; 1,3-diphosphoglyceric acid an ester of glyceric acid with two molecules of phosphoric acid characterized by high-energy phosphate bond. It is an important intermediate in the breakdown of carbohydrate in tissue; its high-energy phosphate group is believed to be transferred from adenosinediphosphate to adenosinetriphosphate, the latter supplying energy required for physiological processes.

di phos″pho-gly-cer′ic al′de-hyde. $CH_2OPO(OH)_2.CHOH.C(H)(OH)PO(OH)_2$; 1,3-diphosphoglyceric aldehyde an ester of the hydrate form of glyceric aldehyde with two molecules of phosphoric acid. It is an important intermediate in the breakdown of carbohydrate in tissue in the presence of coenzyme I it is oxidized to diphosphoglyceric acid, the dihydrocoenzyme I formed in this reaction subsequently reacting with pyruvic acid to produce lactic acid while regenerating the coenzyme I. Also called *diphosphoglyceraldehyde*.

di-phos pho-pyr′i-dine nu′cle-o-tide (dye-fos fo-pirr′i deen, -din) Coenzyme I; cozymase; nucleotide made up of adenine, nicotinamide, ribose, and phosphoric acid It is coenzyme for numerous dehydrogenase reactions. Abbreviated, DPN

di-phos″pho-thi′a-mine. Thiamine pyrophosphate cocarboxylase. Abbreviated, DPT

diph-the ri-a [G *diphthera*, leather membrane]. An acute, communicable disease caused by the *Corynebacterium diphtheriae* (Klebs-Loeffler bacillus); characterized by the formation of false, adherent membrane on mucous membranes, usually of the pharynx, larynx, and trachea, and rarely of the conjunctiva and vagina. Locally the disease produces pain, swelling, and obstruction systemically the toxin causes fever prostration, cardiac damage in some cases paralyses, and often death. —**diphtherit′ic, diphther′ic,** *adj*

bull neck d A condition in which edema of the anterior and lateral parts of the neck occurs in addition to swelling of the regional lymph nodes It accompanies cases of severe faucial or nasopharyngeal diphtheria.

cutaneous d. An acute infection of the skin by *Corynebacterium diphtheriae*, manifested by variety of cutaneous lesions, and sometimes followed by the systemic manifestations of diphtheria, due to absorption of the toxin. Rarely primary the infection is usually secondary to autoinoculation, through contact with carrier or through fomites.

d. antitoxin (*antitoxinum diphthericum*) Blood serum from a horse or other animal immunized against diphtheria toxin. A concentrated and refined serum (*serum anti-diphthericum purificatum*) is prepared by precipitating the various protein fractions and retaining the antibody containing globulins. The antiserum is an aqueous solution of the globulins with transparent or slightly opalescent quality Average dose, prophylactic, 1000–1500 u.; therapeutic, 10,000 u. and over

d. toxin. A toxalbumin produced by *Corynebacterium diphtheriae*; it is destroyed by temperature over 60° C. and is capable of causing in susceptible animals the same phenomena induced by inoculation with the living bacilli.

d. toxin–antitoxin. A mixture of toxin and antitoxin used to produce active immunity against diphtheria; now superseded by toxoid.

d. toxoid. A detoxified diphtheria toxin used to produce active immunity against diphtheria. It has the advantage over toxin-antitoxin of not producing sensitivity to serum.

labial d. Localization of diphtheria to the outer two-third of the lips, with membrane formation, reported as complication of cheilosis and fissures due to riboflavin deficiency

surgical d. Formation of diphtheritic membrane on the surface of wound; cutaneous d.

diph the ri-a-phor [*diphthera*, G *phoros*, bearing]. A diphtheria carrier

diph the-rin. Diphtheria toxin. See *diphtheria*.

diph″the-ri-ol″y-sin (dif″thi-ree ol′i-sin, dif-theer ee o-lye sin) [*diphthera*, G. *lysis*, loosing]. A lysin having specific action on diphtheria toxin.

diph the-ri′tis [*diphthera*; G *-itis*, inflammation]. Infection with the *Corynebacterium diphtheriae*. —**diphtherit′ic,** *adj*

diph′the-roid [*diphthera*; G. *eidos*, form]. Resembling diphtheria or the diphtheria bacteria.

diph′the-roid. 1 Any bacterium resembling the diphtheria bacteria, though not producing diphtheria toxin. 2. Any pseudomembranous formation not due to *Corynebacterium diphtheriae*.

diph″the-ro-tox′in. Diphtheria toxin.

diph thon′gi [G *dis*, twice *phthongos*, voice]. Production of double tone of the voice; due to incomplete unilateral paralysis of the recurrent laryngeal nerve, or to some lesion of the vocal folds which causes each to produce its own sound.

diph″y gen′ic [G *diphyēs*, of double form; *genesthai*, from *gignesthai*, t be produced]. In *zoology* characterized by or having two types of development

di phyl″lo-both ri′ -sis [G. *dis*, twice; *phyllon*, leaf *bothrion*, little trench; NL. *-iasis*, condition]. Infestation with *Diphyllobothrium latum*.

Di phyl″lo both ri um [*dis*; *phyllon*; *bothrion*]. A genus of tapeworms, formerly called *Dibothriocephalus*

D. erinacei. A species of which only the larval stage is found in man, the adult worm being found only in dogs and cats.

D latum. The fish tapeworm, a large tapeworm found in the intestine. The head has two suckers or bothria. The adult worm ranges from 3 to 10 meters in length, and may have over 4000 proglottids. The definitive hosts are man, dog, and cat. The first intermediate hosts are freshwater copepods, and the secondary intermediate hosts are various fresh-water fishes. Infestation in man may cause disorders of the nervous and digestive systems, malnutrition, and anemia.

di phy'o-dont" [G. *diphyēs*, of double form; *odous*, tooth]. Having two sets of teeth, as the deciduous teeth and the permanent teeth.

dip"i-cryl" amine. $C_{12}H_5O_{12}N_7$; an organic compound used for Carere-Comes fliena orange method for potassium. Syn., *hexanitrodiphenyl amine*.

dip"lo-cu'si [G. *diploos*, double; *akousis*, hearing]. Hearing of the same sound differently by the two ears.

d. binauralis. Perception of a single tone as having a higher fundamental pitch in one ear than in the other.

d. unilateralis. Hearing of two tones by one ear when only one tone is produced.

di"plas mat'ic (dye plas mat'ick) [G. *dis*, twice; *plasma*, anything formed or molded]. Containing matter other than protoplasm — said of cells.

di plas'tic [*dis*; *plasma*]. Containing two substances — said of the constitution of some cells.

di ple gi a [*dis*; G. *plēgē*, stroke]. Paralysis of similar parts on the two sides of the body. —**diple gic**, *adj.*

cerebellar d. Hereditary cerebellar ataxia associated with some degree of pyramidal paresis.

spastic d. Spastic paralysis of the legs due to organic changes in the infantile brain, such as diffuse degeneration or atrophy, lobar sclerosis, malformations or developmental defects, and microscopic cellular alterations. This disorder is sometimes associated with convulsions and mental deficiency.

dip'lo-, dipl- [G. *diploos*, double]. A combining form signifying *two*, *twice*, *twofold*, *double*, *twin*, etc.

dip"lo-al bu"mi nu'ri a [*diploos*; L. *albus*, white; G. *ouron*, urine]. The coexistence or alternation of physiologic and pathologic albuminuria in the same subject.

dip"lo-ba cil'lus [*diploos*; L. *bacillus*, small staff]. A pair of bacilli, joined end to end, as the result of incomplete fission.

dip"lo blas'tic [*diploos*; G. *blastos*, germ]. Having two germ layers, ectoderm and entoderm.

dip"lo-car'di ac [*diploos*; G. *kardia*, heart]. Having a double heart, or one in which the two sides are more or less separate, as in birds and mammals.

dip"lo-ce pha'li a, dip"lo-ceph' aly [*diploos*; G. *kephalē*, head]. Dicephaly. *Obs.*

dip"lo-ceph'a lus [*diploos*; *kephalē*]. A monster with two heads. —**diplocephalous**, *adj.*

dip"lo-coc'cin (dip"lo cock'sin). An antibiotic substance obtained from cultures of certain streptococci.

dip"lo-coc'coid [*diploos*; G. *kokkos*, grain; *eidos*, form]. Resembling diplococcus.

Dip"lo-coc cus [*diploos*; *kokkos*]. A genus of bacteria of the family Lactobacteriaceae of the tribe Streptococceae.

D. gonorrhoeae. Synonym for *Neisseria gonorrhoeae*.

D. intracellularis meningitidis. See *Neisseria meningitidis*.

D. pneumoniae. A species that is oval or spherical, typically paired, encapsulated, nonmotile, and usually Gram-positive. It has been subdivided into types, of which 31 are recognized at present, but at least 55 have been described. It is one of the causes of pneumonia, especially lobar, but may also cause other infectious diseases, as meningitis, otitis media, pericarditis, and arthritis. Formerly called *pneumococcus*.

dip"lo-coc cus [*diploos*; *kokkos*]. A micrococcus that occurs in groups of two, such as the pneumococcus.

dip"lo-co ri-a [*diploos*; G. *korē*, pupil]. Double pupil.

dip'lo-ë (dip'lo ee) [G. *diploē*, fold]. The cancellous bone between the outer and inner tables of the bones of the skull. —**dipl 'ic, diploet'ic**, *adj.*

dip"lo gen -sis [G. *diploos*, double; *genesis*, production]. Development of a double or twin monstrosity.

Dip"lo-go nop -rus [*diploos*; G. *gonē*, offspring; *poros*, pore]. A genus of cestodes or tapeworms.

D. grandis. A species normally infesting whales and seals, with man accidentally infested by the ingestion of salt-water fishes, the second intermediate hosts.

dip l 'l cin. An antibiotic substance produced by the lichen *Buellia canescens*.

dip'loid [*diploos*; G. *eidos*, form]. Having double the haploid or gametic number of chromosomes.

dip"l kar'y n [*diploos*; G. *karyon*, kernel]. A nucleus with twice the diploid number of chromosomes. *Obs.*

dip'lo mate. One who has received a diploma. *In medicine*, a holder of a certificate of the National Board of Medical examiners, or a person who has been certified as a specialist by one of the American specialty boards, like the American Board of Surgery.

dip"lo-mel"li tu'ri [*diploos*; G. *meli*, honey; *ouron*, urine]. Coexistence or alternation of diabetic and nondiabetic glycosuria in the same subject.

dip"lo-my cin. An antibiotic substance elaborated by a *Diplococcus* species that has been reported to produce promising results in pulmonary tuberculosis.

dip"lo-my 'li (dip"lo-migh-ee'lee-uh) [*diploos*; G. *myelos*, marrow]. See *diastematomyelia*.

dip"lo-ne ma [*diploos*; G. *nēma*, thread]. The chromosomes in the diplotene stage.

dip"l neu ral (dip"lo-new'rul) [*diploos*; G. *neuron*, nerve]. Pertaining to a muscle supplied by two nerves from different sources.

di plop gus (di-plop uh gus) [*diploos*; G. *pagos*, that which is fixed]. A double monster consisting of conjoined twins equally developed but having one or more vital organs in common.

di plo pi (di plo pee uh) [*diploos*; G. *opsis*, vision]. Double vision, one object being seen as two. —**diplop'ic**, *adj.*

binocular d. The most common type, due to derangement of muscular balance of the two eyes; the images of an object are thrown upon nonidentical points of the retina.

crossed d. The result of divergent strabismus; the false image of the right eye appears upon the left side, and that of the left eye upon the right side. Also called *heteronymous d.*

homonymous d. The reverse of crossed diplopia; found in convergent strabismus. Also called *direct d.*

introspective d. Formation of images on noncorresponding retinal points, giving a perception of depth and perspective. Also called *physiologic d.*

monocular d. Diplopia with a single eye; usually due to hysteria, to double pupil, or to beginning cataract.

t mporal d. See homonymous *d.*

dip"lo-pi-om e-ter [*diploos*; *opsis*; G. *metron*, measure]. Instrument for measuring the degree of diplopia.

dip'lo sal. A trade-mark for *salicylsalicylic acid*.

dip'lo-scope [*diploos*; G. *skopein*, to examine]. Instrument for the investigation of binocular vision.

di pl sis [*diploos*; G. *-osis*, condition]. The establishment of the full double number of chromosomes by fusion of two haploid sets in fertilization.

dip'l some [*diploos*; G. *sōma*, body]. The pair of centrioles commonly found in certain cells.

Dip"lo-strep"to-coc'cus [*diploos*; G. *streptos*, curved; *kokkos*, berry]. *Streptococcus*.

dip'lo-tene [*diploos*; G. *tainia*, ribbon]. Applied to stage of miosis in which the chromatin threads of the spireme are distinctly double.

di po'lar (dye-po'lur). Bipolar.

di'pole [G. *dis*, twice; *polos*, pole]. 1. A particle or object bearing opposite charges. 2. A pair of electric charges, positive and negative, situated near each other in a conducting medium. Syn., *doublet*.

di'pole mo'ment. The measure of the electric asymmetry of a molecule. It is equal to the product of the ionic charges and their spatial separation.

Dippel's oil [for Johann Conrad *Dippel*, German alchemist, 1673–1734]. Bone *oil*.

dip ping [AS. *dyppan*]. 1. Palpating the liver by quick depression of the abdomen. 2. *In veterinary medicine*, the act of submerging an animal for the application of a dip.

dip'pol-dism [after *Dippold*, German schoolteacher tried and convicted of manslaughter]. Flogging of children, especially school children.

dip ro-so'pi-a (dip ro so pee-uh, dye pro-), **di-pros'o-py** (dye-pros o-pee) [G. *dis*, twice; *prosopon*, face]. *In teratology*, duplication of the face.

di pro so-pus (dye pro'so-pus, dye pro-so pus) [*dis*; *prosopon*]. A monster characterized by a duplicity of the face. Such monsters occur with all degrees of duplicity as the **diprosopus dirrhinus** (a monster with a double nose) and the **diprosopus tetrotus** (one with four ears) (see Plate 25) and grade into dicephaly.

d. parasiticus. An individual with doubling of the face, one face being markedly smaller or less well formed.

dip set'ic [G. *dipsetikos*, thirsty]. Causing or attended with thirst. *Rare.*

dip so-ma ni- [G. *dipsa*, thirst; *mania*, madness]. Recurrent periodic compulsion to excessive drinking of alcoholic beverages. —**dipsoma niac**, *n.*

dip"so-pho'bi [*dipsa*; G. *phobos*, fear]. A morbid fear of drinking.

dip sor-rhex'i-a. See chronic *alcoholism*.

dip so ther'a-py [*dipsa*; G. *therapeia*, treatment]. Treatment of certain diseases by reducing the amount of fluid allowed the patient.

Dip'ter-a [G. *dipteros*, from *dis*, twice; *pteron*, wing]. An order of two-winged insects; includes mosquitoes, flies, midges.

Dip"ter-o-car'pus [*dipteros*; G. *karpos*, fruit]. A genus of trees, chiefly found in southern Asia, some of which furnish gurjun balsam.

dip'ter-ous [*dipteros*]. *In biology*, having two wings or winglike processes.

di'pus [G. *dis*, twice; *pous*, foot]. Bifid foot.

di'pus. Having two feet.

di-py'gus, dip y-gus [*dis*; G. *pyge*, rump]. A monster with more or less *duplication of the pelvis* and lower parts of the back. Syn., *dihypogastrius*.

d. parasiticus. A monster having attached to its abdomen a more or less complete parasitic body. See Plate 25.

d. tetrapus. A dipygus with four legs.

d. tripus. A dipygus with three legs.

dip"y-lid-i' -sis [G. *dipylos*, double-gated; NL. *-iasis*, condition]. A disease due to the *Dipylidium caninum*, the common tapeworm of dogs.

Di"py lid'i-um (dye pye lid ee-um) [*dipylos*]. A genus of tapeworms.

D. caninum. A species of which the dog and cat are definitive hosts, and man is an occasional host. These worms vary from 20–40 cm. in length. Fleas are the host of the larval stage.

di rec'tor [L. *director*, from *dirigere*, to send in a straight line]. Anything that guides or directs.

grooved d. An instrument grooved to guide the *knife* in surgical operations.

di rhi'nus, di rhy nus. See *dirrhinus*, *dirrhynus*.

Di"ro-fi la'ri a [L. *dirus*, cruel; *filum*, thread]. A genus of filarial worms. Members of the species **D. immitis**, **D. magalhaesi**, and **D. repens** are parasites of dogs.

D. conjunctivae. A species of filarial worms reported in many areas of the Mediterranean basin and found in such diverse sites as the eyelids, conjunctiva, lips, and gastrosplenic ligament; considered by some authorities to be identical with *Filaria conjunctivae* and *F. palpebralis*.

dir rhi'nus, dir rhy'nus [G. *dis*, twice; *rhis*, nose]. Partial or complete doubling of the nose; mild degree of diprosopia; also sometimes spelled *dirhinus*, *dirhynus*.

dirt eat'ing. See *chthonophagia*; *geophagy*.

dis-, **di-** [G., twice]. A prefix signifying *two*, *twice*, or *double*.

dis- [L., asunder, in pieces, apart, in two, in different directions]. A prefix meaning *separation*, *the opposite of*, *reversal*.

di sac'cha ride (dye sack uh-ride, -rid), **di-sac'cha rid** (dye sack'uh-rid). A carbohydrate formed by the condensation of two monosaccharide molecules.

dis-ag"gre ga'tion [L. *dis-*, indicating separation; *aggregare*, to add to]. 1. A state of perpetual distraction which prevents an individual from entertaining any idea other than the one which dominates or occupies his mind, as in obsessive ruminative states. 2. In hysteria, an inability to coordinate various new sensations and to connect them with visual impressions.

dis"ar tic"u la tion [*dis-*; L. *articulatio*, putting forth of new joints]. Separation at a joint; amputation at a joint.

dis"as so"ci-a tion. The separation of a substance, initially present in a more complex state of organization, into its simpler parts, as when water in the form of $(H_2O)_3$ or $(H_2O)_2$ dissociates to single molecules of H_2O.

dis az'o-, dis a'zo-. *In chemistry*, a combining form indicating the presence in a compound of two azo (—N═N—) groups. —**disazo**, *adj.*

disc. See *disk*.

dis-charge [OF. *descharger*]. 1. An emission, unloading, evacuation, or secretion. 2. That which is emitted. 3. *In electricity*, setting free or escape of stored-up energy; the equalization of differences of potential between the poles of a condenser or other source of electricity by connecting or nearly connecting them with a conductor.

dis-charge. To emit; to unload.

dis-charg'ing [*descharger*]. Unloading; flowing out, as pus.

dis-cis sion (di sish un, -sizh un) [L. *discissum*, from *discindere*, to tear]. 1. State of being torn apart. 2. *In eye surgery*, an operation for soft cataract in which the capsule is lacerated a number of times to allow the lens substance to be absorbed.

disc i'tis (disk eye'tis) [G. *diskos*, disk; *-itis*, inflammation]. Inflammation of a disk, especially of an intervertebral or articular disk.

dis'co-, disc- [*diskos*]. A combining form denoting *connection with*, or *resemblance to*, a *disk*.

dis"co-blas'tu-la [*diskos*; G. *blastos*, sprout]. A blastula produced by meroblastic, discoidal cleavage.

dis"co-gas'tru la [*diskos*; G. *gaster*, stomach]. The modified type of gastrula produced by meroblastic, discoidal cleavage of telolecithal ova.

disc' gram, disk o-gram. A radiograph of an intervertebral disc after the injection of a water-

soluble radiopaque substance into the disc proper. —discog'raphy, n.

di coid, dis"coid'al [*diskos*; G. *eidos*, form] Shaped like disk.

dis coid. *In dentistry* an excavator having blade in the form of disk.

dis-col"or a tion [L. *dis-* indicating separation; *colorare*, to color]. Change in or loss of the natural color of part.

dis"com po-si tion. A process by which an atom is dislodged from its position in crystal lattice by direct nuclear collision.

Dis"co my'ces (dis"ko-my sees) [*diskos*; G. *mykēs*, fungus]. A name proposed and used to minor extent for genus of actinomycetes.

D bovis. Synonym for *Actinomyces bovis*.

D maduras. Synonym for *Nocardia madurae*.

D minutissimum. Synonym for *Nocardia minutissima*.

D. tenuis. Synonym for *Nocardia tenuis*.

dis ceph o-rous [*diskos*, G *phoros*, bearing]. Furnished with disklike organ or part.

dis co-pla cen'ta [*diskos*; L. *placenta*, cake]. A discoid placenta.

dis-co ri a. See *dyscoria*.

dis-cret [*discretus*, from L. *discernere*, to separate]. Not running together separate opposed to *confluent*.

dis-crim"i na'tion [L. *discriminare*, to discriminate]. The act of distinguishing or differentiating.

one-point d. The act of distinguishing by localization point of pressure on the surface of the skin.

tonal d. The act of distinguishing tone values. This function is located in the cochlea.

two-point d. The act of differentiating or identifying two points of pressure on the surface of the skin. The normal bility for this is proportional to the distance between the points.

dis'cus [G. *diskos*, disk]. A disk.

d. articularis. Interarticular fibrocartilage.

d. proligerus. The cumulus oophorus.

dis-cu'tient [L. *discutere* to disperse]. A remedy which causes dispersion or disappearance, as of swelling —discu'tient, adj

dis ease [L. *dis-* indicating separation; OF *aise*, ease]. 1 The failure of the adaptive mechanisms of an organism to counteract adequately the stimuli or stresses to which it is subject, resulting in disturbance in function or structure of any part, organ, or system of the body A reaction to injury sickness, or illness 2. A specific entity which is the sum total of the numerous expressions of one or more pathological processes The cause of disease entity is represented by the cause of the basic pathological process in combination with important secondary causative f tors For any disease not listed here, see the specific name in alphabetical place and under *syndrome*

ana d. See *ana disease*.

abiotrophi d See *abiotrophy*.

acute d. One marked by rapid onset and short course

acute respiratory d. Term applied by the Commission on Acute Respiratory Diseases to an acute f brile respiratory infection which occurs epidemically in military recruits, particularly during the winter months Fever and constitutional symptoms predominate over respiratory symptoms of irritated or sore throat and cough. In contrast to the common cold, coryzal symptoms are not prominent. The disease has been transmitted to man with filtered secretions of the respiratory tract, and is presumably due to specific virus. Immunity develops after infection. The infection is similar to influenza or grippe, but is not caused by the known influenza viruses. The duration f the illness is approximately one week. See also *common cold*.

Adams-Stokes d. Cerebral syncope with bradycardia.

adaptatio d. See *adaptation disease*.

Addison d. A condition brought bout by hypofunction or dysfunction of the suprarenal glands; adrenal insufficiency It is characterized by ex treme emaciation, anemia, and deep bronzing of the skin, ending in death. The name also was pplied formerly to pernicious anemia.

adenocystic d. See *adenosis of breast*.

ai sac d. (*of poultry*) A disease of the respiratory system of chickens haracterized by respiratory rales, slow rate of spread, and protracted course. The tiologic agent is thought to belong to the pleuropneumonia group of bacteria.

Albers-Schomberg d. Osteopetrosis.

Albert' d. Achillodynia.

alkali d. Selenium poisoning.

Alzheimer's d. See presenile *sclerosis*.

amyloid d. See *amyloidosis*.

anserine d. A wasting of the muscles of the extremities, causing the tendons to be unduly prominent, suggesting the ppearance of goose foot

arc-welder' d. Benign pneumonoconiosis caused by inhalation of fine particles of iron oxide which eventually form ggregates in the lymphatics of the lung without producing pulmonary fibrosis form of *siderosis*. It is commonly seen in persons engaged in electric arc welding

attic d. Chron suppurative inflammation of the ttic of the tympanic cavity

Aujeszky's d. Infectious bulbar paralysis.

Australian X d. An epidemic virus encephalitis, prevalent in children; first appeared in Australia in 1917 t resembles poliomyelitis, and can be transmitted to some animals. It is thought to be related to, or identical with, J panese B encephalitis.

Ayerza d. A syndrome of chronic cyanosis, dysp ea, and sclerosis of the pulmonary artery

Babinski-Froehlich d. See adiposogenital *dystrophy*.

bagasse d. See *bagassosis*

Ba g' d. Infectious abortion of cattle.

Banti's d. Chronic congestive splenomegaly Also see Guido *Banti*.

Barcoo d. See *veldt sore*.

Barlow' d. Infantile scurvy

Basedow's d. Exophthalmic goiter

Batten-Mayou d. The juvenile form of amaurotic familial idiocy ( )

Bazin's d. See *erythema induratum*.

beetle d. Scarabiasis. A condition in which dung beetles are present in the intestinal tract. It occurs usually in children and produces symptoms of failing health such as anorexia, dysentery and emaciation

Behcet's d. Behcet *syndrome*.

Bekhterev's d. Chronic arthritis of unknown etiology with progressive deformity stiffness, and bony fusion of vertebrae.

Bell' d. Neuropathy of the facial nerve.

Bernhardt's d. Abnormal sensations, especially of numbness, with hyperesthesia and pain on exertion, in the region supplied by the lateral cutaneous nerve of the thigh.

Besnier Boeck-Schaumann d. Sarcoidosis.

Biermer's d. See pernicious *anemia*.

black d. An acut infectious disease of sheep The most characteristic lesion is necrosis of the liver and extensive hemorrhages on the inner surface of the hide. The causative agent, *Clos-*

tridium novyi, Type B, multiplies in areas of the liver previously damaged by the liver fluke. This disease is prevalent in all areas where the liver fluke occurs.

blue d. Rocky Mountain spotted fever.

Bornholm d. Epidemic pleurodynia.

Bouillaud's d. See *rheumatic fever*.

Bourneville's d. See *tuberous sclerosis*.

Bowen's d. A disease involving the skin and sometimes the mucous membranes; may be a precancerous dyskeratotic process or a superficial epithelioma with lateral intraepithelial spread. Marked by reddish papules covered with a thickened horny layer.

Bright's d. Chronic nephritis.

Brill's d. See recrudescent *typhus*. Also see Nathan E. *Brill*.

Brill-Symmers d. See follicular *lymphoma*.

Bwaki d. An avitaminosis due to lack of vitamin B, characterized by edema and depigmentation of the skin, the latter mostly on the face. The hair loses its luster and natural curl.

Buerger's d. Thromboangiitis obliterans, a chronic arteritis and phlebitis of the extremities, with thrombotic occlusion leading to gangrene; generally affects portions of the toes and feet.

Buschke's d. See *scleredema adultorum*.

Busquet's d. Periostitis resulting in dorsal metatarsal exostoses.

Busse-Buschke's d. Cryptococcosis.

caisson d. A condition caused by a too rapid return from high to normal (sea level) atmospheric pressure; affects tunnel and caisson workers, divers, and others who work under high atmospheric pressure; due to the formation of nitrogen bubbles in the blood and body tissues. Symptoms vary with the location of the bubbles and include pain in the abdomen, joints, and extremities, vertigo, various sensory or motor disturbances, itching of the skin, asphyxia, collapse, and unconsciousness. Prompt treatment usually assures recovery. Syn., *aeremia*, *bends*, *compressed-air illness*, *diver's paralysis*. Also see *aeroembolism*, *cutaneous gaseous embolism*.

California d. See *coccidioidomycosis*.

Calvé's d. Osteochondrosis involving primary growth centers of vertebral bodies.

Carrión's d. Bartonellosis. See also *verruga peruana* and Oroya *fever*.

Castellani's d. See *bronchospirochetosis*.

cat-scratch d. See *cat-scratch fever*.

cave d. An apparently infectious disease of unknown etiology, so named because it was observed in persons who had spent several hours in a cave. The onset is abrupt, with epistaxis, headache, high fever, and squeezing chest pain. X-rays show pathologic changes of the lung.

celiac d. An idiopathic form of celiac syndrome seen in infants and young children in which recovery usually eventuates. The patient presents marked abdominal distention, malnutrition, and characteristic stools. Also called *Gee's d.*, *Gee-Herter d.*, *Gee-Thaysen d.*, *Heubner-Herter d.*, *chronic intestinal indigestion* or *insufficiency*, *chronic [illegible] insufficiency*, *Herter's infantilism*, *intestinal infantilism*, *indigenous sprue*, *chronic idiopathic steatorrhea*.

Chagas' d. American trypanosomiasis.

Charcot-Marie-Tooth d. Progressive, familial, neuropathic muscular atrophy characterized by weakness and atrophy of the peroneal muscles. This is accompanied by diminution of proprioceptive and cutaneous sensation and loss of deep reflexes. Talipes cavus frequently is present. Syn., *peroneal muscular atrophy*, *neuritic muscular atrophy*.

Chauffard-Still's d. See Augustus R. *Felty*.

Chiari's d. Obliterating endarteritis of the liver.

Christian-Weber d. Nodular nonsuppurative panniculitis.

Christmas d. A hemophilialike disease due to deficiency of the Christmas factor; PTC deficiency.

chronic d. One which is slow in its course and of long duration.

coal miner's d. See *anthracosilicosis*.

cobalt deficiency d. (*of ruminants*) A deficiency disease due to lack of cobalt in the forage. Cobalt is thought to be important in the synthesis of B_{12} in the rumen.

collagen diseases. Diseases characterized by widespread alterations of connective tissue, as rheumatic fever, rheumatoid arthritis, polyarteritis, acute disseminated lupus erythematosus, generalized scleroderma, or dermatomyositis; a clinically useful term.

comb d. (Favus of fowls) a contagious skin disease of chickens, chiefly affecting the comb.

combined system d. See subacute combined degeneration of spinal cord.

communicable d. One which is readily transmitted from person to person by direct contact or through the agency of a vector.

complicating d. A secondary or independent disease superimposed upon one already existing. Syn., *intercurrent d.*

Concato's d. See *polyserositis*.

congenital d. One acquired in utero, and therefore present at birth.

congenital polycystic d. A hereditary disease in which parenchyma of the kidney and less frequently that of the liver and pancreas are replaced to a variable extent by multiple cysts.

constitutional d. (a) An inherent disease owing to the individual's inherited genotypic characteristics. (b) A general disease involving the entire body, as contrasted to local disease confined to one part.

contagious d. A disease transmitted by direct contact with an affected person or with his secretions.

Cooley's d. Thalassemia.

cornstalk d. A disease of cattle and horses, resembling hemorrhagic septicemia.

Coxsackie d. A condition characterized by a group of clinical syndromes, as yet only partially established, related to infection with the Coxsackie viruses, and presenting the manifestations of such illnesses as poliomyelitis, aseptic meningitis, epidemic pleurodynia, and herpangina; a tentative designation.

Cruveilhier's d. See progressive spinal muscular atrophy.

Cushing's d. See *pituitary basophilism*.

cutaneous caisson d. See *cutaneous gaseous embolism*.

cystic d. of breast. A condition affecting women, usually near or at the menopause, characterized by the rapid development in the involuting breast of one or more fairly large cysts which can sometimes be transilluminated. At operation the cysts often show a thin blue dome and contain serous fluid. The bilateral polycystic form is also called *Reclus' disease*.

cystine d. Disturbance of amino-acid metabolism, probably faulty disintegration of these acids due to a recessive hereditary factor. It is characterized by aminoaciduria, dwarfism, albuminuria, polyuria, glycosuria, phosphaturia, presence of abnormal amounts of ammonia in the urine, or alkaline urine, skeletal changes suggesting rickets, hypophosphatemia, hypercholesterolemia, low

alkali reserve, glycolability and thermolability. Treatment is dietary: low-protein, alkaline ash, with high carbohydrate and f t.

cytomegalic inclusion d. A rare systemic disease characterized by the presence of intranuclear and intracytoplasmic inclusion bodies in the markedly enlarged cells of many organs; usually observed in infants and children and thought to be due to viral infection.

Darier' d. See *keratosis follicularis*.

Darling's d. Histoplasmosis.

David's d. A rare hemorrhagic disorder found exclusively in women, characterized by bleeding from mucous membranes, marked purpura, or both; it is probably due to ovarian hormone deficiency.

de Beurmann-Gougerot d. See *sporotrichosis*.

deficiency d. One resulting from the lack of necessary dietary constituent, as minerals, vitamins, or f tty acids.

degenerative d. A general wearing-out process, in which no specific deficiency is recognized; common in old age.

degenerative joint d. A chronic joint disease of unknown cause, characterized by progressive loss of joint cartilage, condensation of subchondral bone, and in the advanced phase, spur formation. Early symptoms includ some stiffness and pain about the joint, which characteristically re relieved by rest. Physical signs are joint crepitus and changes in the size and shape of th bones. Limitation of motion is due to bony deformity never to bony ankylosis. Syn. *degenerative hyper trophic*, or *senescent arthritis, arthritis deformans, osteoarthritis*.

demyelinating d. One of large group of diseases of the nervous system which possess, as common patholog feature, foci in which the myelin sheaths of the nerve fibers are destroyed.

Dercum' d. Adiposis dolorosa.

diffused d. One which involves several tracts of the spinal cord.

DiGuglielmo s d. Acute erythremia.

Duchenne-Aran d. Progressive myelopathic muscular atrophy.

Duhri g's d. See *dermatitis herpetiformis*.

Durand-Nicolas-Favre d. Venereal lymphogranuloma.

D ra d's d. A febrile disease, occurring in North Africa, during the course of which local cutaneous lesion develops accompanied by viremia, presence of virus in the cerebrospinal fluid, cough, vomiting, and lethargy. Recovery ensues after six to eight days with the developme t of complement-fixing antibodies in the serum.

dust d. See *pneumonoconiosis*.

Eale d. Retinal periphlebitis associated with recurring vitreous hemorrhages; it is perhaps tuberculous in origin.

Ebstein's d. Congenital downward displacement of the tricuspid trio entricular ring, usually associated with congenital hyperplasia of the right ventricle and patent foramen ovale.

Economo d. See lethargic *encephalitis*.

Eddowe's d. See *osteogenesis imperfecta*.

endemic d. One which occurs continuously or repeatedly at the same season in certai locality.

Engelmann's d. A rare disease of bone characterized by symmetrical fusiform enlargement and sclerosis of the shafts of the main long bones, usually associated with changes in the skull bones; also called *progressive diaphyseal dysplasia, osteopathia hyperostotica (sclerotisans) multiplex infantilis*.

Engel-Recklinghausen's d. See *osteitis fibrosa cystica*.

epidemic d. One attacking large number of people in one region at the sam time.

Erb-Charcot d. Syphilitic spastic spinal paralysis.

f milial d. One occurring in several members of the same family. Often restricted to mean several members of the same generation, in contrast to hereditary disease.

Favre d. Venereal lymphogranuloma.

Feta-Riga d. Cachetic phthae.

fibrocystic d. (*of breast*) See cystic d. of breast.

fifth d See *erythema* infectiosum.

fishskin d. See *ichthyosis*.

Flajani' d. Exophthalmic goiter.

flint d. See *chalicosis*.

foot-and-mouth d. An acute febrile disease due to filtrable virus; causes vesicular eruption of the mucous membranes of the nose and mouth and the skin of the feet. It is contagious to ruminants and pigs and is often transmitted to other domesti animals as well as to man. Syn *epidemic stomatitis, epizootic stomatitis*.

Fordyce' d. See John A. *Fordyce*.

fourth d. A syndrome occurring in childhood, characterized by an acute, reddish exanthema extending over the entire body with the exception of the face, and followed by desquamation. It resembles scarlatina, but runs mild course. The etiology is unknown.

fourth venereal d. Venereal lymphogranuloma.

F Fordyce d. A chronic, tching, papular eruption, seen about the areola, the pubic area, the axillae; probably due to disorder of the apocrine sweat glands. More common in women.

Freiberg' d. See Köhler d (2).

Frei's d. See venereal *lymphogranuloma*.

Friedreich d. Paramyoclonus multiplex.

functional d. One i which no definite cause or no demonstrable patholog lesion can be discovered.

Gaisböck's d. See *polycythemia hypertonica*.

Gamna d. See *splenogranulomatosis siderotica*.

Gaucher' d. A rare and frequently familial disease involving pri cipally the reticuloendothelial system, and occurring in an acute infantile form and more chronic adult form. It is characterized by enlargement of the spleen, bronzing of the skin, anemia, and, in children, by neurological symptoms. The cells of the lesion contain lipids of the cerebroside class. Also called *cerebroside lipoidosis, familial splenic anemia*. See also Gaucher *cells*.

Gee-Herter d. See celiac *disease*.

Gee d. Celiac disease.

Gee-Thaysen d. See celiac *d.*

Gilchrist's d. See North American *blastomycosis*.

glycogen d. See *glycogenosis*.

Gougerot's d. 1. Sporotrichosis. 2. Gougerot's trisymptomatic disease. See nodular dermal *allergid*.

Gougerot-Blum d. A form of capillaritis, known as pigmented purpuric lichenoid *dermatitis*, seen principally in the lower extremities.

Graves d. Exophthalmic goiter.

Guillain-Barré d. Guillain-Barré *syndrome*.

Gull and Sutton d. Generalized *arteriosclerosis*.

Habermann's d. See *pityriasis lichenoides et varioliformis acuta*.

Hailey-Hailey d. See f milial benign *pemphigus*.

Hammond' d. See *athetosis*.

Hand-Schüller-Christian d. A syndrome of childhood, insidious in nset and progressive, characterized by exophthalmos, diabetes insipidus, and softened areas in the bones, particularly in femurs and those of the skull, shoulder

and pelvic girdle. Pathologically the changes are due to lipoidosis of the xanthoma type. Both eosinophilic granuloma and Letterer-Siwe disease have been considered by some to be special manifestations of this disease. Syn. *lipoid granulomatosis*.

H not's d. Hypertrophic cirrhosis of the liver

Hansen's d. Leprosy

Hashimoto's d. See *struma lymphomatosa*.

Hartheween's d. See *keratoderma climactericum*.

heart d. See *heart disease*.

heartwater d. A disease of ruminants seen in South Africa; due to *Rickettsia ruminantium* and transmitted by ticks. Resembles rickettsia infections in humans except for the large effusions in the serous cavities. There is very high mortality

Heberden' d. The condition associated with bony enlargement about the terminal phalangeal joints.

Hebra's d. See *pityriasis rubra, erythema multiforme exudativum*.

Heine-Medi d. See acute anterior *poliomyelitis*.

hemorrhagic d. Disease in which pathologic hemorrhage occurs, due to disturbance in blood coagulation or to increased permeability of the walls of the blood vessels.

hemorrhagic d. of the newborn. A disease occurring in the first two weeks of lif usually between the second and fifth day; marked by spontaneous bleeding in any body tissues. Due to hypoprothrombinemia, resulting from vitamin-K deficiency in the mother Also called *hemophilia neonatorum*.

hereditary d. One transmitted from the parent to his offspring through the genes. May be dominant, recessive, or sex-linked.

Heubner-Herter d. See celiac *d.*

Hippel-Lindau d. See Arvid *Lindau*.

Hirschsprung' d. See *megacolon*.

hock d. *In veterinary medicine*, perosis, deficiency disease characterized by the occurrence of deformed legs. Has been observed frequently in chicks fed on synthetic diets. The factor essential to prevent this disease in chicks so far has not been identified. Also called *slipped tendon*.

Hodgkin d. A form of lymphoma of unknown cause, with manifold clinical manifestations ter minating f tally in which the histologic picture of the lymph nodes is characterized by pleomorphism, including besides adult lymphocytes, neutrophils, eosinophils, fibroblasts, and Reed-Sternberg cells. It is sometimes subdivided on the basis of the pathologic findings into three forms (1) *Hodgkin granuloma*, the most common and most protean in its clinical manifestations; (2) *Hodgkin paragranuloma*, comparatively benign form largely confined to the lymph nodes and *exhibiting only limited systemic* involvement (3) *Hodgkin sarcoma*, highly malignant form of short duration. These three forms, which are probably different stages of this disease, may be difficult to distinguish, and generally the less malignant forms mutate to the more malignant. Also called *scirrhous lymphoblastoma, granulomatous lymphoma, Hodgkin lymphoreticuloma, pleomorphic lymphosarcoma*.

Hellia d. Epidemic hemolytic jaundice.

hookworm d. See *ancylostomiasis*

Hopf's d. See *acrokeratosis verruciformis*.

hunger d. See *hyperinsulinism*

Huntington's d. See *George Huntington*.

Hurler's d. See *lipochondrodystrophy*

hyaline d. of the newborn. A disease of unknown cause occurring during the first few days of the neonatal period, characterized by respiratory distress and frequently cyanosis. Diagnosis is made microscopically hyalinelik membrane being found lining many of th alveoli and alveolar ducts.

hypertensive vascular d. See *hypertensive vascular disease*.

idiopathic d. One in which no causative factor is recognized.

inclusion d. See cytomegalic inclusion *d.*

infectious d. One due to invasion of the body by pathogenic organisms.

intercurrent d. See complicating *d.*

Jaffé-Lichtenstein d. Fibrous dysplasia of the bones of the vertebral column.

Johne's d. A chronic enteritis of cattle, sheep, and deer caused by *Mycobacterium paratuberculosis* and characterized by intermittent diarrhea and progressive emaciation without fever Gross thickening of the mucosa of the small intestine and enlargement of the mesenteric lymph nodes without *ulceration may occur*

Jüngling' d. See *osteitis* cystica of Jungling.

kakk d. See *beriberi*.

Kaposi's d. Xeroderma pigmentosum.

Kienböck's d. Osteochondrosis of the lunate bone.

Kimmelstiel-Wilson d. See *intercapillary glomerulosclerosis*.

Köhler's d. Osteochondrosis (1) of the navicular bone, formerly called *tarsal scaphoiditis*; (2) of metatarsal head, usually the second, also called *Freiberg disease*.

König' d. Osteochondritis dissecans.

Kufs d. A late juvenile form of amaurotic familial idiocy

Kümmell's d. Progressive collapse of vertebral body following an injury Possibly due to vascular necrosis.

Larsen-J hansson d. A rare form of *osteochondrosis* involving an accessory center of ossification in the patella also called *Sinding-Larsen d.*

Legg-Calvé-Perthes d. See *osteochondritis deformans juvenilis*.

Leiner' d. See *erythroderma desquamativa*.

Léri's d. See *pleonosteosis*.

Letterer Siwe d. A fatal disease of infancy and childhood, of unknown cause, characterized by hyperplasia of the reticuloendothelial system without lipoid storage Manifestations include enlargement of spleen, liver and lymph nodes, osseous defects, and involvement of the bone marrow resulting in secondary anemia. Cutaneous eruptions and purpura are frequently present Also called *nonlipid reticuloendotheliosis, nonlipid histiocytosis*.

Lewandowsky's d. A rosacealike tuberculid.

Libman-Sacks d. See atypical verrucous *endocarditis*.

Lindau's d. See *Arvid Lindau*.

lipoid storage diseases. A group of rare diseases characterized by an accumulation of large, lipid-containing histiocytes throughout the reticuloendothelial system. They occur primarily in childhood. Included in this group are Gaucher d., Hand-Schüller-Christian d., Niemann-Pick d., the infantile form of *amaurotic familial idiocy* and *lipochondrodystrophy*. See also reticuloendothelial *granulomatosis*.

Little d. See William John *Little*.

Lobstein's d. See *osteogenesis imperfecta*.

loco d. See *loco disease*.

Looser-Milkman's d. See Milkman *syndrome*.

Lutembacher's d. The pathologic condition where there is an atrial septal defect in association with mitral stenosis.

Majocchi d. See *purpura annularis telangiectodes*.

malignant d. (a) Cancer (b) Any disease in

particularly violent form, threatening to produce death in a short time.
Marie's d. Rheumatic spondylitis involving the spine only or invading the shoulders and hips (Strümpell-Marie type).
Mediterranean d. See *thalassemia.*
Ménière's d. See Ménière's *syndrome.*
Milkman's d. See Milkman's *syndrome.*
Mitchell's d. Erythromelalgia.
Moeller-Barlow d. Infantile *scurvy.*
Monge's d. Chronic mountain *sickness.*
Morquio-Brailsford d. See chondroosteodystrophy.
mosaic d. Virus disease of plants.
Newcastle d. An acute virus disease of fowls characterized by pneumonia and encephalomyelitis. The virus can cause mild conjunctivitis in man. Syn., *avian pneumoencephalitis, avian pseudoplague, Philippine fowl disease.*
Niemann-Pick d. An acute systemic disorder affecting chiefly female Jewish infants, marked by slight anemia, enlargement of the liver, spleen, and lymph nodes, and by mental retardation; death regularly occurs before the child is two years old. Amaurotic familial idiocy is closely associated. Syn., *lipoid histiocytosis.*
nodule d. A disease of ruminants, characterized by nodules in the mucous membranes of the intestine; the nodules contain the larval form of species of *Oesophagostomum.*
occupational d. One arising from the particular toxic substances, characteristic hazards, or frequently repeated mechanical operations of a particular industry or trade.
Ollier's d. Dyschondroplasia.
organic d. One associated with recognizable structural changes in the organs or tissues of the body.
Osgood-Schlatter d. Osteochondrosis of the tuberosity of the tibia.
Osler-Rendu-Weber d. See hereditary hemorrhagic *telangiectasia.*
Osler-Vaquez d. See primary *polycythemia.*
overeating d. Infectious enterotoxemia of sheep.
Owren's d. Parahemophilia.
Paget's d. Osteitis deformans, a disease of the skeleton of unknown cause, characterized by slowly spreading changes in one or more bones, primarily the pelvis, long bones, and sometimes the skull bones, and consisting of decalcification coupled with hyperostosis. Later the marrow spaces in transformed bone are more or less filled with vascular fibrous tissue. Deformities, limitations of joint movement, and sometimes fractures accompany the progress of the disease, which affects principally males after middle age.
Paget's d. of nipple. A carcinoma involving the nipple or areola and the larger ducts, characterized by malignant cells, some of which are large and have clear cytoplasm (Paget's cells); also called *morbus Pageti papillae, carcinoma of nipple, intraepithelial carcinoma of nipple, Paget's cancer.*
pandemic d. One epidemic over a large area, as an entire country or several countries.
pararheumatic d. See *collagen diseases* under *disease.*
parasitic d. One due to invasion of the body by animal or vegetable parasites.
Parkinson's d. Parkinsonism.
Parry's d. Exophthalmic goiter.
Pel-Ebstein d. Pseudoleukemia; multiple lymphadenoma.
periodic d. One occurring at regular intervals or at the same season of the year.
periodontal d. One affecting the periodontium.
Peyronie's d. A condition of unknown etiology characterized by the development of plaques or masses of dense fibrous tissue in the fascia about the corpora cavernosa of the penis, resulting in deformity of the penis. Syn., *cavernitis, penile strabismus.*
Philippine fowl d. See Newcastle *d.*
Pick's d. (a) Circumscribed cerebral *atrophy*, named for Arnold *Pick.* (b) Polyserositis; for Friedel *Pick.*
pilonidal d. An inclusive term for pilonidal sinus, pilonidal cyst, and combined cyst and sinus.
pink d. See *erythredema polyneuropathy.*
pneumatic hammer d. See traumatic vasospastic *syndrome.*
pock diseases. A group of dermatotropic virus diseases characterized clinically by vesicles, pustules, and crusting, and pathologically by balloon degeneration and necrosis of epidermis. Among the diseases are varicella, variola, herpes simplex, and herpes zoster.
porcupine d. See *ichthyosis.*
Pott's d. Tuberculosis of the spine.
PTC-deficiency d. A rare condition caused by the absence of plasma thromboplastin component and manifested by regularly recurring hemorrhagic episodes. It may be controlled by the administration of PTC or by blood transfusions.
pullorum d. An acute, highly contagious disease of young chicks caused by *Salmonella pullorum* and producing a characteristic white diarrhea. Also called *bacillary white diarrhea.*
pulpy kidney d. A disease of lambs, which has been reported in New Zealand and Wales, characterized by severe kidney degeneration. It is caused by *Clostridium perfringens*, Type D.
pulseless d. A disease characterized by absence of radial pulse, syncopal attacks, and arteriovenous anastomoses in the peripapillary region of the retina, visual disturbances, and cataracts. It is believed to be due to sclerosis of subclavian and carotid arteries secondary to panarteritis of unknown cause. Syn., *Takayasu's d.*
pyramidal d. Periostitis of the pyramidal process of the os pedis in the horse.
Quincke's d. Angioneurotic edema.
ragpicker's d. Anthrax. Also called *ragsorter's d.*
rat-bite d. See rat-bite *fever.*
Raynaud's d. See Raynaud's *syndrome.*
Reclus' d. See *cystic d. of breast.*
rheumatic brain d. See rheumatic *encephalopathy.*
rheumatic diseases. Those conditions in which pain and stiffness of some portion of the musculoskeletal system, usually articular or periarticular regions, are outstanding symptoms. See *rheumatism.*
Rhodesian cattle d. A piroplasmotic disease transmitted by ticks of the genus *Rhipicephalus.*
rickettsial d. Any disease caused by rickettsia. The most important groups are the typhus fever group, caused by *Rickettsia prowazeki*, the Rocky Mountain spotted fever group, caused by *R. rickettsii*, the scrub typhus group, caused by *R. tsutsugamushi*, and the Q fever group, caused by *Coxiella burnetii.*
Riga's d. Cachectic aphthae; also called *Fede-Riga's d.*
Ritter's d. See *dermatitis exfoliativa neonatorum.*
rolling d. A syndrome in mice associated with pleuropneumonialike organism (L4). A condition characterized by lateral rolling of the body and pathologically by an intense polymorphonuclear leukocyte reaction in the brain, also by neurolysis and, in some cases, by acute hydrocephaly.
rose d. Swine erysipelas.
Roth's d. Meralgia paresthetica.
sacroiliac d. An inflammation of the sacroiliac

joint, characterized by pain and tenderness over the joint, and thought to produce sciatica.
salivary gland d. A virus disease of guinea pigs and possibly man; characterized by the presence of cellular inclusion bodies. When naturally acquired, it apparently gives rise to no symptoms.
sandworm d. See *larva migrans*.
Sartian d. Obsolete term for *oriental sore*.
Schamberg's d. See progressive pigmentary *dermatosis*.
Schenck's d. See *sporotrichosis*.
Scheuermann's d. Osteochondrosis involving the secondary growth centers of vertebral bodies.
Schilder's d. See *encephalitis periaxialis diffusa*.
Schimmelbusch's d. See *adenosis* of breast.
Schönlein's d. See Schönlein's *purpura*.
Schüller-Christian d. See Hand-Schüller-Christian *d.*
septic d. One due to the presence and multiplication of pyogenic or putrefactive organisms in the body.
Sharrer's d. Bacitis fibrosis.
shimamushi d. See tsutsugamushi *d.*
sickle-cell-thalassemia d. See *microdrepanocytic disease*.
Simmonds' d. See hypopituitary *cachexia*.
Sinding-Larsen d. See Larsen-Johansson *d.*
sponge-gatherers' d. A disease of divers due to a secretion of a species of *Actinia* found in waters where sponges grow. At the point of contact upon the body, the viscid excretion causes a swelling and intense itching, followed by a papule surrounded by a zone of redness which later becomes black and gangrenous and forms a deep ulcer.
sporadic d. One occurring only occasionally and in single cases.
Steinert's d. See muscular *dystrophy*.
Stevens-Johnson d. See *erythema multiforme*.
Still's d. A type of chronic, infectious polyarthritis occurring in children. In the later stages, splenomegaly and glandular enlargement appear.
stomach worm d. Strongylosis of cattle.
storage d. One characterized by excess deposition of exogenous or endogenous substances within the body.
Sturge-Weber-Dimitri d. See nevoid *amentia*.
Stuttgart d. A hemorrhagic, infectious gastroenteritis of dogs; characterized by loss of appetite, vomiting, weakness, anorexia, diarrhea, low temperature, and ulcerative stomatitis. Death occurs in the majority of cases. Syn., *canine typhus*. The etiological agent is *Leptospira canicola*.
subacute combined system d. See subacute combined *degeneration of spinal cord*.
subacute d. One which is more prolonged and less active than an acute disease.
Sulzberger-Garbe d. A disease, thought to be a neurodermatitis, characterized by discoid, lichenoid, and eczematoid dermatitis.
Sutton's d. (a) Leukoderma acquisitum centrifugum. (b) Periadenitis mucosa necrotica recurrens.
sweet clover d. A hemorrhagic disease observed in animals after eating spoiled sweet clover; due to a toxic substance (dicoumarin) which lowers the fibrinogen content of the blood plasma.
swineherd's d. Pseudotyphoid meningitis. An acute febrile disease transmitted from swine to man by the hog louse; due to a virus.
systemic d. Any disease affecting the whole body.
tanner's d. Anthrax.
Tay-Sachs d. Amaurotic familial idiocy.
teart d. Molybdenosis or chronic molybdenum poisoning, applied especially to the condition as seen in cattle.
Thomsen's d. See *myotonia congenita*.
tsutsugamushi d. A disease occurring in Japan, Formosa, and islands of the South Pacific; caused by *Rickettsia tsutsugamushi* and transmitted to man by the bite of the larval forms of a species of *Trombicula*, characterized by headache, fever and a rash. Also called scrub *typhus*, *Queensland coastal fever*, *Malayan typhus*, *Sumatran mite typhus*, *Japanese river fever*.
tunnel d. (a) See caisson *d.* (b) Ancylostomiasis.
vagabonds' d. See *pediculosis corporis*.
vagrants' d. A discoloration of the skin occurring especially in elderly persons who are uncleanly and infested with pediculi over a long period.
Vaquez' d. See primary *polycythemia*.
venereal diseases. Gonorrhea, syphilis, chancroid, granuloma inguinale, and venereal lymphogranuloma. Abbreviated, VD, V.D., vd, v.d.
Vincent's d. See necrotizing ulcerative gingivitis, see also Vincent's angina, Vincent's *stomatitis*.
von Gierke's d. Glycogenosis.
von Hippel's d. Angiomatosis retinae. See also *Hippel-Lindau d.* under Arvid *Lindau*.
von Jaksch's d. Infantile pseudoleukemic anemia.
von Recklinghausen's d. See *neurofibromatosis*.
Waldenström's d. See *osteochondritis deformans juvenilis*.
Weil's d. Spirochetal jaundice.
Whipple's d. Intestinal lipodystrophy.
white-spot d. A special form of scleroderma.
Wilson's d. See hepatolenticular *degeneration*.
woolsorters' d. Anthrax.

dis en gage ment [F. *dégager*]. Emergence from a confined state; especially the emergence of the head of the fetus from the vagina during parturition.

disseptal. Trade name for dimethyldisulfanilamide. Used chiefly in gonorrhea or as ointment in the treatment of infected wounds. Dose, 0.5–1.0 Gm. (8–15 gr.) t.i.d. Also called uleron and ultron.

dis-e″qui lib′ri um [L. *dis-*, indicating separation; *aequilibrium*, equilibrium]. Lack or loss of balance. Syn., *instability*.

dis ger min o′ma. See *dysgerminoma*.

dis″gre-ga′tion [L. *disgregare*, to separate]. Dispersion; separation, as of molecules or cells.

dis″in fect′ant [F. *désinfecter*]. An agent which destroys or inhibits the microorganisms causing disease.
complete d. One that destroys the spores as well as the vegetating cells.
incomplete d. One that destroys the vegetating cells but not the spores.

dis″in fec′tion [*disinfecter*]. The destruction or removal of pathogenic organisms, especially by means of chemical substances. —**disinfect**, *v.*
concurrent d. Prompt disinfection and disposal of infective material continuously throughout the course of a disease.
steam d. The destruction of pathogenic bacteria by application of live steam under pressure. Moist heat is regarded as a more effective germicide than dry heat.
terminal d. Disinfection and disposal of infectious material after the termination of a disease.

dis in″fes ta tion [L. *dis-*, indicating separation; *infestare*, to infest]. Extermination of insects or animal parasites; delousing.

dis in″hi bi′tion. Revival of an extinguished conditioned response by an unconditioned stimulus.

dis-in′te grate [*dis-*; L. *integrare*, to renew]. Break up or decompose.

dis in″te-gra tion. The process of breaking up or decomposing.

dis″in vag″i na ti on (dis″in vadj″i-nay shun)

[*dis-* L. *in*, in; *vagina*, sheath]. The reduction or relief of an invagination.

dis joint' [OF *desjoint*, from *desjoindre*]. Disarticulate; separate, as bones from their natural relations.

disk, disc [G. *diskos*, disk, quoit]. A circular platelike organ or structure. *Disc* is more commonly used in biology, especially zoology; *disk* is more commonly used in chemistry.

anisotropic d. The doubly refractive, dark, broad disk of a myofibril of a striated muscle fiber. Abbreviated, A d, Q d.

articular d. One of fibrocartilage, dividing the joint cavity of certain joints.

blood d. Old term for erythrocyte.

choked d. Papilledema.

cupped d. Excavation of the optic disk, normally present in slight degree, but pathologic if excessive.

embryonal d. In mammals, the central, round, or oval area of the bilaminar blastodisk in which the primitive streak arises and from which the embryo proper develops. Also called *area germinativa, area embryonalis, embryonic blastoderm*.

epiphyseal d. Epiphyseal plate.

equatorial d. See equatorial *plate*.

germinal d. The protoplasmic area in the eggs of reptiles, birds, and lower animals which becomes the blastoderm, in the center of which arises the definitive embryo. In placental mammals, the germinal disk is synonymous with the inner cell mass, which becomes the embryonic disk, while the rest of the blastocyst becomes amnion, yolk sac, and trophoblast.

Hensen d. The clear zone which appears in the middle of the anisotropic disk of a contracting myofibril. Abbreviated, H d.

herniated d. An intervertebral disk in which the nucleus pulposus has protruded through the surrounding fibrocartilage, forming a small hernial sac.

intercalated d. One of the irreversible contraction bands of a cardiac muscle fiber.

intermediate d. The thin, dark, doubly refractive disk in the middle of the isotropic disk. It is not confined to a single myofibril; it passes through the entire diameter of a striated muscle fiber. Abbreviated, Z d. Also called *Krause's membrane*.

intervertebral disks. The mass of fibrocartilage between adjacent surfaces of most of the vertebrae.

isotropic d. The singly refractive, light, broad disk of a myofibril of a striated muscle fiber. Abbreviated, I d., J d.

M d. A line in the middle of Hensen's disk in insect muscle.

Merkel's d. See tactile *d.*

Miller d. Ocular micrometer disk containing two squares whose areas have a 1:9 ratio; used in making reticulocyte counts; also called *Miller ocular d.*

nuclear d. See equatorial *plate*.

optic d. The circular area in the retina that is the site of the convergence of fibers from the ganglion cells of the retina to form the optic nerve. Syn., *optic papilla*.

ovigerous d. See *cumulus* oophorus.

Placido's d. See *keratoscope*.

Q d. The anisotropic or dark disk or band of striated myofibril.

ruptured d. An intervertebral disk whose nucleus pulposus has broken through the surrounding fibrocartilage into the spinal canal.

sarcous d. Old term for anisotropic disk.

stenopeic d. A lens allowing the passage of light rays only through a straight narrow slit; used for testing astigmatism.

strobic disks. Those drawn with concentric circles to produce an illusory impression of revolving.

tactile d. A terminal widening of an axon in contact with a specialized epithelial cell in the epidermis; a receptor for touch. Also called *Grandry-Merkel corpuscle, Merkel's tactile d., Merkel's d.* or *corpuscle, tactile meniscus*.

vitelline d. See *cumulus* oophorus.

Z d. The thin membrane which bisects the isotropic disk in a relaxed muscle fiber and forms the boundary of a sarcomere. Syn., *Z band, Z line, intermediate d.* Also called *Krause's membrane, Dobie's line, telophragma*. See also Z, 2.

disk'o-gram. See *discogram*.

dis"lo-ca'tion [L. *dis-* indicating separation; *locare*, to place]. The displacement of one or more bones of a joint or of any organ from the original position. See *diastasis, displacement, subluxation*. See Plates 37, 38. Syn., *luxation*. —**dis'located,** *adj.* **dis'locate,** *v.t.*

complete d. One in which there is complete separation of the joint surfaces.

compound d. One in which there is a communication with the joint from outside, through an external wound.

congenital d. One existing from birth.

d. of lens. A displacement of the crystalline lens of the eye.

divergent d. A dislocation of the radius and ulna at the wrist, involving rupture of the annular ligament.

double d. One in which there are two similar joint dislocations, on opposite sides of the body.

fracture d. One in which there is a fracture accompanying the dislocation.

habitual d. One in which there are frequently relapsing dislocations of a particular joint, as the shoulder. Also called *recurrent d., relapsing d.*

incomplete d. One in which there has been only partial separation of the joint surfaces; subluxation.

intrauterine d. One which occurs during fetal life.

old d. See unreduced *d.*

paralytic d. One resulting from flaccid paralysis of the muscles and muscular atrophy.

partial d. See incomplete *d.*

pathologic d. One resulting from joint disease with destruction of tissue, or from paralysis.

traumatic d. A dislocation as a result of violence.

unreduced d. One in which the dislocated bone has not been replaced in normal position. Syn., *old d.*

dis mem'ber [*dis-* L. *membrum*, member]. Amputate an extremity or a major portion thereof. —**dismemberment,** *n.*

dis"mu ta'tion. In *chemistry*, a reaction in which two molecules of the same compound interact to yield one oxidized and one reduced product.

dis"oc-clude' [*dis-* L. *occludere*, to close up]. Grind or level a tooth surface so that it will fail to touch the opposing tooth in the other jaw during mastication.

di-so-mus (dye-so-mus), **di so mus** (dye so mus) (pl. *disomata, disomi*) [G. *dis*, twice; *sōma*, body]. A monster having two trunks. In some classifications the term is used to cover all monochorionic twinning.

dis ord'er A disturbance or derangement of physical or mental health or functions. Also see *disease, reaction, syndrome*. For specific psychiatric disorders, see under the qualifying adjective.

dis·or″gan·i·za′tion [L. *dis-*, denoting negation; G. *organon*, organ]. Act of deranging or the state of abnormal structure.

dis·o″ri·en·ta′tion [*dis-* L. *oriens*, east]. Loss of normal relationship to one's surroundings particularly the inability to comprehend time, place, and people such as occurs in organic brain disease.

dis′pa·rate [L. *dispar* dissimilar]. Not alike unequal or unmated.

dis″pa·reu′ni·a (dis″pah-roo′nee-uh) See *dyspareunia*.

dis·par′i·ty [*dispar*]. Difference; inequality

dis·pen′sa·ry [L. *dispensare*, to distribute by weight]. 1 A place where medicine or medical aid is given free or t low cost to ambulatory patients. 2. In place of business, medical office provided by the owner to serve sick or injured employees. 3. *I* *military medicine*, medical treatment facility primarily intended to provide examination and treatment for ambulatory patients, to make necessary arrangements for the transfer of patients requiring bed care, and to provide first aid for emergency cases.

general d. *I* *military medicine* a medical treatment facility which provides medical and dental care, but not hospitalization, for military personnel and their dependents not having access to hospital facilities of post, camp, or station. They are usually located in large cities or military districts.

veterinary d. *In U.S. Army medicine*, an establishment providing for the care and treatment of animals not requiring hospitalization.

dis·pen′sa·to·ry [*dispensare*]. A book containing systematic discussion of medicinal agents, including origin, preparation, description, use, and mode of action.

dis·pense [*dispensare*]. Prepare and distribute medicines for the sick.

di·sper′mine (dye sper meen, -min) Piperazine.

di′sper″my di sper′my [G *dis*, twice; *sperma*, seed]. Entrance of two spermatozoa into an ovum.

dis·per′sion [L. *dispersio* from *dispergere*, to scatter on all sides]. Act of scattering; any scattering of light, as that passed through ground glass.

chromatic d. *I* *physics*, splitting of beam of white light into different wave lengths or frequencies, and consequently into different colors

dis·pers′oid [*disperse*; G. *eidos*, form]. A colloid or finely divided substance.

dis·place′ment [F *déplacement*]. 1 Removal from the normal position; dislocation, luxation; dystopia. 2. *I* *pharmacy*, process occurring in percolation. 3. *I* *chemistry*, change in which one element is removed by another element 4. *I* *psychopathology* the discharge of emotional tension arising out of repressed feeling, as of guilt or inadequacy through an unrelated, trivial act or conscious expression. The original intolerable situation or experience is thereby barred from entering the consciousness.

fish-hook d. A term referring to vertical type of stomach, not an actual displacement; an orthotonic stomach.

hip d. See congenital *dislocation*.

toe d. Overlapping toes.

uterine d. Any change in position of the uterus from the accepted normal See *anteversion*, *prolapse*, *retroversion*.

dis″po·si′tion [L. *dispositio*, from *disponere*, to arrange]. A tendency to acquire certain disease peculiar predisposing factor partly or wholly dependent upon heritable factors.

dis·rup′tive [L. *disruptio*, from *disrumpere*, to burst asunder]. Bursting; rending

dis·sect′ [L. *dissecare*, to cut in pieces]. Cut tissues apart carefully and slowly in order to allow study of the relations of parts.

dis·sec′tion [*dissecare*]. The cutting of tissues of the body for purposes of study

dis·sec′tor [*dissecare*]. 1 One who makes dissection. 2. Handbook or manual of anatomy and instructions for use in dissection.

dis·sem″i·na′tion [L. *disseminare* to scatter seed, to spread abroad]. The scattering or dispersion of disease or disease germs. —**dissem′inated**, *adj*

dis·sim″u·la′tion [L. *dissimulare* to dissemble]. Act of feigning, disguising, or malingering

dis·so″ci·a′tion [L. *dissociare*, to separate from fellowship]. 1 Separation; especially of chemical compound into ions. 2. *I* *cardiology* completely independent action of atria and ventricles; heart block. 3. *I* *psychology* the segregation from consciousness of certain components of mental processes, which then function independently; the separation of ideas from their natural and appropriate affects or feelings. 4. *I* *bacteriology* change in colony form, often occurring in new environment, and associated with modified growth or virulence. —**disso′ciant**, *adj.*, *n.*

albuminocytologic d. Elevated protein in cerebrospinal fluid without corresponding rise in cell count, characteristic of the Guillain-Barré syndrome.

atrioventricular d. with interference. That condition in which there is unidirectional block which prevents impulses from passing from the atrioventricular node back to the atria. This block is exhibited by a series of ventricular beats, representing responses to the atrioventricular node, and premature ventricular beat, representing response t the sinus node.

dis·so·ci tive re·ac′tion. See under *reaction*.

dis·sog′o·ny (di-sod′l-nee) [G. *dissos*, double; *gonos*, from *gignesthai*, to be produced]. *In zoology*, having two periods of sexual maturity; one as larva and one as an adult.

dis″so·lu′tion [L. *dissolutio*, from *dissolvere*, to separate]. 1. Separation of body or compound into its parts. 2. Death; decomposition

dis·solve [*dissolvere*]. T make solution of; become solution. —**dis·sol′vent**, *adj* *n.*

dis′tad [L. *distare*, to be distant; *ad*, to]. Toward the periphery; in distal direction.

dis′tal [*distare*]. 1 Extreme; t the greatest distance from central point; peripheral. 2. *I* *dentistry* referring to position which lies way from the sagittal plane along the curve of a dental arch. See *mesial*. —**distad**, **distally** *adv*.

dis′tance [L. *distantia*, distance]. The measure of space between two objects.

focal d. The distance between the center of a lens and its focus.

hearing d. The distance at which a certain sound can be heard.

hyperfocal d. *I* *photography* the nearest point to lens at which objects will appear sharp in the image space when the lens is focused for objects t an infinite distance.

infinite d. *I* *optics*, a distance of 20 feet or more, so established because the rays from an object at that distance to the lens of the eye are practically parallel.

working d. In the microscope, the distance from the front lens of an objective to the object, when the objective is correctly focused.

dis·tem′per [L. *dis-* denoting negation; *temperare*, t mingle properly]. The common nam applied to certain infectious diseases of animals.

ca ine d. That form occurring in young dogs, caused by filtrable virus.

equine d. See *strangles*.

dis·ten'tion [L. *distentio* from *distendere* to stretch]. A state of dilatation.

dis·tich'i·a (dis·tick'ee·uh) **dis"ti·chi'·a·sis** (dis"ti·kigh'uh·sis) [G. *dis*, twice; *stichos*, row]. The presence of a row of cilia at the inner lid border which turn in and rub on the cornea. This row of cilia is additional to the two or three rows arising at the outer lid border.

dis'til·land [L. *distillare*, to distill]. The substance being distilled.

dis'til·late [*distillare*]. The condensate obtained by distillation.

dis"til·la'tion [L. *distillatio*, from *distillare*]. Process of vaporization and subsequent condensation. It is used principally to separate liquids from nonvolatile substances. —**distill'** v.t., v.i.

destructive d. Decomposition of complex organic substances by heat and distillation of the products.
fractional d. Separation of a liquid into its components by means of gradually increasing temperature, the different products being vaporized in the order of their respective boiling points.
molecular d. Distillation which permits the transfer of a molecule from the distilling to the condensing surface without suffering a collision with another molecule. It usually requires a very high vacuum and close proximity of the two surfaces.

dis'to-, dist- [L. *distare*, to be distant]. A combining form signifying *posterior*, *distant from the center*.

dis"to·buc'cal [*distare*; L. *bucca*, cheek]. Relating to the distal and buccal surfaces of the premolar and molar teeth.

dis"to·buc"co·oc·clu'sal [*distare*; *bucca*; L. *occludere*, to close up]. Relating to the distal, buccal, and occlusal surfaces of a tooth.

dis"to·oc·clu'sal [*distare*; *occludere*]. Relating to the distal and occlusal surfaces of premolar and molar teeth.

dis"to·clu'sion [*distare*; *occludere*]. Malocclusion of the teeth in which those of the lower jaw are displaced backward in relation to the upper teeth.

dis"to·la'bi·al [*distare*; L. *labia*, lip]. Relating to the distal and labial surfaces of incisors and canines.

dis"to·lin'gual [*distare*; L. *lingua*, tongue]. Relating to the distal and lingual surfaces of all teeth.

dis"to·lin"guo·oc·clu'sal [*distare*; *lingua*; L. *occludere*, to close up]. Pertaining to the distal, lingual, and occlusal surfaces of a tooth.

Dis'to·ma, Dis'to·mum [G. *dis*, twice; *stoma*, mouth]. Old name for a genus of trematode worms.
D. haematobium. Synonym for *Schistosoma haematobium*.
D. hepaticum. Synonym for *Fasciola hepatica*.

Di·sto·ma·ta [*dis*; *stoma*]. A suborder of the Trematoda or flukes.

di·sto'mi·a (dye·sto'mee·uh) [*dis*; *stoma*]. Congenital duplication of the mouth.

dis"to·mi'a·sis [*dis*; *stoma*; NL. *-iasis*, condition]. Infestation with flukes.

dis"to·mo'lar [*distare*; L. *molaris*, from *mola*, mill]. A supernumerary tooth distal to a third molar hence in the position of a fourth molar.
d. tubercle. An accessory lobe with one or two cusps on the distolingual side of a third molar believed to represent a rudimentary distomolar.

Dis'to·mum. See *Distoma*.

di·sto'mus (dye·sto'mus, di·sto'mus) [*dis*; *stoma*]. An individual with partial or complete duplicity of the mouth.

dis·tor'tion [L. *distortio* from *distorquere*, to twist]. 1. A twisted or bent shape; deformity or malformation, acquired or congenital. 2. A writhing or twisting motion, as of the face. 3. *In optics*, a form of aberration in which objects viewed through certain lenses appear changed in shape but not broken in continuity. 4. *In psychoanalysis*, the adaptive alteration of an idea to conform with the subject's wishes or prejudices.

dis"to·ver'sion [L. *distare*, to be distant; *versere*, from *vertere*, to turn]. Tilting of a tooth so that the crown moves distally.

dis"tri·bu'tion [L. *distributio*, from *distribuere*, to distribute]. *In anatomy*, the branching of a nerve or artery and the arrangement of its branches within those parts that it supplies.

dis"tri·chi'a·sis (dis tri·kigh'uh·sis) [G. *dis*, twice; *thrix*, hair; NL. *-iasis*, condition]. Two hairs growing from a single follicle.

dis'trix [*dis*; *thrix*]. Splitting of the distal ends of the hair.

di·sul'fide (dye·sul'fide, fid). Bisulfide.

di'ta bark (dee'tuh). The bark of *Alstonia scholaris*, native to the Philippine Islands; alstonia. It has been employed as a bitter tonic, antiperiodic, and antimalarial.

dit'a·ine (dit'uh·een, ·in) $C_{22}H_{28}N_2O_4$. Echitamine. An alkaloid from *Alstonia*.

dit'a·mine (dit'uh·meen, ·min, dit'm'in) $C_{16}H_{19}O_2N$. An alkaloid found in *Alstonia*.

di·ter'pene. Any of the terpene hydrocarbons having the formula $C_{20}H_{32}$, or $(C_5H_8)_4$.

di·thi·o·bi"u·ret' (dye·thigh"o·buy"yoo·ret') $NH_2CS.NH.CS.NH_2$. A substance which has been used experimentally to produce a reversible paralysis of motor function in animals.

di·thi"o·pro·pa·nol-1. Dimercaprol (see BAL).

di"thi·zone. Diphenyl-thiocarbazone, a reagent used as a sensitive test for heavy metals, particularly lead.

di"thra·nol. British Pharmacopoeia name for 1,8-dihydroxyanthranol, used locally in the treatment of skin diseases. See *anthralin*, *dignolin*.

di·thy"mol di·i'o·dide. Thymol iodide.

di·to'kous, dit'o·cous [*dis*; G. *tokos*, offspring]. 1. Producing two young at a birth. 2. Producing young of two kinds, as some worms.

Dittel, Leopold [*Austrian surgeon*, 1815–98]. Remembered for his advocacy of the removal of the median bar of the prostate for urinary obstruction (1880).

Dittrich, Franz [*German physician*, 1815–59]. Described small, dirty-white or yellowish masses, found in cases of bronchiectasis and in pulmonary abscess, which were called *Dittrich's plugs*. They are now not regarded as pathognomonic.

ditubin. Trade-mark for a brand of isoniazid; an antituberculosis drug having the composition of isonicotinic acid hydrazide.

di·u're·ide [*dis*; G. *ouron*, urine]. 1. A derivative of urea in which a hydrogen of both NH_2 groups is replaced by an acyl radical. 2. An acyl derivative of urea containing residues of two urea molecules.

di"u·re'sis [G. *diourein*, to pass urine]. Increased excretion of urine. —**diuret'ic**, *adj.*

di"u·ret'ic [G. *diouretikos*, diuretic]. Agent that increases the volume of urine.
acidifying d. Substance that produces diuresis because of its acid-forming properties in the body.
cardiac d. Substance, such as digitalis, which produces diuresis by increasing the efficiency of the heart in patients with cardiac edema.
mercurial d. An organic mercurial compound, which acts primarily by reducing tubular reabsorption of water.
osmotic d. A substance producing diuresis because of the osmotic effect of the unabsorbed fraction in the renal tubules with resulting loss of water.
saline d. A salt which produces diuresis because of its osmotic effect in the tubules.

diuretin. Trade-mark for brand of theobromine with sodium salicylate.

di·ur'nule [L. *diurnus*, of the day]. A medicinal product that contains the full quantity of drug to be administered in 24 hours.

di"va·ga'tion [L. *divagari*, to wander bout]. Rambling speech and thought.

di·va'lent (dye-vay'lunt, dye'vay-lunt, di ah-lent) [G. *dis*, twice; L. *valere*, to have power]. 1. Bivalent. 2. Having the ability to exist in two valence states.

di·var"i·ca·tion [L. *divaricare*, to spread asunder]. Separation, divergence

di·var"i·ca'ti·o pal"pe·bra rum (dye-var" -kay' shee-o) [L.]. Synonym of *ectropion*.

di·ver'gence (dye-vur'junss, di-vur'junss) [L. *dis*-denoting separation; *vergere*, to bend]. I *ophthalmology*, the abduction of both eyes simultaneously or of one eye when the other is fixed. —**divergent,** *adj.*

di'ver's ear An inflammation of the middle ear and auditory tube; caused by sudden changes in atmospheric pressure that may occur during diver ascent or descent seen in caisson disease. Similar to aerotitis media.

di'ver's men ra'sis. See *caisson disease*.

di"ver tic'u lar [L. *diverticulum*, bypath, from *divertere*, to turn away]. Relating to or arising from diverticulum.

di"ver·tic u lec'to my [*diverticulum*; G. *ektomē*, excision] Surgical removal of diverticulum.

di"ver·tic u·li'tis [*diverticulum*, G. *-itis*, inflammation]. Inflammation of diverticulum.

di"ver tic"u·lo'sis [*diverticulum*, G -*osis*, condition]. Presence of many diverticula I the intestine. **d. of fallopian tube.** See *isthmic nodular salpingitis*.

di"ver·tic'u lum (pl. *diverticula*) [L.]. A pouch or sac springing from hollow organ or structure; may be congenital or acquired.

allantoic d. The endodermal diverticulum from the cloaca into the extraembryonic coelom in most amniotes, or into the body stalk in primates, which forms the epithelial lining of the allantois. Also called *allantoenteric d.*

bladder d. See *vesical d.*

calyceal d. A rare asymptomatic renal alteration, usually discovered only incidentally on pyelography in which there is dilatation of calyx due to obstruction in the infundibulum also called *hydrocalycosis, pyelogenic cyst.*

cervical d. An incomplete fistula i the cervical region, derived from a pharyngeal pouch (internal) or a visceral groove (external).

congenital d. One present t birth; the most common varieties are the esophageal diverticulum, intestinal diverticulum, and the diverticulum ilei.

d. ilei. The persistent proximal end of the yolk stalk. Also called *Meckel'* d.

esophageal d. A saclike protrusion of part of the wall of the esophagus or of the pharynx just above the esophageal opening. See *pulsion d.*, *traction d.*

eustachian d. A small bnormal pouching of the lower portion of the auditory tube

false d. One involving the large intestine, having only mucosal and serosal coats and lacking the muscular coat present in true diverticula.

gastric d. A pouching of the stomach generally seen near the pylorus in connection with duodenal or gastric ulcer

giant d. A congenital enteric cyst or duplication of portion of the ileum, jejunum, duodenum, or occasionally the stomach the cyst has common wall with the gastrointestinal tract.

hepati d. The primordium of the liver gallbladder and their ducts. Also called *hepatic gutter*

intestinal d. A sacculation of the intestinal wall.

Meckel's d. See *d. ilei*.

Nuck's d. The homolog in the female of the vaginal process of the peritoneum. Syn., *canal of Nuck*.

pancreatic d. One of two (dorsal and ventral) from the duodenum or hepatic diverticulum that form the pancreas and its ducts.

pharyngeal d. See *pulsion d.*, *traction d.*

pressure d. See *pulsion d.*

pulsion d. A thin-walled sac in the posterior wall of the laryngopharynx opposite the cricoid cartilage just bove the esophageal opening also called *Zenker d.*

synovial d. An abnormal pouch found in large joint, such as the knee.

thyroid d. An evagination of the ventral floor of the pharynx between the first and second visceral arches which is the primordium of the thyroid gland. The site is marked by the cecal foramen.

traction d. A circumscribed sacculation of the esophagus due to the pull of adhesions.

ureteral d. A chronic localized bulging of the ureter usually the result of obstruction; generally associated with hydronephrosis.

vesical d. One occurring in the urinary bladder usually in males over 60 and generally secondary to urinary obstruction.

Zenker d. See *pulsion d.*

di'vi-di'vi [Sp.]. *Caesalpinia coriaria*, tree of South America whose seed pods yield tannic and gallic acids used as an astringent and in tanning.

di·vi'nyl e'ther (dye-vy'nil) $(CH_2{:}CH)_2O$. A highly volatile, unsaturated ether used as an inhalation anesthetic for short operations. Syn., *divinyl oxide, vinyl ether* See *vinethene*.

di vi'nyl ox'ide. See *divinyl ether*

di vi sion [L. *divisio*, from *dividere*, to divide]. Act or process of dividing into parts.

cell d. Cytokinesis.

equational d. A nuclear division in which daughter chromosomes separate from each other as in ordinary somatic cell division; applied especially to the second meiotic division in contrast with the reduction division in which maternal and paternal homologous chromosomes disjoin.

mitotic d. Mitosis.

nuclear d. Mitosis.

reduction d. Meiosis.

di vul'sion (dye-vul'shun) [L. *divulsio* from *divellere*, to tear asunder]. A tearing apart. —**divulse'** *v.t.*

di vul'sor (dye-vul sur di-vul'sur) [*divellere*]. Instrument for the forcible dilatation of part or of stricture in any organ.

di wa kwad'l. See *willow*.

di"zy·got'ic (dye sye-got'ick) [G. *dis*, twice; G. *zygotos*, yoked]. Developed from two fertilized eggs at single birth, as fraternal twins.

diz'zi ness [AS. *dysig*]. An unpleasant sensation of disturbed relations to surrounding objects in space; giddiness. See also *vertigo*. —**dizzy** *adj.*

dl I *organic chemistry*, a racemic mixture containing both dextrorotatory and levorotatory forms of an organic compound.

D.M.D. Doctor of Dental Medicine: equivalent to the more common *D.D.S.*

DMF An bbreviation for *decayed, missing, and filled teeth*: applied t the quantitative estimate of dental caries in permanent teeth.

DNA Abbreviation for *deoxyribonucleic acid.*

DNASE Deoxyribonuclease.

Dobell's solution. See *compound sodium borate solution.*

Dobie, William Murray [*English anatomist*, 1828–1915]. Remembered eponymically in such terms as *Dobie's globule*, a small, round body in the middle of the transparent disk of a muscular fibril; *Dobie's layer*, a dark line in the center of a light band of striated muscle fiber defining the sarcomere.

doca. Trade-mark for desoxycorticosterone acetate.

Dochez, Alphonse Raymond [*American physician*, 1882–]. Known for his researches on scarlet fever and its toxins; investigated the importance of *Streptococcus hemolyticus* in scarlet fever (1924); obtained a scarlet fever serum, *Dochez's serum*, by immunization of horses.

doch mi' us. Old term for ancylostomiasis.

doc'tor [L., from *docere*, to teach]. 1. One licensed, usually after special study and qualifying by examination, to practice medicine, dentistry, or veterinary medicine. 2. Recipient of an academic title signifying competence in a special branch of learning.

doc tor T. treat medically. *Colloq.*

do dec-a-, dodec- [G. *dōdeka*, twelve]. A prefix denoting *twelve*.

do-dec'yl. The organic chemical radical CH_3-$(CH_2)_{10}CH_2$—.

Döderlein, Albert Siegmund Gustav [*German obstetrician*, 1860–1941]. Remembered for his classic study of vaginal secretions in relation to puerperal fever (1892). *Döderlein's bacillus*, once thought to be of pathologic importance, now is known as a normal inhabitant of the vagina.

Dodoens, Rembert (Dodonaeus) [*Belgian botanist and physician*, 1517–85]. An eminent botanist, he is remembered as author of *Cruydeboeck* (1554). He made many observations on the pathology of diseases of the lungs.

Doehle, Karl Gottfried Paul [*German pathologist*, 1855–1928]. Described a type of aortitis (1885) now known to be syphilitic, called *Doehle-Heller aortitis*, *Welch's aortitis*. Described small, irregularly staining masses, called *Doehle's inclusion bodies*, found in the cytoplasm of neutrophil leukocytes. These once were thought to be the causative organisms in scarlet fever.

Doellinger, Johann Ignaz Josef [*German physician*, 1770–1841]. Remembered for his description of a thickening of Descemet's membrane, forming a ring about the cornea, called *Doellinger's ring*.

Doerfler-Stewart test. See under *test*.

Dogiel, Alexander Stanislavovich (1852–1922) Russian neurohistologist, known for his description of the spinal ganglia of man and other mammals, and his classification of the neuron types in spinal, sympathetic, cardiac, and intestinal ganglia (1899).

Dogiel, Jan [*Russian physiologist*, 1830–1905]. Remembered as the inventor of the stromuhr, a device for measuring the velocity of blood in circulation (1867).

dog'wood". See *cornus*.

doigts en lorgnette. See opera-glass *hand*.

Doisy, Edward Adelbert (1893–). American physiologist and biochemist, known for his work on sex hormones and vitamin K. He collaborated with Edgar Allen on the ovarian hormone (1923); with Sidney Allen Thayer and Clement D. Veler isolated estrone (1929); with Thayer and Donald William MacCorquodale isolated estradiol from ovaries (1936). He was Nobel laureate with Henrik Dam in 1943 for work on vitamin K. See mouse *unit*, which is also called the *Thayer-Doisy unit*.

doi"sy-no'lic ac'id [named for E. A. *Doisy*]. $C_{18}H_{24}O_3$; 1-ethyl-7-hydroxy-2-methyl-1,2,3,4,4a,9,10,10a-octahydrophenanthrene-2-carboxylic acid, obtained from estrone by rupture of its cyclopentane ring with alkali. It possesses high estrogenic activity.

do-lan'tin. Meperidine hydrochloride.

Dolbeau, Henri Ferdinand [*French surgeon*, 1830–77]. Remembered for his description of an operation for lithotomy in which a median incision was made in the urethra, the stone being crushed in the urinary bladder with a lithotrite, followed by evacuation of debris.

dol'i-cho- (dol'i-ko-), **dol'ich-** (dol'ick-) [G. *dolichos*, long]. A combining form meaning *long*, *narrow*.

dol"i-cho-ceph'a-lus [*dolichos*; G. *kephalē*, head]. A dolichocephalic or long-headed person.

dol"i-cho-ceph'a-ly [*dolichos*; *kephalē*]. The condition in which the length-breadth index of the head is 75.9 or less, indicating that the head is much longer than it is broad. —**dolichocephal'ic, dolichocephalous,** *adj.*

dol"i-cho-cham"ae-cra'ni-al [*dolichos*; G. *chamai*, on the ground; *kranion*, skull]. In craniometry, a condition in which a long skull is also markedly low-vaulted, i.e., having a length-breadth index of 74.9 or less and a length-height index of 69.9 or less.

dol"i-cho-cne-mic [*dolichos*; G. *knēmē*, leg]. Designating a tibia with a tibiofemoral index of 83 or more, indicating that it is relatively long as compared with the femur.

dol"i-cho-co'lon. An abnormally long colon.

dol"i-cho-de-rus (dol"i-ko-deer'us, -kod'ur-us) [*dolichos*; G. *deré*, neck]. A person having a disproportionately long neck.

dol"i-cho-eu"ry-mes-o-ceph'a-lus (dol"i-ko-yoor"i-mes-o-sef'uh-lus) [*dolichos*; G. *eurys*, wide; *mesos*, middle; *kephalē*, head]. A person having a long skull which is markedly broad in the temporal region.

dol"i-cho-eu"ry-o-pis"tho-ceph'a-lus [*dolichos*; *eurys*; G. *opisthen*, behind; *kephalē*]. A person having a long skull that is very broad in the occipital region.

dol"i-cho-eu"ry-pro-ceph'a-lus [*dolichos*; *eurys*; G. *pro*, before; *kephalē*]. A person having a long skull that is very broad in the frontal region.

dol"i-cho-fa'cial [*dolichos*; L. *facies*, face]. Having an unusually long face.

dol"i-cho-hi-er'ic (dol"i-ko-high-err'ick) [*dolichos*; G. *hieros*, sacred]. Designating a sacrum with a length-breadth index of 99.9 or less, indicating that it is relatively long and narrow.

dol"i-cho-ker'kic [*dolichos*; G. *kerkis*, shuttle]. Designating a radius with a humero-radial index of 80 or more, indicating that it is relatively long as compared with the humerus.

dol"i-cho-lep"to-ceph'a-lus [*dolichos*; G. *leptos*, thin; *kephalē*, head]. A person whose skull, in addition to being long, is also high and narrow.

dol"i-cho-mor'phic [*dolichos*; G. *morphē*, form]. Marked by a long or narrow form or build.

dol"i-cho-pel'lic, dol"i-cho-pel'vic [*dolichos*; G. *pellis*, bowl; L. *pelvis*, basin]. Designating a pelvis the pelvic index of which is 95.0 or more.

dol"i-cho-plat"y-ceph'a-lus [*dolichos*; G. *platys*, broad; *kephalē*, head]. A person having a long skull which is also unusually broad.

dol"i-cho-rhine (dol'i-ko-reen) [*dolichos*; G. *rhis*, nose]. Having a long nose.

Dol"i-chos (dol'i-kos) [G.]. A genus of tropical herbs and woody vines of the pea family (Fabaceae) bearing seed pods covered with stinging hairs.

dol"i-cho-sten"o-mel'i-a. See *arachnodactyly*.

dol"i-cho-u-ran'ic [*dolichos*; G. *ouranos*, vault, palate]. Having a long palatal alveolar arch, with a palato-maxillary index of 109.9 or less.

Dolin's method. See Flshberg and Dolin method.

Dolman test. See Howard-Dolman depth perception test.

dolophine hydrochloride. A trade-marked name for methadone hydrochloride.

do'lor (pl. dolores) [L.]. Pain.

dolores praesagientes. Fleeting, false pains occurring few days before the onset of labor

do-lo'res (do-lor-ees) Plural of dolor

do"lo-rim'e-ter [dolor G. metron, measure]. A device for measuring sensitivity to pain and the degree of pain experienced in any nerve irritation caused by disease.

dol"or-o-gen'ic (dol-or-o- do"lor-o-) [dolor G gennethai, from gignesthai, to be produced]. Possessing the quality of pain; causing or arousing pain.

Domagk, Gerhard (1895-) German pharmacologist; Nobel prize winner in medicine (1939) for his work on sulfonamides. H introduced prontosil, the first of the sulfonamides, as therapeutic agent.

do"mo-to-pho'bi a [G. dōma, house; phobos, fear]. Morbid fear of being in house; variety of claustrophobia.

dom'in-ance. The state of being dominant.

cerebral d. The tendency for one cerebral hemisphere, usually the left, to be better developed in certain functions, especially speech and handedness.

dom'i-nant [L. dominari, to rule]. In biology, characteristic of one of the parents of hybrid which is present in the offspring, the contrasting recessive characteristic of the other parent being absent. See Mendel' law, under Gregor Johann Mendel. —dom'inant, adj

dom'i na tor Receptive sense organ in light-adapted eyes representing the preponderant type, occurring in broad spectral response curves or absorption bands, having their maximum in the region of 5600 angstroms; it is regarded as responsible for the sensation of luminosity See modulator

Dominici stain. See under stain.

Donald, Archibald [English surgeon and gynecologist, 1860-1919]. Devised an operation for uterine prolapse in which he performed an extensive colporrhaphy with amputation of th cervix (1908) Donald' operation was later modified by W. E. Fothergill, q v.

Donaldson's method. See under stain.

Donath Willem Frederik [Dutch physician and biochemist, 1889-]. Known for his investigations in vitamins and, especially for his isolation of vitamin B_1 with Barend Jansen (1926)

Donath-Landsteiner phenomenon. See Donath-Landsteiner test under test

don'a-tism [after Donato, professional name of Alfred d'Hont, 1845-1900, the Belgian magnetizer"]. A form of hypnosis based on imitation.

Donders, Frans Cornell [Dutch physician and ophthalmologist, 1818-89]. Known for his studies of astigmatism and of physiologic optics. Defined aphakia and hypermetropia (1864) Said to have been the first to measure the reaction time in mental process (1868) Author of classi paper on the physiology of speech (1870) Discovered law of rotation of the eyeball (1847) called Donders' law His name has been given to simple glaucoma, and the rainbowlike rings observed in glaucoma are called Donders rings.

do'nee [L. donare to donate]. The patient who receives transfused blood or other tissues, as skin, bone, or cartilage.

Donnan, Frederick George [English physical chemist, 1870-]. Known for his researches in ionic equilibrium across membrane impermeable to an ion. The Donnan equilibrium theory states, in the case of univalent ions, that the product of the concentrations of diffusible ions on one side of the membrane is equal to the product of the concentrations of such ions on the other side of the membrane.

Donné, Alfred [French physician, 1801 78]. Credited with having first described the blood platelets as third blood particle (1842) Described Trichomonas vaginalis, which he thought was the causative agent of gonorrhea. Gave the first modern description of living organisms in pathologic conditions. Studied cast-off cells or corpuscles that had undergone f tty degeneration, characteristic of colostrum; called Donné' corpuscles. Devised test for pus in urine See Donné test.

do nor [donare]. A person who gives blood for transfusion to another or other tissues, as skin, bone, or cartilage for grafting.

universal d. One whose blood is of group O one whose erythrocytes are not agglutinated by the blood of anyone.

Donovan, Edward [Irish chemist, 1798-1837]. Remembered as the inventor of solution of arsenic and mercuric iodides used in chronic diseases of the skin and joints.

Donovan bodies. See granuloma inguinale and Donovania granulomatis.

Don-o van'i gran"u lo'ma tis. The bacterium causing granuloma inguinale it is gram-negative, nonmotile, and grows in chick embryos but not on ordinary media. With Wright stain blue cells with pink capsules (Donovan bodies) can be demonstrated histologically Also called Klebsiella granulomatis.

do pa. Dihydroxyphenylalanine.

d. reaction. See under reaction.

do pa ox"i-dase do pase. An enzyme of the skin that catalyzes the oxidation of dihydroxyphenylalanine (dopa) to melanin. This enzyme plays an important role in skin pigmentation the melanin pigment is formed in the basal cells of the epidermis. For histologic test for this enzyme, see dopa reaction under stain.

dope [D doop, dripping]. Any drug administered to stimulate or to stupefy temporarily or taken habitually

d. fiend. One addicted to the use of drug.

dope. T administer or habitually take narcotic drug.

Doppler Christian Johann [Austrian physicist and mathematician, 1803-53]. Observed that when the source of light or sound is moving rapidly the wavelength appears to decrease as the object approaches the observer or to increase as the object recedes the pitch of sound becomes higher or lower This is called Doppler principle, phenomenon, effect.

do ra-pho'bi [G dora, skin, hide; phobos, fear]. Morbid fear of touching the skin or fur of animals.

doraxamin. A trade-mark for preparations containing the gastric antacid substance, dihydroxy aluminum aminoacetate.

Dorello' canal. See under canal.

dor'mant. Literally sleeping; hence, concealed; potential. Syn., latent.

dormison. Trade-mark for methylparafynol, hypnotic.

Dorner's spore stain. See under stain.

Dorrance, George Morris [American surgeon, 1877 1949]. Known for his description of an operation devised by him for the repair of the soft palate, called Dorrance' operation.

dor'sa. Plural of dorsum.

dor'sad [L. *dorsum*, back; *ad*, to]. Toward the dorsal aspect.

dor'sal [L. *dorsalis*, from *dorsum*]. Pertaining to the back or to the posterior part of an organ.

dor-sal'gi-a [*dorsum*; G. *algos*, pain]. Pain in the back.

dor sa'lis (dor-sah'lis, dor say'lis) Dorsal.

dor-sa'lis pe'dis (pee'dis, ped'is) [L.]. The main artery of the dorsum of the foot. See Table of Arteries in the Appendix.

dorsaphyllin. Trade-mark for *theophylline sodium glycinate.*

dor'si [*dorsum*]. A combining form meaning *of* or *on the back.*

dor"si flex'ion (dor"si fleck'shun) [*dorsum*, L. *flectere*, to bend]. Bending the foot toward the dorsum, or upper surface of the foot opposed to *plantar flexion.* If used with reference to the toes, same as extension or straightening.

dor"si ven'tral [*dorsum*, L. *venter* belly]. Old term for posteroanterior as used in x-ray positioning.

dor so- [*dorsum*]. A combining form denoting *the back, dorsal,* or *dorsally.*

dor"so an te ri-or [*dorsum*, L. *anterior* foremost]. Applied to a fetus having its back toward the ventral aspect of the mother.

dor"so ceph al-ad [*dorsum*, G. *kephalē*, head; L. *ad*, toward]. Toward the dorsal aspect of the head.

dor"so-ep"i tro-chle-a ris. A rare muscle found in the posterior part of the axilla, extending from the tendon of the latissimus dorsi muscle to neighboring structures. Sometimes called levator of tendon of latissimus dorsi muscle.

dor so-lat er-al [*dorsum*, L. *lateralis*, from *latus*, side]. Relating to the back and the side.

dor"so lum'bar Relating to the back and lumbar regions. Syn., *lumbodorsal.*

dor"so-me'di an [*dorsum*, L. *medius*, middle]. Situated in or relating to the middle region of the back.

dor"so-na'sal (dor so-nay zul) [*dorsum*; L. *nasus*, nose]. Referring to the bridge of the nose.

dor"so-pos te ri-or [*dorsum*, L. *posterior* behind] Applied to the position of a fetus having its back toward the dorsal aspect of the mother.

dor so-ra'di al [*dorsum*, L. *radius*, radius] Relating to or situated upon the dorsal aspect and radial border of the hand, finger or forearm.

dor"so-ul'nar [*dorsum*, L. *ulna*, elbow]. Relating to or situated upon the dorsal aspect and ulnar border of the arm, hand, or finger.

dor"so-ven'tral [*dorsum*, L. *venter* belly]. Pertaining to the dorsal and ventral regions; extending in a direction from the dorsal surface toward the ventral. Syn., *posteroanterior.*

dor'sum (pl. *dorsa*) [L.]. 1 The back. 2. Any part corresponding to the back, as the dorsum of the foot or hand.

d. nasi. The anterior border of the external nose, from the root to the apex.

d. sellae. A square-shaped plate of bone forming the posterior boundary of the sella turcica.

doryl. Trade-mark for *carbachol.*

do sage [G *dosis*, giving]. The proper amount of a medicine or other agent for a given case or condition.

electric d. The regulation of the strength of an electric current for therapeutic purposes.

radiation d. The quantity of radiation absorbed by exposed personnel the product of radiation intensity and time measured in roentgens. See median lethal dose.

dose [*dosis*]. 1 The measured portion of medicine to be taken at one time. Abbreviated, d. Doses in this book are stated in the metric system followed, in parentheses, by the approximate equivalent in the apothecaries system. 2. *In radiology*, the measure, expressed in number of roentgens, of a property of x-rays at a particular place, whether in air tissue, or other material, or even in a vacuum; exposure.

air d. (a) Roentgen dose delivered at a point in free air (b) The number of roentgens in the air at the center of the field employed in treatment with roentgen rays.

average d. One which may be expected ordinarily to produce the therapeutic effect for which the ingredient or preparation is most commonly employed.

booster d. That portion of an immunizing agent given at a later period to stimulate effects of a previous dose of the same agent. Also see *immunization.*

cumulative d. *In radiology* a total dose delivered in fractions over a period of time.

daily d. The total amount to be administered in 24 hours.

depth d. The number of roentgens within the body at a specified depth below the surface field of roentgen irradiation.

erythema d. That quantity of radiation which, when delivered at a single sitting, will produce in at least 95 per cent of cases a definite reddening of the skin within one week after irradiation, followed by subsequent bronzing without permanent injury to the skin.

exit d. The dose of radiation at the surface of the body opposite to that on which the beam is incident.

field d. The total number of roentgens which affect the skin during treatment with roentgen rays.

integral d. *In radiology* the total energy absorbed by a patient during exposure to radiation. Syn *volume dose.*

LD 50 d. See median lethal *d.*

LD 100 d. See total lethal *d.*

lethal d. A dose sufficient to kill. Abbreviated, LD

maximum d. The largest dose consistent with safety

median lethal d. That dose of an injurious agent (drug, virus, radiation) given to a population of animals or man, such that 50 per cent will die within a specific time period. Abbreviated, LD 50 d.

minimum d. The smallest quantity of a medicine that will produce physiologic effects.

minimum lethal d. (a) That amount of an injurious agent (drug, virus, radiation) which is the average of the smallest dose that kills and the largest dose that fails to kill, when each of a series of animals is given a different dose under controlled conditions. Because of its general lack of accuracy this measurement has been largely abandoned in favor of *median lethal dose.* Abbreviated, MLD. (b) Formerly the quantity of toxin which will kill a guinea pig of 250 Gm weight in from 4 to 5 days.

percentage depth d. *In radiology* an amount of radiation delivered at a specific depth in tissue, expressed as a percentage of the dosage to the skin.

permissible d. *In radiology* the amount of radiation an individual may receive during a specific period with no expectation of harmful effects; also called *tolerance d.*

radiation d. The amount of energy absorbed in the form of ionization and excitation per unit of tissue measured in ergs per gram.

skin d. The number of roentgens on the surface of the skin at the center of the field of treatment; the sum of the air dose and the back scatter from underlying tissues.

skin erythema d. The amount of x-ray radiation which will redden the normal skin. Abbreviated, SED.

threshold d. *In therapeutics*, the minimum dose that will produce a given response.

tissue d. The number of roentgens of radioactive substances at specified points in the tissues of the body.

tolerance d. See permissible *d*.

total lethal d. That dose of an injurious agent (drug, virus, radiation) given to a population of animals or man, such that 100 per cent die within a given time period. Abbreviated LD 100 d.

volume d. See integral *d*.

do-sim'e-ter (do-sim e-ter) [*dosis*; G. *metron*, measure]. *In radiology*, an instrument for measuring, usually by ionization methods, exposure to x-rays or to radioactive emanations.

integrating d. One utilizing a thimble ionization chamber in which the ionization current is amplified and indicated on a meter.

do-sim'e-try [*dosis*; *metron*]. 1. Accurate determination of medicinal doses. 2. A system of therapeutics consisting in the use of only a few drugs, mainly alkaloids, in the form of granules administered according to certain fixed rules. 3. Measurement of exposures or doses of x-rays. —**dosimet'ric**, *adj.*

photographic d. The determination of personnel radiation dosage by use of photographic film. See *film badge*.

dot. A minute intracellular granule with special staining characteristics.

Maurer's dots. Small bodies, stained red with Leishman's stain, seen in erythrocytes infested by *Plasmodium falciparum*. See Maurer's *dots*.

doub'let (dub'lit) [L. *duplus*, double]. 1. *In optics*, a combination of two lenses of different focal length. 2. *In electricity*, a dipole.

douche (dōōsh) [F. from L. *ductio* from *ducere*, to conduct (water)]. 1. A stream of water or air directed against the body or into a body cavity. *In physiotherapy* douches are commonly used on the body surface for their stimulating effect. They may be hot, cold, or alternating. 2. *In gynecology*, lavage of the vagina; used for cleansing or for the application of heat or medication to the parts.

Douglas, Beverly [*American plastic surgeon*, 1891–]. Introduced the sieve graft, which sometimes is known by his name. See under *graft*.

Douglas, Claude Gordon [*English physiologist*, 1882–]. Known for his researches on respiration. Studied breathing at high altitudes (1910) and, with John Scott Haldane, Yandell Henderson, and Edward Christian Schneider investigated the effects of atmospheric pressure at high altitudes (1911). Invented a rubber bag, to be supported on the shoulder, for capturing expired air in experiments with ambulatory subjects (1911); called the *Douglas bag*. With Haldane and Johannes Christiansen, made a study of carbon dioxide in the blood (1914); also with Haldane, he studied cardiac output in man during muscular exercise (1922). Since 1930 he has devoted attention to respiratory metabolism during muscular exercise.

Douglas, James [*Scottish anatomist and obstetrician*, 1675–1742]. Well known in his time for his writings on comparative myology (1707), for making the first attempt at systematic medical bibliography (1715), and for his description of the peritoneum (1730). Remembered especially for his description of the rectouterine pouch, also called the *pouch of Douglas*, *cul-de-sac*. Described a pelvic abscess of the cul-de-sac; formerly called Douglas' abscess.

Douglas, John Cappage [*Irish obstetrician*, 1777–1850]. Described spontaneous version sometimes occurring in transverse presentations, called *Douglas' version*.

doug"las-i'tis (dug"luh-sigh'tis) [after James *Douglas*; G. *-itis* inflammation]. Inflammation of the rectouterine cul-de-sac (pouch of Douglas).

dou-rine (doo reen, doo reen) [F. perhaps from Ar. *darin*, filthy]. A contagious venereal disease of horses, the prominent signs and symptoms consisting of inflammation of the genital organs and lymph nodes, and paralysis of the hind legs. The exciting cause is believed to be the *Trypanosoma equiperdum*.

Dover's powder. Ipecac and opium powder.

Dover's p. syrup. Ipecac and opium syrup.

Dover's p. tincture. Ipecac and opium tincture.

dow'el [ME. *dowle*]. *In dentistry*, a metallic pin inserted into a prepared root canal of a tooth in order to attach an artificial crown.

Downey, Hal [*American hematologist*, 1877–]. Known for his neounitarian theory of the origin of blood cells. The theory states that all blood cells are derived from stem cells which are identical and originate in reticuloendothelial cells.

doxyfed hydrochloride. Trade-marked name for *metamphetamine hydrochloride*.

dox"yl a mine' suc'cin-ate. Generic name for the antihistaminic substance 2-[α-(2-dimethylaminoethoxy)-α-methylbenzyl] pyridine succinate; $C_{17}H_{22}N_2O.C_4H_6O_4$; marketed under the trade-marked name *decapryn succinate*.

Doyen, Eugène Louis [*French surgeon*, 1859–1916]. Described an operation for rapid exposure of the heart through a U-shaped incision over the costal cartilages, and a panhysterectomy by the abdominal route. His operation for pericardial paracentesis through a vertical median incision and perforation of the sternum with a trephine is known as *Doyen's operation*.

DPN Abbreviation for *diphosphopyridine nucleotide*. See *coenzyme I*.

DPN.2H Abbreviation for the reduced form of diphosphopyridine nucleotide or *dihydrocoenzyme I*.

DPT Abbreviation for *diphosphothiamine* (cocarboxylase).

dr *dr* Drachm.

drachm (dram) dram [G. *drachmē*, as much as one can hold in the hand]. The eighth part of the apothecary ounce. (Symbol, ℨ.) Also, less commonly, the sixteenth part of the avoirdupois ounce. Abbreviated, dr *dr*.

fluidrachm. The eighth part of a fluidounce. Symbol, fℨ.

drac"on ti" -sis. Dracunculosis.

dra-con"ti as ma [G. *drakontion*, little dragon; *sōma*, body]. Median cleft of abdomen and thorax, with twisted vertebral column and flaring ribs.

dra cun cu li'a sis [L. *dracunculus*, small dragon; NL. *-iasis*, condition]. Infestation with *Dracunculus medinensis*. See also *dracunculosis*.

dra-cun cu-lo sis [*dracunculus*; G. *-ōsis*, condition]. A morbid condition caused by infestation with the nematode parasite *Dracunculus medinensis*; characterized by lesions produced in the leg muscles by the gravid female worm; found in Africa, India, and Brazil; dracontiasis. Also called *Guinea worm infestation*.

Dra-cun cu-lus [L.]. A genus of threadworms belonging to the superfamily Dracunculoidea.

D. medinensis. A species of filarial worms of which certain species of *Cyclops* are the intermediate hosts and man is a definitive host. Human infestation is caused by drinking raw water containing infested Cyclops. Syn., *guinea worm*.

draft, draught [AS. *dragan*, to draw]. 1. A current

primary and secondary coils, and was used to stimulate tissue by controlled induction shock.

Du·boi'si·a [after F. N. *Dubois*, French botanist]. A genus of Far Eastern tropical plants, certain members of which contain scopolamine, hyoscyamine, and related alkaloids, while others contain nicotine and associated alkaloids.

du·boi'sine. Old term for an alkaloid, identified as hyoscyamine, or a mixture of alkaloids, including hyoscyamine and scopolamine, from certain species of *Duboisia*, especially *D. myoporoides*.

Dubos, René Jules [*French bacteriologist in the U.S.A.*, 1901–]. Discovered tyrothricin and gramicidin (1939). Cultivated tubercle bacilli by a quick method called *Dubos' method*.

Duboscq, Jules [*French optician*, 1817–86]. Remembered for his invention of an optical instrument for comparing and matching colors of solutions, called *Duboscq' colorimeter*.

Duchenne (de Boulogne), Guillaume Benjamin Amand (1806–75). French neurologist, founder of electrotherapy. He used faradism as early as 1830, and made important studies of electrophysiology (1855). He described progressive spinal muscular atrophy (1849), called *Duchenne-Aran muscular atrophy, Cruveilhier's disease*, and gave a classic description of tabes dorsalis (1859), which sometimes is called *Duchenne's disease*; also gave the first description of chronic progressive bulbar paralysis (1860), called *Duchenne's paralysis*. He studied the mechanism of facial expressions of emotion (1862). Progressive muscular dystrophy with pseudohypertrophy, described by Griesinger in 1865, by Duchenne in 1868, and by Erb in 1884, is known as *Duchenne-Griesinger disease, Erb paralysis, dystrophy*. Partial paralysis of the brachial plexus, due to laceration at birth, is called *Erb-Duchenne paralysis, Erb's palsy*. He also introduced the technique of examining small bits of muscle taken from living patients (1868), now known as *biopsy*, 2.

duck'er·ing [after G. F. *Duckering*]. A method of disinfecting hair and wool, employed against the *Bacillus anthracis*. Rare.

duck heart. Enlargement of the left ventricle as a result of aortic insufficiency, giving the heart a duck-shaped configuration in its fluoroscopic and radiographic appearance. Also called *wooden-shoe heart*.

Ducrey's bacillus. See *Hemophilus ducreyi* under *Hemophilus*.

duct [L. *ductus*, from *ducere*, to lead]. 1. A tube or channel, especially one for conveying the secretions of a gland. 2. A small enclosed channel conducting any fluid, as the cochlear duct.

accessory pancreatic d. The proximal part of the dorsal pancreatic duct that usually persists. Also called *d. of Santorini*.

allantois d. The proximal part of the allantois opening into the cloaca. Also called *allantoenteric d.*

alveolar d. One of the air passages in the lung branching from a respiratory bronchiole and leading to alveolar sacs.

archinephric d. See pronephric *d.*

Bartholin's d. (a) The duct of a major vestibular gland at the vaginal introitus. (b) The duct of the major sublingual gland. Obs.

bile d. A general term for the cystic, hepatic, or common duct or any of the small ducts of the liver connecting with the hepatic duct. Also called *biliary d.*

branchial d. The tubular second or fourth visceral grooves opening into the cervical sinus of the embryo.

cervical d. The temporary external duct of the cervical vesicle formed as the cervical sinus is closed over by the opercular fold of the hyoid arch.

cloacal d. The caudal part of the cloaca before the urorectal septum completely divides rectum and urogenital sinus. Also called *Reichel' d.*

cochlear d. The ductus cochlearis; the endolymph-filled, triangular (in cross-section) canal between the scala tympani and scala vestibuli. It contains the organ of Corti. Syn., *membranous cochlea, membranous cochlear canal*. Formerly called *scala media*. See Plate 20.

common bile d. The duct formed by the union of the cystic and the hepatic ducts. Syn., *ductus choledochus*.

common pharyngobranchial d. The medial part of the fourth pharyngeal pouch forming a common duct for the ultimobranchial body (fifth pouch) and the lateral part of the fourth pouch.

cystic d. The duct of the gallbladder. See Plate 13.

deferent d. See *ductus deferens*.

dorsal pancreatic d. That of the embryonic dorsal pancreas.

d. of Bellini. Papillary *d.*

d. of Cuvier. One of the two common cardinal veins.

d. of Stensen (Steno). See parotid *d.*

d. of the epididymis. See epididymal *d.*

d. of the testis. That made up of the epididymal duct, the ductus deferens, and the ejaculatory duct.

efferent d. See *efferent ductule*.

ejaculatory d. The terminal part of the ductus deferens after junction with the duct of a seminal vesicle, embedded in the prostate gland and opening into the urethra on the colliculus seminalis. See Plate 44.

endolymphatic d. (a) The duct which unites the endolymphatic sac with the utriculosaccular duct; also called *otic d.* (b) In *embryology*, a dorsomedian diverticulum of the otocyst, the anlage of the endolymphatic sac.

epididymal d. The highly convoluted part of the duct of the testis which forms the main mass of the epididymis. Syn., *d. of the epididymis, ductus epididymidis*.

excretory d. A duct, lined by nonsecretory epithelium, which is solely conductive.

frontonasal d. See nasofrontal *d.*

galactophorous d. Old term for lactiferous duct.

Gartner's d. A persistent remnant of the mesonephric duct in the female. Syn., *longitudinal d. of the epoöphoron*.

hepatic d. The common duct formed by the union of the left hepatic duct which drains the left and caudate lobes of the liver and the right hepatic duct which drains the right and quadrate lobes of the liver. Also called *common hepatic d.* See Plate 13.

hepatocystic d. A bile duct connected directly with the gallbladder.

hepatopancreatic d. The terminal part of the embryonic common bile duct which also drains the ventral pancreas.

intercalated d. The narrow portion of the intralobular ducts of the pancreas, or the parotid or submaxillary glands.

lacrimal d. A tube in each eyelid extending from the punctum lacrimale to the nasolacrimal sac; also called *lacrimal canaliculus*.

lacrimonasal d. See nasolacrimal *d.*

lactiferous d. One of the excretory ducts of the mammary gland, opening on the nipple. Also called *milk d.* See Plate 42.

longitudinal d. of the epoöphoron. See Gartner' *d.*

Luschka's d. One of the aberrant bile ducts

found in the wall of the gallbladder. It may connect with bile duct, but never with the lumen of the gallbladder.

mesonephric d. The duct of the mesonephros or embryonic kidney. It becomes the excretory duct of the testis and gives rise to the ureteric bud in both sexes. Syn., *Wolffian d.*

metanephric d. The ureter.

milk d. See lactiferous *d.*

Müllerian d. The paramesonephric duct; also called *Müller's d.*

nasofrontal d. That between the frontal sinus and the middle meatus of the nose. Also called *frontonasal d.*

nasolacrimal d. The membranous duct lodged within the nasolacrimal canal; it gives passage to the tears from the lacrimal sac to the inferior meatus of the nose. See Plates 12, 19.

nasopalatine d. A duct or canal between the embryonic oral and nasal cavities formed at the site of fusion of the palatine process of the maxillary process of the embryo with the primitive palate. Rarely patent in adults; usually represented by vestigial cords, blind tubes, or cysts.

omphalomesenteric d. The vitelline duct.

otic d. See endolymphatic *d.*

pancreatic d. The main duct of the pancreas formed from the dorsal and ventral pancreatic ducts of the embryo. Also called *d. of Wirsung.*

papillary d. Any one of the largest collecting tubules of the kidney opening into the minor calyces of the renal pelvis; also called *duct of Bellini.*

paramesonephric d. An embryonic genital duct. In the female, the anlage of the oviducts, uterus, and vagina; in the male, it degenerates, leaving the appendix testis. Syn., *Müllerian d.*

paraurethral d. That of paraurethral gland. Formerly called *Skene's duct.*

parotid d. That of the parotid gland. It passes horizontally across the lateral surface of the masseter muscle, pierces the buccinator muscle, and opens into the oral vestibule opposite the second upper molar tooth. Also called *Stensen's d., d. of Steno, Stenonian d.*

perilymphatic d. Aqueduct of the cochlea; minute canal uniting the scala tympani with the subarachnoid space; also called *periotic d.*

periotic d. See perilymphatic *d.*

pharyngobranchial d. The narrow medial part of pharyngeal pouch.

pleuropericardial d. The opening in the pleuropericardial membrane temporarily connecting the embryonic pleural and pericardial cavities. Also called *pleuropericardial canal.*

pleuroperitoneal d. The opening in the pleuroperitoneal membrane temporarily connecting the embryonic pleural and peritoneal cavities. Also called *pleuroperitoneal canal.*

primary genital ducts. The mesonephric and paramesonephric ducts.

pronephric d. That of the pronephros. It becomes the functional mesonephric duct. Syn. *archinephric d.*

prostatic d. Any one of the ducts conveying the secretion of the prostate into the urethra. See Plate 44.

right lymphatic d. The common lymph trunk receiving the right jugular, subclavian, and bronchomediastinal trunks, and emptying into the right subclavian vein at its junction with the right internal jugular vein.

salivary d. That of salivary gland.

semicircular ducts. The membranous semicircular canals.

seminal d. The duct of the testis, especially the ductus deferens and the ejaculatory duct. Syn., *spermatic d.*

spermatic d. The seminal duct.

Stensen's d. See parotid *d.*

sublingual ducts. Those of the sublingual gland opening into the oral cavity. Some unite to form the **major sublingual duct.** Others, the **minor sublingual ducts,** open on the sublingual plica.

submaxillary d. That of the submaxillary gland receiving the major sublingual duct and emptying into the oral cavity at the side of the frenulum of the tongue. Also called *Wharton's d.*

thoracic d. The common lymph trunk beginning in the cisterna chyli, passing upward, and emptying into the left subclavian vein at its junction with the left internal jugular vein.

thymopharyngeal d. The third pharyngobranchial duct which may elongate and persist between thymus and pharynx.

thyreocervical d. The fourth branchial duct.

thyroglossal d. A slender temporary duct connecting the thyroid anlage with the surface of the tongue.

thyropharyngeal d. The fourth pharyngobranchial duct.

umbilical d. Old term for vitelline duct.

urogenital d. (a) The male urethra from the orifices of the ejaculatory ducts to the fossa navicularis. (b) In certain vertebrates, the mesonephric duct. ( ) See urogenital *sinus.*

utricular d. The utriculosaccular *d.*

utriculosaccular d. A membranous tube uniting the utricle and the saccule; from it arises the endolymphatic duct.

vitelline d. The constricted part of the yolk sac opening into the midgut in the region of the future ileum. Syn., *omphalomesenteric d.* Formerly called *umbilical duct.*

Wharton's d. See submaxillary *d.*

Wolffian d. The mesonephric duct. Also spelled *wolffian d.*

duct'less [*ductus*; AS. *lēas*, free from]. Having no excretory duct, as the ductless glands.

duct'ule [dim. from *ductus*]. A small duct.

aberrant ductules. Blindly ending epithelial tubules associated with the epididymis; the ductuli aberrantes superiores and inferiores.

efferent d. Any one of eight to fifteen coiled ducts which connect the rete testis with the d ct of the epididymis and form the head of the epididymis; derived from paragenital mesonephric tubules. Syn., *lobule of the epididymis, vascular cone, efferent duct.*

duc'tu lus (pl. *ductuli*) [dim. from *ductus*]. A small duct. Also see *ductule.*

ductuli aberrantes inferiores. Vestigial remains of caudal mesonephric tubules ttached to the lower part of the duct of the epididymis.

ductuli aberrantes superiores. Vestigial remains of caudal mesonephric tubules and duct; usually the first two epigenital tubules; appendix epididymidis.

ductuli transversi. That part of the epoöphoron consisting of the vestigial remains of paragenital mesonephric tubules.

d. alveolaris. See alveolar *duct.*

duc'tus (pl. *ductūs*) [L.]. Duct.

d. arteriosus. The distal half of the left sixth aortic arch forming fetal blood shunt between the pulmonary artery and the aorta. **Patent d. arteriosus** refers to the congenital anomaly in which there is persistence of this fetal blood shunt indefinitely after birth. Also called *Botallo's duct, duct of Botal.* See Plate 6.

d. arteriosus bilateral. A developmental anomaly in which the right sixth aortic arch persists entirely or in part.

d. caroticus. That part of the embryonic dorsal aortae between the third and fourth aortic arches which normally disappears early in development.

d. choledochus. The common bile duct.

d. cochlearis. The cochlear duct.

d. deferens. That portion of the excretory duct system of the testis which runs from the epididymal duct to the ejaculatory duct. Syn., *vas deferens.* Also called *deferent duct.* See Plate 44.

d. endolymphaticus. Endolymphatic duct.

d. epididymidis. Epididymal duct.

d. perilymphaticus. Aqueduct of the cochlea.

d. reuniens. A membranous tube in the inner ear uniting the saccule with the cochlear duct; it contains endolymph. Also called *Hensen canal.*

d. venosus. A venous channel of the embryonic liver shunting blood from the left umbilical vein to the enlarging right sinus venosus of the heart. Also called *duct of Arantius.*

Duddell, Benedict [*English ophthalmologist,* eighteenth century]. Wrote on diseases of the fibrous coats of the eye (1729). Described the posterior elastic lamina, which sometimes is known as *Duddell membrane.*

Dudley, Emilius Clark [*American gynecologist,* 1850–1928]. Known for his operation for retroversion of the uterus, in which a strip is denuded from the anterior surface of the uterus; this is followed by the removal of other strips along the inner side of each round ligament, the three denuded areas being sutured together. Devised an operation for painful menstruation in which the uterine cervix is split posteriorly and sutured to provide a permanently widened internal os.

Dudley, Harold Ward [*English physiologist and biochemist,* 1887–1935]. With Henry Hallett Dale (1929) isolated acetylcholine from the spleens of animals. With John Chassar Moir isolated ergometrine (1935), now called ergonovine.

Dugas, Louis Alexander [*American surgeon,* 1806–84]. Remembered for his test for dislocation of the shoulder; the elbow cannot be made to touch the side of the chest when the hand of the affected side is placed on the opposite shoulder.

Duhring, Louis Adolphus [*American dermatologist,* 1845–1913]. Known for his description of dermatitis herpetiformis, called *Duhring's disease.*

Dührssen, Alfred [*German gynecologist,* 1862–1933]. Remembered for his description of an operation to correct displacement of the uterus by vaginal fixation. Credited with being the first to perform vaginal Cesarean section (1895). *Dührssen incisions* are incisions of the cervix to facilitate delivery.

du·ip'a·ra [L. *duo,* two; *parere,* to bear]. A woman who has borne two children.

Duke's test. See under *test.*

Duke-Elder's device. See *stenopeic.*

Dukes, Clement [*English physician,* 1845–1925]. Known for his description of acute infectious erythema, which he distinguished from measles, rubella, and scarlet fever. Its existence as a separate entity is open to doubt. Called *fourth disease, Dukes' disease, Filatov-Dukes disease.*

dul"ca·ma'ra (dul"kuh-mair'uh, -mah'rah) [L. *dulcis,* sweet; *amarus,* bitter]. The dried stems of *Solanum dulcamara,* bitter nightshade, containing an alkaloid, solanine. In overdoses it causes nausea, emesis, and convulsive muscular movements; has been employed in psoriasis and similar skin diseases.

dul"ca·ma·rin [*dulcis; amarus*]. $C_{22}H_{34}O_{10}$. A yellow amorphous glycoside found in dulcamara.

dul'cin. $C_9H_{12}O_2N_2$. *p*-phenetolcarbamide; 4-ethoxyphenylurea; it occurs as white, lustrous needles and is soluble in water and alcohol. It is about 250 times as sweet as cane sugar and has been suggested as a substitute for saccharin. See *sucrol, valzin.*

dul'cite (dul'sight, -sit). Dulcitol.

dul'ci·tol. $C_6H_{14}O_6$. Sugar from *Melampyrum nemorosum* and other plants.

dul'cose. Dulcitol.

dull [ME. *dul*]. 1. Slow of perception. 2. Not resonant on percussion; may be normal as over the heart or pathologic as over an area of pulmonary consolidation. 3. Not bright in appearance. 4. Not sharp; blunt. —**dull'ness,** *n.*

dumb [AS.]. Unable to utter articular speech. —**dumb'ness,** *n.*

dumb mad'ness. Dumb rabies. See *rabies.*

dum'my [AS. *dumb*]. A substitute for a natural tooth; pontic.

Dunant, Jean Henri [*Swiss philanthropist,* 1828–1910]. Aroused public opinion with his account (1863) of the battlefield of Solferino (1859). Organized the first Geneva Convention (1864) which founded the International Red Cross Society.

Dunbar's serum. See *pollantin.*

Duncan, James Matthews [*Scottish gynecologist,* 1826–90]. Remembered for his description of the folds in the loose peritoneal covering of the uterus seen immediately after delivery, called *Duncan's folds.* Described a manner of presentation of the placenta at the outlet by one margin, the maternal surface usually being delivered first; known as *Duncan position.*

Dun·ferm'line scale (dun-furm'lyne, -lin, dun-furm'...) [after *Dunfermline,* Scotland, where it was developed]. A scheme for classifying children, according to their state of nutrition, into four grades: (1) superior; (2) fair; (3) requiring supervision; (4) requiring medical treatment.

Dunglison, Robley [*American physiologist,* 1798–1869]. Gave earliest known description of chronic hereditary chorea (1842). Author of the first comprehensive medical dictionary in America (1833) and of several texts on physiology and medical practice.

Dunham, Edward Kellogg [*American pathologist,* 1860–1922]. Known as the inventor of a solution of 1% of peptone and 0.5% of sodium chloride in distilled water, used as a culture medium for bacteria as a preliminary step in ascertaining indol formation.

du·o- [L.]. A combining form meaning *two.*

du"o·crin'in (dew"o-krin'in, dew-ock'rin-in). The hormone, released by the intestinal mucosa when certain foodstuffs are in contact with it, which stimulates the duodenal glands of Brunner to secrete.

du"o·de·nec·ta'si·a [L. *duodeni,* twelve, from the length of the duodenum—about twelve fingers' breadth; G. *ektasis,* a stretching out]. Chronic dilatation of the duodenum.

du"o·de·nec'to·my [*duodeni;* G. *ektomē,* excision]. Excision of part of the duodenum.

duodenin. Trade-mark for a preparation containing secretin and enterokinase.

du"o·de·ni'tis [*duodeni;* G. *-itis,* inflammation]. Inflammation of the duodenum.

du"o·de'no- (dew-o-dee'no-, -den'o-, dew-od'i-no-), **duoden-** [*duodeni*]. A combining form meaning *related to or connected with the duodenum.*

du"o·de"no·chol"an·gi'tis (-kol-an-jy'tis, -ko-lan-jy'tis) [*duodeni;* G. *cholē,* bile; *angeion,* vessel;

-*itis*, inflammation]. Inflammation of th duodenum and the common bile duct about the ampulla.

du"o-de no-chol"e-sys tos'to-my (-kol"i-sis tos'to-mee, ko"li-) [*duoden*; *chole*; G. *kystis*, bladder; *stoma*, mouth]. Th formation of an anastomosis between the duodenum and gallbladder.

du"o de"no-ch led"o chot o-my (ko-led o-cot'o-mee, ko"led o-) [*duoden*; *chole*; G. *dechos*, able to hold *tomē*, cutting]. A modification of choledochotomy by incising the duodenum in order to approach the common d ct.

du"o-de no-col'ic [*duoden*; G *kolon*, colon]. Relating to the duodenum and the colon, as duodenocolic fistula.

du"o-de no-cys-tos'to-my [*duoden*; G. *kystis*, bladder; *stoma*, mouth]. Duodenocholecystostomy.

du"o-de no-en"ter-os'to-my [*duoden*; G. *enteron*, intestine; *stoma*]. Surgical formation of passage bet een the duodenum and another part of the intestine.

du"o-de no-gram (dew"o-dee no-gram, dew-od' i-no) [*duoden*; G *gramma*, letter]. A roentgenogram of the duodenum.

du"o-de no he-pat'ic [*duoden*; G *hēpar* liver]. Pertaining to the duodenum and the liver as the duodenohepatic ligament.

du"o-de no-il"e-os'to-my [*duoden*; G *eilein*, to roll; *stoma*, mouth]. The formation of passage between the duodenum and the ileum.

du" de no je"ju nos t my (dew -dee no-jed) yoo-nos'to-mee, dew"o-den o- dew-od"i-no-) [*duoden*; L. *jejunus*, empty *stoma*]. Surgical anastomosis of the duodenum to the jejunum.

du"o-de no-pan"cre a tec to my [*duoden*; G *pankreas*, pancreas *ektomē*, excision]. The operative excision of portion of the duodenum together with the head of the pancreas. Syn., *pancreatoduodenectomy*.

du"o-de no-plas"ty [*duoden*; G *plassein*, to form, mold]. A reparative operation upon some portion of the duodenum. See *pyloroplasty*.

du-o-de no-py"lo-rec'to-my Resection of a portion of the duodenum and th pylorus.

du"o-de-nor'rha phy [*duoden*; G *rhaphē*, suture]. The suture and repair of the duodenum after incision, as for the closure of ruptured duodenal ulcer.

du"o-de-nos'co-py [*duoden*; G *skopein*, to examine]. Inspection and visual examination of the duodenum by instrumental means.

du"o-de-nos'to-my [*duoden*; G *stoma*, mouth]. The formation, temporarily of duodenal fistula by surgical procedure.

du"o-de not'o-my [*duoden*; G *tomē*, cutting]. Surgical incision of the duodenum.

du"o-de num, du od'e-num [*duoden*]. The first part of the small intestine, beginning at the pylorus. It is from eight to ten inches long and is the most fixed part of the small intestine consists of superior descending, and inferior portions, and contains the openings of the pancreatic duct or ducts and the common bile duct. See Plates 10, 13. —**duodenal** *adj*

giant d. An enormously enlarged duodenum, similar to that seen in congenital megacolon.

inversed d. A congenital abnormality associated with acute angulation and dilatation.

mobile d. A movable condition of the duodenum.

du"o-pa-ren'tal [L. *duo* two *parens*, parent]. Derived from two sexual elements.

duotal. A trade-mark for guaiacol carbonate.

Duplay Emanuel Simon [*French surgeon*, 1836–1924]. Remembered for his contributions to reconstructive surgery of the urethra. Devised an operation for epispadias, forming new urethra t the expense of the corpora cavernosa; he also devised an operation for hypospadias, in three stages, and described subdeltoid bursitis.

du'pli ca"ture [L. *duplicare*, to double]. A fold, as membrane folding upon itself.

du"pli-ca"tus cru"ci-a'tus [L.]. Experimentally produced double monsters obtained by grafting on inversion of the two-celled stage in amphibia.

du plic'i tas (dew-plis'i-tas) [L., being double]. A monstrosity with duplication of either the cephalic or pelvic end, or both. See Plat 23.

d. cru"ci-a'ta. A rare form of conjoined twins in which there is superior and inferior duplicity the long axes of the bodies forming cross.

du plic'i ty (dew-plis' tee) [*d plicitas*]. *1 teratol ogy*, the condition of being double duplexity

du plic'i ty the o-ry A theory of vision that the retinal rods are stimulated by differing intensities of light, the cones only by differing wave lengths.

duponol C. Trade-mark for U.S.P grad of sodium lauryl sulfate.

Dupuytren, Guillaume [*French surgeon*, 1777–1835]. Greatest of the early vascular surgeons. First to excise the lower jaw with success (1812). Ligated the external iliac artery (1815) and the subclavian artery (1819) Described fracture of the lower end of the fibula with displacement (1819); called *Dupuytren's fracture*. Divided the sternocleidomastoid muscle subcutaneously for torticollis (1822) Gave the first adequate description of congenital dislocation of the hip (1826) Devised an operation, in which h used his enterotome, for making an artificial anus (1828). Described an abscess of the right iliac fossa (1829) Classified burns (1832) and wrote treatise on war wounds (1834) See also Dupuytren's contracture.

Duquesnel's aconitine. See *aconitine nitrate*.

du'ra. The dura mater: abbreviated terminology.

duracaine [L. *durare*, to endure; *cocaine*]. Trade-mark for local anesthetic that contains procaine as the analgesic principle the substance is used for spinal anesthesia.

duracillin. Trade-mark for certain preparations containing procaine penicillin G.

duraluminum [L. *durus*, hard *alumen*, alum]. A noncorroding alloy of aluminum and copper used in surgical splints and appliances.

du'ra ma'ter [L hard mother]. The fibrous membrane forming the outermost covering of the brain and spinal cord. Syn., *dura*. —**dural**, *adj*

Duran-Reynals, Francisco [*American physician and bacteriologist*, 1899–] Known for his research on cancer Reported (1928) that vaccinal virus infection of rabbits was aggravated when extracts of rabbit, guinea pig, and rat testis were injected into the skin along with the virus, the effect being produced in the tissues of the host, not in the virus. Today the term *Duran-Reynals' spreading factor* is used to include various substances with the common property of increasing the permeability of connective tissue. Certain bacteria have been known to secrete spreading factor known as hyaluronidase.

Durand, J [*French physician*, contemporary]. With Maurice F vre and Joseph Nicolas, gave the first satisfactory description of venereal lymphogranuloma (1913) called *Durand-Nicolas-Favre disease*, *Fre disease*, *fourth venereal disease*.

Durante, Francesco [*Italian surgeon*, 1844–1934]. Remembered for his important studies on the surgery of tumors and tuberculosis. Is credited with introducing the osteoplastic flap used *in* cranial surgery.

du'ra plas"ty [*dura*; G. *plassein*, to form, mold]. Repair of defects in the dura mater.

durch"wan'der ungs-per"i to-ni'tis (doorkh von dur-oongs-) [Ger. wandering through]. Peritonitis thought to be due to bacteria wandering through the intestinal wall to the peritoneum even though the mucosa is not ulcerated. The organisms may be carried by phagocytes to the peritoneal surface, where they then destroy the phagocytes and multiply.

Dürer, Albrecht [*German illustrator and engraver*, 1471–1528]. One of the world's great artists, supreme in his field. Of enduring medical interest is his work on the proportions of the human body (1528). His woodcuts are among the finest of early medical illustrations.

Durham, Herbert Edward [*English bacteriologist*, 1866–1945]. With Max von Gruber discovered specific agglutination (1896), the basis of the Widal test for typhoid. See under *test*. Also called *Gruber-Durham reaction*, *Gruber-Widal reaction*. Devised a glass tube used to detect gas formation in bacterial cultures; called *Durham fermentation tube*.

du-ri'tis [*dura*; G. *-itis*, inflammation]. Inflammation of the dura mater; pachymeningitis.

du"ro ar"ach ni'tis (dew ro ar"ack nigh tis) [*dura*; G. *arachnē*, spider; *-itis*]. Inflammation of the dura mater and arachnoid membrane.

du"ro-sar co'ma. See *meningioma*.

Duroziez, Paul Louis [*French physician*, 1826–97]. First to describe congenital mitral stenosis (1877) called *Duroziez's disease*. See also Duroziez's *murmur* or *sign*.

Dusser de Barenne, Johannes Gregorius (1885–1940). Dutch physiologist who introduced the technique of local application of strychnine to the cerebral cortex, thereby greatly advancing physiological neuronography; he also demonstrated for the first time the major functional subdivisions of the sensory cortex in the rhesus monkey (1934).

dust count. The number of particles of dust in a given atmosphere, usually expressed as the number of particles less than 10μ in diameter per cu. ft. of air when counted by the light field method. Used chiefly in evaluation of silicosis hazards in industry.

Dutrochet, René Joachim Henri [*French physiologist*, 1776–1847]. Gave the first clear account of osmosis, and originated the terms exosmosis and endosmosis (1827).

Dutton, Joseph Everett [*English physician*, 1874–1905]. Gave the name *Trypanosoma gambiense* (for Gambia in West Africa) to the causative agent of mid-African sleeping sickness (1901). Trypanosomiasis sometimes is called *Dutton's disease*. With J. L. Todd, showed that relapsing fever is caused by a spirochete, *Borrelia duttonii* (1905).

Duval's bacillus. See *Shigella sonnei*.

Duverney, Joseph Guichard [*French anatomist*, 1648–1730]. Remembered for writing the first satisfactory scientific account of the anatomy, function, and diseases of the ear (1683).

d.v. Double vibration.

D. V. M. Doctor of Veterinary Medicine.

D. V. M. S. Doctor of Veterinary Medicine and Surgery.

D. V. S. 1. Doctor of Veterinary Science. 2. Doctor of Veterinary Surgery.

dwarf [AS. *dweorge*]. A diminutive human being. —**dwarf**, *adj.*

achondroplastic d. See *achondroplasia*.

asexual d. One with deficient sexual development.

chondrodystrophic d. One due to fetal chondrodystrophia; achondroplastic dwarf. See *achondroplasia*.

cretin d. One due to thyroid deficiency; a cretin.

diabetic d. One with retarded growth due to diabetes.

hypoplastic d. See normal *d.*

infantile d. See *infantilism*.

micromelic d. One with very small limbs.

normal d. One abnormal only in size. Also called *hypoplastic d.*

ovarian d. One due to absence of the ovaries. The person is not a true dwarf but is undersized and seldom over 54 inches in height; the external genitalia are undeveloped; premature aging is said to be common.

phocomelic d. One with abnormally short diaphyses.

physiologic d. A normal dwarf.

pituitary d. One due to deficiency of pituitary growth hormone.

primordial d. A normal dwarf.

rachitic d. One due to severe rickets.

renal d. One due to renal osteodystrophy.

sexual d. One with normal sexual development.

true d. One with general underdevelopment, characterized by delayed ossification of the epiphyses.

dwarf 1. To prevent normal growth. 2. To become small or dwarfed.

dwarf'ism. Abnormal underdevelopment of the body; the condition of being dwarfed.

nephrotic glycosuric d. A form of renal dwarfism. See Debré-deToni-Fanconi *syndrome*.

ovarian d. See Turner's *syndrome*.

panhypopituitary d. Dwarfism characterized additionally by the metabolic defects of hypopituitarism.

primordial d. Dwarfism resulting from a deficiency in growth hormone without a deficiency in the other adenohypophyseal hormones.

renal d. Dwarfism resulting from several types of chronic renal disease in children, as in congenital malformations of the kidney, chronic nephritis, renal tubular acidosis, and the Debré-deToni-Fanconi syndrome.

thyroid d. See *cretinism*.

dwt, dwt. Abbreviation for pennyweight.

Dy Chemical symbol for dysprosium.

dy'ad [G. *dyas*, the number two]. 1. A pair or couple. 2. One of the groups of paired chromosomes formed by the division of a tetrad in miosis. 3. *In chemistry*, a divalent element or radical.

dye [AS. *dēag*]. A coloring matter generally used in solution. Certain dyes are used medicinally as antiseptics, as chemotherapeutic agents, or for special effects on tissue cells. —**dye**, *v.*

azo dyes. A group of synthetic organic dyes derivable from azobenzene, containing the chromophore —N=N—.

disazo d. A dye containing two —N=N— groups.

monoazo d. A dye containing one —N=N— group.

supravital d. See *supravital staining*.

vital d. A dye suitable for staining living tissues.

zinc-leuco d. A highly specific dye for hemoglobin made by dissolving acid fuchsin, acid violet, or patent blue, in 2% acetic acid, and decolorizing by boiling with a few grains of zinc dust.

dye'stuff" See *dye*.

dymixal. Trade-mark for preparations, employed in the treatment of burns, that contain the dyes crystal violet, brilliant green, and acriflavine.

-dymus [G. *didymos*, twin]. Suffix signifying superior duplicity in conjoined twins; used by I. Geoffroy St. Hilaire.

dy·nam'e·ter (dye·nam'i·tur, di·nam'). See *dynamometer.*

dy·nam'ic (dye·nam'ick, di·nam'ick) [G. *dynamikos*, powerful]. Pertaining to energy; sthenic; characterized by energy or great force.

dy·nam'ics [*dynamic*]. The science which treats of matter in motion.

vital d. The science of the inherent power of an organism.

dy'na·mo [G. *dynamis*, power]. A machine for converting mechanical energy into electric energy by means of coils of insulated wire revolving through magnetic fields of force.

dy·na·mo- [*dynamis*]. A combining form denoting power.

dy"na·mo·gen'e·sis [*dynamis*; G. *genesis*, production]. The generation of power, force, or energy.

dy·nam'o·graph (dye·nam'o·graf, di·nam'). [*dynamis*; G. *graphein*, to write]. An instrument designed to measure and record graphically muscular strength. —**dynamog'raphy**, *n.*

dy"na·mom'e·ter [*dynamis*; G. *metron*, measure]. An instrument for the measurement of muscular strength, particularly of the hand, such as spring balance.

dy·nam'o·neure (dye·nam'o·newr, di·nam'). [*dynamis*; G. *neuron*, nerve]. A spinal motor neuron.

dy"na·moph'a·ny [*dynamis*; G. *phanein*, to show]. Any form of expression or discharge of psychic force.

dy·nam'o·scope (dye·nam'o·scope, di·nam'). [*dynamis*; G. *skopein*, to examine]. An apparatus for auscultating the muscles.

dy'na·therm [*dynamis*; G. *thermē*, heat]. The apparatus used in diathermy.

dyne. That amount of force which, when acting continuously on a mass of one gram for one second, will accelerate the mass one centimeter per second.

dys- [G., prefix meaning hard, bad, unlucky]. 1. A prefix meaning *hard* or *ill*; used to signify *ill*, *bad*, *hard*, or *difficult*. 2. In *biology*, a prefix denoting *subtle*. 3. In *medicine*, a prefix denoting *difficult* or *painful*, *faulty* or *impaired*, or *abnormal* or *morbid*.

dys"a·cou'si·a (dis"uh·koo'shuh, ·see·uh, ·zhuh, ·zee·uh), **dys"a·cou'sis** (dis"uh·koo'sis), **dys"a·cu'si·a** (dis"uh·cue'shuh, ·see·uh, ·zhuh, ·zee·uh, dis"uh·koo'), **dys"a·cous'ma** (dis"uh·kooz'muh) [*dys-*; G. *akousis*, to hear]. A condition in which pain or discomfort is caused by loud or even moderately loud noises.

dys·ad"ap·ta'tion [*dys-*; L. *adaptare*, to adjust]. Inability of the iris and retina to accommodate themselves to variable intensities of light.

dys"aes·the'si·a (dis"es·thee'zhuh, ·zee·uh). See *dysesthesia.*

dys·an"ag·no'si·a [*dys-*; G. *anagnōsis*, reading]. Dyslexia.

dys·an"ti·graph'i·a (·graf'ee·uh, ·gray'fee·uh) [*dys-*; G. *antigraphon*, copy]. Inability to perform copy writing or to print.

dys·aph'i·a, **dys·aph'i·a** [*dys-*; G. *haphē*, touch]. Disordered sense of touch.

dys"ap·ta'tion. Dysadaptation.

dys"ar·te"ri·ot'o·ny [*dys-*; G. *artēria*, artery; *tonos*, tension]. Abnormal blood pressure.

dys·ar'thri·a [*dys-*; G. *arthron*, joint]. Impairment of articulation; stammering. —**dysar'thric**, *adj.*

dys"ar·thro'sis [*dys-*; *arthron*; G. *-ōsis*, condition]. 1. Deformity, dislocation, or disease of a joint. 2. A false joint. 3. Dysarthria.

dys·au"to·no'mi·a. Autonomic dysfunction of children, probably congenital, characterized by excessive sweating and salivation, skin blotching, and hypertension, as a response to anxiety. It is associated with defective lacrimation, bouts of cyclic vomiting, and usually mental retardation. Syn., *Riley-Day syndrome.*

dys'bar·ism. A condition of the body resulting from the existence of a pressure differential between the total ambient barometric pressure and the total pressures of dissolved and free gases within the body tissues, fluids, and cavities.

dys·ba'si·a (dis·bay'zhuh, ·zhuh, ·zee·uh, ·see·uh) [*dys-*; G. *basis*, step]. Difficulty in walking.

d. intermittens angiosclerotica. Intermittent claudication due to arteriosclerosis of the lower extremities.

dys·bu'li·a [*dys-*; G. *boulē*, will]. Impairment of will power.

dys·chi'ri·a (dis·kigh'ree·uh) [*dys-*; G. *cheir*, hand]. Inability to tell which side of the body has been touched; partial allochiria.

dys·che'zi·a (dis·kigh'zhuh, ·zee·uh), **dys·che'zi·a** (dis·kee'zhuh, ·zee·uh) [*dys-*; G. *chezein*, to go to stool]. Painful or difficult defecation.

dys·chon"dro·pla'si·a (dis·kon·dro·play'zhuh, ·zee·uh, ·shuh, ·see·uh, dis"kon·dro·) [*dys-*; G. *chondros*, cartilage; *plassein*, to form]. A disease of unknown etiology attacking the long bones and the metacarpal and phalangeal skeleton of the hand. It is characterized by cartilaginous tissue developing regularly but ossifying very slowly. Also called *Ollier's disease*, *skeletal enchondromatosis.*

dys'chro·a (*dis'kro·uh*, *dis·kro'uh*), ***dys·chroi'***[*a*] [*dys-*; G. *chroia*, skin]. Discoloration of the skin; bad complexion.

dys·chro'ma·to·der'mi·a, **dys"chro·mo·der'mi·a.** Dyschroa.

dys·chro"ma·top'si·a [*dys-*; G. *chrōma*, color; *opsis*, vision]. Partial colorblindness; difficulty in distinguishing colors. —**dyschro'matope**, *n.*

dys·chro'mi·a [*dys-*; *chrōma*]. Discoloration, especially of the skin.

dys chro·mo·der'mi·a. See *dyschroa.*

dys'chro·nous [*dys-*; G. *chronos*, time]. Not agreeing as to time. —**dyschronа'tion**, *n.*

dys·co'ri·a [*dys-*; G. *korē*, pupil]. Abnormality of the form of the pupil.

dys·cra'si·a (dis·kray'zhuh, ·zee·uh, ·shuh, ·see·uh) [*dys-*; G. *krasis*, mixing]. An abnormal state of the body. —**dyscras'ic**, **dyscrat'ic**, *adj.*

blood d. Any abnormal condition of the formed elements of blood or of the constituents required for clotting; loose usage.

dys·cri'nism [*dys-*; G. *krinein*, to separate]. A condition of disordered function of the endocrine glands.

dys"di·ad"o·cho·ki·ne'si·a, **dys"di·ad"o·ko·ki·ne'si·a** (dis·dye·ad·o·ko·ki·nee'zhuh, ·zee·uh) [*dys-*; G. *diadochos*, succeeding; *kinēsis*, motion]. Impairment of the power to perform alternating movements in rapid succession, such as pronation and supination; a sign of cerebellar disease.

dys"e·coi'a [G. *dysēkoia*, deafness]. Deafness.

dys·em"bry·o'ma [*dys-*; G. *embryon*, embryo; *-ōma*, tumor]. Teratoma.

nephrogenic d. See *Wilms's tumor.*

dys·em"bry·o·pla'si·a (dis·em"bree·o·play'zhuh, ·zee·uh, ·shuh, ·see·uh) [*dys-*; *embryon*; G. *plassein*, to form]. A malformation which develops during embryonic life.

dys"e·me'si·a (dis"i·mee'zhuh, ·zee·uh), **dys·em'e·sis** [*dys-*; G. *emesis*, disposition to vomit]. Painful vomiting; retching.

dys·e'mi·a, **dys·ae'mi·a** (dis·ee'mee·uh) [*dys-*; G. *haima*, blood]. Any disease of the blood. *Obs.*

dys"en·do·cri·ni'a·sis, **dys·en·do·cri·si'a·sis.** Dysendocrinism.

dys"en·doc'rin·ism (dis·en·dock'rin·iz·um, dis·en·do·krin'iz·um) [*dys-*; G. *endon*, within; *krinein*,

to separate]. Any abnormality in the function of the endocrine glands. —**dysen'docrine** *adj*

dys"en-te ri-a. See *dysentery*

dys'en ter"y [G *dysenteria*, from *dys-*; *enteron*, intestine] Inflammation of the intestine, characterized by pain, rectal tenesmus, intense diarrhea with the frequent passage of small amounts of mucus and blood, and symptoms of toxemia. —**dysenter'ic,** *adj*

amebic d. See amebic *colitis*.

bacillary d. An infectious disease which primarily involves the colon, caused by a species of the genus *Shigella*.

balantidial d. See balantidial *colitis*.

lamb d. An acute enteritis occurring among lambs chiefly along the English-Scottish border. The etiological agent is *Clostridium welchii*, Type B.

nonspecific d. A chronic ulcerative *colitis*.

schistosomal d. A type caused by *Schistosoma mansoni*. In the early stages there is congestion and edema with inflammatory polyp formation. During ova deposition there is mild diarrhea, low fever, abdominal discomfort, and often urticaria. There may be leukocytosis and usually eosinophilia, culminating in severe anemia.

Sonne d. One of the commonest forms of intestinal infection, caused by *Shigella sonnei*, found in hospital wards for babies and children.

dys"er ga'si (dis ur-gay'shuh, -see-uh, -zhuh, -zee uh) [*dys-*; G *ergasia*, work]. In *psychobiology*, mental disturbance due to toxic factors which are capable of producing delirium, such as uremia or alcohol.

dys"es the si a, dys"aes the si (dis es-thee shuh, -zee-uh) [*dys-*; G *aisthēsis*, sensation]. 1. Impairment of the senses, especially of the sense of touch. 2. Painfulness of any sensation not normally painful.

dys-func'tion [*dys-*; L. *functus*, from *fungi*, to perform]. Any abnormality or impairment of function, as of an organ.

constitutional hepatic d. A benign, often familial, disorder of bilirubin metabolism characterized by mild elevation of indirectly reacting bilirubin without the usual evidence for a hemolytic process. Otherwise, liver function tests are normal. Also called *hereditary nonhemolytic hyperbilirubinemia*.

dys"ga-lac'ti-a (dis ga-lack tee-uh, -shee uh) [*dys-*; G. *gala*, milk]. Loss or impairment of milk secretion.

dys gen'ic [*dys-*; G *gennētikos*, from *gignesthai*, to be produced]. Detrimental to the hereditary constitution of the race. In contrast to *eugenic*.

dys ger mi no ma [*dys-*; L. *germen*, germ; G *-ōma*, tumor]. A firm, elastic, usually well-encapsulated, solid tumor of the ovary not disposed to metastasis. Occurs usually before 30 years of age, and microscopically resembles the embryonal carcinoma (seminoma) of the testis with lymphoid stroma. Also called *embryoma of ovary*. See also *seminoma*.

dys geu'si-a (dis jew see-uh, -zee-uh) [*dys-*; G. *geusis*, taste]. Morbidity or perversion of the sense of taste.

dys glan du lar [*dys-*; L. *glans*, acorn]. Pertaining to any abnormality in the function of glands, particularly the glands of internal secretion.

dys gnath'ic (dis nath'ick, -nay'thick) [*dys-*; G *gnathos*, jaw]. Pertaining to jaws with improper development and in poor relation to each other.

dys-gno'si [*dys-*; G *gignōskein*, to know]. Disorder or distortion of gnostic function.

dys-gon'ic [*dys-*; G *gonos*, seed]. Growing poorly; used of bacterial cultures.

dys-gram'ma tism [*dys-*; G *gramma*, letter]. Inability to make the proper use of words, a symptom of certain cerebral diseases, particularly diseases of the temporal lobe.

dys graph'i (dis-graf'ee-uh, -gray'fee-uh) [*dys-*; G *graphein*, to write]. Impairment of the power of writing as a result of a brain lesion.

dys hem a to-poi-et'ic (dis hem uh to- dis-hee muh-to-) [*dys-*; G. *haima*, blood; *poiein*, to make]. Pertaining to a disturbed formation of blood cells. —**dyshematopoiesis,** *n.*

dys hid'ri a [*dys-*; G *hidrōs*, sweat]. Old term for dyshidrosis.

dys"hi dro sis, dys"i dro sis [*dys-*; G *hidrōsis*, sweating]. 1. Any disturbance in sweat production or excretion. 2. Pompholyx. —**dyshidros'i-form,** *adj*

dys in su lin ism" See *hypoglycemia*.

dys"ker a to sis [*dys-*; G *keras*, horn; *-ōsis*, condition]. A disturbance in the normal process of keratinization; occurs in many skin diseases, such as keratosis follicularis, certain precancerous lesions, etc. —**dyskeratot'ic,** *adj*

dys"ki ne'si (dis"ki-nee shuh, -see-uh, -zhuh, -zee-uh, dis"kigh-nee) [*dys-*; G *kinēsis*, motion]. Impairment of the power of voluntary motion.

biliary d. A functional spasticity of the sphincter of Oddi.

dys-la'li-a, dys lal'i a [*dys-*; G *lalein*, to talk]. Impairment of the power of speaking, due to defect of the organs of speech.

dys lex'i a [*dys-*; G *lexis*, speech]. Impairment of the ability to read.

dys lo gi a [*dys-*; G. *logos*, word]. Difficulty in the expression of ideas by speech.

dys"ma se sis, dys"ma se si (dis ma-see zee-uh) [*dys-*; G. *masēsis*, chewing]. Difficulty of mastication.

dys"men or rhe a, dys"men-or rhoe [*dys-*; G *mēn*, month; *rhoia*, flow]. Difficult or painful menstruation.

acquired d. See secondary *d.*

congenital d. See primary *d.*

congestive d. A form of painful menstruation due to an intense congestion of the pelvic viscera. Syn., *plethoric d.*, *vascular d.*

d. intermenstrualis. Pain between the menses.

essential d. See primary *d.*

functional d. (a) That without anatomic or pathologic explanation. (b) That contributed to or caused by pelvic congestion from unsatisfied sexual stimulation.

inflammatory d. That due to inflammation.

mechanical d. That due to mechanical obstruction to the free escape of the menstrual fluid. Syn., *obstructive d.*

membranous d. That characterized by discharge of casts or shreds of uterine mucosa.

obstructive d. See mechanical *d.*

ovarian d. That form due to disease of the ovaries.

plethoric d. See congestive *d.*

primary d. That present from the menarche. Syn., *essential d.*, *congenital d.*

psychogenic d. Menstrual pain of mental or psychic origin.

secondary d. That type associated with organic pelvic disease. Syn., *acquired d.*

spasmodic d. That due to sudden and severe uterine contraction.

tubal d. That form associated with disease of the oviduct.

uterine d. That type caused by uterine disease.

vaginal d. The type associated with disease of the vagina.

vascular d. See congestive *d.*

dys″mer-o-gen′e-sis [*dys-*; G. *meros*, part; *genesis*, production]. Cleavage resulting in unlike parts. —**dysmerogenet′ic**, *adj.*

dys-me′tri-a, dys-met′ri-a [*dys-*; G. *metron*, measure]. Inability to control accurately the range of movement in muscular acts, as observed in cerebellar lesions.

dys-mi-mi′a [*dys-*; G. *mimēsis*, farce]. Impairment of the power to use signs and gestures as a means of expression; inability to imitate, caused by disturbance in the innervation of the facial muscles.

dys-mne′si-a (dis-nee′zhuh, -zee-uh, dis-nee′) [*dys-*; G. *mnēsis*, remembering]. An impaired or defective memory.

dys-mor′phi-a [*dys-*; G. *morphē*, form]. Deformity. Obs.

dys-mor′phic. In the *somatotype*, badly formed, or of low primary t component.

dys-mor″pho-pho′bi-a [*dys-*; *morphē*; G. *phobos*, fear]. Morbid fear of deformity.

dys-no-mi′a [*dys-*; G. *onoma*, name]. Nominal aphasia.

dys″o-don-ti′a-sis (dis″o-don-ty′uh-sis, -tee′uh-sis) [*dys-*; G. *odous*, tooth; NL. *-iasis*, condition]. Difficult or painful dentition.

dys-o′pi-a [*dys-*; G. *opsis*, vision]. Painful or defective vision.

dys″o-rex′i-a [*dys-*; G. *orexis*, appetite]. A disordered or unnatural appetite.

dys-os′mi-a (dis-oz′mee-uh) [*dys-*; G. *osmē*, smell]. Impairment of the sense of smell.

dys″os-te-o-gen′e-sis. Dysostosis.

dys″os-to′sis [*dys-*; G. *osteon*, bone; *-ōsis*, condition]. Defective formation of bone.

cleidocranial d. A congenital complex consisting in incomplete ossification of the skull, malformation of the palatine arch, and more or less aplasia of the clavicles. Other bones may also be involved.

craniofacial d. Hypertelorism.

d. multiplex. See *gargoylism*.

mandibulofacial d. Hypoplasia of the facial bones, especially of the zygoma and the mandible. With this are associated lateral downward sloping of the palpebral fissures, defects of the ear, macrostomia, and a peculiar fish-face appearance. It is presumed to be a sex-linked recessive trait. Also called *Treacher Collins syndrome*.

metaphyseal d. A very rare condition in which the roentgenographic appearance of the metaphyses is unique, being largely cartilaginous, irregularly cloudy, and impregnated with salts. Many metaphyses appear enlarged and the space between the epiphyses and the shafts is markedly widened.

dys-par″a-thy′roid-ism [*dys-*; G. *para*, near; *thyreoidēs*, shield-shaped]. Any functional disorder of the parathyroid gland.

dys″pa-reu′ni-a (dis″pa-roo′nee-uh) [*dys-*; G. *pareunos*, lying beside]. Painful or difficult intercourse.

psychologic d. That form of dyspareunia having an emotional basis with no anatomic or pathologic explanation.

dys-pep′si-a [*dys-*; G. *pepsis*, *pessein*, to cook]. Disturbed digestion. —**dyspep′tic**, *adj.*

acid d. That attended with hyperacidity of the gastric juice.

anacidic d. That accompanied by lack of the normal acidity of the gastric juice.

biliary d. Intestinal dyspepsia due to impaired secretion of bile.

flatulent d. That marked by almost constant eructation of gas. Also called *gaseous d.*

gastric d. That confined to the stomach.

gastrointestinal d. That in which both the stomach and the intestine are concerned.

inflammatory d. That due to some form of gastritis.

intestinal d. That due to imperfect digestive action of the intestinal juices or a lack of tone in the muscular coat of the intestine.

muscular d. That due to atony of the muscular coat of the stomach or intestine.

nervous d. That characterized by gastric pains, precipitated by emotional states.

dys-pep′tic [*dys-*; *peptein*]. A person suffering from dyspepsia.

dys″per-i-stal′sis [*dys-*; G. *peristaltikos*, clasping and compressing]. Violent or abnormal peristalsis.

dys-pha′gi-a [*dys-*; G. *phagein*, to eat]. Difficulty in swallowing, or inability to swallow.

d. constricta. That due to stenosis of the pharynx or esophagus.

d. globosa. Globus hystericus.

d. lusoria. That caused by compression of the esophagus and trachea between the aorta and ductus arteriosus in the case of right-sided aortic arch, or between the two sides of the arch when it is double, or due to pressure on the esophagus by an anomalous right subclavian artery.

d. spastica. That due to hysterical spasm of the esophagus or pharynx.

sideropenic d. See Plummer-Vinson syndrome.

dys-pha′si-a (dis-fay′zhuh, -zee-uh) [*dys-*; G. *phasis*, speech]. Difficulty in speaking or in understanding language, caused by a central lesion.

dys-phe′mi-a [*dys-*; G. *phēmē*, speech]. Stammering.

dys-pho′ni-a [*dys-*; G. *phōnē*, voice]. An impairment of the voice.

d. spastica. See *spastic aphonia*.

dys-pho′ri-a [*dys-*; G. *pherein*, bearing]. Impatience and restlessness; mental anxiety; fidgets. —**dysphor′ic**, *adj.*

dys-pho′ti-a [*dys-*; G. *phōs*, light]. Myopia.

dys-phra′si-a (dis-fray′zhuh, -zee-uh) [*dys-*; G. *phrasis*, speech]. Imperfect speech due to impairment of mental power.

dys″pi-tu′i-ta-rism [*dys-*; L. *pituita*, phlegm]. A condition due to abnormal functioning of the pituitary gland.

dys-pla′si-a (dis-play′zhuh, -zee-uh, -shuh, -see-uh) [*dys-*; G. *plassein*, to form]. 1. Abnormal development or growth. 2. In the *somatotype*, the extent to which an individual presents different components (somatotypes) in different bodily regions, expressed quantitatively by regarding the body as made up of a specific number of regions and somatotyping each. They may be endomorphic, mesomorphic, or ectomorphic. Also called *d.-component*.

chondroectodermal d. A rare congenital disorder characterized by dyschondroplasia, ectodermal dysplasia, bilateral polydactyly and polymetacarpalism, and sometimes congenital heart disease. Syn., *Ellis-van Creveld syndrome*.

d. epiphysialis multiplex. A rare congenital developmental error characterized by irregularities in the density and outline of several of the developing epiphyses, dwarfism, and short thick digits.

d. epiphysialis punctata. A rare congenital skeletal defect diagnosed by roentgenographic demonstration of multiple punctate epiphyseal calcific deposits. Other skeletal defects as shortening of limbs, and semiflexion and limitation of extension of the larger joints, bilateral congenital cataracts, and mild mental deficiency are frequently present. Also called *d. epiphysialis punctularis*, *chondrodystrophia calcificans con-*

genita, chondrodystrophia fetalis calcarea or *hypoplastica, chondroangiopathia calcarea seu punctata, calcareous chondrodystrophy (congenital) stippled epiphyses.*

d. epiphysialis punctularis. See *d. epiphysialis punctata.*

familial metaphyseal d. An exceedingly rare condition marked by symmetrical enlargement of one or both ends of the shafts of long bones.

fibrous d. (*of bone*) A condition characterized by bone resorption, fibrosis of the marrow, irregular bone trabeculae replacing cancellous and cortical bone. It is often unilateral and segmental. When only one bone is affected, it is known as *monostotic fibrous d.*; if more than one, as *polyostotic fibrous d.* This latter is sometimes accompanied by segmental pigmentation. If precocious puberty is also present it is known as *Albright' syndrome*, and is seen mostly in girls. Also called *osteitis fibrosa disseminata, osteodystrophia fibrosa.*

hereditary hidrotic ectodermal d. One of a very large group of primarily cutaneous congenital abnormalities, marked chiefly by deficient or absent sweat-gland function (anhidrosis) deficient development of the teeth (hypodontia) or their absence (anodontia) and by congenital alopecia.

macular d. An irregularly circular or oval defect of the macula, occurring in young children and causing reduction in visual acuity.

mammary d. A group of common pathological conditions in the breasts of women during sexual maturity due to endocrine imbalances. Included are *adenosis of breast, cystic disease of breast*, and *mastodynia*. Also called *cystadenosispathia*; formerly called *chronic cystic mastitis.*

monostotic fibrous d. See fibrous d.

neuroectodermal d. A congenital derangement of cerebral tissues associated with skin tumors, as tuberous sclerosis, Lindau disease, and von Recklinghausen neurofibromatosis.

periosteal d. See *osteogenesis imperfecta.*

polyostotic fibrous d. See fibrous d.

progressive diaphyseal d. See Engelmann's disease.

dysp·ne·a [*dys-*; G. *pnoia*, breath]. Difficult or labored breathing. —**dyspneal, dyspneic,** *adj.*

cardiac d. That due to cardiac failure.

renal d. That due to acidosis in uremia.

dys·pnoe·a. Dyspnea.

dys·prax'i·a [*dys-*; G. *praxis*, doing]. Disordered or painful functioning of a part.

dys·pro·si·um (dis-pro'shee-um, -see·um) [G. *dysprositos*, difficult of access]. Dy = 162.46. A rare earth metal.

dys·ra·phism [G. *dys-* bad; *rhaphē*, seam]. Defective raphe formation; defective fusion. Syn., *araphia.*

prosencephalic d. Failure in closure of the embryonic prosencephalic vesicle.

spinal d. A general term for all manifestations of dysraphism in the dorsal midline whether cutaneous, vertebral, meningeal, or neural.

dys·rhyth'mi·a (dis-rith'mee-uh, dis-rith') [*dys-*; G. *rhythmos*, rhythm]. Disordered rhythm.

cerebral d. Any abnormal rhythm in brain waves, as revealed by the electroencephalogram. The waves may be too fast, too slow, or may alternate between the two types. Dysrhythmia is frequently associated with an epileptiform condition.

dys·se·ba·ci·a (dis·se·bay'shee·uh) Plugging of the sebaceous glands, especially around the nose, mouth, and forehead, with a dry yellowish material. It occurs in pellagra and other deficiencies of the vitamin-B complex. Also called *shark skin.*

dys"se·cre·to·sis [G. *dus*, faulty; L. *secretus*, separate out; G. *-osis*, condition]. A condition in which there is faulty secretory activity of glands.

dys·sper'ma·tism, dys·sper'mi·a [*dys-*; G. *sperma*, seed]. 1. Difficulty of depositing the sperm within the vagina. 2. Occurrence of pain or discomfort in discharge of seminal fluid. 3. Any disturbance in the formation of normal sperm.

dys·sta·si·a (dis-stay'see-uh, -zee-uh) [*dys-*; G. *stasis*, standing]. Difficulty in standing. —**dysstat'ic,** *adj.*

dys·syn'er·gy. Asynergy.

progressive cerebellar d. See cerebellofugal degeneration.

dys·tax'i·a [*dys-*; G. *taxis*, arrangement]. Ataxia or partial taxia.

d. agitans. Tremor due to irritation of the spinal cord. Also called *pseudoparalysis agitans.*

dys·tec·tic. *In physical chemistry*, characterizing the specific mixture of two or more substances which has the highest melting point of any mixture of the substances; it is the opposite of *eutectic.*

dys"tha·na'si·a (dis-thuh-nay'zh·uh, -zee-uh) [*dys-*; G. *thanatos*, death]. A slow and painful death.

dys·the·si·a (dis-thee'zhuh, -zee-uh) [*dys-*; G. *thesis*, setting]. Impatience; fretfulness; ill temper in the sick. —**dysthet'ic,** *adj.*

dys·thy'mi·a (dis-thigh'mee-uh, -thim'ee-uh) [*dys-*; G. *thymos*, mind]. 1. Melancholia or mental perversion. 2. A state thought to be due to malfunction of the thymus during childhood.

dys·tith'i·a [*dys-*; G. *tithēnē*, nurse]. Difficulty of nursing or inability to nurse at the breast.

dys·to'ci·a [*dys-*; G. *tokos*, birth]. Difficult labor. —**dystocic,** *adj.*

fetal d. Difficult labor due to abnormalities of position or size and shape of the fetus.

maternal d. Difficult labor due to deformities within the mother.

dys·to'ni·a [*dys-*; G. *tonos*, tension]. Disorder or lack of tonicity. —**dyston'ic,** *adj.*

d. musculorum deformans. A rare, progressive disease with familial incidence, which affects children between 8 and 14 years of age. Tonic spasms and clonic contractions occur in the large muscles of the thigh and leg; the leg flexes, the toes flare, the forearm pronates; the abnormal tonus of the entire muscular system is so severe as to cause lordosis and scoliosis of the spine. Degenerative lesions are found chiefly in the corpus striatum. Also called *d. lenticularis, torsion d., torsion spasm.*

dys·to'pi·a [*dys-*; G. *topos*, place]. Displacement of any organ. —**dystop'ic,** *adj.*

dys'tro·phy, dys·tro'phi·a [*dys-*; G. *trophē*, nourishment]. 1. Defective nutrition. 2. Defective or abnormal development or degeneration. —**dystroph'ic,** *adj.*

adiposogenital d. Adiposity, retarded development of gonads, and occasionally diabetes insipidus; results from organically impaired function of the pituitary and hypothalamus. May be caused by craniopharyngioma, basilar meningitis, trauma, etc. Also called *adiposa dystrophia genitalis, Babinski-Froehlich syndrome, Froehlich syndrome, neuropituitary syndrome.*

cleidocranial d. See cleidocranial dysostosis.

dystrophia mediana canaliformis. A rare form consisting of longitudinal grooves occupying the center of the nail from the lunula to the free edge; usually involves the thumb.

dystrophia myotonica. Muscular dystrophy.

dystrophia periostalis hyperplastica familiaris. A familial disorder characterized by early closure of cranial sutures and thickening of the clavicles and phalanges.

dystrophia unguium. An abnormality of the

finger or toe nails of any degree, from simple longitudinal fissuring to complete loss.
endothelial d. A degenerative lesion of the cornea, with the formation of hyaline nodules on the posterior surface of Descemet's membrane. Passage of the aqueous into the cornea is frequently associated, causing bullae to form under the epithelium. This form is called *epithelial d.*
epithelial d. See endothelial *d.*
facioscapulohumeral d. See *facioscapulohumeral atrophy.*
familial corneal d. Degenerative changes in the anterior corneal layers, causing opacities; definitely hereditary, affecting adolescents and young adults. Syn., *lattice keratitis.*
familial osseous d. See *chondroosteodystrophy.*
fundus d. A disturbance, or usually genetic affection, involving initially the central area of the fundus of the eye and inducing atrophic changes that may become widespread.
juvenile progressive muscular d. A rare form beginning in childhood or early adolescence; affecting first the muscles of the shoulder girdle, lastly the face, forearms, hands, and legs. The muscles are hypertrophic early later becoming atrophic.

Laurence-Moon-Biedl d. See Laurence-Moon-Biedl *syndrome.*
marginal d. A form of arcus senilis associated with degeneration of the cornea.
muscular d. A progressive, familial hereditary disorder marked by atrophy and stiffness of the muscles, and observed when voluntary action is first attempted. Also called *dystrophia myotonica, myotonic dystrophy, myotonia dystrophica, Steinert's disease.*
myotonic d. Muscular dystrophy
progressive muscular d. A primary wasting disease of muscles characterized by progressive muscular weakness; apparently due to peripheral rather than central nervous degeneration.
pseudohypertrophic muscular d. A progressive, familial disorder beginning in childhood characterized by early hypertrophy and later atrophy of the muscles with lordosis, weakness, inability to rise from the ground, waddling gait, and progressive helplessness. Also called *Erb d.*
reflex (sympathetic) d. Causalgia. See also shoulder-hand *syndrome.*
dys·u'ri·a [*dys-*; G. *ouron,* urine]. Difficult or painful urination.

E

E Electromotive force.
E. 1. Abbreviation for *eye, emmetropia.* 2. An einstein, 6.06×10^{23} quanta.
E$_a$ Symbol for electroaffinity
e Symbol for an electron, as $H = H^+ + e$.
e- [L.]. A prefix denoting *without, out, out of, from.*
Eagle, Harry [*American pathologist,* 1905–]. Known for his flocculation test for syphilis, employing inactivated serum with antigen made of lecithin from beef heart, fortified with cholesterol and corn germ sterol, and for a complement-fixation test for syphilis. See Eagle *test.*
Eales, Henry [*English physician,* 1852–1913]. Known for his description of a condition characterized by repeated retinal and vitreous hemorrhages, called *Eales' disease.*
ear [AS. *ēare*]. The organ of hearing, consisting of the external ear the middle ear and the internal ear or labyrinth. The external ear is made up of an expanded portion, the pinna, and the external auditory canal. The middle ear consists of the tympanic cavity with the auditory ossicles, the auditory tube, and the mastoid cells. The internal ear consists of the osseous and membranous labyrinths, which are separated from each other by a space containing the perilymph. The osseous labyrinth consists of three parts: the vestibule, the semicircular canals, and the cochlea. The semicircular canals are three in number the superior the posterior and the lateral The cochlea, so named from its resemblance to a snail-shell, is a cylindrical tube that winds around a central axis, the modiolus, which is perforated by canals for the passage of the cochlear nerves and blood vessels. The vestibule contains two small sacs, the utricle and the saccule connected by the utriculosaccular duct. The saccule communicates through the ductus reuniens with the membranous cochlea. The membranous cochlea, or cochlear duct, contains the acoustic organ of the cochlea, the organ of Corti. See Plate 20.

aviator's e. See *barotitis media.*
cat e. A congenital deformity in which the upper posterior part of the (sometimes enlarged) helix is folded forward. In its most severe form the helix may meet and fuse with the tragus.
congenital deformity of e. See Darwin *tubercle.*
flat e. A large, prominent ear characterized by effacement of the ridges and grooves.
mueneous e. One with a prominent auricular (Darwin's) tubercle.
pointed e. One with a satyr tubercle.
Stahl's e. See Friedrich Karl *Stahl.*
Wildermuth's e. See Hermann A. *Wildermuth.*
ear'ache [*ēare;* AS. *ece*]. Pain in the ear
ear'drum" [*ēare;* probably of D. or LG. origin, cf. D. *trom*]. The tympanic membrane.
ear dust. Otoconia or otoliths.
ear'plug" [*ēare;* MD. *plugge*]. A device, usually made of rubber plastic, or cotton kneaded with glycerin or petrolatum; to protect the ear as from loud noises
earth [AS. *eorthe*]. The soil.
diatomaceous e. Purified siliceous earth.
e. nuts. Peanuts.
e. wax. Cerumen.
fuller's e. A clay related to kaolin, and used similarly as an adsorbent and protective.
infusorial e. Purified siliceous earth.
purified siliceous e. (*terra silicea purificata*) A form of silica (SiO_2) consisting of the frustules and fragments of diatoms.
earth eat'ing. Geophagy
ear wax" [AS. *ēare;* *weax*]. Cerumen.
Ebers, Georg Moritz [*German Egyptologist and novelist,* 1837–98]. Known for having discovered (1872) the oldest medical document in the world, a papyrus in hieratic script, containing a record of Egyptian medicine. Believed to date from about 1502 B.C. Called *Ebers Papyrus.*
E"ber·thel'la (ee"bur-thel'uh, -tel'uh, -tay'luh, ay"bur-) [L., after Karl Joseph *Eberth,* German

pathologist, 1835–1926]. Old name for genus of organisms now designated *Salmonella*.

E. typhosa. See *Salmonella typhosa*.

Ebner, Victor von [*Austrian histologist*, 1842–1925]. Remembered for his description of the serous glands opening into the trenches of the vallate papillae of the tongue, called *serous lingual glands, Ebner' glands*.

Ebstein, Wilhelm [*German physician*, 1836–1912]. Remembered for his description of hyaline degeneration of the epithelial cells of the renal tubules, sometimes occurring in diabetes mellitus (1881); this was once known as *Ebstein disease*. Investigated pseudoleukemia, also called *multiple lymphadenoma*, *Pel-Ebstein disease*. See also Pel-Ebstein *fever*.

'bur [L. ivory]. A tissue similar to ivory in appearance or structure.

e. dentis. Dentin.

"bur na tion [L. *eburnus*, of ivory]. An increase in the density of tooth or bone following some pathologic change. —**ebur'nated**, *adj.*

ec- [G. *ek*, from, out of]. A prefix meaning *out of*.

Ec bal'li um [G. *ekballein*, to throw out]. A genus of the Cucurbitaceae. See *elaterium*.

ec bol'ic [G. *ekbolē*, throwing out]. Producing abortion or accelerating labor. —**ecbol'ic**, *n.*

ec'bol ine (eck'bo leen, -lin). An alkaloid of ergot.

ec cen'tric [G. *ekkentros*, from *k.* way from, *kentron*, circle]. Situated away from the center or median line.

ec cen'tro-os"t eo chon"dro dys pla si a. See *chondroosteodystrophy*.

ec ceph" l sis (eck-sef"uh-lo sis) [G. *ek*, out of; *kephalē*, head; *-sis*, condition]. Removal of the brain of the fetus to facilitate delivery. Syn., *cephalotomy*, *excerebration*.

ec"chon dro'ma (eck"on-dro muh) [*ek*; G. *chondros*, cartilage; *-ōma*, tumor]. A nodular outgrowth from cartilage at the junction of cartilage and bone; usually hyperplasia (ecchondrosis) but may be neoplastic.

ec"chon dro sis (eck"on-dro sis) [*ek*; *chondros*; G. *-ōsis*, condition]. A cartilaginous outgrowth.

e. physaliphora. See *chordoma*.

ec chon dro tome (eh kon dro-tohm) [*ek*; *chondros*; G. *tomos*, cutting]. An instrument for the surgical removal of cartilaginous growths.

ec"chy mo sis (eck" -mo sis) [*ek*; G. *chymos*, juice; *-ōsis*]. An extravasation of blood into the subcutaneous tissues. It is marked by purple discoloration of the skin, the color gradually changing to brown, green, and yellow. —**ecchymot'ic**, *adj.*

ec crine. See *eccrine glands* under *gland*.

ec"cy e'sis (eck"sigh-ee sis) [*ek*; G. *kyēsis*, pregnancy]. Extrauterine gestation.

ec dem'ic [G. *ekdēmos*, away from home]. Applied to diseases brought into region from without; not endemic or epidemic.

ec dem"o ma ni (eck-dem o-m y nee-uh, eck-dee mo-) [*ekdēmos*; G. *mania*, madness]. A morbid desire to wander. *Obs.*

ec'der-on [G. *ek*, out of; *deros*, skin]. The outermost or epithelial layer of the skin and mucous membranes; epidermis. —**ecderon'ic**, *adj.*

ec'dy-sis [G. *ekdysis*, stripping]. Sloughing or casting off of the outer epidermis; desquamation.

ECG EKG Electrocardiogram.

ec go-nine (eck go-neen, nin). $C_9H_{15}NO_3$; 3-hydroxy-2-tropanecarboxylic acid, the principal part of the cocaine molecule (which is benzoylmethylecgonine). Ecgonine may be obtained from cocaine by hydrolysis.

e-chid'nase (eh-kid'nace) [G. *echidna*, viper]. A phlogogenic principle found in snake venom.

-chid'nin (eh kid'nin) [*echidna*]. 1. Snake poison; the poison or venom of the viper and other similar snakes. 2. A nitrogenous and venomous principle found in poisonous secretion of various snakes.

Ech"id noph a ga (eck"id-nof'uh-guh) [*echidna*; G. *phagein*, to eat]. A genus of fleas.

E. gallinacea. The species known as the stick tight or tropical hen flea, which attacks chickens in many parts of the world; may also become human pest.

e-chid"no-tox'in (eh kid no-tock sin) [*echidna*; G. *toxikon*, poison]. A principle of snake venom which produces general reaction in the human body and has powerful effect on the nervous system.

ech"i na ce (eck nay shuh, -see-uh) [G. *echinos*, hedgehog, sea-urchin]. Cone flower. The dried rhizome and roots of *Echinacea pallida* and *E. angustifolia*; formerly used to treat ulcers, septicemia, etc.

-chin'e-none (eh kin'i-nohn, eh high ni) [*echinos*]. A naturally occurring precursor of vitamin A derived from sea urchins.

-chi'no- (eh kigh no- eck'i-no-, eh-kin o-), **echin-** [*echinos*]. A combining form usually denoting *spiny*, *bearing spines*, or *relation* or *resemblance to the sea urchins*.

e-chi'no-chrome [*echinos*; G. *chrōma*, color]. A respiratory pigment found in the Echinodermata.

e-chi"no-coc-ci' -sis (-cock-sigh uh-sis) [*echinos*; G. *kokkos*, berry; NL. *-iasis*, condition]. Infestation with cysticercus of the dog tapeworm.

e-chi"no-coc co sis [*echinos*; *kokkos*; G. *-ōsis*, condition]. Infestation of man with the *Echinococcus granulosus* in its larval or hydatid stage. Most important site of infestation is the liver and secondly the lungs.

E-chi"no-coc cus [*echinos*; *kokkos*]. A genus of tapeworms.

E. granulosus. That species whose ova, when ingested by man or other intermediate hosts, develop into echinococcus cysts.

E-chi"no-der'ma ta [*echinos*; G. *derma*, skin]. A phylum of marine animals including starfish, sea urchins, etc.

ech"i nop sine (eck"i nop seen, -sin) [*echinos*; G. *opsis*, eye]. An alkaloid isolated from the fruits of *Echinops ritro* and other species of *Echinops*. It belongs to the strychnine group.

E-chi"no-rhyn'chus (-ring'kus, -rin'kus) [*echinos*; G. *rhynchos*, snout]. Formerly genus of acanthocephalan worms.

E. gigas. Synonym for *Macracanthorhynchus hirudinaceus*.

E. moniliformis. Synonym for *Moniliformis moniliformis*.

ech"i no sis (eck"i-no sis). Crenation.

E-chi"no sto ma (eh kigh o-sto muh, eck"i no-sh kn eck" -nos'to-muh) [*echinos*; G. *stoma*, mouth]. A genus of flukes parasitic in man, but of little pathologic importance.

Ech'is (eck'iss, ee'kiss) [G. viper]. A genus of vipers found in Africa, Arabia, and India.

E. carinatus. The saw-scaled viper small snake attaining one and one-half feet in length, possessing hemotoxic venom.

e-chit' mine (eh kit'uh-meen -min). See *ditaine*.

-chit'e-mine (eh kit -meen, -min). $C_{22}H_{28}NO$. An amorphous, brown alkaloid of *dita bark*.

ech' [G. *ēchō*, echo]. A reverberated sound.

amphoric e. A vocal resonance in which the voice, when transmitted, sounds as if it were spoken into narrow-necked bottle.

ech"o- acou'si (eck o-a koo huh, -see h -shuh, -see-uh) [*ēchō*; G. *akousis*, hearing]. The subjective sensation of hearing echoes following sound heard normally.

ech″o·graph′i·a (-graf′ee-uh, -gray′fee-uh) [*ēchō*; G. *graphein*, to write]. A form of aphasia in which questions submitted to the patient are copied without ability to comprehend the inquiry; also, in writing, the last word or letter is repeated.

ech″o·ki·ne′sis. See *echopraxia*.

ech″o·la′li·a [*ēchō*; G. *lalia*, talk]. The meaningless repetition of words spoken by others, commonly seen in the catatonic form of schizophrenia. Syn., *echophrasia*. —**echolal′ic**, *adj.*

ech″o·la′lus [*ēchō*; G. *lalos*, talkative]. A hypnotized person who repeats words heard without comprehension of their meaning.

ech″o·lo·ca′tion. See *echosounding*.

ech·o′ma·tism (eh ko′muh-tiz-um, eh-koh-uh-) See *echopraxia*.

ech″o·mim′i·a. See *echopraxia*.

ech″o·mo′tism. See *echopraxia*.

ech·op′a·thy (eck-op′uth-ee) [*ēchō*; G. *pathos*, disease]. In psychiatry, a morbid condition marked by the automatic and purposeless repetition of a word or sound heard or of an act seen. Also see *echolalia*, *echopraxia*.

ech·oph′o·ny [*ēchō*; G. *phōnē*, voice]. An echo of a vocal sound heard in auscultation of the chest.

ech″o·phot′o·ny [*ēchō*; G. *phōs*, light; *tonos*, tone]. The production of the sensation of color by the stimulus of aerial waves, or sound. See *phonism*, *photism*.

ech″o·phra′si·a (eck″o-fray′zhuh, -zee-uh) See *echolalia*.

ech″o·prax′i·a [*ēchō*; G. *praxis*, doing]. Automatic imitation by the patient of another person's movements or mannerisms seen in the catatonic form of schizophrenia. Syn., *echokinesis*, *echomatism*, *echomimia*, *echomotism*.

echristine. A proprietary name for 4-(4-ethylcyclohexylmethyl)pyridine, a compound of high fungistatic activity.

ech·u·gin (eck′yoo-jin) A crystalline glycoside from *Adenium boehmianum*, Apocynaceae. It is probably related to the digitalislike group of glycosides.

ec″li·o·ma′ni·a (eck″lee-o-may′nee-uh) See *ecomania*.

Eck, Nikolai Vladimirovich [Russian physiologist, b. 1847]. Reported on his experimental study of diseases of the liver and liver metabolism by means of an artificial communication made between the portal vein and inferior vena cava. Called *Eck fistula*.

Ecker, Alexander [German anatomist, 1816–87]. Described the posterior occipital convolution of the brain, called *Ecker's convolution*.

Ecker's diluting fluid. Rees and Ecker's diluting fluid.

ec·la′bi·um [G. *ek*, out of; L. *labium*, lip]. Eversion of the lip.

ec·lamp′si·a [G. *eklampsis*, a shining forth]. 1. A convulsive or epileptiform seizure, usually of peripheral origin. 2. Specifically, a disease occurring during the latter half of pregnancy and characterized by an acute elevation of blood pressure, proteinuria, edema, and convulsions or coma. In the absence of convulsions or coma, the disease is referred to as *preeclampsia*. Preeclampsia and eclampsia collectively are referred to as *toxemia of pregnancy*. The cause is unknown, and the pathogenesis remains obscure; involved are sodium retention and diffuse vasospasm. —**eclamptic**, *adj.*

cerebral e. A form in which the irritation is presumed to originate in the brain; distinguished from eclampsia of pregnancy.

e. gravidarum. Eclampsia, 2.

e. nutans. A condition characterized by paroxysms, in which the head and upper part of the body are bowed forward several times in succession; the attacks are accompanied by disordered consciousness. It may be a form of psychomotor epilepsy. Syn., *salaam spasm* or *convulsion*.

e. rotans. Rotatory spasm of the head.

infantile e. A reflex convulsion of childhood associated with dentition, acute bowel disturbances, or cerebral congestion.

puerperal e. See *eclampsia*, 2.

uremic e. Convulsive seizures associated with suppression of urine.

ec·lamp′tism [*eklampsis*]. The preeclamptic toxemic state of pregnancy which may lead to convulsions and coma; includes the preconvulsive prodromata, from true toxemia, nephritis, and vascular disease.

ec·lec′ti·cism [G. *eklektikos*, selective]. A system of medicine in which a group of physicians select, from various schools, what they consider to be the best doctrines or methods of treatment; special importance is attached to the development of indigenous plant remedies. —**eclectic**, *adj.*, *n.*

ec′ly·sis [G. *eklysis*, release]. 1. Any loosening, as of the bowels. 2. A mild degree of syncope.

ec·mne′si·a (eck-nee′zhuh, -zee-uh, eck-mnee′) [G. *ek*, out of; *mnēsis*, forgetfulness]. Loss of memory for recent happenings, but retention for remote period.

ec·ol′o·gy [G. *oikos*, house; *logos*, word]. The study of the environmental relations of organisms.

e″co·ma′ni·a, **ec″i·o·ma′ni·a** (eck″o-may′nee-uh) [*oikos*; G. *mania*, madness]. A psychosis marked by domineering and haughty attitude toward members in the family but an attitude of humility toward those in authority; domestic perversity.

Economo, Constantin von [Austrian neurologist, 1876–1931]. Known for giving the first adequate description of lethargic encephalitis (1917), called *von Economo's disease*.

ec·o·site [*oikos*; G. *sitos*, food]. A microparasite whose host is immune to its action.

e·cos′tate (ee-kos′tayt) [L. *e*, without; *costa*, rib]. Without ribs. —**ecosta′tion**, *n.*

ec·pho′ri·a [G. *ekphoros*, carrying out]. The revival of a memory trace or engram, as by repetition of the original stimuli.

é″cra·seur′ (ay″krah-zur′. See Notes § 35) [F., from *écraser*, to crush]. An instrument used in veterinary surgery for the operation of castration, especially of stallions. It is armed with a chain or heavy wire loop which can be tightened until it cuts through the spermatic cord.

ECS Electroconvulsive shock.

ec·sta·sy [G. *ekstasis*, displacement]. A trancelike state with mental exaltation. —**ecstat′ic**, *adj.*

ECT Electroconvulsive therapy.

ec′tad [G. *ektos*, without; L. *ad*, to]. Outward.

ec·tal [*ektos*]. External; superficial.

ec·ta·si·a (eck-tay′zhuh, -zee-uh, -shuh, -see-uh), **ec′ta·sis** [G. *ektasis*, stretching out]. Dilatation of a tubular vessel. —**ectat′ic**, *adj.*

alveolar e. Ectatic emphysema.

diffuse arterial e. Cirsoid aneurysm.

e. ventriculi paradoxa. Hourglass stomach.

hypostatic e. Dilatation of a blood vessel, due to gravitational settling of the blood.

papillary e. Circumscribed dilatation of the capillaries, resulting in an elevated red spot on the skin.

senile e. Varicose or dilated tufts of capillaries in the skin. Usually seen in older people as red or purplish areas on the trunk.

ec·ten′tal [G. *ektos*, without; *entos*, within]. Pertaining to the line of union between the ectoderm and the entoderm.

ect·eth′moid [*ektos*; G. *ēthmos*, sieve; *eidos*, form].

Either one of the lateral cellular masses of the ethmoid bone.

ec thy'ma [G. *ekthyma*, pustule]. An inflammatory skin disease attended with an eruption of large flat pustules that ulcerate and become crusted. They vary in size from half to two centimeters in diameter and *are surrounded by* *distinct* inflammatory areola. The lesions as rule appear on the legs and thighs, and occur in crops which persist for an indefinite period. See Plate 31.

contagiosum e. See contagious pustular *dermatitis*.

e. gangrenosum. Dermatitis gangrenosa infantum.

ec to-, ect- [G. *ektos*, without]. A combining form signifying *without, upon the outer side*.

ec"to bat'ic [*ektos*; G. *bainein*, to go]. Efferent; centrifugal; moving ectad or distad.

ec to-blast [*ektos*; G. *blastos*, offspring]. 1. Old term for ectoderm. 2. Primitive ectoderm. 3. Improper *spelling of ectoplast*.

ec"to-car'di-a [*ektos*; G. *kardia*, heart]. An abnormal position of the heart. It may be outside the thoracic cavity (*ectopia cordis*) or *misplaced* within the thorax.

ec"to cho- oi'de-a (eck to-ko-roy'dee-uh) [*ektos*; G. *chorioeides*, from *chorion*, membrane, *eidos*, form]. The outer layer of the choroid.

ec"to-cor'ne-a [*ektos*; L. *corneus*, horny]. The outer layer of the cornea.

ec"to-cra ni al [*ektos*; G. *kranion*, skull]. Pertaining to the outside of the skull.

ec'to-derm [*ektos*; G. *derma*, skin]. The outermost of the three primary germ layers of the embryo. From it arise the epidermis, epithelial lining of stomodeum and proctodeum and the neural tube, with all derivatives of these. —**ectoder'mal**, *adj*

amniotic e. The internal epithelium of the amnion continuous with the epidermis of the embryo at the umbilicus.

basal e. That part of the trophoblast covering the eroded uterine surface of the placental sinuses, continuous with the tips of the chorionic villi. It partly disappears in late pregnancy.

epidermal e. That part of the ectoderm destined to form the epidermis. Syn., *epiblast*.

neural e. That part of the ectoderm destined to form the neural tube and neural crest. Syn., *neuroblast*.

primitive e. The *undifferentiated external layer* of gastrula or of the bilaminar blastodisk. Syn., *ectoblast*. Also called *primary e.*

two-layered e. The epidermis of young embryos, consisting of germinal layer and the epitrichium.

ec"to-der mo sis. Any disease entity of the ectoderm.

ec"to der-mo sis e-ro-si'va plu"ri or"i fi-ci al is. A form of erythema multiforme, usually limited to the extremities but may be accompanied by *inflammation of the body orifices*.

ec"to-en zyme [*ektos*; G. *en*, in *zymē*, leaven]. An extracellular enzyme; one which is excreted into the surrounding medium or tissue.

ec tog'e-nous (eck todj'i-nus) [*ektos*; G. *gennaein*, from *gignesthai*, to be produced]. Capable of growth outside of the body of its host; applied to bacteria and their parasites.

ec-tog' ony [*ektos*; G. *gonē*, offspring]. The influence of the developing zygote on the mother

ec"to mean'inx [*ektos*; G. *mēninx*, membrane]. The external part of the meninx primitiva, differentiating into dura mater and more superficial part concerned with the *formation of the chondrocranium* and osteocranium.

ec'to-mere [*ektos*; G. *meros*, part]. A blastomere destined to take part in forming the ectoderm.

ec"to-mes' derm [*ektos*; G. *mesos*, middle; *derma*, skin]. Mesoderm derived from the primary ectoderm of bilaminar blastodisk or gastrula, in contrast to *endomesoderm*.

ec't morph. *I* *the somatotype*, an individual exhibiting relative predominance of ectomorphy

ec to-mor'phy [*ektos*; G. *morphē*, form]. Component III of the somatotype, representing relative predominance of linear and fragile body features the skin or surface area, derived from *ectoderm, is relatively great with respect to body* mass. Ectomorphs appear to be more sensitive to their external environment. The counterpart on the behavioral level *is cerebrotonia*. —**ectomorph'ic**, *adj*

-ec'to-my [G. *ektomē*, excision]. A combining form denoting *surgical removal*.

ec"to-pa gi a, ec-top a gy [G. *ektos*, without; *pagos*, that which is made firm]. The condition of being ectopagous an ectopagous monstrosity

ec top' gus [*ektos*; *pagos*]. A monster consisting of conjoined twins united laterally at the thorax. —**ectopagous**, *adj*

ec to-par'a site [*ektos*; G. *parasitos*, parasite]. A parasite that lives on the exterior of its host. —**ectoparasit'ic**, *adj*

ec'to phyt [*ektos*; G. *phyton*, plant]. An external parasitic plant growth; vegetable parasite on the skin. —**ectophyt'ic**, *adj*

ec t pi [G. *ektopos*, away from place]. An abnormality of position of an organ or part of the body; usually congenital. —**ectop'ic**, *adj*

e. cordis. See *ectocardia*.

e. lentis. Malposition of the crystalline lens.

e. pupillae See *corectopia*.

e. renis. See ectopic *kidney*.

e. testis. A rare, congenital anomaly in which the testis descends into an abnormal location, generally in the perineum or near the pubic bone.

vesical e. Exstrophy of the urinary bladder

visceral e. A congenital hernia into the umbilical cord.

ec"to pla cen'ta [G. *ektos* without; L. *placenta*, from G. *plakous*, flat cake]. The growing, functional part of the trophoblast that develops into the placenta, especially in rodents. Syn., *trophoderm*. —**ectoplacental**, *adj*

ec'to plasm [*ektos*, G. *plasma*, anything formed or molded]. The outer denser layer of cytoplasm of cell or unicellular organism also called *plasma membrane*. —**ectoplas'mic**, *adj*

ec to-plast. Ectoplasm.

ec"to-pot'o my [G. *ektopos*, way from place; *tomē*, cutting]. Laparotomy for the removal of the contents of an extrauterine gestation sac.

ec to-py Ectopia.

ec"to-ret'i na [G. *ektos*, without; L. *rete*, net]. The external and pigmentary layer of the retina.

ec'to-sarc [*ektos*; G. *sarx* flesh]. The outer layer of protozoan ectoplasm.

ec'to-thrix [*ektos*; G. *thrix*, hair]. A type division of the genus Trichophyton.

Ec"to tri choph'y ton (eck"to-trye-kof'i ton) [*ektos*; *thrix*; G. *phyton*, plant]. A name sometimes given to the ectothrix type of the genus of fungi, *Trichophyton*.

ec"to-zo on [*ektos*; G. *zōon*, living being]. An external animal parasite ectoparasite.

ec tro- [G. *ektrōsis*, miscarriage]. A combining form denoting *congenital absence*.

ec"tro dac tyl'i-a, ec"tro-dac'tyl ism, ec"tro-dac'ty ly [*ektrōsis*; G. *daktylos*, finger]. Congenital absence of any of the fingers or toes or parts of them.

ec trog' ny (eck-trodj' nee) [*ektrōsis*; G. *gennaein*, from *gignesthai*, to be produced]. Loss or congenital absence *of any part or organ*. —**ectrogen'ic**, *adj*

ec"tro·me'li·a, ec·trom'e·ly [*ektrōsis*; G. *melos*, limb]. Congenital absence or marked imperfection of one or more of the limbs.

infectious e. See *mousepox*.

ec·trom'e·lus [*ektrōsis*; *melos*]. An individual with one or more congenitally absent or imperfect limbs.

ec·tro'pi·on [G. *ek*, out of; *trepein*, to turn]. Eversion of a part, especially of an eyelid. —**ectropi·oniza'tion**, *n.*, **ectropionize**, *v.*

cicatricial e. Ectropion following trauma, in which scar tissue causes eversion of the lid.

paralytic e. Ectropion due to paralysis of the facial nerve.

senile e. Ectropion due to changes in the tissues of the lids as a result of age.

spastic e. Ectropion caused by spasm of the orbicularis.

ec·trop'o·dism [G. *ektrōsis*, miscarriage; *pous*, foot]. Congenital absence of a foot or feet.

ec"tro·syn·dac'ty·ly [*ektrōsis*; G. *syn*, together; *daktylos*, finger]. A developmental defect in which some of the digits are missing while others are fused.

ec·trot'ic [*ektrōsis*]. Tending to cut short; preventing the development of disease; abortive; abortifacient.

ec"ty·lot'ic [G. *ek*, out of; *tylos*, callus]. Removing warts or indurations.

ec'ze·ma (eck'si-muh, eg'zi-muh, eck'si-muh) [G. *ekzema*, from *ekzein*, to boil over, break out]. Tetter; salt rheum. An acute or chronic, noncontagious, itching, inflammatory disease of the skin usually characterized by irregular and varying combinations of edematous, vesicular, papular, pustular, scaling, thickened, or exudative lesions. The skin is reddened, the redness shading off into the surrounding unaffected parts. The cause is unknown. Eruptions of similar appearance due to such known causes as ingested drugs or local irritants are properly referred to as *dermatitis medicamentosa*, *contact dermatitis*, or *dermatitis venenata*, etc. —**eczem'atous**, **eczem'atoid**, *adj.*

atopic e. See atopic *dermatitis*.

camel-hair e. A contact dermatitis from hair of squirrels occurring in workers making camel-hair brushes.

e. erythematosum. The mildest form of eczema in which the skin is reddened and slightly swollen.

e. fissum. A form affecting the hands and skin over the articulations; characterized by deep, painful cracks or fissures.

e. herpeticum. A rare manifestation of primary herpes simplex infection which occurs in patients with eczema or neurodermatitis. Involving large areas of the eczematous skin, the grouped vesicles usually appear in crops over a period of several days; hence, it is similar to varicella. Fever may be high, but subsides during the second week, coincident with crust formation and healing of the skin lesions. See also Kaposi's varicelliform eruption.

e. hypertrophicum. A form characterized by permanent hypertrophy of the papillae of the skin, giving rise to general or limited warty outgrowths.

e. madidans. A form characterized by large, raw, weeping surfaces studded with red points. It follows eczema vesiculosum. Syn., *e. rubrum*.

e. marginatum. See *tinea cruris*.

e. nummularis. A distinctive eczema characterized by coin-sized marginated patches of eczematoid dermatitis favoring the extensor surfaces of the extremities below the elbows and the knees. In addition to allergic factors, nutritive and infective ones are involved. It is chronic and tends to relapse.

e. papulosum. A variety showing minute papules of deep-red color and firm consistence; accompanied by intense itching.

e. pustulosum. A stage characterized by the formation of pustules.

e. rubrum. See *e. madidans*.

e. seborrheicum. See *dermatitis seborrheica*.

e. solare. That form due to irritation from the sun's rays; prickly heat.

e. squamosum. A variety characterized by the formation of adherent scales of shed epithelium.

e. sycomatosum. Pustular form occurring on the hairy parts and affecting the hair follicles. Also called *e. sycosiforme*.

e. tyloticum. Form occurring on the palms attended with callosity.

e. vesiculosum. An eczema characterized by the presence of vesicles.

exudative e. An acute eczematous dermatitis with exudation of serum; also called *weeping eczema*.

Fox-Fordyce e. See *dermatitis exfoliativa palmaris*.

hyperkeratotic e. That type in which the stratum corneum is thickened.

infantile e. Cutaneous allergic (atopic) dermatitis seen in young children, usually due to foods, beverages, and other antigens, as the inhalants.

lichenoid e. That marked by acuminate papules on reddened and infiltrated bases, and accompanied by intense itching.

weeping e. See *exudative e.*

ec·zem"a·tid. An eruption dermatitis presumably caused by a circulating allergen.

ec·zem"a·ti·za'tion (eg·zem"uh·ti·zay'shun, ·tye·zay'shun, eck·sem"..., eck"si·mat·i·zay'shun) [*eczema*]. A condition of the skin marked by persistent eczemalike lesions, due to continued injury from physical or chemical irritation.

ec·zem'a·toid re·ac'tion. A dermal and epidermal inflammatory response characterized by erythema, edema, vesiculation, and exudation in the acute stage, and in the chronic stage by erythema, edema, thickening (or lichenification) of the epidermis, and scaling.

ec·zem"a·to'sis [*eczema*; G. *-ōsis*, condition]. Any eczematous skin disease.

Eddowes' disease. See *osteogenesis imperfecta*.

Ed'dy·ism [after Mary Baker Glover Patterson *Eddy*, American religious leader, 1821–1910]. Christian Science.

Edebohls, George Michael [*American surgeon*, 1853–1908]. Known for his contributions to the knowledge of surgery of the kidney. Made an attempt at a plastic operation for hydronephrosis (1886) and performed nephropexy (1893). The first to operate for the relief of chronic nephritis by renal decortication (1899), called *Edebohls' operation*. Described a position for vaginal operations called *Edebohls' position*, *Simon's position*. See Simon's position.

e·de'ma [G. *oidēma*, swelling]. Dropsy; excessive accumulation of fluid in the tissue spaces; due to disturbance in the mechanisms of fluid exchange. There may be decrease of osmotic pressure of the plasma from reduction in protein concentration, increased hydrostatic pressure in the capillaries due to cardiac failure, increased permeability of the capillary walls from injury or inflammation, or there may be obstruction of the lymph channels. —**edem'atous**, *adj.*

angioneurotic e. That marked by acute, transitory, localized swellings, usually about the face; the lesions resemble those of urticaria, but are larger and of less distribution. Some cases are hereditary; others seem to be due to food allergy. Syn., *angioedema*, *giant urticaria*, *giant e.* Also called *Quincke's disease*.

bullous e. See bullous *cystitis*.

cardiac e. That occurring in cardiac failure, due to increased venous pressure; most marked in dependent parts where hydrostatic pressure is the greatest.

cerebral e. Edema of the brain; due to toxic causes or nutritional or vitamin deficiencies. It is usually associated with delirium, convulsions, or coma.

congenital e. See hereditary e. e. neonatorum.

e. neonatorum. That of the newborn, usually associated with severe erythroblastosis fetalis, but it may also occur without known cause.

decrine e. Any edema of hormonal origin such as that associated with menstruation, pituitary tumor, desoxycorticosterone administration, and insulin therapy. They are probably primarily result of salt retention.

giant e. See angioneurotic e.

heat e. Swelling of the hands and feet occurring in hot weather; due to increased blood volume and capillary dilatation. It is usually mild.

hereditary e. A chronic, hereditary process characterized by edema of the lower extremities, of unknown cause. The condition is ordinarily asymptomatic. Also called *Milroy's disease*.

inflammatory e. The swelling of inflammation. It results from increased permeability of the capillaries and thrombosis of the venules.

intercellular e. (of epidermis) See *spongiosis*.

lymphedema. That due to obstruction of lymph vessels; elephantiasis from filariasis.

malignant e. Inflammatory edema occurring in infections with gas bacilli.

nephrotic e. A type found in patients with chronic lipoid nephrosis or the nephrotic stage of glomerular nephritis, resulting from the loss of protein through proteinuria.

nutritional e. That occurring in starvation or in poorly nourished state, due to an abnormally low plasma protein concentration of the blood.

periorbital e. That occurring in the unusually loose areolar connective tissue of the lids and periorbital subcutaneous tissue.

pitting e. Edema of sufficient degree that the surface can be indented by pressure. Such indentation is temporary, lasting only several minutes after pressure is released.

pulmonary e. An effusion of fluid into the air sacs and interstitial tissue of the lungs.

e·den'tate [L. *edentare*, to render toothless, from *e*, out, *dens*, tooth]. 1. Without teeth. 2. Referring to the order of mammals Edentata. —**eden'tate** *n.*

e·den'ti·a [*e-*; *dens*]. Absence of the teeth, condition congenital or acquired; anodontia.

e·den'tu·lous [*e-*; *dens*]. Without teeth.

ede-, edeo-, edo- [G *aidoia*, genitals]. A combining form meaning *relating to the external genitals*. Most words from this stem are now obsolete.

ede·ol'o·gy, ee·dee·ol'o·gy (ee·dee·ol'o·jee) [*edeo-*; G *logos*, word]. The science of the organs of generation.

e·des'tan, ·dee·tan [G *edestos*, eatable]. A protein derivative of the class of proteins which is formed by the action of dilute acid or water on edestin.

e·des'tin, ·dee·ti [*edestos*]. A globulin type of simple protein obtained from the seeds of hemp.

ed'i·ble [L. *edibilis*, from *edere*, to eat]. Fit to eat.

Edinger, Ludwig (1855–1918). German neurologist known for his studies in neuroanatomy. He was the first to describe the ventral and dorsal spinocerebellar tracts and to distinguish between paleocerebrum and neocerebrum, and between paleocerebellum and neocerebellum, and also the first to describe a nucleus in the midbrain (1885) now known as the *Edinger-Westphal nucleus*.

ed'i·pism [after *Oedipus*, King of Thebes, who put out his own eyes because he unwittingly had killed his father]. Self-inflicted injury to the eyes. Rare.

Edkins, John Sydney [*English physician*, 1863–1940]. Discoverer of gastric secretin (1905).

Edmunds, Charles Wallis [*American physician*, 1873–1941]. Remembered for his association with Cushny in the recognition of atrial fibrillation in man (1901).

ed"e·oceph'a·lus (ee·do·sef'uh·lus) [G *aidoion*, genitals, penis; *kephalē*, head]. A type of otocephalus characterized by partially fused eyes in a single orbit (cyclopia), proboscis above the fused orbit, no mouth, defective lower jaw and synotia. —**edoceph'aly** *n.*

ed"ro·phon'i·um chlo'ride. Generic name for the anticurare agent supplied under the trade-marked name *tensilon chloride*.

EDTAA Abbreviation for ethylenediaminetetraacetic acid.

EEG Electroencephalography, electroencephalogram, electroencephalograph.

ef·fect' The result of any action.

Bezold-Brücke e. The perception of a given wavelength of light as different hues depending upon the amount of retinal illuminance. There are three wavelengths (478 mμ, 404 mμ, 572 mμ) which are always perceived as the same hue regardless of the amount of retinal illuminance.

detonator Excitatory effects at synapses leading to responses (Eccles).

hypsochromic e. The shift of an absorption band to a higher frequency caused by some external effect on the chromophore.

Wever-Bray e. See *Wever-Bray effect*.

ef·fec'tor [L., from *efficere*, to produce, accomplish]. A motor or secretory nerve ending in an organ, gland, or muscle, which is consequently called an effector organ; opposed to *receptor*.

ef'fer·ent [L. *efferre*, to carry away]. Carrying away, as efferent nerves, conveying impulses away from the central nervous system; or as efferent lymphatics, conveying lymph from the lymph nodes. Opposed to *afferent*.

ef"fer·ves'cence [L. *fervescere*, to foam up]. 1. The escape of gas from a liquid; bubbling. 2. In infectious diseases, that period following the prodrome; the onset or invasion of the disease.

ef"fer·ves'cent [*effervescere*]. Capable of producing effervescence.

ef"fleu·rage (ef"loo·rahzh. *See* NOTES § 35) [F.]. The stroking movement used in massage. It may be superficial, for producing reflex action, or deep, for actual emptying of the veins and lymphatic vessels.

ef"flo·res'cence [L. *efflorescere*, to bloom]. 1. The spontaneous conversion of a crystalline substance into powder by loss of its water of crystallization. 2. The eruption of an exanthematous disease.

ef'flu·ent [L. *effluere*, to flow out]. 1. An outflow. 2. A fluid discharged from a basin or chamber for the treatment of sewage.

ef·flu'vi·um (pl. *effluvia*) [L., a flowing out]. Body odor; that which emanates from an animal body, especially an ill-smelling emanation.

ef·fuse (ef·yōōss, i·fyōōs') [L. *fusus*, from *effundere*, to pour out]. Of or pertaining to a type of growth produced by bacteria on solid mediums. The growth does not project above the surface, in contrast with the raised type of growth.

ef·fu'sion [*effundere*]. 1. A pouring-out of fluid, either serous, purulent, or bloody, into serous or other spaces. 2. The effused fluid.

pericardial e. An effusion into the pericardium.

peritoneal e. An effusion into the peritoneal cavity.

pleural e. An effusion into the pleural cavity.

serous e. An effusion of serum.

efocaine. Trade-mark for a long-acting local anesthetic and analgesic containing procaine base, procaine hydrochloride, and butyl p-aminobenzoate, dissolved in a mixture of polyethylene glycol-300, propylene glycol, and water. The preparation is administered by subcutaneous or intramuscular injection.

efrasine hydrochloride. Trade-marked name for *methamphetamine hydrochloride*.

e″ga·grop′i·lus [G. *aigagros*, goat; *pilos*, hair wrought into felt]. An intestinal concretion formed of hair; a hair ball.

Egas Moniz, Antonio Caetano de Abreu Freire (1874–). Portuguese neurologist who described frontal lobotomy (an operation which he named *prefrontal lobotomy*) in the treatment of certain mental disorders. He pioneered in angiography and obtained the first arteriograph in man. Nobel laureate, 1949, in medicine and physiology.

e·ger′sis (i·jur′sis, i·gur′sis) [G., an awaking]. Extreme wakefulness and alertness. —**egertic**, *adj.*

e·ges′ta (i·jes′tuh) [L. *egestum*, from *egerere*, to discharge]. The discharges of the intestines or other excretory organs.

egg. Ovum.

Eggleston, Cary [*American physician*, 1884–]. Known for advocating rapid digitalization of the heart by administering digitalis in large doses and at brief intervals.

egg′-white in′ju·ry. A syndrome developed in experimental rats fed on raw white of egg; characterized by dermatitis and emaciation resulting in death; caused by the presence of avidin in the white of egg which renders unavailable the biotin of the diet.

e·glan′du·lar, e·glan′du·lose [L. *e*, without; *glandulae*, glands, dim. of *glans*, acorn]. Without glands; aglandular.

ego [L., I]. 1. In *psychology*, the self, regarded as a succession of mental states, or as the consciousness of the existence of the self as distinct from other selves. 2. In psychoanalytic theory, that part of the personality in conscious contact with reality.

e. restriction. See *restriction of ego*.

e″go·bron·choph′o·ny (ee″go·brong·kof′o·nee, ·bron·kof′o·nee) [G. *aix*, *aigos*, goat; *bronchos*, trachea; *phōnē*, voice]. A combination of egophony and bronchophony.

e″go·cen′tric [L. *ego*, I; G. *kentron*, center]. Self-centered. —**egocentric′ity, egocentricism,** *n.*

e′go i·de·al. In *psychoanalysis*, the standard of perfection of the ego.

e″go·ma′ni·a [*ego*; G. *mania*, madness]. Abnormal self-esteem.

e·goph′o·ny [G. *aix*, *aigos*, goat; *phōnē*, voice]. A modification of bronchophony in which the voice has a bleating character like that of a goat. It is heard over a compressed lung, as above the level of fluid in hydrothorax.

Ehlers, Edvard Lauritz [*German dermatologist*, 1863–1937]. First to describe the syndrome of dermatolysis with chronic pseudotumors of the skin in the neighborhood of the joints (1901), called *Meekeren-Ehlers-Danlos syndrome*.

Ehrenritter, Johann [*Austrian anatomist*, d. 1790]. Described the jugular ganglion of the glossopharyngeal nerve, called *Ehrenritter's ganglion*.

Ehret, Heinrich [*German physician*, 1870–]. Known for his description of a traumatic neurosis following injury to the medial or inner aspect of the foot, in which there appear spasmodic contractures of the flexor muscles with functional paralysis of the peroneal. Called *Ehret's paralysis*.

Ehrlich, Paul [*German bacteriologist and pathologist*, 1854–1915]. A pioneer in the fields of bacteriology, immunology, and chemotherapy. Developed the differential blood-count technic. Introduced methylene blue as a tissue stain (1881) and developed various staining technics. See *Ehrlich's stains*, under *stain*. Advanced his side-chain theory of immunity (1885); see under *theory*. Was the first to recognize aplastic anemia, and described inclusion bodies in erythrocytes seen in hemolytic anemias due to toxic agents (1892); see *Heinz-Ehrlich bodies* under *body*. His research on chemotherapy for experimental trypanosomiasis (1907) led to his discovery, with Hata, of arsphenamine, also called *salvarsan*, *Ehrlich's 606*, for the treatment of syphilis and yaws (1909); this marked the beginning of a new era in the treatment of bacterial diseases. Shared Nobel prize in physiology and medicine with Metchnikoff (1908). See also Ehrlich's reagent, Ehrlich's diazo reagent, Ehrlich's test.

Eichhorst, Hermann Ludwig [*Swiss physician*, 1849–1921]. Described interstitial neuritis, also called *Eichhorst's neuritis*.

Eichstedt, Carl Ferdinand [*German dermatologist*, 1816–92]. Remembered as the discoverer of *Malassezia furfur* in pityriasis versicolor or *Eichstedt's disease*.

ei″co·nom′e·ter (eye″ko·nom′i·tur). See *eikonometer*.

ei·det′ic im′age. An image (usually visual) so clear as to seem like an external or perceptual experience, but usually recognized as subjective. It is common in children, rare in later years.

ei′do·gen (eye′do·jen) [G. *eidos*, form; *gennaō*, from *gignesthai*, to be produced]. A chemical substance having the power of modifying the form of an embryonic organ after induction has occurred; a second-grade inductor involved in regional differentiation about the neural axis. See *organizer*.

ei″dop·tom′e·try (eye″dop·tom′i·tree) [*eidos*; G. *optikos*, of sight; *metron*, a measure]. The estimation of the acuity of vision.

Eijkman, Christiaan (1858–1930). Dutch bacteriologist and physiologist; Nobel laureate in medicine and physiology in 1929 for his discovery of the cause of beriberi, eventually identified as vitamin-B_1 deficiency. He studied a tropical anemia, showing that it was not a separate disease but an anemia due to vitamin deficiency, and also studied the influence of climate on metabolism. He developed a test for the presence of the colon bacillus in water.

ei″ko·nom′e·ter, ei″co·nom′e·ter (eye″ko·nom′i·tur). See *aniseikonometer*.

Ei·me′ri·a (eye·meer′ee·uh) [L., after Theodor *Eimer*, German zoologist, 1843–98]. A genus of protozoans living in the body fluids or tissues of vertebrates and invertebrates, and having a life cycle characterized by alternation of generations. Only one species, *E. gubleri*, is perhaps a parasite of man.

Einhorn, Max [*American physician*, 1862–]. Introduced gastrodiaphany, also known as *Einhorn's method* (1889). Drew attention to a functional disorder of secretion, achylia gastrica (1892).

Einstein, Albert [*American theoretical physicist*, 1879–1955]. Famous the world over for his theory of relativity, his formula for Brownian movement, and for his contributions to the quantum theory. Did much to prepare the theoretical ground for the development of atomic research. Nobel laureate in physics (1921).

ein'stein [*Einstein*]. A unit of energy (6.06 × 10[23] quanta) analogous to the faraday (6.06 × 10[23] electrons); the amount of radiation absorbed by system to activate one gram molecule of matter Abbreviated, E.

Einthoven, Willem [*Dutch physiologist*, 1860-1927] Devised galvanometer for use in electrocardiography; see string *galvanometer* also called *Einthoven galvanometer* Nobel laureate (1924) See also *Einthoven formulas* under *formula*, Einthoven *triangle*, Einthoven *law*

ei"san-the ma (eye san-theem uh, eye san thi-muh) Enanthema.

Eiselsberg, Anton Freiherr von [*Austrian surgeon*, 1860–1939]. Remembered for his contributions to the knowledge of neurosurgery Produced artificial tetany xperimentally in animals by thyroidectomy (1892)

Eisenmenger's complex. See under *complex*.

ei'sen zuck"er (eye'zun-zuck"ur) See saccharated iron oxide

e-jac"u la'tion [*ejaculatio*]. The ejection of the semen

e-jac"u la'tor u'ri ae. Old term for the bulbocavernosus muscle in the male

jec'ta [L. *ejectum*, from *eicere* to cast out]. Materials cast out excretions or excrementitious matter; dejecta

jec'tion [L. *ejectio* from *eicere*]. 1 The act of casting out, as of excretions or of excrementitious matter 2. That which is cast out.

systolic The discharge of blood by the ventricles into the pulmonary artery and aorta after previous short phase of isometric contraction.

e-jec tor One who, or that which, casts out or expels.

saliva e. *I dentistry* suction tube for removing saliva from the mouth during dental operations also called *dental pump*.

'ka-. *In chemistry*, combining form meaning *first*, used as prefix to recognized chemical element to designate provisionally predicted but as yet undiscovered element which should adjoin the former in the same group of the periodic system.

e"ka-i o-dine (ee"kuh-eye o-deen, -din, ay"kuh-) The provisional name of the element of atomic o. 85, adjoining iodin in the halogen group of the periodic classification of elements. The element is now called *astatine*.

EKG Abbreviation for electrocardiogram, from German *Elektrokardiogram*.

e-lab o-ra tion [L. *elaboratio*, from *elaborare*, to get clear]. *I physiology*, any anabolic process, such as the making of crude food int higher tissue products, or the formation of secretory products in gland cells.

el' cin [G. *elastis*, from *elaunein*, to drive]. The product of degeneration of elastin.

el"ae-o-my-en chy-ma (el ee-o-migh en'ki muh, ee lee-o-) See *eleomyenchyma*.

el"ae-op'tene (el ee op'teen) See *eleoptene*

el"ae-o-sac'cha ra (el ee sak uh ruh, ee"lee-o-) Oleosaccharа.

el" id'ic ac'id. $CH_3(CH_2)_7CH{\cdot}CH(CH_2)_7COOH$ solid, unsaturated fatty acid, being the transstereoisomer of olei acid and obtained by treating the latter with nitrous acid.

la'i din [G *elaia*, olive-tree]. A whit crystalline, f tty substance, produced by the action of nitric acid upon olein and isomeric with the latter

E lap'i-dae [G. *elaps*, serpent]. A family of venomous snakes possessing short, erect immovable front fangs includes cobras, tiger snakes, death adders, kraits, et —**elapine**, *adj*

las'tase. An enzyme which acts on elastin t render it soluble; it has been isolated from the pancreas.

e las'tic [G *elaunein*, to drive]. Returning to the original form after being stretched or compressed.

e-las'ti-ca [*elasticus*]. 1. Elastic. 2. The tunica elastica of blood vessel.

lamina e. The elastic layer of the mucous membrane of the pharynx and respiratory tract.

las tin [*elasticus*]. The albuminoid base of elastic tissue.

las'ti nase (i-lass ti-nace, -nase) An enzyme that digests or hydrolyzes the protein elastin.

las'to mer A generic term for all substances having the properties of natural or synthetic rubber —**elastomer'ic**, *adj*

las tom'e-ter An instrument which measures the indentation of skin under graded pressures and its return to normal on removal of weights.

e-las tose. A proteose obtained from elastin.

e las t sis se-nil'is [L.]. Degeneration of the elastic connective tissue of the skin in old age.

e lat er in [G *elaterios*, driving]. $C_{20}H_{28}O_5$; neutral principle from juice of the fruit of *Ecballium elaterium*, powerful hydragogue cathartic.

el"a te ri um [*elaterios*]. The dried sediment from the juice of the squirting cucumber *Ecballium elaterium*. It is powerful hydragogue cathartic. Elaterin is extracted from it with ether or chloroform.

el'bow [AS. *elboga*] The junction of the arm and forearm; the bend of the arm. See Table of Joints and Ligaments in the Appendix.

tennis e. Inflammation of the olecranon bursa, or of bursa over the head of the radius.

el der Sambucus.

el'drin. See *rutin*

el"e-cam pane el" cam pane. Inula.

Electra complex. See under *complex*.

lec'tri al"ter na'tion. Alternation in amplitude of the QRS waves of the electrocardiogram; sign of cardiac f tigue. Of grave importance if the heart rate is slow

lec'tric cur'rent tran sient. The passage of an electric current through the body to study passive electrical characteristics of tissue.

lec"tric'i ty [G. *elektron*, amber]. One of the basic quantities in nature consisting of the fundamental particles, electron and proton. Electricity in rest and in motion can be produced by friction, by magnetism, and by chemical methods. —**elec'tric, elec'trical**, *adj*

animal e. Free electricity in the body

faradic e. That produced by induction.

franklinic e. Frictional or static electricity

frictional e. That produced by friction.

galvanic e. That which is generated by chemical action in galvanic battery

induced e. That produced in body by proximity to an electrified body

magnetic e. That developed by moving conductor through magnetic field of force

negative e. That characterized by an accumulation of electrons.

positive e. That characterized by deficiency of electrons.

static e. Frictional electricity

voltaic e. Galvani electricity

e-lec'tri fy [*elektron*] Make electric.

e-lec"tri za tion [*elektron*] The pplication of electricity to the body

intragastric e. Electrotherapy practiced by the introduction of an lectrode into the stomach.

e-lec'tro- [*elektron*]. A combining form denoting *connection with electricity*

e-lec"tro-af fin'i ty [*elektron*; L. *affinis*, related]. The force by which ions hold their electric charges. Symbol E_a.

l c tro n"es the si (-an ess-thee h h,

-see uh) [*elektron*; G. *anaisthēsia*, lack of sensation]. Local anesthesia induced by an electric current.

e-lec″tro-bi-ol′o-gy [*elektron*; G. *bios*, life; *logos*, word]. The science of electric phenomena in the living organism, either those produced by the organism itself or by outside sources. —**electrobiolog′ic**, *adj.*

e-lec″tro-bi-os′co-py (i-leck″tro-buy-os′ko-pee) [*elektron*; *bios*; G. *skopein*, to examine]. The use of electricity to determine the existence of life.

e-lec″tro-cap″il-lar′i-ty [*elektron*; L. *capillaris*, from *capillus*, hair]. The effect of an electric current upon the interface between two liquids in a capillary; due to changes in the surface tension.

e-lec″tro-car′di-o-gram″ [*elektron*; G. *kardia*, heart; *gramma*, letter]. A graphic record, made by an electrocardiograph, of the electric potential differences due to cardiac action, taken from the body surfaces. A typical normal record shows P, Q, R, S, T, and U waves: the P wave is due to excitation of the atria, Q, R, and S, to excitation of the ventricles; T, to repolarization of ventricles; U is a diastolic wave of unknown origin. Electrocardiograms furnish important aid in the diagnosis and management of patients with heart disease. Abbreviated, ECG, EKG. Also see *interval*, *lead*, *wave*.

e-lec″tro-car′di-o-graph″ [*elektron*; *kardia*; G. *graphein*, to write]. An instrument for making a permanent record of small voltages, due to the beating heart, that exist between different parts of the body. —**electrocardiograph′ic**, *adj.*

e-lec″tro-car″di-og′ra-phy [*elektron*; *kardia*; *graphein*]. The specialty of recording and interpreting electrocardiograms. See also *axis deviation*, *interval*, *preponderance*, *vector quantity*, *ventricular hypertrophy*, *ventricular strain*.

pattern e. Certain types of abnormalities or combinations which occur with such constancy as to indicate a specific cause.

e-lec″tro-car″di-o-pho-nog′ra-phy [*elektron*; *kardia*; G. *phōnē*, sound; *graphein*]. The electric recording of the heart sounds.

e-lec″tro-ca-tal′y-sis [*elektron*; G. *katalysis*, dissolution]. Catalysis or chemical changes produced by the action of electricity.

e-lec″tro-cau′ter-y [*elektron*; G. *kautērion*, branding-iron]. Cauterization by means of a wire loop or needle heated by a direct galvanic current. Also called *galvanocautery*.

e-lec″tro-chem′is-try [*elektron*; G. *chymos*, juice]. The science treating of the chemical changes produced by electricity.

e-lec″tro-chro″ma-tog′ra-phy. A generic term for resolution of mixtures by differential electrical migration from a narrow zone; it applies to such migration of all solutes and suspensoids, ions, and colloids.

e-lec″tro-co-ag″u-la′tion [*elektron*; L. *coagulare*, to cause a fluid to curdle]. The destruction or hardening of tissues by coagulation induced by the passage of high-frequency currents; surgical diathermy.

e-lec″tro-co′ma [*elektron*; G. *kōma*, deep sleep]. The coma induced by electroshock therapy. See under *therapy*.

e-lec″tro-con″duc-tiv′i-ty [*elektron*; L. *conducere*, to conduct]. Facility for transmitting electricity.

e-lec″tro-con″trac-til′i-ty [*elektron*; L. *contractum*, from *contrahere*, to contract]. Capacity of muscular tissue for contraction in response to electric stimulation.

e-lec″tro-cor-ti-cog′ra-phy [*elektron*; *cortex*; G. *graphein*, to write]. The process of recording the electric activity of the brain by electrodes placed directly on the cerebral cortex, providing a much higher voltage, greater accuracy, and more exact localization than electroencephalography. —**electrocor′ticogram**, *n.*

e-lec″tro-cor′tin. Aldosterone.

e-lec″tro-cu′tion [*elektron*; L. *executum*, from *exsequi*, to follow to the end]. Execution by electricity.

e-lec″tro-cys′to-scope [*elektron*; G. *kystis*, bladder; *skopein*, to examine]. A cystoscope combined with an electric light. —**electrocystos′copy**, *n.*

e-lec′trode [*elektron*; G. *hodos*, way]. 1. A surface of contact between a metallic and a nonmetallic conductor. 2. One of the terminals of metal, salts, or electrolytes through which electricity is applied to, or taken from, the body or an electric device or instrument.

active e. A small one used for its exciting effect in a sharply localized area for stimulating muscles or nerves.

antimony e. An electrode made of antimony for determining hydrogen-ion concentration.

brush e. One consisting of a wire brush, used to apply faradic current over a large area of skin.

calomel e. One used as a standard, as in determining hydrogen-ion concentration, because it develops a constant potential.

depolarizing e. One with a larger resistance than that of the part of the body enclosed in the circuit.

dispersing e. A large electrode used in treatment or testing which has little or no localizing effect.

dropping-mercury e. An electrode providing for a steady release of droplets of mercury falling through an electrolyte into a pool of mercury.

exciting e. Active electrode.

glass e. An electrode used in determining the hydrogen-ion concentration which operates by means of the tendency for hydrogen ions to diffuse through a thin glass membrane in contact with dilute hydrochloric acid.

hydrogen e. One made of platinum saturated with hydrogen. Used in the determination of hydrogen-ion concentration.

indifferent e. Dispersing electrode.

localizing e. Active electrode.

negative e. The cathode.

positive e. The anode.

therapeutic e. Active electrode.

thimble e. A device for very rapid localization of motor points, in the form of a long, thin, flexible thimble to fit the palpating index finger.

e-lec′tro-dent. In dentistry, the negative electrode of a device used to test the vitality of the pulp of a tooth.

e-lec″tro-der′ma-tome. An electrically driven cutting instrument used for obtaining split skin grafts.

e-lec″tro-des″ic-ca′tion [*elektron*; L. *desiccare*, to dry up]. The diathermic destruction of small growths of the urinary bladder, skin, cervix, etc., by means of a single terminal electrode with a small sparking distance.

e-lec″tro-di″ag-no′sis [*elektron*; G. *diagnōsis*, deciding]. Diagnosis by means of electric instruments. —**electrodiagnos′tic**, *adj.*

e-lec″tro-di-al′y-sis (i-leck″tro-dye-al′i-sis) [*elektron*; G. *dialysis*, a separating]. A method for rapidly removing electrolytes from colloids by dialysis of the colloidal sol while an electric current is being passed through it.

e-lec″tro-di″a-pha′ne [*elektron*; G. *diaphainein*, to show through]. An apparatus for illumination of body cavities, a diaphanoscope. —**electrodiaph′any**, *n.*

e-lec″tro-dy-nam′ics (i-leck″tro-dye-nam′icks, -di-

nam'iks) [*elektron*, G *dynamikos*, powerful]. The science of energy transformations as related to electric currents and their magnetic fields.

e-lec"tro-dy"na-mom'e-ter [*elektron*, G *dynamis*, power; *metron*, measure]. An instrument for measuring the magnitude of electric currents.

e-lec"tro-en-ceph'a-lo-gram" [*elektron*, G *enkephalos*, brain; *gramma*, letter]. A graphic record of the minute changes in electric potential associated with the activity of the cerebral cortex, as detected by electrodes applied to the surface of the scalp. Also see under *rhythm*, *wave*. Abbreviated, EEG.

e-lec"tro-en-ceph'a-lo-graph [*elektron*, *enkephalos*; G *graphein*, to write]. An instrument for recording the electric activity of the brain. Abbreviated, EEG. —**electroencephalograph'ic**, *adj.*

e-lec"tro-en-ceph"a-log'ra-phy [*elektron*, *enkephalos*; *graphein*]. A method of recording graphically the electric activity of the brain, particularly the cerebral cortex, by means of electrodes attached to the scalp. Electroencephalography is used in the diagnosis of epilepsy, trauma, tumors, and degenerations of the brain. Abbreviated, EEG.

e-lec"tro-en"dos-mo'sis. Electroosmosis.

e-lec"tro-fit [*elektron*, AS. *fit* of uncertain origin]. The convulsion induced by electroshock therapy. See under *therapy*.

e-lec"tro-form. To form by the electrodeposition of metal in finished or semifinished form, as sheets or tubes or electrotypes.

e-lec"tro-gas'tro-graph. A graphic tracing of changes in electrical potential of the stomach, associated with muscular contraction. —**electrogas'trogram**, *n.*

e-lec"tro-gen'e-sis [*elektron*, G *genesis*, production]. Production of electricity.

e-lec'tro-gram. The graphic representation of electric events in living tissues; most commonly an electrocardiogram or electroencephalogram. Also see *electroretinogram*, *electromyogram*, *electroretinogram*. —**electrog'raphy**, *n.*

e-lec"tro-he"mo-sta'sis [*elektron*, G *haima*, blood; *stasis*, standing]. Arrest of hemorrhage by means of a high-frequency clamp, which causes desiccation of the tissue.

e-lec"tro-hys"ter-og'ra-phy [*elektron*, G *hystera*, womb; *graphein*, to write]. The recording of electric action potentials of the uterus.

e-lec"tro-ki-net'ics (i-lek"tro-ki-net'iks, -kigh-net'iks) [*elektron*, G *kinētikos*, of motion]. The science of electricity in motion. —**electrokinetic**, *adj.*

e-lec"tro-ky'mo-graph" [*elektron*, G *kyma*, wave; *graphein*, to write]. An apparatus that combines a photoelectric recording system with a fluoroscope so as to make possible the continuous recording of the movements of a shadow within the fluoroscopic field or of changes in density in that shadow; usually employed in studying the heart. Also called *fluorocardiograph*.

e-lec"tro-li-thot'ri-ty [*elektron*, G *lithos*, stone; L. *tritum*, from *terere*, to grind]. Disintegration of vesical calculus by means of electricity.

e-lec"trol'o-gy [*elektron*, G *logos*, word]. The science of electricity.

e-lec"trol'y-sis [*elektron*, G *lysis*, a loosing]. The decomposition of a chemical compound by a direct electric current. —**elec'trolyze**.

cupric e. Electrolysis in which a bulb of chemically pure copper is applied directly to the diseased area; the copper oxychloride generated acts as germicide.

e-lec'tro-lyte [*elektron*, G *lytos*, soluble]. A substance which in solution is capable of conducting an electric current, and is decomposed by it. —**electrolyt'ic**, *adj.*

amphoteric e. An electrolyte that can act as either an acid or a base.

e-lec"tro-ly"zer [*elektron*, G *lysis*, a loosing]. An instrument for removing urethral strictures by electricity.

e-lec"tro-mag'net [*elektron*, G *Magnētis lithos*, magnet]. A core of soft iron surrounded by a coil of wire. A current passing through the wire will make the iron temporarily magnetic.

e-lec"tro-mag-net'ics [*elektron*, *Magnētis lithos*]. 1. The production of magnetic force by means of electricity. 2. The science dealing with the relation of electricity to magnetism.

e-lec"tro-mas-sage' [*elektron*, F. from G *massein*, to knead]. The transmission of electricity through a kneading instrument; electric treatment combined with massage.

e-lec-trom'e-ter [*elektron*, G *metron*, a measure]. A device for measuring differences in electric potential. —**electromet'ric**, *adj.*

string e. One consisting of a fine conducting string placed between two conducting plates. An electric field between the plates causes the string to be displaced if a potential is applied to it.

e-lec"tro-mo'tive [*elektron*, L. *motum*, from *movere*, to move]. Pertaining to or producing electric action, as an electromotive force.

e-lec"tro-my'o-gram [*elektron*; G *mys*, muscle; *gramma*, letter]. 1. A record of the response of a muscle to an electric stimulation. 2. A record of eye movements during reading, obtained by measuring the potential difference between an electrode placed at the center of the forehead and one placed at the temple.

e-lec"tro-my-og'ra-phy (i-leek"tro-migh-og'ruh-fee) [*elektron*, *mys*; G *graphein*, to write]. Production and study of the electromyogram. —**electromyograph'ic**, *adj.*

e-lec'tron [*elektron*]. Commonly the smallest particle of negative electricity; sometimes called *negatron* to distinguish it from a corresponding particle of positive charge called a *positron*. The mass of an electron at rest is 9.035×10^{-28} grams, or $\frac{1}{1845}$ that of a hydrogen atom. Its unit electric charge is 4.77×10^{-10} electrostatic units. Symbol, e. —**electron'ic**, *adj.*

k e. Either of the two electrons in the first shell or orbit surrounding the nucleus of an atom.

l e. An electron in the l or second shell surrounding the nucleus of an atom.

m e. An electron in the m or third shell surrounding the nucleus of an atom.

n e. An electron in the n or fourth shell surrounding the nucleus of an atom.

negative e. The ordinary electron, also called *negatron*.

o e. An electron in the o or fifth shell surrounding the nucleus of an atom.

p e. An electron in the p or sixth shell surrounding the nucleus of an atom.

positive e. An elementary particle having the mass of an ordinary electron but carrying a positive charge. Syn., *positron*.

q e. An electron in the q or seventh shell surrounding the nucleus of an atom.

recoil e. An electron removed from its place in an atom and set into motion by impact of a photon; as a result of the collision the photon gives up only part of its energy to the electron and proceeds along a new path. Also called *Compton electron*.

secondary e. Any photoelectron or recoil electron produced when roentgen rays strike an atom.

subvalence electrons. All the electrons of any atom other than those in the valence or planetary shell.

e-lec"tro-nar-co'sis [*elektron*, G *narkōsis*, be-

numbing]. Narcosis produced by the application of electric currents to the body.

e-lec"tro-neg'a-tive [*Elektron*; L. *negativus*, negative]. Pertaining to or charged with negative electricity.

e-lec"tro-neg"a-tiv'i-ty. The power of an atom in a molecule to attract electrons to itself.

e-lec"tro-neu'ro-tone (i-leck"tro-new'ro-tohn) [*Elektron*; G. *neuron*, nerve; *tonos*, stretching]. An apparatus for applying massage by electricity.

e-lec'tron lens. An electric field used to focus a stream of electrons on a target.

e-lec'tron op'tics. See under *optics*.

e-lec'tron volt. A unit of energy equal to the energy acquired by an electron when it falls through a potential difference of one volt.

e-lec"tro-os-mo'sis [*Elektron*; G. *ōsmos*, impulse]. The movement of a conducting liquid through a permeable membrane under the influence of a potential gradient; it is thought to be caused by the opposite electrification of the membrane and the liquid. Syn., *electroendosmosis*.

e-lec"tro-pa-thol'o-gy [*Elektron*; G. *pathos*, disease; *logos*, word]. The study of morbid conditions produced by the passage of electric current through living tissues.

e-lec"tro-pho'bi-a [*Elektron*; G. *phobos*, fear]. A morbid fear of electricity.

e-lec"tro-pho-re'sis [*Elektron*; G. *phorēsis*, from *pherein*, to bear]. The migration of charged colloidal particles through the medium in which they are dispersed, when placed under the influence of an applied electric potential. Also called, though less preferably, *cataphoresis*. The process of ion transfer is sometimes erroneously called electrophoresis. **Microscopic electrophoresis** is a method adapted to the study of larger particles which may be seen by means of the microscope or the ultramicroscope. It has been used to great advantage in studying surface and immunologic phenomena in liquids. **Moving boundary electrophoresis** is a method applicable to dissolved substances. Used in the study of biologic mixtures in their natural state. It separates, isolates, and defines the homogeneity of various components of the mixture. Also see Tiselius apparatus.

e-lec"troph'o-rus [*Elektron*; G. *phoros*, bearing]. An instrument used to generate small quantities of static electricity by induction.

e-lec"tro-pho"to-ther'a-py [*Elektron*; G. *phōs*, light; *therapeia*, treatment]. Therapeutic treatment by means of electric light.

e-lec"tro-phren'ic [*Elektron*; G. *phrēn*, diaphragm]. Pertaining to electric stimulation of the phrenic nerves.

e-lec"tro-phys"i-ol'o-gy [*Elektron*; G. *physis*, nature; *logos*, word]. The branch of physiology dealing with the relations of the body to electricity; the physiologic production of electric phenomena.

e-lec"tro-pos'i-tive [*Elektron*; L. *positivus*, positive]. Pertaining to or charged with positive electricity.

e-lec"tro-punc'ture [*Elektron*; L. *punctura*, prick ing]. In surgery, the use of needles as electrodes.

e-lec"tro-py-rex'i-a (i-leck"tro-pye-reck'see-uh) [*Elektron*; G. *pyressein*, to be feverish]. The production of high body temperatures by means of an electric current.

e-lec"tro-re-sec'tion [*Elektron*; L. *resectio*, cutting off]. Excision by means of electrocautery.

e-lec"tro-ret'i-no-gram [*Elektron*; L. *rete*, net; G. *gramma*, letter]. A record of the electric variations of the retina made by placing one electrode over the cornea, the other over some indifferent region. **E a.** The type of electroretinogram in which excitatory phenomena are predominant and associated by Ragnar Granit with activity of the rods. **I a.** The type of electroretinogram in which inhibitory phenomena are dominant and associated by Ragnar Granit with activity of the cones.

e-lec"tro-sci'sion (i-leck"tro-sizh un, -sish un, i-leck'tro sizh un, -sish un) [*Elektron*; L. *scissio*, from *scindere*, to tear]. Cutting of tissues by an electrocautery knife.

e-lec'tro-scope [*Elektron*; G. *skopein*, to examine]. An instrument for detecting the presence of static electricity and its relative amount, and for determining whether it is positive or negative.

e-lec"tro-sec'tion [*Elektron*; L. *sectio* from *secare*, to cut]. Tissue division by a knifelike electrode operated by high-frequency machine.

e-lec"tro-shock' [*Elektron*; F. *choquer*, to shock]. Shock produced by electricity. See electroshock therapy.

e-lec"tros-mo'sis. See *electroosmosis*.

e-lec'tro-sol [*Elektron*; hydrosol, confused with Ger *sole*, salt water]. A colloidal dispersion of a metal, electrically obtained.

e-lec'tro-some [*Elektron*; G. *sōma*, body]. A chondriosome in the cytoplasm which is responsible for chemical action.

e-lec"tro-stat'ics [*Elektron*; G. *statikos*, causing to stand]. The science of static electricity.

e-lec"tro-steth'o-phone [*Elektron*; G. *stēthos*, breast; *phōnē*, voice]. An amplifying stethoscope which increases and transmits sounds by the use of electronic circuits.

e-lec"tro-stric'tion. The contraction of a solvent resulting from the development of an electrostatic field by a dissolved electrolyte.

e-lec"tro-sur'ger-y [*Elektron*; G. *cheirourgia*, working by hand]. The use of electricity in surgery; surgical diathermy. —**electrosur'gical**, *adj.*

e-lec"tro-syn'the-sis [*Elektron*; G. *synthesis*, putting together]. Chemical combination caused by electricity.

e-lec"tro-tax'is [*Elektron*; G. *taxis*, arrangement]. The attraction or repulsion of organisms or cells to electric charges.

e-lec"tro-thal'a-mo-gram. A record of the electrical activity of the thalamus, obtained by inserting small electrodes deep into the cerebral hemispheres.

e-lec"tro-tha-na'si-a (i-leck"tro-thuh-nay'zhuh, -see-uh) [*Elektron*; G. *thanatos*, death]. Death due to electricity.

e-lec"tro-ther"a-peu'tics (i-leck"tro-therr"uh-pew'ticks) [*Elektron*; G. *therapeutikos*, inclined to serve]. Electrotherapy.

e-lec"tro-ther'a-py [*Elektron*; G. *therapeia*, treatment]. The use of electricity for therapeutic purposes.

e-lec'tro-therm [*Elektron*; G. *thermē*, heat]. An apparatus which generates heat electrically; for application to the body surface to relieve pain. —**electrother'mal**, *adj.*; **electrother'my**, *n.*

e-lec'tro-tome [*Elektron*; G. *tomos*, cutting]. A surgical electrocautery device using low current, high voltage, and high frequency which has a loop for engaging the part to be excised. No coagulation of tissues is produced.

e-lec"tro-ton'ic af"fect'. An altered condition of excitability of a nerve or muscle, produced when in the electrotonic state.

e-lec"trot'o-nus (i-leck"trot'o-nus, i-leck"tro-to'nus) [*Elektron*; G. *tonos*, stretching]. The change of condition in a nerve or muscle during the passage of a current of electricity. Also see *anelectrotonus*, *catelectrotonus*. —**electroton'ic**, *adj.*

e-lec"tro-tro'pism. Electrotaxis.

e-lec"tro-tur"bi-nom'e-ter. A small turbine placed into the arterial blood stream for the purpose of measuring blood flow; a flowmeter.

lec"tro-va go-gram [*elektron*, L. *vagus*, wandering; G. *gramma*, letter]. A record of the electric changes occurring in the vagus nerve. Also called *vagogram*.

e lec"tro-va'lence [*elektron*, L. *valere*, to be strong]. The number of planetary electrons that an atom tends to lose or accept by transfer in chemical reaction.

e lec"tro-win To recover as metals from their ores, by electrodeposition.

lectrozone. A proprietary disinfectant fluid produced by the electrolysis of sea water.

e-lec'tu ar"y (i leck shoo-err"ee) [L. *electuarium*, from G. *ekleigma*, medicine that melts in the mouth]. A medicinal substance formed into a soft or pasty mass by combination with sugar or honey and water.

e-le'i din [G. *elaia*, olive tree]. The semifluid, acidophil material in the stratum lucidum of the epidermis.

el'e-ment [L. *elementum*, element]. 1. Any one of the ultimate parts of which anything is composed, as the cellular elements of a tissue. 2. In *chemistry* any one of the 100 ultimate chemical entities of which matter now is believed to be composed. Each element is composed wholly of atoms of the same atomic number (having the same charge on their nuclei) although their atomic weights may differ due to differences in nuclear weight. See *isotope*. For elements listed by name, see Table of Elements in the Appendix.

amphoteric e. One whose oxide in aqueous solution has the ability to act either as an acid or as a base.

electronegative e. An element having a tendency to attract additional electrons.

electropositive e. An element having a tendency to part with electrons.

transuranic e. An element with an atomic number greater than that of uranium (92).

el'e-mi (el' -mee) [Ar. *al-lāmī*]. A resinous exudation frequently derived from the *Canarium commune*, but other plants of the Burseraceae are also used. It contains a crystalline resin, elemin or amyrin. Its action is similar to that of the turpentines. Elemi has been used in plasters and ointments.

el" -o ma [G. *elaion*, olive oil; -*oma*, tumor]. A pathologic swelling caused by the injection of an oil into the tissues.

el" -om ter [*elaion*; G. *metron*, measure]. An apparatus for ascertaining the specific gravity of oil.

el"e-o-my-en'chy sis (el ee-o-migh en'ki-sis, ee lee-o-) [*elaion*; G. *mys*, muscle; *enchysis*, pouring in]. The intramuscular injection and congelation of oils in treatment of clonic local spasms.

el"e-op'tene [*elaion*; G. *ptenos*, winged]. The permanent liquid portion of volatile oils, as distinguished from stearoptene. Syn. *elaeptene*.

el"e-phan-ti' sis [G. *elephas*, elephant; NL. -*iasis*, condition]. A chronic enlargement of the subcutaneous and cutaneous tissues as a result of lymphatic obstruction. In the form commonest in the tropics, the recurrent lymphangitis is caused by *Wuchereria bancrofti*. The legs and scrotum are most commonly affected. —**elephan'tiac, elephantias'ic,** *adj.*

congenital e. A rare anomaly due to maldevelopment of the lymphatic channels.

e. anaesthetica. Anesthetic leprosy.

e. arabum. Elephantiasis, presumably filarial, occurring in the Middle East.

e. asturiensis. Pellagra.

e. congenita cystica. A state of malformation marked by skeletal defects, general anasarca, and formation of cysts in the subcutaneous tissue.

e. dura. A variety of elephantiasis marked by density and sclerosis of the subcutaneous connective tissues. Also called *e. scirrhosa*.

e. filariensis. That due to infection with filaria, most commonly *Wuchereria bancrofti*.

e. graecorum. That in leprosy.

e. nervorum. See *e. neuromatosa*.

e. neuromatosa. Diffuse neurofibromas of skin, causing great thickening, and seen in neurofibromatosis. Similar hypertrophic changes may occur also in bone and parts of the gastrointestinal tract. Syn., *e. nervorum*.

e. nostras. That associated with, and perhaps due to, chronic erysipelas.

e. sclerosa. Scleroderma.

e-leu ther a bark. Cascarilla.

el'e-va"tor [L. from *elevare*, to raise]. An instrument for elevating or lifting a part, or for extracting the roots of teeth.

Elford membrane. See under *membrane*.

lim'i nant [L. *eliminare*, to turn out of doors]. Promoting elimination.

e-lim"i na'tion [*eliminare*]. The process of expelling or casting out; especially the expelling of the waste products of the body.

lin-gua'tion (e-lin-gway'shun, e-ling-) [L. *elinguare*, to deprive of the tongue]. Surgical removal of the tongue.

e-lix'i [G. *xeros*, dry]. A sweetened, aromatic solution, usually hydroalcoholic, commonly containing soluble medicaments, but sometimes not containing any medication intended for use only as a flavor and/or vehicle.

adjuvant e. Glycyrrhiza elixir.

aromatic e. (*elixir aromaticum*). A tasteful vehicle prepared from compound orange spirit, syrup and alcohol. It contains 22–24% of alcohol.

compound digestive e. Compound pepsin elixir.

iso-alcoholic e. (*elixir iso-alcoholicum*). An elixir of the particular alcohol concentration which is most suitable for the intended medicament. It is prepared by combining in suitable proportions high-alcohol elixir and low-alcoholic elixir the former containing 73–78% of alcohol, the latter from 8–10%. Also called *iso-elixir*.

red aromati e. (*elixir aromaticum rubrum*). Aromatic elixir colored with cudbear tincture.

simple e. Aromatic elixir.

Elkin Daniel Collier [*American surgeon*, 1893–]. Has contributed to the knowledge of cardiac surgery. Devised a method of suturing the wounded heart by means of a stay suture passed deep into the cardiac muscle. This controls bleeding until the edges of the wound are approximated, when the deep suture is removed. Called *Elkin operation*.

elkosin. Trade-mark for the sulfonamide compound *sulfisomidine*.

el lag'i e'id. $C_{14}H_6O_8$; tetracyclic, polyhydroxy compound occurring free or combined in galls and in certain bezoars.

Elliot, George Thompson [*American dermatologist*, 1855–1931]. Introduced a paste made of bassorin, dextrin, glycerin, and water for use as protective skin dressing.

Elliot, John Wheelock [*American surgeon*, 1852–1925]. Originated a position in which the patient is supine with his upper abdomen raised by a support under the back; known as *Elliot position*.

Elliot, Robert Henry [*English ophthalmologist in India*, 1864–1936]. Remembered for his operation of sclerocorneal trephining for the relief of glaucoma; called *Elliot operation*.

Elliott treatment. See under *treatment*.

el·lip'sin [G. *elleipsis*, ellipse]. The protein constituents of the cell responsible for maintaining its form and structure.

el·lip'soid [*ellipsis*; G. *eidos*, form]. *In histology*, condensation of reticular fibers and reticulo-endothelial cells around an arteriole situated in the red pulp of the spleen between venous sinuses. —**ellip'soid**, *adj.*

el·lip'to·cyte [*ellipsis*; G. *kytos*, cell]. An elliptic erythrocyte. Syn., *ovalocyte*.

el·lip"to·cy·to'sis (i-lip"to-sigh-to-sis) [*ellipsis*; *kytos*; G. *-ōsis*, condition]. A rare hereditary phenomenon seen in humans, characterized by the presence of an abnormal number of oval or elliptic erythrocytes in the blood. ovalocytosis. also called *oval-cell anemia*.

Ellis, Arthur William Mickle [*English physician*, 1883–]. With Homer Swift, described method for the treatment of cerebrospinal syphilis. See Swift-Ellis *treatment*.

Ellis, Calvin [*American physician*, 1826–83]. Described sign of resorption of pleuritic exudate: the curved line of dullness follows convex course at the upper border toward the head, the highest point being lateral in the midaxillary line; called *Ellis' curve, Damoiseau's curve*.

Ellis, Henry Havelock [*English psychologist*, 1859–1939]. Celebrated for his investigations of the psychology of sex.

elm. See *Ulmus*.

e·lon"ga'tion [L. *elongare*, to prolong]. 1. The process of lengthening. 2. A lengthened condition, as of the cervix of the uterus through hypertrophy.

Elsberg, Charles Albert [*American neurosurgeon*, 1871–1948]. Described quantitative method of measuring olfactory excitation by administering specific volumes of odor-laden air.

el'u·ant [L. *eluere*, to wash out]. The solvent used in elution in chromatography. Also spelled *eluent*.

el'u·ate [*eluere*]. The extract obtained from elution in chromatography; it represents solution of the formerly adsorbed substance in the eluant.

e·lu'tion [*eluere*]. The process for the extraction of the adsorbed substance from the solid adsorbing medium in chromatography.

e·lu"tri·a'tion [L. *elutriare*, to wash out]. A process whereby the coarser particles of an insoluble powder are separated from the finer by mixing the substance with liquid and decanting the upper layer after the heavier particles have settled. A form of water-sifting.

Elvehjem, Conrad Arnold (1901–). American biochemist who worked on many of the B vitamins as well as trace elements in nutrition and the relation of vitamins to enzymes. See also Elvehjem and Kennedy method.

Ely's table. A table giving the duration of pregnancy. See Table in the Appendix.

el'y·tro-, elytr- [G. *elytron*, sheath]. A combining form meaning *connection with*, or *relation to*, *the vagina*, as in *elytritis*, inflammation of the vagina.

e·ma·ci·a'tion [L. *emaciare*, to make lean]. The process of losing flesh so as to become extremely lean, or the resultant state; wasted condition.

e·mac"u·la'tion [L. *emaculare*, to clear from spots]. The removal of freckles or other skin lesions, especially skin tumors.

em"a·na'tion [L. *emanatio*, from *emanare*, to spring out of]. 1. That which flows or is emitted from substance; effluvium. 2. Gaseous, radioactive products formed by the loss of alpha particles from radium (radon), thorium X (thoron), and actinium X (actinon).

em"a·na·to·ri'um [*emanare*]. An institution where patients are treated by radioactive waters and the inhalation of radium emanations.

e·man"ci·pa'tion [L. *emancipatio*, from *emancipare*, to emancipate]. In *embryology*, the process whereby organ districts acquire a definite boundary when forming from the primitive individuation field; the appearance of the presumptive organ rudiment after determination.

em"a·no·ther'a·py [L. *emanare*, to spring out of; G. *therapeia*, treatment]. Treatment by radioactive emanations; mild radium therapy.

e·man"si·o (e-man'see-o, -shee-o) [L., from *emanere*, to remain beyond]. A failing.

e. mensium. Delay in the first appearance of the menses.

e·mas"cu·la'tion [L. *emasculare*, to make impotent]. Castration; removal of the testes, or of the testes and penis.

Em"ba·do·mo'nas (em"bah-do-mo'nus, -dom'o-nus) [G. *embadon*, by foot, by land; *monas*, unit]. A genus of protozoan flagellates.

E. intestinalis. A species found in the intestine of man.

em·balm'ing [OF. *embaumer*]. The treatment of a cadaver with antiseptic and preservative substances for burial or for dissection.

em·bed' [L. *in*, in; AS. *bed*]. *In histology*, to surround specimen with substance, as paraffin or celloidin, to give support during the process of cutting it into sections for microscopic examination. —**embedding**, *n.*

Em·be'li·a. A genus of shrubs of the Myrsinaceae.

E. ribes. An Asiatic species; the berries contain embelin, an anthelmintic principle.

em·bel'ic ac'id. Embelin.

em'be·lin. 2,5-Dihydroxy-3-lauryl-para-benzoquinone, the taeniacidal principle of *Embelia ribes*. Syn., *embelic acid*.

em"bo·le'mi·a. See *embolalalia*.

em"bo·lec'to·my [G. *embolos*, plug; *ektomē*, excision]. Surgical removal of an embolus.

em"bo·le'mi·a [*embolos*; G. *haima*, blood]. Presence of emboli in the blood.

em·bol'ic [*embolos*]. 1. Relating to an embolus or an embolism. 2. Pushing or growing in.

em'bo·lism [G. *embolisma*, from *emballein*, to throw in]. The occlusion of blood vessel by an embolus, causing various syndromes depending on the size of the vessel occluded, the part supplied, and the character of the embolus. Also see *embolus*.

air e. Large amounts of air in the blood stream, such as may gain entrance through wounds of the great veins in the neck, and, reaching the heart, cause cardiac arrest. small amounts are resorbed and cause no symptoms.

amniotic e. A rare type seen in the mother following delivery, in which there are multiple emboli containing material from the amniotic fluid widely disseminated, the clinical picture resembling that seen in fat embolism.

bone-marrow e. A type similar to fat embolism resulting from bone injuries in which emboli of marrow get into the circulation.

cerebral e. The blocking of cerebral vessel by any type of embolus gives rise to a syndrome resembling cerebral hemorrhage.

coronary artery e. The blocking of coronary artery by an embolus is rare and clinically gives rise to syndrome similar to that seen in coronary thrombosis or spasm.

cutaneous gaseous e. The cutaneous manifestations of caisson disease: generalized or local pruritus, purple erysipeloid plaques, scarlatiniform rash, cyanosis, and subcutaneous emphysema.

fat e. Multiple, widely disseminated droplets of fat resulting in emboli of parenchymatous organs and often causing death. The fat droplets may be liberated in crushing injury of adipose tissue or

bone, or may follow the injection of oily solutions. Also called *oil e.*

gas e. See caisson disease; cutaneous gaseous e.

infective e. The obstruction of blood vessels by infected emboli, resulting in multiple abscess formation. Also called *septic e.*, *bacterial e.*

paradoxical e. See under embolus.

peripheral artery e. The blocking of a large artery supplying a limb results in gangrene of the part supplied. If the embolism occurs in a smaller artery, collateral circulation will take over the function of the occluded vessel.

pulmonary e. Obstruction of the pulmonary artery by lodgment of an embolus.

retrograde e. Embolism in which the embolus has gone against the normal direction of the blood stream.

em"bo-lo-la'li a, em"bo la'li a [G. *embolos*, plug; *lalia*, chat]. The insertion of meaningless words into speech, occurring in some aphasic and schizophrenic states.

em"bo-lo phra si a (em"bo-lo-fray'zhuh, -zee-uh) Embololalia.

em bo-lus (pl. *emboli*) [*embolos*]. A bit of matter foreign to the blood stream—it may be blood clot, air, cancer or other tissue cells, fat, cardiac vegetations, clumps of bacteria, or a foreign body such as a needle or bullet—which either gains entrance to the circulation from the individual's body or is carried by the blood stream until it lodges in a blood vessel and obstructs it, causing embolism. —embol'iform, embolold, *adj.*

paradoxical e. One which originates in the venous system and crosses to the arterial side through a patent foramen ovale.

riding e. An embolus at the bifurcation of an artery blocking both branches. Also called *saddle e.*, *straddling e.*

em'bo-ly [G. *embolē*, putting in]. The process of invagination by which the two-layered gastrula develops from the blastula.

em bra sure (em bray'zhur -shur) [F *embraser* to widen an opening, of uncertain origin]. In *dentistry*, the space between the sloping proximal surfaces of the teeth. The opening may be toward the cheek (*buccal*), toward the lips (*labial*) or toward the tongue (*lingual*).

em"bro-ca'tion [G. *embrochen*, to wet]. 1. The application, especially by rubbing, of a liquid to a part of the body. 2. The liquid so applied; liniment.

em"bry-ec'to-my [G. *embryon*, embryo; *ektomē*, excision]. The surgical removal of an extrauterine embryo.

em'bry o [*embryon*]. 1. A young organism in the early stage of development. 2. The product of conception up to the third month of pregnancy. See Plate 41. —embryonal, embryon'ic, *adj.*

presomite e. An embryo from the time of fertilization until the appearance of the first somite, about 21 days.

previllous e. An embryo from the time of fertilization until the development of the chorionic villi.

somite e. An embryo during the period when somites are formed, approximately the twenty-first to the thirty-first days of development.

em'bry-o-, embry- [*embryon*]. A combining form signifying *fetus*, *embryo*, *embryonic*.

em'bry-o-blast" [*embryon*, G *blastos*, germ]. That part of the germ disk or inner cell mass from which the embryo proper develops.

em"bry-o-car'di a [*embryon*; G *kardia*, heart]. A morbid condition in which the heart sounds resemble those of the fetus, the first and second sounds being almost identical.

em"bry-o-chem'i-cal [*embryon*, G. *chymos*, juice]. Relating to the changes in the chemistry of the ovum or embryo.

em"bry oc to-ny [*embryon*, G *kteinein*, to kill]. The killing of a fetus. —embryocton'ic, *adj.*

em"bry-og' ny (em"bree-odj'i-nee) **em"bry-o-gen' -sis** [*embryon*, G *genesthai*, from *gignesthai*, to be produced]. Embryology; the development of the embryo. —embryogen'ic, embryogenet'ic, *adj.*

em'bry-oid [*embryon*, G *eidos*, form]. Resembling an embryo.

em"bry o-lem'ma (pl *embryolemmata*) [*embryon*, G. *lemma*, that which is peeled off]. Any one of the fetal or extraembryonic membranes.

em"bry-ol'o-gist [*embryon*, G *logos*, word]. One skilled in the science of embryology.

em"bry ol' gy [*embryon*; *logos*] The science dealing with the embryo and its development. —embryolog'ic, embryolog'ical *adj.*

chemical e. Investigation of development of an embryo on a physicochemical basis.

comparative e. Investigation and comparison of the embryology of different orders of animals or of plants, one with another.

descriptive e. A study of the separate and individual portions of the embryo.

experimental e. That which uses experimental methods to investigate the development of an embryo.

em"bry oma [*embryon*, G -*ōma*, tumor]. Old term for *teratoma*.

e. of kidney See Wilms' *tumor*.

e. of ovary See *dysgerminoma*.

e. of testis. See embryonal *carcinoma* of testis.

em"bry o-mor'phous [*embryon*, G *morphē*, shape]. Like an embryo or of embryonic origin.

em'bry on [G]. Embryo *Rare*.

em'bry o-nate [*embryon*] Fecundated; containing an embryo.

em"bry o-ni za'tion [*embryon*]. Change of a cell or tissue to an embryonic form of structure.

em'bry o-noid [*embryon*, G *eidos*, form]. Embryoniform.

em"bry-o-plas'tic [*embryon*, G *plassein*, to form]. Participating in the formation of the embryo.

em"bry-o to ci (em"bree-o-to shee uh, -see-uh) [*embryon*, G *tokos*, birth]. Abortion. *Obs.*

m'bry o tome [*embryon*, G *tomos*, cutting]. An instrument for performing embryotomy.

em"bry-ot'o my [*embryon*, G *tomē*, cutting]. Any mutilation of the fetus in the uterus to aid in its removal when natural delivery is impossible.

em"bry-o-tox'on [*embryon*, G *toxon*, bow]. An opaque marginal ring in the cornea resembling arcus senilis; sometimes seen at birth.

em'bry o-trophe, em'bry o-troph [*embryon*, G *trophē*, nourishment]. 1 The total nutriment, both histotrophe and hemotrophe, supplied to the embryo during pregnancy. 2. See *histotrophe*, 1. —embryotroph'ic, *adj.*

em"bry ot'ro phy [*embryon*, *trophē*]. The nutrition of the fetus.

em"bry l'ci (em"bree-ul see-uh) [G *embryoul kia*, from *embryon*, *helkein*, to draw]. Extraction of the fetus from the uterus by means of instruments.

em"bry-ul'cus [G *embryoulkos*, hook]. A blunt hook, or obstetric forceps, used in performing embryulcia.

e mer'gen-cy med'i-cal tag In *U S Army* medicine, an individual medical record in the form of a tag, so designed that it can be attached to each casualty and bearing certain identifying and administrative data with diagnosis and treatment administered, used by aid stations, collecting stations, and clearing stations.

e·mer'gen·cy the·o·ry The concept that the major function of adrenal medulla is to liberate epinephrine in states of emergency so as to increase heart rate, raise blood pressure, reduce blood flow to viscera, and mobilize blood glucose, thereby creating optimal conditions for function of skeletal muscles.

em'e·sis [G. vomiting]. Vomiting.

em"e·ta·mine (em"i-tah-meen', i-met'uh-meen, -min) [G. *emetos*, vomiting]. $C_{29}H_{36}N_2O_4$; an alkaloid occurring in small amounts in ipecac and obtainable from emetine by dehydrogenation.

e·met"o·tro·phi·a [*emetos*; G. *atrophia*, atrophy]. Atrophy or wasting away due to persistent vomiting.

e·met'ic [G. *emetikos*, provoking sickness]. Having the power to induce vomiting.

e·met'ic. An agent causing emesis.

direct e. One acting directly on the stomach.

indirect e. One acting through the blood upon the vomiting center. Also called *systemic e.*

em'e·tine (em'i-teen, -tin) [G. *emetos*, vomiting]. $C_{29}H_{40}N_2O_4$; the principal alkaloid of ipecac, and the methyl ether of cephaeline, from which it may be prepared by methylation. A white, amorphous powder sparingly soluble in water. It is emetic, diaphoretic, and expectorant, but its chief utility is as an amebicide, being used in the form of emetine hydrochloride and emetine bismuth iodide.

e. bismuth iodide. A complex iodide of emetine and of bismuth, containing 25–30% emetine and 18–22.5% bismuth (British Pharmacopoeia); a reddish-orange powder insoluble in water; used orally in the treatment of amebic dysentery. Dose, 60–200 mg. (1–3 gr.) daily.

e. hydrochloride. $C_{29}H_{40}N_2O_4 \cdot 2HCl \cdot xH_2O$. A white or very slightly yellowish, crystalline powder freely soluble in water. Dose, subcutaneously 30–60 mg. (½–1 gr.) daily for 3 to 10 days.

em'e·to- (emet-) [*emetos*]. 1. A combining form denoting *vomiting*. 2. A combining form denoting an *emetic*.

em"e·to·ca·thar'sis [*emetos*; G. *katharsis*, cleansing]. Vomiting and purgation at the same time, or produced by a common agent.

em"e·to·ma'ni·a [*emetos*; G. *mania*, madness]. Morbid desire to vomit.

em"e·to·mor'phine (em"i-to-mor'feen, -fin) [*emetos*; G. *Morpheus*, god of dreams, from *morphē*, form, because he calls up forms before the sleeper]. Apomorphine.

em"e·to·pho'bi·a [*emetos*; G. *phobos*, fear]. Morbid fear of vomiting.

emf, e.m.f. Electromotive force. E and E.M.F. are also used.

EMG Electromyography; electromyogram.

e·mic'tion [L. *e*, out; *mictum*, from *mingere*, to urinate]. Urination.

e·mic'to·ry [*e*; *mingere*]. Diuretic. —**emic'tory**, *n.*

em"i·gra'tion [L. *emigratio*, from *emigrare*, to depart from a place]. The outward passage of wandering cells or leukocytes through the walls of a small blood vessel.

em'i·nence [L. *eminentia*, from *eminere*, to stand out, project]. A projecting, prominent part of an organ, especially a bone.

acoustic e. See acoustic *tubercle*.

arcuate e. A round protuberance on the anterior aspect of the petrous portion of the temporal bone, marking the location of the superior semicircular canal.

articular e. [BR]. The articular tubercle of the zygomatic process of the temporal bone, forming the anterior boundary of the mandibular fossa.

canine e. A prominence on the outer side of the maxilla, corresponding to the root of the canine tooth.

collateral e. A ridge on the floor of the lateral ventricle, corresponding to the depth of the collateral fissure of the temporal lobe.

cruciate e. Ridges intersecting in the form of a cross on the internal surface of the squamous portion of the occipital bone.

e. of the concha. The posterior projection on the pinna corresponding to the concha.

e. of the scaphoid fossa. The elevation on the medial side of the auricle corresponding to the scaphoid fossa on the lateral side.

e. of the triangular fossa. The elevation on the medial side of the auricle corresponding to the triangular fossa on the lateral side.

facial e. See facial *colliculus*.

frontal e. One of two rounded elevations of the frontal bone above the superciliary ridges.

genital e. An elevation which is the anlage of the penis in the male or the clitoris in the female.

hypobranchial e. A median swelling of the floor of the pharynx between the tongue and the laryngotracheal groove that forms the epiglottis and the aryepiglottic folds.

hypoglossal e. See *trigone* of the hypoglossal nerve.

hypothenar e. An elevation on the ulnar side of the palm corresponding to the muscles of the little finger.

iliopectineal e. A ridge on the hipbone, marking the site of union of ilium and pubis. Syn., *iliopubic e.*

iliopubic e. Iliopectineal eminence.

intercondyloid e. The spinous process lying between the two articular facets on the superior articular surface of the tibia.

jugular e. The spinelike extremity of the jugular process of the occipital bone.

median e. A longitudinal ridge in the floor of the fourth ventricle, bounded by the median sulcus medially and the sulcus limitans laterally. It includes the facial colliculus and the trigone of the hypoglossal nerve.

median e. of the tuber cinereum. The enlarged upper end of the stalk of the neurohypophysis, attached to the tuber cinereum and forming a small part of the third ventricle; it contains capillary anastomoses between the superior hypophyseal arteries and the hypophysis.

parietal e. The rounded part of the parietal bone. This is sometimes bosselated, due to rickets.

pyramidal e. A bony projection on the posterior wall of the tympanic cavity having an opening at its tip for the tendon and an elongated cavity for the body of the stapedius muscle.

radial e. of the wrist. A prominence composed of the tubercles of the navicular and the greater multangular bones.

supracondylar e. An epicondyle.

thenar e. A rounded elevation on the radial side of the palm corresponding to the muscles of the thumb.

ulnar e. of the wrist. A prominence made up of the pisiform bone and the hook of the hamate bone.

em"i·nen'ti·a (em"i-nen shee-uh) [L.]. Eminence.

e. carpi radialis [BNA]. See radial *eminence of the wrist*.

e. carpi ulnaris [BNA]. See ulnar *eminence of the wrist*.

em'is·sar"y (em'i-serr"ee) [L. *emissarius*, from *emittere*, to send forth]. Any venous channel through the skull, connecting the venous sinuses with the diploic veins and veins of the scalp.

e-mis·sion [L. *emissio*, from *emittere*]. 1. An ejaculation, sending forth. 2. A seminal discharge, voluntary or involuntary.
cold e. Emission of electrons from an unheated cathode under the influence of very strong electric field; also called *field*.
secondary Emission of electrons from a metal plate which is being bombarded by stream of high energy (primary) electrons.

em·men·agogue (eh-men'uh-gog, eh-mee'nuh-) [G. *emmena*, the menses; *agōgos*, leading]. An agent that stimulates the menstrual flow. —**emmenagog'ic**, *adj.*
direct e. One acting directly on the generative organs.
indirect e. One acting by relieving an underlying condition, such as anemia or constipation.

em·men'i·a (eh-me'nee-uh, -mee'nee-uh) [*emmenia*]. The menses.

Emmenin. Trade-mark for placental estrogenic substance, composed mainly of estriol glycuronide.

em·men·i·op'a·thy (eh-men'ee-op'uth-ee, eh-mee'nee-) [*emmenia*; G. *pathos*, disease]. Any menstrual disorder.

em"me·nol'o·gy [*emmenia*; G. *logos*, word]. That branch of medicine that treats of menstruation.

Emmet, Thomas Addis [American gynecologic surgeon, 1828–1919]. Famed in his time for his investigations of sterility (1865); his operation of vaginal cystotomy (1872), called *Emmet's operation*, and his technic for repair of the cervix and perineum after labor (1883), called *Emmet's perineorrhaphy*.

em·me·tro'pi·a [G. *emmetros*, in measure; *ōps*, eye]. Normal or perfect vision. The condition in which parallel rays are focused exactly on the retina without effort of accommodation. Abbreviated, E. —**emmetrop'ic**, *adj.*; **em'metrope**, *n.*

Emmons, Chester Wilson (1900–) American mycologist who investigated mycoses of man and the fungi causing them, particularly the natural and induced mutations of these fungi, simplification of their classification, and their natural occurrence in animal reservoirs and soil.

em'o·din. $C_{15}H_{10}O_5$. 1,3,8-trihydroxy-6-methylanthraquinone; product of hydrolysis or oxidation of glycosidal compounds found in rhubarb, cascara, and other plants; it has also been synthesized. It is an irritant cathartic, acting mainly on the large intestine.

em'o·din-L-rham'no·side. Frangulin.

e·mol'li·ent [L. *emollire*, to soften]. A substance used externally to soften the skin, or internally to soothe an irritated or inflamed surface. —**emol'lient**, *adj.*

e·mo·ti·o·met"a·bol'ic (i-mo"shee-o-) [L. *emotum*, from *emovere*, to stir up; G. *metabolikos*, changeable]. Modifying metabolism as result of emotion.

e·mo"ti·o·mo'tor [*emotion*; L. *motor*, from *movere*, to move]. Of, pertaining to, or inducing some activity as result of emotion.

e·mo"ti·o·mus'cu·lar [*emotion*; L. *musculus*, muscle]. Relating to muscular activity which is due to emotion.

e·mo'tion [*emotum*]. 1. A mental feeling or sentiment. 2. Strong feeling, often of an agitated nature, accompanied frequently by physical and psychic reactions, as changes in heart action, gastrointestinal and vasomotor disturbances. —**emotional**, *adj.*

e·mo"ti·o·vas'cu·lar (i-mo"shee-o-) [*emotum*; L. *vasculum*, small vessel]. Relating to some vascular change brought about by emotion.

em·pas'm (em-paz'um, em-paz'um) **em·pas'ma** (em-paz'muh) [G. *empasma*, dusting-powder from *empassein*, to sprinkle on]. A perfumed powder for dusting the person.

em'pa·thy [G. *empatheia*, passion]. In psychology, emotional identification with another's feelings.

em·phly'sis [G. *en*, in; *phlysis*, eruption]. Any vesicular or exanthematous eruption terminating in scales.

em·phrac'tic [G. *emphraktikos*, likely to obstruct]. Obstructive; closing the pores of the skin.

em·phrac'tic. Any agent that obstructs the function of an organ, especially the excretory function of the skin.

em·phrax'is [G., stoppage]. An obstruction, infarction, or congestion.
phrenic e. See *phrenicoexeresis*.

em·phy·se'ma (em-fi-see'muh, -zee'muh, em-figh-) [G., inflation, from *emphysan*, to blow in]. A condition in which there is overdistention of the air spaces in the lungs (pulmonary or alveolar e.), or in which there is abnormal presence of air or gas in the body tissues (interpulmonary e.). Overinflation of the alveoli may be physiologic (functional) or pathologic. —**emphysem'atous**, *adj.*
acute bullous e. A fulminating form of obstructive pulmonary emphysema, in which the lungs become severely overinflated due to extreme inspiratory efforts and bronchial obstruction, as in acute tracheobronchitis, suffocation from gases or drowning, or bronchial and cardiac asthma. Syn., *acute vesicular*.
aero e. See *aeroembolism*.
atrophic e. See *senile e.*
chronic pulmonary e. An obstructive type of pulmonary emphysema characterized by voluminous lungs following prolonged overinflation of the alveoli, with atrophic changes of the alveolar walls, which may thin out, rupture, or coalesce, and of the blood vessels supplying them; also called *hypertrophic e.*, *essential e.*, *substantial e.*, *inspiratory e.*, *expiratory e.*, *functional e.*, *structural e.*, *irreversible e.*, *large-lunged e.*, *hyperic e.*
compensatory e. Simple nonobstructive overdistention of lung segments or an entire lung in intrathoracic adaptation to collapse, destruction or removal of contiguous portions of lung or the opposite lung; also called *complementary e.*, *ectatic e.*
cutaneous e. See *subcutaneous e.*
ectatic e. See *complementary e.*
hypertrophic e. See *chronic pulmonary e.*
interlobular e. See *interstitial e.*
interstitial e. Air in tissue spaces between alveoli or lobules, or under the pleura, following rupture of alveoli or small respiratory bronchioles. Seen most often in the newborn following vigorous artificial respiration, in young children following pertussis, and in adults following trauma to the chest.
mediastinal e. Accumulation of air in the tissues of the mediastinum, often by extension from the interstitial connective stroma of the lungs.
nonobstructive e. See *postural e.*
obstructive e. Overdistention of the lung due to partial obstruction of the air passages, which permits air to enter the alveoli but which resists expiration of the air.
postural e. Overdistention of the lungs in conformity to changes in the size of the thoracic cage, as in acromegaly and other deformities, or as in senile emphysema.
senile e. A nonobstructive pulmonary emphysema associated with atrophic and involutionary changes seen with aging. Alveolar overdistention is considered to be due not so much to atrophic changes of the alveolar walls, but primarily to

changes in the thoracic spine and subsequent adaptation of the lungs to the size of the thorax. The lungs are usually of normal size or only slightly enlarged. Also called *small-lung e.*

subcutaneous e. The accumulation of air or gas in the connective-tissue spaces under the skin; due to trauma, or infection with gas-producing organisms.

substantive e. See chronic pulmonary *e.*

tissue e. See *aerosebaceum*, salmon *disease*.

vesicular e. An obstructive emphysema, which may be acute bullous emphysema or the chronic pulmonary form.

em·pir'ic [G. *empeirikos*, experienced]. Based on practical observation and not on scientific reasoning or education.

em·pir'ic. One who in practicing medicine relies solely on experience and experimentation; in modern usage, a quack, or charlatan. —**empirical**, *adj.*

em·pir'i·cism [*empiricus*]. Dependence upon experience or observation.

empirin. Trade-mark for a brand of acetylsalicylic acid.

e. compound. Trade-mark for a tablet containing acetylsalicylic acid, acetophenetidin, and caffeine.

em·plas'trum. A plaster.

em·pros·thot'o·nos [G. *emprosthotonos*, from *emprosthen*, in front, *tonos*, a stretching]. Tonic muscular spasm in which the body and head are forcibly flexed forward.

em"pros·tho·zy·ge'sis (em·pros·tho·zye·go·sis) [*emprosthen*, G. *zygōsis*, from *zygoun*, to join together]. The condition of conjoined twins in which the fusion is anterior.

em"py·e'ma (em·pye·ee·mah, em·pee·ee·mah) [G. *empyēma*, gathering, abscess]. A term used to indicate the presence of pus in a cavity, hollow organ, or space; such as the pleural cavity, the gallbladder, the maxillary sinus, or the pericardial cavity. —**empyemic**, **empyemat'ic**, *adj.*

e. of necessity. One in which pus from the pleural cavity burrows to the outside, appearing as a tumor in an intercostal space or at the costal border.

pulsating e. One in which there is pulsation, transmitted from the heart, through the chest wall.

streptococcal e. A pleural empyema caused by streptococci and occurring most frequently during extensive epidemics of measles and influenza as a complication of the original disease.

tuberculous e. A pleural empyema caused by the tubercle bacillus.

em"py·e'sis [G., suppuration]. A pustular eruption, as smallpox; any disease characterized by phlegmonous vesicles gradually filling with purulent fluid.

em"py·reu·mat'ic (em·pye·roo·mat'ick, em·pi·) [G. *empyreuein*, to set on fire]. Referring to any odorous substance produced by destructive distillation of organic material.

e·mul'si·fi"er [L. *emulsum*, from *emulgere*, to milk out]. An agent used to assist in the production of an emulsion.

e·mul'si·fy [*emulgere*]. Make into an emulsion. —**emulsifica'tion**, *n.*

e·mul'sin [*emulgere*]. An enzyme, found in bitter almonds and other seeds, which selectively catalyzes hydrolysis of β-glucoside linkages; thus, it effects hydrolysis of amygdalin to benzaldehyde, hydrocyanic acid, and glucose. Syn., *amygdalase*, *glucosidase*.

e·mul'sion [*emulgere*]. A product consisting of minute globules of one liquid dispersed throughout the body of a second liquid. The portion which exists as globules is known as the internal, dispersed, or discontinuous phase; the other liquid is the external or continuous phase or the dispersion medium.

e·mul'soid [*emulgere*; G. *eidos*, form]. A colloid system whose internal phase is liquid; a lyophilic colloid.

e·munc'to·ry [L. *emunctum*, from *emungere*, to wipe the nose]. Excretory.

en- [F., from L. *in*, in, into; G. *en*, in]. A prefix signifying *in*, *into*.

-en [AS. *-nian*]. A suffix meaning *to make*, *to render*.

-en [AS.]. An adjective suffix meaning *made of*.

en·am'el [OF. *esmail*, *enamel*]. The hard, calcified substance that covers the crown of a tooth.

e. drop. See *enameloma*.

e. navel. In developing enamel organs, a transitory slight depression in the outer enamel epithelium where it is joined by the enamel cord.

e. pearl. See *enameloma*.

mottled e. Imperfectly calcified or hypoplastic dental enamel that is the result of excessive ingestion of fluorides; chronic dental fluorosis.

en·am"el·o·blas·to'ma. See *ameloblastoma*.

en·am"el·o'ma [*enamel*; G. *-ōma*, tumor]. A benign odontogenic tumor consisting of enamel. It commonly appears as a nodule attached to the root of a tooth, but may be free in the periodontal membrane. Also called *enamel pearl*, *enamel drop*.

en·an·thal'de·hyde. See *heptaldehyde*.

en·an·the'ma, **en·an'them** [G. *en*, in; *anthēma*, efflorescence, pustule]. An eruption on a mucous membrane, or within the body, in distinction from *exanthema*. —**enanthem·at'ous**, *adj.*

en·an"ti·o·la'li·a [G. *enantios*, opposite; *lalia*, talk]. Talking contrariwise; a disturbance in mental and speech function which prompts ideas and words opposite to those presented as a stimulus.

en·an'ti·o·mer. Enantiomorph.

en·an'ti·o·morph" [G. *enantios*, opposite; *morphē*, shape]. 1. *In chemistry*, one of a pair of isomeric substances with asymmetric structures that are mirror images of each other. In general, enantiomorphs possess identical chemical and physical properties, but usually differ in their reactions with other asymmetric molecules or in reactions catalyzed by asymmetric molecules, including enzymes. Under identical conditions they rotate the plane of polarized light to the same extent but in opposite directions. Syn., *enantiomer*, *optical antipode*. 2. Either of two forms of a crystal which possesses neither a plane nor a center of symmetry but which has a mirror-image resemblance to the other form; under identical conditions the two forms rotate the plane of polarized light to the same extent but in opposite directions. —**enantiomor'phic**, **enantiomor'phous**, *adj.*

en·ar·thro'sis [G., from *en*, *arthron*, joint; *-ōsis*, condition]. A ball-and-socket joint, like that of the hip. —**enarthrodial**, *adj.*

enbin emulsion. Trade-marked name for a preparation containing benzyl benzoate, chlorophenothane, and ethyl aminobenzoate; used for treatment of pediculosis and scabies.

en·can'this [*en*, G. *kanthos*, corner of the eye]. A neoplasm in the inner canthus of the eye.

en·cap"su·la'tion [*en*, L. *capsula*, small box]. The process of surrounding a part with a capsule.

en·cap'suled [*en*, *capsula*]. Enclosed in a capsule or sheath.

en·ceph"a·lal'gi·a [G. *enkephalos*, brain; *algos*, pain]. Pain in the head.

en·ceph"a·lat'ro·phy [*enkephalos*; G. *atrophia*, want of food]. Atrophy of the brain.

en·ceph·a·li'tis [*enkephalos*; G. *-itis*, inflammation]. Inflammation of the brain; may be a specific dis-

ease, or sequela or complication of another disease. According to etiology encephalitis can be classified as actinomycotic, parasitic, trichinotic, etc. —encephalit'ic, *adj.*

American e. See St. Louis e.

cat-scratch e. That resulting from contact with cat rare form of cat-scratch disease. Diagnosis is based on positive skin test with cat-scratch antigen and bsence of all other infectious agents.

chronic e. A term sometimes pplied to postencephalitic paralysis agitans.

eastern equine e. See equine e.

e. periaxialis diffusa. A disease, primarily of children, due to extensive inflammation and early demyelination of the white matter in cerebral hemisphere; characterized by marked loss of hearing, speech, and sight. Also called *Schilder' disease*.

epidemic e. Lethargic e., the term is also used to refer to *Japanese e.*, *equine e.*, and *Australian X disease*.

equine e. A viral disease affecting lower animals, as birds, horses, and mules, and usually transmitted to man by mosquitoes. Three causative viral strains are known the eastern, western, and Venezuelan equine viruses. Diagnosis of th type of encephalitis rests on identification of the virus or on serologic reactions. Also called (*epizootic*) *equine encephalomyelitis*.

hemorrhagic e. That form of encephalitis with hemorrhagic foci.

herpetic e. A type of meningoencephalitis, characterized by large intranuclear inclusion bodies (Lipschütz bodies) in th brain, and diagnosed on the basis of isolation of the herpes simplex virus and serological reactions.

inclusion e. An unusually chronic form of encephalitis, involving the gray and white matter in which large intranuclear inclusion bodies, resembling those of the herpes simplex virus, are found primarily in oligodendria and less frequently in nerve cells; relationship to herpetic e., however is not known. Convulsions and progressive mental deterioration may develop.

Japanese A type due to virus and epidemic in Japan affects older persons primarily and has high mortality rate. Diagnosis rests on identification of the specific virus and serologic reactions It may be related to Australian X disease Also called *Japanese B e.* to distinguish it from *lethargic e.* (*Japanese A e.*) *Russian autumnal e.*

lead e. That due to lead poisoning and resembling acute toxic encephalitis.

lethargic e. A meningoencephalomyelitis of unknown cause, occurring chiefly during spring and winter characterized y its diversity of signs and symptoms simulating any type of neurologic syndrome in different individuals or even at different stages of the disease. The symptoms often include sleepiness at first, from which stems the name given this entity by von Economo (1917) Other common symptoms are ophthalmoplegia, berrant forms of hyperkinesia and parkinsonism, and also signs suggestiv of psychoneurosis or neurotic reactions Thought to be infectious, the disease has occurred in epidemics in the past Microscopically th lesions seen in the mesencephalon and diencephalon are more chronic and productive than those f known viral encephalitides Syn *type A e.*, *epidemic e.*, *von Economo disease*, *sleeping sickness*

lymphogranuloma venereum e. Encephalitis caused by the virus of venereal lymphogranuloma.

measles e. A postinfectious form, following measles.

mumps e. Encephalitis caused by the virus of mumps, during or after the swelling of the parotid gland, or without the usual clinical picture of mumps, and characterized by high lymphocyte count in the cerebrospinal fluid to be distinguished from postinfectious e. due to mumps virus

otogenic nonpurulent e A type of encephalitis quite similar to brain abscess, characterized by abrupt onset, high fever sensorium disturbance, headache, vomiting, convulsions, paralysis, and changes in the optic nerves. Prognosis is good.

postinfectious That occurring as sequel of any one of variety of infectious diseases, such as influenza, measles, and chickenpox. Also called *acute disseminated e.*, *encephalomyelitis*.

postvaccinal e. An acute form following vaccination against smallpox or rabies.

Russian autumnal e. See J panese e.

Russian Far East e. A viral disease of man occurring in the spring and early summer Its vector is the wood tick, *Ixodes*. Its signs and symptoms are those of either meningoencephalitis or polioencephalitis depending on the location of the lesions in the central nervous system. Diagnosis rests on identification of the specific virus and serologic reactions. Also called *Russian spring-summer* *Russian forest spring e.*, *Russian tick-borne e.*

St. Louis e. A viral meningoencephalomyelitis occurring during the summer and endemic and epidemic in the central and western United States, first reported in Illinois (1932) and in St. Louis (1933 and 1937) Symptoms are variable and diagnosis rests on identification of the virus and serologic reactions. Also called *American e.*

suppurative A type caused by pyogenic organisms and characterized by bscess formation. Also called *purulent* or *pyogenic e.*

syphilitic e. See *dementia* paralytica.

torula e. A rare form of meningoencephalitis caused by *Torula histolytica* and resembling tuberculous meningitis, cerebral tumor or epidemic encephalitis. The primary lesion is usually in the lung and involves the brain secondarily

toxic e. A commonly acute cerebral disturbance of unknown etiology occurring chiefly in children; characterized clinically by delirium or coma and convulsions, cerebral palsies, and symptoms of meningeal irritation.

type-A e. Lethargic e.

type-B e. See Japanese e.

type-C e. See St. Louis e.

Venezuelan equine e. See equine e.

western equine e. See equine e.

en-ceph ll to gen'ic [*enkephalos*; *-itis*, G. *gennethen*, from *gignesthai*, to be produced]. Producing, or capable of produc g, encephalitis.

en-ceph lo- encephal- [*enkephalos*]. A combining form meaning *the encephalon* or *brain*.

en-ceph a lo-cele" [*enkephalos*, G *kēlē*, hernia]. Hernia of the brain through congenital or traumatic opening in the cranium.

ceph" lo-dys pla sl (en-sef"ah-lo dis play zhah, -zee-uh, -shah, -see-uh) [*enkephalos*; G. *dys-*, bad *plassein*, to form]. Maldevelopment of the tissues of the central nervous system.

en-ceph lo-gram [*enkephalos*; G *gramma*, letter]. A roentgenogram of the brain made in encephalography

en-ceph" log'ra phy [*enkephalos*; G *graphein*, to write]. Roentgenography of the brain following removal of cerebrospinal fluid, by lumbar or cisternal puncture and its replacement by air or oxygen.

en-ceph' loid [*enkephalos*; G *eidos*, form]. Resembling the brain or brain tissue.

en·ceph′a·loid. A cancer of soft, brainlike consistency.

en·ceph′a·lo·lith [*enkephalos*; G. *lithos*, stone]. A calculus of the brain.

en·ceph″a·lol′o·gy [*enkephalos*; G. *logos*, word]. The study of the brain; the sum of the knowledge regarding the brain.

en·ceph″a·lo′ma [*enkephalos*; G. *-ōma*, tumor]. 1. A tumor of the brain. 2. Encephaloid carcinoma.

en·ceph″a·lo·ma·la′ci·a (en·sef″uh·lo·ma·lay′shuh, -see·uh) [*enkephalos*; G. *malakia*, softness]. A disease of the brain dependent upon deficient blood supply; the symptoms vary according to the part affected, and consist of partial or complete loss of function. Depending upon the appearance, the softening is distinguished as red, yellow or white.

en·ceph″a·lo·men″in·gi′tis. Meningoencephalitis.

en·ceph″a·lo·me·nin′go·cele [*enkephalos*; G. *mēninx*, membrane; *kēlē*, hernia]. Hernia of the membranes and brain substance through an opening in the cranium.

en·ceph″a·lo·men″in·gop′a·thy [*enkephalos*; *mēninx*; G. *pathos*, disease]. Disease of the brain and meninges.

en·ceph′a·lo·mere″ [*enkephalos*; G. *meros*, part]. Any one of the succession of segments of the embryonic brain; neuromere of the brain. —**encephalomer′ic**, *adj.*

en·ceph″a·lom′e·ter [*enkephalos*; G. *metron*, measure]. An instrument for measuring the cranium, and locating certain regions of the brain.

en·ceph″a·lo·my″e·li′tis [*enkephalos*; G. *myelos*, marrow; *-itis*, inflammation]. Inflammation of the brain and spinal cord.

acute disseminated e. An acute disorder of the brain and spinal cord with variable symptoms, due to various causes, as vaccination or acute exanthems.

equine e. An epidemic virus disease of horses, the virus being transmitted by the mosquito; occasionally communicable to man.

ovine e. Louping-ill.

en·ceph″a·lo·my″e·lo·neu·rop′a·thy [*enkephalos*; *myelos*; G. *neuron*, nerve; *pathos*, disease]. Disease of the brain, spinal cord, and peripheral nervous system.

en·ceph″a·lo·my″e·lop′a·thy [*enkephalos*; *myelos*; *pathos*]. Any disease affecting both brain and spinal cord.

en·ceph″a·lo·my″e·lo·ra·dic″u·li′tis [*enkephalos*; *myelos*; L. *radicula*, small root; G. *-itis*, inflammation]. Any acute inflammatory disease of the entire nervous system, particularly the axial portion of the peripheral nerves, the spinal roots, the cord and the bulbar nuclei; symptoms include paresthesia and weakness in the distal parts of the extremities, absence of tendon reflexes, and facial diplegia. Essential in diagnosis is an albuminocytologic dissociation in the spinal fluid. See also Guillain-Barré syndrome.

en·ceph″a·lo·my″e·lo·ra·dic″u·lop′a·thy [*enkephalos*; *myelos*; *radicula*; G. *pathos*, disease]. Disease of the brain, spinal cord, and roots of the spinal nerves.

en·ceph″a·lo·my″e·lo·ma·la′ci·a. A generalized softening of brain and spinal cord in senile persons; encephalomalacia with myelomalacia.

en·ceph″a·lo·my″o·car·di′tis. An acute, nonfatal, febrile disease of man, often accompanied by pharyngitis, stiff neck, positive Kernig sign, and hyperactive deep reflexes. Cardiac lesions have been observed only in experimental animals. It is caused by small viruses (Columbia SK, MM, EMC, and Mengo-encephalomyelitis agent); diagnosis rests on identification of the virus and serologic reactions.

en·ceph′a·lon [*enkephalos*]. The brain. —**encephal′ic**, *adj.*

en·ceph″a·lo·nar·co′sis [*enkephalos*; G. *narkōsis*, benumbing]. Stupor from some brain lesion.

en·ceph″a·lop′a·thy [*enkephalos*; G. *pathos*, disease]. Any disease of the brain.

anoxic e. Degeneration of the brain resulting from oxygen deprivation, manifested as stupor, visual disturbances, convulsions, or cerebral excitement.

lead e. Neuronal degeneration and cerebral edema, apparently resulting from the presence of lead in the brain. It may occur so acutely that the usual findings of a lead line, hypochromic anemia, and basophilic stippling of erythrocytes do not appear.

rheumatic e. A chronic inflammatory reaction of the smaller arteries of the cerebral cortex following rheumatic disease; also called *Bruetsch disease*.

saturnine e. See lead encephalopathy.

en·ceph″a·lo·punc′ture [*enkephalos*; L. *punctura*, puncture]. Puncture of the brain, especially of the cisterna.

en·ceph″a·lo·py·o′sis (en·sef″uh·lo·pye·o′sis) [*enkephalos*; G. *pyōsis*, suppuration]. Suppuration or abscess of the brain.

en·ceph″a·lo·ra·chid′i·an (·ra·kid′ee·un) [*enkephalos*; G. *rhachis*, spine]. Cerebrospinal.

en·ceph″a·lor·rha′gi·a [*enkephalos*; G. *rhēgnynai*, to burst]. Cerebral hemorrhage.

en·ceph″a·lo·scle·ro′sis [*enkephalos*; G. *sklērōsis*, hardening]. Hardening of the brain.

en·ceph′a·lo·scope [*enkephalos*; G. *skopein*, to examine]. An instrument for examining abscess cavities in the brain substance. —**encephalos′copy**, *n.*

en·ceph″a·lo·sep′sis [*enkephalos*; G. *sēpsis*, decay]. Sepsis of brain tissue.

en·ceph″a·lo′sis [*enkephalos*; G. *-ōsis*, condition]. Any degenerative disease of the brain.

criminogenic e. A syndrome in which sleep disturbances and social disorders or delinquency are associated.

en·ceph″a·lo·spi′nal [*enkephalos*; L. *spina*, spine]. Pertaining to the brain and to the spinal cord.

en·ceph′a·lo·tome [*enkephalos*; G. *tomos*, cutting]. 1. An instrument for dissecting the brain. 2. A surgical instrument for incising the brain. 3. A surgical instrument for destroying the brain of a fetus to facilitate delivery.

en·ceph″a·lot′o·my [*enkephalos*; G. *tomē*, cutting]. 1. Surgical incision of the brain. 2. Operative destruction of the fetal brain to facilitate delivery. 3. Dissection of the brain.

en·chon′dral. Contraction of *endochondral*.

en·chon·dro′ma (en″kon·dro′muh) [G. *en*, in; *chondros*, cartilage; *-ōma*, tumor]. A benign cartilaginous tumor appearing usually as a single centrally located lesion within a bone, commonly one of the bones of the hand and sometimes a long limb bone or rib. Roentgenographically the tumor produces a rarefaction in the affected bone; histologically the cells are uniform, small, with single nuclei, and a matrix which is sometimes edematous or myxoid. Also called *central c.*, *solitary enchondroma*. —**enchondromatous**, *adj.*

multiple enchondromata. See *dyschondroplasia*.

en·chon·dro·ma·to′sis. The infrequent occurrence of multiple enchondromas (enchondromata) in a single bone. Histologically the lesions are more cellular than the enchondroma, and there

is marked tendency toward malignant change. Enchondromatosis associated with multiple cutaneous hemangiomas is known as *Maffucci syndrome*. Also called *enchondrosis*, *multiple chondroma*, *multiple enchondromata*.

en·chon"dro·sar·co'ma (en kon dro-sahr-ko muh) See *chondrosarcoma*.

en·chon·dro'sis. See *enchondromatosis*.

en"chy·le'ma (en"kigh lee muh, en"ki) Old term for hyaloplasm.

en·clit'ic [G. *enklitikos*, from *enklisis*, inclination]. Presenting obliquely not synclitic; designating the inclination of the pelvic planes to those of the fetal head.

en·col·pi'tis. See *endocolpitis*.

en"co·pre'sis. Psychically caused incontinence of feces; soiling.

en·cra'ni·us [G. *en*, in *kranion*, skull] An episphenoid teratoid parasite which lies within the cranium of the autosite.

en·crus·ta'tion. See *incrustation*.

en·cy·e'sis (en sigh-ee sis) [G. *enkyēsis*, gestation]. Pregnancy *Obs.*

en·cys·ta'tion. See *encystment*.

en·cyst'ed [G. *en*, in; *kystis*, bladder]. Inclosed in cyst or capsule.

en·cyst'ment [en, *kystis*]. The state of being enclosed in cyst, or sac, or the process of forming cyst. —**encysted**, *adj*

en"da·del'phus [G. *endon*, within; *adelphos*, brother]. A monster which encloses more or less complete individual within its own body

En"da·moe'ba (en duh mee'buh) [*endon*; G. *amoibē*, change] A genus of protozoan parasites which includes species parasitic in man also spelled *Entamoeba*.

E. buccalis. Old term for *Endamoeba gingivalis*.

E. coli. A nonpathogenic species inhabiting the intestinal tract.

E. gingivalis. A species found in the mouth, about the gums, and in the tartar of the teeth.

E. histolytica. The etiologic agent of amebic or tropical, dysentery See Table of the Most Common Microorganisms Pathogenic to Man in the Appendix.

E. nana. See *Endolimax nana*.

en"da·me·bi'a·sis. See *amebiasis*

en"dan·gi·i'tis, en"dan·ge·i'tis [*endon*, G *angeion*, vessel; *-itis*, inflammation]. Inflammation of the intima of blood vessel; endarteritis or endophlebitis.

en"da·or·ti'tis [*endon*, G *aortē*, aorta *-itis*] Inflammation of the intima of the aorta.

end'-ar"bor·i·za'tion. One of the small nonmyelinated branches at the end of an axon also called *end-brush*.

en"dar·ter·ec'to·my en d ter"I ec to my [*endon*, G. *artēria*, artery; G *tomē*, cutting]. The surgical removal of an organized thrombus and the attached endothelium from segment of an artery which has become thrombosed.

en"dar·te'ri·al [*endon*, G *artēria*, artery]. Within an artery

en"dar·te·ri'tis [*endon*; *artēria*; G *-itis*, inflammation] Inflammation of the inner coat of an artery also spelled *endoarteritis*.

infectious e. An inflammatory lesion of an artery arising as the result of septic embolus.

obliterating e. A form in which the production of new intimal connective tissue obliterates the lumen of vessel

verrucous e. Rheumatic arteritis sometimes affecting the coronary arteries. The lumen contains granular material, having the same structure and staining affinities as verrucae on valves in rheumatic endocarditis.

end"au'ral [*endon*, L. *auris*, ear]. Pertaining to the inner surface or part of the external auditory canal, as endaural approach for mastoidectomy

end"ax·o·neu'ron [*endon*; G *axōn*, axis; *neuron*, nerve]. A neuron whose nerve process does not leave the spinal cord; the endaxoneurons include the column cells and the internal cells. *Obs.*

end"brain" See *telencephalon*.

end'-bulb 1. An end-foot, particularly one of the larger end-feet. 2. Krause's corpuscle.

en·dem'ic [G. *endēmos*, dwelling in place, native]. Peculiar to a certain region; said of disease which occurs more or less constantly in any locality

end·ep"i·der'mis [G *endon*, within; G *epidermis*, outer skin]. The inner layer of the epidermis. *Obs.*

end"er·gon'ic [*endon*, G *ergon*, work]. Of or pertaining to chemical reaction in which the final products possess more free energy than the starting materials usually associated with anabolism. This energy may be drawn from concomitant catabolism or from an external source.

en·der'mic [G *en*, in; *derma*, skin]. Acting through the skin by absorption, as medication applied to the skin.

en"der·mo'sis [*en*, *derma*, G. *-osis*, condition] 1. Administration of medicines through the skin, by rubbing. 2. Any herpetic affection of a mucosa.

Enders, John Franklin (1897–) American bacteriologist, who, with F C. Robbins and T H. Weller shared the Nobel prize (1954) in physiology and medicine for their discovery of the ability of the poliomyelitis virus to grow in cultures of different tissues. He is also widely known for his work on mumps and the mumps virus, including skin test for that disease.

end-feet. Small terminal enlargements of nerve fibers which are in contact with the dendrites or cell bodies of other nerve cells. The synaptic ending of nerve fiber Also called *boutons terminaux*, *end-bulbs*.

Endo, Shigeru [*Japanese bacteriologist and physician*, 1869–1937]. Produced lactose agar medium, with sodium hydroxide, phenolphthalein, fuchsin, and sodium sulfite, formerly in general use in bacteriology

en·do-, end- [G *endon*, within]. A combining form signifying *within*.

en"do·ab·dom'i·nal [*endon*, L. *abdomen*, abdomen] Within the abdomen intraabdominal.

en"do·an·eu·rys·mor'rha·phy (en do an yoor iz-mor'uh fee) [*endon*, G *aneurysma*, aneurysm; *rhaphē*, suture]. The operation for aneurysm consisting of opening the sac and folding and suturing the walls of the aneurysm, thus leaving lumen of approximately normal size.

en·do·an"gi·i'tis. Endangiitis.

en"do·a·or·ti'tis (en do-ay"or-tye'tis) See *endaortitis*.

en"do·ar"te·ri'tis. See *endarteritis*.

en"do·bi·ot'ic (en do-buy-ot'ick) [*endon*, G. *bios*, life]. Living in the tissues of the host.

en"do·bron'chi·al (en do-brong'kee-ul, -bron kee-ul) [*endon*, G. *bronchia*, bronchial tubes]. Within bronchus.

en"do·car·di'tis [*endon*, G. *kardia*, heart]. Inflammation of the endocardium or lining membrane of the heart and its valves. The condition may be acute subacute, or chronic. **Acute endocarditis** is either warty or ulcerative, the most frequent causes being rheumatism and the infectious diseases. The disease usually affects the valves of the left side of the heart and gives rise to murmur fever dyspnea, and rapid pulse. **Chronic** or **sclerotic endocarditis** is terminal process following the acute or recurrent rheumatic forms.

or is primary endocarditis due to gout, rheumatism, alcoholism, syphilis, and to other obscure causes, and usually is associated with general arteriosclerosis. Both the acute and the chronic forms give rise to insufficiency or obstruction of the valvular orifice, or to both combined. —endocardit'ic, *adj.*

acute bacterial e. A form due to invasion of bacteria such as streptococci, pneumococci, *Micrococcus pyogenes*, meningococci, gonococci, or the *Hemophilus influenzae*. Affects the valves more often than the mural endocardium. Usually vegetative in morphology but may be ulcerative. The symptoms resemble those of pyemia.

atypical verrucous e. A clinical and pathological entity of unknown cause, occurring frequently in systemic lupus erythematosus, generally involving the ventricular aspect of the valve cusps with flat extensions of finely granular verrucae upon the mural endocardium and with negative blood culture. Syn., *Libman-Sacks disease* or *syndrome*.

e. lenta. Subacute bacterial endocarditis.

infectious e. That due to infectious microorganisms, usually bacteria, but rarely other vegetable parasites.

pneumococcal e. See acute bacterial e.

rheumatic e. That which occurs in the course of and following, rheumatic fever

subacute bacterial e. A form which runs a somewhat prolonged course, usually due to alpha streptococcus (*S. viridans*) Syn., *e. lenta*.

tuberculous e. A rare type characterized by small vegetations, without typical tubercles, but in proved cases showing acid-fast bacilli.

verrucous e. A form which anatomically is characterized by the presence on the endocardium, usually valvular of minute, pale-yellow soft, sessile, loosely attached nodules made up principally of fibrin. Most common in rheumatic cardiac disease but may occur in septicemias.

en"do-car'di-um [*endon*, *kardia*]. The membrane lining the interior of the heart, consisting of endothelium and the subjacent connective tissue. See Plate 5. —endocardial, *adj.*

en"do-car"do-fi bro'sis [*endon*, *kardia*, L. *fibra*, fiber; G. *-ōsis*, increase]. Endocardial fibrosis.

en'do-carp. The inner coat of a pericarp

en"do-ce'li-ac [*endon*; G. *koilia*, cavity]. Within one of the body cavities.

en"do-cer'vi-cal [*endon*; L. *cervix*, neck] Relating to the inside of the uterine cervix.

en"do-cer"vi-ci'tis [*endon*, *cervix*; G *-itis*, inflammation]. Inflammation of the lining membrane of the cervix uteri.

en"do-cer'vix [*endon*; *cervix*]. The endometrium or mucous membrane of the cervix uteri.

en"do-chol"e-doch-al. Within the common bile duct.

en"do-chon'dral (en do-kon dral) [*endon*, G *chondros*, cartilage]. Situated within a cartilage.

en"do-col pi'tis [*endon*; G *kolpos*, vagina; *-itis*, inflammation]. Mucous vaginitis.

en"do-cra-ni'tis [*endon*; G. *kranion*, skull *-itis*]. Inflammation of the endocranium; pachymeningitis externa. *Obs.*

en"do-cra'ni-um [*endon*, *kranion*]. The inner lining of the skull; the dura mater —endocra i l *adj*

en'do-crine (en do-kryne, -krin) [*endon*; G *krinein*, to separate]. Secreting internally —endocri ic, *adj.*

en'do crine. Any of the ductless glands, such as the adrenals, the thyroid, the pituitary whose secretions pass directly into the blood stream See under *gland*

en"do cri nol'o-gy (en do kri nol o-jee, -cry-nol' jee) [*endon*, *krinein*; G *logos*, word]. The study of the internal secretions and the endocrine glands.

en"do-cri nop a thy (kri-nop uth-ee, -cry-nop uth-ee) [*endon*, *krinein*, G. *pathos*, disease]. A disorder resulting from abnormality in one or more of the endocrine glands or their secretions.

en"do-crin o-ther' -py (en do-krin o-therr uh-pee, [*endon*, *krinein*, G. *therapeia*, therapy]. Treatment of disease by the use of hormones secreted by the endocrine glands.

en doc ri nous [*endon*; *krinein*]. Obsolete term for endocrine.

en"do-cy'ma [*endon*; G. *kyma*, fetus]. A type of cryptodidymus in which the parasiti twin is visceral in location.

en'do-cyst [*endon*, G *kystis*, bladder] The inner wall of a cyst.

en"do-cys ti'tis. See *cystitis*.

en'do-derm. Entoderm.

en do-der ma to-zo o-no sis. A skin disease in which the parasite burrows deeply into, and remains embedded within, the skin, as certain acari and some oestridae larvae.

En"do-der-moph y ton [*endon*, G *derma*, skin *phyton*, plant]. Formerly a genus of the dermatophytes, now included in the genus *Trichophyton*.

en"do-der"mo-phy t sis (en do-dur'mo-figh-to sis). See *tinea imbricata*.

en"do-don tics. The branch of dentistry concerned with the treatment of pulpless teeth also called *endodontia*.

en do-don'tist. A dentist who specializes in endodontics.

en do-en"ter i'tis. See *enteritis*

en do-en'zyme [*endon*; G *en*, in; *zymē*, leaven]. An intracellular enzyme, one which is not excreted but is retained i the originating cell.

en"do-er'gic. Endothermic.

en dog' my [*endon*, G *gamos*, marriage]. Conjugation between cells having the same chromatin ancestry

en-dog'e-nous (en-dodj'i nus) [*endon*, G *gennasthai*, from *gignesthai*, to be produced]. 1 Produced within due to internal causes; applied to the formation of cells or of spores within the parent cell. 2. Relating to the metabolism of the nitrogenous elements of tissues. 3. *I psychology* arising from within the body and directly affecting the nervous system, as hereditary or constitutional disorder

en-dog' ny (en-dodj'i-nee) [*endon*, *gennasthai*]. *I biology* growth from within endogenous formation.

en"do-gna'thi-on (en do-nayth ee-on, -nath ee-on, en dohg-) [*endon*; G *gnathos*, jaw]. Albrecht hypothetical mesial portion of the premaxilla, his lateral portion being the mesognathion.

en"do go ni um [*endon*, G *gonos*, offspring]. A gonidium formed inside a receptacle or parent cell. Also called *endogonidium*.

en do la-ryn ge-al (en do-la-rin'jul, -jee-ul, -lar' in-jee ul) [*endon*, G. *larynx*, larynx]. Within the larynx.

En do-li'max [*endon*, G *leimax*, meadow]. A genus of protozoans of the family Amoebidae parasitic in man, but nonpathogenic.

E. nana. A species of nonpathogenic amebas containing a characteristic single small nucleus in which the chromatin is clustered in a single, coarse irregularly shaped karyosome; widely distributed in both temperate and tropical countries. Man is the common host, though these amebas are also found in the intestine of various species of monkeys. Formerly called *Entamoeba nana* and *Endolimax intestinalis*.

en do-lymph [*endon*; L. *lympha*, water]. The fluid

of the membranous labyrinth of the ear. —**endo-lymphat'ic, endolym phic,** *adj*

en"do-lym phan gi al, en"do-lym phan ge al [*endon*; *lympha*; G. *angeion*, vessel]. Situated or belonging within a lymph vessel.

en"do-ly'sin, en-dol'y-sin [*endon*; G. *lysis*, loosing]. Obsolete term for *leukin*.

en do-men'inx [*endon*; G. *meninx*, membrane]. The internal part of the meninx primitiva that differentiates into the pia mater and arachnoid membrane.

en"do-mes'o derm [*endon*; G. *mesos*, middle; *derma*, skin]. Mesoderm derived from the primary entoderm of a bilaminar blastodisk or gastrula.

en do me-tree'to my [*endon*; G. *metra*, womb; *ektomē*, excision]. The extirpation of the entire mucosa of the uterus through the abdomen and incised uterus. *Obs.*

en"do me tri oma. Endometriosis in which there is a discrete tumor mass.

en"do me"tri o sis [*endon*; *metra*; G. *-ōsis*, condition]. The presence of endometrial tissue in abnormal locations, including the uterine wall, ovaries, or extragenital sites; also called *Sampson's cyst*.

external e. Abnormal endometrial tissue outside or beneath the serosal surface of the uterus. The uterine serosa and myometrium may be involved from without.

internal e. That involving primarily the myometrium with diffuse involvement of the uterine wall; adenomyosis.

interstitial e. See stromal.

stromal, stromatous e. A rare form, in which the ectopic tissue resembles the stroma of late proliferative endometrium; also called *interstitial e.*, *stromal myosis*, *perithelioma*, *stromatosis*, *endolymphatic stromal myosis* or *fibromyosis*.

en do me tri'tis [*endon*; *metra*; G. *-itis*, inflammation]. Inflammation of the endometrium. Formerly a common clinical diagnosis; now for the most part, a laboratory term.

cervical e. See *endocervicitis*.

decidual e. See *deciduitis*.

e. exfoliativa. See membranous *dysmenorrhea*.

gangrenous e. Rare gangrenous inflammation of the endometrium.

infectious granulomatous e. Granulomatous inflammation of the endometrium which may be due to any of a particular group of disease processes which characteristically produce this type of response in tissues, such as tuberculosis, syphilis, and actinomycosis.

streptococcal e. Postpartum infection in which streptococci invade the uterus and produce lesions which have a peculiar foul odor. If secondary pulmonary abscesses occur the patient's breath also has this same foul odor.

syncytial e. Excessive proliferation of the syncytial trophoblastic cells near the site of the placenta with invasion of the endometrium, decidua, and adjacent myometrium by these cells; called *syncytioma*, when localized into a tumorlike mass. Syn. *syncytial deciduitis*.

tuberculous e. That caused by the tubercle bacillus.

en"do me'tri-um [*endon*; *metra*]. The mucous membrane lining the uterus. —**endometrial,** *adj*

isthmic e. That portion of the endometrium lying between the endocervix and fundus of the uterus, whose tubules are neither racemose nor secretory, and which does not show the cyclic changes characteristic of the rest of the endometrium.

en dom e try [*endon*; G. *metron*, a measure]. The measurement of the interior of an organ or cavity.

en"do-mi to'sis. The duplication of chromosomes without any accompanying spindle formation or cytokinesis.

en'do morph. *In the somatotype*, an individual exhibiting relative predominance of endomorphy.

en'do mor"phy [*endon*; G. *morphē*, form]. Component I of the somatotype, representing relative predominance of soft and round body features. In normal nutritional status, the abdominal viscera, whose functional elements are derived from entoderm, are prominent. Endomorphs tend to be fat. The counterpart on the behavioral level is viscerotonia. —**endomor'phic,** *adj*

En do my ces (en do-migh sees) [*endon*; G. *mykēs*, fungus]. An invalid name for a genus of fungi.

E. albicans. Synonym for *Candida albicans*.

E. capsulatus. Synonym for *Blastomyces dermatitidis*.

en do my" o-car-di'tis [*endon*; G. *mys*, muscle; *kardia*, heart; *-itis*, inflammation]. Inflammation of both endocardium and myocardium.

en do-mys'i um (en do-miss ee-um, -mis'ee-um) [*endon*; *mys*]. The connective tissue between the fibers of a muscle bundle, or fasciculus. —**endo-mysial,** *adj*

en"do na sal [*endon*; L. *nasus*, nose]. Within the nasal cavity, as endonasal approach in sinus drainage.

en"do-neu ral [*endon*; G. *neuron*, nerve]. Relating to or situated in the interior of a nerve.

en do neu'ri um [*endon*; *neuron*]. The delicate connective tissue holding together the fibers of a nerve bundle, or fasciculus. —**endoneurial,** *adj*

en"do-nu-cle o-lus [*endon*; L., dim. of *nucleus*, kernel]. A nonstaining area within a nucleolus.

en do par'a-site [*endon*; G. *parasitos*, parasite]. A parasite living within its host. —**endoparasit'ic,** *adj*

en"do-pep ti dase. Any of a group of enzymes, including pepsin and trypsin, capable of attacking both centrally located and terminal peptide bonds (Bergmann); a proteinase.

en"do-per"i-car di tis [*endon*; G. *perikardios*, around the heart; *-itis*, inflammation]. Inflammation of both endocardium and pericardium.

en"do per"i my"o-car-di'tis [*endon*; G. *peri*, around; *mys*, muscle; *kardia*, heart; *-itis*]. Inflammation of endocardium, pericardium, and myocardium.

en"do phle bi'tis [*endon*; G. *phleps*, blood vessel; *-itis*]. Inflammation of the intima of a vein.

en-doph"thal mi'tis [*endon*; G. *ophthalmos*, eye; *-itis*]. Inflammation of the internal tissues of the eyeball.

e. phacoanaphylactica. The anaphylactic sensitization of the human to his own lens protein by extracapsular cataract extraction. A second attempt at cataract extraction results in a sterile endophthalmitis.

suppurative e. Septic inflammation of the uveal tract with pus formation.

en'do-plasm [*endon*; G. *plasma*, anything formed]. The inner cytoplasm of a protozoon or of certain cells.

end or'gan. The expanded termination of a nerve fiber in muscle, skin, mucous membrane, or other structure.

en do-sal pin gi o'ma. See serous *cystadenoma*.

en"do sal pin gi o sis. See isthmic nodular *salpingitis*.

en do-scope [*endon*; G. *skopein*, to examine]. An instrument, equipped with an electric light or system of lenses, used for the visual examination of the interior of a body cavity or viscus through its natural outlet. —**endoscop'ic,** *adj*; **endoscopy,** *n*.

en d skel'e-ton [*endon*; G. *skeletos*, dried up]. The

internal supporting structure of an animal; the vertebrate skeleton.

en″dos·mom′e·ter (en dos-mom′i-tur, en dos) [*endon*; G. *ōsmos*, pushing; *metron*, a measure]. An instrument for measuring endosmosis.

en″dos·mo′sis (en dos-mo′sis, en dos-) **en′dos·mose** (en dos-mose, en dos) [*endon*, *ōsmos*, G. *-ōsis*, condition]. The passage of liquid inward through porous septum. —**endosmot′ic, endosmot′ic**, *adj*

en′do·sperm [*endon*, G. *sperma*, seed]. *In biology*, the protein of seed.

en′do·spore [*endon*, G. *sporos*, seed]. 1. A spore formed within the parent cell. 2. The inner coat of spore.

en·dos″te·i′tis. See *endostitis*.

en·dos″te·o′ma, en″dos·te·o′ma [*endon*, G. *osteon*, bone; *-ōma*, tumor]. A tumor within bone.

en·dos′te·um [*endon*, *osteon*]. The membranous layer of connective tissue lining the medullary cavity of bone. —**endosteal**, *adj*

en″dos·ti′tis [*endon*, *osteon*, G. *-itis*, inflammation]. Inflammation of the endosteum.

en″do·st gnus. See *epignathus*

en″dos·to′sis [*endon*, *osteon*; G. *-ōsis*, condition]. Ossification of cartilage.

en do·sub·til′y sin. An antibiotic substance derived from *Bacillus subtilis*; it is active against *Staphylococcus aureus*, *Escherichia coli*, *Eberthella typhosa*, and *Mycobacterium tuberculosis*.

en″do·ten din e·um [*endon*, L. *tendere*, to stretch]. The delicate connective tissue between the fibers of tendon bundle or fasciculus.

en do·the″li·o·an gi i′tis [*endon*, G. *thēlē*, nipple; *angeion*, vessel *-itis*, inflammation]. A systemic infection similar to, and possibly the same as, lupus erythematosus, and marked by fever arthritis, and angiitis.

en″do the″li·o·cho ri al (-kor′ee-ul) [*endon*, *thēlē*; G. *chorion*, skin]. Pertaining to maternal endothelium and chorionic ectoderm, as endotheliochorial placenta.

en″do the′li·o·cyte″ Old term for macrophage.

en do·the′li·oid [*endon*; *thēlē*; G. *eidos*, form]. Resembling endothelium.

en″do the″li·o·ly′sin (en do-theel ee lye sin, -theel″ee ol′i-sin) [*endon*, *thēlē*; G *lysis*, loosing]. A cytotoxin endowed with the capacity of dissolving endothelial cells. Syn., *hemorrhagin*.

en″do·the″li o′ma [*endon*; *thēlē*; G. *-ōma*, tumor]. A group of tumors made up of large cells morphologically like endothelium and supposedly derived from cells lining blood vessels, lymphatics, and various serous spaces. The different forms vary as to malignant character and may affect solid organs, such as lymph nodes, skin, etc because of growth from vascular or tissue spaces.

diffuse e. of bone. See Ewing sarcoma.

dural e. See *meningioma*.

e. capitis. See *cylindroma*.

e. of bone. See Ewing sarcoma.

e. of lymph node. See reticulum-cell *sarcoma*.

e. of meninges. See *meningioma*.

perithelial e. See *hemangiopericytoma*.

en″do the″li·o ma to′sis [*endon*, *thēlē*; *-ōma*; G. *-ōsis*, condition]. The presence of multiple endotheliomas.

en do·the″li·o′sis [*endon*, *thēlē*; *-ōsis*] Overgrowth of endothelium from unknown cause better called nonthrombopenic purpura.

e. of meninges. See *meningioma*.

en″do·the″li·o·tox′in. See *endotheliolysin*.

en do·the′li·um [*endon*, *thēlē*]. 1. The simple squamous epithelium lining the heart, blood vessels, and lymph vessels vascular endothelium. 2. The mesodermally derived, simple, squamous epithelium lining any closed cavity in the body *Obs.* —**endothelial**, *adj*

en″do·ther′mic [*endon*, G. *thermē*, heat]. 1. *In chemistry*, relating to the absorption of heat. 2. Pertaining to endothermy. Syn., *endoergic*.

en do ther′my en do-ther′my Diathermy

en do·thrix [*endon*; G *thrix*, hair]. A type division of the genus *Trichophyton*.

en″do·tox″i·co′sis [*endon*; G. *toxikon*, poison *-ōsis*, condition]. Poisoning by an endotoxin.

en″do·tox′in [*endon*, *toxikon*]. A toxin produced within microorganism which does not diffuse out of the bacterial cell until the cell is disintegrated.

end-plate. 1. A complex hypolemmal terminal arborization of motor nerve fiber in bed of specialized sarcoplasm; it transmits nerve impulses to muscle. 2. The achromatic masses at the poles of the mitotic spindle of Protozoa.

end pleas′ure. *In psychoanalysis*, the pleasure accompanying sexual discharge or detumescence, brought about by relief of the tension built up during the forepleasure.

end prod′uct. The final product formed by series of reactions, as the end products of sugar metabolism.

-ene [cf. L. ad] suff. *-enus*, G *-ēnos*]. *In chemistry* suffix used in the naming of certain hydrocarbons; specifically indicates *the presence of one double bond*.

en e·ma [G injection]. A rectal injection for therapeutic, diagnostic, or nutritive purposes.

high e. An injection into the colon.

retention e. Liquid injected into the rectum, the expulsion of which is delayed voluntarily in order to liquefy the rectal contents or provide medication.

en″er get′ics (en ur-jet′icks) [G. *energētikos*, active]. The branch of physics dealing with energy and the laws and conditions governing its manifestations.

en″er gom e ter [G *energos*, at work *metron*, measure]. 1. Any apparatus for measuring energy 2. One designed to measure the energy of pulse beats. —**energometry** n.

en er gy [G *energeia*, from *en*, in; *ergon*, work]. The capacity for doing work. All forms of energy are mutually convertible one into the other The quantity of work done in the process of transfer is measure of energy Therefore, work units are commonly used as energy units.

free e. That portion of the total potential energy of natural system available for the performance of work.

kinetic e. That part of the total energy of body in motion which is due to its motion.

nuclear e. Energy released in reactions involving the nucleus of an atom, especially in quantities sufficient to be of interest in engineering or in astrophysics.

potential e. The power possessed by body at rest, by virtue of its position, as the potential energy of suspended weight. Also called *latent e.*

radiant e. Energy transmitted through electromagnetic radiation.

solar e. Energy derived directly from the sun.

en er va tion [L. *enervatio*, from *enervare* to take out the sinews, to weaken]. Weakness, lassitude, neurasthenia; reduction of strength.

en gage ment [F from *en*, in; *gage* pledge]. *In obstetrics*, the entrance of the presenting part of the fetus into the superior pelvic strait.

en gas′tri us [G *en*, in; *gastēr* belly]. A form of duplicity in which parasitic fetus (or fetal parts) is included within the peritoneal cavity of its autosite.

Engelmann, Theodor Wilhelm [*German physiologist*, 1843–1909]. Described the narrow zone of transparent substance on each side of the intermediate or Z disk of the cross striae of the myofibril of muscle fiber as lateral disk (1893) called *Engelmann disk*. *Obs.*

en globe ment [F *englober* to take in]. The absorption or engulfing of substance by such cell as protozoon, leukocyte, or macrophage; phagocytosis. —**englob'ing**, *n.*

Engman, Martin Feeney [*American dermatologist*, 1869–]. Described infectious eczematoid dermatitis, low-grade infection of the skin characterized by vesicles, pustules, and crusts with scale about the edge. Often associated with drainage from some other infection such as suppurating ear (1902). Called *Engman disease*.

en gorge'ment [F *engorger* to cram in]. Hyperemia an excessive amount of blood in part, usually with local edema. —**engorged'** *adj*

en gram [G *en*, in *gramma*, letter]. The hypothetic impression or trace left upon neurons by psychic experiences; a latent memory picture.

engran. Trade-mark for an encapsulated multiple vitamin preparation.

en grappes (ahn grahp *See* NOTES § 35) [F]. Grapelike; used of fungus spores in grapelike clusters.

en hem a to-spore (en-hem uh-to-spor en hee muh-to) **en he'mo spore** (en-hee mo-spor en-hem o-) [G. *en*, in *haima*, blood *spora*, seed]. A spore of the malarial parasite produced within the human body; merozoite

en large ment. Increase in size; broadening expansion.

cervical e. Broadening of the spinal cord from the level of the third cervical to the second thoracic vertebra, maximal at the fifth cervical vertebra also called *cervical intumescence*.

lumbar e. Broadening of the spinal cord starting at the level of the ninth and maximal at the level of the twelfth thoracic vertebra. Syn., *lumbar intumescence*.

en ni tine. A multiple antibiotic from *Fusarium orthoceras* var *enniatinum*, it is active against several species of mycobacteria.

e'nol. *I chemistry*, of or designating the form of compound when it contains the =C:C(OH)— group, as distinguished from that in which it contains the tautomeric =CH CO— group, designated *keto*. The enol form is produced from the keto form by migration of hydrogen atom from the carbon atom adjoining the carbonyl group of the keto form

-ase. The enzyme that converts 2-phosphoglyceric acid to phosphopyruvic acid.

-pyruvic acid, CH_2:COH COOH the enol form of pyruvic acid, presumably formed in certain metabolic reactions involving pyruvic acid.

en oph thal'mos [*en*, G. *ophthalmos*, eye]. Recession of the eyeball into the orbit

en o si ma ni a (en o si-may'nee-uh) [G *enosis*, shaking; *mania*, madness]. A mental disorder marked by extreme terror

en os to sis [G *en*, in; *osteon*, bone; *-osis*, condition]. A bony ingrowth within the medullary canal of bone.

en'si form [L. *ensis*, sword; *forma*, shape]. Shaped like sword, as the ensiform cartilage.

Enslin [*German army physician*, contemporary]. Remembered eponymically for his description of syndrome including tower skull and atrophy of the optic nerve (1904)

en-som'pha lus [L. *ensis*, sword; G. *omphalos*, navel]. Conjoined twins (diplopagi) united by band in the epigastric and lower sternal regions

Siamese twins. See *xiphopagus*. —**ensomphal'ic**, *adj*

en'stro-phe (en stro fee) [G *enstrephein*, to turn in]. Inversion, as of the margin of an eyelid.

en"to cous tic (en toh kōōs tick) [G. *entos*, within *akoustikos*, of hearing]. Of or pertaining to subjective auditory sensations having their origin within the ear or in its vicinity

en'tad [*entos*; L. *ad*, toward]. Inward.

en tal [*entos*]. Internal.

en ta me-bi'a-sis. See *amebiasis*.

En"ta moe'ba (en tuh-mee'buh) Synonym for *Endamoeba*.

en-ta si (en-tay'shuh, -see-uh, -shuh, -see-uh), **n'ta sis** [G *entasis*, straining]. A general term for spasmodic muscular action; tonic spasm. —**entat'ic**, *adj*

en tel'e-chy (en tel'i kee) [G *entelecheia*, complete reality from *enteles*, complete, *echein*, to have]. 1. The complete realization or expression of some principle. 2. A vital influence which guides living organisms in the right direction.

en ter al [G *enteron*, intestine]. Intestinal.

en"ter-al'gi [*enteron*, G. *algos*, pain]. Pain in the intestine.

en"ter ec'ta-si [*enteron*; G. *ektasis*, extension]. Dilatation of some part of the small intestine.

en"ter-ec t my [*enteron*, G *ektomē*, excision]. Excision of part of the intestine.

en ter-e pip'l -cel [*enteron*, G *epiploon*, fold of the peritoneum; *kēlē* hernia]. Hernia in which both the intestine and the omentum are involved.

en ter'ic [*enteron*]. Pertaining to the intestine.

en ter'i-coid [*enteron*, G *eidos*, form]. Resembling typhoid fever

en"ter i'tis [*enteron*, G *-itis*, inflammation]. Any intestinal tract inflammation, acute or chronic.

acute fibrinous e. An acute inflammatory process associated with desquamation and fibrin deposition on the mucosa; not clinical entity but pathologic classification also called *membranous e.*

acute follicular e. An acute inflammation characterized by hyperplasia of the lymph nodules in the intestine; occurs commonly in children suffering from summer complaint or diarrhea.

chronic catarrhal e. A form due to passive hyperemia in which the mucosa is thickened and covered by mucus, and, in cases of long standing, is associated with atrophy

membranous e. See acute fibrinous *e.*

regional e. See *ileitis*.

tuberculous e. A common complication of far advanced or moderate cases of tuberculosis inflammation of the alimentary canal due to the presence of tubercle bacilli which are swallowed with the sputum Diarrhea, abdominal pain, anorexia, and loss of weight are the common symptoms.

en'ter-o-, enter [*enteron*]. A combining form denoting *the intestine*.

en"ter-o-a nas"to-mo si [*enteron*; G *anastomōsis*, opening] Intestinal anastomosis.

en ter"o-an'thel-one. Anthelone derived from the mucosa of the small intestine.

En"ter-o bac te"ri-a ce-ae (en ter-o-back-teer" ee-ay see-ee) [*enteron*, G *baktērion*, small staff]. A family of bacteria including many animal and some plant parasites, causing blight and soft rot the five tribes are the Escherichieae, Erwineae, Serrateae, Proteae, and Salmonelleae.

en"ter-o-bi' sis [*enteron*, G. *bios*, life NL. *-iasis*, condition]. Infestation of the small intestine, colon, and rectum with the *Enterobius vermicularis*; characterized by mild catarrhal inflammation of the intestinal mucosa, occasionally by secondary

bacterial invasion, and, if the infection is very severe, obstruction of the intestine.

En″ter·o′bi·us [*enteron*; *bios*]. A genus of nematode parasites of man.

E. vermicularis. The pinworm or seatworm; the etiologic agent of enterobiasis in man.

en′ter·o·cele [*enteron*; G. *kēlē*, hernia]. A hernia containing a loop of intestine.

en″ter·o·cen·te′sis [*enteron*; G. *kentēsis*, pricking]. Surgical puncture of the intestine.

en″ter·o·chro·maf′fin cell. See under *cell*.

en″ter·o·cri′nin [*enteron*; G. *kinēsis*, to set in motion]. A proposed term for the active principle stimulating intestinal motility; the existence of such hormone or principle is disputed.

en″ter·oc′ly·sis [*enteron*; G. *klysis*, drenching]. Injection of a fluid preparation into the rectum for nutrient, medicinal, or cleansing purposes.

en″ter·o·coc′cus [*enteron*; G. *kokkos*, seed]. A group of *Streptococci*, normally found in the intestinal tract of man and other species, pathogenic when found elsewhere, as in urinary- and respiratory tract diseases and in subacute bacterial endocarditis. All members elaborate group D C-substance.

en″ter·o·coele (en′tur·o·seel″) [*enteron*; G. *koilos*, hollow]. A coelom formed by evagination of the wall of the primitive gut. —**enterocoe′lic**, *adj.*

en″ter·o·co·lec′to·my [*enteron*; G. *kolon*, colon; *ektomē*, excision]. Resection of parts of both small intestine and colon.

en″ter·o·co·li′tis [*enteron*, *kolon*; G. *-itis*, inflammation]. Inflammation of small intestine and colon.

en″ter·o·co·los′to·my [*enteron*, *kolon*, G. *stoma*, mouth]. Operation for the formation of a communication between the small intestine and colon; enterocolic anastomosis.

en″ter·o·cri′nin (en″tur·o·krin′in, en″tur·ock′ri·nin) [*enteron*; G. *krinein*, to separate]. A hormone produced by the intestinal mucosa which stimulates the glands of the small intestine. See Table of Hormones in the Appendix.

en′ter·o·cyst″ [*enteron*, G. *kystis*, bladder]. An intestinal cyst.

en″ter·o·cys′to·cele [*enteron*, *kystis*; G. *kēlē*, hernia]. Hernia involving urinary bladder and intestine.

en″ter·o·cys·to′ma. See gastroenteric cyst.

en″ter·o·cys′to·plas″ty. A surgical procedure wherein a loop of small bowel is anastomosed to the urinary bladder to increase its capacity.

en″ter·o·cys″to·os′che·o·cele (en″tur·o·sis″toe·os′kee·o·seel) [*enteron*; *kystis*; G. *oscheon*, scrotum; *kēlē*, hernia]. A scrotal hernia containing both intestine and urinary bladder. *Obs.*

en″ter·o·en·ter′ic [*enteron*, *enteron*]. Involving two separate portions of the intestine.

en″ter·o·en″ter·os′to·my [*enteron*, *enteron*; G. *stoma*, mouth]. The surgical formation of a passage between two parts of the intestine.

en″ter·o·gas·tri′tis. Gastroenteritis.

en″ter·o·gas′tro·cele [*enteron*; G. *gastēr*, belly; *kēlē*, hernia]. A hernia containing the stomach and intestine or portions of them; ventral hernia.

en″ter·o·gas′trone [*enteron*; *gastēr*]. A hormone from the upper intestinal mucosa. It inhibits gastric motility and secretion. See Table of Hormones in the Appendix.

en″ter·og′e·nous (en″tur·odj′i·nus) [*enteron*, G. *genesthai*, from *gignesthai*, to be produced]. Originating in the intestine.

en′ter·o·graph″ [*enteron*, G. *graphein*, to write]. An apparatus which records graphically the movements of the intestine.

en″ter·o·ki′nase (en″tur·o·kigh′nace, ·naze, ·kin′ace, ·aze). An enzyme present in the mucous enteric which converts inactive trypsinogen into active trypsin.

en′ter·o·lith [*enteron*, G. *lithos*, stone]. A concretion formed in the intestine.

en″ter·o·li·thi′a·sis [*enteron*, *lithos*; NL. *-iasis*, condition]. The presence of calculi in the intestine.

en″ter·ol′o·gist. Old term for gastroenterologist.

en″ter·ol′o·gy. Old term for gastroenterology.

en″ter·ol′y·sis [*enteron*, G. *lysis*, a loosing]. Removal of adhesions binding the intestine.

en″ter·o·meg′a·ly. See *megacolon*.

en″ter·o·me′ro·cele [*enteron*, G. *mēros*, thigh; *kēlē*, hernia]. Femoral hernia involving intestine. *Obs.*

En″ter·o·mo′nas (en″tur·o·mo′nas, ·om′o·nas) [*enteron*; G. *monas*, unit]. A genus of intestinal flagellates of the family Cercomonadidae; contains only one species parasitic in man, E. hominis.

en″ter·o·my·co′sis (·migh·ko′sis) [*enteron*, G. *mykēs*, fungus; *-ōsis*, condition]. Intestinal mycosis.

en″ter·o·my·i′a·sis (en″tur·o·migh·yah′sis, ·migh·eye′uh·sis) [*enteron*, G. *myia*, fly; NL. *-iasis*, condition]. Disease due to the presence of the larvae of flies in the intestine.

en′ter·on [G., intestine]. The alimentary canal.

en″ter·op′a·thy [*enteron*, G. *pathos*, disease]. Any disease of the intestine.

en″ter·o·pex′y, en′ter·o·pex″y [*enteron*, G. *pēxis*, fixing]. In surgery, the fixation of a portion of the intestine to the abdominal wall, for the relief of enteroptosis, splanchnoptosis, etc.

en′ter·o·plas″ty [*enteron*, G. *plassein*, to form]. A plastic operation upon the intestine. —**enteroplas′tic**, *adj.*

en″ter·o·ple′gi·a [*enteron*; G. *plēgē*, stroke]. Paralysis of the intestine.

en″ter·o·proc′ti·a (en″tur·o·prock′shee·uh) [*enteron*, G. *prōktos*, anus]. The existence of an artificial anus. *Obs.*

en″ter·op·to′sis [*enteron*; G. *ptōsis*, a falling]. Prolapse of the intestine. Syn., *visceroptosis*. —**enteroptot′ic**, *adj.*

en″ter·or·rha′gi·a [*enteron*, G. *rhēgnynai*, to burst]. Intestinal hemorrhage.

en″ter·or′rha·phy [*enteron*, G. *rhaphē*, suture]. Suture of the intestine.

circular e. The suturing of two completely divided sections of an intestine.

en″ter·or·rhe′a. Old term for diarrhea.

en″ter·or·rhex′is [*enteron*, G. *rhēxis*, breaking]. Rupture of the intestine. *Obs.*

en′ter·o·scope [*enteron*, G. *skopein*, to examine]. An endoscope for examining the inside of the intestine.

en″ter·o·sep′sis [*enteron*, G. *sēpsis*, decay]. Intestinal toxemia or sepsis.

en′ter·o·spasm [*enteron*; G. *spasmos*, spasm]. Spasm of the intestine.

en″ter·o·sta′sis (en″tur·o·stay′sis, ·os′tuh·sis) [*enteron*; G. *stasis*, a standing]. Intestinal stasis; delay in the passage of the intestinal contents.

en″ter·o·ste·no′sis [*enteron*; G. *stenōsis*, being straitened]. Stricture or narrowing of the intestinal canal.

en″ter·os′to·my [*enteron*, G. *stoma*, mouth]. The formation of an artificial opening into the intestine through the abdominal wall.

en′ter·o·tome [*enteron*; G. *tomos*, cutting]. An instrument for cutting open the intestine.

en″ter·ot′o·my [*enteron*, G. *tomē*, cutting]. Incision of the intestine.

en″ter·o·tox·e′mi·a [*enteron*, G. *toxikon*, poison; *haima*, blood]. The presence in the blood stream of toxins produced in the intestine.

infectious e. of sheep. A toxemia of sheep occurring in Australia and in scattered parts of the

United States, thought to be caused by *Clostridium perfringens*, Type D. Syn., *overeating disease*.

en"te-ro-tox'in [*enteron*; G. *toxikon*, poison]. A toxin produced by the *Micrococcus pyogenes* var. *aureus* (*Staphylococcus aureus*) which gives rise to typical symptoms of food poisoning in man and the rhesus monkey (upon feeding) and in kittens (following intraperitoneal injection).

en"ter-o-zo'on [*enteron*; G. *zōion*, living being]. An animal parasite of the intestine.

en"the-o-ma'ni-a [G. *entheos*, full of the god; *mania*, madness]. A mania in which the patient believes himself to be inspired; religious insanity.

en'the-sis [G. ... putting in]. The employment of metallic or other inorganic material to replace lost tissue.

en-thet'ic [G. *enthetikos*, fit for implanting]. 1. Pertaining to enthesis. 2. Exogenous.

en-ti'ris [G. *entos*, within; *iris*, iris]. The uvea of the iris, forming its inner and pigmentary layer.

en'to-, ent- [*entos*]. A combining form signifying *within*, *inner*.

en'to-blast [*entos*; G. *blastos*, germ]. The primitive entoderm; hypoblast.

en'to-cele [*entos*; G. *kēlē*, hernia]. Internal hernia.

en"to-cho-roi'dea (en"to-ko-royd'ee-uh) [*entos*; G. *choroeidēs*, choroid]. The inner lining of the choroid membrane of the eye, made up mainly of capillaries.

entocine. Trade-mark for a vaccine for immunization against the common cold.

en'to-cone [*entos*; G. *kōnos*, cone]. The posterior lingual cusp of a maxillary molar tooth.

en"to-co'nid [*entos*; *kōnos*]. The posterior lingual cusp of a mandibular molar tooth.

en'to-derm [*entos*; G. *derma*, skin]. The innermost of the three primary germ layers, which forms the lining of the gut, from pharynx to rectum, and its derivatives. Syn., *endoderm*. —**entoder'mal**, *adj.*

presumptive e. Tissue which is the primordium of the entoderm.

primitive e. The internal layer of the gastrula; the group of cells that segregate from the inner cell mass on the ventral surface of the primitive ectoderm and from which are derived the yolk sac and embryonic gut; also called *primary e.* Syn., *entoblast*, *hypoblast*.

yolk-sac e. The epithelial lining of the yolk sac, continuous with that of the gut.

en'to-mere [*entos*; G. *meros*, part]. A blastomere capable of forming entoderm.

en-to'mi-on [G. *entomē*, notch]. The point where the tip of the mastoid angle of the parietal bone fits into the parietal notch of the temporal bone.

en"to-mog'e-nous (en"to-modj'i-nus). Originating with insects, their bites, or products; originating (growing) within an insect.

en"to-mol'o-gist [G. *entomos*, cut in pieces; *logos*, word]. A specialist in that department of zoology which deals with insects.

en"to-mol'o-gy [*entomos*; *logos*]. The study of insects.

en"to-mo-pho'bi-a [*entomos*; G. *phobos*, fear]. A morbid fear of insects.

ent"oph-thal'mi-a [G. *entos*, within; *ophthalmos*, eye]. Inflammation of the internal parts of the eyeball.

ent-op'tic [*entos*; G. *optikos*, of sight]. Pertaining to the internal parts of the eye.

ent"op-tos'co-py [*entos*; *optikos*; G. *skopein*, to examine]. Examination of the interior of the eye, or of the shadows within the eye. —**entoptoscop'ic**, *adj.*

en"to-ret'i-na [*entos*; L. *rete*, net]. The innermost portion of the retina, itself composed of five layers and an inner limiting membrane.

ent"os-to'sis, ent-os"te-o'sis [*entos*; G. *osteon*, bone; *-ōsis*, condition]. A benign growth of bone extending from the endosteal cortex into the medullary cavity; enostosis.

ent-o'tic (ent-o'tick, -ot'ick) [*entos*; G. *ōtikos*, of the ear]. Pertaining to the internal ear.

en"to-zo'on [*entos*; G. *zōion*, living being]. An animal parasite living within another animal. —**entozoal**, *adj.*

en-train'ment. A condition in which a liquid boils at such a rapid rate as to carry droplets of liquid in the vapor.

en-tro'pi-on [G. *en*, in; *trepein*, to turn]. Inversion of the eyelid, so that the lashes rub against the globe of the eye. —**entropionize**, *v.*

cicatricial e. That due to scar tissue on the inner side of the lid; affects the upper lid most commonly.

senile e. That caused by relaxation of a portion of the orbicularis, resulting from senile changes.

spastic e. That caused by excessive contraction of the ciliary portion of the orbicularis muscle; occurring almost always in the lower lid.

trachomatous e. That due to trachomatous cicatrization of the conjunctiva.

en'tro-py [*en*; *trepein*]. That portion of the energy of a system, per degree of absolute temperature, which cannot be converted to work. All spontaneous changes—i.e., those occurring in nature—are accompanied by an increase in the entropy of the system.

en'ty-py [G. *entypē*, pattern]. A condition in which the trophoblastic layer remains uninterrupted over the inner cell mass of the blastocyst.

e-nu'cle-ate [L. *enucleare*, to take out the kernels]. Remove an organ or a tumor in its entirety, as an eye from its socket. —**enuclea'tion**, **enucleator**, *n.*

enule. Trade name applied to suppositories or medicated bougies.

en"u-re'sis [G. *enourein*, to make water in]. Incontinence of urine; more specifically and preferably, urinary incontinence in the absence of demonstrable organic causes at an age when urethral sphincter control may normally be expected; a habit disturbance. —**enuret'ic**, *adj.*, *n.*; **enuresee**, *n.*

diurnal e. The less common form, occurring in the daytime.

nocturnal e. That occurring at night during sleep.

en-vi'ron-ment [F. *environ*, about]. Those external conditions which surround, act upon, and influence an organism or its parts.

en"zo-ot'ic [G. *en*, in; *zōion*, living being]. Pertaining to a disease affecting animals in a limited district; neither epizootic nor sporadic.

en'zyme (en'zime, -zim) [*en*; G. *zymē*, leaven]. A catalytic substance formed by living cells and having a specific action in promoting a chemical change. Syn., *ferment*. See Table of Enzymes in the Appendix. —**enzymat'ic**, **enzy'mic**, *adj.*

activation of enzymes. The means by which an enzyme that has little or no catalytic activity undergoes an increase in such activity; commonly the presence of another substance, of diverse nature, is required.

amylolytic e. One hydrolyzing starch to dextrin and maltose, as ptyalin, pancreatic amylase.

autolytic e. That producing autolysis or digestion of the cell in which it exists, usually at the death of the cell.

bacterial e. That existing in, or produced by bacteria.

coagulating e. One converting soluble proteins into insoluble products, as rennin, myosinase.
copper e. One of the copper-containing enzymes.
deaminating e. One splitting off —NH groups; usually followed by secondary oxidative reaction, as guanase, adenase.
decarboxylating e. That splitting CO_2 from organic acids, as carboxylase.
diastatic e. See amylolytic e.
digestive e. The enzymes concerned with digestion in the alimentary tract.
extracellular e. An enzyme which retains its activity when removed from the cell in which it is formed, or which normally exerts its activity at site removed from the place of formation. Also called *unorganized ferment, lyoenzyme.*
glycolytic e. One capable of decomposing sugars, either by hydrolysis or by oxidation.
Haas e. A yellow enzyme that oxidizes coenzyme II, having the same action as that of Warburg' old yellow enzyme.
hydrolytic e. One capable of inducing hydrolytic reactions, as carbohydrases, esterases, proteases etc.
intracellular e. An enzyme which exerts its activity within the cell in which it is formed and which loses its activity when removed from the cell. Also called *organized ferment.*
iron e. One of the group of enzymes that contain iron in the prosthetic group.
iron-porphyrin-protein enzymes. Iron porphyrin proteins, with enzymatic function.
lipolytic e. One hydrolyzing fats to glycerol and fatty acids, as pancreatic lipase.
oxidizing e. That influencing oxidation reactions, as oxidase, dehydrogenase.
phosphorylating enzymes. Enzymes which catalyze the phosphorylation or dephosphorylation of compounds.
proteolytic e. Protease; an enzyme involved in the breaking down of protein, as pepsin, rennin, etc.
pyridinoprotein enzymes. See *phosphopyridine nucleotide*
Q e. An enzyme from potato extracts which, in conjunction with potato phosphorylase, catalyzes conversion of glucose-1-phosphate to branched-chain polysaccharide.
respiratory e. An enzyme concerned with the mechanism by which molecular oxygen produces oxidations in the living cell. Indophenol oxidase, cytochrome oxidase.
steatolytic e. See lipolyti e.
Warburg's old yellow e. The oxidative enzyme that removes hydrogen from coenzyme II and gives it to gaseous oxygen. Its prosthetic group is riboflavin-5-phosphate
yellow e. Any one of 12 enzymes containing specific protein combined with isoalloxazine mononucleotide or isoalloxazine-adenine dinucleotide, involved in certain biologic oxidations; sometimes called flavoprotein.

enzymol. Trade name for liquid extract prepared from mucous membranes of animal stomachs used as solvent of necrotic and sloughing tissues.

en"zy mol' gy (en zye-mol'o-jee. en m) [en; zyme; G. logos, word]. The science and study of enzymes and the chemical reactions they catalyze.

en"zy mol'y-sis (en zye-mol'i-sis, en zi-) [en, zyme; G. lysis, loosing]. A chemical change produced by enzyme action. —**enzymolyt'ic,** *adj.*

en"zy mo sis (en zye-mo sis, en zi) See *enzymolysis.*

e'on-ism [from Charles Geneviève Louis Auguste André Timothée, chevalier d'Eon de Beaumont, 1728-1810, French diplomatic agent]. The adoption of feminine habits, manners, and costume by male. Also see *sexo-esthetic inversion, transvestitism.*

e o-sin. $C_{20}H_8Br_4O_5$ Tetrabromofluorescein. A brown-colored, crystalline powder; its aqueous solution is red with green fluorescence. A bacteriologic stain and diagnostic reagent. Commercially several rose-colored fluorescein dyes of the xanthine series are called eosins: eosin Y ethyl eosin, eosin B, phloxine, and rose bengal. See also under *stain.*
alcohol-soluble e. The potassium or sodium salt of the ethyl ester of tetrabromofluorescein. A moderately coarse, red powder; used as histologic stain. Also called *ethyl e.*
soluble e. The sodium salt of tetrabromofluorescein.

e-sin o-pe ni a [G. eōs, dawn penia, poverty]. A decrease of the normal number of eosinophils in the peripheral blood. —**eosinope'nic,** *adj.*

-sin phil [eos; G. philein, to love]. Having an affinity for eosin or any acid stain.

e"o-sin' phil. One of the eosinophil leukocytes of the blood or connective tissues. See Plate 20. —**eosinophil'ic, eosinoph'ilous,** *adj.*

-sin"o-phil'i a [eos; philein]. An increase above the normal number of eosinophils in the circulating blood or in the tissues also called *acidophilia, oxyphilia.*
tropical e. A condition of unknown cause described in India and the South Pacific area, which presents clinical picture similar to that of *Loeffler syndrome,* and may be identical with it.

pac'tal [G epaktos, brought in]. Intercalated, supernumerary
pac'tal. An epactal bone, as the interparietal or Inca bone, or the sutural or Wormian bones.

epanutin. A British brand of diphenylhydantoin sodium.

ep ar te ri-al [G epi, on; artēria, artery]. Situated upon or above an artery; applied especially to the first branch of the right primary bronchus.

ep-ax'i al [epi, L. axis, axle]. Situated above an axis.

ep-en'dy ma [G ependyma, upper garment]. The lining membrane of the cerebral ventricles and the central canal of the spinal cord. —**ependymal,** *adj*

ep-en"dy mi'tis [ependyma, G -itis, inflammation]. Inflammation of the ependyma.

ep-en dy-mo-blas-to ma [ependyma; G blastos, germ; -ōma, tumor]. A more malignant type of ependymoma, histologically showing no characteristic arrangement of cells and containing large number of oligodendroglialike cells.

ep-en dy mo-cyte [ependyma; G kytos, cell]. A cell lining the cavities of the brain; derived from embryonic epithelial cells.

p-en dy-mo'ma [ependyma; G. -ōma, tumor]. A glioma which originates i or near the ependyma and grows into ventricle; histologically the tumor may have an epithelial or papillary pattern, or there may be no characteristic arrangement varying degrees of cellular differentiation occur in the ependymal cells, (b) varying with the degree of malignancy Also called *blastoma ependymale, medulloepithelioma, spongioblastoma primitivum.*

ep-en"dy mop a-thy [ependyma; G. pathos, disease]. Disease of the ependyma.

eph e-bo-gen' -sis [G ephēbos, one arrived at adolescence genesis, production]. The spontaneous development of male germ cell thought to cause chorionic carcinoma or teratoma of the testis.

E phe dra, Eph e-dra [G ephedra, sitting upon]. A genus of shrubs of the Gnetaceae, from some species of which is obtained the alkaloid ephedrine.

Under the name *ma-huang* species of *Ephedra* have been used in China for many years.

e-phed'rine (eh fed'rin, ef'i-dreen, -drin) (*ephedrina*) $C_6H_5CHOHCH(CH_3)NHCH_3$. An alkaloid obtained from *Ephedra equisetina*, *E. sinica*, and other species, or produced synthetically. It is anhydrous or contains up to one-half molecule of water of hydration. White crystals or granules slowly decomposed by light. Sol ble in 20 parts of water or 0.2 part of alcohol; slowly soluble in liquid petrol tum. Aqueous solutions are alkaline. Its actions are similar to those of the chemically related epinephrine but slower and longer lasting. Stimulant to the peripheral endings of the sympathetic nerves. Used in hay fever and asthma, urticaria, surgical shock and as topical application to mucous membranes in congestions such as colds, etc. Dose 15–50 mg. (¼ ⅚ gr.)

e. hydrochloride (*ephedrinae hydrochloridum*) F ne white, odorless crystals or powder soluble in 3 parts of water or 14 parts of alcohol. Dose 15–60 mg. (¼ 1 gr.)

e. sulfate (*ephedrinae sulfas*) Fine, white odor less crystals or powder soluble in 1.2 parts f water or 95 parts of alcohol. Dose, 15–60 mg. (¼ 1 gr.) Locally solutions of 0.5–3.0% are used.

ph-e'lis (ef ee'lis) (pl *ephelides*) [G *ephelis*, freckle, from *hēlios*, sun]. A freckle.

e-phem er-al [G *ephēmeros*, living but day] Temporary pplied to fevers that are of short duration.

-e phen mine pen'i cil'lin G Generic name for the antibiotic supplied under the trade-marked name compenamine

ephetonin. A trade-mark for racemi (optically inactive) form of ephedrine hydrochloride. It is used like ephedrine but is less ctive and also causes side reactions less frequently

eph'i dro si [G superficial perspiration]. Excessive perspiration; hyperhidrosis.

e. cruenta. Bloody sweat.

e. tincta. Colored sweat chromhidrosis.

ephynal. Trade-mark for synthetic α-tocopherol, substance having potent vitamin-E activity

ep'i-, ep- [G. *epi*, on, upon]. 1 A prefix meaning *upon, beside, among above anterior over on the outside*. 2. I *chemistry*, prefix denoting relation of some ki d to (specified) compound.

ep'i a gnath us (ep ee-a-nath us, -nayth us, ep eeag' ath-us) [*epi*, G *a-* not, *gnathos*, jaw]. An individual with deficient upper jaw

ep'i blast [*epi*, G *blastos*, germ] 1 The epidermal ectoderm after segregation of the neuroblast. 2. Old term for primitive ectoderm of blastula

ep'i bleph'a ron [*epi*, G *blepharon*, eyelid] A congenital fold of skin on the lower eyelid, causing lashes to turn inward. *Rare.*

pib ly [G *epibolē*, throwing on]. A process of overgrowth in gastrulation in telolecithal eggs, in which the blastoporal lips spread ver the vegetal hemisphere of the gastrula. —**epibol'ic,** *adj*

ep'i bulb ar [G. *epi*, on; L. *bulbus*, bulb]. Situated upon the globe of the eye.

ep'i can'thus [*epi*; G. *kanthos*, corner of the eye] A congenital anomaly in which fold of skin covers the inner canthus and caruncle. Epicanthus is racial characteristic of the Mongolia race, and is not uncommon in infants of other races in whom the nasal bone is underdeveloped.

ep'i-car'di [*epi*, G *kardia*, heart] The lower end of the esophagus, between the diaphragm and the stomach. —**epicardial,** *adj*

ep'i-car'di um [*epi*, *kardia*]. The visceral layer of the pericardium. See Plate 5. —**epicardial** *adj.*

e pic'a-rin, ep'i-car'in. An antiseptic and antiparasitic, chemically β-hydroxynaphthyl-o-hydroxy-m-toluic acid; used in the form of 5–20% ointment or 10% alcoholic solution in skin diseases.

ep'i carp [G. *epikarpos*, from *epi*, *karpos*, fruit]. The outermost layer of the pericarp of fruit.

ep'i-chor'dal (ep'i kor dul) [*epi*, G *chordē*, chord]. Located bove or dorsad of the notochord, applied especially t cerebral structures.

ep'i cho ri l (ep'i kor ee ul) [*epi*, G *chorion*, membrane]. Located on the chorion.

ep'i-cho ri-on (ep'i ko ree-o) [*epi*, *chorion*]. The decidua capsularis.

ep'i col'i [*epi*, G *kolon*, colon]. Situated over the colon.

ep'i co mus [*epi*, G *komē*, hair]. An individual (utosite) with parasitic accessory head attached to its vertex. Syn., *craniopagus parasiticus.*

ep'i con dyl al'gi [*epi*, G *kondylos*, knuckle *algos*, pain]. Pain in the vicinity of an epicondyle.

ep'i con'dyle [*epi*, *kondylos*]. An eminence upon bone above its condyle. —**epicondylar epicondyl'ian, epicondyl'ic,** *adj*

ep'i-con'dy li'tis [*epi*, *kondylos*; G. *-itis*, inflammation]. Inflamm tion of an epicondyle, specifically that of the humerus; often pplied to synovitis of the radiohumeral articulation. Also called *radiohumeral bursitis, radiohumeral e.*

ep'i-cra ni-o-tem'po-ral'is. A portion of the uricularis anterior muscle.

ep'i cra ni um [*epi*, G *kranion*, skull]. The structures covering the cranium.

ep'i-cra ni us [*epi*, *kranion*]. The occipitofrontalis muscle. See Table of Muscles in the Appendix.

p'i-cri'sis [G *epikrisis*, determination]. The disease phenomena succeeding crisis.

e-pic ri-sis [*epikrisis*]. A critical summary or analysis of the record of case or of scientific article.

ep'i crit'i [G. *epikritikos*, determinative]. Pertaining to sensory nerve fibers which enable one to ppreciat very fine distinctions of temperature and touch. These fibers are found in the skin and oral mucosa.

ep'i-cys ti'ti [G *epi*, on; *kystis*, bladder; *-itis*, inflammation]. Inflammation of the tissues about the urinary bladder

ep'i-cys-tot o my [*epi*, *kystis*; G. *tomē*, cutting]. Suprapubic incision of the urinary bladder *Obs.*

ep'i-cyte [*epi*, G *kytos*, cell]. 1. The cell wall. 2. A cell of epithelial tissue.

ep'i dem'ic [G *epidēmios*, among the people]. Unusual prevalence of disease ordinarily affecting large numbers or spreading over wide area. An arbitrary standard of normal incidence is used to determine the presence of an epidemic. The number f cases occurring for the equivalent chronological period during the previous five years is used to determine the median. —**epidemic'ity** (ep'i-di-mis -tee), *n.*

ep'i-de'mi-ol'o-gist (ep -dee mee-ol'o-jist, ep'i-dem ee-) [*epidēmios*; G. *logos*, word]. One who has made special study of epidemiology

ep'i de mi-ol' gy [*epidēmios*; *logos*]. The study of occurrence and distribution of disease; usually restricted to epidemic and endemic but sometimes broadened t include all types of disease. —**epidemiolog'ic,** *adj*

ep'i derm. See *epidermis.*

ep'i-der"ma to-plas'ty (ep'i-dur'muh-to-plas'tee, ep -dur muh-to-plas tee, ep'i-dur-mat o-plas tee) [G *epiderma*, epidermis, *plassein*, t mold]. Skin grafting by transplanting small pieces to denuded areas.

ep'i-der"ma to zo on-o-sis [*epiderma*; G *zōon*, animal *-osis*, condition]. Any skin disease in

which the parasite, such as the louse, remains on the surface of, and does not burrow into, the skin. Syn., *epizoonosis*.

ep"i-der"mi-dal-i-za'tion [*epidermis*]. The conversion of columnar into stratified squamous epithelium.

ep"i-der"mi-do-sis. See *epidermosis*.

ep"i-der'min. A fibrous protein isolated from skin, having an alpha-keratin structure.

ep"i-der'mis, ep"i-derm [*epidermis*]. The protective, epithelial outer layer of the skin apposed to the dermis or corium. —**epider'mal, epider'mic, epidermat'ic,** *adj*.

ep"i-der-mi'tis [*epidermis*; G. *-itis*, inflammation]. Inflammation of the outer layer of the skin.

ep"i-der"mi-za'tion [*epidermis*]. 1. The formation of epidermis. 2. Skin grafting.

ep"i-der'mo- [*epidermis*]. A combining form denoting *epidermis*.

ep"i-der"mo-dys-pla'si-a ver-ru"ci-for'mis (ep"i-dur"mo-dis-play'zhuh verr-oo"si-for'mis, -play'zee-uh, -play'shuh, -play'see-uh). A congenital defect in which verrucous lesions occur on the hands, feet, face, or neck.

ep"i-der'moid [*epidermis*; G. *eidos*, form]. Resembling epidermis.

ep"i-der'moid. A neoplasm occurring as a cyst in the epidermis; containing keratin, hair, or any other parts arising from epidermis.

ep"i-der-mol'y-sis. The easy separation of various layers of skin, primarily of the epidermis from the corium. See Nikolsky sign.

ep"i-der-mol'y-sis bul-lo'sa. A genodermatosis characterized by the development of vesicles and bullae on slight, or even without, trauma. It was described by Heinrich Koebner.

e. b. dystrophica. A condition in which bullae of skin form on slight trauma or without it, followed by scarring and atrophy. Nails become dystrophic and are sometimes destroyed. Oral mucosa may show bullae, infiltration, or patches of leukoplakia. There may be alopecia and electroencephalographic changes. There is linkage with acrodermatitis enteropathica.

e. b. hereditaria letalis. A rare form characterized by bullae which may contain lymph or blood. The nails are loosely attached and there are oral lesions. Death usually occurs before the third month.

e. b. simplex. The mild type; bullae form in early childhood; there is complete healing, tendency to remission at puberty with none of the other symptoms which occur in the dystrophic type.

ep"i-der"mo-my-co'sis (-migh-ko'sis) [*epidermis*; G. *mykēs*, fungus; *-ōsis*, condition]. Any dermatitis caused by a fungus.

ep"i-der-moph'y-tid [*epidermis*; G. *phyton*, plant]. A secondary allergic skin eruption thought to occur when the fungus *Epidermophyton floccosum*, or its products, is carried through the blood stream to sensitized areas of the skin.

Ep"i-der-moph'y-ton (ep"i-dur-mof'i-ton, ep"i-dur"mo-figh'ton) [*epidermis*; *phyton*]. A genus of fungi of the dermatophyte group; contains but one recognized species. See Table of the Most Common Microorganisms in the Appendix.

E. floccosum. The single species of this genus, found in infections of the skin and nails, and especially of the groin. Syn., *Acrothecium floccosum*.

E. inguinale. Synonym for *E. floccosum*.

ep"i-der"mo-phy-to'sis (ep"i-dur"mo-figh-to'sis) [*epidermis*; *phyton*; G. *-ōsis*, condition]. Infection by the *Epidermophyton floccosum*. It has commonly been used to include any fungus infection of the feet producing scaliness and vesicles with pruritus.

ep"i-der"mo-pro'te-ase. A protease isolated from the epidermis.

ep"i-der-mo'si-s [*epidermis*; *-ōsis*]. A collective name for anomalous growths of the skin of epithelial origin and type.

ep"i-did"y-mec'to-my [G. *epididymis*, from *epi*, on, *didymos*, testis; *ektomē*, excision]. Surgical removal of the epididymis.

ep"i-did'y-mis (pl. *epididymides*) [G.]. That portion of the seminal duct lying posterior to the testis and connected to it by the efferent ductules of the testis. See Plate 44. —**epididymal,** *adj*.

ep"i-did"y-mi'tis [*epididymis*; G. *-itis*, inflammation]. Inflammation of the epididymis.

ep"i-did'y-mo- [*epididymis*]. A combining form signifying *epididymis*.

ep"i-did'y-mo-or-chi'tis (ep"i-did"i-mo-or-kigh'tis) [*epididymis*; G. *orchis*, testis; *-itis*, inflammation]. Inflammation of both the epididymis and testis.

ep"i-did"y-mot'o-my [*epididymis*; G. *tomē*, a cutting]. Making an incision into the epididymis.

ep"i-did"y-mo-vas-os'to-my (-vase-os'to-mee, -vas-) [*epididymis*; L. *vas*, vessel; G. *stoma*, mouth]. Surgical anastomosis of the ductus deferens with the epididymis.

ep"i-du'ral [G. *epi*, on; L. *durus*, hard]. Situated upon or over the dura.

ep"i-fas'ci-al (ep"i-fash'ee-ul, -fash'ul) [*epi*; L. *fascia*, band]. Of, pertaining to, or on a fascia.

ep"i-fol-lic"u-li'tis [*epi*; L. *folliculus*, small bag; G. *-itis*, inflammation]. Inflammation of the hair follicles of the scalp.

ep"i-gas-tral'gi-a [*epi*; G. *gastēr*, belly; *algos*, pain]. Pain in the epigastrium.

ep"i-gas'tric [*epi*; *gastēr*]. Of or pertaining to the epigastrium.

ep"i-gas'tri-o-cele". See *epigastrocele*.

ep"i-gas'tri-um [*epi*; *gastēr*]. The upper and middle part of the abdominal surface between the two hypochondriac regions; the epigastric region.

ep"i-gas'tri-us [*epi*; *gastēr*]. A form of double monster having a parasitic twin or part attached to the epigastric region of the other. Also called *thoracopagus parasiticus, epigastrius parasiticus*.

ep"i-gas'tro-cele, ep"i-gas'tri-o-cele [*epi*; *gastēr*; G. *kēlē*, hernia]. A hernia in the epigastric region.

ep"i-gen'e-sis [*epi*; G. *genesis*, production]. The theory that the fertilized egg gives rise to the organism by the progressive production of new parts, previously nonexistent as such in the egg's original structure. Distinguished from preformation. —**epigenet'ic,** *adj*.

ep"i-glot"ti-dec'to-my [*epi*; G. *glōttis*, glottis; *ektomē*, excision]. Excision of the epiglottis.

ep"i-glot'tis [*epi*; *glōttis*]. An elastic cartilage covered by mucous membrane forming that superior part of the larynx which guards the glottis during swallowing. See Plate 12. —**epiglottic,** *adj*.

ep"i-glot-ti'tis [*epi*; *glōttis*; G. *-itis*, inflammation]. Inflammation of the epiglottis.

e-pig'na-thus, ep"i-gnath'us [*epi*; G. *gnathos*, jaw]. A condition in which a mixed tumor, teratoma, or parasitic twin fetus (or part of a fetus) is attached to the base of the skull or to the jaws, usually to the hard palate.

ep"i-gua'nine (ep"i-gwah'neen, -nin, -gwan'een, -in), **ep"i-gua'nin.** $C_6H_7ON_5$. Methyl guanine. A purine base found in human urine, especially during leukemia.

ep"i-hy'oid [*epi*; G. *hyoeidēs*, shaped like the letter upsilon]. Situated upon the hyoid bone.

ep"i-la-mel'lar (ep"i-lah-mel'ur, -lam'i-lur) [*epi*; L.

lamella, small plate of metal]. Situated upon a basement membrane.

ep"i·la·tion [L. *e*, out; *pilus*, hair]. Removal of the hair by the roots by the use of forceps, chemical means, or roentgentherapy. —**ep'ilate**, *v.*

ep"i·lem'ma (pl. *epilemmata*) [G. *epi*, upon; *lemma*, that which is peeled off]. The perineurium of very small nerves. *Obs.*

ep'i·lep·sy, **ep"i·lep·si** [G. *epilēpsia*, a seizure]. A disorder of the brain characterized by recurring excessive neuronal discharge, manifested by transient episodes of motor, sensory, or psychic dysfunction, with or without unconsciousness or convulsive movements. The seizure is associated with marked changes in recorded electrical brain activity. —**epilep'tic**, *adj., n.*

acousticomotor e. See reflex *e.*

adversive e. A seizure characterized by turning of the head, eyes, and trunk in single direction, until the entire body is twisted, usually caused by lesion in one frontal lobe.

affective e. See psychic *e.*

akinetic e. A form in which there are seizures characterized by sudden loss of muscle tone and postural control, with nodding of the head, and falling. The electroencephalogram is not characteristic, and usually resembles that of petit mal epilepsy. Also called *atonic "drop" e.*

Amantea's reflex e. A form characterized by intense clonic movements, sometimes produced in experimental animals by applying strychnine to the motor areas of the cortex, after tactile stimulation of corresponding skin areas.

atonic "drop" e. See akinetic *e.*

autonomic e. That in which seizures are confined to the autonomic nervous system, predominantly the sympathetic portion. The visceromotor manifestations include pupillary changes, fluctuations of temperature, and cardiovascular, gastrointestinal, and pilomotor disturbances. Viscerosensory manifestations, such as the epigastric aura or sense of nausea, are sometimes also present. See also diencephalic autonomic *e.*

brain-stem e. See tonic postural *e.*

central e. Any epilepsy characterized by seizures in which the epileptogenic discharge originates in the higher integrating brain stem. Included are grand mal, petit mal, psychomotor epilepsy, and certain forms of automatism.

"centrencephalic" e. See central *e.*

cerebellar e. A term sometimes used for tonic postural epilepsy because the manifestations simulate those produced by cerebellar lesions, although the cerebellum is not involved.

continuous e. Epilepsy characterized by continuous muscular twitchings of some part of the body without loss or impairment of consciousness. Attributed to brain infection. Also called *partial continuous epilepsy*, *Kozhevnikov* (*Kojewnikoff's*) *e.*

cortical e. See Jacksonian *e.*

cryptogenic e. That for which cause has been found. Syn., *idiopathic e.*

cursive e. A form manifested by seizures characterized by uncontrollable forward running of the patient who appears oblivious to any obstacles in his course; also called *running fits*.

decerebrate e. See tonic postural *e.*

diencephalic autonomic e. A form of autonomic epilepsy with sudden vasodilation, lacrimation, salivation, tachycardia, slowed respiration, and other signs of autonomic system disturbances. Gastrointestinal (viscerosensory) signs, however, are absent. It is usually caused by lesion of the floor of the third ventricle.

dreamy state e. An illusional seizure consisting of rather sudden alteration of the patient's own perceptions, as sudden feeling of familiarity or strangeness in the environment; indicative of lesion in the temporal lobes. Syn., *déjà vu.*

focal e. See Jacksonian *e.*

grand mal e. A complete epileptic seizure; characterized by sudden loss of consciousness, tonic convulsion, cyanosis, and dilated pupils, followed by a clonic spasm of all voluntary muscles, with the eyes rotated upward, the head extended, frothing at the mouth, and, frequently, incontinence of urine. After the convulsion subsides, the patient is confused and then falls into deep sleep. The electric rhythm or brain wave during grand mal attack is one of increased rate and high voltage. Also called *epilepsia gravis.*

gustatory e. A convulsive seizure announced by an aura of peculiar taste; frequently characterized by smacking movements of the tongue and lips, usually indicative of an irritation of the cortex in the region of the hippocampal convolution.

hypothalamic e. See autonomic *e.*

hysterical e. A functional disorder in which the seizures occur in the presence of others; they are violent, marked by disorganized muscular movements, do not cause injury, and are abruptly terminated without the confusion and lethargy which usually occur in true epilepsy.

idiopathic e. A convulsive disorder not caused by known or specific brain disease.

Jacksonian e. Spasmodic contractions in certain groups of muscles or paroxysmal paresthesias in certain skin areas due to local disease of the cortex. May be limited to one side of the body with retention of consciousness or it may progress and become generalized with loss of consciousness. Syn., *focal e.*, *cortical e.*

Kozhevnikov e. See continuous *e.*

musicogenic e. See reflex *e.*

myoclonic petit mal e. Severe petit mal epilepsy in which the patient exhibits symmetrically bilateral jerks of the eyes, face, neck, limbs, or trunk muscles. Its electroencephalogram is typical of petit mal, but also shows sporadic multiple spike-and-wave complexes.

myoclonus e. A degenerative disease characterized by recurrent fibrillary twitching of muscle fibers, associated with generalized convulsions and progressive impairment of mental functions; it may be identical with paramyoclonus multiplex.

nocturnal e. That in which the attacks occur during sleep.

opisthotonic e. See tonic postural *e.*

organic e. That due to known brain disease, as contrasted with idiopathic epilepsy.

partial continuous e. See continuous *e.*

petit mal e. A form characterized by very short lapses of consciousness and by a sudden momentary pause in conversation or movement, the duration of which is rarely more than 30 seconds. Petit mal attacks are frequent in children, and may occur as often as 200 times day, but rarely cause the patient to fall or to show muscular spasm. The brain wave disturbance is very slow rate of three or four waves per second. Also called *epilepsia mitis*, *epilepsia vertiginosa*. See *pyknolepsy.*

photogenic, photic e. A form characterized by convulsive seizures induced by photic stimulation, i.e., flicker or intermittent light; the attacks are usually of the myoclonic type.

psychic e. A form in which the seizures are precipitated by an emotional or mental experience.

psychomotor e. That in which transient mental disturbances replace the typical convulsions. Syn., *epileptic equivalent.*

reflex e. A form characterized by convulsive seizures brought about by sensory stimuli such as music, sudden noise (*acousticomotor e.*) or an object of touch or sight, with electroencephalographic changes in the sensory projection area corresponding to the trigger zone.

sensory e. Various disturbances of sensation occurring in paroxysms that replace the epileptic convulsion.

spinal e. Clonic spasm of certain muscle groups of the lower extremities; seen in spastic paraplegia.

striate e. A form characterized by tonic seizures of one or both limbs, attributed to lesions of the corpus striatum. Syn., *subcortical e.*

sympathetic e. See autonomic e.

symptomatic e. A convulsive state in which causative lesion or agent has been found.

tonic postural e. A form in which seizures are characterized by rigid posture with arms and legs extended, hands pronated, and feet held in plantar flexion. The state may resemble decerebrate rigidity or opisthotonos. The focus of the discharge is localized in the brain stem.

toxemic e. That due to poisonous substances in the blood, as in uremia, or due to convulsant doses of drugs, such as strychnine, picrotoxin, metrazol, or camphor.

traumatic e. That form following the cicatrization of laceration of the brain; it is clinically similar to Jacksonian epilepsy.

uncinate e. That characterized by an olfactory aura, as recurring, pungent odor preceding the period of unconsciousness and muscle spasm. Usually caused by an irritation of the uncinate gyrus in the anterior-inferior portion of the temporal lobe.

vasomotor e. That in which extreme constriction of the arteries precedes the attacks, causing dusky cyanotic discoloration of the skin.

visceral e. See autonomic e.

ep"i·lep"to·gen'ic, ep"i·lep·tog'e·nous (ep"i-lep"to-jen'ick, ep"i-lep-todj'i-nus) [G. *epilēptos*, caught in anything *preceded, from gignesthai*, to be produced]. Producing epilepsy.

ep"i·lep'toid [*epilepsy*; G. *eidos*, form]. Resembling epilepsy.

ep"i·lep'toid. A person subject to nervous attacks of the *general nature of epilepsy*.

ep"i·loi'a. See tuberous sclerosis.

ep'i·mer [G. *epi*, on; *meros*, part]. Either of a pair of isomeric aldoses the configurations of which are identical except in the positions of H and OH attached to the number 2 carbon atom, i.e. the carbon atom next to the aldehyde group. D-Glucose and D-mannose, for example, are epimers. —**epimer'ic**, *adj.*

ep'i·mere. The dorsal portion of the mesothelial lining of the coelom of primitive chordates, forming skeletal musculature and contributing to dermis and axial skeleton.

ep"i·my"o·car'di·um [*epi*; G. *mys*, muscle; *kardia*, heart]. The external part of the embryonic heart that develops into the epicardium and myocardium.

Ep'i·mys [*epi*; G. *mys*, mouse]. A genus of rats and mice of the family Muridae. **E. norvegicus** is the common ship rat; **E. rattus**, the plague rat of India.

ep"i·mys'i·um (ep"i-mis'ee-um, -miz'ee-um) [*epi*; G. *mys*, muscle]. The sheath of connective tissue surrounding a muscle.

ep"i·neph'rine (ep"i-nef'reen, -rin). $C_9H_{13}NO_3$. *l*-α-3,4-dihydroxyphenyl-β-methylaminoethanol; the *chief hormone of the adrenal medulla*, occurring as minute, colorless crystals that gradually acquire a brown color on exposure to light and air; it is sparingly soluble in water. It may be obtained by extraction from the gland or prepared synthetically. The physiologic *actions* of epinephrine are incompletely understood. It is sometimes used as a vasoconstrictor and cardiac stimulant in acute circulatory failure; as a local vasoconstrictor in hemorrhage and local congestion; to relax the bronchi in asthmatic paroxysms. The effect of local anesthetics is prolonged by its vasoconstrictor action. It causes uterine contractions. Dose, 0.3–1.0 cc. (*5–15 min.*) of a 1:1000 solution intravenously, intramuscularly, or subcutaneously. Its action is fleeting. For local application, 1:10,000 to 1:1000 solutions are used. Employed by inhalation in the form of a 1:100 solution. It is marketed under various names as *adrenalin*, *suprarenalin*, *adrenine*, and *suprarenin*. See Table of Hormones in the Appendix.

demethylated e. See *norepinephrine*.

e. bitartrate. $C_9H_{13}NO_3.C_4H_6O_6$, occurring as a white or grayish-white or light brownish-gray crystalline powder; 1 Gm. dissolves in about 3 cc. of water. This salt is well suited for preparation *of solutions and ointments containing epinephrine*, the products being more stable and less irritant than those made from hydrochloric acid solutions of epinephrine.

e. inhalation (*inhalatio epinephrinae*). A 1:100 solution of epinephrine in distilled water, prepared with the aid of hydrochloric acid. Dispersed in the form of a fine mist, it is employed as an inhalation to control bronchospasm. Dose, 0.5–1.0 cc. (8–15 min.) by inhalation.

e. injection (*injectio epinephrinae*). A solution of epinephrine, generally 1:1000, in water for injection, prepared with the aid of hydrochloric acid.

e. solution (*liquor epinephrinae*). A 1:1000 solution of epinephrine in distilled water prepared with the aid of hydrochloric acid. For local application.

slow e. An epinephrine suspension in a vegetable oil; the action is thereby retarded and prolonged. A solution in an aqueous gelatin base is used similarly.

ep"i·neph"ri·ne'mi·a [*epi*, G. *nephros*, kidney; *haima*, blood]. The presence of epinephrine in the blood.

ep"i·ne·phri'tis [*epi*; *nephros*; G. *-itis*, inflammation]. Inflammation of a suprarenal capsule.

ep"i·neph'ros [*epi*; *nephros*]. Suprarenal gland. *Obs.*

ep"i·neu'ral [*epi*; G. *neuron*, nerve]. Attached to neural arch.

ep"i·neu'ri·um [*epi*; *neuron*]. The connective-tissue sheath of a nerve trunk. —**epineurial**, *adj.*

epinine. Trade-mark of a product, dihydroxyphenyl-methylaminoethane, having vasomotor *effect* similar to that of epinephrine, to which it is chemically related, but about one-tenth as powerful and more prolonged in its action.

ep"i·ot'ic (ep ee-ot' ick, -o tick) [*epi*, G. *ōtikos*, of the ear]. Situated above or on the cartilage of the ear.

ep"i·pal'a·tum [*epi*; L. *palatum*, palate]. That variety of epignathus in which the parasitic fetus or fetal remnant is attached to the palate.

ep"i·pas'tic [G. *epipassein*, to sprinkle over]. Having the qualities of a dusting powder.

ep"i·pas'tic. A powder for use on the surface of the body, as talc.

ep"i·phar'ynx [G. *epi*, on; *pharynx*, pharynx]. The nasopharynx. —**epipharyn'geal**, *adj.*

ep"i·phe·nom'e·non [*epi*; G. *phainomenon*, from *phainesthai*, to appear]. An unusual or peculiar event or process in the course of a disease, not

necessarily due to the same cause, for example, epituberculosis in lungs due t focal atelectasis or nontuberculous pneumonia.

e-piph·o·ra [G from *epipherein*, to bring upon]. A persistent overflow of tears, due to excessive secretion or t impeded outflow

ep"i·phy·lax'i (ep"i-figh-lack'sis, fi-lack'sis) [G. *epi*, on; *phylaxis*, watching]. The reinforcing or increase of the defensive agencies of the body

ep"i·phys"e·o·ne·cro·sis, ep"i·phys"i·o·ne·cro·sis [*epiphysis*; G *nekrosis*, mortification]. Aseptic necrosis involving the epiphysis of long bone.

ep"i·phys"e·op thy (ep"i-fiz ee-op uth-ee) [G *epiphysis*, ongrowth; *pathos*, disease]. Any disorder of an epiphysis of bone or of the pineal gland

ep"i·phys"i·o·de·sis [*epiphysis*; G *desis*, binding together]. The surgical production of permanent or temporary arrest of epiphyseal growth.

ep"i·phys"i·ol'is·the·sis. The slipping of an epiphysis.

ep"i·phys"i·ol'y·sis, ep"i·phys·e·ol·y·sis (ep"i-fiz ee-ol -sis) [*epiphysis*; G. *lysis*, loosing]. The separation of an epiphysis from the shaft of bone

e-piph y·sis [G.]. A portion of bone attached for time to bone by cartilage, but subsequently becoming consolidated with the principal bone. —**epiphys'eal,** *adj*

e. cerebri. The pineal body

slipping e. Displacement of the upper femoral epiphysis; of uncertain etiology It occurs in children.

e-piph"y·si'tis [*epiphysis*; G *-itis*, inflammation]. Inflammation of an epiphysis.

ep"i·phyte [G *epi*, on; *phyton*, plant]. 1 A vegetable parasite growing on the exterior of the body 2. A plant growing upon another plant, but deriving the moisture required for its development from the air

ep"i·pi'al [*epi*, L *pius*, tender]. Upon or above the pia mater

ep"i·pleu·ral (ep"i-ploor al) [*epi*, G *pleura*, rib]. 1. Relating to pleurapophysis. 2. Located on the side of the thorax.

e-pip'lo·cele [G *epiploon*, omentum *kēlē*, hernia] A hernia containi g omentum only

ep"i·plo·ec·to·my [*epiploon*, G. *ektomē*, excision]. Excision of the omentum.

e-pip"lo·en'ter·o·cele [*epiploon*; G *enteron*, intestine; *kēlē*, hernia]. A hernia containing both omentum and intestine.

e-pip"lom·phal'o·cele (i-pip"lom-fal eel ep-ip lom ful seel) [*epiploon*, G. *omphalos*, navel *kēlē*]. Omphalocele containing omentum only

e-pip'lo·on [G.]. The omentum; specifically the great omentum —**epiplo'ic,** *adj*

e-pip'lo·pex"y [*epiploon*, G *pēxis*, fixing]. The operation of suturing the great omentum to the anterior abdominal wall, for the purpose of establishing collateral venous circulation in cirrhosis of the liver

ep"i·plor'rha·phy [*epiploon*; G. *rhaphē*, suture]. Suture of the omentum.

ep"ip·ter'ic [G *epi*, on; *pteron*, wing]. Near the pterion, as the Wormian bones

ep"i·py'gus, e-pip y·gus [*epi*, G. *pygē*, rump]. An individual with an accessory limb attached t the nates. Syn., *pygomelus*.

ep"i·scl·ra (ep" skleer uh) [*epi*, G. *sklēros*, hard]. The loose connective tissue lying between the conjunctiva and the sclera.

ep"i·scle·ral [*epi*, *sklēros*] 1 Situated on the outside of the sclerotic coat. 2. Relating to the episclera.

ep"i·scle·ri'tis [*epi*, *sklēros*; G *-itis*, inflammation]. An inflammation of the subconjunctival tissues or of the sclera itself.

ep"i·si·o- (eh-pee see-o-, eh-piz'ee-o-, eh-pis ee o- ep i-sigh o-) [G. *epision*, pubic region]. A combining form indicating *relation to the vulva*.

e-pi"si·cli·si·a (kly'see uh, klee see-uh) [*epision*; G *kleisis*, closing]. Surgical closure of the vulva.

pi"si·o·el"y·tror' ha·phy [*epision*, G. *elytron*, covering; *rhaphē*, suture] The operation of suturing relaxed or lacerated perineum and narrowing the vagina.

pi"si·o·per"i·ne'o·plas"ty [*epision*, G. *perinaion*, space between the anus and scrotum *plassein*, to form]. Surgical repair of the perineum and vestibule in the female.

e pi"si per"i ne·or rha phy [*epision*, *perinaion*, G. *rhaphē*, suture]. Surgical repair of lacerated vulva and perineum.

pi'si plas"ty [*epision*, G *plassein*, to mold] A plastic operation upon the pubic region or the vulva.

pi"si or rha'gi [*epision*, G *rhēgnynai*, to burst]. Hemorrhage from the vulva.

e-pi"si·or' ha·phy (eh-pee see-or uh-fee, eh-pis ee- eh-pi ee ep"i-sigh) [*epision*, G *rhaphē*, suture]. An operation for the repair of lacerations about the vulva.

pi"si -ste·no sis [*epision*, G *stenōsis*, being straitened]. Contraction or narrowing of the vulva.

e pi"si·ot' my (eh pee see-ot o-mee, eh-pis ee eh-pi ee- ep"i-sigh) [*epision*, G *tomē*, cutting]. Medial or lateral incision of the vulva during childbirth, to void undue laceration.

ep"i sode [G *epeisodios*, coming in beside]. An event having distinct effect on person life, or on the course of disease.

psycholeptic e. A strikingly vivid mental experience in the life of patient which he believes started his illness.

ep"i pa di·as (ep -spay'dee-us, -spad'ee-us) [G. *epi*, on; *span*, to draw]. A congenital defect of the anterior urethra in which the canal terminates on the dorsum of the penis and posterior to its normal opening or rarely bove the clitoris. —**epispadial,** *adj.*, **epispadiac,** *adj* n.

female e. A congenital defect in which the urethra, usually dilated, opens between the divided halves of the clitoris; usually associated with absence of all, or at least the upper portion, of the labia minora and other developmental defects.

ep"i·spas tic [*epi*, G *spastikos*, drawing in]. Causing blisters.

ep"i·spas'tic. A blistering agent.

ep"i·sphe noid [*epi*, G *sphēnoeidēs*, wedge-shaped]. A parasitic fetus or fetal parts attached in the sphenoid region one of the varieties of epignathus.

ep"i spi'nal [*epi*, L. *spina*, spine]. 1 Upon the spinal column. 2. Upon the spinal cord. 3. Upon any spinelike structure.

ep"i·sta sis [G stopping]. 1 A scum or film of substance floating on the surface of urine. 2. A checking or stoppage of hemorrhage or other discharge.

ep"i·stat'ic [G *epistatikos*, giving an impulse toward] *1 genetics*, dominating or suppressing. as gene which suppresses the effect of another mutant gene that affects the same part of the organism. —**epis'tasy** n.

ep"i stax'i [G dripping]. Bleeding from the nose.

ep"i stern'um [G *epi*, on, upon; *sternon*, breast] A dermal bone or pair of bones ventral to the sternum of certain fishes and reptiles formerly confused with the *presternum*.

ep"i stro phe us [BNA] [G turning on pivot]. Axis the second cervical vertebra. See T ble of Bones in the Appendix.

ep"i sym pu di'pus. An individual in which

the legs are rotated as in sympodia, but are united by membrane only.

ep"i·ten·din'e·um [G *epi* on L *tendere*, to stretch]. The fibrous sheath surrounding tendon.

ep"i·thal'amus [*epi*; G *thalamos*, chamber]. The region of the diencephalon including the habenula, the pineal gland, and the posterior commissure.

ep"i·the·lax'i·a [*epi*; G *thēlē*, nipple; *allaxis*, shedding]. Shedding of epithelial cells, especially in the lining of the intestine.

ep"i·the'li·a. Plural of epithelium.

ep"i·the'li·al rest remnant. See epithelial rest.

ep"i·the"li·o·cho'ri·al (ep"ith·ee"lee·o·kor'ee·ul) [*epi*; *thēlē*; G *chorion*, skin]. Pertaining to the uterine epithelium and the chorionic ectoderm, as epitheliochorial placenta.

ep"i·the"li·o·ge·net'ic [*epi*; *thēlē*; G *genethel*, from *gignesthai*, to be produced]. Relating to, or caused by epithelial proliferation.

ep"i·the'li·oid [*epi*; *thēlē*; G *eidos*, form]. Resembling epithelium.

ep"i·the"li·o'ma [*epi*; *thēlē*; G *-ōma*, tumor]. Any benign tumor derived from epithelium and composed largely of epithelial cells; formerly applied to epidermoid carcinoma. —**epitheliomatous**, *adj.*

adenoid basal-cell e. A variety of basal-cell e.

basal-cell e. A nevoid tumor of the epidermis or its appendages, characterized by masses of basal cells having palisaded arrangement at the periphery and found in skin of exposed parts, especially in elderly people. Two classes, undifferentiated and differentiated, are described; both types are only locally malignant, but in late stages may ulcerate. Also known as basal-cell carcinoma, rodent ulcer.

basal-squamous cell e. See basosquamous carcinoma.

calcifying e. (*of Malherbe*) A solitary hard tumor of the lower dermis or subcutaneous fat of skin, most commonly seen on the face and upper extremities, characterized histologically by the presence of so-called shadow cells and variable number of their basophilic precursors, which resemble the cells of basal-cell epithelioma. Areas of keratinization are present, and calcification is frequent though not constant feature.

e. adenoides cysticum. Trichoepithelioma.

e. basocellulare. See basal-cell e.

e. chorioepitheliomatosis. See chorioncarcinoma.

e. contagiosum. *In veterinary medicine*, fowl pox.

hair matrix e. See keratotic basal-cell

intraepidermal e. Carcinoma in situ, of either the squamous-cell or basal-cell type

keratotic basal-cell e. A basal-cell epithelioma that has differentiated towards hairs, thus producing keratin cysts.

multiple benign cystic e. See *trichoepithelioma*

myxoplasmorphic e. See mixed tumor of salivary gland type.

pigmented basal-cell e. Basal-cell epithelioma in which there is sufficient melanin to produce brown or black papule. Clinically it may be difficult to differentiate from melanoma.

squamous-cell e. One made up of squamous cells.

ep"i·the"li·o·my·o'sis. See isthmus nodular salpingitis.

ep"i·the"li·i'tis [*epi*; *thēlē*; G *-itis*, inflammation]. Inflammation and overgrowth of epithelium of mucous membrane, due to an -ray burn.

ep"i·the'li·um (pl. *epithelia*) [*epi*; *thēlē*]. A tissue composed of contiguous cells with minimum of intercellular substance. It forms the epidermis and lines hollow organs and all passages of the respiratory, digestive, and genitourinary systems. Special types include endothelium, lining blood and lymph vessels; and mesothelium, lining body cavities. Epithelium is divided, according to the shape and arrangement of the cells, into columnar, cuboidal, and squamous; simple, pseudostratified, and stratified epithelium; according to function, into protective, sensory, and glandular or secreting. —**epithelial**, *adj.*

ciliated e. A form in which the cells bear vibratile filaments or cilia on their free extremities.

columnar e. Distinguished by elongated, prismatic, or columnar cells.

crevicular e. That lining the gingival sulcus.

cuboidal Distinguished by prismatic cells in which height and width are approximately equal.

germinal e. A region of the dorsal coelomic epithelium, lying between the dorsal mesentery and the mesonephros. It becomes the covering epithelium of the gonad when it arises from the genital ridge. Some believe that it gives rise to the germ cells. Also called *germ e.*

glandular e. An epithelium in which the cells are predominantly secretory in function.

heterotopic e. Intestinal epithelial cells, including goblet cells, found in the stomach.

laminated e. See stratified e.

Malpighian e. See mucous e.

mesenchymal The simple layer of squamous cells lining subdural, subarachnoid, and perilymphatic spaces, and the chambers of the eyeball.

mucous e. (a) The rete mucosum, or germinative layer of stratified squamous epithelium, especially of the epidermis. (b) The entire embryonic epidermis with the exception of the epitrichium.

nerve e. See sensory e.

olfactory e. The sensory epithelium lining the olfactory region of the nasal cavity

pavement e. Simple squamous epithelium.

pigmented e. Epithelial cells holding pigment granules.

protective e. That serving for protection, as the epidermis, as distinguished from that serving for secretion or secretion.

pseudostratified e. One in which all cells are seated on the basement membrane, but not all reach the free surface.

pyramidal e. Cuboidal or columnar epithelium, the cells of which are modified by pressure of surrounding cells to the form of truncated hexagonal pyramids, as in the acini or tubules of glands.

respiratory e. The pseudostratified, ciliated epithelium lining most of the respiratory tract.

rod e. Striated cells lining certain glands.

sensory e. Epithelium in which sensory cells combined with ordinary epithelial cells form the peripheral terminations of the nerves in the organs of sense.

simple e. One with only one layer of cells.

squamous e. The form in which the cells have been reduced to thin plates.

stratified e. A form in which the cells are arranged in distinct layers.

striated e. That consisting of striated cells.

subcapsular e. The epitheliumlike lining of the internal surface of the capsule of the nerve cells of spinal ganglions; satellite cells.

tabular e. Pavement epithelium.

tegumentary e. The epidermis.

tessellated e. Flattened epithelial cells joined by their edges. Also called *simple squamous e.*

transitional e. The epithelium of the urinary tract. The cells of this form vary in shape between squamous, when the epithelium is stretched, and columnar when not stretched.

vascular e. Endothelium.

vibrating e. Ciliated epithelium.

ep"i the"li za tion [*epi*; *thēlē*]. The growth of epithelium over a raw surface.

ep'i them [G. *epithema*, something put on]. Any local application, as a compress, fomentation, lotion, or poultice.

ep"i to'nos, ep"i to nus [G. *epitonos*, on the stretch]. Anything exhibiting abnormal tension or tone, or stretched from one point to another. —**epiton'ic,** *adj.*

ep"i trich'i um (ep"i-trick'ee-um) [G. *epi*, on; *trichion*, small hair]. 1. The superficial layer of fetal epidermis, the remnant of which forms the cellular component of the vernix caseosa. Syn., *periderm.* 2. The superficial layers of squamous cells overlying a hair shaft in its canal before it breaks through the epidermis. —**epitrichial,** *adj.*

ep"i troch'le ar (ep"i trock'lee-ur) [*epi*; L. *trochlea*, mechanical contrivance containing one or more pulleys]. Applied to a lymph node which lies above the trochlea of the elbow joint.

ep"i troch"le-or'is. The chondrohumeralis muscle.

ep"i troch'le-o-ol"ec-ra no'nis. An occasional bundle of muscle running from the medial epicondyle of the humerus to the olecranon.

ep"i tu ber"cu lo sis [*epi*; L. *tuberculum*, small swelling; G. *-ōsis*, condition]. A pulmonary lesion occurring in tuberculin-positive children; characterized by a massive or lobar density in the x-ray films, paucity of clinical symptoms, and eventual complete resolution. Originally interpreted as nonspecific pneumonia modified by association with tuberculous infection, but no longer accepted as a single pathologic entity.

ep"i tym pa num [*epi*; G. *tympanon*, kettledrum]. The attic of the middle ear or tympanic cavity. —**epitympan'ic,** *adj.*

ep"i zo'ic [*epi*; G. *zōon*, living being]. Parasitic on the surface of the body.

ep"i zo'i cide [*epi*; *zōon*; L. *caedere*, to kill]. A drug or preparation that destroys external parasites.

ep"i zo on (pl. *epizoa*) [*epi*; *zōon*]. An animal parasite living upon the exterior of the body; ectozoon.

ep"i zo o-no sis. Darier's term for *epidermatozoonosis.*

ep"i zo-ot'i [*epi*; *zōon*]. Attacking many animals of one kind in any region simultaneously; widely diffused and rapidly spreading.

ep"i zo-ot'ic. A disease of animals which is widely prevalent in contiguous areas.

ep"o-nych'i um (ep o-nick ee-um) [*epi*; G. *onyx*, nail]. 1. A horny condition of the epidermis from the second to the eighth month of fetal life, indicating the position of the future nail. 2. The horny layer (stratum corneum) of the nail fold attached to the nail plate at its margin.

ep o-nym [G. *epōnymos*, given as a significant name]. A name formed or derived from that of a person known or assumed to be the first, or one of the first, to discover or describe a disease, symptom complex, theory, etc. Eponyms often honor persons who are proponents of systems and procedures, methods, surgical operations, etc., even though these are not original with the person so honored. —**eponym'ic, epon ymous,** *adj.*

ep o-oph'o-ron [G. *epi*, on; *ōophoros*, bearing eggs]. A vestigial structure in the female; derived from paragenital mesonephric tubules, a part of the mesonephric duct, and perhaps the rete ovarii.

ep-ox y-. *1. chemistry.* A prefix indicating that two different atoms in a molecule, already otherwise linked, are joined by an atom of oxygen.

ep ro-caine. A product, 2-diethylaminoethyl *p*-(3,4-dihydroxyphenacylamino) benzoate hydrochloride, which has been shown experimentally to raise blood pressure and produce anesthesia.

eprolin-S. A trade-mark for α-tocopherol.

EPS Exophthalmos-producing substance.

Ep som salt. Magnesium sulfate.

Epstein, Alois [German physician, 1849–1918]. Described the small, slightly elevated, yellowish white masses seen on each side of the hard palate at birth; called *Epstein's pearls.*

ep-u'lis (pl. *epulides*) [*epi*; G. *oulon*, gum]. Any solitary tumorlike lesion developing from the periosteum of the maxilla or mandible, appearing clinically as a circumscribed swelling beneath the gums. It may be a true giant-cell tumor, a fibroma, or a reparative hyperplasia. —**ep uloid,** *adj.*

e. of newborn. See granular-cell myoblastoma.

ep"u lo-fi bro ma (ep yoo-lo-figh bro muh) [*epi*; *oulon*; L. *fibra*, fiber; G. *-ōma*, tumor]. A fibroma of the gums.

equanil. A trade-mark for *meprobamate.*

e-qua tion [L. *aequatio*, from *aequare*, to make equal]. A means of expressing equality between two parts.

allometric e. The power function, $y = bx^k$ to which many data in studies of relative growth conform. In this equation, y is a part, x the whole or another part of the organism, b and k are constants.

chemical e. An expression representing a chemical reaction.

e-qua'tor [L., from *aequare*]. Any imaginary circle which divides a body into two equal and symmetrical parts in the manner of the equator of a sphere. —**equato rial,** *adj.*

e. of a cell. The boundary of the plane through which division takes place.

e. of the eye. A line joining the four extremities of the transverse and the vertical axis of the eye; aequator bulbi oculi.

e. of the lens. The periphery of the crystalline lens between the two layers of the ciliary processes; aequator lentis.

equi- [L. *aequus*, equal]. A prefix meaning *equally.*

equi ax'i al. Having equal axes.

Eq'ui dae [L. *equus*, horse; G. *-idēs*, descendant]. A family of mammals having a single extant genus, *Equus*, which includes the horse, ass, and zebra.

e"qui-len'in, e-quil'e-nin. $C_{18}H_{18}O_2$. An estrogenic steroid hormone, chemically 3-hydroxy-17-keto-1,3,5,6,8-estrapentaene, occurring in the urine of pregnant mares; structurally it differs from estrone in containing two additional double bonds.

e"qui li bra tion (ee"kwi-li-bray shun, i-kwi-li-bray shun, i kwil"i bray shun) [L. *aequilibrium*, equilibrium]. Maintenance of equilibrium.

e qui lib ri um [*aequilibrium*]. 1. A state of balance; a condition in which opposing forces equalize one another so that no movement occurs. 2. A well-balanced condition of mind or feeling.

acid-base e. See acid-base balance.

Donnan e. See membrane e. See also Frederick George *Donnan.*

fluid e. A state of balance between the water intake and the water loss in the body.

membrane e. A state of ionic balance created on opposite sides of a membrane which is impermeable to an ion. Also called *Donnan e.*

nitrogen e. A state of balance between the intake of nitrogen as proteins and its excretion, in urine, feces, sweat, etc. See *nitrogen balance.*

nutritive e. A condition of balance between the intake of a nutritive material and the excretion of the products of its metabolism.

radioactive e. A relationship between a radio-

active substance and its parent substance, in which at any given moment the rate of disintegration of the former is equal to its rate of formation from the latter.

e'qui·lin (ee'kwi-lin, eck'wi-lin). $C_{18}H_{20}O_2$. An estrogenic steroid hormone, chemically 3-hydroxy-17-keto-1,3,5,7-estratetraene, occurring in the urine of pregnant mares; structurally it differs from estrone in containing one [a]dditional double bond.

e"qui·mo·lec'u·lar [L. *aequus*, equal; dim. from *moles*, mass]. 1. Containing or representing quantities of substances in the proportion of their molecular weights. 2. Containing or representing an equal number of molecules.

eq'uine (eck'wine) [L. *equinus* from *equus* horse]. Of, pertaining to, or derived from [a] horse; horse-like.

e·quin'i·a. See *glanders*.

eq"ui·no·ca·va'rus (eck"wi-no-kay'vus, ee"kwi-no-[il]kwye no-). See under *talipes*.

eq"ui·no·va'rus. See under *talipes*.

e·qui'nus. See under *talipes*.

eq"ui·se·to'sis (eck"wi-si-to'sis, ee"kwi-) [L. *equus*, horse; *saeta*, stiff hair; G. *-ōsis*, condition]. The poisoning of horses due to ingestion of horsetail (*Equisetum*).

Eq"ui·se'tum (eck"wi-see'tum, ee"kwi-) [*equus*; *saeta*]. A genus of cryptogamous plants, some of which have been shown to have [a] diuretic effect.

e·quiv'a·lent [L. *aequus* equal; *valere*, to be strong]. Having an equal value.

e·quiv'a·lent. 1. That which is equal in value, size, weight, or in any other respect, to something else. 2. *I[n]* chemistry, the weight of [a] substance which is chemically equal to 8 parts by weight of oxygen; the weight is commonly expressed in grams. The weight of [a] substance which combines with or replaces one gram atomic weight of hydrogen. Syn., *equivalent weight*.

abdominal convulsive e. Abdominal symptoms such as pain, vomiting, and distress, occurring paroxysmally without intraabdominal causes, and thought to be, like epileptic convulsions, an expression of [a] cerebral seizure discharge. Such seizures are rare and diagnosis depends on electroencephalographic proof.

combustion e. The amount of heat obtained by burning one gram of fat or carbohydrate.

endosmotic e. The ratio obtained by dividing the amount of the replacing liquid in osmotic action by the amount replaced.

epileptic e. Attacks, such as automatic motor acts or fugue states, followed by amnesia, which are experienced by epileptic patients in place of or as equivalents of grand or petit mal attacks.

Joule's e. The number of units of work equivalent to [a] unit of heat, first experimentally deter[-]mined by Joule; the mechanical equivalent of heat. Symbol, J.

lead e. The thickness of lead which [a]bsorbs radiation [a]t the same rate as the material in question.

mechanical e. of heat. The mechanical energy required to raise the temperature of one gram of water one degree centigrade; it is 4.185 × 10[illegible] ergs per calorie (15°); Joule['s] equivalent.

psychic epilepti[c] e. Mental disturbance or excitement which may take the place of epileptic attacks.

thermometric e. A change of 180 Fahrenheit degrees is equivalent to [a c]hange of 100 centigrade degrees and [a] change of 80 Réaumur degrees. See Tables of Thermometric Equivalents in the Appendix.

toxic e. The quantity of poison capable of killing, by intravenous injection, one kilogram of animal.

ventilatory e. The amount of air which must be inspired for the absorption of 100 ml. of oxygen.

Er Chemical symbol for erbium.

[e]·ra'sion (i-ray'zhun) [L. *erasum*, from *eradere*, to scrape off]. 1. Surgical removal of tissue by scraping. 2. Excision of [a] joint; arthrectomy.

Erasistratus [*Greek physician and anatomist in Egypt, ca. 310–250 B.C.*]. Pioneer physiologist and pathologist. Traced veins and arteries to the heart, and developed [a] reversed theory of circulation. Devised [a] catheter. Disputed th[e] theory of humors; regarded the blood as [a] nourishing factor of the body and the pneuma as the vital substance. Said to have discovered and named the prostate gland.

Er[a]·ty'rus. A genus of bugs of the Triatomidae.

E. cuspidatus. A species found in South America which has been incriminated in the transmission of American trypanosomiasis.

Erb, Wilhelm Heinrich [*German neurologist, 1840–1921*]. Pioneer in electrotherapy. Described par[-]tial paralysis of the brachial plexus, due to laceration [a]t birth, called *Erb['s] palsy, paralysis*, *Erb-Duchenne paralysis*. Syphilitic spastic spinal paralysis is called *Erb'[s] paralysis*, *Erb-Charcot disease*. Progressive muscular dystrophy with pseudohypertrophy is known as *Erb['s] paralysis, dystrophy*, *Duchenne-Griesinger disease*. Erb drew attention to myasthenia gravis, called *Erb-Goldflam disease*. In the same year as Westphal (1875) he discovered the diagnostic value in tabes dorsalis of absence of the patellar reflex; he is said to have introduced the term *tendon reflex*. See also Erb['s] sign of tetany.

Erben, Siegmund [*Austrian physician, 1863–*]. Described various phenomena, such as the temporary sl[o]wing of the pulse on bending forward or [at]tempting to sit down, due to stimulation of the vagus nerve; the pain in sciatica which is increased by hyperflexion of the leg on the sound side, and the reduction of the temperature of the knee on the painful side in sciatica. Each of these is known as *Erben['s] phenomenon, reflex*.

er'bi·um [NL., from Ytterby, in Sweden]. Er = 167.2. A rare earth metal.

Erdmann, Hugo [*German chemist, 1862–1910*]. Introduced [a] reagent used in identifying alkaloids. It consists [o]f [a] mixture of 10 drops of nitric acid in 20 cc. of sulfuric acid. Known as *Erdmann['s] reagent*.

[e]·rec'tile [L. *erectum*, from *erigere*, to erect]. Capable of being dilated or erected.

[e]·rec'tion [L. *erectio* from *erigere*]. The enlarged state of erectile tissue when engorged with blood, as of the penis or clitoris. —**erect'**, *adj.*

[e]·rec'tor [L. *erectum*, from *erigere*]. 1. A muscle that produces erection of [a] part. See Table of Muscles in the Appendix. 2. A prism attached to the eyepiece of [a] microscope for correcting the inversion of the image.

e. clitoridis. The ischiocavernosus muscle in the female.

e. penis. The ischiocavernosus muscle in the male.

e. pili. Old term for an arrector pili muscle.

e. spinae. Old term for sacrospinalis muscle.

er"[e]·mi·o·pho'bi[a] [G. *ēremia*, rest; *phobos*, fear]. Morbid fear of stillness.

er"[e]·mo·pho'bi[a] [G. *erēmos*, lonely, solitary; *phobos*]. 1. Morbid fear of being lonely. 2. Morbid fear of large desolate places; [a]goraphobia.

e·rep'sin. An enzyme mixture produced by the intestinal mucosa, consisting of various peptidases which split peptones and proteoses into simpler products; it has no effect on native proteins.

er'e·thism [G. *erethismos*, irritation]. 1. An [abnor-]

mal increase of nervous irritability 2. Quick response to stimulus. —erethis'mic, erethis'tic, erethit'ic, adj

e-ryth"ro-pho'bi-a (i-rith"ro-fo'bee-uh, err"yooth-o-) See *erythrophobia*.

erg [G. *ergon*, work]. A unit of work, representing the work done in moving a body against the force of one dyne through a distance of one centimeter.

ergamine. Trade-mark for histamine.

er-ga'si-a (ur-gay'shuh, -see-uh, -zhuh, -zee-uh) [G. work]. 1. In *psychobiology*, the sum total of the functions and reactions of an individual; the actions or responses which spring from the whole organism or personality. 2. A tendency toward work.

er-ga'si-a-try (ur-gay'see-uh-tree, ur"guh-sigh'uh-tree) [*ergasia*; G. *iatreia*, medical treatment]. Adolph Meyer's term for psychiatry.

er-ga"si-o-ma'ni-a (ur-gay"see-o-may'nee-uh, ur"gass-ee-o-) [*ergasia*; G. *mania*, madness]. An exaggerated desire for work of any kind; seen in the manic state of manic-depressive psychoses. Rare.

er-ga"si-o-pho'bi-a [*ergasia*; G. *phobos*, fear]. A morbid fear of work.

er"gas-the'ni-a [G. *ergon*, work; *astheneia*, weakness]. Weakness due to overwork.

er-gas'to-plasm. Indefinite collective term for basophil cytoplasmic substances.

er'go-, erg- [*ergon*]. A combining form denoting work.

ergoapiol. A proprietary remedy used as an emmenagogue.

er"go-ba'sine (ur"go-bay'seen, -sin). Ergonovine.

er"go-ba-si'nine (ur"go-bay-si'neen, -nin). Ergometrinine.

er"go-cal-cif'er-ol. The recently adopted designation for calciferol or vitamin D_2, prepared from ergosterol.

er"go-cor'nine. $C_{31}H_{39}N_5O_5$; a levorotatory alkaloid from ergot, isomeric with ergocorninine.

er"go-cor-ni'nine. The dextrorotatory isomer of ergocornine, occurring in ergot; physiologically it is relatively inactive.

er"go-cris'tine (ur"go-kris'teen, -tin). $C_{35}H_{39}N_5O_5$, a levorotatory alkaloid from ergot, isomeric with ergocristinine.

er"go-cris-ti'nine. The dextrorotatory isomer of ergocristine, occurring in ergot; physiologically it is relatively inactive.

er"go-cryp'tine. $C_{32}H_{41}N_5O_5$; a levorotatory alkaloid from ergot, isomeric with ergocryptinine.

er"go-cryp-ti'nine. The dextrorotatory isomer of ergocryptine, occurring in ergot; physiologically it is relatively inactive.

er'go-graph [*ergon*; G. *graphein*, to write]. An instrument which, by means of a weight or spring against which a muscle can be contracted, records the extent of movement of that muscle or the amount of work it is capable of doing.

ergoklonin. Trade-mark for a biologically standardized solution of ergot alkaloids.

er-gom'e-ter [*ergon*; G. *metron*, a measure]. An instrument which permits calculation of the work performed (weight multiplied by shortening) by a muscle or muscles over a period of time. One form of this instrument is the **ergometer bicycle**, a stationary bicycle on which the subject pedals against a measurable load.

er"go-met'rine (ur"go-met'reen, -rin, -mee'treen, -trin). Ergonovine.

er"go-met'ri-nine (ur"go-met'ri-neen, -nin). The dextrorotatory relatively inactive isomer of ergonovine. Syn., *ergobasinine*.

er"go-no'vine (ur"go-no'veen, -vin). $C_{19}H_{23}N_3O_2$. An alkaloid obtained from ergot. Discovered almost simultaneously by several investigators, it has been known as ergotocin, ergometrine, ergostetrine, and ergobasine. It causes rhythmic uterine contractions and is more prompt but less persistent in its action than other ergot alkaloids. A white or faintly yellow powder affected by light.

e. maleate (*ergonovinae maleas*). $C_{19}H_{23}N_3O_2 \cdot C_4H_4O_4$; the form in which ergonovine is commonly administered. Dose, oral, intramuscular or subcutaneous, 0.2–0.5 mg. See *ergotrate*.

er"go-pho'bi-a [*ergon*; G. *phobos*, fear]. Morbid dread of work; ergasiophobia.

er'go-phore group. A chemical group which determines the specificity of an antibody.

er'go-plasm. See *archoplasm*.

er'go-sine (-go-seen, -sin). An alkaloid, $C_{30}H_{37}O_5N_5$, of ergot, having physiologic activity similar to that of ergotoxine.

er-go-si'nine. The dextrorotatory isomer of ergosine, occurring in ergot; it is nearly devoid of physiologic activity.

er-gos'tan-ol. $C_{28}H_{49}OH$; a sterol having the structure of ergosterol but with all three double bonds of the latter saturated.

er-gos'ten-ol. Any of a group of sterols of the composition $C_{28}H_{47}OH$, differing from ergostanol in having one double bond, the position of which varies and thus characterizes the individual ergostenols.

er-gos'ter-in. Ergosterol.

er-gos'ter-ol. $C_{28}H_{43}OH$; ergosta-5:6,7:8,22:23-triene-3-ol; an unsaturated sterol occurring in ergot, yeast, and other fungi. It occurs in crystals, insoluble in water. It is provitamin D_2; on irradiation with ultraviolet light or activation with electrons, it is converted to vitamin D_2 (calciferol). Syn., *ergosterin*.

irradiated e. Vitamin D_2 or calciferol.

er"go-stet'rine (ur"go-stet'reen, -rin). Ergonovine.

er'got [OF. *argot*, a spur] (*ergota*). The dried sclerotium of *Claviceps purpurea*, a fungus developed on rye plants. It contains at least five optically isomeric pairs of alkaloids; the levorotatory isomers are physiologically active, the dextrorotatory isomers nearly inactive. Ergot causes powerful uterine contractions, and is useful in menorrhagia and metrorrhagia and in preventing and checking postpartum hemorrhage. Its injudicious use during labor is exceedingly dangerous. Through its vasoconstrictor action, it is useful in cerebral or spinal congestion, in colliquative sweats, and in similar conditions where there are local passive congestions. It is a common allergen.

e. extract (*extractum ergotae*). Each gram is equivalent to 4 Gm. of ergot. Dose, 0.5 Gm. (8 gr.)

e. fluidextract (*fluidextractum ergotae*). A preparation which deteriorates rapidly under the influence of air and heat. Dose, 2–8 cc. (½–2 fluidrachms).

er-got'a-mine (ur-got'uh-meen, -min, ur"guh-tam'een, -in). A levorotatory alkaloid, $C_{33}H_{35}O_5N_5$, from ergot, having activity qualitatively identical with that of ergotoxine but two-thirds as strong.

e. tartrate (*ergotaminae tartras*). White crystals used as uterine contractor and in migraine. Dose, oral, 1 mg. (1/60 gr.); subcutaneous, 0.25–0.5 mg. (1/240–1/120 gr.). See *gynergen*.

er"go-tam'i-nine. The dextrorotatory isomer of ergotamine; it is nearly devoid of therapeutic activity.

er"go-ther'a-py [G. *ergon*, work; *therapeia*, treatment]. Treatment of disease by physical work.

er"go-thi'o-ne-ine. See *thioneine*.

er'got-in. Ergot extract.

Bonjean's e. An aqueous ergot extract.

er-got'i-nine (ur-got'i-neen, -nin). A dextrorota-

tory alkaloid, $C_{35}H_{39}O_5N_5$, discovered in ergot by Tanret in 1875. It is practically inert physiologically

er'got ism [OF. *argot*, spur]. The constitutional effects following the prolonged use of ergot, or of grain containing the fungus *Claviceps purpurea*. There are two types: spasmodic form with contractions and cramps of the muscles, and form characterized by dry gangrene.

er'got ized [ergot]. Affected by ergot as result of treatment or poisoning, as wheat infected with the fungus of ergot.

er"go-to-cin. Ergonovine.

er"go-tox'ine (ur"go-tock'seen, -sin). A crystalline alkaloidal substance, long believed to be chemical individual, isolated from ergot and having pronounced physiological activity; now known to be mixture of ergocristine, ergocornine, and ergocryptine.

ergotrate. Trade-mark for ergonovine maleate.

Erichsen, John Eric [*English surgeon*, 1818–96]. Described train of symptoms following accidents, which may assume the form of traumatic hysteria, neurasthenia, hypochondriasis, or melancholia; called *railway spine*, *railway brain*, *Erichsen disease*.

Erickson test. See Harrower Erickson test.

e-ric'o-lin. A yellow resinous, glycosidal substance obtained from uva-ursi and other sources. It has been reported to be impure arbutin.

er'i gens. Pertaining to the sacral parasympathetic preganglionic nerve fibers.

E-rig'er-on (i-ridj'ur-on) [G. early-old]. A genus of the Compositae. Several species have been used in urinary diseases, diarrhea, and dysentery in the form of an oil (erigeron oil) present to the extent of 0.3–0.4%. Syn., *fireweed*.

e"ri-o-dic'tin. $C_{21}H_{22}O_{11}$; the L-rhamnoside of eriodictyol, constituent of citrus, isolated from citrus fruits.

e"ri o-dic'ty-ol. $C_{15}H_{12}O_6$; 3',4',5,7-tetrahydroxy flavanone; constituent of *Eriodictyon californicum* leaves. The L-rhamnoside of eriodictyol is known as *eriodictin*.

E"ri-o-dic'ty-on (eer"ee-o dick'tee-on, err"ee-o-) [G. *erion*, wool; *diktyon*, net]. A genus of shrubs of the Hydrophyllaceae.

E. californicum. California yerba santa; mountain balm. The leaves of this California shrub have been used as an expectorant and in fluid preparations to mask the taste of bitter drugs.

er-i-om'e-ter. See *halometer*.

-rie'o-phaka. See *erysiphake*.

E ris'ta lis [NL.]. A genus of the Diptera of the Syrphidae; commonly called drone flies. The rat-tailed larvae of several species have been known to cause intestinal myiasis in man.

Erlanger, Joseph (1874–). American physiologist, who, with H. S. Gasser combined the amplifier with the cathode-ray oscillograph and studied the highly differentiated functions of the individual nerve fibers, concluding that each group of nerve fibers (A,B,C) had its own threshold of stimulation, conduction rate (alpha, beta, and gamma waves) and refractory period. Nobel laureate in medicine and physiology with Gasser (1944)

Erlenmeyer flask. See under *flask*.

Ermengem, Emile Pierre Marie van [*Belgian physician*, 1851 1932]. Discovered the *Bacillus botulinus* in cases of food poisoning (1897)

Ernst, Paul [*German pathologist*, 1859–1937]. Described, with Babes, meta-chromatic granules in bacteria, called *Babes-Ernst bodies*. See under *Babes*.

ernutin. A proprietary preparation of ergot.

E-ro di um [G. *erōdios*, heron]. A genus of herbs of the Geraniaceae.

E. cicutarium. Alfilaria; has been used as substitute for hydrastis.

e-rog'e-nous (i-rodj' -nus) **er" gen'ic** [G. *erōs*, love; *genesthai*, from *gignesthai*, to be produced]. Producing or stimulating the sexual appetite.

eros (ē ros, er'os) [G. love] *I psychoanalysis*, all the instinctive tendencies which lead the organism toward self-preservation often used synonymously with *libido*. Also called *life instinct*, in contrast to *thanatos*, death instinct.

e-rose (i rohss') [L. *erosus*, from *erodere*, to gnaw away]. *I botany*, having margin or border irregularly toothed.

e-ro'si-o in"ter dig"i ta'lis blas"to my-ce'ti ca (eh-ro see-o in tur-didj -tah'lis blas"to-migh-see ti kuh, -set' kuh). A form of moniliasis which involves the webs of the fingers and particularly the third or fourth interdigital web. This disease is seen in laundresses and in others whose hands are exposed to the macerating effects of water and strong alkalies.

-ro sion [*erodere*]. Superficial destruction of surface area by inflammation or trauma. —**erosive** *adj* **erode'** *v.*

dental e. A process, probably chemical, which results in the loss of calcified tissues at the neck of tooth.

e. of cervix uteri. Destruction of the squamous epithelium of the vaginal cervix, the eroded area being covered by columnar cells.

-rot'ic [G. *erōtikos*, amorous] 1 Pertaining to the libido or sexual passion. 2. Moved by or arousing sexual desire. —**erot'ic**, *n.*

-rot'i ca [*erōtikos*]. Literature devoted to erotic themes; sexual literature.

er'o-tism, e-rot'i-cism [G. *erōs*, love]. 1. Sexual excitement or desire. 2. *I psychoanalysis*, any manifestation of the sexual instinct or love life.

anal e. Sexual excitement localized in the anal zone.

ego e. See *narcissism*.

muscle e. The association of the libido with muscular activity

organ e. Sexual desire localized in an organ of the body

er"o-to gen'ic (err"o-to-jen'ick, i-ro to- i rot o-) [*erōs*; G. *genesthai*, from *gignesthai*, to be produced]. Causing, or originating from, erotic feelings.

er"o-to ma ni [*erōs*; G. *mania*, madness]. Morbid exaggeration of the affections, usually toward the opposite sex. Also called *eromania*, *eroticomania*. —**erotomaniac**, *n.*

er" top' thy [*erōs*; G. *pathos*, disease]. Any perversion of the sexual instinct. —**erotopath'ic**, *adj* **ero'topath**, *n.*

er"o-to-pho'bi-a [*erōs*; G. *phobos*, fear]. A morbid fear of love.

ertron. Trade-mark for highly concentrated form of vitamin D in capsules.

e-ru'cic ac'id. $CH_3(CH_2)_7CH{:}CH(CH_2)_{11}COOH$. An unsaturated acid found in the glycerides of rape seed oil and mustard oil.

e"ruc ta'tion (ee ruck-tay'shun, err"uck) [L. *eructatio*, from *eructare*, to belch forth]. Belching.

ru'ga to ry [L. *erugare*, to clear from wrinkles]. Tending to remove wrinkles.

e-rup tion [L. *eruptio*, from *erumpere* to break forth]. 1 Lesions on the skin, especially applied to those of the exanthematous diseases. 2. The appearance of tooth through the gums.

creeping e. See *larva migrans*.

drug e. Dermatitis medicamentosa.

fixed e. A skin eruption in which the sensitivity

to certain circulating substances remains localized and fixed to certain areas the term usually refers to *dermatitis medicamentosa*.

Kaposi varicelliform e. A secondary infection of abnormal skin (usually topic eczema) with the virus of herpes simplex and times with vaccinia virus. See also *eczema herpeticum*.

miliary e. An eruption of little vesicles occurring in the course of febrile diseases.

ringed e. See *granuloma* annulare.

e-rup'tive [L. *eruptum*, from *erumpere*]. Attended by or producing an eruption, as an eruptive fever

E ryn gi um [G *eryngos*, of the eryngo]. A genus of plants of the *Umbelliferae*.

E. aquaticum. Button snakeroot eryngo; species indigenous to the western prairies and southern barrens of the United States. The root is reputedly diaphoretic, expectorant, and emetic.

er"y-sip e las (err" -sip -las, irr"i) [G.] An acute, infectious disease due to *Streptococcus pyogenes*; characterized by spreading inflammation of the skin and subcutaneous tissues, rarely of the mucous membranes. Sulfa drugs are very effective in treatment. —**erysipel' tous,** *adj*

e. ambulans. See wandering *e*.

e. ntitoxin. One prepared from animals immunized against the *Streptococcus pyogenes* of erysipelas; ot so effective in treatment as the sulfa drugs.

e. bullosum. That attended with formation of bullae.

e. chronicum. A chronic or relapsing erysipelas leading to elephantiasis of the affected part.

e. diffusum. That in which the ffected area is not sharply defined, the redness merging gradually with the color of the surrounding skin.

e. glabrum. That in which the skin is tightly stretched and has smooth, shining ppearance.

e. medicamentosum. A rash resembling erysipelas, but marked by rapid development, the bsence of well-defined areas, and tenderness on pressure prod ced by ingested drugs.

e. migrans. See wandering *e*.

e. perstans. A chronic, erysipelaslike condition of the face.

facial e. Erysipelas of the face the most common form. After an initial chill, the temperature rises very high and there are severe symptoms of toxemia there may be vomiting and delirium, and the disease may spread rapidly over great part of the body The affected area is swollen, itches, has deep-red color and an elevated margin, and tends to heal centrally while spreading peripherally

idiopathic That occurring without any visible wound.

phlegmonous e. A form of erysipelas in which there is abscess formation.

pustular e. A variety of erysipelas bullosum in which the bulla contain pus.

serpiginous e. *A form which extends by involving neighboring parts of the skin.*

spontaneous e. Idiopathi *e*.

surgical e. That occurring in the site of wound. Also called *traumatic e*.

swine e. An infectious disease of hogs; caused by *Erysipelothrix rhusiopathiae*; occurring in acute, subacute, and chronic forms.

wanderi g e. A form in which the erysipelatous process successively disappears from one part of the body to ppear subsequently in another part.

er"y sip e-la-coc'cus [*erysipelas*; G *kokkos*, berry]. *Streptococcus erysipelatis*, to which erysipelas is ascribed.

er"y sip loid [*erysipelas*; G *eidos*, form] An infection caused by *Erysipelothrix rhusiopathiae*; occurs on the hands of those who handle infected meat or fish. Characterized by circumscribed, multiple lesions of red color erythema is present in some cases.

Er y si pel o-thrix (err -si-pel'o-thricks, err'isip'l-o-) [*erysipelas*, G. *thrix*, hair]. A genus of filamentous, branching bacteria of the family Corynebacteriaceae.

E. rhusiopathiae. The causative organism of swine erysipelas and of erysipeloid in man.

e-rys'i phak [G *erysis*, drawing; *phakos*, lentil]. An instrument shaped like small spoon, with blunt edges and long handle, connected with an *apparatus for producing vacuum*; used in an operation for cataract known as phacoerisis. Also spelled *erisophake*.

er"y the ma [G redness]. A redness of the skin occurring in patches of variable size and shape. It can be caused by heat, certain drugs, ultraviolet rays, and ionizing radiation. —**erythem' atous** (err ith em uh tus, -eem uh-tus) *adj*

butterfly e. Skin lesions on the malar eminences in pellagra, hyperemi and edematous at first later they scal and leave rough, red area.

choleraic e. Erythema multiforme occurring in cholera patients affects chiefly the extremities marked by bluish-red or livid papules.

cholinergenic e. Erythema of the skin produced by efferent cholinergic impulses via the autonomic ervous system.

epidemi arthritic e. An acute, infectious disease; characterized by brupt onset with chills, fever back and joint pains after few days rubelliform or morbilliform eruption ppears. Syn., *Haverhill fever*

e. b igne. An eruption of varying form and color often with pigmentation; due to prolonged exposure to artificial heat; seen typically on the extremities of stokers.

e. annulare centrifugum. A rare disease characterized by gyrate, annular lesions, with hard, cordlike *edges and peripheral enlargement*.

e. brucellum. A eruption of papules, vesicles, and pustules may occur on the arms of individuals coming in contact with cows affected with infectious bortion.

e. bullosum. The bullous type of erythema multiforme.

e. caloricum. Transitory redness of the skin induced by heat.

e. chronicum migrans. An afebrile erythema; ppears as single elevated ring, progressive at the border and healing at the center

e. chronicum migrans Afzelius. A form of annular peripherally extending erythema progressing from the site of bite, usually that of tick.

e. circinatum. A form of erythema multiforme showing lesions with depressed centers and erythematous borders.

e. congestivum. *Erythema with congestion* of the skin.

e. diffusum. A form resembling scarlatina, with ill-defined outline, the red color of the affected skin merging gradually into that of the surrounding parts.

e. elevatum diutinum. A clinical variety of granuloma annulare characterized by firm, painless nodules, which, discrete at first, later coalesce to form flat, raised plaques or nodular tumors.

e. endemicum. Pellagra.

e. epidemicum. Erythredema polyneuropathy

e. figuratum perstans. A form of erythema multiforme with gyrate figures on the skin.

e. fugax. Transitory redness of the skin, possibly urticarial in nature.

e. gangrenosum. A feigned or self-induced eruption. Syn., *dermatitis factitia.*
e. gluteale. An eruption in the napkin or diaper area in children. Also called *Jacquet's e.*
e. gyratum perstans. An eruption characterized by persistent erythematous patches in annular, marginate, or gyrate forms. Syn., *erythema figuratum perstans.*
e. induratum. A chronic recurrent disorder; characterized by deep-seated nodosities and subsequent ulcerations; usually involves the skin of the legs of younger women; often tuberculous. Also called *Bazin's disease.* See Plate 33.
e. infectiosum. Fifth disease; a feebly infectious rash occurring in epidemics as a disease of early childhood; of unknown etiology.
e. intertrigo. Intertrigo; hyperemia of the skin occurring where the folds of the integument come into contact. The epidermis may be abraded.
e. iris. A variety of erythema multiforme in which the skin lesions appear in variously colored, concentric rings.
e. marginatum. A type of erythema multiforme in which an elevated, well-defined band remains as a sequela of an erythematous patch.
e. migrans. See geographic *tongue.*
e. multiforme. An acute, inflammatory skin disease; characterized by reddish macules, papules, or tubercles; the lesions, varying in appearance, occur usually on neck, face, legs, and dorsal surfaces of hands, forearms, and feet; initial symptoms are often gastric distress and rheumatic pains. Ectodermosis erosiva pluriorificialis and Stevens-Johnson syndrome are clinical variants of erythema multiforme.
e. nodosum. An eruption, usually on the anterior surfaces of the legs below the knees, of pink to blue, tender nodules appearing in crops; more frequently seen in women; often associated with joint pains.
e. nuchae. Redness on the back of the neck seen in early infancy lasting for a variable time.
e. of ninth day. A morbilliform or scarlatiniform eruption associated with constitutional disturbances; occurs about the ninth day following the administration of arsphenamine.
e. palmaris hereditarium. Condition described by J. E. Lane in which palms showed a bright-red color considered as a nevus.
e. papulatum. Type of erythema multiforme in which lesions are nodular or papular.
e. paralyticum. Early stage of diffuse idiopathic atrophy of the skin.
e. pernio. A condition occurring, in cold weather only, on hands and feet of individuals with feeble circulation, or following frostbite. Syn., *pernio, chilblains.*
e. perstans. Persisting, recurring erythema; a group including erythema figuratum perstans, erythema annulare centrifugum, erythema simplex gyratum, erythema chronicum migrans.
e. punctatum. See *e. scarlatiniforme.*
e. scarlatiniforme. An eruption from different causes but simulating the rash of scarlet fever. Syn., *e. punctatum, scarlatinoid e.*
e. serpens. See *erysipeloid.*
e. simplex. A hyperemia showing various shades of redness, either diffuse or circumscribed. The symptomatic erythemas may be precursors of systemic disturbances or febrile disorders. Also called *e. hyperemicum.*
e. simplex gyratum. An eruption of arcuate and gyrate lesions disappearing after a few days only to be succeeded by fresh outbursts.
e. solare. Sunburn.
e. traumaticum. Redness of the skin produced by trauma.
e. tuberculatum. A type of erythema multiforme in which the lesions are nodular in character.
e. urticans. A type of erythema multiforme in which the lesions are urticarial in appearance.
e. venenatum. Redness of the skin produced by external irritants.
e. vesiculosum. A type of erythema multiforme characterized by vesicles.
lepromatous e. necroticans. See Lucio *leprosy.*
nummular e. Discoid lesions of tinea corporis.
reticulate e. See *e. ab igne.*
scarlatinoid e. See *e. scarlatiniforme.*
symptomatic e. Redness of skin as a surface manifestation of an internal cause. A simple form is blushing.
tertiary circinate e. Skin lesions of pink to red color occurring as circular or oval patches with normal or pigmented centers, or in segments of circles which may form gyrate figures by coalescence; occurring several years after syphilitic infection. Also called *neurosyphilid, circinate syphilitic erythema.*
toxic e. Redness of the skin produced by toxic causes.
variolous e. The initial eruption of variola.

er''y·them'a·toid, er''y·the·mat'oid [*erythema*; G. *eidos*, form]. Resembling erythema.

er''y·thral'gi·a. See *erythromelalgia.*

er''y·thras'ma (err''i-thraz'muh) [G. *erythros*, red]. A skin disease seen in the axillae or the inguinal or pubic regions. It forms reddish or brownish, sharply defined, slightly raised, desquamating patches which cause little or no inconvenience. It is due to the fungus *Nocardia minutissima.*

e·ryth''re·de'ma pol''y·neu·rop'a·thy (e·rith''re·dee'muh pol''ee·new·rop'uth·ee). A syndrome of uncertain cause, but possibly related to mercury poisoning, occurring in infancy and characterized by pink itching hands and feet, and marked vasomotor and emotional disturbances. There is profuse sweating, photophobia, irritability, tachycardia, and hypertension. Also called *pink disease, acrodynia, Selter's disease, Feer's disease, Swift's disease.*

er''y·thre'mi·a. 1. Erythrocytosis. 2. Primary polycythemia.
acute e. A rare acute disease of the blood-forming organs, characterized by uncontrolled proliferation of the cells of the erythrocytic series, corresponding to, and in later stages often accompanied by, leukemia (erythroleukemia). The hematologic picture shows erythrocyte precursors in all stages of maturation; clinically there is hepatomegaly, splenomegaly, and hemorrhagic diathesis. Syn., *erythrocythemia, acute erythremic myelosis, DiGuglielmo's erythremic myelosis or disease.*
chronic e. Thalassemia major.
high-altitude e. See chronic *mountain sickness.*

e·ryth'rin. 1. An antibiotic substance derived from animal tissues, apparently from erythrocytes. 2. A chromogen derived from *Roccella tinctoria* and other lichens.

Er''y·thri'na [*erythros*]. A genus of tropical and subtropical trees and shrubs, various species of which have long been used in folk medicine. The seeds of some species contain one or more alkaloids having curarelike action; of these beta-erythroidine and its derivative dihydro-β-erythroidine are potentially of clinical importance.

er'y·thrite (also pronounced e·ryth'rite). Erythritol.

e·ryth'ri·tol. $CH_2OH(CHOH)_2CH_2OH$; 1,2,3,

butanetetrol; a polyhydric alcohol existing as several different optical isomers. The meso- isomer occurs in algae and fungi and is also obtained by synthesis. It occurs in crystals, is very soluble in water, and is about twice as sweet as sucrose. Syn., *erythrol*, *erythrite*.

e. tetranitrate. Erythrityl tetranitrate.

e·ryth'ri·tyl tet"ra·ni'trate. $C_4H_6(NO_3)_4$, the tetranitrate of erythritol; a vasodilator which gives its maximum effect in about 20 minutes and lasts for five or six hours. Syn., *erythritol tetranitrate*, *erythrol tetranitrate*.

e·ryth'ro-, er'yth·ro- [*erythros*]. A combining form signifying red.

e·ryth'ro·blast [*erythros*; G. *blastos*, germ]. 1. In *hematology*, generally a nucleated precursor of the erythrocyte in which cytoplasmic basophilia is retained. Erythrocytes of the embryo are primitive erythroblasts, those in the fetal liver and in normal bone marrow are definitive erythroblasts. According to size and nuclear characteristics these cells can be divided into early and late forms. —**erythroblas'tic**, *adj.*

acidophilic e. See *normoblast*, 1.

basophilic e. An early e.

early e. The earliest form of erythroblast, preceded by the proerythroblast, which may retain nucleoli and which is generally larger than later forms. Also called *basophilic e.*, *basophilic* or *early normoblast*.

eosinophilic e. See *normoblast*, 1.

late e. An erythroblast characterized by a less vesicular and smaller nucleus, absence of nucleoli, and incipient cytoplasmic polychromatophilia indicating beginning hemoglobin synthesis. It is generally smaller than the early erythroblast, but larger than the normoblast. Also called *polychromatic e.* Also see *normoblast*.

mitroid e. A temporary type of secondary erythroblast in rat fetuses, shaped like a head wearing a cap.

orthochromatic e. See orthochromatic *normoblast*.

polychromatic e. See late e.

e·ryth"ro·blas·to'ma [*erythros*; *blastos*; G. *-oma*, tumor]. A tumor of bone marrow which is composed of cells that resemble large erythroblasts.

e·ryth"ro·blas"to·pe'ni·a [*erythros*; *blastos*; G. *penia*, poverty]. A decrease in the number of the erythroblasts in the bone marrow. It may be absolute, due to bone marrow aplasia or erythroid aplasia, or it may be relative, due to hyperplasia of other bone marrow elements. Also see *aplastic anemia*.

e·ryth"ro·blas·to'sis fe·ta'lis (fee-tah'lis). A hemolytic anemia of the newborn, characterized by icterus and an increased number of nucleated red blood cells. Occurs when the mother is Rh negative and develops antibodies against the fetus, which is Rh positive.

e·ryth"ro·chlo·ro'pi·a, e·ryth"ro·chlo'ro·py, e·ryth"ro·chlo·rop'si·a [*erythros*; G. *chlōros*, green; *ōps*, eye]. A form of subnormal color perception in which green and red are the only colors correctly distinguished.

erythrocin. A trade-mark for the antibiotic substance *erythromycin*.

e·ryth'ro·conte [*erythros*; G. *kontos*, pole]. One of the many fine azurophilic rods found in erythrocytes, and especially in stippled cells.

e·ryth"ro·cru·or'in. Any of the respiratory pigments found in the blood and tissue fluids of some invertebrates. It is an iron-porphyrin protein corresponding to hemoglobin in vertebrates.

e·ryth"ro·cy"a·no'sis [*erythros*; G. *kyanos*, blue; *-osis*, condition]. Irregular reddish-blue markings on the skin, usually reticular in arrangement; due to a circulatory disturbance of the skin.

e·ryth'ro·cyte [*erythros*; G. *kytos*, cell]. The non-nucleated and agranular cell of human blood whose oxygen-carrying pigment, hemoglobin, is responsible for the red color of fresh blood. The cell is generally disk-shaped and biconcave. Red blood cells or corpuscles normally are from 5 to 9 microns in diameter (mean 7.2 to 7.8μ) and 1 to 2 microns thick; they number around 5 million per cubic millimeter in the adult, usually slightly less in the female. It is the mature cell of the erythrocytic series. Also called *akaryocyte*, *erythroplastid*, *normocyte*, *rubricyte*. For abnormal forms see *macrocyte*, *microcyte*, *elliptocyte*, *poikilocyte*, *sickle cell*, *target cell*, *anisocytosis*, *spherocytosis*. See Plate 26. —**erythrocyt'ic**, *adj.*

crenated e. One with indented edges, due to withdrawal of fluid from the inside of the cell.

dichromatic e. One that is slightly immature slightly basophilic, nonnucleated erythrocyte.

immature e. See *reticulocyte*.

orthochromatic e. One that stains with acid stains only.

polychromatic e. One that does not stain evenly.

polychromatophilic e. An erythrocyte which contains variable amounts of basophilic staining material giving an appearance of polychromatophilia on Wright-Giemsa-stained blood films. Also see *reticulocyte*.

series e. Any cell of the blood and bone marrow which contains hemoglobin, or which will develop into a cell which contains hemoglobin.

young e. See *reticulocyte*.

e·ryth"ro·cy·the'mi·a (eh-rith"ro-sigh-theem'ee-uh, err"ith-ro-). 1. Erythrocytosis. 2. Primary polycythemia.

e·ryth"ro·cyt'ic se'ries. In *hemopoiesis*, the cells at progressive stages of development from a primitive cell to the mature erythrocyte. Concepts and terminology vary greatly. See under *proerythroblast*, *erythroblast* (early e., late e.), *normoblast*, *reticulocyte*, *erythrocyte*. See also *rubriblast*, *prorubricyte*, *rubricyte*, *metarubricyte*, *prokaryocyte*, *karyocyte*, *metakaryocyte*.

e·ryth'ro·cy'to- [*erythros*; *kytos*]. A combining form signifying *erythrocyte*.

e·ryth"ro·cy'to·blast. See *erythroblast*.

e·ryth"ro·cy"to·ly'sin (-sigh-to-lye'sin, -sigh-tol'i-sin) [*erythros*; *kytos*; G. *lysis*, a loosing]. An agent capable of producing erythrocytolysis; hemolysin.

e·ryth"ro·cy·tol'y·sis [*erythros*, *kytos*, *lysis*]. The plasmolysis of erythrocytes; the escape of soluble substances and the reduction of the volume of the corpuscle; hemolysis.

e·ryth"ro·cy·tom'e·ter (-sigh-tom'i-tur) [*erythros*; *kytos*; G. *metron*, a measure]. Hemocytometer. —**erythrocytometry**, *n.*

e·ryth"ro·cy'to·op·so'nin [*erythros*; *kytos*; G. *opsōnein*, to buy victuals]. A substance which is opsonic for erythrocytes.

e·ryth"ro·cy"to·poi·e'sis [*erythros*; *kytos*; G. *poiēsis*, production]. The formation or development of erythrocytes. Syn., *erythropoiesis*. See also *erythrocytic series*.

normoblastic e. Greater than normal numbers of normoblasts in erythrocytopoietic tissue.

megaloblastic e. The abnormal development of erythrocytes characteristically seen in deficiency of antianemic factor (erythrocyte maturation factor). The cells are larger and are precursors of the megalocytes of these deficiency syndromes. They are characterized by a discrepancy between nuclear and cytoplasmic maturation.

e·ryth"ro·cy"tor·rhex'is [*erythros*; *kytos*; G. *rhēxis*,

breaking]. Breaking up or fragmentation of the erythrocytes. Syn., *erythrorrhexis*.

e-ryth"ro-cy to-schi'sis (eh-rith ro-sigh-toss'ki-sis, err"ith ro-) [*erythros*; *kytos*; G. *schisis*, cleavage]. The fragmentation or splitting up of erythrocytes into disks resembling blood platelets.

e-ryth"ro-cy-to'sis (-sigh-to'sis) [*erythros*; *kytos*; G. *-osis*, increase]. 1. Increased erythrocyte count of more than two standard deviations above mean normal, as determined by the same method on the bloods of healthy persons of the patient age and sex, and associated with increased total blood volume also called *erythremia*, *erythrocythemia*, *polycythemia*. 2. An increase in the number of *erythrocytes in the fetus and newborn*.

anoxemic e. See secondary *polycythemia*.

e. megalosplenica. See primary *polycythemia*.

e-ryth"ro-de-gen'er a tive [*erythros*; L. *degenerare*, to degenerate]. Involving degenerative changes in the erythrocytes with increase in polychromatic basophilic stippling.

e-ryth"ro-der'ma [*erythros*; G *derma*, skin]. A dermatosis characterized by an abnormal redness of the skin; erythema also spelled *erythrodermia*.

e. desquamativa. A generalized redness and scaly eruption seen in children. The nails, scalp, and intestinal tract are usually involved. M y be fatal. Differentiated from dermatitis exfoliativa. Also called *Leiner disease*.

e. ichthyosiforme congenitum. A type of congenital dermatosis in which there is thickening and reddening of the skin, and tendency to resemble hebra.

e. maculosa perstans. A plaquelike variety of psoriasis in which the areas involved are about one-half inch in diameter and without marked desquamation.

e. psoriaticum. Generalized psoriasis, with an increase in the inflammatory changes.

exfoliative e. A dermatosis having scarlatiniform eruption lasting from six to eight weeks, with free desquamation. See *pityriasis* rubra.

e-ryth"ro-dex'trin. A dextrin formed by the partial hydrolysis of starch with acid or amylase. It yields red color with iodine.

e-ryth"ro gen -sis [*erythros*; G. *genesis*, production]. The formation of erythrocytes.

e-ryth ro-gone, **ryth"ro-go ni um.** A basophilic leptochromatic precursor of an erythroblast or megaloblast, stem cell.

er"y thro id [*erythros*; G. *eidos*, form.] Reddish of red color; used of cells of the *erythrocytic* series.

e-ryth"roi-dine (eh-rith roy-deen, din) An alkaloid, $C_{16}H_{19}NO_3$, obtained from species of *Erythrina*. It occurs in α- and β-varieties, both of which are crystalline compounds easily sol ble in water or alcohol. It has curarelike action of short duration. β-Erythroidine and its derivative dihydro-β-erythroidine are potentially useful because of their curarelike action.

er"y throl. 1 Erythritol 2 3-Butene-1,2-diol $CH_2OH.CHOH.CH{:}CH$

e. tetranitrate. Erythrityl tetranitrate.

ryth"ro-leu ke mi a. See *erythremia*

e-ryth"ro-leu"ko-blas t sis (leu ko blas-to sis) [*erythros*; *leukos*; G. *blastos*, germ -*osis*, increase]. Erythroblastosis foetalis with changes in leukocytes.

e-ryth"ro-leu ko sis (eh rith ro leu-ko sis, err ith ro) [*erythros*, G. *leukosis*, whitening] A condition characterized by an increase in he umber of immature erythrocytes and leukocytes in the blood also called *leukanemia*, *panmyelosis*

er"y-throl'y-sis (err throl'i sis, eh rith ro lye sis) Erythrocytolysis hemolysis.

er"y throl'y-sis [*erythros*; G. *lysis*, a loosing]. Erythrocytolysis.

e-ryth"ro-me lal'gi-a [*erythros*; G *melos*, limb; *algos*, pain]. A cutaneous vasodilatation of the feet or more rarely of the hands; characterized by redness, mottling, changes in skin temperature, and neuralgic pains. It is thought to be an angioneurosis of the sympathetic system, of unknown etiology Also called *acromelalgia*, *Mitchell disease*.

e. of the head. See histamine *headache*.

-ryth ro-me'li a [*erythros*; *melos*]. A condition of the extensor surfaces of the arms and legs; characterized by painless progressive redness of the skin; distinct from erythromelalgia.

er"y throm' ter [*erythros*; G *metron*, measure] Apparatus for measuring degrees of redness. *Rare*.

ryth ro-my'cin. An antibiotic substance isolated from cultures of the red-pigment-producing organism *Streptomyces erythreus*; it is basic compound having the empirical formula $C_{36-38}H_{65-69}NO$ Erythromycin is ffective orally against many Gram-positive and some Gram-negative pathogens. See *erythrosin*, *ilotycin*.

-ryth"ro-my"e-lo sis. Acute erythremia.

er"y thron. *I hematology*, concept of the erythrocytes, their precursors, and the erythropoietic bone marrow as one functional organ unit affected in great variety of disorders.

e-ryth"ro-ne"o-cy to sis (-nee o-sigh-to sis) [*erythros*; G. *neos*, new *kytos*, cell -*osis*, condition]. The presence of regenerative forms of erythrocytes in the circulating blood.

Er"y-thro'ni um [G *erythronion*, from *erythros*]. A genus of plants of the Liliaceae

E. americanum. A species indigenous to the United States; the dried plant is emetic in large doses.

-ryth"ro ne-cla si a. Destruction of erythrocytes, not only in circulating blood, but also in the hematopoietic tissues.

er"y thro-pe'ni [*erythros*; G. *penia*, poverty]. Deficiency in the number of erythrocytes.

ryth ro-phage [*erythros*; G *phagein*, to eat]. A phagocytic cell containing ingested erythrocytes. Syn., *macrophage*, *histiocyte*.

ryth"ro-pha gi a. See *erythrophagocytosis*.

ryth"ro pha go-cy to sis [*erythros*, *phagein*, *kytos*; -*osis*] The ingestion of an erythrocyte by phagocytic cell, such as blood monocyte or tissue macrophage.

e-ryth're phil [*erythros*; G *philein*, to love]. 1. Auerbach term for the red-staining nuclear substance of cells. 2. Eosinophil; acidophil; having an affinity for red dye. —**erythroph'ilous**, *adj*

ryth"ro-phle'ine (eh-rith ro flee een, -in, err" ith-ro- err"ith-ref'lee-een, -in) An alkaloid from casca bark having digitalislike action.

e-ryth ro-phle um [*erythros*; G *phloios*, bark]. Casca bark.

ryth"ro pho'bi a [*erythros*; G *phobos*, fear]. 1 Morbid intolerance or fear of red colors may be associated with fear of blood. 2. Fear of blushing. Syn., *ereuthophobia*.

e-ryth're-phose (eh-rith ro-fohz, err'ith-ro-) [*erythros*; G *phōs*, light]. A red phose.

er"y thro pi a. See *erythropsia*.

-ryth"ro-pla'si a of Quey-rat (eh-rith ro-play' zhuh uv kay-rah -play'zee-uh, -play'shuh, -play' see uh, err th ro- See Notes §§ 29 30, 23) A condition characterized by circumscribed, erythematous, velvety lesion affecting mucocutaneous junctions or mucosa of the mouth tongue vulva, glans penis, or prepuce Considered precancerous to squamous-cell carcinoma.

e-ryth″ro-plas′tid [*erythros*; G. *plassein*, to form]. See *erythrocyte*.

e-ryth″ro-poi-e′sis. See *erythrocytopoiesis*.

er″y-throp′si-a, er″y-throp′sy [*erythros*; G. *opsis*, vision]. An abnormality of vision in which all objects appear red; red vision.

er″y-throp′sin. Visual purple. See *rhodopsin*.

er″y-thror-rhex′is. See *erythrocytorrhexis*.

e-ryth″ro-sar-co′ma. An erythrocytic proliferation, with polycythemia, multiple metastatic lesions, and fatal termination.

er′y-throse. The tetrose sugar CHO.CHOH.CHOH.CH$_2$OH, existing in D- and L- forms, variously obtained.

e-ryth′ro-sin (e-rith′ro-sin, err″ith-ro-si′). **e-ryth′ro-sine** (e-rith′ro-seen, -sin, err″ith-ro-seen, -sin). A red dye; an iodine derivative of fluorescein.

e., yellowish. Di-iodofluorescein; valuable counterstain after Delafield hematoxylin or methylene blue. Also called *e. R* or *G*, *pyrosin J*, *dianthin G*, *iodeosin G*.

e-ryth′ro-sin B (C.C.). Tetraiodofluorescein; used as a counterstain. Also called *bluish e.*, *pyrosin B*, *eosin J*, *iodeosin B*, *dianthin B*.

e-ryth′ro-sin BB (C.C.). See *phloxine*.

e-ryth″ro-sin-o-phil [*erythros*; G. *philein*, to love]. Easily stainable with erythrosin.

e-ryth-ro′sis. 1. Overproliferation of erythrocytopoietic tissue as found in polycythemia. 2. The unusual red skin color of individuals with polycythemia.

e-ryth″ro-sta′sis. The processes to which erythrocytes are subjected when denied free access to fresh plasma, resulting from stasis of the blood.

er″y-throx′y-lon. Coca.

e-ryth′ru-lose. The tetrose sugar CH$_2$OH.CO.CHOH.CH$_2$OH existing in D- and L- forms, variously obtained; the sugars are isomeric with the corresponding erythroses.

er″y-thru′ri-a [*erythros*; G. *ouron*, urine]. Passage of red urine.

Esbach method. See under *method*.

Esbach's reagent. See under *reagent*.

es-cape′ [OF. *escaper*]. In *medicine*, leakage or outflow, as of nervous impulses.

vagal e. One or more spontaneous beats of the heart, occurring in spite of the fact that the function of the sinus node that normally initiates heart beats has been arrested by stimulation of the vagus nerve.

ventricular e. See *ventricular escape*.

es-cape mech′a-nism. A mode of adjustment to difficult and/or unpleasant situations by utilizing means easier or pleasanter than that required for a permanent solution of the difficulty; often resulting in an evasion of responsibility.

es′char (ess′kahr) [G. *eschara*, scab]. A dry slough, especially that produced by heat or a corrosive or caustic substance.

es″cha-rot′ic (ess″kuh-rot′ick) [*eschara*]. Caustic; producing a slough. —**escharot′ic**, *n.*

es-cha-rot′ic. A substance that produces an eschar; a caustic or corrosive.

eschatin. Trade-mark for an extract of the suprarenal cortex.

Esch″er-ich′i-a (esh″ur-ick′ee-uh) [NL., after Theodor *Escherich*, 1857-1911, German physician]. A genus of nonsporeforming, Gram-negative bacteria, widely distributed in nature.

E. coli. A normal inhabitant of the intestine of man and all vertebrates. It occasionally causes peritonitis and infections of the urinary tract. Formerly called *Bacillus coli*. Also called *colon bacillus*.

E. foetida. Old term for *Salmonella foetida*.

es″chro-la′li-a (ess″kro-lay′lee-uh). See *coprolalia*.

es-cor′cin. Escorcinol, $C_9H_8O_4$, prepared by the action of sodium amalgam on esculetin. A brown powder soluble in alkalies to give a green solution which quickly changes to red. One drop of a 10-20% aqueous solution is used in observation of corneal defects and lesions of the conjunctival epithelium; it imparts a red color to the lesions.

es″cu-le′tin, es-cu′le-tin. 6,7-Dihydroxycoumarin, $C_9H_6O_4$. A cleavage product of esculin.

es′cu-lin. A glycoside, $C_{15}H_{16}O_9.1\frac{1}{2}H_2O$, from the bark of the horse chestnut, *Aesculus hippocastanum*. Being fluorescent, it absorbs ultraviolet rays which are then gradually given off. It has been used as a protective against the sun and in heliotherapy.

es-cutch′eon [L. *scutum*, shield]. The pattern of the pubic hair growth which differs in man and women.

-ese [from *-ase*, diastase, from G. *diastasis*, separation]. In *biochemistry*, a suffix denoting an *enzyme which exerts a synthetic action*.

es′er-a-mine. $C_{16}H_{25}N_4O_3$; an alkaloid from Calabar beans.

e-ser′i-dine (eh-serr′i-deen, -din). An alkaloid, $C_{15}H_{23}O_3N_3$, found in Calabar beans. Syn., *geneserine*.

es′er-ine (ess′ur-een, -in). Physostigmine.

eskadiazine. Trade-mark for an orange-flavored aqueous suspension of sulfadiazine.

Esmarch, Johann Friedrich August von [German military surgeon, 1823-1908]. Celebrated in surgical annals for his introduction of the first-aid packet for use on the battlefield (1869). Devised the widely used rubber bandage and tourniquet, a pure rubber elastic bandage about three inches in width, of great value in operations upon limbs where a bloodless field is desired. His name is associated also with a chloroform inhaler which consists of a drop bottle and a wire frame over which is stretched a double layer of gauze, adapted to the open method of ether inhalation. He devised a number of operations, including an amputation at the hip joint, which bore his name.

e-soph″a-gal′gi-a [G. *oisophagos*, gullet; *algos*, pain]. Pain in the esophagus.

e-soph″a-ge-cta′si-a (e-sof″uh-jeck-tay′shuh, -see-uh, -zhuh, -zee-uh), **e-soph″a-gec′ta-sis** (i-sof″uh-jeck-tay′sis, -jeck′tuh-sis) [*oisophagos*; G. *ektasis*, extension]. Idiopathic dilatation of the esophagus.

e-soph″a-gec′to-my [*oisophagos*; G. *ektomē*, excision]. Surgical resection of part of the esophagus.

e-soph″a-go-ec-to′pi-a [*oisophagos*; G. *ektopos*, away from a place]. Displacement of the esophagus.

e-soph′a-gism, e-soph″a-gis′mus (i-sof″uh-jiz′mus, -jiss′mus). See *esophagospasm*.

e-soph″a-gi′tis [*oisophagos*; G. *-itis*, inflammation]. Inflammation of the esophagus.

e-soph′a-go- (i-sof′uh-go-), **e-soph-a-g-, oe-soph′a-g-** [*oisophagos*]. A combining form denoting *relation to the esophagus*.

e-soph″a-go-du″o-de-nos′to-my (i-sof″uh-go-dew″o-di-nos′to-mee, -dew-od″i-nos′to-mee). See *esophagoenterostomy*.

e-soph″a-go-en″ter-os′to-my [*oisophagos*; G. *enteron*, intestine; *stoma*, mouth]. Total gastrectomy with suture of the cardiac end of the esophagus to the duodenum (**esophagoduodenostomy**) or to the jejunum (**esophagojejunostomy**).

e-soph″a-go-e-soph″a-gos′to-my [*oisophagos*; G. *stoma*, mouth]. The surgical reunion of the esophagus after removal of an intervening portion.

e-soph″ a-go-gas-trec′to-my [*oisophagos*; G. *gaster*, belly; *ektomē*, excision]. Excision of parts of the stomach and esophagus.

e-soph″ a-go-gas′tro-plas″ty [*oisophagos*; *gaster*; G. *plassein*, to form]. Surgical repair of the stomach and esophagus.

-soph″ a-go-gas′tro-scope [*oisophagos*; *gaster*; G. *skopein*, to examine]. An instrument for examining the interior of the esophagus and the stomach. —esophagogastros′copy, *n.*

-soph″ a-go-gas-tros′to-my [*oisophagos*; *gaster*; G. *stoma*, mouth]. The surgical establishment of an anastomosis between the esophagus and the stomach; may be performed by the abdominal route or by transpleural operation.

-soph″ a-go-je″ju-nos′to-my (i-sof″uh-go-jee-jew-nos′to-mee, -jedj″oo-nos′to-mee) See *esophagojejunostomy*.

e-soph″ a-gom′e-ter [*oisophagos*; G. *metron*, measure]. An instrument for measuring the esophagus.

e-soph″a-gop′a-thy [*oisophagos*; G. *pathos*, disease]. Any disease of the esophagus.

e-soph′a-go-plas″ty (i-sof′uh-go-plas″tee, i-sof″uh-go-plas tee, es″o-fag′o-plas tee) [*oisophagos*; G. *plassein*, to form]. Plastic surgery of the esophagus.

e-soph″ a-gop-to′sis [*oisophagos*; G. *ptōsis*, falling]. Prolapse of the esophagus.

e-soph a-go-scope″ (i-sof″ uh-go-scope, es o-fag o-) [*oisophagos*; G. *skopein*, to examine]. An electrically illuminated instrument for direct visualization of the interior of the esophagus. —esophagos′copy, *n.*

-soph″ a-go-spasm (i-sof uh-go-spaz-um, es o-fag o-) [*oisophagos*; G. *spasmos*, spasm]. Spasmodic contraction of the esophagus.

e-soph a-go-ste-no′sis [*oisophagos*; G. *stenōsis*, being straitened]. Constriction of the esophagus.

e-soph″ a-gos′to-ma [*oisophagos*; G. *stoma*, mouth]. An abnormal aperture or passage into the esophagus.

e-soph″ a-gos″to-mi′ a-sis [*oisophagos*; *stoma*; NL. *-iasis*, condition]. Infestation with *Œsophagostomum*.

e-soph″ a-gos′to-my [*oisophagos*; *stoma*]. The formation of an artificial opening in the esophagus. **e. externa.** The surgical opening of the esophagus from the surface of the neck; for the removal of foreign bodies. **e. interna.** Incision of the esophagus from the inside by means of the esophagotome, for relief of stricture.

e″so-phag′o-tome (es o fag o tohm, i sof″uh-go-tohm″) [*oisophagos*; G. *tomos*, cutting]. Instrument devised for cutting into the esophagus.

-soph″a-got′o-my [*oisophagos*; G. *tomē*, cutting]. Opening of the esophagus by an incision.

e-soph a-gus, es-soph a-gus [*oisophagos*]. The gullet; the musculomembranous canal, about nine inches in length, extending from the pharynx to the stomach. See Plate 13. —esophag′eal, *adj.*

e-soph a-gram, e-soph a-go-gram. Radiographic image of the esophagus, obtained by outlining its lumen with a radiopaque contrast material, such as barium sulfate suspension.

es″o-pho′ri [G. *esō*, within; *phoros*, bearing]. Form of heterophoria in which the visual lines tend inward.

es o-tro pi-a [*esō*; G. *tropē*, turning]. Convergent concomitant strabismus; one eye fixes upon an object and the other deviates inward.

ESP Extrasensory perception.

es pun′di-a. South American *leishmaniasis*.

Esquirol, Jean Étienne Dominique [*French psychiatrist*, 1772–1840]. Remembered for his influence on the care of the insane in France. Founded 10 asylums and contributed classical study and description of paresis (1838).

ESR Erythrocyte sedimentation rate.

es sence [L. *essentia*, essence]. 1. That which gives to anything its character or peculiar quality. 2. A solution of an essential oil in alcohol.

es sen′tial [*essentia*]. 1. Pertaining to the essence of a substance. 2. Of diseases, idiopathic; occurring without known cause.

Esser, Johannes Fredericus Samuel [*Dutch plastic surgeon*, 1877–1946]. Known for his ingenuity in devising reconstructive technics in plastic surgery and especially for his epithelial inlay graft known as the *Esser inlay*. See inlay *graft*.

es′ter. A compound formed from an alcohol and an acid by elimination of water, as ethyl acetate, $CH_3CO·OC_2H_5$.
Harden-Young e. Fructose-1,6-diphosphate.
Neuberg e. Fructose-6-phosphate.

es″ter-ase (es ter-ace, -aze). Any enzyme which catalyzes the hydrolysis of an ester into an alcohol and an acid. See Table of Enzymes in the Appendix.
acetylcholine e. An enzyme found in the blood which rapidly hydrolyzes any excess of acetylcholine to acetic acid and choline.

es-ter″i-fi-ca′tion. The process of converting an alcohol or an acid to an ester.

es the′si (es thee′zhuh, -zee-uh) [G. *aisthēsis*, feeling]. Capacity for perception, feeling, or sensation. Opposed to *anesthesia*.

es-the′si-o-, es the si-o- (es-thee zee-o-, -see o-) [*aisthēsis*]. A combining form meaning *pertaining to the perceptive faculties*.

es-the″si-ol′ o-gy [*aisthēsis*; G. *logos*, word]. The science of the senses and sensations.

es-the si-om e-ter [*aisthēsis*; G. *metron*, measure]. An instrument for measuring tactile sensibility.

es the″si-o neu″ro-bla s′to-ma. See *neuroepithelioma*.

es the″si-o neu″ro-ep″i the li-o′ma. See *neuroepithelioma*.

es-the″si o-phys″i-ol′o-gy [*aisthēsis*; G. *physis*, nature; *logos*]. The physiology of sensation and the sense organs.

es-thet′ic [G. *aisthētikos*, perceptive]. Pertaining to the senses.

es″thi om′e-ne (es thee om′i-nee) [G. *esthiomenos*, from *esthiein*, to eat]. A term applied to the chronic ulcerative lesion of the vulva in venereal lymphogranuloma.

Estienne, Charles (Carolus Stephanus) [*French publisher and bookseller*, ca. 1504–64]. Remembered for his illustrated works on normal and pathologic anatomy containing noteworthy plates of both the venous and the nervous systems (1545).

estinyl. Trade-mark for ethynyl estradiol.

es′ti val, aes′ti-val (es′ti-vul, es tye vul) [L. *aestivus*, pertaining to summer]. Of, or belonging to, the summer.

es″ti va′tion [L. *aestivare*, to pass the summer]. 1. The adaptation of certain animals to the conditions of summer, or the taking on of certain modifications, which enables them to survive a hot dry summer. 2. The dormant condition of an organism during the summer.

estivin. A proprietary liquid preparation of *Rosa gallica*; used to relieve congestion of the conjunctiva and nasal mucosa.

Estlander, Jakob August [*Finnish surgeon*, 1831–81]. Widely known for his radical surgical treatment of chronic empyema by resection of portions of several ribs to produce obliteration of the cavity; the precursor of modern thoracoplasty

Devised also an operation for plastic repair of the upper lip.

es·tra·di'ol. $C_{18}H_{24}O_2$. 3,17-dihydroxy-1,3,5-estratriene; an estrogenic hormone secreted in the ovarian follicular fluid and placenta; it occurs in pregnancy urine. Two isomers exist: the active isomer was originally designated *alpha-estradiol*, the other *beta-estradiol*. Structural studies show that *alpha*-estradiol is actually 17β-estradiol, and that *beta*-estradiol is 17α-estradiol. Syn., *dihydrotheelin*. See Table of Hormones in the Appendix.

e. benzoate. Estradiol-3-benzoate, a white, crystalline powder insoluble in water but sparingly soluble in vegetable oils. It is an intramuscular dosage form of estradiol.

e. dipropionate. Estradiol in which both hydroxyl groups are esterified with propionic acid. It is injected intramuscularly and is claimed to maintain a more prolonged effect than any other estrogen.

ethinyl e., ethynyl e. $C_{20}H_{24}O_2$. An orally active, synthetic estrogen. See *estinyl*, *lynoral*.

es·trane. $C_{18}H_{30}$; the saturated parent hydrocarbon of estrone, estradiol, estratriol, and related estrogenic steroids.

es·tri'a·sis. Variant spelling for oestriasis.

es'trin. Old term for estrogen.

es'tri·ol (es tree-ole, -ol, -awl, es try-, es try'). $C_{18}H_{24}O_3$. A crystalline estrogenic hormone, 3,16,17-trihydroxy-1,3,5-estratriene, from human pregnancy urine. Formerly called *theelol*. See Table of Hormones in the Appendix.

estrobene. Trade name for a brand of diethylstilbestrol.

es'tro·gen [G. *oistros*, gadfly; *gennathai*, from *gignesthai*, to be produced]. Any substance possessing the biologic activity of estrus-producing hormones, either occurring naturally or prepared synthetically. —**estrogen'ic**, *adj.*

es'trone. $C_{18}H_{22}O_2$. 3-Hydroxy-17-keto-1,3,5-estratriene. An estrogenic hormone present in the ovary, adrenal glands, placenta, and urine. Syn., *theelin*, *folliculin*. See Table of Hormones.

e. sulfate. A naturally occurring conjugated form of estrone, in which the hydroxyl group of the latter is esterified with sulfuric acid. The sodium salt of estrone sulfate is soluble in water and is the principal estrogen in certain commercial products.

es"tru·a'tion, oes"tru·a'tion. Estrus.

es'trum, oes'trum. See *estrus*.

es'trus, oes'trus (es trus) [*oistros*]. 1. Sexual desire in the lower animals; the mating period of animals, especially of the female; heat; rut. 2. The whole sequence of changes in the uterine mucosa of animals, corresponding to the various phases of ovarian activity. —**estrous, estrual**, *adj.*

es'tu·a"ri·um [L. *aestuarium*, from *aestus*, swell of the sea, boiling, heat]. A vapor bath.

etalate. Trade name for a sclerosing solution containing ethylamine oleate and benzyl alcohol.

etamon chloride. Trade-mark for tetraethylammonium chloride, $(C_2H_5)_4NCl$, available in solution for parenteral use. See *tetraethylammonium*.

é·tat' mar·bré' (ay·tah' mar·bray'). See *status marmoratus*.

eth'an·al. Formaldehyde.

eth'ane [G. *aithēr*, ether, the heavens]. C_2H_6. A saturated, gaseous hydrocarbon, CH_3CH_3, found in natural and illuminating gas. Syn., *methylmethane*.

eth"ane·di·o'ic ac'id. Oxalic acid.

eth"a·no'ic ac'id. Acetic acid.

eth'a·nol. Ethyl alcohol.

eth"a·nol·a·mine. Cholamine.

eth'ene. Ethylene.

eth'e·noid. Resembling ethylene in containing a double bond.

eth'e·none. Ketene.

e'ther, ae'ther [*aithēr*]. 1. An all-pervading and permeating medium, formerly believed to exist and to transmit light and similar energy. 2. A compound formed hypothetically from H_2O by the substitution of two hydrocarbon radicals for the H. 3. Ethyl ether $(C_2H_5)_2O$; a thin, colorless, volatile, and highly inflammable liquid. The ether of the U.S.P. contains 96–98% by weight of $(C_2H_5)_2O$, the remainder consisting of alcohol and water; its specific gravity at 25° C. is 0.713–0.716. Its chief use is as an anesthetic. Also called *ethyl oxide*, *sulfuric ether*, *diethyl ether*, *diethyl oxide*, although the United States Pharmacopeia recognizes as *ethyl oxide* a less pure form of the substance for use as a solvent and other nonanesthetic purposes. —**ethe'real**, *adj.*

absolute e. Ether 3, containing no alcohol or water.

anesthetic e. Ethyl ether. See *ether* 3.

compound e. spirit. A solution containing 32.5% ethyl oxide, and 2.5% of ethereal oil, by volume, in alcohol. Used as an anodyne and antispasmodic. Also called *H. fmann's anodyne*.

diethyl e. Ether 3.

diethylene glycol monoethyl e. See *carbitol*, 1.

e. spirit. A solution containing 32.5% by volume of ethyl oxide in alcohol; used like compound ether spirit. Also called *H. fmann's drops*.

ethyl e. See *ethyl ether*.

isopropenyl vinyl e. See *isopropenyl vinyl ether*.

nitrous e. See *nitrous ether*.

propenyl ethyl e. See *propenyl ethyl ether*.

propethylene e. See *propethylene ether*.

vinyl e. CH_2:CH.O.CH:CH_2. An inhalation anesthetic used for short operations. The recovery is usually quick and uneventful. Syn., *divinyl oxide*, *vinethene*.

e'ther·ide. A comprehensive term for any combination of formyl with a haloid.

ether"i·fi·ca'tion [*aithēr*; L. *facere*, to make]. The formation of an ether from an alcohol. —**ether'ify**, *v.*

e"ther·i·za'tion [*aithēr*]. The administration of ether to produce anesthesia. —**e'therize**, *v.*

eth'ics [G. *ēthikos*, from *ēthos*, custom, habit]. A system of moral principles.

medical e. Principles of medical conduct; duties a physician owes to himself, his profession, and his fellow men.

eth'i·dene. Ethylidene.

eth'ine. Ethyne or acetylene.

eth'i·nyl. Ethynyl.

17-eth·i·nyl"tes·tos'ter·one, 17-eth·y·nyl"tes·tos'ter·one. Anhydrohydroxyprogesterone or ethisterone.

e·thi'o·nine. $C_2H_5S(CH_2)_2CHNH_2COOH$; the ethyl homolog of methionine; it inhibits growth of experimental animals, presumably by interfering with the metabolism of methionine.

e·this'ter·one. Currently official title for *anhydrohydroxyprogesterone*.

eth'mo- [G. *ēthmos*, sieve]. A combining form signifying *ethmoid*.

eth"mo·ceph'a·lus [*ēthmos*; G. *kephalē*, head]. A variety of cebocephalus with a rudimentary nose similar to a proboscis, which terminates anteriorly in two imperfect nostrils or in a single opening.

eth"mo·fron'tal [*ēthmos*; L. *frons*, forehead]. Relating to the ethmoid and frontal bones.

eth'moid [*ēthmos*; G. *eidos*, form]. A bone of the base of the skull perforated for the olfactory nerves and forming the upper bony nose. See Plate 12.

See Table of Bones in the Appendix. —ethmoid'al, ethmoi'dal, *adj.*

eth"moid-ec'to-my [*ēthmos*; *eidos*; G. *ektomē*, excision]. Surgical removal of the ethmoid masses or part of the ethmoid bone.

transmaxillary e. Ethmoidectomy by incision through canine fossa and maxillary sinus, preserving the mucous membrane of the lateral nasal wall. Also called *De Lima operation*.

eth"moid-i'tis [*ēthmos*; *eidos*; G. *-itis*, inflammation]. Inflammation of the ethmoid bone or of the ethmoid sinuses.

eth"moid-ot'o-my [*ēthmos*; *eidos*; G. *tomē*, a cutting]. Incision of an ethmoid sinus.

eth"mo-lac'ri-mal [*ēthmos*; L. *lacrima*, tear]. Relating to the ethmoid and lacrimal bones.

eth"mo-max'il-lar"y (eth"mo-mack'si-lerr-ee) [*ēthmos*; L. *maxilla*, jaw]. Pertaining to the ethmoid and the maxillary bone.

eth"mo-na'sal [*ēthmos*; L. *nasus*, nose]. Pertaining to the ethmoid and the nasal bones.

eth"mo-tur'bi-nal [*ēthmos*; L. *turbo*, whirl]. Relating to the turbinal portions of the ethmoid bone, forming what are known as the superior and middle turbinates.

eth'nic [G. *ethnos*, nation]. Pertaining to races, and peoples, and to their traits and customs.

eth-nog'ra-phy [*ethnos*; G. *graphein*, to write]. A branch of anthropology concerned with the geographic distribution of mankind and description of the physical types of races and peoples.

eth-nol'o-gy [*ethnos*; G. *logos*, word]. The study of mankind, including the origins of races and peoples, their distribution, and their classification according to physical types and linguistic families.

eth"o-caine hy"dro-chlo'ride. British Pharmacopoeia synonym for *procaine hydrochloride*.

ethocel. Trade-mark for *ethyl cellulose*.

eth"o-hex"a-di'ol. $CH_3CH_2CH_2CH(OH)CH(C_2H_5)CH_2OH$; 2-ethylhexane-1,3-diol, colorless, oily liquid used as an insect repellent and toxicant. Syn. *Rutgers 612*.

eth"o-pro-pa-zine hy"dro-chlo'ride. Approved British generic name for *profenamine hydrochloride*.

eth-ox'y. The radical C_2H_5O—.

eth-ox"y-caf'fe-ine (eth-ock"si-kaf'ee-in, -een) $C_{10}H_{14}O_3N_4$. A white to yellowish crystalline powder formerly used as an analgesic and local anesthetic.

eth'yl. The monovalent radical, C_2H_5—.

e. acetate. $CH_3CO \cdot OC_2H_5$. A colorless, pleasantly odorous liquid used chiefly as a solvent and in artificial fruit essences. Syn., *acetic ether*.

e. acetoacetate. See *acetoacetic ester*.

e. alcohol. See *alcohol*, 2.

e. aminobenzoate (*aethylis aminobenzoas*) $H_2N \cdot C_6H_4CO \cdot OC_2H_5$. A white, crystalline powder soluble in 2500 parts of water, in 5 parts of alcohol, or in 30 to 50 parts of olive oil or expressed almond oil. It is a local anesthetic of low toxicity used chiefly in dusting powders and ointments. In suppositories it is of value in relieving the pain of hemorrhoids. Internally it is used in gastralgia and to stop vomiting due to gastric irritation. Dose, 0.2–0.5 Gm. (3–8 gr.). Syn., *benzocaine*. See *anesthesin*.

e. bromide. C_2H_5Br. A rapid and transient anesthetic more dangerous than ethyl chloride.

e. biscoumacetate. British generic name for bis-3,3'-(4-oxycoumarinyl)ethyl acetate, an anticoagulant. See *tromexan*.

e. carbamate (*aethylis carbamas*) $H_2N \cdot CO \cdot OC_2H_5$. Colorless crystals or granular powder, easily soluble in water or alcohol. A somnifacient of uncertain power. It has been employed success-fully in treating myeloid and lymphatic leukemia, and has brought about disappearance of nodules of anaplastic undifferentiated cancer. Dose, 1–3 Gm. (15–45 gr.). It increases the solubility of quinine salts. Syn., *urethane*.

e. cellulose. The ethyl ether of cellulose, useful as a dispersing agent and to increase viscosity in aqueous systems. A 4–6% solution in a mixture of three parts of ether and one of alcohol has been suggested under the name *ethyl collodion* as a vehicle for many externally applied medicaments. See *ethocel*.

e. chaulmoograte (*aethylis chaulmoogras*). The ethyl esters of the mixed acids of chaulmoogra oil, chiefly chaulmoogric and hydnocarpic; used in leprosy. Dose, oral or intramuscular 0.5–4.5 cc. (8–70 min.).

e. chloride (*aethylis chloridum*) CH_3CH_2Cl. A colorless liquid boiling between 12° and 13° C. It acts as a local anesthetic of short duration through the superficial *freezing* produced by its rapid vaporization from the skin. It is occasionally used by inhalation as a rapid and fleeting general anesthetic, comparable to nitrous oxide but somewhat more dangerous.

e. chlorophyllide. The chief constituent of crystalline chlorophyll.

e. diacetate. Acetoacetic ester.

e. ether. Ether, 2.

e. formate. $HCO \cdot OC_2H_5$. A colorless liquid of aromatic odor used as a fumigant and larvicide and in organic syntheses.

e. green. See *brilliant green*.

e. iodide. CH_3CH_2I. Colorless liquid which reddens with age. Has been used by inhalation in bronchial asthma, etc.

e. iodophenylundecylate. See *iophendylate injection*.

e. nitrite. $C_2H_5O \cdot NO$. A pale yellow liquid of pleasant ethereal odor boiling at 17° C. Syn., *nitrous ether*.

e. nitrite spirit (*spiritus aethylis nitritis*). An alcoholic solution of 3.5–4.5% of ethyl nitrite. A popular diaphoretic in mild fevers. Dose, 2–4 cc. (30–60 min.). Also called *spirit of nitrous ether*, *sweet spirit of niter*.

e. oxide. Ether, 2.

e. parahydroxybenzoate. A preservative.

e. salicylate. $HO \cdot C_6H_4COOC_2H_5$. A liquid, slightly soluble in water, miscible with alcohol; its odor resembles that of methyl salicylate and the liquid is used similarly.

e. valerate. $CH_3(CH_2)_3COOC_2H_5$. A liquid which has been used as an antispasmodic and sedative in asthma.

e. vanillate. $C_6H_3 \cdot OCH_3 \cdot OH \cdot COOC_2H_5$; ethyl 4-hydroxy-3-methoxybenzoate; the ethyl ester of vanillic acid. It is a fungicide and has been found useful in the treatment of histoplasmosis, being administered in 40% solution in olive oil by gavage. Not to be confused with *ethyl vanillin*.

e. vanillin. $CHO \cdot C_6H_3 \cdot OC_2H_5 \cdot OH$; 3-ethoxy-4-hydroxybenzaldehyde, occurring as white or slightly yellowish crystals, sparingly soluble in water. It has a finer and more intense vanilla odor and taste than has vanillin, and is used as a flavor. Not to be confused with *ethyl vanillate*.

17-eth"yl-an-dro-stane. Allopregnane.

eth'yl-ate. A compound of ethyl alcohol in which the H of the hydroxyl is replaced by a base.

eth"yl-a'tion. The introduction of an ethyl group into a compound.

eth'yl-ene (*aethylenum*). Ethene, olefiant gas, C_2H_4. A colorless gas of slightly sweet odor and taste; used as an inhalation anesthetic. The ripening of certain fruits is hastened by its application.

e. glycol. $HOCH_2CH_2OH$. A colorless, viscid, hygroscopic liquid of sweet taste. It has been used in the manufacture of some pharmaceutical products intended only for external use. It is markedly toxic. Also called *glycol, ethylene alcohol.*

e. oxide $(CH_2)_2O$ A colorless gas used as fumigant, insecticide, and sterilizer of bacteriological media. See *carboxide.*

e. series. A group of hydrocarbons of the general formula, C_nH_{2n}, having one double bond. Also called *alkene, alkene series.*

e. tetraiodide. Diiodoform.

eth"yl-ene-di"amine (eth"l·een-dye uh-meen, -dye·am in, -dye uh-meen, -min) $H_2N\,CH_2\,CH_2\,NH_2$ A colorless, strongly alkaline liquid of ammoniacal odor It is used to increase the solubility of certain medicinal substances. See *aminophylline*

e. dihydrochloride. A urine acidifier Dose 0.3–1.0 Gm. (5–15 gr) See *chlor-ethamin.*

eth yl ene di"a mine tet ra ace ti c a id. $(HOOC\,CH_2)_2N\,CH_2CH_2N(CH_2COOH)_2$; an amino acid, produced synthetically occurring as white crystalline solid, slightly soluble in water Water-soluble salts of the acid, such as tetrasodium ethylenediaminetetraacetate, are powerful chelating and sequestering agents, forming water soluble complexes with many different cations in solution, thereby preventing such cations from exhibiting their characteristic chemical properties. Salts of ethylenediaminetetraacetic acid are used chiefly for their solubilizing and stabilizing actions the disodium salt prevents coagulation of blood Abbreviated, EDTAA. See *sequestrene sequestrene.*

eth"yl-e-phed'rine (eth"il-eh-fed'rin, -ef' -dreen, -drin) *l*-N Ethylephedrine hydrochloride or *l*-1 phenyl-2-methylethylaminopropan 1-ol hydrochloride. A white, odorless, crystalline compound having pharmacologic action and toxicity similar to *l*-ephedrine hydrochloride, except that its stimulating effect on the central nervous system is very slight. See *nethamine.*

eth'yl e'ther Ether 3.

eth"yl hy dro-cu pre ine (high dro-cue pree-een, -in) A synthetic derivative of cupreine It is also chemically related to quinine and possesses the latter's antimalarial and anesthetic action. See *optochin*

e. hydrochloride (*aethylhydrocupreinae hydrochloridum*) $C_{21}H_{28}N_2O\,HCl$. A 1 or 2% solution is used in the eye and instilled into the conjunctival sac in pneumococcic infections of the eye See *optochin.*

eth'yl i dene. The bivalent hydrocarbon radical $CH_3CH=$ Syn *ethidene.*

eth yl mor'phine hy"dro- hlo ride (eth il-mor feen, -fin). A sedative used especially in diseases of the bronchi. Dose 0.008–0.065 Gm. (⅛ 1 gr) Syn., *dionin.*

ethylnorsuprarenin hydrochloride. Trad name for an antiasthmatic chemically 1-(3 4-dihydroxyphenyl)-2-amino-1-butanol hydrochloride or ethylnorepinephrine hydrochloride.

eth yl ox'ide. See under *ethyl*

N-eth"yl pi-per'i dine. $C_5H_{10}NC_2H_5$ A compound used in chemical assay for penicillin G

eth"yl stib a mine (eth il stib uh meen, -min) Generic name for pentavalent antimony complex consisting principally of the tetramer of *p*-aminobenzenestibonic acid, the dimer of *p*-acetylaminobenzenestibonic acid, antimonic acid, and diethylamine; light yellow to yellow-brown powder soluble in water used in the treatment of kala-azar and other forms of leishmaniasis, also filariasis. See *neostibosan.*

eth yl va-nil'late. See under *ethyl.*

eth yl va nil'lin. See under *ethyl.*

eth'yne Acetylene.

eth y nyl eth'i nyl (eth'igh-nil) The radical $CH\equiv C—$

e. estradiol. $C_{20}H_{24}O_2$, 17-ethynyl estradiol, produced synthetically from estrone. The ethynyl radical delays decomposition of the estradiol molecule in the stomach, intestine, and liver so that the drug can be given orally It is one of the most potent estrogens known. See *estinyl, eticylol, lynoral, oradiol orestralyn.*

eticylol. A trade-mark for *ethynyl estradiol.*

eti o cho lan olon (ee tee-o-ko-lan e-lone). $C_{19}H_{30}O_2$ Etiocholane-3(α)-ol-17-one. A biologically inactive isomer of androsterone found in urine.

e ti o la tion [F *étioler* from L. *stipula*, stubble]. Pallor caused by the exclusion of light.

"ti ol' gy [G *aitia*, cause; *logos*, word]. The science or study of the causes of disease, both direct and predisposing, and the mode of their operation not synonymous with cause or pathogenesis of disease, but often loosely used to mean pathogenesis. —**etiolog'ic,** *adj*

"ti-o-path o-gen'e-si [*aitia*; G *pathos*, disease *genesis*, production]. The cause and course of development of disease or lesion.

ti o por'phy rin. Any of the four isomeric, metal-free porphyrins containing four methyl and four ethyl groups, in different positions, distinguished as etioporphyrins I, II, III, and IV The particular spatial arrangements of the etioporphyrins provides the basis for classification of naturally occurring porphyrins.

Eu Chemical symbol for europium.

Eu"bac te"ri les (yoo"back teer ee-ay'leez) [G. *eu*, well *baktērion*, little staff]. An order of bacteria, class Schizomycetes, including forms least differentiated and least specialized; the true bacteria According to Bergey suborder I, the Eubacteriineae, is composed of the following 13 families Nitrobacteriaceae, Pseudomonadaceae, Azotobacteriaceae, Rhizobiaceae Micrococcaceae Neisseriaceae, Lactobacteriaceae, Corynebacteriaceae, Achromobacteriaceae, Enterobacteriaceae, Parvobacteriaceae, Bacteriaceae, and Bacillaceae. Suborder II, the Caulobacteriineae, is composed of five families Nevskiaceae, Gallionellaceae, Caulobacteriaceae, Siderocapsaceae, and Pasteuriaceae. Suborder III, the Rhodobacteriineae, is composed of three families Thiorhodaceae, Athiorhodaceae, and Chlorobacteriaceae.

eu caine' hy"dro-chlo ride (yoo-cane yoo-kay'in, yoo'kuh-een, -in) $C_{15}H_{21}O_2N.HCl$. The hydrochloride of benzoyl vinyl-diacetone alkamine crystalline powder soluble in water A local anesthetic introduced early as substitute for cocaine but rarely used today Also called *betaeucaine hydrochloride.*

eu"ca lyp tene (yoo"kuh lip teen) $C_{10}H_{16}$. A terpene derived from eucalyptol.

e. hydrochloride. Eucalypteol.

eu"ca lyp'te-ol. $C_{10}H_{16}.2HCl$. Eucalyptene hydrochloride Yellowish crystals; camphorlike odor Formerly used like eucalyptol. Syn., *terpilene dihydrochloride.*

eu ca lyp'tol. $C_{10}H_{18}O$ cineol, eucalyptol constituent of the volatile oils of eucalyptus and cajeput mild local irritant used in bronchitis, coryza, etc. and formerly as vermifuge and antimalarial. Dose, 0 3 cc. (5 min.)

eu"ca lyp'tus [G *eu*, well *kalyptos*, covered]. The leaf of *Eucalyptus globulus*, formerly used medicinally

e. gum. The dried gummy exudate from *E*

camaldulensis containing 45% kinotannic acid; formerly used as an astringent.

e. oil. A volatile oil from the leaves of *E. globulus* of Australia (cultivated in California); contains eucalyptol. Used as a stimulant antiseptic.

eu'ca sin (yoo'ca sin). Ammonium caseinate. A soluble derivative of casein obtained by dissolving casein in dilute ammonium hydroxide. Has been used as a proprietary food product.

eu-cat'ro-pine hy"dro-chlo'ride (yoo kat'ro-peen, -pin) (*eucatropinae hydrochloridum*) $C_{17}H_{25}O_3N.$-HCl. A white, granular powder freely soluble in water used in 5% solution as a mydriatic of brief duration. See *euphthalmine*.

eucerin. Trade-mark of a hydrophilic substance made from wool fat used as an ointment base.

eu"chlor hy'dri a (yoo klor high dree-uh, -hid' ree-uh) [eu; G *chlōros*, pale green; *hydōr*, water]. Presence of a normal amount of hydrochloric acid in the gastric juice.

eu-chol'i a (yoo kol'ee-uh, -ko'lee-uh) [eu; G *cholē*, bile]. Normal condition of the bile.

eu-chro mo tin [eu; G *chrōma*, color]. 1. The deeply staining substance of the chromosomes, rich in nucleic acid, which is genetically active (contains the genes). 2. The substance of the euchromosomes, more usually called autosomes, in contrast to the substance of heterochromosomes. See *heterochromatin*. —euchromat'ic, *adj.*

eu-chro"ma top si [eu; *chrōma*, G *opsis*, vision]. Capacity for correct recognition of colors.

eu-chro'mo-some. See *autosome*.

eu'co-dal. A synthetic, narcotic alkaloid, dihydrohydroxycodeinone hydrochloride, $C_{18}H_{21}O_4N$.-HCl. Used for pain and spasmodic cough, dose, 3-10 mg. ($\frac{1}{20}$-$\frac{1}{6}$ gr.); and as a miotic.

eu-cor'ti sm. Normal adrenal cortical function.

eucupin. Trade-mark for isoamylhydrocupreine, local anesthetic.

eu"di-om'e-ter [G. *eudia*, fair weather; *metron*, measure]. Instrument for the analysis and volumetric measure of gases. —eudiometry, *n.*

eu"es-the'si a (yoo"ess-thee'zhuh, -zee-uh) [G *eu*, well; *aisthēsis*, sensation]. The sense of well-being; vigor and normal condition of the senses.

euflavine. Trade-mark for acriflavine.

eugallol. Trade-mark for a brand of pyrogallol monoacetate.

Eu ge ni a [L., after Prince *Eugene* of Savoy 1663-1736]. A genus of trees and shrubs of the Myrtaceae, mostly tropical.

E. caryophyllata. A species which yields cloves.

eu-gen'ics [G *eugenēs*, well-born]. The applied science concerned with improving the genetic constitution of a stock or race; term usually limited now to man. **Positive eugenics** includes all those measures under social control which aim to increase the families of the better types; **negative eugenics**, those measures which aim to decrease the worse types. —eugenic, *adj.*

eu'ge-nol. 4-Allyl-2-methoxyphenol. A colorless or pale yellow liquid having a clove odor and spicy pungent taste; obtained from clove oil and other sources. Used in dentistry as a local anesthetic and disinfectant in root canals; in ointments, as an anesthetic and antiseptic.

eu-glob'u lin. True globulin. A globulin fraction soluble in distilled water and dilute salt solutions. Also see *pseudoglobulin*.

eu-gnath'ic (yoo nath'ick, -nay'thick) [G. *eu*, well; *gnathos*, jaw]. Pertaining to jaws that are well developed and in proper relation to each other.

eu gon'ic [eu; G *gonos*, offspring]. Growing luxuriantly; used to describe bacterial cultures.

eu-ker'a tin. One of the two main groups of keratins. Eukeratins are insoluble in water, dilute alkali, and acids, are not digested by common proteolytic enzymes, and contain histidine, lysine, and arginine in the ratio of approximately 1:4:12.

eu"ki ne'si a (yoo"ki-nee'zhuh) [eu; G *kinēsis*, motion]. Normal power of movement.

eu'ko-dal. See *eucodal*.

Eulenburg, Albert [German physician, 1840-1917]. Described paramyotonia congenita, a spasm of the muscles of the neck, face, and throat of heredofamilial origin, called *Eulenburg's disease*.

eu mor'phic. Well and normally formed; not misshapen.

Eu"my-ce'tes (yoo migh-see teez) [eu; G. *mykēs*, fungus]. A class of thallophytes containing all the true fungi.

eu my'cin. An antibiotic substance derived from a strain of *Bacillus subtilis*. It is active against *Corynebacterium diphtheriae*, *Trichophyton mentagrophytes*, *Mycobacterium tuberculosis*, and other organisms.

eumydrin. Trade-mark for a brand of atropine methylnitrate.

eunarcon. Trade-mark for sodium 5-(2-bromoallyl)-5-isopropyl-1-methylbarbiturate, a rapidly acting narcotic used intravenously in surgical anesthesia.

eu noi a [G goodwill]. Normal condition of mind and will.

eu'nuch (yoo nuck) [G. *eunouchos*, guarding the couch] One who has undergone complete loss of testicular function from castration, inflammation, or mechanical injury. If this occurs before puberty it is associated with failure of development of secondary sex characters and typical changes in skeletal maturation, with increased height and span and disproportionate length of the lower extremities to trunk. —eu'nuchism, *n.*

eu'nuch oid ism (yoo nuk-oyd iz-um) [eunuchos; G *eidos*, form]. A state in which there is hypogonadism or agonadism accompanied by alterations in the development of secondary sex characters and the skeleton, similar to those seen in true prepuberal eunuchs; it may be due to a primary gonadal defect or to inadequate stimulation by the adenohypophysis. —eu'nuchoid, *adj.*

idiopathic e. A type of eunuchoidism without enlargement of the mammary gland, in which the testes are similar in histological appearance to those of a prepuberal male. There is a normal to low level of urinary 17-ketosteroids.

pituitary e. A clinical condition in which a specific deficiency of adenohypophyseal gonadotropins results in sexual retardation. Syn., *pituitary hypogonadism*.

eu-on'y mus [G. *euōnymos*, of good name]. The dried bark of *E. atropurpureus*; used as a cathartic. Dose, 0.3-1.0 Gm. (5-15 gr.). Syn. wahoo bark.

eu'pad. A mixture of equal parts of chlorinated lime and boric acid, for use in preparing eusol.

eu'pa ral. A mixture of resins used as a mounting medium for histologic sections; it has a refractive index of 1.483. The colorless form lacks (the green form contains) a copper salt for intensification of hematoxylin stain.

Eu"pa-to'ri um [G *eupatorion*, agrimony]. A genus of composite-flowered plants. The leaves and flowering tops of *E. perfoliatum*, thoroughwort or boneset, are used, principally by the laity, as a bitter tonic, diaphoretic, and feeble emetic.

eu pav'er ine. $C_{19}H_{15}NO.HCl$; the hydrochloride of 3-methyl-6,7-methylenedioxy-1-piperonylisoquinoline, a synthetic homolog of papaverine. It is a smooth muscle antispasmodic.

eu pho ni-a [G. goodness of voice]. A normal, good, and clear condition of the voice.

Eu phor'bi [G euphorbion, spurge]. A genus of plants of the Euphorbiaceae. E. corollata and E. ipecacuanhae the American species, were formerly employed in medicine because of their emetic and cathartic properties. E. pilulifera of South America and Australia is used in asthma and bronchitis. E. resinifera of Africa produces euphorbium.

Eu-phor'bi-a ce ae [euphorbion]. A plant family of herbs, shrubs, or trees.

eu phor'bin. A constituent of euphorbium.

eu phor'bi-um [euphorbion]. The dried resinous latex obtained from E phorbia resinifera. It is strongly purgative and vesicant now mainly employed in veterinary medicine

eu phor'bon. A constituent of euphorbium

eu pho ri [G sense of well-being]. I psychology, the exaggerated sense of well-being. —euphor'ic, adj

uphthalmi n. Trade-mark for eucatropine hydrochloride; mydriatic.

eu phys"i-o-log'ic. Of, pertaining to, or characterizing the normal range of function of an organism or part.

eu'ploid [G eu, well; diploos, twofold eidos, form]. I biology having an exact multiple of the basic haploid number of chromosomes. —euploidy n.

eup-ne a, eup-noe (yōōp-nee uh) [G. eupnoia, easiness of breathing]. Normal or easy respiration. Obs.

eu por'phin. Apomorphine methylbromide.

eu prax'i [G from eu; praxis, a doing]. Normal and perfect performance of coordinated movements.

Eu proc'tis chrys-or rho a. The brown-tail moth which causes brown-tail rash.

eu py'rene [eu; G pyrēn, stone of fruit]. Descriptive of the normal functional type of mature sperm cell. See apyrene, oligopyrene

eu qui'nine (yōō-kwye'nyne, kwin een, -in, yōō kwi-neen, -nin) Quinine ethylcarbonate.

eurax. Trade-mark for crotamiton or N-ethyl-o-crotonotoluidide; $C_{13}H$ NO used as scabicide and antipruritic.

euresol. Trade-mark for resorcinol monoacetate, used in certain skin diseases.

e. pro capillis. A proprietary perfumed resorcinol monoacetate for scalp lotions.

eu"ro-den'ti-a [G eurōs, mold, dank decay odous, tooth]. Dental caries Obs.

eu ro-pis"o-ceph lus [G eurys, broad opisō, behind kephalē, head] A person whose head is unusually broad in the occipital region.

eu-ro pi um [Europe]. Eu = 152.0. A rare earth metal found in cerium minerals

u"ro-pro-ceph' lus (G eurys, broad pro, in front kephalē, head). A person whose head is unusually broad in the frontal region

eu"ry ce-phal'ic [G eurys, broad kephalē, head]. Designating head that is unusually broad. Sometimes used to designate brachycephalic head with cephalic index of 81 to 85 4 Also eurycephalous.

eu ry has mus (yoo ka mus) [eurys; G chasma, chasm]. An individual with an unusually wide nasopharynx, with corresponding facial differences.

eu"ryc-ne mic [eurys; G knēmē, leg]. Referring to cnemic index of 70 or above.

eu"ry gnath'ism (yoor nath iz-um, yoo-rig' nathis um) [eurys; G. gnathos, jaw] A condition in which the j ws are unusually broad —eurygnath'ic, eurygnathous, adj

eu ry mer'ic [eurys; G meros part]. I osteometry designating a femur that is nearly circular in cross section in the proximal portion of the shaft, having platymeric index of 85.0 to 99.9.

eu ry on [eurys]. That point on either lateral surface of the skull which is located t the extremities of the greatest width of the skull.

eu"ry ther'mal eu"ry ther'mic [eurys; G thermē, heat]. Capable of tolerating great range of temperature, as certain organisms.

eu scope [G eu, well skopein, to examine]. A modified microscope which projects enlarged images of stereoscopic effect on screen.

Eu scor pi us [eu; G skorpios, scorpion]. A genus of scorpions.

E. italicus. A poisonous black scorpion found in northern Africa and southern Europe.

eu'sol [Edinburgh University solution]. A solution used as wound antiseptic, prepared by the interaction of 12.5 Gm. each of chlorinated lime and boric acid in water to make 1 liter

Eustachio, Bartolommeo (Eustachius) [Italian anatomist, ca. 1520–74]. Described the auditory or Eustachian tube; see under tube. The bony portion of the tube was once known as the Eustachian canal. Eustachio described the tensor tympani, and identified the chorda tympani as nerve. He discovered the thoracic duct, and gave the first description of the suprarenal glands. The caval valve is also called the Eustachian valve. See also, Eustachian catheter

eu sta chi n, Eu-sta chi an (yoo-stay'kee-un, -stay shee-un, -stay shun) (after Eustachio). Pertaining to the eustachian or auditory tube.

Eu stron gy lus gi'gas (yoo-stron'ji-lus jy'gas) Synonym for Dioctophyme renale.

eu-sys'to-le (yoo-sis'to-lee) [G. eu, well; systolē, contraction]. A normal contraction of the cardiac cavities.

eu tec'tic [eu, G. tēktos, melted, from tēkein, to melt]. I physical chemistry, of, pertaining to, or designating the specific mixture of two or more substances which has the lowest melting point of any mixture of the substances.

e. mixture. Through common usage, any mixture which has lower melting point than the individual constituents; more usually mixture which softens or melts at room temperature.

eu"tha na si (yōō thuh-nay zhuh, -zee-uh) [G from eu; thanatos, death]. 1. An easy or calm death. 2. The painless killing of people who are suffering from an incurable or painful disease.

eu then'ics [G euthenein, to thrive]. The science which deals with the improvement of the human race by means of the betterment of living conditions Also see eugenics. —eu'thenist, n.

Eu the ri-a [G eu, well thērion, beast]. The true placental mammals. —eutherian, adj.

eu thy'roid ism [eu, G thyreoeidēs, shield-shaped]. Denoting ormal thyroid function.

eu-to ci (yoo-to'shee-uh, -see-uh) [eu; G tokos, childbirth]. Natural or easy childbirth; normal labor

Eu"tri-at ma (yōō try-at o-muh) A genus of bugs, some members of which transmit American trypanosomiasis.

vac'u ant [L. evacuare, to empty out]. A medicine which empties an organ, especially the bowels: purgative. —evac'uant, adj

vac"u tion [L. evacuatio, from evacuare]. 1. The voiding of any matter either by the natural passages of the body or by an artificial opening; specifically defecation. 2. I military medicine, the withdrawal of sick and wounded personnel, or material, or both, as in air evacuation.

e-vac u 'tion of'fi-cer. The U S. Army Medical Service officer in charge of the movement of

patients through the Army Medical Service channels of evacuation.

e-vac"u-a'tion pol'i-cy *I military medicine*, (a) the command decision, indicating the length in days of the maximum period of noneffectiveness that patients may be held within the command for treatment. Patients who, in the opinion of responsible medical officers, cannot be returned to duty status within the period prescribed are evacuated by the first available means, provided the travel involved will not aggra te their disabilities. (b) command decision concerning the movement of civilians from the proximity of military operations for security and safety reasons, and involving the need to arrange for movement, reception, care, and control of such individuals.

e-vac'u a"tor [*evacuare*]. An instrument for the removal of fluid or particles from the urinary bladder or intestine.

e-vag"i-na'tion (i-vadj i-nay'shun) [L. *evaginare*, to unsheathe]. Outpouching.

ev"a-nes'cent [L. *evanescere*, to vanish away]. Unstable tending to vanish quickly

Evans, Herbert M. (1882-) American anatomist, known for many discoveries in biology and medicine, among which are vitamin E, the 48 chromosomes in man, and the growth hormone of the hypophysis. See also *Evans blue*, Evans blue method.

Evans blue. $C_{34}H_{24}N_6Na_4O_{14}S_4$; tetrasodium salt of 4 4'-bis[7 (1-amino-8-hydroxy 2,4-disulf)naphthylazo]-3,3'-bitolyl; a diazo dye occurring as bluish-green or brown iridescent powder very soluble in water It is used as an intravenous diagnostic agent for colorimetric determination of blood volume, cardiac output, and residual blood volume in the heart; when injected into the blood stream it combines with plasma albumin and leaves the circulation slowly *Syn.*, *T 1824*.

Eve, Frank Cecil [*English physician*, contemporary]. Invented halometer for measuring the degree of angulation between the axial beam of light and the edge of halo, micrometer for determining the size of erythrocytes. See also *Eve' method* under *artificial respiration*.

e"ven-tra'tion [L. *e*, out; *venter* belly]. Protrusion of the abdominal viscera through the abdominal wall, as in ventral hernia, to be distinguished from evisceration.

e. of the diaphragm. A condition where there is defective muscular action of the diaphragm, the left leaf being abnormally high, not moving through the normal excursion.

Eversbusch, Oscar [*German ophthalmologist*, 1853-1912]. Devised an operation for the relief of ptosis by shortening the levator palpebrae by infolding; called *Eversbusch operation*.

e-ver'sion [L. *eversio* from *evertere*, to turn out]. A turning outward. —**evert'** *v.*

e. of the eyelid. (a) A method of folding the lid upon itself for the purpose of exposing the conjunctival surface or sulcus. (b) Ectropion.

ev'i-dence [L. *evidens*, clear]. *I legal medicine*, the means by which the existence or nonexistence of the truth or falsehood of an alleged fact is ascertained or made evident; proof, as of insanity

circumstantial e. Evidence which is beyond actual demonstration, but upon which conclusions are based.

conclusive e. Evidence that admits of no doubt.

expert e. That given before jury by an expert in any science, art, profession, or trade

e'vil eye. An eye whose glance brings disease, bad luck, or death still living belief in many parts of the world. The delusion of being the victim of the evil eye is frequent among patients with the paranoid type of schizophrenic reaction. The Latin term *fascinum* is more common in psychiatric usage.

evipal. Trade-mark for hex barbital, a rapidly acting barbiturate.

evipal sodium. Trade-mark for hexobarbital sodium.

ev"i ra tion (ev"i ray'shun, ee vi-) [L. *evirare*, to emasculate]. 1. Castration; emasculation. 2. A psychic process in which there is a deep and permanent assumption of feminine qualities, with corresponding loss of manly qualities. In contrast to *defemination*.

e-vis"cer a'tion [L. *eviscerare*, to disembowel]. 1 Removal of the abdominal or thoracic viscera. 2. Protrusion of the viscera through an abdominal incision following an operation. 3. Removal of the contents of an organ, such as the eye.

e. of the eye. Removal of the contents of the globe, the sclera being left intact.

obstetric e. Removal of the abdominal or thoracic viscera of fetus to permit delivery

e vis cer-o neu rot o my (i-vis ur-o-new-rot'o-mee) [*eviscerare*; G *neuron*, nerve; *tomē*, cutting]. Evisceration of the eye with division of the optic nerve.

ev"o-ca'tion (ev'o-kay'shun, ee vo-) [L. *evocatio* from *evocare*, to call forth]. That part of the morphogenic effect of an organizer which can be referred to the action of single chemical substance, the evocator

ev'o-ca"tor (ev'o-kay"tur ee vo-) [L., from *evocare*]. The chemical substance emitted by an organizer which acts as all or part of morphogenic stimulus. *Syn.*, *morphogenic hormone*.

ev" lu'tion [L *evolutio* from *evolvere*, to roll out]. The view that present-day species of plants and animals have originated by descent with modification from preexisting species. The development has been through series of progressive changes, leading from the simpler and more generalized to the complex and more specialized forms, although ther has been some retrogression and degeneration, as in parasitic forms.

e-vul'sion [L. *evulsio* from *evellere*, to pull out]. Forcible tearing or plucking way of part. See *avulsion*.

Ewald, Carl Anton [*German physician*, 1845-1915]. Known for his studies of digestive disorders and of gastric secretion. Said to have introduced the use of flexible rubber tubing for the aspiration of stomach contents (1875) W th Boas, introduced the test meal (1885)

Ewart, William [*English physician*, 1848-1929]. Called attention to unerous signs which indicate pericardial effusion. Of these the most important are the patch of dullness at the inner part of the left lung base, and the area of bronchial respiration below the tip of the left scapula, associated with egophony

Ewing, James [*American pathologist*, 1866-1943]. Widely acclaimed for his evaluation of different varieties of tumors in masterly work on neoplastic disease (1919) Described form of bone sarcoma involving the shaft of the long bones. See Ewing' sarcoma.

ex [L.]. A prefix denoting *beyond*, *from*, *f out of thoroughly*, or *without*.

ex-ac"er ba'tion (eg-zas ur-bay'shun, eck-sass ur) [L *exacerbatio*, from *exacerbare* to irritate]. Increase in the manifestations of disease.

ex"al ta tion [L. *exaltatio* from *exaltare* to exalt] A mental state characterized by self-satisfaction, ecstatic joy abnormal cheerfulness, optimism, or delusions of grandeur

ex-am"i na'tion [L. *examinatio*, from *examinare* to examine]. Investigation for the purpose of

diagnosis. Qualified as: bimanual, digital, oral, physical, etc.

physical e. Investigation to determine an individual's physical status. A final type consists of complete physical and neuropsychiatric examination, including detailed medical history, chest x-ray, serological test for syphilis, urinalysis (including microscopic), other tests as indicated, and pelvic examination in women examinees. Preliminary physical examination includes these procedures in order to give advanced information regarding the physical status of an individual; approval of an individual's physical status based on preliminary examination is not binding. A screening physical examination includes brief medical history, physical examination, and appropriate x-ray or other laboratory procedures of any particular system of the body suspected or found to be abnormal or defective. A supplemental physical examination consists of reexamination of any part of a final type, special tests, or special examination of any particular system of the body. It is performed when indicated, usually by a specialist in some particular field of medicine or surgery.

ex″an·the′ma, ex·an′them (pl. *exanthemas, exanthems*) [G. eruption]. 1. An eruption upon the skin. 2. Any eruptive fever such as measles or scarlet fever. —**exanthem′atous, exanthematic, adj.**

e. subitum. A noncontagious roseola occurring in infants; roseola infantum.

vesicular e. An acute, febrile virus disease of swine characterized by the presence of vesicles on the nose, feet, and mucous membrane of the mouth.

ex·ar″te·ri′tis [L. *ex*, out; G. *artēria*, artery; *-itis*, inflammation]. Inflammation of the outer coat of an artery.

ex″ca·va′tion [L. *excavatio*, from *excavare*, to hollow out]. 1. A hollow or cavity, especially one with sharply defined edges. 2. Act or process of making hollow.

dental e. (a) The cavity prepared in a tooth, prior to filling or the insertion of an inlay. (b) The preparation of such a cavity.

e. of the optic disk. A cupping of the optic disk, which is more pronounced than the normal physiologic cupping, seen in glaucoma and certain other ophthalmic diseases.

rectouterine e. [BNA]. The rectouterine pouch; cul-de-sac.

rectovesical e. [BNA]. The rectovesical pouch.

vesicouterine e. See vesicouterine *pouch*.

ex′ca·va″tor [*excavare*]. 1. An instrument like a gouge or scoop used to scrape away tissue. 2. A dental instrument for removing decayed matter from a tooth cavity.

ex·cel′sin. A simple protein of the globulin type which occurs in Brazil nuts.

ex″ce·men·to′sis [L. *ex*, out; *caementum*, rough stone; G. *-ōsis*, condition]. Hypertrophy of the cementum of the teeth; hypercementosis.

ex·cer″e·bra′tion [*ex*; L. *cerebrum*, brain]. Removal of the fetal brain in the process of embryotomy.

ex·cip′i·ent [L. *excipere*, to take out, to take to one's self]. Any substance combined with an active drug to give the latter an agreeable or convenient form.

ex·ci′sion (eck·sizh′un) [L. *excisio*, from *excidere*, to cut out]. The cutting out of a part; removal of a foreign body or growth from a part, organ, or tissue. —**excise′**, v.

e. of wound. Clearing away all devitalized or infected tissue.

ex·cit″a·bil′i·ty (eck·sight″uh·bil′i·tee) [L. *excitabilis*, from *excitare*, to rouse up]. Readiness of response to a stimulus; irritability. —**excit′able**, adj.

ex·ci′tant (eck·sigh′tunt) [*excitare*]. An agent that stimulates the activity of an organ. —**exci′tant**, adj.

ex″ci·ta′tion (eck″sigh·tay′shun) [*excitare*]. 1. The act of stimulating or irritating an organ or tissue. 2. *In physics and chemistry*, the addition of energy to a system, thereby transforming it from its ground state to an excited state. Excitation of a nucleus, atom, or molecule can result from absorption of photons or from inelastic collisions with various atomic or nuclear particles. —**excit′ing**, adj.; **excite′**, v.t.

direct e. The stimulation of a muscle by placing an electrode on the muscle itself.

indirect e. The stimulation of a muscle through its nerves.

ex·clu′sion [L. *exclusio*, from *excludere*, to shut out]. 1. The process of extruding or shutting out. 2. A surgical operation by which part of an organ is disconnected from the rest, but not excised.

ex″coch·le·a′tion [L. *ex*, out of; *cochlea*, snail shell]. Removal by scraping.

ex·con′ju·gant [*ex*; L. *conjugare*, to join together]. A protozoon immediately after the separation following conjugation.

ex·co″ri·a′tion [L. *excoriare*, to strip of its skin]. Abrasion of a portion of the skin. —**exco′riate**, v.

neurotic e. Severe scratching of the skin due to psychogenic pruritis.

ex′cre·ment [L. *excrementum*, from *excernere*, to sift out]. An excreted substance; the feces. —**excrementi′tious**, adj.

ex·cres′cence [L. *excrescere*, to grow out]. Abnormal outgrowth upon the body.

cauliflower e. A tumor or other lesion with an irregular corrugated surface resembling a cauliflower.

Lambl's excrescences. Fine, hairlike proliferations of fibrous connective tissue in the region of the nodules of Arantius, usually on the aortic valve.

ex·cre′ta [L. *excretus*, from *excernere*, to sift out]. Waste material cast out or separated from an organism.

ex′cre·tin [*excernere*]. That fraction of secretin which stimulates pancreatic secretion. Also see *inertia*.

ex·cre′tion [*excernere*]. 1. The discharge of waste products. 2. The matter so discharged. —**ex′cretory**, adj.; n.; **excrete′**, v.t.

ex″cre·to′lic acid. A fatty acid occurring in feces.

ex·cur′sion [L. *excursio*, from *excurrere*, to run out]. 1. A wandering from the usual course. 2. The extent of movement, as of the eyes from a central position, or of the chest during respiration.

lateral e. The sideways movement of the mandible causing the inclined planes of the opposing teeth to glide upon each other.

ex·cur′va·ture, ex″cur·va′tion [L. *ex*, out; *curvatio*, from *curvare*, to curve]. Outward curvature.

ex·cy″clo·pho′ri·a [G. *ex*, out; *kyklos*, circle; *phoros*, bearing]. A latent outward tilting of the upper pole of the eye. See *cyclophoria*.

ex·cy″clo·tro′pi·a [*ex*; *kyklos*; G. *tropē*, turning]. A defect of vision in which the vertical median superior pole of the eye is turned outward.

ex″cys·ta′tion [*ex*; *kystis*, bladder]. The escape from a cyst by the bursting of the surrounding envelope; a stage in the life of an intestinal parasite which occurs after the parasite has been swallowed by the host.

ex′e·dens. *In dermatology*, progressively ulcerative.

ex"en ce pha'li a (ecks en-si-f ay'lee-uh, -fal' ee-uh) **ex"en-ceph'a ly** [ex; G. *enkephalos*, brain]. Cranioschisis and partial anencephalia, with encephalocele, or hydrencephalocele. —**exencephal'ic**, *adj.*

ex" n-ceph lus [ex; *enkephalos*]. A monster showing exencephalia.

ex-en"ter a'tion [L. *exenterare*, from G. *ex* out of; *enteron*, intestine]. 1. Evisceration or surgical removal, as of the orbital contents. 2. Destruction of cells of an air sinus by removing the bony partitions and forming single, large cavity as of the cells of the petrous pyramid.

ex'er-cise [L. *exercitium*, from *exercere*, to work at]. Functional activity of the muscles; such activity when its purpose is the preservation or restoration of the health, or the development of physical prowess or athletic skill.

active e. Exercise due to the voluntary effort of the patient.

graduated resistance e. See progressive resistance e.

passive e. The moving of parts of the body by another without help or hindrance by the patient.

postural e. That designed to improve posture by correcting mild deformities.

progressive resistance e. An exercise to increase the power of weakened muscle, or muscles, in which resistance to contraction is progressively increased as muscle power improves. In load-assisting exercise, the load with which the patient performs the exercise serves as counter balance, i.e., helps the muscle; in load-resisting exercise, the load resists the muscle. Syn., *graduated resistance e.*

setting-up e. That designed for routine use by normal persons.

underwater e. That done under water so that buoyancy makes movement easy enough for weakened muscles to control.

ex'er-cise gloves. Soft leather gloves used in graduated resistance exercises for patients who lack strength in the upper extremities. They eliminate hazards involved in using the bare hands.

ex-er'e-sis [G. *exairesis*, removal]. Surgical excision or extraction.

ex"er gon'ic [ex; G. *ergon*, work]. Of, pertaining, or referring to chemical reaction in which the end products possess less free energy than the starting materials usually associated with catabolism.

ex"fe-ta'tion [L. *ex*, out; *fetus*, offspring]. Ectopic or extrauterine fetation.

ex flag"el la'tion (ecks-fladj"i lay'shun) [ex; L. *flagellare*, to whip]. The formation of actively motile flagella in the microgametocyte, the male malarial parasite.

ex fo"li-a'tion [L. *exfoliare*, to strip of leaves]. 1. The separation of bone or other tissue in thin layers; superficial sequestrum. 2. A peeling and shedding of the horny layer of the skin. A normal process that may be exaggerated after an inflammation or as part of skin disease. —**exfo'liative**, *adj.*

ex"ha-la'tion [L. *exhalatio* from *exhalare*, to breathe out]. 1. The giving off or sending forth in the form of vapor; expiration. 2. That which is given forth as vapor; emanation.

ex-haust'er [L. *exhaurire*, to draw out]. Instrument for the removal of soft cataracts.

ex haus'tion [L. *exhaustum*, from *exhaurire*]. 1. Loss of vital and nervous power from fatigue or protracted disease. 2. The pharmaceutical process of dissolving out one or more of the constituents of crude drug by percolation or maceration.

e. from cold. The condition seen when the body is no longer able to compensate for exposure to cold, marked by fatigue, drowsiness, and coma.

heat e. See *heat prostration.*

ex"hi bi tion [L. *exhibitio* from *exhibere* to hold forth]. The administration of remedy.

ex"hi bi'tion ism [*exhibere*]. 1. A sexual perversion in which pleasure is obtained by exposing the genitals. 2. In *psychoanalysis*, gratification of early sexual impulses in young children by physical activity such as dancing. —**exhibitionist**, *n.*

ex hil'a rant [L. *exhilarare*, to make merry]. Exhilarating; causing rise in spirits.

ex hil'a-rant. An agent to enliven and cheer the mind. —**exhilara'tion**, *n.*

ex"hu ma'tion [L. *ex*, out, *humus*, ground]. Removal from the ground after burial; disinterment. —**exhume'** *v.*

ex'i tus [L.]. 1. Exit outlet. 2. Death.

Exner Siegmund [*Austrian physiologist*, 1846–1926]. Described layer of sensory fibers in the cerebral cortex near the surface, called *Exner's plexus.*

ex'o- ex [G. outside]. A prefix signifying *outside, outer layer out of*.

ex" -car'di a [*exō*; G. *kardia*, heart]. Displacement of the heart.

ex" -car'di ac, ex"o-car'di al [*exō*, *kardia*]. Originating or situated outside of the heart.

ex" -cat" pho i [*exō*; G. *kata*, down; *pherein*, to bear]. Condition in which the visual axis turns outward and downward.

ex"oc-cip'i tal (ecks"ock sip'i tul) [L. *ex* out; *occiput*, back part of the head]. Lying to the side of the foramen magnum, as the exoccipital bone.

ex" -cho ri-on (eck"so-kor'ee-on) [G. *exō* outside *chorion*, skin]. External layer of the chorion.

ex"o-coe'lom (eck"so-see'lum) [*exō*; G. *koilos*, hollow]. That part of the coelom outside the embryo proper. Originally extensive, it becomes restricted to the proximal umbilical cord by the growth of the amnion. —**exocoelom'ic**, *adj.*

ex'o-crine (eck'so-kryne, -krin, -kreen) [*exō*; G. *krinein*, to separate]. Pertaining to glands which deliver their secretion or excretion to an epithelial surface, either directly or by means of ducts. Cf. *endocrine.*

ex"o-don'ti a, ex"o-don'tics. The art and science of the extraction of teeth.

ex" -don'tist [G. *ex*, out; *odous*, tooth]. One wh specializes in tooth extraction.

ex" -er'gic. Exothermic.

ex"o-e-ryth"ro-cyt'ic [G. *exō*, outside *erythros*, red *kytos*, cell]. Outside of erythrocytes said of the development of some of the malaria plasmodia in the cells of the lymphatic system of birds.

ex-og'a my [*exō*; G. *gamos*, marriage]. Union of gametes of different ancestry; outbreeding; cross-fertilization.

ex" gas'tru la [*exō*; NL. dim. from G. *gastēr* stomach]. An abnormal embryo with evagination of the primitive gut and absence of further development.

ex-og' nous (eck-sodj'i-nus) **ex"o-gen'ic, ex"o-ge-net'ic** [*exō*; G. *genesthai*, from *gignesthai*, to be produced]. 1. Due to an external cause; not arising within the organism. 2. In *physiology*, pertaining to those factors in the metabolism of nitrogenous substances obtained from food.

ex"o-hys"ter-o-pex"y [*exō*; G. *hystera*, uterus; *pēxis*, fixing]. Fixation of the uterus in the abdominal wall outside the peritoneum.

ex"o me-tri'tis. Parametritis.

ex-om pha-los [G. from *ex*, out; *omphalos*, navel]. A prominence of the navel due to umbilical hernia; congenital hernia into the umbilical cord.

ex"o-pep'ti-dase. Any of group of enzymes, in-

cluding aminopeptidases and carboxypeptidases, capable of acting only upon terminal peptide bonds.

ex"o·pho'ri·a [G. *exō*, outside; *phoresis*, to bear]. A type of heterophoria in which the visual lines tend outward.

ex"oph·thal·mom'e·ter [G. *exophthalmos*, from *ex*, out; *ophthalmos*, eye; *metron*, measure]. Instrument for measuring the degree of exophthalmos.

ex"oph·thal·mom'e·try [*exophthalmos*; *metron*]. Mean measurement of the anterior plane of the cornea from the external orbital rim.

ex"oph·thal'mos, ex"oph·thal'mus [*exophthalmos*]. Abnormal protrusion of the eyeball from the orbit. —**exophthal'mic**, *adj.*

malignant e. Severe intractable exophthalmos arising in previously hyperthyroid individuals after thyroidectomy and thought to have the same cause as thyrotropic exophthalmos.

pituitary e. See thyrotropic e.

pulsating e. That characterized by bruit and pulsation, due to an aneurysm that pushes the eye forward.

thyrotropic e. Exophthalmos associated with either normal or low metabolic rate. Asymmetric proptosis is common, often accompanied by chemosis, lid edema, and paresis of extraocular muscles, believed to be due to hypersecretion of pituitary factor (exophthalmos-producing substance) associated with, but not identical to, thyrotropin. Syn., *pituitary e.*

ex"oph·thal'mos-pro·duc'ing sub'stance (EPS). A substance, considered to be distinct from thyroid-stimulating hormone (TSH), obtained from extracts of the anterior pituitary which, in experimental animals, produces exophthalmos.

ex-or'bi·tism. Exophthalmos.

ex"o·skel'e·ton [G. *exō*, outside; *skeletos*, dried up]. 1. The usually chitinous external skeleton of invertebrates. 2. The bony or horny supporting structures in the skin of many vertebrates, such as fish scales, the carapace of turtle.

ex"os·mom'e·ter (eck-soss-mom'e-tur, eck"soz-) [G. *ex*, out; *ōsmos*, impulse; *metron*, measure]. Instrument for measuring the degree of exosmosis.

ex"os·mo'sis (eck-sos-mo'sis, eck-soz-), **ex'os·mose** (eck'sos-mohss, eck'soz-) [*ex*; *ōsmos*; G. *-ōsis*, condition]. Passage of liquid outward through porous membrane. —**exosmot'ic**, *adj.*

ex-os"to-sec'to·my [*ex*; G. *osteon*, bone; *ektomē*, excision]. Excision of an exostosis.

ex"os·to'sis (pl. *exostoses*) [*ex*; *osteon*; G. *-ōsis*, increase]. The most common benign tumor of bone, usually seen as cartilage-capped bony growth protruding from the surface of long bones but also seen on flat bones, and thought to arise from periosteum with formation of anomalous foci of metaplastic cartilage. It appears in two forms: (1) **solitary exostosis**, also called *osteochondroma* or *chondro-osteoma*, thought to be limited or abortive form of (2) **multiple hereditary exostoses**, the most common systematized congenital skeletal abnormality revealing itself in childhood or adolescence. This form is also called *hereditary multiple cartilaginous exostoses*, *hereditary deforming chondrodysplasia*, *diaphyseal* or *metaphyseal aclasis*. —**exos'tosed**, **exostot'ic**, *adj.*

ex"o·ther'mic, ex"o·ther'mal [G. *exō*, outside; *thermē*, heat]. Relating to the giving out of energy, especially heat energy. Syn., *exoergic*.

ex"o·ther'mic. A substance formed with the liberation of heat.

ex"o·tox'in [*exō*; G. *toxikon*, poison]. A toxin which is excreted by living microorganism and can afterwards be obtained in bacteria-free filtrates without death or disintegration of the microorganisms. —**exotox'ic**, *adj.*

ex"o·tro'pi·a [*exō*; G. *trepein*, to turn]. Divergent concomitant strabismus occurring when one eye fixes upon an object and the other deviates outward.

expandex. A trade-mark for the plasma-expanding and blood-pressure-maintaining substance dextran.

ex·pan'sive [L. *expansio*, from *expandere*, to spread apart]. 1. Comprehensive; wide-extending. 2. In *psychiatry*, characterized by megalomania, euphoria, talkativeness, overgenerosity, grandiosity. —**expansiveness**, *n.*

ex"pec·ta'tion of life. 1. *In biometry*, the average number of years lived by group of individuals after reaching given age, as determined by the mortality experience of specific time and geographic area; mean afterlifetime. 2. Commonly, the probable number of years of survival for an individual of given age.

ex·pec'to·rant [L. *expectorare*, to drive from the breast]. Promoting expectoration.

ex·pec'to·rant. A remedy that promotes or modifies expectoration.

ex·pec"to·ra'tion [*expectorare*]. 1. Ejection of material from the mouth. 2. The fluid or semifluid matter from the lungs and air passages expelled by coughing and spitting; sputum.

prune-juice e. A peculiar bloody sputum, of dark purple color resembling prune juice, occurring in pneumonia, gangrene, and in carcinoma of the lung.

ex·pel' [L. *expellere*, to drive out]. Drive or force out, as the fetus, by means of muscular contractions.

ex·per'i·ment [L. *experimentum*, from *experiri*, to try]. A trial or test; procedure undertaken to discover some unknown principle or effect, to test hypothesis, or to illustrate known principle or fact. —**experimen'tal**, *adj.*; **experimenta'tion**, *n.*

control e. See *control experiment*.

ex'pert [L. *expertus*, from *experiri*]. A person specially qualified in certain subject, as science or an art.

medical e. A physician particularly fitted by experience or special learning to render an authoritative opinion in medicolegal or diagnostic questions. —**expert'ness**, *n.*

ex"pi·ra'tion [L. *expirare*, to breathe out]. Act of breathing forth or expelling air from the lungs. —**expi'ratory**, *adj.*

ex·pire' [*expirare*]. 1. Breathe out. 2. Die.

ex"plan·ta'tion [L. *explantare*, to pull up (a plant)]. Removal of living tissue from its habitat for cultivation in artificial mediums; tissue culture. —**explant**, *n.*

ex·plode [L. *explodere*, to drive out by clapping]. 1. Burst violently and noisily because of sudden release of energy. 2. Cause to burst violently. 3. Discredit and reject, as theory. 4. Break out suddenly, as an epidemic. —**explo'sive**, *adj.*; **explo'sion**, *n.*

ex"plo·ra'tion [L. *explorare*, to spy out]. The act of exploring for diagnostic purposes, through investigation of part hidden from sight, by means of operation, by touch, by artificial light, or by instruments. —**explor'atory**, *adj.*

ex·plor'er [*explorare*]. A probe; an instrument for use in exploration.

ex·po'sure [OF. *exposer*, from L. *ex*, out, F. *poser*, to place]. 1. Act of exposing or laying open. 2. State of being open to some action or influence

that may affect detrimentally, as cold or wet. 2. In radiology, dose.

acute e. In radiology, a short exposure to radiation.

chemical e. The product of gas concentration and time of exposure, commonly measured in milligram minutes per cubic meter of air. See median lethal gas e.

e. of person. In legal medicine, the exhibiting of the genitalia in public, before a person of the opposite sex. Also called *indecent exposure*. See *exhibitionism*.

median lethal gas e. The exposure to a war gas required to kill 50% of those exposed; commonly expressed as LCT 50. See chemical e.

ex·pres'sion [L. *expressio*, from *exprimere*, to press out]. 1. Act of pressing out. 2. The product of the act of pressing out.

e. of fetus. Pressure exerted upon the uterus through the abdominal walls to aid in the expulsion of the fetus.

ex"pres·siv'i·ty [L. *expressus*, from *exprimere*]. The degree to which a given gene manifests itself in the hereditary characteristic which it governs. Also see *penetrance*.

ex·pul'sion [L. *expulsio*, from *expellere*, to drive out]. 1. Act of forcing out. 2. Summary dismissal from membership. —**expulsive**, *adj.*

ex·san'gui·nate [L. *exsanguis*, deprived of blood]. Bloodless. —**exsanguine**, *adj.*; **exsanguina'tion**, **exsanguin'ity**, *n.*

ex·san'gui·nate. To drain of blood.

ex·sec'tion. See *excision*.

ex·sic'cant [L. *exsiccare*, to dry up]. Drying or absorbing moisture.

ex·sic'cant. A dusting powder.

ex"sic·ca'tion [L. *exsiccatio*, from *exsiccare*]. Act of drying; especially depriving a crystalline body of its water of crystallization. —**exsic'cative**, *adj.*

ex'sic·ca"tor. Old term for desiccator.

ex'stro·phy [G. *ex*, out; *strephein*, to turn]. Eversion; the turning inside out of a part.

e. of bladder. A congenital malformation in which the lower anterior part of the abdominal wall, the anterior wall of the urinary bladder, and usually the symphysis pubis are wanting, and the posterior wall of the bladder is pressed through the opening.

ex"suf·fla'tion [L. *exsufflare*, to blow away]. Forced discharge of the breath.

ext. *Extractum*, extract.

ex·ten'sion [L. *extensio*, from *extendere*, to stretch out]. 1. A straightening out, especially the muscular movement by which a flexed limb is made straight. 2. Traction upon a fractured or dislocated limb. *Counterextension* is traction made on a part in a direction opposite to that in which traction is made by another force.

Buck's e. See *Gurdon Buck*.

ex·ten'sor [L., from *extendere*]. 1. A muscle which extends or stretches a limb or part, as opposed to a *flexor*. See Table of Muscles in the Appendix. 2. In *dermatology*, the extensor surfaces of an extremity.

e. carpi radialis accessorius. A variant part of the extensor carpi radialis brevis muscle which is inserted into the base of the first metacarpal, the base of the first phalanx of the thumb, or into the short abductor of the thumb.

e. carpi radialis brevior. Old name for extensor carpi radialis brevis muscle.

e. carpi radialis brevis. The short radial extensor of the wrist.

e. carpi radialis intermedius. A variant part of the extensor carpi radialis brevis muscle inserted into the base of the second or third metacarpal or both.

e. carpi radialis longior. The old name for extensor carpi radialis longus muscle.

e. carpi radialis longus. The long radial extensor of the wrist.

e. carpi ulnaris. The ulnar extensor of the wrist.

e. carpi ulnaris digiti quinti. A rare variant part of the extensor carpi ulnaris muscle inserted into the base of the proximal phalanx of the little finger.

e. coccygeus. An occasional slip of muscle arising from the lower posterior surface of the sacrum and the upper posterior surface of the coccyx and inserted into the lower part of the coccyx; a rudiment of the extensor of the caudal vertebrae of tailed animals.

e. communis pollicis et indicis. An occasional extra extensor arising from the dorsal surface of the ulna and the interosseous membrane and inserted into both thumb and index finger.

e. digiti annularis. A rare anomalous muscle arising from the dorsal surface of the distal end of the ulna and inserted into the ring finger; a variant of the extensor indicis proprius muscle.

e. digiti medii. A rare anomalous muscle arising from the dorsal surface of the distal end of the ulna and inserted into the middle finger; a variant of the extensor indicis proprius muscle.

e. digiti minimi proprius. The extensor digiti quinti proprius.

e. digiti quinti proprius. The extensor of the little finger.

e. digitorum. The BR name for extensor digitorum communis muscle.

e. digitorum brevis manus. Various rare anomalous muscle bands arising from the dorsal surface of the ulnar carpal bones and inserted into the usual extensor tendons of the fingers or into the metacarpals.

e. digitorum brevis pedis. The short extensor of the toes.

e. digitorum communis. The extensor of the fingers.

e. digitorum longus. The long extensor of the toes.

e. hallucis brevis. The part of extensor digitorum brevis muscle for the great toe.

e. hallucis longus. The long extensor of the great toe.

e. hallucis proprius. The extensor hallucis longus muscle.

e. indicis. The BR name for extensor indicis proprius muscle.

e. indicis proprius. The extensor of the index finger.

e. ossis metacarpi pollicis. Old name for abductor pollicis longus muscle.

e. ossis metatarsi hallucis. Old name for an occasional part of the extensor hallucis longus muscle inserted into the first metatarsal.

e. pollicis brevis. The short extensor of the thumb.

e. pollicis longus. The long extensor of the thumb.

e. primi internodii longus hallucis. Old name for an occasional part of the extensor hallucis longus muscle inserted into the proximal phalanx of the great toe.

e. primi internodii pollicis. Old name for extensor pollicis brevis muscle.

e. secundi internodii pollicis. Old name for extensor pollicis longus muscle.

ex·ten'sor thrust. Rapid reflex contraction of extensor muscles occurs in the leg of a spinal

evil e. See *evil eye.*
exciting e. The originally injured or diseased eye in sympathetic phthalmia.
fixing e. In strabismus, the eye which is directed toward the visual bject.
gas e. A peculiar disease prevalent among the employees of the gas pumping stations in the natural gas regions of the United States. The eyes are inflamed, tender and sensitive to light.
pineal e. The rudimentary median eye in some lizards. Also called *epiphyseal e.*
reversed dominance of the eyes. In right-handed person, dominance of the left eye because of disease, operation, or ametropia of the right eye in left-handed person, dominance of the right eye.
schematic e. An pparatus representing an ideal or normal eye.
sticky e. An infection of the eye, caused most often by micrococci, sometimes seen in newborn infants.
sympathizi g e. The noninjured eye that becomes involved in sympathetic ophthalmia.

eye'ball" [*ēage*; ME. *bal*]. The globe of the eye. See Plate 19.

eye'brow" [*ēage*; AS. *brū*]. The supercilium; the arch above the eye; the hair covering the arch.

eye cells" [*ēage*; L. *cella*, cell]. Cup-shaped cells of porcelain, enameled black, to place over the eye after operations.

eye cup" [*ēage*; AS. *cuppa*, from L. *cupa*, tub]. 1. The optic vesicle. 2. A small cup which fits over the eye; used for bathing the conjunctiva.

eye ground. The fundus of the eye the internal aspect of the eye as seen through an ophthalmoscope.

eye'lash" [*ēage*; ME. *lasche*]. One of the stiff hairs growing on the margin of the eyelid; cilium.

eye'lid" [*ēage*; AS. *hlid*]. One of the two protective coverings of the eyeball; curtain of movabl skin lined with conjunctiva, having the tarsus, glands, and cilia in the distal part, muscle in the proximal part. See Plate 19.
e. lag. See von Graef sign.
fused eyelids. (a) The normal fusion between the epithelia of the fetal eyelid folds, occurring bout the ninth week and persisting until the seventh or eighth month. (b) A congenital anomaly caused by the failure of the two fetal eyelids to separate.

eye piece [*ēage*; OF *pece*, of Celtic origin] *I* *optics*, the ocular; the lens or combination of lenses of an optical instrument nearest the eye.

eye point" [*ēage*; OF *pointe*, from L. *pungere*, to prick]. The point above an ocular or simple microscope where the greatest number of emerging rays cross.

eye spot" [*ēage*; ME.]. A pigmented spot in invertebrates, thought to stimulate reactions in response to light.

eye strain" [*ēage*; OF *estraindre* from L. *stringere*, to draw tight]. Irritation and weariness of the eye as result of excessive use or uncorrected defects of vision.

eye'tooth [*ēage*; AS. *tōth*]. A canine tooth of the upper jaw

eye'wash" [*ēage*; AS. *wascan*]. A medicated solution for the eye; collyrium.

F

F Chemical symbol for fluorine.
F Symbol for luminous flux.
F Abbreviation for Fahrenheit, field of vision, formula.
F The first filial generation. The offspring of given mating.
F The second filial generation. The grandchildren of given mating.
f 12. See under *freon.*
F Chemical symbol for francium.

fa bel'la [dim. of L *faba*, bean] A sesamoid fibrocartilage or small bone occasionally developed in head of the gastrocnemius muscle

Faber Knud Helge (1862–) Danish physician who described hypochromic anemia associated with achlorhydria. See achlorhydric *anemia.*

fa'bism, f bis mus. F vism.

fab ri ca tion. See *confabulation*

Fabricius ab Aquapendente, Hieronymus (Girolamo Fabrizio) [*Italian anatomist and surgeon*, ca. 1537 1619]. Remembered especially for his researches in embryology M de observations on the valves of the veins, although he is not credited with their discovery Teacher of Harvey

Fabricius Hildanus (Wilhelm Fabry) [*German surgeon*, 1560–1634] Called the father of German surgery Made the first known classification of burns (1607) Described chest of medicines and surgical instruments for military use in the field.

Fabricius-Moller urine test. See under *test.*

Fabrizio. See *Fabricius ab Aquapendente.*

Fabry See *Fabricius Hildanus.*

fab u la'tion. See *confabulation.*

F.A.C.D Fellow of the American College of Dentists.

face [OF from L *facies*, form, face]. The anterior part of the head including forehead and jaws, but not the ears. See Table of Bones in the Appendix.
—**f cial** *adj*
adenoid f One showing the characteristic open-mouthed and stupid ppearance associated with adenoid growths which interfere with nasal breathing
bird f. One characterized by receding chin and beaklike appearance of the nose; the result of mandibular hypoplasia (micrognathia)
bovine f See *facies* bovina.
f. grippale. The pinched face bserved in peritonitis.
frog f. A facial deformity due t growth of polyps or other tumors in the nasal cavities. A temporary condition of this kind may be due to orbital cellulitis or facial erysipelas.
Hippocrati f See *facies* hippocratica.
mask f A condition present in paralysis agitans: the facial muscles are fixed and do ot react to emotions. Also called *Parkinsonian mask.*
masklike f A face often seen in alcoholi multiple neuritis expressionless and immobile between the eyes and lips, while the eyebrows, forehead, and lips may be moving freely
moon f Rounded, full facies characteristic of Cushing' syndrome
scaphoid f. One that ppears concave because

of weakly developed nasal and maxillary regions also called *dish face*.

face bow *I dentistry* a device used to record the spatial relationship between the alveolar ridges and the mandibular joints.

fac'et (fass'it) [F *facette* little face]. A small plane surface, especially on bone or hard body; may be produced by wear as a worn spot on the surface of a tooth.

fa cial ar'ter y. BR term and O T for *external maxillary artery*. See T ble of Arteries in the Appendix.

fa cial (seventh cranial) nerve. See Table of Nerves in the Appendix.

fa ci-es (fay'shee-eez, fash ee-eez) [L., face]. 1. The appearance of the face. 2. A surface.

f. abdominalis. The pinched, dehydrated facial mien of person with marked gastrointestinal disturbance, often an accompaniment of generalized systemic disease.

f. articularis. An articular surface.

f. auricularis. Auricular surface.

f. bovina. Cow face, as may occur with ocular hypertelorism.

f. cerebralis. Cerebral surface.

f. costalis. Costal surface.

f. diaphragmatica. Diaphragmatic surface.

f. epileptica. Dull expression of the face with little emotional lability seen in some epileptics.

f. frontalis. Frontal surface.

f. gastrica. Gastric surface.

f. hippocratica. An appearance of the face indicative of the rapid approach of death the nose is pinched, the temples hollow the eyes sunken, the ears leaden and cold, the lips relaxed, the skin livid.

f. intestinalis. Intestinal surface.

f. labialis. Labial or buccal surface.

f. lateralis. Lateral surface.

f. leontina. The lionlike face seen in lepers

f. lingualis. Lingual surface.

f. malaris. Malar surface.

f malleolaris. Malleolar surface.

f. maxillaris. Maxillary surface.

f. medialis. Medial surface.

f. mediastinalis. Mediastinal surface.

f. myopathica. A peculiar expression seen in some forms of myopathic muscular atrophy. It is characterized by imperfect movement of the facial muscles, sinking in of the cheeks, and drooping of the lower lip.

f. nasalis. Nasal surface.

f. orbitalis. Orbital surface.

f. ossea. Bony portion of the face.

f. palatina. Palatine surface.

f. parietalis. Parietal surface.

f. patellaris. Patellar surface.

f. pelvina. Pelvic surface.

f renalis. Renal surface.

f. sphenomaxillaris. Temporal surface.

f. velaris. Velar surface.

hepatic f. The sharp, pinched features and yellowish skin seen in patients with chronic liver disorders.

fa-cil'i ta'tion [L. *facilis*, easy]. 1. Increased ease in carrying out an action or function. 2. The furtherance of neural activities by conditioning or by previous or simultaneous stimulation.

fa'ci-o- [L. *facies*, face]. A combining form meaning the face.

F.A.C.P Fellow of the American College of Physicians.

F.A.C.S. Fellow of the American College of Surgeons.

fac-ti'tious [L. *facticius*, from *facere*, to make]. Pertaining to state or substance which is brought about or produced by means other than natural.

fac'tor [L., maker]. 1 A circumstance, fact, or influence which tends to produce result; constituent. 2. *I biology* gene. 3. An essential or desirable element in diet.

accelerator f. Any factor which accelerates clotting; more specifically any blood factor accelerating the conversion of prothrombin to thrombin most specifically proaccelerin or accelerin.

accessory food factors. Substances, present in foods, which are necessary to life, or for proper growth and development. See *vitamin*.

nimal protein f. See *vitamin* B_{12}.

antialopecia f. Inositol.

antianemia f See *vitamin* B_{12}.

anti-egg-white-injury f Biotin.

anti-gray-hair f. Para-aminobenzoic acid.

antihemophilic f. A factor associated with human plasma globulin but deficient in hemophilic blood, required for the development of plasma thromboplastic activity Syn., *plasma thromboplastinogen, globulin substance*.

anti-pernicious-anemia f. See *vitamin* B_{12}.

anti-pernicious-anemia liver f See *vitamin* B_{12}.

ntistiffness f. Fat-soluble vitamin, not known to be essential to man, found in green vegetables, raw cream, etc. In experimental animals its lack produces inflammatory lesions of the fibrous connective tissue and influences phosphorus metabolism.

antixerotic f Vitamin A.

Bittner milk f. See *milk f*

bursting f. See *collagenase*.

CH f. A substance in liver extract that intervenes in the metabolic process to correct deficiencies f methionine or choline. It protects against lathyrism.

chick antidermatitis f Pantothenic acid.

Christmas f A component of plasma necessary for the development of plasma thromboplastic activity Deficiency of the factor results in a hemophilialike disease (*Christmas disease*) Syn. *plasma thromboplastic component*.

chromotrichia f Para-aminobenzoic acid.

citrovorum f. A factor necessary for the growth of the bacillus *Leuconostoc citrovorum*. It is a B-complex vitamin, apparently folinic acid, and has been used in the treatment of anemia and malnutrition. Syn., *folinic acid*.

diabetogenic f. Originally the factor in crude anterior pituitary extract which was diabetogenic in dogs. Growth hormone is now known to be the major diabetogenic agent in crude pituitary extract.

erythrocyte aggregation f. A serum or plasma factor first discovered in cases of lupus erythematosus and demonstrable by cold conglutination tests.

erythrocyte-maturi g f See *vitamin* B_{12}.

Escherichia coli f. An antibiotic identical with corylophilline, myosin, notatin, penatin, and penicillin-B.

external f. An external component of the environment of an organism, as heat, gravity etc.

extrinsic f. See *vitamin* B_{12}.

f. V See *proaccelerin*.

f. VI. See *accelerin*.

f. VII See *convertin*.

fibri f A substance necessary for and concerned in, the formation of fibrin, as fibrinogen and thrombin.

filtrate f. Pantothenic acid.

glycotropic f. The factor from the adeno-

hypophysis, which is capable of antagonizing the action of insulin.

growth f. A chemical constituent of the diet, the lack of which retards normal growth and development.

hyperglycemic f. Hyperglycemic-glycogenolytic factor. See *glucagon*.

hyperglycemic-glycogenolytic f. Glucagon. Abbreviated, HGF.

internal f. An internal component of the environment of an organism.

intrinsic f. A substance, produced by the stomach, which combines with the extrinsic factor (vitamin B_{12}) in food to yield an antianemic principle. Lack of the intrinsic factor is believed to be the cause of pernicious anemia. Also called *intrinsic f. of Castle*.

Jarrell f. A dominant hereditary blood factor; in persons lacking it, the presence of the antibody may be related to the development of cancer in some cases.

kappa f. A cytoplasmic genic factor in paramecia, believed to be desoxyribonucleoprotein. When this factor is transmitted to susceptible paramecium through cytoplasmic conjugation, it causes cell death.

labile f. See *accelerin*.

Lactobacillus casei f. See *folic acid*.

Lactobacillus lactis Dorner f. Vitamin B_{12}; cyanocobalamin. Abbreviated, LLD factor.

lethal f. A gene which causes the death of the gamete or the zygote before development is completed.

lipotropic f. A substance that reduces the amount of liver fat; more specifically, choline or any compound, or compounds, which metabolically can give rise to choline. Syn., *lipotropin*.

LLD f. The Lactobacillus lactis Dorner *f.*

lytic f. Plasminogen; former usage.

maturation f. of liver. See *vitamin B*.

melanophore-stimulating f. A hormone or part of a hormone, *intermedin*, present in lower vertebrates, that effects the dispersion of pigment granules in the melanophores.

milk f. A filtrable, noncellular agent in the milk and tissues of certain strains of inbred mice; transmitted from the mother to the offspring by nursing. It seems to be an essential factor in the genesis of mammary cancer in these strains. Syn., *Bittner milk f.*

mouse antialopecia f. See *inositol*.

norite f. A bacterial growth factor adsorbable on certain types of charcoal (norite) and related to, or identical with, pteroylglutamic acid.

pellagra preventive f. Nicotinic acid. Abbreviated, PP factor.

Peters' f. Another name for vitamin B_4.

PP f. Pellagra preventive *f.*

reflection f. The ratio of reflected light from a surface to the incident light. Also called *coefficient of reflection*.

R f. Vitamin B_{11}.

Rh f. See *Rh factors*.

semilethal f. A gene which causes the death of the individual soon after development is completed or before reproductive age.

Simon's septic f. The phenomenon of the reduction or disappearance of eosinophils during infections in which neutrophilia occurs; it is now attributed to the action of adrenocortical hormones.

skin f. Biotin.

van't Hoff f. i A factor indicating the dissociation of an electrolyte in solution; a correction factor between theoretical figures based on concentration and experimental value of activity derived from measurements of osmotic pressure, freezing or boiling point.

V f. of the blood. A thermolabile factor found in blood, which is sensitive to alkali but not to acid; diffuses through parchment membranes and is necessary for the growth of *Hemophilus influenzae*.

Williams-Waterman f. Vitamin B_4.

Wills's f. A hematopoietic principle, present in certain crude liver extracts and in autolyzed yeast, effective in cases of macrocytic anemia that are unresponsive to vitamin B_{12} and to highly refined liver extracts. It may be identical with folic acid.

Y f. See *pyridoxine*.

fac·ul·ta"tive [L. *facultas*, capability]. Voluntary; optional; having the power to do or not to do a thing.

FAD Flavin adenine dinucleotide.

fae·ces (fee'seez). See *feces*.

faex (fecks) [L.]. The dregs or sediment of any liquid; fecula.

f. medicinalis. Yeast.

fa'gar·ine (fay'gur-een, -in; fag'ur-). The name applied to the three alkaloids of *Fagara coco*, a tree of Argentina; they are differentiated by the prefixes α, β, and γ. **Alpha-fagarine**, $C_{19}H_{23}NO_4$, has been used as a substitute for quinidine in restoring normal rhythm in atrial fibrillation.

Faget, Jean Charles [French physician, 1818–84]. Remembered for his description of an important sign in yellow fever: the fall in pulse rate with rise in the temperature curve or its maintenance at the horizontal.

fag"o·py'rism, fag·op'y·rism [L. *fagus*, beech; G. *pyros*, wheat]. Photosensitization of the skin and mucous membranes, accompanied by convulsions; produced in white and piebald animals by feeding with the flowers or seed husks of the buckwheat plant (*Fagopyrum sagittatum*) or clovers and grasses containing flavin or carotin and xanthophyll.

Fahr, Karl Theodor [German physician, 1877–]. With Volhard, he described arteriolar nephrosclerosis and malignant nephrosclerosis, both of which are sometimes called *Fahr-Volhard disease*. See also *Volhard's and Fahr's tests* under *test*.

Fahr. Fahrenheit scale or thermometer. Also abbreviated, F.

Fåhraeus, Robin [Swedish pathologist, 1888–]. Described his test for estimating the speed of settling of the red blood cells in a specimen of blood to which an anticoagulant has been added. Called *Fåhraeus sedimentation test*.

Fahrenheit, Gabriel Daniel [German physicist, 1686–1736]. The inventor of the thermometer and scale bearing his name, in which the space between the freezing point of water (32°) and its boiling point (212°) is divided into 180 degrees.

Failla, Gioacchino (1891–). American radiological physicist, known for his research in measurement of x-rays and radium rays, and in the biological effects of radiations. He developed the small radon tube (gold radon seed) in 1924.

fail'ure. See *cardiac failure*, *circulatory failure*, *metabolic failure*.

coronary f. A mild form of acute coronary insufficiency with subendocardial ischemia, but without necrosis or infarction.

faint [OF., from *faindre*, to feign]. Weak; wanting strength; ready or about to swoon.

faint. A state of syncope or swooning.

faint. To swoon; suffer syncope.

faith cure. The system or practice of treating disease by religious faith and prayer.

fal'cate [L. *falcatus*, from *falx*, sickle]. Sickle-shaped.
fal'ci form (fal'si-form) [*falx*; L. *forma*, shape]. Having the shape of sickle.
fal cu la [L. *falcula*, small sickle]. The falx cerebelli.
fal'cu-lar [*falcula*]. 1 Sickle-shaped. 2. Pertaining to the falx cerebelli.
fal lo pi-an, Fal lo pi-an tube See under *tube*.
Fallopius, Gabriel (Gabriello Falloppio) [*Italian anatomist*, 1523–62]. Described ovaries, round ligaments of the uterus, and oviducts, called *fallopian* or *uterine tubes*. Gave the vagina and placenta their present names. Made detailed study of the ear being first to describe the semicircular canals. Was first to describe the facial canal, called the *fallopian aqueduct*.
Fallot, Etienne Louis Arthur [*French physician*, 1850–1911]. Described type of congenital heart disease with dextroposition of the aorta, hypertrophy of the right ventricle, ventricular septal defect, and pulmonary stenosis or atresia. Called *tetralogy of Fallot*.
Falls test. See colostrum *test*.
Falret, Jean Pierre [*French psychiatrist*, 1794–1870]. Described manic-depressive psychosis (1854) called *circular insanity*, *cyclic insanity*. A pioneer in French psychiatry he was the precursor of Charcot.
false [L. *falsus*, from *fallere*, to deceive]. Not genuine; not real; imitating.
falx [L.]. A sickle-shaped structure. —**fal'cial**, *adj*
f. aponeurotica. The conjoined tendon.
f. cerebelli. A sicklelike process of dura mater between the lobes of the cerebellum.
f. cerebri. The process of the dura mater separating the hemispheres of the cerebrum. See Plate 18.
f. inguinalis. See *f* aponeurotica.
fa'mes (fay meez) [L.]. Hunger
fa mil'ial [L. *familia*, household]. Of, pertaining to, or occurring among, the members of family as familial disease.
fam'i ly [*familia*]. 1 A group of closely related persons; parents and children those descended from common ancestor 2. *In biology* classification group higher than genus; the principal division of an order
fa-nat'i-cism [L. *fanaticus*, pertaining to a temple]. Perversion and excess of the religious sentiment; unreasoning zeal in regard to any subject. Sometimes manifestation of mental disease.
Fanconi, Guido [*Swiss pediatrician*, 1892–]. Described constitutional infantile anemia, resembling pernicious anemia, called *Fanconi's disease*; he also described (1934) fibrosis of the pancreas with bronchiectasis, and amino diabetes (1936) called *de Toni-Fanconi syndrome*.
fang [AS *fon*, to make fast]. 1 A sharp or pointed tooth; especially the tooth of wild beast or serpent. 2. The root of tooth. *Obs*.
fan go [It., mud]. Clay from the hot springs of Battaglio, Italy; used as local application.
fan go-ther apy [*fango*; G *therapeia*, treatment]. Treatment with fango used in arthritis or gout.
Fan ni-a [G. *phanos*, conspicuous]. A genus of flies of the family Anthomyiidae The species *F canicularis*, the lesser house fly and *F scalaris*, the latrine fly breed under unsanitary conditions occasionally their larvae cause intestinal myiasis in man.
Fano, Giulio [*Italian physiologist*, 1856–1930]. Known for his studies of the physiology of the circulation and of the electric impulses of the heart, which contributed to the development of electrocardiography
fan'ta-sy [G *phantasia*, appearance, imagination]. 1 Imagination; the ability to form mental pictures of scenes, occurrences, or objects not actually present; fanciful, whimsical image making. 2. An image. Also see *phantasy*
Farabeuf Louis Hubert [*French anatomist and surgeon*, 1841 1910] Described operations, each called *Farabeuf's operation*, for amputation of the forefinger and for disarticulation of the great toe. Also devised operations for amputation of the foot, of the arm at the elbow and of the leg above the knee joint. Invented a bone-holding instrument for use in amputations. Described triangle, called *Farabeuf's triangle*, formed in the upper part of the neck by the internal jugular vein the common facial vein, and the hypoglossal nerve.
far'ad [after Michael *Faraday*]. The unit of electric capacitance; the capacitance of a capacitator that is charged to potential of 1 volt by 1 coulomb of electricity
Faraday Michael [*English chemist and physicist*, 1791 1867]. Discovered electromagnetic induction. Stated *Faraday's laws* (a) of electrolysis: the weight of an ion deposited electrolytically is proportional to the strength of the current passing through the solution; (b) see *faraday*.
far a-day [*Faraday*]. The quantity of electricity which will liberate one gram equivalent of an element in electrolysis. It equals 96,490 coulombs.
fa rad'ic [*Faraday*]. Relating to induced rapidly alternating currents of electricity
far a-dim'e ter [*Faraday*; G *metron*, measure] An instrument for measuring the strength of an induced rapidly alternating electric current.
fa rad"i punc'ture [*Faraday*; L. *punctura*, puncture]. The application of faradic currents by means of needle electrodes thrust into the tissues.
far' dism [*Faraday*]. 1 Induced rapidly alternating currents. 2. Faradization.
far" -di za tion [*Faraday*] Faradism; the therapeutic application of induced rapidly alternating currents to diseased part. —**far'adize** v. **general f.** The therapeutic application of the electric current to the organism as whole.
far' -do- [*Faraday*]. A combining form signifying *faradic*.
far" -do-con"trac til'i ty [*Faraday*; L. *contrahere*, to contract]. Contractility in response to faradic stimulus.
far"a-do-mus cu lar [*Faraday*; L. *musculus*, muscle]. Pertaining to the reaction of muscle when faradic current is applied.
far"a-do ther' py [*Faraday*; G. *therapeia*, treatment]. Therapeutic use of faradism; faradization.
farastan. The trade-mark for compound of cinchophen and mono-iodo-cinchophen, used in the treatment of arthritis, neuritis, sciatica, and gout.
far'cy Glanders
far'del-bound" Having disease in which the omasum becomes static and the food dry and impacted; said of ruminants.
far"i na'ceous [L. *farina*, flour]. H ving the nature of or yielding flour; starchy; containing starch.
Farley St. Clair and Reitinger's method. See under *method*.
Farmer's method. See Farmer and Abt's *method*, Folin-Farmer *method*.
far'ne-sol, $C_{15}H_{26}O$; 3,7 11-trimethyl-2,6,10-dodecatrien-1-ol; an unsaturated liquid alcohol found in various volatile oils, also in Peruvian balsam and tolu balsam. It is used in perfumery to emphasize the odor of certain floral perf mes.
far -point The most distant point at which an eye can see distinctly when accommodation is completely relaxed.
Farr William [*English medical statistician*, 1807 83]. One of the founders of morbidity and mortal-

ity statistics. Showed that in a typical epidemic the incidence of the disease is represented by a curve rising at first sharply, then more gradually to a peak, and descending more rapidly than it rose at first. Called *Farr's law*.

Farre, Arthur [*English gynecologist*, 1811–87]. Described the boundary line at the hilum of the ovary in the broad ligament, called *Farre's white line*.

far'ri·er·y [L. *ferrarius*, blacksmith]. The treatment of the diseases of the horse. *Obs.*

far'-sight. Hypermetropia. —**farsight'edness**, *n.*

fas'ci·a (fash'ee·uh) (pl. *fasciae*) [L., band]. 1. The areolar tissue layers under the skin (superficial fascia) or between muscles and forming the sheaths of muscles, or investing other deep, definitive structures, as nerves and blood vessels (deep fascia). 2. A bandage. *Obs.* —**fascial**, *adj.*

Buck's f. The deep fascia of the penis.

Camper's f. The superficial, loose, fat-containing layer of the superficial fascia of the lower abdomen.

clavipectoral f. That portion of the deep fascia of the pectoral region which is attached above to the clavicle and coracoid process and which surrounds the subclavius and pectoralis minor muscles. The portion between the two muscles is also called the *costocoracoid membrane* or *ligament*.

Colles' f. The deep layer of the superficial perineal fascia.

Cooper's f. The cremasteric fascia.

cremasteric f. A thin covering of the spermatic cord, enclosing the fibers of the cremaster muscle.

cribriform f. The sievelike covering of the fossa ovalis of the thigh.

crural f. The deep fascia of the leg, extending from knee to ankle.

deep cervical f. That which invests the muscles of the neck and encloses the vessels and nerves. It consists of three fascial planes, one surrounding the trapezius and sternocleidomastoid muscles, a second surrounding the larynx, pharynx, and thyroid gland, and a third, the prevertebral fascia.

Denonvilliers's f. That portion of the pelvic fascia between the anterior surface of the rectum and the seminal vesicles and prostate gland.

diaphragmatic f. That portion of the pelvic fascia which surrounds the pelvic diaphragm.

endopelvic f. The visceral portion of the pelvic fascia.

external spermatic f. The outer covering of the spermatic cord and testis, continuous with the aponeurosis of the external oblique muscle at the subcutaneous inguinal ring.

f. colli. See deep cervical *fascia*.

f. dentata. A serrated band of gray matter lying upon the medial side of the hippocampus of the cerebrum.

f. lata. The dense fascia surrounding the muscles of the thigh.

f. lunata. The deep fascia of the ischiorectal fossa.

Gerota's f. The renal fascia.

iliac f. The fascia covering the pelvic surface of the iliacus muscle.

infundibuliform f. See internal spermatic *f.*

intercolumnar f. (a) A fascia attached to the crura of the external abdominal ring. (b) That portion of the diaphragmatic fascia located between the two pubococcygeus muscles.

internal spermatic f. The inner covering of the spermatic cord and testis, continuous with the transversalis fascia at the abdominal inguinal ring.

ischiorectal f. That covering the perineal aspect of the levator ani muscle and filling the ischiorectal fossa.

lumbodorsal f. Variously described as the sheath of the sacrospinalis muscle alone, or the sheaths of the sacrospinalis and the quadratus lumborum muscles.

obturator f. The portion of the parietal pelvic fascia overlying the obturator internus muscle.

palpebral f. Fascia of the eyelids; orbital septum.

pectineal f. The portion of the fascia lata associated with the pectineus muscle; also called *pubic f.*

pectoral f. Deep fascia over the pectoralis major muscle on the anterior aspect of the thorax. Also called *pectoralis f.* See Plate 43.

pelvic f. A collective name for all of the fascia located within the pelvic cavity. It is usually divided into three portions: parietal, diaphragmatic, and endopelvic or visceral.

prevertebral f. The third layer of the deep cervical fascia; a band of connective tissue covering the front of the cervical vertebrae and the prevertebral muscles. It is attached to the esophagus and pharynx by loose connective tissue.

pubic f. See pectineal *f.*

renal f. The connective tissue investment of the kidney. There is an anterior and a posterior layer with the kidney and perirenal fat between. The two layers form a pocket; above, below and laterally they are fused. Also called *Gerota's f.*

Scarpa's f. The deep, membranous layer of the superficial fascia of the lower abdomen.

Sibson's f. A domelike expansion of fascia strengthening the pleura over the apex of the lung, extending from the first rib to the transverse process of the seventh cervical vertebra.

transversalis f. That lying between the transversus abdominis muscle and the peritoneum.

triangular f. The reflected inguinal ligament.

Waldeyer's f. That portion of the pelvic fascia surrounding the distal end of each ureter.

fas'ci·cle (fas'i·kul). Fasciculus. —**fascic'ular**, *adj.*

fas·cic'u·lat"ed (fa·sick'yoo·lay"tid) [L. *fasciculus*, small bundle]. United into bundles or fascicles.

fas·cic·u·la·tion (fa·sick"yoo·lay'shun) [*fasciculus*]. 1. An incoordinate contraction of skeletal muscle in which groups of muscle fibers innervated by the same neuron contract together. 2. The formation of fasciculi.

fas·cic'u·lus (fa·sick'yoo·lus) [L.]. 1. In *histology*, a bundle of nerve, muscle, or tendon fibers separated by connective tissue; as that of muscle fibers, by perimysium. 2. In *neurology*, a bundle or tract of nerve fibers presumably having common connections and functions. Also see *tract*. —**fascicular**, *adj.*

arcuate f. (*of the cerebrum*). Long association fibers that form a ventral part, connecting the superior and middle frontal convolutions with the temporal lobe, and a dorsal part (superior longitudinal fasciculus) connecting the upper and caudal portions of the frontal lobe with the occipital and parietal portions of the temporal lobe.

basal olfactory f. A diffuse system of nerve fibers that arise in the basal olfactory nuclei, pass beneath the head of the caudate nucleus, give terminal or collateral fibers to the tuber cinereum and mammillary body (olfactohypothalamic tract) and continue to the tegmentum of the midbrain (olfactotegmental tract), some reaching the medulla and spinal cord.

dorsal longitudinal f. A bundle of long association fibers in the cerebrum, connecting the frontal lobe with the occipital and temporal lobes.

f. cuneatus. The lateral part of the dorsal funiculus. Also called *Burdach's column*.

f. gracilis. The medial part of the dorsal funiculus of the spinal cord carrying proprioceptive impulses

from the lower regions of the trunk and legs. Also called Goll' column or tract.

f. interfascicularis. Comma tract.

f. proprius. That which immediately surrounds the gray columns of the spinal cord, containing short ascending and descending correlation fibers. Syn. *ground bundle, fundamental column, spino-spinal tract.*

f. retroflexus. A bundle of nerve fibers connecting the habenular nucleus with the interpeduncular nucleus of midbrain. It is concerned with olfactory impulses. Syn., *habenulopeduncular tract.* Also called *Meynert'* bundle.

f. solitarius. The tractus solitarius.

gyral f. See *association fibers* under *fiber*.

inferior longitudinal f. A bundle of long association fibers coursing horizontally in the lateral wall of the inferior and posterior horns of the lateral ventricle, extending from the occipital to the temporal lobe.

medial longitudinal f. One of two heavily medullated bundles close to the midline, just ventral to the central gray matter and extending from the upper spinal cord to the rostral end of the midbrain.

occipitofrontal f. A bundle of long association fibers extending from the cortex of the frontal lobe to the cortex of the occipital lobe.

occipitothalamic f. A bundle of nerve fibers connecting the thalamus with the occipital lobe.

spino-olivary f. See *spino-olivary tract.*

subcallosal f. A tract of long association fibers lying under the corpus callosum and connecting the frontal, parietal, and occipital lobes.

superior longitudinal f. See *arcuate f.*

uncinate f. of hemisphere. Long association fibers which lie immediately below the limen insulae and connect the orbital gyri with the hippocampal gyrus and temporal lobe and the frontal lobe with the occipital lobe.

fas"ci-ec'to-my (fash"ee-eck'to-mee, fass"ee-) [L. *fascia*, band; G. *ektomē*, excision]. Surgical excision of fascia; specifically, excision of strips from the lateral part of the fascia lata (iliotibial tract) for use in plastic surgery.

fas-ci'num [L., spell, bewitching]. 1. Literally, spell, bewitching; specifically, spell cast by the evil eye; in modern Italian *fascino.* 2. Any amulet or charm worn to protect against the evil eye; frequently, tiny image of penis hung around the necks of children as protective amulet against the evil eye and other forms of witchcraft.

fas'ci-o- (fash'ee-o-, fass'ee-o-) [L. *fascia*, band]. In anatomy, combining form for *fascia*.

fas"ci-od'e-sis (fash"ee-od'e-sis, fass"ee-) [*fascia*; G. *desis*, binding]. The operation of suturing tendon to fascia.

Fas-ci'o-la (fa-sigh'o-luh, fa-see') [L., small bandage]. A genus of trematodes; hermaphroditic flukes.

F. gigantica. A species related to *F. hepatica*, natural parasite of cattle, sheep, and swine; human infestation has been reported from Indo-China, central Asia, Africa, and Hawaii, where it is the commonest cause of fascioliasis.

F. hepatica. A species which is natural parasite of sheep and cattle and, occasionally, man.

fas-ci'o-la ci"ne-re-a. The dorsal continuation of the fascia dentata of the cerebrum.

fas"ci-o-li'a-sis [*fasciola*; NL. *-iasis*, condition]. Infestation with the *Fasciola hepatica*; normally occurs in sheep and other herbivorous animals, but man has served as an accidental host. The liver is usually the site of infestation. Also called *liver rot.*

Fas"ci-o-loi'des (fass"ee-o-loy'deez, fash"ee-o-) [*fasciola*; G. *eidos*, form]. A genus of digenetic trematodes.

F. magna. A species of flukes occurring in the liver, rarely the lungs, of cattle and other herbivores in North America and northern Europe.

fas"ci-o-lop"si-a'sis (fash"ee-o-lop-sigh'uh-sis, fass"ee-o-) [*fasciola*; G. *opsis*, appearance; NL. *-iasis*, condition]. Intestinal infestation of man and the hog by the *Fasciolopsis buski*, characterized by toxic diarrhea with visceral complications in severe cases.

Fas"ci-o-lop'sis [*fasciola*; *opsis*]. A genus of flukes parasitic in both man and the hog.

F. buski. Largest intestinal fluke of man; endemic only in the Orient; the causative organism of fasciolopsiasis.

fas'ci-o-plas"ty [L. *fascia*, band; G. *plassein*, to form]. Plastic surgery upon fascia.

fas'ci-or'rha-phy [*fascia*; G. *rhaphē*, a suture]. Suture of cut or lacerated fascia.

fas"ci-o-scap"u-lo-hu"mer-al. Involving the scapula, humerus, and adjacent fascia.

fas"ci-ot'o-my (fash-ee-ot'o-mee, fass"ee-) [*fascia*; G. *tomē*, cutting]. Incision of fascia.

fas-ci'tis (fass-eye'tis, fash-eye'tis) [*fascia*; G. *-itis*, inflammation]. Inflammation of fascia.

plantar f. An inflammatory process, usually secondary to trauma or chronic strain, involving the plantar fascia, most commonly at its attachment to the calcaneus.

fast [AS. *faest*]. Resistant to the action of drug or chemical, especially to the action of stain.

fast green FCF (C.C.). An acid dye of the diamino triphenyl methane series; used as counter stain.

fas-tig'i-um (fas-tidj'ee-um) [L., summit]. 1. The acme of disease. 2. That portion of the cerebellum which forms an angle in the roof of the fourth ventricle between the anterior medullary velum and the tela chorioidea.

fat [AS. *faett*]. 1. Plump, corpulent. 2. Oily, greasy.

fat. 1. Any of class of neutral organic compounds, mixtures of which form the natural fats. They are glyceryl esters of certain acids (in animal fat chiefly oleic, palmitic, and stearic). They are soluble in ether but not in water, are combustible, and on saponification yield glycerin. Fat is an energy-yielding foodstuff, one gram furnishing 9.3 Calories. 2. The chief component of the cell contents of adipose tissue; occurs also in other animal tissue to lesser degree, and in plant cells. —**fat'ty**, *adj.*

brown f. See *hibernating gland.*

depot f. Fat occurring in certain regions like the abdominal wall or the buttocks, which are called fat depots.

fat'i-ga-ble [L. *fatigabilis*, from *fatigare*, to weary]. Susceptible to fatigue; easily tired. —**fatigableness, fatigabil'ity**, *n.*

fa-tigue' [F., from L. *fatigare*, to tire]. 1. Exhaustion of strength; weariness from exertion. 2. Condition of cells or organs in which, through overactivity, the power or capacity to respond to stimulation is diminished or lost.

battle f. A neurotic or psychotic reaction developed in combat; formerly called *shellshock.*

flying f. A chronic psychosomatic disturbance developed by flier after relatively long exposure to the stresses associated with flying, especially in combat flying; also called *operational f., pilot f.*

operational f. Flying *f.*

fa-tigue'. 1. To induce condition of fatigue in. 2. To become weary. 3. To suffer fatigue.

fa-tigue'-pos'tur-al par'a-dox. See *scapulocostal syndrome.*

fat si a [perhaps from Malagasy *fatsy*, spur]. The bark of the root of *Oplopanax horridus*, believed to contain hypoglycemic principle. Also called *devil' club*.

fat'-sol'u ble Soluble in fats or fat-solvents specifically used with letter to designate certain vitamins, as f t-sol ble A.

fat'ty ac'id. See under *acid*.

fau ces (faw sees) [L., upper part of the throat]. The space surrounded by the soft palate, palatine arches, and base of the tongue. —**fau' cial,** *adj*

Fauchard, Pierre [*French dentist*, 1678–1761]. Has been called the father of dentistry Wrote classi account of the dental science of his time. Was one of the founders of orthodontics, and the inventor of many prosthetic ppliances. Described alveolar pyorrhea, called *Fauchard' disease*.

fau'na [L. *Faunus*, Roman god of animals and crops]. The entire animal lif peculiar to any geographic area or geologic period.

Faust method. See Faust zinc sulfate centrifugal flotation *method*.

fa-veo'l ous (fa-vedj'l-nus) [L. *favus*, honeycomb]. Resembling f vus having honeycombed surface. *Rare*.

fa-ve late [dim. from *favus*] F vose; honeycombed alveolate.

fa ve o-lus [*favus*]. A pit or cell like that of the honeycomb. See *foveola*.

fa vi des (fay'vi-dees) [*favus*]. Allergic skin reactions to favus.

f vism (fay'vis-um, fah vis um) [L *faba*, bean]. An acute hemolytic anemia, common in Sicily and Sardinia caused by sensitivity to the broad bean, *Vicia faba*. M y result from ingestion of the seeds or from inhalation of the pollen. Also called *fabism, fabismus*.

Fav'o-tri choph'y ton (f v'o-tri kof'i-ton, tryekof'i ton) [L. *favus*, honeycomb G thrix, hair *phyton*, plant]. Synonym for *Trichophyton*.

Favre, Maurice (1876–) French physician, who with J Durand and Joseph Nicolas gave the first satisfactory description (1913) of venereal lymphogranuloma.

fa vus (f y vus, fah vus) [L., honeycomb]. A para siti skin disease due to the presence of the vegetable parasite, *Trichophyton schoenleini*, *T violaceum*, or *Microsporum gypseum*. It is characterized by the presence of round sulfur-yellow cup-shaped crusts (favus cups) having peculiar mousy odor This crust formation, scutulum, is found on microscopic examination to contain the elements of the fungus. The disease affects the scalp most frequently but may occur elsewhere Syn., *tinea favosa*. See Plate 32.

Fayrer Joseph [*English surgeon*, 1824–1907]. Known for his contributions to tropical medicine. Described the venomous snakes of India (1872)

Fazio, Eugenio [*Italian physician*, 1849–1902]. Described type of progressive bulbar paralysis in early life, called *Fazio-Londe' atrophy*

F.D.I. *Fédération Dentaire Internationale*; International Dental Federation.

F Chemical symbol for iron.

fear [AS. *fær* danger]. An emotion marked by dread, pprehension, or alarm. An irrational and persistent fear is called *phobia*.

fear re-ac tion. A euphemism for neurosis, particularly one developed in combat, in which anxiety is manifested by the conscious fear of particular object or event.

fea'ture [L. *factura*, making]. Any single part or lineament of structure, as of the face.

feb ri-. Combining form meaning *fever*

feb ri-cant [L. *febris*, fever] F brifacient.

feb"ri fa cient (feb ri-f y'shunt) [*febris*; L. *facere*, to make]. Producing fever

fe bril'ic [*febris*]. Febrifacient.

feb ri fuge [*febris*; L. *fugare*, to make flee]. A substance which mitigates or reduces fever an antipyretic. —**feb rifuga ad**j

feb"ri fu'gine. An alkaloid, possessing antimalarial activity isolated from *Dichroa febrifuga*, which is the probable source of the Chinese antimalarial drug *ch ang shan* Febrifugin may be identical with α-dichroine and β-dichroine from ch ang shan.

fe'brile (fee'bril, bryle, feb ril, -ryle) [*febris*]. Pertaining to or characterized by fever

feb ri pho'bi-a [*febris*; G *phobos*, fear]. A morbid fear of fever; pyrexeophobia.

fe ca lith (fee'kah lith, feck'ah) [L. *faex*, dregs; G *lithos*, stone]. A concretion or calcified mass of fecal material; coprolith.

f cal-oid (fee'kah-loyd, feck uh) [*faex*; G *eidos*, form]. Resembling feces.

fe'ces, fae ces (fee'sees) [*faex*]. The excretions of the bo els. The excretions from the intestine of unabsorbed food, indigestible matter and intestinal secretions. —**fe cal,** *adj*.

Fechner Gustav Theodor [*German physicist and experimental psychologist*, 1801–87] One of the founders of the science of psychophysics. See Fechner' *law*.

fec u la [L. *faecula*, dim. of *faex*]. 1 The starch part of seed. 2. The sediment subsiding from an infusion.

fec'u lent [*faecula*]. 1 Having sediment. 2 Excrementitious.

fe cun da'tion (fee"kun-day'shun, feck un-) [L *fecundus*, fertile]. The act of fertilizing fertilization. —**fe cundate,** *t*.

artificial f. Artificial insemination

fe-cun di ty [*fecundus*]. The innate potential reproductive capacity of the individual organism, as denoted by its bility to form and separate from the body mature germ cells —**fe cund,** *adj*

Fede Francesco [*Italian pediatrician*, 1832–1913]. Described an oral disease of infancy occurring during dentition and marked by induration of the frenulum of the tongue called *sublingual granuloma of infancy Fede' disease, Fede-Riga disease*.

fee"ble-mind'ed ness. Mental deficiency

feed'ing [AS. *fēdan*]. The taking or giving of food.

artificial f. (a) The introd ction of food into the body by means of artificial devices. (b) The nourishing of an infant by any means other than breast milk.

extrabuccal f The introduction of food into the system by channels other tha the mouth; feeding by nutritive enema, by intravascular injection, or through gastric fistulas.

forced f. The administration of food against the will of th patient.

ham f That in which the food is swallowed and then diverted to the exterior by fistula or other means.

feel'ing [AS *fēlan*]. 1. The sense of touch. 2. A sensation, as sensation of touch, bodily consciousness, temperature, pai 3. An emotion or emotional state. 4. *I psychology* any conscious process consciousness, including sensation, thought, and emotion. —**feel** *v*.

feel'i g. Of great sensibility easily moved.

Feer Emil (1864–) Swiss pediatrician who described erythredema polyneuropathy (1923) also called *Feer' disease*.

fee split'ting. A division of the consultant's fee between consultant and referring physician.

Fehleisen, Friedrich [*German physician in the United States*, 1854–1924]. Described the strepto-

coccus of erysipelas (1883) called *Streptococcus pyogenes*. *Fehleisen streptococcus*.

Fehling' reagent, test. See under *reagent test*.

Fell André [*French physician*, 1884–]. With Klippel, described congenital fusion of the cervical vertebrae. See Klippel-Feil *syndrome*.

fel [L.]. Bile.

f. bovis. Ox bile.

felamine. The trade-mark for compound of cholic acid and methenamine employed as cholagogue, and biliary and urinary antiseptic.

fe'line [L. *felinus*, from *felis*, cat]. 1 Of, pertaining to, or derived from cats [genus *Felis*] or the family (Felidae) which includes cats, tigers, lions, leopards. 2. Catlike. —**fe'line**, *n*.

Felix test. See Weil-Felix *test*.

fel la'ti-o (feh lay'shee) [L. *fellare*, to suck]. An act of sexual perversion in which the penis is introduced into the mouth of another; friction by the lips or tongue produces the orgasm. Syn., *irrumation*.

fel'la-tor (fel uh-tor fel'uh tor feh-lay tur) [L., from *fellare*]. A male who takes the penis of another into his mouth.

fel'la trice' (fel uh-treess') [*fellare*] A female who takes the penis into her mouth in fellatio.

fel'lic ac'id. $C_{23}H_{40}O$ An acid claimed to exist in human bile.

Fell-O'Dwyer method. See under *artificial respiration*.

fel'on [ME.]. A deep infection in the distal closed space on the palmar surface of finger; it may progress to osteomyelitis of the distal phalanx.

felsol. The trade-mark for mixture of antipyrine, iodopyrine, citrated caffeine, digitalis, strophanthin, and lobeline employed as an antiasthmatic.

Felty Augustus Roi [*American physician*, 1895–]. Known for his description of syndrome of rheumatoid arthritis in adults, haracterized by lymphatic glandular enlargement with splenomegaly and liver enlargement, accompanied by anemia. Called *adult Still' disease*, *Chauffard-Still' disease*, *Felty syndrome*.

f male [L. *femella*, dim. of *femina*, woman]. Pertaining to the sex which produces the ovum. Symbol, ○ ♀ (That of the male is □, ♂.)

fe'male. Denoting that part of double-limbed instrument that receives the complementary part

fem'i nism [*femina*]. The presence in male of various mental and physical approximations to the characters of the female sex. —**feminiza tion**, *n*.

fem'or al ar'ter y See T ble of Arteries in the Appendix.

fem'or-al nerve. See T ble of Nerves in the Appendix

fem"o-ro-tib'i al [L. *femur* thigh; *tibia*, shinbone]. Relating to the femur and the tibia.

fe mur (plural *femora*) [L.] 1 Thigh bone See Table of Bones in the Appendix. 2. Old term for the thigh See Plates 1 2 —**fem oral**, *adj*

pilastered f. A femur with exaggerated backward concavity and prominent linea aspera.

fen chone (fen'shone, kone) A ketone, $C_{10}H_{16}O$ which provides the characteristic bitter taste of some specimens of fennel oil. A levorotatory isomer occurs in thuja oil.

fe-nes'tra (pl *fenestrae*) [L., window]. 1 *F anat omy*, name given to two apertures of the medial wall of the middle ear the fenestra cochleae (or fenestra rotunda) or round window and the fenestra vestibuli (or fenestra ovalis) or oval window 2. An opening in bandage or plaster splint for examination, drainage etc. 3 The open space in the blade of forceps. —**fenestral**, *adj*

fen es-tra tion [*fenestra*]. 1. The presence of fenestrae or openings in structure. 2. An operation to create permanently mobile window in the lateral semicircular canal; used in cases of deafness caused by stapedial impediment of sound waves. Sometimes referred to as *Lempert operation*. —**fenes trated**, *adj*

Fenger Christian [*American surgeon and pathologist*, 1840–1902]. Devised an operation for stricture of the upper end of the ureter in which he employed the plastic methods pplied for the relief of pyloric stenosis.

fen nel [AS. *fenol*, from L. *feniculum*, fennel] (*foeniculum*) The dried, ripe fruit of cultivated varieties of *Foeniculum vulgare*; contains 2% of volatile oil. It is used as carminative.

f oil. See under *oil*.

f water A saturated solution of the volatile oil of fennel; used as vehicle.

fen u greek [L. *fenum Graecum*, Greek hay]. The *Trigonella foenum-graecum*, a leguminous plant whose seeds are used as condiment and in preparing emollient pplications.

Fenwick, Samuel [*English physician*, 1821 1902]. Remembered for his description of primary atrophy of the stomach, called *Fenwick disease*

feosol. A trade-mark for certain preparations of ferrous sulfate.

ferad. A trade-mark for certain preparations containing ferrous sulfate.

fer"-de-lance' (fehr -duh-lahns -lans *See* Notes § 35) [F iron of lance]. A large, venomous snake of Central America the *Bothrops atrox*.

Féréol, Louis Henri Félix [*French physician*, 1825–91]. Described nodosities observed about the joints in acute articular rheumatism, called *Féréol' nodosities*. Drew attention to paralysis of the medial rectus muscle occurring with that of the lateral rectus in the other eye, called *Féréol' ocular palsy Féréol-Graux ocular palsy*

fergon. A trade-mark for certain preparations containing ferrous gluconate.

Ferguson, Alexander Hugh [*Canadian surgeon*, 1853–1911] Devised the operation bearing his name for the repair of inguinal hernia. A modification of Bassini' technic, it omits the transplantation of the spermati cord. The conjoined tendon is sutured to the inguinal ligament, the external oblique muscle being closed over the canal.

Fergusson William [*Scottish anatomist and surgeon*, 1808–77]. Has been called the founder of conservative surgery Devised many operations, including one for harelip, lithotomy and removal of the maxilla for malignant tumor Described number of amputations, including one of the foot and one of the leg at the hip joint.

fer ment [L. *fermentum*, ferment]. A catalytic agent produced by and associated with, living organism (*organized ferment*) as distinguished from an enzyme which may be separated from the living organism (*unorganized ferment*) This distinction is no longer commonly made, having been replaced by intracellular and extracellular enzymes. See under *enzyme*.

fer"men ta tion [*fermentum*]. The decomposition of complex molecules under the influence of ferments or enzymes.

acetic f The fermentation whereby weak alcoholic solutions are converted into vinegar

alcoholic f. That resulting in the conversion of carbohydrates into alcohol.

ammoniacal f. That giving rise t ammoniacal gas and carbon dioxide, which combine to form ammonium carbonate

butyric f. That resulting in the conversion of sugars, starches, milk, etc., int butyric acid.

caseous f. That resulting in the conversion of milk into cheese.

diastatic f That resulting in the conversion of starch into glucose by the action of ptyalin, etc.

lactic f That resulting in the souring of milk.

propionic f That resulting in the production of propionic acid from carbohydrates.

viscous f. A fermentation characterized by the production of gummy substance.

Fernel, Jean François [*French physician*, 1497 1558]. First to use the terms physiology (1552) and pathology (1554) in the modern sense. Gave the earliest clear descriptions of appendicitis and endocarditis.

fer′ra ted [L. *ferratus*, from *ferrum*, iron] Combined with iron; containing iron.

Ferraton, Louis [*French orthopedic surgeon*, contemporary]. Described snapping hip called *Perrin-Ferraton disease*. Also see under *Perrin*

Ferrein, Antoine Aesculape [*French anatomist*, 1693–1769]. Described the small groups of straight tubules radiating from the boundary zone of the renal pyramids into the cortex, the medullary (cortical) rays once called *Ferrein pyramids*. Described the convoluted uriniferous tubules.

fer′ri [*ferrum*]. A combining form indicating *ferric compounds, containing iron as trivalent element.*

fer′ric [*ferrum*]. 1 Pertaining to or of the nature of iron. 2. Containing iron as trivalent element.

f alum. Ferric ammonium sulfate.

f. ammonium citrate (*ferri ammonii citras*) A complex salt containing 16.5 to 18.5% iron It occurs in red scales or granules, or as brownish yellow powder Used as nonastringent hematinic. Dose, 1 Gm. (15 gr.) Syn., *soluble ferric citrate*. *Also called iron and ammonium citrates.*

f ammonium sulfate. $FeNH_4(SO_4)_2 \cdot 12H_2O$ Formerly used for its astringent and styptic effects. Syn *f alum*

f ammonium tartrate. A salt of somewhat indefinite composition occurring in reddish-brown scales formerly much used as mild chalybeate.

f cacodylate. Approximately $Fe[(CH_3)_2AsO_2]_3$ yellowish, amorphous powder soluble in water; has been used for treatment of leukemias, also in iron-deficiency states

f. chloride $FeCl_3$ + water Astringent and styptic.

f. chloride solution (*liquor ferri chloridi*) An aqueous solution representing 10–11% of iron. Principal use is as styptic and astringent Dose, 0.06–0 3 cc (1–5 min.)

f chloride tincture (*tinctura ferri chloridi*) A hydroalcoholic solution representing about 4.5% of iron An astringent and styptic. Occasionally *used as hematinic. Dose, 0 6–2 0 cc (10–30 min)*

f. glycerophosphate (*ferri glycerophosphas*) $Fe_2[C_3H_5(OH)_2PO_4]_3$ Formerly used as chalybeate.

f. hydroxide. Hydrated iron oxide, an antidote to arsenic

f. hydroxide with magnesium oxide (*magnesii ferri hydroxidi*) An antidote to arsenic prepared by adding suspension of magnesium oxide to ferric salt in solution.

f. hypophosphite (*ferri hypophosphis*) $Fe(H_2PO_2)_3$ Formerly used as chalybeate.

f. pyrophosphate. Approximately $Fe_4(P_2O_7)_3 \cdot 9H_2O$ yellowish white powder insoluble in water and lacking the astringency characteristic of iron salts. It is used in nutrition and medicinally as source of iron **Ferric pyrophosphate soluble** is ferric pyrophosphate rendered soluble by the inclusion of sodium citrate.

f subsulfate solution (*liquor ferri subsulfatis*) Monsel' solution. A powerful styptic.

f. sulfate. $Fe_2(SO_4)_3$ salt occurring as grayish-white powder very hygroscopic, slowly soluble in water and forming an acid solution. It is largely used industrially

green f. ammonium citrate (*ferri ammonii citras viridis*) A complex salt containing 14 5 to 16% iron with higher proportion of citric acid than in ferric ammonium citrate. It occurs in green scales, granules, or powder and is the preferred form of the salt for intramuscular injection Dose, 0.1 Gm. (1½ gr) Also called *green iron and ammonium citrates.*

red f. oxide (*ferri oxidum rubrum*) A reddish brown powder used, along with yellow ferric oxide, to confer flesh color to neocalamine.

saccharated f. oxide (*ferri oxidum saccharatum*) A mild chalybeate. Dose, 2 Gm. (30 gr.)

soluble f citrate. See *ferric* ammonium citrate.

soluble f phosphate (*ferri phosphas solubilis*) Mild chalybeate. Dose, 0 6–2.0 Gm. (10–30 gr.)

yellow f oxide (*ferri oxidum flavum*) A hydrated ferric oxide occurring as yellowish-orange powder Used, along with red ferric oxide, to confer flesh color to neocalamine.

fer″ri-cy′a-nide. A salt containing the trivalent $[Fe(CN)_6]$ anion.

Ferrier, David [*Scottish neurologist in England*, 1843–1928]. His study of the localization of cerebral functions (1876) has been called the foundation of present knowledge in this field

fer′ri heme Heme in which the ferrous iron normally present is in the ferric (oxidized) state: the resulting higher valence imparts a positive charge which in alkaline solution attracts hydroxyl ion, forming hematin, and in hydrochloric acid solution attracts chloride ion, forming hemin

fer″ri he mo-glo′bin. Methemoglobin, characterized by containing iron in the ferric state.

fer″ri py′ rin. See *ferropyrin*.

fer′ri tin. An iron-protein complex occurring in tissues, probably being storage form of iron. It is in many characteristics similar to hemosiderin. See *apoferritin*.

ferrivenin. Trade-mark for preparation of saccharated iron oxide suitable for intravenous injection.

fer′ro- [*ferrum*]. A combining form generally used to indicate *ferrous compound*, sometimes to designate *substance containing metallic iron.*

fer″ro-cy′a-nide. A salt containing the divalent $[Fe(CN)_6]$ anion.

fer′ro heme. Heme

fer″ro he mo glo′bin. Hemoglobin, in which the iron is normally in the ferrous state.

fer″ro pro″to por′phyr in 9. *Heme.*

ferropyrin. Trade-mark for hemostatic compound of antipyrine and ferric chloride. The substance is used for external bleeding either in the form of dusting powder or 15–20% solution.

fer″ro-ther′ apy [*ferrum*, G *therapeia*, treatment]. Treatment of disease by the use of chalybeates.

fer′rous [*ferrum*]. Containing iron in divalent form

f bromide. $FeBr_2 \cdot 2H_2O$; reddish crystalline powder hygroscopic and soluble in water It occurs also with $6H_2O$ as bluish-green crystals, and has been used in chorea and tuberculous cervical adenitis

f. chloride $FeCl_2 \cdot 4H_2O$ pale-green, deliquescent crystals or crystalline powder soluble in acidulated water used largely industrially

citrated f chloride (*ferri subchloridum citratum*) A mixture of ferrous chloride and citric acid. used as hematinic. Dose, 0.2–0.3 Gm. (3–5 gr.).

exsiccated f. sulfate (*ferri sulfas exsiccatus*) A hematinic. Dose, 0.06–0 2 Gm (1–3 gr.)

f. ascorbate. An iron salt possessing antiscor-

batic properties. May be administered intravenously. Dose, 0.2 Gm. (3 gr.)

f. carbonate mass (*massa ferri carbonatis*) Vallet mass. Contains 36–41% $FeCO_3$; hematinic. Dose, 0.3–1.0 Gm. (5–15 gr.)

f. carbonate pills (*pilulae ferri carbonatis*) Bland' pills. The official pill contains not less than 60 mg of $FeCO_3$.

f. gluconate (*ferri gluconas*) $Fe(C_6H_{11}O_7)_2 \cdot 2H_2O$. A yellowish-gray or pale, greenish-yellow powder containing not less than 11.5% Fe; soluble in water. Appears to be better tolerated than other iron salts. Dose, 0.3 Gm. (5 gr.)

f. iodide. $FeI_2 \cdot 4H_2O$ occurring as almost black, very deliquescent masses, rapidly decomposing in air with liberation of iodine. It has been used in chronic tuberculosis, and is employed in veterinary medicine as a source of iron and iodine.

f. iodide pills (*pilulae ferri iodidi*) Blancard pills; each pill contains one grain of ferrous iodide.

f. iodide syrup (*syrupus ferri iodidi*) Contains 6.5–7.5% of FeI_2. An alterative and chalybeate. Dose, 0.6–2.5 cc. (10–40 min.)

f. lactate. $Fe(C_3H_5O_3)_2 \cdot 3H_2O$. A mild chalybeate. Dose, 0.06–1.3 Gm. (1–20 gr.)

f. sulfate (*ferri sulfas*) $FeSO_4 \cdot 7H_2O$. Pale bluish green crystals or granules. An effective hematinic, used also as a deodorant. Dose, 0.13–0.3 Gm. (2–5 gr.).

saccharated f. carbonate (*ferri carbonas saccharatus*) Contains not less than 15% $FeCO_3$. Dose, 0.6–2.0 Gm. (10–30 gr.)

fer·ru·gi·na'tion. Deposition of iron in tissues.

fer·ru'gi·nous [L. *ferrugo*, iron rust]. 1. Chalybeate. 2. Having the color of iron rust.

fer'rum. See iron.

fer'tile [L. *fertilis*, fertile]. Prolific; fruitful. —**fer·til'i·ty**, *n.*

fer·til'i·ty clin'ic. A clinic to help diagnose the causes for lack of reproduction and to assist reproductive ability; popularly known as *sterility clinic.*

fer"ti·li·za'tion [*fertilis*]. The act of making fruitful; impregnation; union of male and female gametes.

cross-f. In *biology* the fertilization of the ovules of one species by the seed germs of another.

fer'ti·li·zin (fur'ti-lye-zin, fur-til'i-zin) [*fertilis*]. A colloidal substance in ripe ova, in certain species, which is capable of agglutinating and binding spermatozoa to the ova.

Fer'u·la (fer'yoo-lah, ferr'oo-lah) [L., fennel-giant]. A genus of the family Umbelliferae whose genera and species yield asafetida, galbanum, and sumbul.

fe·ru'lic ac'id. $CH_3O.C_6H_3(OH)CH.CHCOOH$. Meta-methoxy-para-hydroxycinnamic acid; constituent of asafetida.

fes'ter [ME. *festren*]. 1. Superficial suppuration on a lesion such as an ulcer. 2. Suppurate.

fes"ti·na'tion [L. *festinare*, to hasten]. An involuntary increase or hastening in gait, seen in paralysis agitans.

fes·toon' [F. *feston*, from It. *festa*, feast]. The papilliform interproximal gingiva which fills each buccal and lingual embrasure between the necks of adjacent teeth.

McCall's f. A thickening of the gingiva along its margin, usually due to traumatic occlusion or incorrect toothbrushing.

fe'tal·ism [L. *fetus*, offspring]. The presence or persistence of certain prenatal conditions in the body after birth.

fe·ta'tion [*fetus*]. 1. The formation of a fetus. 2. Pregnancy.

fe'ti·cide [*fetus*; L. *caedere*, to kill]. The killing of the fetus in the uterus.

fet'id (fet'id, fee'tid) [L. *fetere*, to stink]. Having foul odor.

fe'tish, fe'tich (fee'tish, fet'ish) [Pg. *feitiço* from L. *factitius*, artificial]. 1. Any material object thought to have magical power or to bring supernatural aid. 2. In *psychiatry*, personalized inanimate object, love object, or any maneuver or body part which, through association, arouses erotic feelings. —**fetishism, fetishist,** *n.*

fet'lock [ME. *fetlak*]. That region of the leg of the horse extending from the lower extremity of the metacarpal or metatarsal bone to the pastern joint.

fe·tom'e·try (fee-tom'i-tree) [L. *fetus*, fetus; G. *metron*, measure]. The measurement of the fetus, especially of its cranial diameters.

fe'tor, foe'tor (fee'tur, -tor) [L., an offensive smell]. Stench.

f. ex ore. Bad breath.

f. hepaticus. A peculiar musty or sweetish odor of the breath occurring in the terminal stage of hepatocellular jaundice.

fe'tus, foe'tus (fee'tus) [L.]. The unborn offspring of viviparous mammals in the later stages of development. In man, from the end of the third month until birth. See Plate 41. —**fetal,** *adj.*

amorphous f. See *anideus.*

calcified f. See *lithopedion.*

compressed f. See *sympus.*

f. compressus. See *f. papyraceus.*

f. cylindricus. A malformed, abortive fetus with but little indication of head and extremities, being roughly cylindrical in form.

f. in fetu. Cryptodidymus.

f. papyraceus. A dead twin fetus which has been compressed by the growth of its living twin.

harlequin f. See *ichthyosis congenita.*

mermaid f. See *sympus.*

parasitic f. A more or less completely formed fetus which is attached to its autosite.

sireniform f. See *sympus, sirenomelus.*

Feulgen reaction. See under *reaction.*

fe'ver [AS. *fefer*; L. *febris*, fever]. 1. Elevation of the body temperature above the normal; in human beings, above 37° C. or 98.6° F. 2. A disease whose distinctive feature is elevation of body temperature. Syn., *pyrexia.* —**feverish,** *adj.*

abortus f. A form of brucellosis.

Aden f. Dengue.

algid pernicious f. A severe attack of malaria; characterized by collapse, extremely cold skin, and tendency to fatal syncope.

American mountain f. Colorado tick *f.*

aphthous f. See foot-and-mouth *disease.*

artificial f. One purposefully produced for therapeutic benefit, as by the induction of malaria, by the injection of foreign protein, or by means of fever cabinet.

Assam f. Kala-azar.

barbiero f. American trypanosomiasis.

Barra f. See *malaria.*

black f. See *Rocky Mountain spotted fever.*

blackwater f. See hemoglobinuric *f.*

boutonneuse f. An acute tick-bite fever of Africa and other regions of the Mediterranean basin, characterized by maculopapular eruptions on hands and feet, and a characteristic lesion (*tache noire*) at the site of the bite. Also called *exanthematous f., eruptive f., Marseilles f.*

brain f. Cerebrospinal meningitis.

Brazilian spotted f. São Paulo typhus. See *Rocky Mountain spotted fever.*

breakbone f. Dengue.

Brushy Creek f. See pretibial *f.*

Bull f. See *Rocky Mountain spotted fever.*

Bullis f. An acute disease, due to a rickettsialike agent, which occurred in an epidemic at Camp Bullis, Texas, in 1942.
bullous f. That which accompanies pemphigus.
Bwamba f. A mild febrile viral disease occurring in Uganda and characterized by headache, generalized pains, and conjunctivitis.
camp f. See classic epidemic *typhus*.
canebrake yellow f. See hemoglobinuric *f.*
canicola f. The disease caused in man by infection with *Leptospira canicola*.
canine yellow f. Nambi uvu.
catarrhal f. Old term for the common cold.
cat-scratch f. A self-limited disease clinically manifested by fever and generalized lymphadenitis, caused by a virus closely related to the viruses causing psittacosis and lymphogranuloma venereum. Diagnosis is confirmed by history of recent skin contact with a cat (bite, scratch) and by an intradermal skin test using material from an infected lymph node or bubo of a known case. Syn., *cat-scratch disease, benign lymphoreticulosis*.
cerebrospinal f. Cerebrospinal meningitis.
Charcot's intermittent f. A condition often accompanying common bile duct obstruction. It may be a sign of cholangitis or obstructive jaundice.
childbed f. See puerperal *f.*
Chitral f. Phlebotomus fever.
Colombian spotted f. Rocky Mountain spotted fever occurring in Colombia, South America.
Colorado tick f. A nonexanthematous viral disease of man occurring in the western United States and transmitted by the tick, *Dermacentor andersoni*. Clinically the disease is characterized by short course and intermittent fever, variegated symptomatology, and usually leukopenia, but no specific pathologic findings are known. Diagnosis rests on serologic reactions. Also called *American mountain f., tick f.*
continued f. One which does not vary more than 1 or 2° F during 24 hours.
dandy f. See *dengue*.
deer fly f. Tularemia.
dengue f. See *dengue*.
desert f. Coccidioidomycosis.
double quartan f. A form of malaria with a three-day cycle; paroxysms occurring on two successive days are followed by a one-day interval.
drug f. That resulting from the administration of a drug, often by sensitization, as the sulfonamides.
dumdum f. Visceral leishmaniasis; kala-azar.
East Coast f. A form of piroplasmosis in cattle which occurs chiefly in East and South Africa. Syn., *Rhodesian f.*
Eastern spotted f. Rocky Mountain spotted fever occurring in the eastern United States.
elephantoid f. See filarial *f.*
English sweating f. A contagious malignant fever also known as *ephemera maligna*, characterized by black or dark-colored sweat, of historical significance. Syn., *Anglicus sudor*.
enteric f. Typhoid.
entericoid f. See paraenteric *f.*
epidemic catarrhal f. Influenza.
epidemic hemorrhagic f. An acute infectious disease of unknown cause but probably viral, occurring in parts of Siberia, Manchuria, and Korea. It is characterized by fever, prostration, anorexia, vomiting, proteinuria, hemorrhagic manifestations, cardiovascular instability, and renal abnormalities resembling those of lower nephron nephrosis. Syn., *Far Eastern hemorrhagic f., hemorrhagic nephroso-nephritis, Manchurian f.*
equine biliary f. A form of piroplasmosis in horses, mules, donkeys; caused by the *Babesia equi* and transmitted by ticks.
eruptive f. See boutonneuse *f.*
essential f. One of unknown cause.
estivo-autumnal f. Malaria.
European typhus f. See classic epidemic *typhus*.
exanthematous f. See boutonneuse *f.*
famine f. See *relapsing fever*, classic epidemic *typhus*.
Far Eastern hemorrhagic f. See epidemic hemorrhagic *f.*
field f. Marsh *f.*
filarial f. A recurrent fever occurring irregularly at intervals of months or years in most forms of filariasis. Syn., *elephantoid f.*
five-day f. Dengue.
flood f. See tsutsugamushi *disease*.
Fort Bragg f. See pretibial *f.*
gaiter-pain f. Trench *f.*
Gibraltar f. Brucellosis.
gin f. Brucellosis.
gland ular f. See infectious *mononucleosis*.
goat f. Brucellosis.
harvest f. A form of spirochetosis affecting field workers.
Haverhill f. See epidemic arthritic *erythema*.
hay f. See *hay fever*.
heartwater f. A disease of cattle, sheep, and goats caused by *Rickettsia (cowdria) ruminantium*, transmitted by the tick, *Amblyomma hebraeum*. It occurs in South Africa, the Belgian Congo, and surrounding areas, and is characterized by hydropericardium.
hectic f. One recurring daily with the highest temperature in the evening; accompanied by chills and sweats. It occurs frequently in tuberculosis.
hemoglobinuric f. A severe form of malaria, associated with hematuria; occurs mainly in endemic areas of malignant tertian malaria. Also called *blackwater f., canebrake yellow f.*
hepatic f. Catarrhal cholangitis.
herpetic f. One with chills, sore throat, and herpetic eruption on the face.
hospital f. See classic epidemic *typhus*.
icterohemorrhagic f. Spirochetal jaundice.
intermittent f. Malaria.
inundation f. Tsutsugamushi disease.
jail f. See classic epidemic *typhus*.
Japanese river f. Tsutsugamushi disease.
jungle yellow f. A form of yellow fever endemic in parts of Brazil; occurs in or near forested areas where the *Aëdes aegypti* has not been found.
kedani f. See tsutsugamushi *disease*.
Kenya typhus f. See tick-bite *fevers* of Africa.
malarial f. See *malaria*.
Malta f. Brucellosis.
Manchurian f. Epidemic hemorrhagic *f.*
Marseilles f. See boutonneuse *f.*
marsh f. The disease caused in man by *Leptospira grippotyphosa*. Syn., *field fever*.
Mediterranean f. Brucellosis.
melitococcal f. See *brucellosis*.
metal fume f. A febrile reaction following the inhalation of finely divided particles of metallic oxides. Also called *brass chills, brass founder's ague, metal ague, zinc chills, spelter shakes*.
miliary f. An acute, infectious disease; characterized by fever, profuse sweating, and a papular rash later forming pustules. Syn., *sweating sickness*.
milk f. (a) A misnomer for a fever during the puerperium, once thought to be due to a great accumulation of milk in the breasts, but now generally believed to be due to actual puerperal infection. (b) Parturient paresis.

Monday morning f. Byssinosis.
mountain f. See *Rocky Mountain spotted fever*.
North African tick-bite f. See tick-bite *fevers* of Africa.
Oroya f. The more malignant form of *bartonellosis* (Carrión's disease) endemic in the mountainous areas of northwestern South America, characterized by fever, macrocytic and hemolytic anemia, and having rapid course which, when untreated, is highly fatal. The causative organism, *Bartonella bacilliformis* can be demonstrated in the erythrocytes in blood smear as well as in the cytoplasm of vascular endothelium. The liver, spleen, and lymph nodes are frequently involved and may be markedly enlarged. Related etiologically and immunologically to verruca peruviana, it differs greatly in the clinical picture but Oroya fever is frequently followed by verruca peruviana. Both diseases are associated with the name of Daniel A. Carrión, who first demonstrated their relationship.
Pahvant Valley f. Tularemia.
pappataci f. Phlebotomus fever.
papular f. A disease characterized by fever, papular eruption, and rheumatic pains.
paratyphoid f. Paratyphoid.
parenteric f. One resembling typhoid or paratyphoid, but due to different organism.
parrot f. See psittacosis.
Pel-Ebstein f. Periodic hyperpyrexia, occasionally seen in Hodgkin's disease.
petechial f. See classic epidemic *typhus*.
phlebotomus f. An infectious viral disease transmitted by *Phlebotomus papatasii*, found in the Mediterranean area, British India, China, East Africa, and South America. It resembles dengue but is less severe and of shorter duration. Syn., *Chitral f.*, *pappataci f.*, *sandfly f.*, *three-day f.*
polka f. Dengue.
pretibial f. A febrile disease caused by species of *Leptospira*, and characterized by an erythematous rash in the pretibial region, frontal, postorbital, and lumbar aching, nausea, vomiting, leukopenia, and enlargement of the spleen. Also called *autumnal f.*, *Fort Bragg f.*, *Brushy Creek f.*
protein f. Artificial fever produced by the intravenous or intramuscular injection of foreign protein.
puerperal f. Infection of the endometrium and septicemia following delivery. Also called *childbed f.*, *puerperal sepsis*.
putrid f. Typhus.
Q f. An acute infection transmitted by *Coxiella burnetii*, characterized by pneumonitis, fever, nausea, and vomiting. The disease is of short duration, without mortality. Also called *quadrilateral f.*, *Queensland f.*
quartan f. Malaria, with paroxysms every 72 hours.
Queensland coastal f. See tsutsugamushi disease.
Queensland f. See Q *f.*
quinine f. A disease marked by fever and skin eruption; occurs in persons exposed to quinine during its preparation.
rabbit f. Tularemia.
ragweed f. See *hay fever*.
railway f. See shipping *f.*
rat-bite f. A form which includes two distinct diseases contracted from the bite of infected rats or other animals. One caused by *Streptobacillus moniliformis* is identical with epidemic arthritic erythema. The other due to spirochet *Spirillum minus*, is characterized by an indurated ulcer at the site of inoculation, remittent fever and purplish maculopapular rash. Also called *sodoku*.
recurrent f. See relapsing *f.*
red f. of Congo. See murine typhus.
relapsing f. Any of group of specific infectious diseases caused by spirochetes, *Borrelia recurrentis* and *Borrelia duttonii* being most common, and transmitted to man by lice or ticks, characterized by acute onset, chills, fever, pain in the back and legs, splenomegaly, delirium, and sometimes convulsions; also called *famine f.*, *remittent f.*, *spirillum f.*, *recurrent f.*
remittent f. A paroxysmal fever with exacerbations and remissions, but without intermissions. The term is sometimes used for relapsing *f.*
rheumatic f. See *rheumatic fever*.
Rhodesian f. See East Coast *f.*
Rift Valley f. An epizootic hepatitis of mild degree caused by filtrable virus and of limited geographic distribution.
Rocky Mountain spotted f. See *Rocky Mountain spotted fever*.
rose f. See *hay fever*.
Salmonella f. A mild disease caused by member of the genus *Salmonella*; similar to typhoid.
sandfly f. Phlebotomus fever.
San Joaquin Valley f. See *coccidioidomycosis*.
São Paulo f. São Paulo typhus, now known to be identical with Rocky Mountain spotted fever.
scarlet f. See *scarlet fever*.
septic f. One due to septicemia.
seven-day f. A disease similar to dengue lasting about one week; due to the spirochete *Leptospira hebdomadis*.
ship f. See classic epidemic *typhus*.
shipping f. Hemorrhagic septicemia of cattle. It is an acute, occasionally subacute, septicemic disease caused by *Pasteurella boviseptica*.
shoddy f. A febrile disease with cough and dyspnea seen in persons who work with shoddy.
South African tick-bite f. A tick-bite fever of Africa always accompanied by lymphadenopathy. Appearance of a rash is variable.
spirillum f. Relapsing fever.
spotted f. group. A group of rickettsial diseases caused by species of *Dermacentroxenus*, transmitted by ticks and mites, and having certain clinical features in common. In the United States the type disease is Rocky Mountain spotted fever. Others are the tick-bite fevers of Africa, Brazilian and Colombian spotted fevers, pinta fever (Choix) of Mexico, North Queensland tick typhus, rickettsialpox, maculatum disease, and probably some of the rickettsioses of India and Russia.
sthenic f. Old term for fever with high temperature and delirium.
suppurative f. Old term for pyemia.
swamp f. of horses. Infectious anemia of horses.
swine f. Hog cholera.
symptomatic f. See traumatic *f.*
tertian f. A form of malaria due to *Plasmodium vivax*, which completes its life cycle in 48 hours. Chills recur every two days.
Texas f. An infectious disease of cattle; due to the parasite *Babesia bigemina*, which is transmitted by the cattle tick *Boophilus annulatus*, and invades the red blood corpuscles. Characterized by high fever, hemoglobinuria, and enlargement of the spleen.
therapeutic f. See artificial *f.*
thermic f. Sunstroke.
three-day f. Phlebotomus fever.
threshing f. A form of pneumonoconiosis affecting threshers; characterized by headache, fever and irritation of the respiratory tract.
tick f. Colorado tick *f.*

tick bite fevers of Africa. Tick-borne typhus-like fevers belonging to the spotted fever group, caused by *Dermacentroxenus rickettsi conori* and characterized by a local lesion (*tache noire*) with black necrotic center appearing at the site of the tick bite and generally also by lymphadenopathy. Diagnosis rests on identification of serologic tests. The African tick-bite fevers, representing wide geographic distribution, include boutonneuse fever, Kenya typhus, Nigerian typhus, and South African and North African tick-bite fevers; their clinical features are similar and cross immunity between several of them has been established.

Tobia f. See *Rocky Mountain spotted fever*.

traumatic f. That following a wound or an injury. Syn., *symptomatic f.*

trench f. An acute infection lasting several days; caused by *Rickettsia quintana* and transmitted by the body louse. Syn., *Volhynia f.*

trypanosome f. Trypanosomiasis.

tsutsugamushi f. See tsutsugamushi *disease*.

typhoid f. See *typhoid*.

typhomalarial f. Malaria with typhoidlike symptoms.

typhus f. See classic *epidemic typhus*.

undulant f. Brucellosis.

urticarial f. That accompanying an urticarial rash.

uveoparotid f. A syndrome of uveitis, parotitis, and fever of unknown origin; also called *Heerfordt's disease*, *Heerfordt's syndrome*, *uveoparotitis*. See also *sarcoidosis*.

vaccinal f. That following vaccination.

valley f. Coccidioidomycosis.

Volhynia f. See trench *f.*

war f. See classic epidemic *typhus*.

yellow f. An acute infectious disease of tropical and subtropical regions of America, caused by a filtrable virus disseminated by the *Aëdes aegypti* (*Stegomyia fasciata calopus*). After a period of incubation varying from a few hours to several days, the disease begins with a chill and pain in the head, back, and limbs. The temperature rises rapidly to from 103° to 105° F; vomiting occurs, the bowels are constipated, the urine scanty and albuminous. A remission follows, after which, in severe cases, the temperature rises to its original height, jaundice develops, and the vomited material becomes dark from the presence of blood (black vomit). Hemorrhages may occur from the intestinal mucous membrane. The disease is often fatal, death occurring in the typhoid state or from uremia.

F.F.P.S. Fellow of the Faculty of Physicians and Surgeons (Glasgow).

FFT Flicker fusion test; flicker fusion threshold.

fi'ant. Plural of fiat.

fi'at (pl. *fiant*) [L., pres. subj. of *fieri*, to be made]. Let there be made; used in the writing of prescriptions. Abbreviated, ft.

fi'ber, fi'bre [L. *fibra*, fiber]. A filamentary or threadlike structure. —**fibrous,** *adj.*

accelerating fibers. Sympathetic nerve fibers which convey impulses that hasten the rapidity and increase the force of the heartbeat. Also called *augmentor fibers*.

adrenergic fibers. Nerve fibers which liberate an adrenalinlike substance at their terminations; include most of the postganglionic fibers of the sympathetic nervous system.

arcuate f. One of a number of bow-shaped or arched nerve fibers in the brain; those on the ventral surface of the medulla are called **ventral external arcuate fibers**, others within the medulla are called **internal arcuate fibers**.

argentaffin f., argentophile f. See reticular *fibers*.

argyrophil fibers. See reticular *fibers*.

association fibers. White nerve fibers situated just beneath the cortical substance and connecting the adjacent cerebral gyri.

axial f. (a) The axis cylinder of a nerve fiber. (b) The central spiral filament, probably contractile, of the flagellum of the spermatozoon.

basilar fibers. Specialized connective-tissue fibers in the basilar membrane of the cochlea.

cerebellorubral f. A fiber of the brachium conjunctivum terminating in the red nucleus.

cerebellothalamic f. A fiber of the brachium conjunctivum terminating in the thalamus.

cholinergic fibers. Nerve fibers which liberate an acetylcholinelike substance at their terminations; include most of the motor nerves of the body except postganglionic sympathetics.

climbing fibers of cerebellum. Afferent fibers entering the cerebellar cortex from the white matter probably through the brachium pontis, to synapse directly with the dendrites of the Purkinje cells.

collagenous fibers. The flexible, fibrillar nonelastic, connective-tissue fibers which are the commonest type. They make up the main mass of such structures as the corium, fasciae, tendons, ligaments, aponeuroses, periostea, and capsules of organs, and form also the fibrillar intercellular substance of bone and cartilage. Syn., *white fibers*.

collateral fibers. The delicate lateral branches of the axon of a neuron. Also called *paraxons*.

commissural fibers. Fibers joining an area of the cortex of one cerebral hemisphere to a similar area of the other.

cone f. One of the fibers of the retinal cones.

corticifugal f. Any nerve fiber carrying impulses away from the cerebral cortex to other centers.

corticopontile f. A fiber arising from the cortex of the frontal lobe and from the parietal, temporal, and portions of the occipital lobe, and descending uncrossed to the pontile nuclei; also called *corticopontine f.*, *palliopontile f.*

corticorubral f. One going from the premotor frontal cortex to the red nucleus.

corticostriate fibers. Fibers transmitting impulses from the cerebral cortex to the corpus striatum; part of the extrapyramidal system.

corticothalamic fibers. Fibers transmitting impulses from the cerebral cortex to the thalamus. It is believed that they bring about thalamic receptivity to incoming impulses from the secondary sensory pathways.

dentinal fibers. The processes of odontoblasts in the dentinal tubules. Syn., *Tomes' fibers*.

dentinogenic fibers. The precollagenous fibers which pass between the odontoblasts into the dentine to form the fibrillar component of the dentinal matrix. Also called *Korff's fibers*.

elastic fibers. The nonfibrillar, branching, highly elastic fibers of fibroelastic connective tissue. They form also the fenestrated membranes of large arteries. Syn., *yellow fibers*.

enamel f. See enamel *prism*.

f. cell. Any cell elongated to a fiberlike appearance; for example, muscle cells are commonly referred to as muscle fibers.

fibers of Remak. Peripheral nonmedullated nerve fibers.

fibers of Sharpey. See perforating *fibers*.

fibroglia fibers. Tonofibrils intimately associated with fibroblasts. See *fibroglia*.

Korff's f. See dentinogenic *fibers*, osteogenic *fibers*.

lattice fibers. See reticular *fibers*.

lens fibers. The highly modified epithelial cells which form the main mass of the lens of the eye.

mossy fibers. Fibers entering the cerebellum

from the restiform body to synapse with the granule cell dendrites.

Müller's fibers. Modified neuroglia cells which traverse perpendicularly the layers of the retina, and connect the internal and external limiting membranes.

muscle f. The ultimate element of which muscular tissue is made up. Voluntary muscles consist of transversely striated fibers, involuntary muscles of spindle-shaped fibers or cells.

nerve f. The long process of a neuron, usually the axon. **Myelinated nerve fibers** have a thick layer of myelin surrounding the nerve fiber; **unmyelinated nerve fibers** contain very little myelin.

osteogenic fibers. The precollagenous fibers which pass between the osteoblasts during bone formation to form the fibrillar component of the bone matrix. Also called *Korff's fibers.*

pallidohypothalamic f. An afferent fiber from the globus pallidus to the anterior ventral and several medial thalamic nuclei.

palliopontile f. See corticopontile *f.*

perforating fibers. Collagenous fibers of a tendon, ligament, or periosteum buried in the matrix of subperiosteal bone. Also the similar fibers in the cementum of a tooth. Syn., *fiber of Sharpey, Sharpey's fibers.* Also called *penetrating fibers.*

precollagenous fibers. See reticular *fibers.*

projection fibers. Fibers joining the cerebral cortex to lower centers and vice versa.

Purkinje fibers. The modified cardiac muscle fibers of the conduction system of the heart; also called *Purkinje system.*

reticular fibers. The delicate, branching connective-tissue fibers forming the reticular framework of lymphatic tissue, myeloid tissue, the red pulp of the spleen, the finest stroma of many glands, and most basement membranes. They differ from collagenous fibers in their response to silver impregnation, in which they are blackened. Also called *argentaffin f., argentophile f., argyrophil f., lattice f., precollagenous f.*

rivet fibers. Protoplasmic processes on the basal surface of the columnar cells of stratified squamous epithelium.

secretory fibers. Centrifugal nerve fibers exciting secretion.

smooth muscle fibers. The straight, or slightly bent, elongated, spindle-shaped, nucleated cells, bearing more or less distinct longitudinal striations, which make up involuntary, or unstriped, muscles. Also called *involuntary fibers, nonstriated fibers, unstriated fibers, unstriped fibers.* See *muscular tissue.*

spindle fibers. See *achromatic fibrils* under *fibril.*

sustentacular fibers. A supporting connective tissue that unites the various layers of the retina.

sympathetic fibers. Sympathetic nerve fibers.

Tomes's fibers. Odontoblastic processes occupying the dentinal tubules; also called *dentinal fibers.*

vasoconstrictor fibers. Nerve fibers which, upon stimulation, produce constriction of blood vessels.

vasodilator fibers. Nerve fibers whose function is to dilate blood vessels.

white fibers. See *collagenous fibers* under *fiber.*

yellow fibers. See *elastic fibers* under *fiber.*

zonular fibers. The fibers of the ciliary zonule of Zinn.

Fibiger, Johannes (1867–1928) Danish bacteriologist who discovered *Spiroptera carcinoma,* supporting Virchow's theory that cancerous growths are due to chronic irritation. Nobel laureate in medicine and physiology (1926).

fibra. Fiber.

fibre. See *fiber.*

fi·bre·mi·a, fi·brae·mi·a (figh-bree-mee-uh) [*fibre*; G. *haima*, blood]. The presence of fibrin in the blood.

fi'bri·form [*fibre*; L. *forma*, form]. Shaped like a fiber.

fi'bril [*fibra*]. A component filament of a fiber, as of a muscle or of a nerve. Also called *fibrilla.* —**fibrillar, fibrillary,** *adj.*

achromatic fibrils. Fibrils of achromatic, nuclear, or cell substance forming lines which extend from pole to pole in a dividing nucleus, so as to form a spindle- or barrel-shaped figure.

chromatic fibrils. The threadlike fibrils consisting of the chromatin in a cell nucleus; nuclear fibrils.

dentinal f. One of the fibrils of the dentinal matrix. The term is sometimes erroneously used for dentinal fiber.

fi"bril·la'tion [*fibra*]. 1. The formation of fibrils. 2. A local quivering of muscular fibers. —**fi'brillated,** *adj.*

atrial f. A cardiac arrhythmia due to a disturbed spread of excitation through atrial musculature; generally believed to be due to waves of excitation circulating irregularly and continuously at rapid rates around a variable ring of muscle in the atria from where excitation of the rest of the atria and ventricles occurs, giving rise to an irregular, usually rapid, rate of ventricular excitation. Also called *auricular f.*

auricular f. Term clinically used for atrial *f.*

ventricular f. A cardiac arrhythmia characterized by an absolutely irregular spread of idioventricular excitation whose origin and spread are completely disordered, analogous to atrial fibrillation. It produces only limited, ineffectual, and irregular ventricular contractions and, being almost always irreversible in man, usually is fatal.

fi·bril"lo·gen'e·sis (figh-bril-o-jen'i-sis) [*fibra*; G. *genesis*, production]. The formation and development of fibrils, especially those of connective tissue.

fi'brin [*fibra*]. The fibrous insoluble protein, formed by the interaction of thrombin and fibrinogen, in the network of which blood corpuscles are enmeshed in the clotting of shed blood. —**fi'brinous,** *adj.*

f. ferment. Thrombin.

f. film. A pliable, elastic, translucent film of fibrin, prepared from human blood plasma; used in neurosurgery for the repair of dural defects and in the prevention of meningocerebral adhesions.

f. foam. A spongy material made from human fibrin which, when soaked in human thrombin, is a useful hemostatic agent in neurosurgery, in wounds of parenchymatous organs, and in cases of jaundice and hemophilia. It causes little tissue reaction and is absorbable.

gluten f. Vegetable fibrin; a brownish mass extracted from gluten.

fi"bri·ne'mi·a, fi"bri·nae'mi·a (figh"bri-nee-mee-uh) [*fibra*; G. *haima*, blood]. Fibremia.

fi'bri·no-, fi'brin- [*fibra*]. A combining form meaning *relating to fibrin.*

fi·brin'o·gen (figh-brin'o-jen) [*fibra*; G. *gennethai*, from *gignesthai*, to be produced]. A protein of the globulin class present in blood plasma and serous transudations; the soluble precursor of fibrin. See Table of Normal Values of Blood Constituents in the Appendix. —**fibrinogen'ic, fibrinog'enous** (figh"bri-nodj'i-nus) *adj.*

fi·brin·o·gen"o·pe'ni·a (figh-brin-o-jen-o-pee'nee-uh) [*fibra*; *gennethai*, G. *penia*, poverty]. Decrease in the fibrinogen of the blood plasma often associated with hemorrhagic disorders of parturition, although other acquired and con-

genital cases are bserved. Formerly called *fibrinopenia*.

fi'bri noid [*fibra*, G *eidos*, form]. The fibrinlike material f the placenta; produced by necrosis of the mucosa and trophoblast and by fibrin from maternal blood. It occurs as an incomplete layer in the chorion and decidua and as patches on the chorionic villi. Also called *stria*.

canalized f The layered fibrinoid material having striated or canalized appearance, found especially on the chorionic plate during the last half of pregnancy

fi"brin o-kin ase. The activators of plasminogen, found in animal tissues.

fi"bri-no-ly'sin, fi"bri nol y sin [*fibra*; G *lysis*, loosing]. Any enzyme which digests fibrin. Plasma contains fibrinolysin, called *plasmin*, present as precursor which can be activated by streptokinase, staphylokinase, fibrinokinase, or certain organic solvents, including chloroform. The term was formerly applied to the bacterial products which activate plasminogen.

fi"brin-ol'y-sis [*fibra*; *lysis*]. 1 The slow digestion and solution of fibrin which occurs when blood clot is allowed to stand aseptically in the serum in which it was formed presumably due to the action of proteolytic enzyme. 2. The hydrolysis of fibrin.

fi-brin"o-pe'ni-a (figh-brin o-pee nee-uh, figh brin-o) See *fibrinogenopenia*.

fi'bro-, fibr [*fibra*]. A combining form signifying *pertaining to fibers*, *elation to fibrous tissue or structure*.

fi"bro ad" no ma [*fibra*, G *adēn*, gland *-ōma*, tumor]. Benign adenomatous tumor containing *variable amounts of connective tissue, which may* vary from densely collagenous to myxoid also called *adenofibroma*, *cystadenofibroma*, *fibroadenoma xanthomatodes*, *fibropapilloma*, *fetal fibroadenoma*, *myxofibroadenoma*, *pleomorphic fibroadenoma*.

giant f. of breast. See *cystosarcoma phylloides*.

intracanalicular f (*of breast*) A benign breast tumor with proliferation of connective tissue causing distortion of the lumina of th glands and ducts in the tumor also called *intracanalicular myxoma*.

periacinar f. See pericanalicular *f* (*of breast*)

pericanalicular f (*of breast*) A glandular type of benign breast tumor with large amounts of connective tissue which is often arranged concentrically around the multiplied ductules also called *periacinar f*

fi"bro-ad'i pose [*fibra*; L. *adeps*, fat]. Both fibrous and fatty

fi"bro- n"gi ma [*fibra*, G. *angeion*, vessel; *-ōma*, tumor]. A benign tumor composed of blood or lymph vessels, with abundant connective tissue.

fi"bro-a-re o-lar [*fibra*, L. *areola*, small, open place]. Both fibrous and areolar *Obs*.

fi'bro-blast [*fibra*; G *blastos*, germ]. A stellate or spindle-shaped cell (rod-shaped, if seen on edge) with large, oval, flattened nucleus and thin layer of cytoplasm found in fibrous tissue. Syn., *fibrocyte*. Also called *connective-tissue cell*.

fi"bro blas'tic [*fibra*, *blastos*] 1 Pertaining to fibroblasts. 2. F broplastic.

fi"bro-blas-to ma [*fibra*; *blastos*; G *-ōma*, tumor]. Term used for fibroma.

arachnoid f Term used for meningioma.

meni geal f. See *meningioma*

perineural f See *neurilemmoma*; *neurofibroma*.

fi"bro-bron chi'tis [*fibra*; G. *bronchos*, windpipe; *-itis*, inflammation]. Bronchitis with expectoration of fibrinous casts.

fi"bro-cal-car'e-ous (figh"bro-kal kair ee-us) [*fibra*; L. *calcarius*, pertaining to lime]. Both fibrous and calcareous, as a deposit of calcifi material in tissues (occurring in fibromas or as the seat of fibrosis)

fi"bro-car"ci no ma [*fibra*; G *karkinos*, crab *-ōma*, tumor]. A carcinoma with fibrous elements.

fi"bro-ca ti lage [*fibra*; L. *cartilago* cartilage]. Dense, white, fibrous connective tissue in which the cells have formed small masses of cartilage between the fibers, and have impregnated the fibers with chondrin. —**fibrocartilag'inous** (figh"bro-kahr ti-ladj'i-nus) *adj*

fi"bro-cel'lu lar [*fibra*, L. *cellula*, small store-room]. Both fibrous and cellular fibroareolar

fi"bro-chon dro ma (figh"bro-kon-dro muh) [*fibra*; G *chondros*, cartilage *-ōma*, tumor]. A chondroma with considerable amount of fibrous tissue.

fi"bro-chon dro-os"te-o ma. See *osteochondroma*.

fi"bro-cys-to ma [*fibra*; G *kystis*, bladder; *-ōma*]. A fibrous tumor accompanied by cystic degeneration.

fi'bro-cyte. Fibroblast.

fi"bro-dys pla si a. See fibrous *dysplasia*.

fi"bro-e las tic [*fibra*; G *elaunein*, to drive]. Applied to connective tissue in which interlacing collagenous fibers are interspersed by more or less strongly developed networks of elastic fibers.

fi"bro-e-las-to sis [*fibra*, *elaunein*, G. *-osis*, condition]. See endocardial *fibrosis*.

fi"bro-en chon-dro ma (-en"kon-dro muh) [*fibra*; G. *en*, n *chondros*, cartilage; *-ōma*, tumor]. An enchondroma containing fibrous elements.

fi"bro-en"do-the li ma of joint. See *synovioma*.

fibrogen. Trade-mark for suspension of tissue fibrinogen and cephalin in sodium chloride *solution. Possesses thromboplastic activity* and is employed rally as hemostatic.

fi brog'li (figh-brog'lee-uh, fi brog' figh-bro glee-uh, fi-bro) [*fibra*; G *glia*, glue]. Old term for the ground substance of connective tissue. Tonofibrils associated with fibroblasts are called *fibroglia fibers*. See under *fiber*

fi"bro-gli-o ma (figh"bro glye muh) [*fibra*; *glia*; G *-ōma*, tumor]. A glioma with considerable amount of mesodermal fibrous tissue.

f of nose. See heterotopic *glioma*.

fi'broid [*fibra*, G. *eidos*, form]. Composed of fibrous tissue said of tissue or structure which has become the seat of extensive fibrosis.

fi"broid-ec to-my [*fibra*, *eidos*; G *ektomē*, excision]. Removal of terine fibroid.

fi"bro lam'i nar [*fibra*, L *lamina*, plate]. Relating to fibrous layer as fibrolaminar thrombus.

fi"bro-lei" myo-o ma. A leiomyoma containing fibromatous component.

fi"bro-li-po ma [*fibra*, G. *lipos*, fat; *-ōma*, tumor]. A lipoma with considerable amount of fibrous tissue. —**fibrolipom'atous**, *adj*

fi"bro-li po-sar-co ma. A liposarcoma with fibromatous component.

fibrolysin. Trade-mark for thiosinamine and sodium salicylate solution used as resolvent of cicatrices

fi bro ma (figh-bro muh) [*fibra*, *-ōma*]. A benign tumor composed principally of whorls of white fibrous connective tissue. —**fibrom atous**, *adj.*

chondromyxoid f. of bone A rare, peculiarly differentiated tumor of connective tissue, characterized cytologically by spindle-shaped cells in myxoid intercellular matrix and in parts, as well as gross ppearance, simulating cartilage.

endoneural f. See *neurofibroma*.

f. durum. A hard fibroma, firm because of large *quantities of collagenous material* comparison with the umber of cells dermatofibroma.

f fungoides. See *mycosis* fungoides.

f. lipomatodes. See *xanthoma.*
f. molle. A soft fibroma, soft because cellular components are rich as compared with collagenous fibers. It is often pedunculated.
f. molluscum. See *neurofibromatosis.*
f. of nerve sheath. See *neurofibroma.*
f. simplex. See *dermatofibroma.*
nonosteogenic f. of bone. A common benign tumor of bone, exhibiting no osteogenic tendencies, usually found in the shaft of long bones, and histologically characterized by whorls of spindle-shaped connective-tissue cells. There are giant cells containing several nuclei, and lipid-laden cells.
odontogenic f. A benign odontogenic tumor formed from the mesenchymal derivatives of the tooth germ, which usually develops at the apex of a tooth.
ossifying f. of bone. A benign tumor of bone derived from bone-forming connective tissue, seen particularly in the vertebral column, which microscopically appears as vascularized connective tissue interspersed with fibrous bone trabeculae. Syn., *osteogenic f., osteofibroma, fibrous osteoma.*
osteogenic f. Ossifying *f.*
papillary f. A superficial fibroma with papillary projections.
perineural f. See *neurofibroma.*

fi·bro·ma·toid (figh·bro·muh·toyd) [*fibroma*; G. *eidos*, form]. Resembling a fibroma.

fi·bro·ma·to·sis (figh·bro·muh·to·sis) [*fibroma*; G. *-osis*, condition]. The simultaneous occurrence of many fibromas.

fi″bro·mus·cu·lar [*fibro-*; L. *musculus*, muscle]. Made up of connective tissue and muscle.

fi″bro·my·o·ma (·migh·o·muh) [*fibro-*; G. *mys*, muscle; *-oma*, tumor]. A myoma in which connective tissue is so intermingled with the muscle as to constitute a fibromatous component.
f. of uterus. See *leiomyoma.*

fi″bro·my″o·mec′to·my [*fibro-*; *myo-*; *-oma*; G. *ektomē*, excision]. Excision of a fibromyoma.

fi″bro·my″o·si′tis. See *myositis.*

fi″bro·myx″o·en·do·the″li·o′ma [*fibro-*; G. *myxa*, mucus; G. *endon*, within; G. *-oma*, tumor]. See *mixed tumor of salivary gland type.*

fi″bro·myx″o·li·po′ma [*fibro-*; G. *myxa*, mucus; *lipos*, fat; *-oma*]. A mixed, fatty tumor with fibrous and myxomatous tissues.

fi″bro·myx·o·ma [*fibro-*; *myxa*, *-oma*]. A connective-tissue tumor composed of fibrous and myxomatous components.
f. of breast. See *cystosarcoma phylloides.*
f. of nerve sheath. See *neurofibroma.*

fi″bro·myx″o·sar·co′ma [*fibro-*; *myxa*, G. *sarkōma*, fleshy excrescence]. A fibrosarcoma with mucoid degeneration; rarely a combination of fibrosarcoma and myxosarcoma.
f. of breast. See *cystosarcoma phylloides.*

fi″bro·neu·ro′ma. See *neurofibroma.*

fi″bro·os″te·o·chon·dro′ma. See *osteochondroma.*

fi″bro·os·te·o′ma. An osteoma.

fi″bro·os″te·o·sar·co′ma. An osteosarcoma.

fi″bro·pla′si·a (figh″bro·play′zhuh, ·see·uh, ·shuh, ·zee·uh) [*fibro-*; G. *plassein*, to form]. The growth of fibrous tissue, as in the second phase of wound healing. —**fibroplas′tic,** *adj.*
retrolental f. A blinding disease of the eye affecting premature infants with low birth weight; so-called because in the ultimate stage the contracture of organized fibrous tissue detaches the retina and occupies the pupillary area back of the lens.

fi″bro·plate [*fibro-*; OF. *plate*]. A disk of interarticular fibrocartilage.

fi″bro·psam·mo′ma (·sam·o′muh) [*fibro-*; G. *psammos*, sand; *-oma*, tumor]. 1. A psammoma with considerable amount of fibrosis. 2. A fibroma in which psammoma bodies are present.

fi″bro·pu′ru·lent [*fibro-*; L. *purulentus*, purulent]. Consisting of pus containing flakes of fibrin.

fi″bro·sar·co′ma [*fibro-*; G. *sarkōma*, fleshy excrescence]. Spindle-cell sarcoma, mature in type, with production of collagenous fibrils.
f. myxomatodes. See *fibromyxosarcoma.*
f. of breast. See *cystosarcoma phylloides.*
f. of nerve sheath. See malignant schwannoma.
f. ovarii mucocellulare carcinomatodes. See *Krukenberg tumor.*
f. phyllodes. See *cystosarcoma phylloides.*
odontogenic f. A malignant tumor derived from mesenchymal odontogenic tissues.

fi″bro·se′rous [*fibro-*; L. *serum*, whey]. Composed of fibrous tissue with a serous surface.

fi·bro·sis (figh·bro·sis) [*fibro-*; G. *-osis*, increase]. Growth of white fibrous connective tissue in an organ or part in excess of that naturally present. —**fibrot′ic,** *adj.*
arteriocapillary f. Fibrosis of small arteries and arterioles, with variable degrees of hyalinization and reduction in the size of the lumens. One of the manifestations of what is now called arteriolar sclerosis. Also called *arteriocapillary fibrosis of Gull and Sutton.*
bauxite f. A type of pulmonary fibrosis observed in the abrasive manufacturing industry among workers exposed to concentrated fumes of amorphous alumina and silica. Exact etiology has not been established. It is characterized by pulmonary insufficiency, diffuse roentgenologic changes, and the frequent occurrence of spontaneous pneumothorax. Fatal termination may occur within a period of months. Also called *Shaver's disease.*
cystic f. See pancreatic *f.*
endocardial f. Congenital thickening (hyperplasia) of the endocardium in infants' hearts, with or without valvular deformity. Syn., *endocardofibrosis, fibroelastosis, endocardial sclerosis.*
hepatolienal f. Intrahepatic obstruction to the portal flow as the result of a fibrosing factor operating during childhood, adolescence, and early adult life. There is no known etiological factor.
nodular f. Fibrosis in the form of small nodules.
pancreatic f. Congenital disease which may involve widespread change in the mucous glands of the entire body. Obstructive lesions of the pancreas with acinar atrophy and eventually marked fibrosis of the entire gland, causing pancreatic exocrine insufficiency and having the clinical appearance of the celiac syndrome comprise a prominent feature. There is also severe pulmonary disease, which may precede, accompany, or follow the symptoms of pancreatic insufficiency. Diagnosis is substantiated by the deficiency or absence of trypsin. Also called *cystic fibrosis of pancreas, congenital pancreatic or familial steatorrhea, chronic interstitial pancreatitis of infancy, mucosis, mucoviscidosis.*
pulmonary f. Proliferation of fibrous tissue in the lung.
replacement f. That which replaces destroyed tissues, in part or wholly.
silica f. A condition produced in dogs by the experimental injection of ground quartz into the hepatic portal vein. As a result, marked collateral circulation to the intrahepatically obstructed portal circuit develops.

fi″bro·si′tis [*fibro-*; G. *-itis*, inflammation]. (a) Inflammatory hyperplasia of the white fibrous tissue. (b) A form independent of gross anatomic disease of the structures involved; it may be

primary or without demonstrable cause, or *secondary* to some form of arthritis, trauma, or other disease abnormality —fibrosit'ic, *adj*
b rsal f Bursitis.
fascial f See tendinous *f*
f. ossificans progressiva. The multiple progressive form f myositis ossificans.
intramuscular f. Myositis.
periarticula f. That involving the joint capsule.
te dinous f That involving the fibrous sheaths of tendons.
fi'brous [fibra]. Containing fibers similar to fibers.
fib u la [L., clasp]. The slender bone at the outer part of the leg, articulating above with the tibia and below with the talus and tibia. See Plates 1, 2. See Table of Bones in the Appendix. —fibular *adj*
fib u lo-cal-ca ne al [*fibula*; L. *calcaneum*, heel]. Pertaining to or connecting the fibula and the calcaneus.
F I.C. Fellow of the Institute of Chemistry
fi'cin [L. *ficus*, fig]. A proteolytic enzyme from the fig-tree sap It is an active *Ascaris* and *Trichuris* vermicide.
Fick, Adolf [*German physiologist*, 1829–1901]. Introduced number of instruments used in the study of muscle and nerve physiology including the myotonograph and the cosine lever (1864) H described method, called *Fick principle*, for determining cardiac output by gasometry if the total quantity of oxygen consumed per minute is known, and also the oxygen content of both the arterial and the mixed venous blood, the output can be calculated by means of the following formula

$$\frac{\text{Total oxygen consumption}}{\text{Arteriovenous oxygen difference}} \times 100 = \text{cardiac output}$$

fi-co sis. See *sycosis*.
F.I C.S. Fellow of the International College of Surgeons.
Fiedler Carl Ludwig Alfred [*German physician*, 1835–1921]. Described spirochetal jaundice, called *Weil' disease*, *Fiedler disease*. Described progressive myocardial failure caused by idiopathic, diffuse, nonsuppurative myocarditis, called *Fiedler' myocarditis*.
field [AS. *feld*] 1 An open space or area. 2. A concept of development in which the whole and the parts of structure or organism are dynamically interrelated, reacting to each other and to the environment. 3. A region of the embryo that is the anlage of some organ or part.
adversive fields. Regions of the cerebral cortex in which stimulation evokes turning of the eyes, head, and trunk toward the opposite side.
auditory f The area within which given sound is audible to the ear
deaf f. One of the small areas near the external auditory meatus in which the vibrating tuning fork is not heard.
electrical f I *cardiology* the electrical line of force in the body exerted by the heart currents. Abbreviated EMF or E.M.F
f f fixation. I *optics*, the region bounded by the utmost limits of distinct or central vision, which the eye has under its direct control throughout its excursions when the head is not moved.
f of microscope. The area within which bjects can be seen through microscope at one time.
f. of vision. The space visible to the patient when the eye is fixed steadily on an object in the direct line of vision. Abbreviated, F
frontal adversive f. Adversive field of the frontal cerebral cortex.
individuation f. A term denoting the ability of an organizer to rearrange the regional structure of both itself and the adjacent tissue, to make the adj cent tissue part of complete embryo.
magnetic f The portion of space around magnet in which its action can be felt.
nasal f The anlage of the olfactory placode. Syn., *olfactory f* nasal area.
occipital eye f A region on the lateral aspect of the occipital portion of the cerebral cortex whose stimulation produces conjugate deviation of the eyes toward the opposite side.
olfactory f See nasal *f*
parietal adversive f Adversive field of the parietal cerebral cortex.
field med'i cal card. I U S *Army medicine*, type of individual medical record, usually used by numbered hospitals and fixed dispensaries in overseas commands.
field med'i-cal rec'ord. I U S. *Army medicine*, field medical card and the field medical record jacket, with all th enclosed medical and clinical records.
fi-èvre bou ton neuse (fyev ruh boo-taw-nehz *See* Notes § 35) See boutonneuse *fever*
fig [L. *ficus*, fig]. The fruit of *Ficus carica*, having nutritive and laxative qualities.
fig'ure [L *figura*, form]. The visible form of any thing the outline of an organ or part.
achromatic f. The spindle and asters in mitosis or miosis.
chromatic f The chromosomes or the pattern formed by the chromosomes in miosis or mitosis.
nuclear figures. The peculiar arrangement of the chromosomes during karyokinesis.
fig'wort. Any member of the botanical family Scrophulariaceae specifically the herb *Scrophularia nodosa* var *marilandica*, formerly variously used medicinally
fi'la Plural of filum.
fi-la ceous (fi lay'shus, figh lay shus) [L. *filum*, thread]. Consisting of threads or threadlike fibers or parts. *Rare*.
fil' ment [F from L. *filare*, to spin]. A small, threadlike structure. —filamen tous, *adj*
axial f The central contractile fibril of cilium or flagellum which arises from centriole or blepharoplast.
spermatic f. The axial filament of spermatozoon
terminal f. The end piece or naked axial filament of the tail of spermatozoon.
fil'a men ta'tion [*filare*]. Thread formation peculiar reaction bserved when bacteria are grown in an immune serum. Long threads of bacteria occur The reaction is shown by the typhoid and proteus bacilli. Also called *Pfaundler reaction*, *thread reaction*, *Mandelbaum reaction*.
fi'lar [L *filum*, thread] Filamentous.
fi-la ri (pl. *filariae*) [*filum*]. A long filiform nematode which is member of the superfamily Filarioidea. The adults may live in the circulatory or lymphatic systems, the connective tissues, or serous cavities of vertebrate host. The larval forms, or microfilariae, are commonly found in the circulating blood or lymph spaces from which they are ingested by some form of blood-sucking arthropod. After series of metamorphoses in the body of the arthropod, the larvae migrate to the proboscis as infective forms. —filar'ial, *adj*
blinding f. Onchocerciasis.
fil ri' sis [*filum*, NL. *-iasis*, condition]. A diseased state due to the presence of filariae in the body
f bancrofti. Elephantiasis due to *Wuchereria bancrofti*.

Malayan f. Filariasis of man caused by *Wuchereria malayi*, occurring exclusively in the Far East (India, China, Celebes, New Guinea, etc.). It is frequently associated with elephantiasis of the upper extremities.

fi·lar'i·cide [*filum*, L. *caedere*, to kill]. A drug which destroys filariae. —**filar'icidal**, *adj.*

fi·lar'i·form [*filum*, L. *forma*, shape]. In the form of, or resembling, filariae.

Filatov, Nil Fedorovich [*Russian pediatrician*, 1848-1902]. Described infectious mononucleosis, calling it idiopathic adenitis (1885-87); this is also known as Filatov's disease, *Pfeiffer's disease*. Described a form of rubella with scarlatiniform rash, under the name rubeola scarlatinosa (1857). Its existence as a separate entity is open to doubt. Called *fourth disease*, *Filatov-Dukes disease*.

Filatov, Vladimir Petrovich [*Russian ophthalmologist*, 1875-]. Renowned for his operation of transplantation of the cornea, in which a protecting celluloid shield is passed into the anterior chamber, a disk of cornea removed, and a similar disk from the donor eye placed in the defect. The graft is secured in place by a conjunctival flap turned down from above.

fi·lic'ic ac'id (fi-lis'ik). The term applied to a mixture of related constituents found in aspidium, which appear to be derivatives of methyl and dimethyl phloroglucinol.

fil'i·cin. Filicic acid.

fil'i·cin'ic ac'id. 1,1-Dimethylcyclohexane-2,4,6-trione; a decomposition product of several constituents of aspidium.

fil'i·form [*filum*, *forma*]. Threadlike.

Filipowicz, Casimir [*Polish physician*, contemporary]. Described a yellowish discoloration of the palmar and plantar regions seen in typhoid fever; called *palmoplantar phenomenon*, *Filipowicz' sign*.

fil'i·punc"ture [*filum*, L. *punctura*, a puncture]. A method of treating aneurysm by inserting wire threads, hair, or the like to promote coagulation. Obs.

fil'let [*filum*]. 1. A loop for the purpose of making traction on the fetus. 2. Old term for *lemniscus*.

fill'ing [A.S. *fyllan*]. 1. The material used in closing cavities in carious teeth. 2. The process of inserting, condensing, shaping, and finishing a filling substance.

contour f. In *dentistry*, a filling in which the material is so built out as to restore the lost portion of the crown of the tooth.

root canal f. The closure and filling of the prepared root canal from the apex to the coronal portion of the tooth with an impervious material to prevent subsequent infection.

temporary f. A substance, as cement or gutta-percha, used in teeth as a filling which is to be replaced later by a permanent restoration.

film [AS. *filmen*]. 1. A pellicle or thin skin. 2. An opacity, as of the cornea. 3. In *microscopy*, a thin spread of blood, usually on a glass slide or coverslip.

film badge. A device containing enclosed photographic film, worn by personnel exposed to radiation to show dosage received. See photographic dosimetry.

fil'ter (F. *filtre*, from ML. *filtrum*, felt). 1. An apparatus which separates one or more components of a mixture from the others. 2. A special part of a high-frequency circuit which suppresses certain frequencies of electric waves. 3. In *acoustics*, a device which suppresses certain frequencies of sound waves. 4. In *photography*, a colored glass or gelatin plate used in front of the photographic lens to alter the relative intensity of different wavelengths in the light beam.

Berkefeld f. An apparatus for sterilizing any liquid or solution by separating bacteria and spores by means of diatomaceous earth.

inherent f. One built into roentgen-ray tubes, consisting of tube wall, oil layer, and plastic layer.

Mandler f. The American modification of the German Berkefeld candle, made of kieselguhr, asbestos, and plaster of Paris, and used in the recovery and study of viruses.

Pasteur-Chamberland f. Unglazed porcelain filter made of kaolin and sand, of graded porosities, L_1 to L_{13}, which permits the recovery of bacteria-free filtrates used in the study of viruses.

pollen f. A means of removing pollen from the air; may either make the atmosphere pollen-free, as by means of a forced draft through various sized filters, or filter the respired air as with a gauze mask worn over mouth and nose, or an adjustable device worn in the nostrils.

primary f. In *radiology*, a thin layer of any one of several materials used to absorb a greater percentage of low energy rays than of the high energy rays of a roentgen beam, thus producing a beam with greater penetrating power. Aluminum filters are used for superficial and medium work, copper or thoraeus filters for deep therapy, and lead or tin filters for supervoltage work.

secondary f. In *radiology*, a sheet of material of low atomic number relative to that of the primary filter, placed in the path of the filtered beam of radiation to remove the characteristic radiation of the primary filter.

Seitz f. A bacterial filter utilizing a matted asbestos filtering pad or disk, the unit being used with either vacuum or pressure.

Thoraeus f. A combination filter consisting of tin, copper, and aluminum, used in x-ray therapy.

ultraviolet f. One which passes ultraviolet radiation but which is relatively opaque to longer wavelengths.

virus f. A filter such as the Berkefeld, Chamberland, Seitz, and Mandler; used in the recovery and study of viruses. See individual filters.

Wood's f. See Robert William *Wood*.

fil'ter. To separate one or more components of a mixture from the others.

fil'ter aid. A substance added to a liquid to be filtered to assist filtration, generally through formation of a bed of the added material which functions as an auxiliary filter preventing passage of particles which would otherwise either pass through or clog the primary filter.

fil'trate [*filtrum*]. The liquid that has passed through a filter.

fil·tra'tion [*filtrum*]. The operation of straining through a filter.

fil'trum (pl. *filtra*) [*filtrum*]. A filter or strainer.

f. ventriculi. A small vertical groove in the mucosa of the lateral wall of the larynx between the cuneiform and arytenoid cartilages; also called *Merkel's f.*

fi'lum (pl. *fila*) [L., thread]. Any threadlike or filamentous structure.

fila coronaria. Fibrous bands of the cardiac skeleton extending from the base of the medial cusp of the tricuspid valve to the aortic opening and right trigone.

fila olfactoria. The component fasciculi of the olfactory nerve before and during their passage through the cribriform plate of the ethmoid bone.

f. durae matris spinalis. The caudal tip of the filum terminale invested by the dura mater.

f. lateralis pontis. A fiber bundle running along the rostral border of the pons which may go to the cerebellum or connect the pons to the midbrain. Syn., *taenia pontis*.

f. terminale. The atrophic slender inferior end

of the spinal cord, the caudal part of which is mostly pia mater

fim'bri [L., fringe]. 1. A fringe. 2. Th fringelike process of the outer extremity of th terine tube. 3. A flattened band of white fibers along the medial margin of the hippocampus, continuous with the crus of the fornix. Formerly called *f cornu Ammonis*. —**fimbrial**, *adj*

fim'bri ate, fim'bri a"ted [*fimbria*]. Fringed with slender processes which are larger than filaments; said of bacterial cultures and of the ostium of th uterine tube.

Findlay Francis McRae [*American surgeon*, 1896–]. Known for his description of an original method of closure of gastrojejunocolic fistula, called *Findlay' operation*.

fin'ger [AS.]. *A digit of the hand.*

baseball f. Luxation of distal phalanx with rupture of the distal portion of the extensor ten don, resulting in drop of the phalanx; caused by baseball injury

clubbed f. A finger the terminal phalanx of which is short and broad, with an verhanging nail seen in some cases f pulmonary and cardiac disease. Also called *Hippocratic f chronic hypertrophic pulmonary osteoarthropathy, drumstick f*

giant fingers. Macrodactyli

hammer f. A congenital flexio deformity usually of middle phalanx of middle finger

lock f. A peculiar affection of the fingers in which they suddenly become fixed in flexed position, due to the presence of small fibrous growth in the sheath of flexor tendon.

mallet f. A deformity marked by undue flexion of the last phalanx.

seal f. An infection occurring in Norway believed to be contracted from seals, characterized by the glistening appearance f the swollen finger· It is similar clinically to erysipeloid

spatulate f A particular type of broad finger flattened at th tip.

spider fingers. See *arachnodactyly*

springfinger Condition in which there is an obstruction t flexion and extension of one or more fingers due to injuries or inflammation of the tendinous sheaths.

trigger f. A condition in which flexion or extension of finger is at first bstructed, but finally accomplished with jerk or sweep. It is due t chronic tenosynovitis

webbed fingers. Union of adjacent fingers by interdigital tissue fingers fused at the lateral aspects. *Syn., syndactyly*

fin ger cot. A covering of rubber or other material to protect the finger or to prevent infection Also called *finger stall*.

fin ger print [*finger* ME. *print*]. An impression of the cutaneous ridges of finger tip. M y be direct pressure print or rolled print, the latter recording the entire flexor and lateral aspects of the phalanx. See **dermatoglyphics**. —**fi gerprinting, n.**

fin ger stall. A rubber cap for finger

Finkeldey cells. See *Warthin-Finkeldey giant cells* under *cell*.

Finkelstein, Heinrich [*German pediatrist*, 1865–1942]. Devised an albumin milk preparation which has low lactose and salts content and high casein and fat content, known as *Finkelstein albumin milk*.

Finkler Dittmar [*German bacteriologist*, 1843–1912]. Isolated, with J Prior *Vibrio proteus* from human stools in acute gastroenteritis (1884) The spirillum also received the name *Finkler Prior spirillum*.

Fin-lay'a [after Carlos *Finlay*] A subgenus of *Aedes* mosquitoes, members of which transmit yellow fever

Finlay y de Barres, Carlos Juan [*Cuban biologist and physician*, 1833–1915]. Stated the theory some years before this was proved by Reed and his associates, that yellow f ver is transmitted to man by mosquitoes (1881)

Finney J hn Miller Turpin [*American surgeon*, 1863–1942] Eminent surgeon and teacher Widely known for having introduced special type of pyloric operation in which anastomosis of the first portion of the duodenum is made with the pyloric end of the stomach, employing the principles of the posterior gastroenterostomy technic and using large, U-shaped incision in the pylori and duodenal region; called *pyloroplasty, Finney operation*.

Finochetti, Enrique [*Argentinian surgeon*, 1880–] *Finochetti' stirrup* is an apparatus used for skeletal traction in leg fractures.

Finsen Niels Ryberg [*Danish physician*, 1860–1904]. Proved the therapeuti value of actinic rays (1896) considered the father of modern phototherapy See Finsen *light*. Advocated heliotherapy N bel laureate (1903)

Finsterer Hans [*Austrian surgeon*, 1877–]. The *Hofmeister-Finsterer operation* is modification of Pólya operation of subtotal gastrectomy

fire damp" An explosive mixture of methane and air

first aid. Emergency treatment given to casualty before regular medical or surgical care can be administered by trained individuals. —**first' aid'** *adj* **first-aid'er** *n.*

first'-aid' kit. A pouch, bag, or box containing sterilized dressings, adhesive plaster iodine, bandages, and simpl instruments; for use in giving first aid in an emergency

first'-aid' pack'et. A hermetically sealed, water proof metal case containing emergency first-aid material. It is issued to each soldier of the U S. Army and is not to be opened until needed.

first in ten tion. See *healing* by first intention.

Fischer Emil [*German chemist*, 1852–1919] Made important contributions to the knowledge of animal and vegetable proteins. Synthesized purines, polypeptides, and various sugars. With von Mering, introduced the use of barbital. Nobel laureate (1902)

Fischer Hans (1881 1945) German chemist, noted for his investigation of heme compounds, especially for his synthesis of hemin. N bel laureate in *chemistry (1930)*

Fischer Louis [*American physician*, 1864–1944]. Described systoli murmur heard over the anterior fontanel or in the temporal region of infants with rickets Also described presystoli murmur in cases of adherent pericarditis in the absence of valvular disease.

Fishberg' test. See under *test*.

Fishberg and Dolin' method. See under *method*.

fish'ber"ry See *cocculus*.

fis'sile. Fissionable.

fis'sion [L. *fissio*, from *findere*, to cleave] 1 Any splitting or cleaving. 2. *I biology* asexual reproduction by the division of the body into two or more parts, each of which grows int complet organism. It is the common method of reproduction among the bacteria and protozoa. —**fissionable**, *adj*

atomic f. The splitting of the nucleus of an atom by neutron bombardment into two main fragments. For example, the uranium isotope 235 can be split in two, barium and krypton resulting, with the release of vast amount of energy Also called *nuclear f*

binary f. The division of first the nuclear material, then the cytoplasm into two equal parts; common in protozoa.

multiple f. A series of divisions of the nucleus followed by a division of the body into as many parts as there are nuclei.

nuclear f. Fission or splitting of the nucleus, the center of an atom. Also called *atomic f.*

uranium f. See atomic *f.*

fis·sip'a·rous [L. *fissum*, from *findere*; *parere*, to bring forth]. Propagating by fission.

fis'su·la. A small fissure.

f. ante fenestram. A channel, irregular in size and shape, extending from the vestibule of the inner ear from a point just anterior to the fenestra vestibuli toward the tympanum. There may or may not be an external opening. Also called *Cotunnius' canal*.

fis'sure [L. *fissura*, cleft]. A groove or cleft; applied to the clefts or grooves in various organs, as the skull, the brain, the liver, the spinal cord; also to cracks in the skin or linear ulcers in mucous membranes. When applied to the brain, the term is used for the deepest linear depressions, as the lateral cerebral fissure. Also see *sulcus*. —**fissured, fissural,** *adj.*; **fissura'tion,** *n.*

abdominal f. See *celosoma*.

anal f. A linear ulcer at the mucocutaneous junction of the anus, causing intense suffering on defecation.

anterior median f. A groove extending the entire length of the spinal cord in the midline anteriorly and incompletely dividing it into two symmetrical parts.

ape f. A fissure of the human brain which corresponds with that present in an ape, as the lunate sulcus.

avulsion f. The separation of the tibial tuberosity due to violent action of the patellar tendon.

basal f. See decidual *f.*

calcarine f. One on the medial aspect of the occipital lobe of the cerebrum, between the lingual gyrus and the cuneus.

callosomarginal f. See *cingulate sulcus*.

central f. See central *sulcus*.

choroid f. (a) The ventral fissure in the optic cup and the optic stalk of the embryo. Syn., *fetal f.* (b) The line of invagination of the tela chorioidea of the lateral ventricles of the brain.

cingulate f. See cingulate *sulcus*.

collateral f. One on the medial aspect of the cerebrum, between the subcalcarine and subcollateral gyri, corresponding to the collateral eminence.

decidual f. One of the fissured spaces developing in the decidua basalis, parallel with the uterine wall, in the later months of pregnancy.

dentate f. Old term for hippocampal *f.*

fetal f. See choroid *f.*

f. of the gallbladder. See *cystic fossa*.

f. of the optic cup. That part of the choroid fissure of the embryonic eye located in the optic cup.

f. of the optic stalk. That part of the choroid fissure of the embryonic eye located in the optic stalk.

genal f. Genal cleft, (a).

genitovesical f. A groove, developing about the third fetal month, between the cranial end of the genital cord and the urinary bladder. It disappears in the male, but deepens in the female to form the vesicouterine excavation.

Glaserian f. Old term for petrotympanic *f.*

hippocampal f. That situated between the hippocampal gyrus and the fascia dentata.

inferior orbital f. That of the orbit which gives passage to the infraorbital blood vessels, and ascending branches from the sphenopalatine ganglion.

interarytenoid f. The narrow cleft between the embryonic arytenoid folds.

interhemispheric f. See longitudinal *f.* of the cerebrum.

lateral cerebral f. A deep fissure of the brain, beginning on the outer side of the anterior perforated space, and extending outward to the lateral surface of the hemisphere. It has two branches, a short vertical and a long horizontal, the latter separating the temporal from the frontal and parietal lobes. Also called *sylvian f.* See Plate 18.

lip f. Harelip.

longitudinal f. of the cerebrum. The deep fissure that divides the cerebrum into two hemispheres; also called interhemispheric *f.*

longitudinal f. of the liver. A fissure on the lower border of the liver through which passes the round ligament.

palpebral f. The space between the eyelids extending from the outer to the inner canthus.

parieto-occipital f. A fissure on the medial aspect of the cerebral hemisphere, separating the parietal and occipital lobes.

petrosquamous f. The narrow cleft formed by incomplete fusion of the petrous and squamous portions of the temporal bone.

petrotympanic f. The narrow slit posterior to the mandibular fossa of the temporal bone, giving passage to the chorda tympani nerve; formerly called *Glaserian f.*

portal f. See transverse *f.* of the liver.

precentral f. A fissure in front of the central sulcus and parallel to it.

presylvian f. The anterior branch of the sylvian fissure.

primary f. A transverse fissure separating the anterior and posterior cerebellar lobes. Also called *fissura prima, sulcus primarius*.

pterygoid f. The gap at the inferior portion of the pterygoid fossa between the medial and lateral laminas.

pterygomaxillary f. A narrow gap between the lateral pterygoid plate and posterior portion of the maxilla leading into the pterygopalatine fossa; also called *sphenomaxillary f.*

rhinal f. A shallow groove separating the terminal archipallial part of the hippocampal gyrus from the rest of the temporal lobe.

Rolando's f. Old term for central sulcus.

sphenoidal f. The superior orbital *f.*

sphenomaxillary f. The pterygomaxillary *f.*

superior orbital f. The elongated opening between the small and the great wings of the sphenoid; also called *sphenoidal f.*

sylvian, Sylvian f. Lateral cerebral fissure.

transverse cerebral f. The space between the diencephalon and the cerebral hemispheres.

transverse f. of the liver. A fissure crossing transversely the lower surface of the right lobe of the liver. It transmits the portal vein, hepatic artery and nerves, and hepatic duct.

umbilical f. The anterior portion of the longitudinal fissure of the liver.

urogenital f. The cleft between the urogenital folds forming the aperture of the urogenital sinus.

ventral median f. See anterior median *f.*

fis'tu·la [L., tube]. An abnormal tube or canal formed by incomplete closure of a wound, abscess, disease process, or (congenitally) a part, and communicating between two hollow viscera, two surfaces, or a hollow viscus and a surface. It usually transmits some fluid, either pus or the secretions

or contents of some organ, viscus, or body cavity. Fistulas opening from a viscus to the exterior of the body are named according to the viscus involved, as biliary, gastric, cecal, vesical. When the communication is between two organs, the names are combined, as esophagotracheal, gastrocolic, vesicovaginal, anorectal. —**fistular, fistulate, fistulous,** *adj.*

abdominal f. One opening through the abdominal wall and communicating with an abdominal viscus or space.

alveolar f. One communicating with a diseased alveolar process; more properly called *alveolar sinus.*

antral f. One communicating with an antrum or cavity in bone.

arteriovenous f. Arteriovenous aneurysm.

blind f. One having an opening at one end only; may be an internal or external opening; more properly, a sinus.

bone f. One leading to an osteomyelitic process or to the site of an ostitis; more properly called *bone sinus.*

branchial f. Old term for lateral fistula of the neck.

bronchial f. (a) An abnormal tract communicating between the pleural cavity and a bronchus and generally closing when the empyema is healed. (b) An abnormal tract leading from a bronchus to a cutaneous opening, the result of gangrene or abscess of the lung.

bronchobiliary f. One communicating between a bronchus and the biliary tract, usually as a result of empyema or subphrenic hepatic abscess.

bronchocolic f. One communicating between a bronchus and the colon, usually as a result of empyema or subphrenic abscess.

bronchoesophageal f. One communicating with a bronchus and the esophagus.

cervical f. An open communication between the pharynx and the surface of the neck arising by retention of a visceral groove and pouch with perforation of their closing plate.

coccygeal f. See *sacrococcygeal f.*

craniosinus f. Cerebrospinal rhinorrhea; a condition in which there is leakage of cerebrospinal fluid into the nose, usually the result of a fracture of the posterior wall of the frontal sinus or the cribriform plate of the ethmoid, with an opening through the meninges.

Eck f. An experimental procedure of anastomosing the portal vein to the inferior vena cava, so that the portal blood by-passes the liver.

esophageal f. An abnormal tract of congenital origin, communicating between the esophagus and some portion of the skin through an external opening, or between esophagus and some viscus or organ through an internal opening. A similar fistula may result from trauma or disease.

external f. A fistula opening from some body cavity to the skin.

extrasphincteric f. A rectal or anal fistula external to the sphincter.

fecal f. An opening from an intestine through the abdominal wall to the skin, with discharge of intestinal contents; usually applied to openings from the ileum and colon.

f. auris congenita. A congenital, hereditary narrow, usually blind pit opening at the crus of the helix.

gastric f. An abnormal tract from the stomach communicating through an external opening with the skin, or through an internal opening with some other viscus or organ.

gastrojejunal f. A fistula between the stomach and the jejunum; a condition following posterior gastroenterostomy which develops in about 10% of anastomotic ulcer patients. The symptoms include diarrhea, vomiting, and loss of weight. Diagnosis is confirmed by roentgenologic examination.

gastrojejunocolic f. One between stomach, jejunum, and transverse colon. It is an occasional complication arising in patients who have developed a marginal ulcer at the site of a gastrojejunostomy; later the ulcer perforates into the lumen of the colon.

horseshoe f. A semicircular fistulous tract in the perineum near the anus.

internal f. A fistula in which the openings are within the body without communication through the skin.

labial f. A minute fistulous tract or congenital pit near the vermilion border of the lower lip; more properly called *labial sinus.*

lacrimal f. A fistula communicating with a lacrimal duct.

lateral f. of the neck. A congenital fistula opening lateral to the midline, anywhere from the mandible to the sternum, and communicating with the pharynx, a cyst, a cell rest, or a duct; due to faulty closure of pharyngeal pouches or the thymopharyngeal duct, or to other developmental defects.

lymphatic f. A tract communicating through an external opening in the skin with a lymphatic vessel or duct, as the thoracic or right lymphatic, with discharge of chylous fluid and lymph.

Mann-Bollman f. A fistula of the small intestine produced in animal experimentation by suturing the proximal end of a loop of small intestine to the edges of the opening in the abdominal wall and anastomosing the distal end with the functioning intestine, thus preventing movement of material out through the skin by peristaltic movement will be in the reverse direction.

median f. of the neck. A rare congenital fistula with its opening in the midline, due to imperfect closure of the cervical sinus.

pancreatic f. 1. An external opening from the pancreas to the skin of the abdominal wall following the drainage of a pancreatic cyst or other gastric or duodenal operation. 2. An internal opening from the pancreas to the jejunum, duodenum, stomach, or gallbladder to overcome the formation of an external fistula.

pilonidal f. See *pilonidal cyst.*

pleuropulmonary f. One extending from the lung to an external opening on the skin. See *bronchial f.*

rectovaginal f. An opening between the vagina and the rectum.

rectovesical f. A congenital or acquired opening between the rectum and the urinary bladder.

sacrococcygeal f. One communicating with a dermoid cyst in the coccygeal region.

salivary f. One communicating with a salivary gland or its duct, usually the parotid, with discharge of saliva through an external opening in the skin.

scrotal f. One extending from some portion of the testis or epididymis to an external opening in the skin of the scrotum.

sigmoidovesical f. A fistula connecting the sigmoid flexure and urinary bladder.

Thiry's f. An experimental fistula produced in the dog to obtain secretions from the intestine.

thyroglossal f. A developmental abnormality, due to incomplete obliteration of the thyroglossal duct, resulting in a midline cervical fistula.

urinary f. An abnormal tract from any portion of the urinary system; discharges urine through an

opening on the skin or into an organ, viscus, or cavity.

vesical f. An abnormal opening from the urinary bladder communicating externally with the skin or internally with another pelvic organ.

vesicoabdominal f. A fistula extending from the urinary bladder through the abdominal wall and opening externally onto the skin of the abdomen.

vesicouterovaginal f. An abnormal opening connecting the vagina, urinary bladder and uterine cavity.

vesicovaginal f. An abnormal tract between the urinary bladder and the vagina.

fis"tu-lec'to-my [*fistula*; G. *ektomē*, excision]. The surgical excision of a fistula.

fis"tu-li-za'tion [*fistula*]. The development or formation of a fistula.

fis"tu-lo-en"ter-os-to-my [*fistula*; G. *enteron*, intestine; *stoma*, mouth]. In surgery, the establishment of anastomosis between a biliary fistula and the duodenum.

fis"tu-lot'o-my [*fistula*; G. *tomē*, cutting]. Incision of a fistula.

fit [AS.]. 1. Any sudden paroxysm of a disease, especially an epileptic convulsion. 2. *In biometry*, the agreement of probable data with actual data; in graphic representation, the way in which a curve of specified type approaches a given set of points in a plane.

running f. See *cursive epilepsy*.

uncinate f. See *uncinate fit*.

fit. In *biometry*, to adjust obtained data in such a way that it may be expressed by an equation or that the difference between it and the probable data is reduced. See *curve fitting*.

Fitz, Reginald Heber [American physician, 1843–1913]. Demonstrated the pathology and symptoms of inflammation of the vermiform appendix (1886); said to have introduced the term appendicitis. Made valuable contributions to the knowledge of acute pancreatitis (1889).

fix-a'tion [L. *fixus*, from *figere*, to fix]. 1. The act of fixing or making firm. 2. The operation of rendering fixed a displaced or floating organ by means of sutures. 3. In microscopy, fixing. 4. In psychiatry, the arrest of development of an emotion or desire at an immature level.

external skeletal f. *In dentistry and surgery*, a method of immobilizing bony fragments of fractures by the use of metal pin or screw devices applied externally; adapted especially to edentulous mouths.

field of f. See under *field*.

f. of complement. The entering of complement into combination with an antigen-antibody aggregate so that it is not available for subsequent reaction in the indicator systems of hemolysis or bacteriolysis. The basis of the Wassermann test and other serologic tests.

intramedullary f. A method of holding a fractured bone in proper alignment by means of a metal pin or nail in the marrow cavity. See also *intramedullary nail*.

nitrogen f. See *nitrogen fixation*.

fix'a-tive [*fixus*]. 1. Any substance used to fasten microscopic sections to a slide. 2. Any substance, like shellac, used to render a drawing or painting more permanent. 3. Any substance used to preserve tissues for microscopic study. See *fixing fluid*.

formol-corrosive f. Formol-sublimate f.

formol-sublimate f. An apparently stable mixture of 9 parts aqueous mercuric chloride (5-6%) with 1 part commercial formalin. It acts very rapidly. Also called *formol-corrosive f*.

Mayer's albumen f. Egg albumen dissolved in glycerine, used to make sections of tissues adhere to glass slides.

fixed. In *clinical medicine*, pertaining to a persistent, nongrowing lesion, or one recurring frequently at the same site: used particularly in *dermatology* as fixed drug eruption.

fixed med'i-cal treat'ment fa-cil'i-ty. In *U. S. Army medicine*, a medical treatment facility designed to operate in the same location over a considerable period of time. Included are the following unnumbered or table of distribution medical treatment facilities: hospitals, infirmaries, and dispensaries; and the following numbered or table of organization and equipment medical treatment facilities: general hospitals, station hospitals, field hospitals, and dispensaries. See *nonfixed medical treatment facility*.

fix'ing [*fixus*]. The preparation of tissue for microscopical study by means of some agent that hardens it and preserves the form and arrangement of the cells.

fix'ing flu'id. A solution, or mixture of solutions, used to prepare tissues for microscopical study. Formalin, Zenker's fluid, and Regaud's fluid are the most widely used. Also see *fixation*.

Bouin's f. f. Saturated aqueous picric acid, 75 cc.; formalin, 25 cc.; acetic acid, 5 cc. The most generally useful of all the picric acid fixatives.

Carnoy's f. f. Absolute alcohol, 6 parts; chloroform, 3 parts; glacial acetic acid, 1 part. A quick fixative, used for many purposes.

Champy's f. f. 3% potassium bichromate, 7 parts; 1% chromic acid, 7 parts; 2% osmic acid, 4 parts. An excellent fixative for cytologic details.

Flemming's f. f. Weak: 0.25 Gm. chromic acid, 0.1 Gm. osmic acid, 0.1 cc. glacial acetic acid, in distilled water 100 cc. Strong: 1% chromic acid, 15 cc.; 2% osmic acid, 4 cc.; glacial acetic acid, 1.0 cc. Now used more in biology than in medicine, largely for the study of chromosomes.

formalin. Trade-mark for a 37% aqueous solution of formaldehyde. The solution is the most generally useful of all fixing fluids.

formalin-ammonium bromide f. f. Formalin, 15 cc.; distilled water 85 cc.; ammonium bromide, 2 Gm. A central nervous system fixative for Cajal's gold sublimate procedure.

Gendre's f. f. Saturated alcoholic picric acid, 8 vols.; formalin, 1.5 vols.; glacial acetic acid, 0.5 vol. Used for the fixation of glycogen in the liver.

Helly's f. f. See under *Zenker's f. f.*

Müller's f. f. Potassium bichromate, 2.0–2.5 Gm.; sodium sulfate 1.0 Gm.; distilled water 1.0 Gm. Used for hardening nervous tissue after preliminary fixation. Often used in conjunction with formalin to make other fixing fluids, such as Orth's and Regaud's. The sodium sulfate is often omitted.

Ohlmacher's f. f. Absolute alcohol, 32 cc.; chloroform, 6 cc.; glacial acetic acid, 2 cc. Just before use add $HgCl_2$. A fixative for animal tissue giving rapid fixation and good penetration.

Orth's f. f. To 9 parts of 2.0–2.5% aqueous potassium bichromate, add one part of 10.0% formalin on using.

osmic acid. The tetroxide of osmium; generally used in the 2% aqueous solution.

Regaud's f. f. 3% aqueous potassium bichromate, 20 cc.; formalin, 5 cc. A fixing fluid used for many purposes.

Schaudinn's f. f. (A) Cold-saturated aqueous $HgCl_2$, 66 cc.; alcohol 95%, 33 cc. (B) Glacial acetic acid, 1 cc. Mix (A) and (B) immediately before use. A general animal tissue fixative.

SUSA f. f. Mercuric chloride, 4.5 Gm.; sodium

chloride, 0.5 Gm. distilled water 80 cc. formalin, 20 cc. trichloroacetic acid, 4 cc.

Zenker' f f. Potassium bichromate, 2.5 Gm mercuric chloride, 5 0 Gm.; distilled water 100 cc.; glacial acetic acid, 5 0 cc. Used in numerous technics. The acetic acid is often omitted, or more frequently replaced by 5 cc. of formalin, thus forming **Helly's fixing fluid**; or by 10 cc. of formalin, thus making **Bensley' formalin-Zenker**

F.K.Q.C.P Fellow of the King and Queen College of Physicians (of Ireland)

Fl Symbol for florentium.

fl. Fluid.

flac'cid (flack sid) [L. *flaccus*, flabby]. Soft, flabby; relaxed. —**flaccid'ity** n.

Flack, Martin William [*English physiologist*, 1882–1931]. With Arthur Keith, discovered the sinoatrial node, called *Flack' node, node of Keith and Flack*.

flag [ME. *flagge*]. Any one of several monocotyledonous plants having long, ensiform leaves.

sweet f *Acorus calamus*. See *calamus*

flagecidin. Trade-mark for the antibiotic substance *anisomycin*.

Flag"el la'ta (fladj uh lay'tuh) Synonym for *Mastigophora*.

flag'el late (fladj'uh-late) [L. *flagellare*, to whip]. A protozoon furnished with slender whiplike processes.

flag"el la'tion (fladj uh-lay shun) [L. *flagellatio*, from *flagellare*]. 1. Flogging or beating. 2. Beating or whipping as a means of producing sexual gratification. 3. Massage by strokes or blows.

fla gel'li form [L. *flagellum*, whip *forma*, shape]. Having the form of flagellum or whiplash.

flag"el lo sis (fladj uh-lo sis) [*flagellum*, G -*osis*, condition]. Infection with flagellate protozoa.

fla-gel'lum (L.). A whiplike process consisting of an axial filament enclosed in thin cytoplasmic sheath the organ of locomotion of sperm cells, and of certain bacteria and protozoa.

Flagg resuscitation See under *resuscitation*.

Flajani, Giuseppe [*Italian surgeon and anatomist*, 1741 1808]. Said to have been the first to describe exophthalmic goiter in which he noted cardiac disturbance (1802) called *Flajani disease, Basedow disease, Graves disease Parry disease*.

flank (OF *flanc*). The fleshy or muscular part of an animal or man between the ribs and the hip the thigh of an animal; the outer side of the thigh, hip, and buttock of human being.

flap [ME. *flappe*]. A partially detached portion of skin or other tissue, either accidentally formed, or created by the surgeon to be used as graft to fill defect or to improve contour Flaps which are composed of special tissue, such as mucous membrane, conjunctiva, dura, wall of intestinal tract, omentum, muscle, etc. are named after the tissue contained, as muscle flap, etc. They may also be named according to the special purpose for which they are used, as rhinoplastic flap, for repair of the nose See also *graft*.

amputation f A simple, broad-based flap which needs no advancement, and is shaped to provide proper contour of the part to be covered.

osteoplastic f. A flap of skin and underlying bone, commonly of scalp and skull, raised for the purpose of exploring the underlying structures.

pedicle f A type which btains its blood supply through narrow base, or pedicle used when length is required to fill remot defect, or on movable part which can be approximated to the donor site. The pedicl flap has many forms for specific purposes and therefore many named varieties. For instance, pedicle flap which has the ends reversed to gain more distance is called an **advanced jump, caterpillar** or **waltzing flap.** Long pedicle flaps are usually tubed or rolled on themselves, so the free edges are sutured together such **tubed flap** (rope graft) ttached at both ends is **bipedicled flap;** attached also in the center it is **bridge flap.** A flap raised and applied to movable part, such as one from the abdominal wall applied to the hand, may be **gauntlet, pocket,** or **tunnel flap.** A pedicle flap may include large artery in its base it is then called an **artery flap.** It may be lined with skin or mucous membrane, for repair of cheek or nose, or contain other tissue, as bone, cartilage, etc.; it is then called **compound flap.**

sliding or **rotation f.** A simple flap which is rotated on broad base to fill an adjacent defect.

f A means of lengthening linear contracted scar by transposing two triangular flaps of skin, the sutured incision having shape.

flaps (*flappe*). Swelling of the lips in horses.

flare (of uncertain origin). An bnormal vasomotor reaction manifested by prolonged, widespreading flush of the skin after pointed instrument has been drawn heavily across it.

aqueous f The Tyndall effect or light scattering of increased protein concentrations in the aqueous humor of the eye in inflammation of the anterior segment.

Flarer Francesco [*Italian ophthalmologist*, 1791 1850]. Eminent ophthalmic surgeon devised operations for trichiasis and entropion by ablation of the line of cilia.

flask (VL. *flasca*, wine bottle). A glass or metal vessel having narrow neck.

Carrel f See Alexis Carrel.

Erlenmeyer f A conical flask with flat bottom.

Fernwall f. A flask having heavy rubber cap with central outlet fitted with stainless steel secondary stopper; used for sterilizing fluids by steam.

Florence f. A round-bottomed flask used in distillation.

Li dbergh f. See Charles Augustus *Lindbergh*.

flat (ON *flatr*) Lying on one plane. —**flat'ness,** n.

flat. A percussion note that is low-pitched and without resonance.

Flatau, Edward [*Polish neurologist*, 1869–1932] Observed that the greater the length of the fibers of the spinal cord, the nearer they are to the periphery called *Flatau law, law of the eccentric situation of long tracts*. Schilder' disease, or progressive subcortical encephalopathy is sometimes called *Flatau-Schilder disease*.

flat'foot" (*flatr* AS. *fōt*). Pes planus; depression of the plantar arch of varying degree. It may be congenital, or acquired as result of loss of muscle tone often caused by ill-fitting shoes, incorrect walking habits, and/or standing long hours at certain occupations. The acquired form is usually associated with eversion.

spastl f. A planovalgus deformity of the foot associated with spasm of the peroneal muscles.

flat'sedge (*flatr* AS. *secg*). A genus of plants of the family Cyperaceae. The root of the jointed flat sedge, *Cyperus articulatus*, is anthelmintic, aromatic, and stomachic.

flat'u lence (F from L. *flatus*, blowing]. The presence of gas in the stomach and intestinal tract. —**flatulent,** *adj*

fla'tus (L.). Gas, especially gas or air in the gastrointestinal tract.

f vaginalis. Expulsion of gas from the vagina.

flat'worm" (ON *flatr* AS. *wyrm*). A y worm of the phylum Platyhelminthes.

fla vac"l-din (fla vas dln) See *flavicin*.

flav' cin. Flavicin.

flav'-nol. See *flavonol*.
flav'a-tin. See *flavicin*.
flavaxin. A trade-mark for synthetic riboflavin.
fla ve do [L. *flavus*, yellow]. Yellowness of the skin.
fla vi 'ic ac'id. $HO.C_{10}H_4(NO_2)_2SO_3H.3H_2O$; 2,4-dinitro-1-naphthol-7-sulfonic acid, occurring as light-yellow needles, freely soluble in water; employed as precipitant for arginine, also histidine.
fla vi cid. A dye. The 3,7-dimethyl-5-amino-2-dimethylamino-10-methylacridinium chloride, reddish brown powder sol ble in water Used as local germicide, in dilute solutions.
flav'i-ci (flav'i-sin, flay'vi-sin) An antibiotic substance from certain fungi. It is identical with aspergillin, flavacidin, flavatin, gigantic acid, and parasiticin.
flavicrine. Trade-mark for thiazonium derivative of diamino-alkyl-acridine used intravenously as urinary antiseptic
fla vin, flav'in. 1 One of group of yellow pigments, derived from isoalloxazine, isolated from various plant and animal sources. 2. Quercetin.
f. ad'e-nine di nu'cle-o-tide. $C_{27}H_{33}N_9O_{15}P_2$; compound resulting from the condensation of molecule each of riboflavin-5'-phosphate (flavin mononucleotide) and adenosine-5'-phosphate (adenine nucleotide) linkage being effected through the respective phosphoric acid residues. It is the prosthetic group of number of flavoproteins, including D-amino acid oxidase. Abbreviated FAD Syn., *isoalloxazine adenine dinucleotide, riboflavin adenine dinucleotide*.
f mon' nu'cle-o-tide. Riboflavin-5'-phosphate. Abbreviated, FMN
f. phos phate. Riboflavin-5-phosphate. Abbreviated, FP
fla vine (flay'veen, -vin, flav'een, -in) 1 Flavin. 2. Acriflavine.
fla'vo- [*flavus*]. 1. *I botany* combining form designating *yellow* tint. 2. *I chemistry*, combining form designating series of complex *yellow* salts of cobalt.
Fla"vo-bac te ri um [*flavus*; G *baktērion*, little staff]. A genus of the Achromobacteriaceae whose species become orange-yellow in cultures.
fla"vo ki'nase. An enzyme, obtained from yeast, that catalyzes the phosphorylation of riboflavin to riboflavin-5'-phosphate by adenosinetriphosphate.
fla vone. 1 $C_{15}H_{10}O_2$. 2-Phenylbenzopyrone. 2. One of the yellow vegetable dye derivatives of flavone, 1
fla vo-noid. 1 A substance obtained from flavone, 1, or one of its derivatives. 2. Any of the flavone derivatives, including citrin, hesperetin, hesperidin, rutin, quercetin, and quercitrin, which may reduce capillary fragility in certain cases —**fla vonoid,** *adj.*
flav'o-nol (flav'o-nole, -nol, -nawl, flay'vo-) 1 $C_{15}H_{10}O_3$ 3-Hydroxyflavone 2. One of group of vegetable dyes, including the anthocyanins, derived from flavonol, 1 Also spelled *flavanol*.
fla'vo-none. $C_{15}H_{12}O_2$, 2,3-Dihydroflavone, derivatives of which include hesperetin and citrin.
fla vo-pro'te-in [*flavus*; G. *prōteios*, of the first quality]. One of group of conjugated proteins of the chromoprotein type which constitute the yellow enzymes. The prosthetic group in the known enzymes of this type is either phosphoric acid ester of riboflavin or the latter combined with adenylic acid.
fla"vo-xan'thin. $C_{40}H_{56}O_3$; carotenoid pigment often found in plants in minute amounts; it has no vitamin-A activity
flaxedil. Trade-marked name for 1,2,3-*tris*(β-diethylaminoethoxy) benzene triethiodide, powerful curariform substance.
flax'seed" [AS. *fleax*; *saed*]. Linseed.
flea [AS. *flea*]. 1 Any blood-sucking, laterally compressed, wingless insect of the order Siphonaptera. Fleas are of medical importance as hosts and transmitters of disease and their bites produce form of dermatitis. 2. A stirring pparatus consisting of an iron-filled glass bead which is oper ted upon by discontinuous electromagnetic field; useful in microtechniques.
cat f See *Ctenocephalides felis*.
dog f See *Ctenocephalides canis*.
human f. See *Pulex irritans*.
rat f. See *Xenopsylla cheopis*.
flea'bane See *Erigeron*.
Flechsig, Paul Emil (1847 1929) German neurologist, known for his studies of the myelogenesis of spinal cord and brain. H also mapped the motor and sensory areas of the cerebral cortex (1876) He described the dorsal spinocerebellar tract, called *Flechsig tract*, and the septomarginal root zone, called *Flechsig oval bundle*.
Fleischer Richard [*German physician*, 1848–1909]. Described sign of hepatolenticular degeneration. See Kayser Fleischer ring.
Fleischmann, Friedrich Ludwig [*German physician*, fl. 1841]. Described sublingual bursa, sometimes known as *Fleischmann bursa*.
Fleitmann's test. See under *test*.
Fleming, Sir Alexander (1881 1955) Scottish bacteriologist who discovered that cultures of *Penicillium* inhibited the growth of certain bacteria (1929); hence the development of penicillin He is known also for his work in immunology and chemotherapy Nobel laureate with E. B. Chain and H. Florey (1945)
Flemming, Walther [*German anatomist*, 1843–1905]. Made early researches on cell division and karyokinesis (1882) and was first to describe the centrosome (1876) Described germinal centers, called *Flemming' germ centers*. See also Flemming' *fixing fluid*.
flesh [AS. *flǣsc*]. The soft tissues of the body especially the muscles. —**flesh y** *adj*
goose f. A rough condition of the skin, due t erection of the hairs; caused by cold or fear. Syn., *cutis anserina*.
proud f. See exuberant *granulation*.
Fletcher Horace [*American dietitian*, 1849–1919]. Remembered for his investigation in dietetics. Advocated the thorough mastication of food taken in definite quantities and at regular intervals, combined with sipping of fluids. The term *Fletcherism* was once applied to the method he advised.
Fletcher Robert [*American surgeon and bibliographer* 1823–1912]. W th Billings, founded the monthly *Index Medicus* (1879) Assisted Billings and later continued his work in directing the compilation of the *Index-Catalogue of the Library of the Surgeon General*.
flex [L. *flexus*, from *flectere*, to bend]. Bend.
flex"i bil'i-tas ce re-a (fleck si-bil -tass seer' ee-uh) The tendency of cataleptic or catatonic patient to maintain with seemingly indifferent passivity any posture in which he is placed.
flex'i ble [L. *flexibilis*, pliant]. Capable of being bent, without breaking; pliable. —**flexibil'ity** n.
flex'ile (fleck'sill) [L. *flexilis*, pliant]. Easily bent.
flex im e-ter [L. *flexum*, from *flectere* to bend; G *metron*, measure]. An instrument for measuring the amount of flexion possible in joint.
flex'ion (fleck'shun) [L. *flexio* bending]. The act of bending; the condition of being bent.
Flexner Abraham (1866–) American edu-

cator widely known for his study *Medical Education in the United States and Canada* (1910) made for the Carnegie Foundation for the Advancement of Teaching, and now commonly called the *Flexner report*. He reported on the 155 medical institutions then existing, and his study became a base document in the reform and standardization of medical education and statutory requirements for physicians in these two countries.

Flexner, Simon [*American pathologist and bacteriologist*, 1863–1946]. Made many contributions to our knowledge of the transmission of infectious diseases. With William Henry Welch, made experimental studies of the action of diphtheria toxin (1891–93). Isolated *Shigella paradysenteriae*, called *Flexner's bacillus* (1900). This bacillus, at first incorrectly identified with *Shigella dysenteriae*, was found in tropical dysentery. It produces acid, indole, and endotoxin. With N. guchi, Flexner studied the effects of snake venom. Developed *Flexner's serum* for cerebrospinal meningitis (1907). With Paul A. Lewis, transmitted poliomyelitis to monkeys by means of cultures of a filtrable virus (1909). An experimentally transmissible carcinoma of the rat is called *Flexner-Jobling tumor*.

Flexner report. See Abraham *Flexner*.

flex'or (fleck'sur, -sor) [L. *flexum*, from *flectere*, to bend]. A muscle that bends or flexes a limb or part, as opposed to an *extensor*. See Table of Muscles in the Appendix.

f. accessorius. Old name for quadratus plantae muscle.

f. carpi radialis. The radial flexor of the wrist.

f. carpi radialis brevis. An anomalous muscle arising from the lateral or volar surface of the distal half of the radius and inserted into the carpus, metacarpus, or proximal phalanx of the index finger.

f. carpi ulnaris. The ulnar flexor of the wrist.

f. carpi ulnaris brevis. An anomalous muscle arising from the distal fourth of the volar surface of the ulna and inserted into the ulnar carpals or proximal end of fifth metacarpal.

f. digiti minimi. BR name for the flexor digiti quinti muscle.

f. digiti quinti brevis manus. A variable short flexor of the little finger.

f. digiti quinti pedis. The short flexor of the little toe.

f. digitorum accessorius. BR name for the quadratus plantae muscle.

f. digitorum brevis. The short flexor of the toes.

f. digitorum longus. The long flexor of the toes.

f. digitorum profundus. The deeper long flexor of the fingers.

f. digitorum sublimis. The more superficial long flexor of the fingers.

f. hallucis brevis. The short flexor of the great toe.

f. hallucis longus. The long flexor of the great toe.

f. ossis metacarpi pollicis. Old name for opponens pollicis muscle.

f. pollicis brevis. The short flexor of the thumb.

f. pollicis longus. The long flexor of the thumb.

flex'u·ous (fleck'shoo us, fleck'syoo-us) [L. *flexuosus*, full of turns]. Curving in an undulant manner.

flex·u'ra (fleck-shoor'uh, fleck shoor-uh). See *flexure*.

flex'ure (fleck'shur) [L. *flexura*, a bending]. A bend or fold. —**flex'ural**, *adj.*

caudal f. A flexure of the caudal end of the embryo.

cephalic f. See mesencephalic *f.*

cervical f. A flexure of the embryonic brain concave ventrally occurring at the junction of hindbrain and spinal cord. Also called *nuchal f.*, *spinal f.*

cranial f. A flexure of the embryonic brain.

duodenojejunal f. The abrupt bend at the junction of the duodenum and jejunum.

hepatic f. An abrupt bend in the ascending colon to the right of the gallbladder.

mesencephalic f. A flexure of the embryonic brain concave ventrally occurring in the region of the midbrain. Syn., *cephalic f.*

perineal f. The second curve of the rectum; its concavity is directed posteriorly.

pontine f. A flexure of the embryonic brain concave dorsally occurring in the region of the myelencephalon.

sacral f. The curve of the rectum in front of the sacrum; its concavity is directed anteriorly.

sigmoid f. An S-shaped bend in the colon between the descending portion and the rectum.

splenic f. An abrupt turn of the colon beneath the lower end of the spleen, connecting the descending with the transverse colon.

flick'er [AS. *flicorian*]. A sensation of fluctuating vision caused by light of such slow intermittence that the visual impressions produced do not fuse.

flight of ideas. A condition in acute mania in which disconnected ideas and fancies flow rapidly through the mind. Also called *idea chase*.

Flint, Austin [*American physician*, 1812–86]. Eminent teacher who contributed to the knowledge of diseases of the heart and respiratory system. Said to have introduced the terms cavernous respiration and bronchovesicular respiration. See also Flint's murmur.

Flint, Austin (Junior) [*American physician*, 1836–1915]. Discovered coprosterol, formerly called stercorin, in human feces (1862). Made an important study of human output of nitrogen after exercise (1871) and described arterial and venous arches, called *Flint's arcade*, at the bases of the renal pyramids.

float'ing [AS. *flota*, ship]. Abnormal movability or situation of a structure, due to natural lack, abnormal stretching, or destruction of its attachments.

float'ing kid'ney. See under *kidney*.

float'ing rib. See under *rib*.

floc·cil·la'tion (flock·si-lay'shun). See *carphology*.

floc"cu·la'tion (flock yoo-lay'shun) [L. *floccus*, flock of wool]. The coagulation or coalescence of finely divided or colloidal particles into larger particles which precipitate.

floc'cu·lent [*floccus*]. 1. Flaky, downy, or woolly; said of a liquid containing irregularly shaped particles. 2. Causing flocculation. —**floc'culent**, *n.*

floc'cu·lus [dim. of *floccus*]. A prominent lobe of the cerebellum situated behind and below the middle cerebellar peduncle on each side of the median fissure. See Plates 17, 18. —**floccular**, *adj.*

accessory f. The paraflocculus. O.T.

floor [AS. *flōr*]. The basal limit of any hollow organ or open space.

f. of the pelvis. The united mass of tissue forming the inferior boundary of the pelvis, consisting mainly of the levator ani muscles.

flo'ra [L. *Flora*, goddess of flowers]. The entire plant life of any geographic area or geologic period.

floraq'uin. A proprietary preparation of the substances known by the trade-marked name diodoquin (5,7-diiodo-8-hydroxyquinoline), lactose, dextrose, and boric acid. It is used in the treatment of vaginal infections.

Florence's reagent. See under *reagent*.

Florence's test. See under *test*.

Florentini, Luis. See *Alderotti*.

flo·ren'ti·um. Fl. The name given by Rolla and Fernandes to element 61, which has been called *illinium* by Hopkins, and for synthetic forms of

which the names *cyclenium* and *premethium* have been proposed. It is now called *promethium*.

flo'res (flor'eez) [L. *flos*, flower]. 1. The flowers or blossoms of a plant. 2. A flocculent or pulverulent form of certain substances after sublimation.

Florey, Howard W (1898–) Australian pathologist in England, who, in association with E. B. Chain, discovered the chemotherapeutic value of penicillin. Nobel laureate in medicine and physiology with A. Fleming and E. B. Chain (1945)

flor'id [L. *floridus*, abounding with flowers]. Bright red in color.

floropryl. A trade-mark for *diisopropyl fluorophosphate* or *isoflurophate*.

Flosdorf, Earl William (1904–) American bacteriologist who developed a skin test for whooping cough, and with Stuart Mudd devised a method of dehydrating serums, plasma, bacterial suspensions, and other products by vacuum desiccation in the frozen state. They called the method *lyophilization*.

flo-ta'tion [F. *flotter*, to float]. In *colloid chemistry*, the process of separating the valuable constituents (minerals) of ores from the valueless gangue by agitation with water, a small proportion of an oil and a foaming agent, the mineral rising with the foam and the gangue sinking.

Flourens, Marie Jean Pierre [*French physiologist and anatomist*, 1794–1867]. In experiments with pigeons, found that removing the cerebrum caused loss of cerebration, although the reflexes were not affected, whereas removal of the cerebellum caused a loss of equilibrium and coordination (1822). Later showed that injury to the semicircular canals affects equilibrium and coordination (1830). Demonstrated that integrity of the cerebral cortex is essential for vision (1824).

Flournoy, Thomas [*American physician*, 1877–]. With Charles Norris and A. M. Pappenheimer, reported discovery of a spirochete in an American case of relapsing fever (1906).

flow [AS. *flowan*]. 1. The free discharge of a liquid, as the blood. 2. The menses.

cerebral blood f. The rate, in cubic centimeters per minute, at which blood flows through the brain, measured by the rate of diffusion of inert gases (N_2O, krypton) into the brain. Normal value of cerebral blood flow is 750 cc per minute.

intermenstrual f. See *metrorrhagia*, *polymenorrhea*.

streamline f. A flow in which particles in the axial stream move more rapidly than those in the periphery, as the blood cells in the capillaries.

flow, v. To menstruate profusely.

Flower, William Henry [*English anatomist*, 1831–99]. Described the nasomalar and dental indices. See *index of Flower*.

flow'ers [L. *flos*, flower]. 1. The blossoms of a plant. 2. A sublimated drug, usually sulfur. 3. The menses. *Obs.*

flow'er-spray. In *neurohistology*, an afferent nerve ending with extensive arborizations, found in the muscle spindles.

flow me'"ter [AS. *flowan*; G. *metron*, a measure]. A physical device for measuring the rate of flow of gas or liquid, as blood in the blood vessels; *stromuhr*. Flowmeters may record the mean flow as with bubble flowmeters, or with the thermostromuhr which measures the blood flow by the difference in temperatures at two points in the blood stream. Flowmeters capable of registering the instantaneous rate of flow are the differential manometer, air expansion flowmeter, and electromagnetic flowmeter.

electromagnetic f. One in which changes in the flow of blood are measured through impedance to electromagnetic lines of force introduced across the stream. It has the great advantage that an intact blood vessel can be used.

Floyer, John [*English physician*, 1649–1734]. First to count the pulse with a watch, for which purpose he invented a watch dividing the minute. Wrote the first book on geriatrics (1724).

F.L.S. Fellow of the Linnean Society.

fluagel. Trade-mark for *aluminum hydroxide gel*.

Flückiger's mapalline. See British *sanguifine*.

fluc"tu-a'tion [L. *fluctuare*, to move in the manner of waves]. 1. The wavelike motion produced when a body containing fluid is tapped between the fingers or hands. 2. A slight deviation from the average of the sort which gives rise to the continuous variability of the normal frequency curve.

Fluhmann test. See under *test*.

flu'id [L. *fluidus*, from *fluere*, to flow]. 1. A substance whose molecules move freely upon one another. 2. Any liquid secretion of the body. Abbreviated, fl.

allantoic f. The fluid contents of the allantois.

amniotic f. The transparent, almost colorless, albuminous fluid contained within the amniotic sac surrounding the fetus.

cerebrospinal f. The fluid within the cerebral ventricles and between the arachnoid membrane and pia mater of the brain and spinal cord.

follicular f. The fluid filling the follicle or space about the developing ovum in the Graafian follicle.

intermicellar f. In *colloid chemistry*, a liquid medium in which the colloidal particles (micelles) are dispersed.

labyrinthine f. The perilymph.

otic f. See *endolymph*.

pericardial f. The fluid in the pericardial cavity.

periotic f. See *perilymph*.

pleural f. A film of fluid in the pleural cavity.

Rees and Ecker diluting f. A solution of 3 Gm sodium citrate and 8 Gm sucrose dissolved in about 75 cc water, to which is added 0.04 Gm ground brilliant cresyl blue; the mixture is brought up to 100 cc with water; used in counting platelets.

Rossman f. See under Isadore *Rossman*.

seminal f. See *semen*.

serous f. Normal lymphatic fluid.

subarachnoid f. See cerebrospinal *f*.

synovial f. The clear fluid, resembling white of egg, found in various joints, bursae, and sheaths of tendons. An example of tissue fluid in general, being produced by dialysis from the plasma.

flu'id. Liquid or gaseous.

flu'id-ex'tract [*fluidus*; L. *extractum*, from *extrahere*, to draw out]. A hydroalcoholic solution of vegetable principles so made that each cc. contains the therapeutic constituents of 1 Gm. of the standardized drug which it represents. Maceration and percolation with suitable solvent are employed as the means of obtaining solution of the desired constituents. See *extract*, *dissolution*.

flu'id-glyc'er-ate (-glis'er-ate). A preparation containing about 50% of glycerin, but no alcohol, and of such strength that 1 cc. of the fluidglycerate represents 1 Gm. of the crude drug.

fluid level. In *radiology*, a roentgenographic line demarcating radiopaque liquid from radiolucent gas, as in the stomach.

fluid line. In *radiology*, a roentgenographic line demarcating the extent of a fluid effusion or inclusion; gas need not be present to demonstrate this line.

flu'id-ounce' [*fluidus*; L. *uncia*, twelfth part of pound]. A liquid measure; 8 fluidrachms. Equivalent to approximately 29.57 cc. Symbol, f℥.

flu"i-drachm' flu"i-dram' (floo"i-dram'). f

dram') [*fluidus*; G. *drachmē*, drachm]. A liquid measure equal to one-eighth fluidounce, roughly equivalent to one teaspoonful. 60 minims = 1 fluidrachm. Symbol, f3

fluke [AS. *flōc*]. A trematode worm of the order Digenea.

blood f. *Schistosoma haematobium*, *S. mansoni*, *S. japonicum*.

intestinal f. *Fasciolopsis buski*, *Heterophyes heterophyes*, *Metagonimus yokogawai*.

liver f *Clonorchis sinensis*, *Fasciola hepatica*, *Opisthorchis felineus*.

lung f *Paragonimus westermani*.

flu mer in. The disodium salt of hydroxymercurifluorescein; it is powder freely soluble in water formerly used in treating syphilis.

flu mi na pi lor'um. Regional hair tracts. Certain areas of the skin have the hairs so arranged that they point in common direction.

flu'o- [L. *fluor* from *fluere* to flow]. *I chemistry* combining form indicating *the presence of fluorine*.

flu'or-chrome. A dye which fluoresces when irradiated with ultraviolet radiation.

flu' -rene. $C_6H_4\langle CH_2 \rangle C_6H_4$. A solid hydrocarbon from coal tar employed in the synthesis of several dyes and medicinals.

flu re mine (flōō -reen h meen, min, flōō reen uh-meen') An amine of fluorine var ious derivatives produce experimental tumors. Syn *aminofluorene*.

flu"o-res'ce-in. $C_{20}H_{12}O_5 + H_2O$ resorcinolphthalein, condensation product of resorcinol and phthalic anhydride. It dissolves in alcohol to form yellow solution with green fluorescence.

f sodium (*fluoresceinum sodicum*) $C_{20}H_{10}O_5Na_2$, freely sol ble in water. A 2% solution is employed in diagnosing corneal lesions and in the detection of minute foreign bodies in that tissue. It is suggested as means of determining pparent death by injection of one gram d circulation remains, the mucosa will be stained yellow within few minutes. Syn., *soluble fluorescein*, *uranin*.

soluble f See *f* sodium.

flu" res'cence [*fluere*]. A property possessed by certain substances of radiating, when illuminated, light of different, usually greater wavelength. —**fluorescent**, *adj*

secondary f. The type of fluorescence found in nonfluorescent tissues which have been treated with fluorochromes.

flu"o-res cin. $C_{20}H_{14}O_5$ reduction product of fluorescein which readily oxidizes to the latter occurring as bright yellow powder insoluble in water but soluble in alkaline solutions used as reagent.

flu'or i-date. T add fluoride to drinking water in such concentration that the incidence rate of caries will be diminished. —**fluorida tion**, *n*.

flu'o-ride. A salt of hydrofluoric acid.

flu' ri-dize. T use fluoride, especially as therapeutic measure for the prevention of dental caries.

flu"o-ri na'tion. The addition of fluorine in one of several compounds to water especially t the water supply of community as an aid in control of dental caries

flu'o-rine (flōō o-reen, -rin) F = 19 00. A gaseous lement belonging to the halogen group Certain of its salts, the fluorides, have been used in goiter and in rheumatism. Fluorides may prevent dental caries but in excessive amounts in drinking water they may cause mottling of tooth enamel

flu o rite. Native calcium fluoride, CaF_2 used as source of fluorine compounds, as flux, and in manufacture of certain lenses.

flu o-ro-a-ce tic ac'id. CH_2FCOOH; crystalline substance, prepared synthetically but occurring in *Dichapetalum* (*Chailletia*) *cymosum*, poisonous South American plant. It is highly poisonous the sodium salt is used as water-soluble rodenticide.

flu"o- o-car'bon. Any compound composed only of carbon and fluorine, representing corresponding hydrocarbon in which the hydrogen atoms have been replaced by fluorine. Fluorocarbons are characterized by extreme resistance to chemical action and stability at high temperatures.

flu"or -car"di og'ra phy See *electrokymography*.

flu-or'o-chrome, fluor'o-chrome. One of group of fluorescent substances which are bsorbed by certain tissues not fluorescent in themselves.

flu or'o-gen. Any of the particular groups or ar rangements of atoms the presence of which in compound is essential for development of fluorescence.

flu or-og'ra phy [*fluere*; G. *graphein*, to write]. A combination of fluoroscopy and photography whereby photograph of small size is made of the fluoroscopic image. Used to reduce the cost of making large numbers of chest examinations for tuberculosis surveys. Also called *miniature fluorography*. —**fluorograph'ic**, *adj*

flu"o-ro-pho tom try [*fluere*; G *phōs*, light; *metron*, measure]. The quantitative assay of fluorescent substances in solution. The exciting radiation of about 3650 Å wavelength is concentrated upon the substance under investigation and the intensity of fluorescence is compared, either visually or photoelectrically against the fluorescence of standard solution. —**fluorophotomet'ric**, *adj*

flu' ro-scope [*fluere*; G *skopein*, to examine]. The instrument used for examining the form and motion of the internal structures of the body by means of roentgen rays. It consists of fluorescent screen composed of crystals of cadmium tungstate

biplane f One having two fluorescent screens and two x-ray tubes at right angles to each other for examination of foreign bodies, fractures, and other lesions in two planes.

flu"or-os co-py Examination of internal body structures by means of fluoroscope.

function f Estimation of pulmonary ventilatory ability with the fluoroscope by bserving the motion of ribs and diaphragm and the emptying rate of lungs.

flu"o-ro sis [*fluere*; G -*ōsis*, increase]. 1. Poisoning by bsorption of toxi amounts of fluorine. 2. A condition of generalized increased density of the skeleton, including dental fluorosis, resulting from prolonged ingestion of fluorides. I endemic areas, this may lead to rigidity of th spinal column, increased bone fragility and other symptoms referable to bone and joint changes.

chronic dental f Hypoplasia and discoloration of the teeth, resulting from the continued use, during the formative period of the tooth, of water containing toxic amounts of fluorine commonly called *mottled enamel*

flush [ME. *flusshen*]. 1. Blush, become suffused, as the cheeks; due to vasodilation of small arteries and arterioles especially when these vessels are hypotonic. Occurs in emotional states, hyperthyroidism, local inflammation, pyrexia, and in states of chronic malnutrition of the skin. 2. Cleanse wound or cavity by rapid flow of water —**flush**, *n*.

flut'ter [AS. *floterian*, to float about]. Quick, ir regular motion agitation.

atrial f A cardiac irregularity closely resembling trial fibrillation, consisting of regular but abnormal atrial contractions said to be caused by

wave of excitation and contraction constantly cir culating, about 300 times per minute around fixed ring of muscle in the atria. The ventricles respond at fraction of the atrial rate (usually about 150 per minute). Electrocardiograms indicate two types of atrial flutter: impure, in which the events are not accurately repeated from cycle to cycle; pure, in which the vents are constant from cycle to cycle. Clinically often called *auricular f.*

auricular f. Clinical term used for atrial *f.*

diaphragmatic f. See under *tic.*

flu"vo-my'cin. An antibiotic substance produced by strain of *Bacillus subtilis*, active, in vitro, against many Gram-positive and Gram-negative bacteria, also fungi, but does not ppear to be active in vivo.

flux [L. *fluxus*, from *fluere*, to flow]. 1. An excessive flow of any of the excretions of the body especially the feces. 2. *In chemistry*, material added to minerals or metals to promote fusion.

luminous f. Radiant flux applied to visible light symbol, *F*

radiant f. The rate of transfer of radiant energy; symbol, *P*

fly [AS. *flyge*]. Any insect of the order Diptera. Many insects not belonging to the Diptera are popularly called flies, such as dragonflies, caddis flies, May flies, butterflies, sawflies, gallflies, etc. Some insects belonging to the Diptera are not popularly known as flies, notably the mosquitoes.

black f. See *Simulium.*

blowfly See *Calliphoridae.*

bluebottle f. See *Calliphoridae.*

botfly See *Oestridae, Gastrophilidae, Cuterebridae.*

cheese f. See *Piophila.*

Columbacz f. See *Simulium.*

Congo-floor maggot f. See *Auchmeromyia luteola.*

crane f. A fly of the genus *Tipulidae.*

deer f. See *Chrysops.*

drone f. See *Eristalis.*

flesh f. See *Sarcophagidae.*

frit f. See *Oscinidae.*

gadfly See *Tabanidae.*

green-bottle f. See *Calliphoridae*

heel f. See *Hypoderma.*

horn f. See *Haematobia irritans.*

horsefly See *Tabanidae.*

housefly See *Muscidae.*

latrine f. See *Fannia.*

louse f. See *Hippoboscidae.*

mango f. See *Chrysops*

moth f. See *Psychodidae.*

sand f. See *Phlebotomus.*

screwworm f. See *Calliphoridae, Sarcophagidae.*

soldier f. See *Hermetia.*

Spanish f. The beetle, *Lytta vesicatoria.*

stable f. See *Stomoxys.*

tsetse f. See *Glossina.*

tumbu f. See *Cordylobia anthropophaga.*

warble f. See *Oestridae*

FMN Abbreviation for flavin mononucleotide (riboflavin-5'-phosphate)

Foà, Pio [*Italian pathologist*, 1848–1923]. Made important studies of the pneumococcus and of erysipelas serum. Described lymphocyte or monocyte, found in the guinea pig, containing one or more Kurlov bodies; called *Foà-Kurlov cell, Kurlov cell.*

foam [AS. *fām*]. *In physicochemistry* heterogeneous mixture of gaseous phase, or finely divided gas bubbles suspended in liquid.

fibrin f. See *fibrin foam*

fo'cal length. The distance from the second principal point of lens to point on the axis where rays from an infinitely distant source converge to common point or focus.

Fochier Alphonse [*French gynecologist*, 1845–1903]. Described fixation abscess as one resulting from the injection of an irritant under the skin; formerly called *Fochier' abscess.*

f ocus (pl. *foci*) [L., hearth]. 1 The principal seat of disease. 2. The point (called **principal focus** or **real focus**) at which rays of light converge that pass through convex lens or are reflected from concave mirror —**focal,** *adj*

Assmann f. A small caseous lesion discovered roentgenologically and usually located in the subapical or infraclavicular region of the lung It may represent the first sign of early infiltration in reinfection tuberculosis and tends to have more severe prognosis than an pical lesion.

conjugate foci. Two interchangeable points at corresponding distances from lens; the focal point of the image and the point of the bject.

Elschnig's f A black point in the fundus sur rounded by yellowish halo, usually associated with sclerosis of the choroidal vessels.

epileptogenic f. The exact location in the brain from which an epileptic discharge originates. In some cases it may be identified by the electroencephalogram or electrocorticogram.

Ghon's f See Anton *Ghon.*

secondary f The site of secondary bacterial infection which in turn may become another center of dispersal.

Simon foci. Osseous nodules with marked tendency to calcification, which develop in children in the apical portions of the lungs due to hematogenous spread of *Mycobacterium tuberculosis* after primary infection is established.

virtual f. The point at which divergent rays would meet if prolonged in backward direction. Also called *negative f*

Fodera, Michele [*Italian physician*, 1793–1848]. Credited with the discovery of the law of absorption or osmosis (1822) later demonstrated by Dutrochet.

Foerster Otfrid [*German neurologist and surgeon*, 1873–1941]. With Hermann Küttner described an operation of resection of the posterior spinal nerve roots for relief of spastic paralysis and tabetic incoordination; called *Foerster's operation.* With Wilder Penfield, devised an operation for traumatic epilepsy in which the cerebral cortical scar is excised, called *Foerster-Penfield operation.* See also Foerster's cutaneous numeral *test.*

foe'tus (fee'tus) See *fetus.* —**foetal,** *adj.*

fog'ging [perhaps from Danish *fog* spray]. 1 In regression treatment of esophoria, the reduction of vision to about 20/80 by combining prisms (varying with the muscular imbalance), bases in, with convex sphere the patient reads with these glasses for half hour at night before retiri g. 2. A method of refracting the eye by using convex lens sufficiently strong to cause the eye to become artificially myopic and fog the vision. Astigmatism is then corrected by means of minus cylinders, after which the fog is removed by gradually reducing the convex lens. Generally used in adults or when cycloplegia might precipitate glaucoma.

fo'go sel va'gem. An endemic bullous disease found in certain lowland areas of Brazil, believed to be an attenuated tropical form of pemphigus foliaceus.

foil [L. *folium*, leaf]. A thin sheet of metal, especially gold or tin.

Foi Charles [*French neurologist*, 1882–1927]. Made detailed study of the vascular topography of the brain. Described syndrome of complete unilateral paralysis of all nerve elements, motor

and sensory as well as sympathetic but excluding the optic nerve, which enter the orbit. It is indicative of a lesion in the lateral wall of the cavernous sinus; called *Foix syndrome*. Described a second syndrome of cerebellar ataxia and hemichorea without ocular paralysis, due to a lesion in the red nucleus.

fold [AS. *fealdan*]. A plication or doubling of various parts of the body.

amniotic f. One of the folds of the blastoderm that unite over the embryo to form amnion and chorion in Sauropsida and many mammals. Also called *amniotic f.*

anterior malleolar f. A fold on the external surface of the tympanic membrane stretching from the malleolar prominence to the anterior portion of the tympanic sulcus of the temporal bone. It forms the lower anterior border of the pars flaccida.

aryepiglottic f. A fold of mucous membrane that extends from each arytenoid cartilage to the epiglottis.

bloodless f. of Treves. See ileocecal *f.*

body f. One of the various folds formed by the rapid growth of the embryonic area.

bulboventricular f. A transverse fold between the bulb of the heart and ventricle, which disappears when the proximal part of the bulb is incorporated into the right ventricle.

caudal genital f. See epigonal *f.*

caval f. See caval *mesentery*.

circular folds. The shelflike folds of the mucous membrane of the small intestine. Also called *valvulae conniventes, valves of Kerckring, plicae circulares*.

costocolic f. See phrenicocolic *ligament*.

cranial genital f. See progonal *f.*

epigastric f. A ridge of peritoneum covering the inferior epigastric vessels.

epigonal f. The caudal part of the genital ridge, in which the ovarian ligament or the upper part of the gubernaculum testis develops.

fimbriated f. A fold of mucous membrane having a fringed, free edge, on either side of the frenulum of the tongue.

f. of the urachus. See median umbilical *f.*

genital f. (a) A lateral swelling on either side of the cloacal membrane produced by the growth of mesoderm. (b) Genital ridge. (c) See urethral *f.*

glossoepiglottic f. A fold separating the glossoepiglottic fossa into the two valleculae.

gluteal f. Crease between buttock and thigh.

gonadal f. That part of the genital ridge containing the gonad and mesorchium or mesovarium.

gubernacular f. A fold of peritoneum containing the lower part of the gubernaculum testis.

head f. A ventral fold formed by rapid growth of the head of the embryo over the embryonic disk, resulting in the formation of the foregut accompanied by anteroposterior reversal of the anterior part of the embryonic disk.

hypogastric f. See lateral umbilical *f.*

ileoappendicular f. See ileocecal *f.*

ileocecal f. A fold of peritoneum extending from the terminal part of the ileum to the cecum and to the mesentery *of the vermiform appendix, or to the* appendix itself. Also called *bloodless f. of Treves, ileoappendicular f., ileocolic f.*

ileocolic f. See ileocecal *f.*

inguinal f. A fold, developing on the urogenital ridge, which unites with the inguinal crest at the brim of the embryonic pelvis. The gubernaculum testis develops within these structures. Also called *plica inguinalis, inguinal fold of the mesonephros*.

lacrimal f. An inconstant, valvular fold of mucosa at the inferior meatus of the nasolacrimal duct. Also called *Hasner's valve*.

lateral nasal f. See lateral nasal *process*.

lateral umbilical f. A fold of peritoneum covering an obliterated hypogastric artery.

malleolar f. A small fold of the tympanic membrane extending outward from the projection produced by the lateral process of the malleus. There is an anterior and a posterior malleolar *fold*.

mammary f. See mammary *ridge*.

median nasal f. See median nasal *process*.

median umbilical f. A fold of peritoneum covering the urachus.

mesonephric f. A fold or swelling of the dorsal coelomic wall, created by the growth of the mesonephros, which bulges into the coelomic cavity.

neural f. One of the paired, longitudinal folds of the neural plate which unite in the midline to form the neural tube.

palmate folds. Radiating folds in the mucous membrane of the cervix of the uterus.

palpebral f. That formed by the reflection of the conjunctiva from the eyelids onto the eye. There are two folds, the superior and the inferior.

pharyngoepiglottic f. One of the paired folds of mucous membrane passing from the pharynx to the epiglottis.

posterior malleolar f. A fold on the external surface of the tympanic membrane stretching from the malleolar prominence to the posterior portion of the tympanic sulcus of the temporal bone. It forms the lower posterior border of the pars flaccida.

progonal f. The cephalic part of the genital ridge, in which develops the suspensory ligament of the ovary.

salpingopalatine f. A fold of mucous membrane extending from the torus tubarius to the palate.

salpingopharyngeal f. A vertical fold of mucous membrane extending from the torus tubarius to the pharynx.

semilunar f. A conjunctival fold in the inner canthus of the eye, the vestigial homolog of the nictitating membrane of Amphibia and Sauropsida.

sexual f. See genital *ridge*.

sublingual f. A fold of mucous membrane caused by the projection of the sublingual gland.

tail f. A fold formed by rapid growth of the caudal end of the embryo over the embryonic disk, resulting in the formation of hindgut and ventral body wall in this region.

transverse rectal folds. Large, semilunar folds projecting into the lumen of the first part of the rectum. Also called *Houston's valves*.

triangular f. A triangular membrane extending from the upper posterior portion of the glossopalatine arch backward and downward, until lost in the tissues at the base of the tongue.

urethral f. One of a pair of folds flanking the urethral groove on the caudal surface of the genital tubercle or phallus.

urogenital f. A fold or swelling of the dorsal coelomic wall containing the mesonephros and its duct and, later, the gonad and paramesonephric duct. Syn., *urogenital ridge*.

vascular f. *A fold of peritoneum containing the* spermatic vessels.

ventricular f. A fold of mucous membrane on either side of the larynx, enclosing the superior thyroarytenoid ligament. Also called *false vocal cord, plica ventricularis*.

vestigial f. of Marshall. See John *Marshall*.

vocal f. One of the two membranous bands extending from the thyroid cartilage to the arytenoid cartilage; their tension controls the pitch

of the voice. Also called *true vocal cord, plica vocalis.*

Foley, Frederic Eugene Basil (1891–) American urologist who devised a procedure for relief of stricture at the ureteropelvic junction, the so-called *Foley (Y) plasty* and the Foley lumbar ureterolithotomy operation; he also devised the Foley balloon catheter.

Foley's combined method. See under *stain.*

fo'li·a·ceous [L. *folium,* leaf]. Leaflike.

fo'lic ac'id. Pteroylglutamic acid, or N-[4-{[(2-amino-4-hydroxy-6-pteridyl)methyl]amino}benzoyl]glutamic acid; a substance occurring in green leaves, liver, and yeast, also produced by synthesis. It is essential for the growth of *Lactobacillus casei,* for synthesis of nucleic acid in the body and also for growth, reproduction, tissue reparation, etc., probably through conversion to folinic acid. 2. It is employed clinically in treating certain types of macrocytic anemia. Also called *liver L. casei factor, vitamin B_c.* See *folate.*

fo·lie' (fo'lee'. See Notes § 35) [F.]. 1. A mental disorder or psychosis. 2. Old term for insanity.

f. à deux. A type of communicated psychosis involving two persons, one of whom has an essential psychosis. His control of and influence over the other person is so potent that the latter will simulate or accept the elements of the psychosis without question. Similar supposed syndromes are also called *communicated insanity, double insanity, induced insanity.*

Folin, Otto [American biochemist, 1867–1934]. Alone and with various co-workers, devised a number of useful biochemical technics. Especially notable are his colorimetric tests for the estimation of amino acids, blood gases, and alkaline reserve. See under *method, reagent, test.*

fo·li·nerin, fo·lin·er·in. A glycoside from *Nerium oleander* which, on hydrolysis, yields gitoxigenin, the same steroid aglycone as is obtained from the digitalis glycoside, gitoxin. Syn., *oleandrin.*

fo·lin'ic ac'id. 1. A collective term for a group of factors, occurring in liver extracts and also obtained from pteroylglutamic acid by synthesis, essential for growth of *Leuconostoc citrovorum.* 2. $C_{20}H_{23}N_7O_7$; 5-formyl-5,6,7,8-tetrahydrofolic acid, the form in which folic acid probably exists and is active in tissues. It appears to be identical with principles variously referred to as *citrovorum factor* (abbreviated, CF) and *leucovorin.*

fo'li·um (pl. *folia*) [L.]. Any lamina or leaflet of gray matter forming a part of the arbor vitae of the cerebellum.

f. cacuminis. A lobule on the upper surface of the vermis.

f. vermis. The terminal lobule on the superior surface of the vermis.

Folius. See Cecilio Folli.

follacro. The trade-mark for a preparation of estradiol-17-propionate, offered in ampuls containing a sesame oil solution of the hormone. Also see *estradiol.*

Folli, Cecilio (Folius) [Italian anatomist, 1615–60]. Discovered the anterior process of the malleus (1645). Called *Folian process, Rau' process.*

Folli, Francesco [Italian physician, 1624–85]. Accomplished blood transfusion by means of a silver tube inserted in the artery of the donor and a bone cannula inserted in the vein of the recipient, these being united by a tube made from the blood vessel of an animal (1654).

fol'li·cle [L. *folliculus,* small bag]. 1. Old term for lymph nodule. 2. A small secretory cavity or sac, as an acinus or alveolus. —**follic'ular,** *adj.*

aggregate f. An aggregation of lymph nodules situated in the mucous membrane of the lower part of the small intestine, opposite the mesenteric attachment. Also called *Peyer' glands, Peyer' patches.*

atretic f. An involuted or degenerated ovarian follicle. Also called *corpus atreticum.*

dental f. The dental sac.

graafian, Graafian f. The mature ovarian follicle. Syn., *vesicular f.* See Plate 41.

growing f. Any stage in the maturation of an ovarian follicle between the primary follicle and the graafian follicle.

hair f. The tubular epithelial invagination containing the root of a hair.

lymph f. See lymph *nodule.*

Nabothian f. See Nabothian *cyst.*

ovarian f. An ovum and the epithelial follicular cells which surround it, lying in the cortex of the ovary.

palpebral follicles. The tarsal glands.

primary f. An ovarian follicle in which the ovum is surrounded by a single layer of follicular cells.

sebaceous f. A sebaceous gland of the skin.

solitary f. Old term for solitary lymphatic nodule.

vesicular f. See graafian *f.*

fol'li·clis [*follicular*]. A tuberculid involving the extremities and at times the face. The histopathology is that of tuberculosis, and the lesions are papules or crusted pustules.

fol·lic'u·lin. See *estrone.*

fol·lic"u·li'tis [*follicular;* G. *-itis,* inflammation]. Inflammation of a group of hair follicles.

agminate f. Inflammation of a set of hair follicles.

deep f. See *sycosis vulgaris.* See also *tinea barbae.*

f. abscedens et suffodiens. A rare scalp cellulitis with multiple follicular abscess formation.

f. barbae. Inflammation of the hair follicles of the beard; sycosis.

f. decalvans. Inflammatory disease of the hair follicles resulting in patches of baldness.

f. keloidis. A chronic skin disease affecting the nape of the neck and adjacent parts, characterized by minute red papules, which occasionally suppurate and are usually traversed by a hair. They unite to form hard white or reddish keloids. Also called *keloid acne, dermatitis papillaris capillitii.*

f. simplex. See superficial *f.*

f. ulerythematosa reticulata. A eruption over the face, especially the cheeks; characterized by small areas of atrophy separated by narrow ridges producing a reticulated honeycomb appearance. Also called *atrophoderma vermicularis, acne vermoulante, atrophoderma reticulatum.*

pustular f. A pustular inflammation of the hair follicles, usually micrococcal.

superficial f. A type of pustular folliculitis in which the pustule is limited to the distal portion of the hair follicle; also called *f. simplex.*

fol·lic"u·lo'ma [*folliculus;* G. *-ōma,* tumor]. See feminizing *tumor* of ovary.

follutein. The trade-mark for a preparation of chorionic gonadotropin obtained from the urine of pregnant women.

fo"men·ta'tion [L. *fomentare,* to foment]. 1. The application of heat and moisture to a part to relieve pain or reduce inflammation. 2. The substance applied to a part to convey heat or moisture.

fo'mes (fo'meez, fom'eez) (pl. *fomites*) [L., tinder]. Any substance regarded as capable of transmitting contagious disease. Obs.

fo'mi·tes (fo'mi·teez, fom'i·) Plural of fomes.

Fon"se·cae'a (fon·si·see'uh) [L., after O. da Fonseca, contemporary Brazilian physician]. Name proposed by Negroni for a genus of fungi; synonym for *Hormodendrum.*

Fonseca's disease. See *chromoblastomycosis.*

fon tac'to-scope. An instrument for ascertaining the radioactivity of waters and gases.

Fontana, Arturo [*Italian dermatologist,* 1873–1950]. See Fontana stain.

Fontana Felice [*Italian physiologist and naturalist,* 1720–1805]. Mad an important experimental study of viper venom (1767) Said to have been the first to describe the renal tubules. See also *Fontana s spaces* under *space.*

fon"ta nel' fon"ta nelle' [F dim. of *fontaine,* fountain]. A membranous space between the cranial bones in fetal lif and infancy

anterior f. That at the point of union of the frontal, sagittal, and coronal sutures. Closes during the second year Also called *fonticulus major fonticulus quadrangularis.*

great f. See anterior *f*

lateral fontanels. Two membranous spaces, one in front between the parietal, frontal, great wing of the sphenoid, and temporal bones (the **anterior lateral** or **sphenoid fontanel**) and one behind between the parietal, occipital, and temporal bones (the **posterior lateral, mastoid, Casser's** or **Casserio' fontanel**) They usually close by three months after birth.

nasofrontal f An abnormal one at the union of the nasal and frontal bones.

posterior f That at the point of junction of lambdoid and sagittal sutures. Also called *fonticulus minor fonticulus triangularis.*

sagittal f One occasionally found in the sagittal suture, bout midway between the anterior and posterior fontanels.

small f See posterior *f*

supraoccipital f I *comparative embryology,* cordate membranous space between the occipital cartilage and the more anterior parts of the cranium.

fon"ta-nelle Fontanel.

fon tic'u lus [L., little fountain]. 1 Old term for suprasternal notch. 2. A small artificial ulcer or issue. 3. Fontanel.

food [AS. *fōda*]. Nutriment any substance which, when taken into the body of an organism, may be used either to supply energy or to build tissue. Foods are organic substances classified in three groups proteins, carbohydrates, and fats All of these may occur in animal or vegetable substance.

Food and Drug Ad min"is-tra tion. An enforcement agency of the Federal Security Agency dealing with interstat commerce involving misbranding, false labeling, and adulteration of foods, insecticides, fungicides, drugs, cosmetics, and health devices.

food ball. A phytobezoar

food yolk. See *deutoplasm.*

foot [AS. *fōt*]. 1 The terminal extremity of the leg It consists of the tarsus, metatarsus, and phalanges or toes. 2. A measure of length equal to 12 inches, or 30 479 cm. Abbreviated ft.

cleft f. A condition similar to cleft hand.

congenital deformity of the f. See *talipes.*

contracted f Clawfoot.

f cell. One of the branching parenchymatous cells of the pineal body

frosted feet. See *chilblain.*

hollow f Clawfoot

immersion f See *immersion foot.*

march f. See march *fracture*

perivascular f The expanded pedicle of neuroglial cell process attaching t t blood vessel.

shelter f A condition resembling trench foot and immersion foot, but of less severity It occurs in persons who are confined to cold and damp shelters associated with some vitamin deficiency

splay f. Flatfoot with extreme eversion of the forefoot and tarsus.

tabetic f ( ) An extension of th foot in prostrate tabes, observed when the patient is lying down. (b) An affection of the foot in the beginning of tabes, marked by numbness and formication, followed by hypertrophy of the head of the talus, navicular cuneiform, and metatarsal bones.

trench f A condition of the feet somewhat like frostbite It occurs in those exposed in the trenches.

weak f Chronic eversion of the foot, due usually to faulty walking habits associated with loss of muscular tone. Frequently confused with flatfoot.

foot-can'dle The illumination received at sur face 1 foot from standard lamp of 1 candlepower; 1 foot-candle = 1 lumen per square foot.

foot drop. A falling of the foot due to paralysis of the dorsiflexors of the ankle.

foot'-pound' A unit of energy; the work equal to that of raising a pound to the height of one foot Abbreviated, ft.-lb.

foot print [*fōt*; ME. *printe,* from L. *premere,* to press]. An ink impression of the sole of the foot; used for identification of infants.

foot rot. A disease of cattle and sheep marked by necrosis of the skin around the hoof

foots. The bottom portion, sediment, or residue from certain crude liquids, as fixed animal or vegetable oils, obtained in process of refining.

Foot' methods. See under *stain.*

fo-ra men (pl. *foramens, foramina*) [L., an opening]. A perforation or opening, especially in a bone. —**foram'inal,** *adj*

anterior ethmoid f. A canal between the ethmoid and frontal bones, giving passage to the nasal branch of the ophthalmic nerve and anterior ethmoid vessels.

anterior palatine f. Incisive *fossa,* ( ) old term.

anterior sacral f One of the eight (four on each side) on the anterior surface of the sacrum connecting with the sacral canal, and giving passage to the anterior branches of the sacral nerves.

aortic f. See aortic *hiatus.*

pical f. The passage at the end of the root of tooth for the vessels and nerves of the dental pulp.

cecal f. of the frontal bone. A small foramen formed by the frontal bone and the crista galli of the ethmoid, occasionally giving passage to vein.

cecal f. of the medulla oblongata. One located in depression at the termination of the anterior median fissure.

cecal f of the tongue. One located in the posterior termination of the median raphe of the tongue at the apex of the terminal sulcus the site of the former orifice of the thyroglossal duct.

common interclinoid f. A canal formed by an anomalous process connecting the anterior middle, and posterior clinoid processes of the sphenoid bone.

condylar condyloid f. See condylar *canals*

cotyloid f. A notch in the acetabulum converted into foramen by ligament; it gives passage to vessels and nerves

epiploic f An perture of the peritoneal cavity situated between the liver and the stomach, bounded in front by the portal vein, hepatic artery and common bile duct, behind by the inferior vena cava, below by th duodenum, and above by the liver Formed by folds of the peritoneum. It establishes communication between the greater and lesser cavities of the perito eum. Also called *f of Winslow.*

esophageal f See esophageal *hiatus*

external auditory f The lateral opening of the

external auditory canal; also called *porus acusticus externus*.

f. cecum. See cecal *f* of the tongue.

f. caroticum externum. The outer or lateral opening of the carotid canal.

f. caroticum internum. The inner or medial opening of the carotid canal.

f. infrapiriforme. The passageway through the pelvic wall below the piriformis muscle where the inferior gluteal nerve and vessels leave the pelvic cavity; subdivision of the greater sciatic foramen.

f. lacerum. An irregular aperture between the apex of the petrous portion of the temporal bone and the body and great wing of the sphenoid, and the basilar process of the occipital bone also called *lacerated f*

f. magnum. A large oval aperture centrally placed in the lower and anterior part of the occipital bone; it gives passage to the spinal cord and its membranes and venous plexuses, the spinal accessory nerves, and the vertebral arteries.

f. nasale. A small opening on the outer (facial) surface of the nasal bone which transmits tributary to the anterior facial vein.

f. of Bochdalek. Either of two potentially weak areas of the diaphragm between the dorsal or lumbar portion and each costal portion. Either may be the site of diaphragmatic hernia, but the condition is more common on the left.

f. of Huschke. See Knoll *H*uschke.

f. of Key. A small opening in the roof of the fourth ventricle, allowing passage of cerebrospinal fluid into the subarachnoid space.

f. of Magendie. A posterior median foramen in the membranous roof of the fourth ventricle of the brain.

f. of Monro. The interventricular foramen

f. of Morgagni. Either of two potentially weak areas of the diaphragm between the sternal portion and each costal portion. Either may be the site of diaphragmatic hernia. Also called *parasternal orifice of the diaphragm*.

f. of Retzius. See *f* of Key

f. of Scarpa. A median incisive *f*. See incisive *f*

f. of Stensen. A lateral incisive *f*. See incisive *f*

f. of Vesalius. An inconstant foramen in the great wing of the sphenoid, situated between the foramen ovale and foramen rotundum, which when present transmits an emissary vein from the cavernous sinus.

f. of Winslow. See epiploic *f*

f. ovale of the heart. A fetal opening between the two atria of the heart, situated at the lower posterior portion of the septum. Through this opening blood is shunted from the right atrium to the left atrium. In patent f. ovale there is persistence of this fetal opening after birth, and the term usually refers to *functional patency*. An *anatomical* patency can frequently be demonstrated at autopsy of individuals who displayed no signs of functional patency in lif

f. ovale of the sphenoid. An oval opening near the posterior margin of the great wing of the sphenoid, giving passage to the mandibular branch of the trigeminal nerve, the accessory meningeal artery and occasionally the lesser superficial petrosal nerve

f. ovale primum. See *f* secundum.

f. palatinum majus. See greater palatine *f*

f. palatinum minus. See lesser palatine *f*

f. primum. The temporary interatrial opening bounded by the growing margins of the septum primum and the endocardial cushions. Also called *primitive interatrial f*

f. rotundum. A round opening in the great wing of the sphenoid bone for the maxillary branch of the fifth nerve.

f. secundum. The secondary opening in the septum primum due to thinning and perforation of its cranial portion. Also called *f ovale primum*.

foramens of Luschka. Openings, one in each lateral recess of the fourth ventricle, allowing passage of the cerebrospinal fluid into the subarachnoid space. The free ends of the choroid plexus project through them.

f. spinosum. A passage in the great wing of the sphenoid bone, near its posterior angle, giving passage to the middle meningeal artery and spinosus nerve.

f. suprapiriforme. The passageway through the pelvic wall above the piriformis muscle where the superior gluteal nerve and vessels leave the pelvic cavity; subdivision of the greater sciatic foramen.

f. transversarium. A foramen in the transverse process of each of the upper six cervical vertebrae, which transmits the vertebral artery and vein also called *vertebroarterial f*

f. venae cavae. The opening in the diaphragm for the transmission of the inferior vena cava.

f. venarum minimarum. Any one of the small openings into the right atrium of the heart, which are the orifices of the Thebesian veins.

f. venosum. Any small opening, especially on the surface of bone, for the passage of vein.

f. zygomaticofaciale. An opening on the outer aspect of the zygomatic bone for the passage of the zygomaticofacial nerve and accompanying vessels

f. zygomaticoorbitale. An opening on the orbital surface of the zygomatic bone for the passage of the zygomatic branch of the maxillary nerv and accompanying vessels.

f. zygomaticotemporale. An opening on the temporal surface of the zygomatic bone for the passage of the zygomaticotemporal nerve.

greater palatine f. The lower opening of the greater palatine canal. It is formed on the medial side by notch in the horizontal part of the palatine bone and on the lateral side by the adjacent part of the maxilla also called *major palatine f*, *f palatinum majus*.

incisive f. One of the two to four openings of the incisive canal or canals on the floor of the incisive fossa, ( ) A pair in the midline, the **median incisive foramens** (*f of Scarpa*) transmit the nasopalatine nerves from the anterior nasal floor to the anterior hard palate. A pair of **lateral incisive foramens** (*f of Stensen*) transmit terminal branches of the greater palatine arteries from the palat to the floor of the nasal cavities.

infraorbital f. In the maxilla, the external aperture of the infraorbital canal; it gives passage to the infraorbital nerve and artery

innominat f. See innominate canaliculus.

internal auditory f. One located in the petrous portion of the temporal bone; it gives passage to the auditory and facial nerves and vessels, and the internal auditory vessels.

interventricular f. Either one of the two foramens that connect the third ventricle with each lateral ventricle. Also called *f of Monro*. See Plate 18.

intervertebral f. The aperture formed by the notches opposite to each other in the laminas of the adjacent vertebrae passage for the spinal nerves and vessels

jugular f. The space formed by the jugular notches of the occipital and temporal bones, divided into two portions, the posterior portion giving passage to an internal jugular vein and

the anterior portion giving passage to the ninth, tenth, and eleventh cranial nerves and the inferior petrosal sinus.

lacerated f. See *f. lacerum.*

lesser palatine f. The lower opening or openings of the lesser palatine canals on the lower surface of the palatine bone. Also called *minor palatine f., f. palatinum minus.*

major palatine f. See greater palatine *f.*

mandibular f. The external aperture of the inferior dental or alveolar canal in the ramus of the mandible; it transmits the inferior dental or alveolar vessels and nerve to the lower jaw.

mastoid f. A small foramen behind the mastoid process. It transmits a small artery from the dura and a vein opening into the lateral sinus.

medullary f. See nutrient *f.*

mental f. The external aperture of the inferior dental canal in the mandible. It transmits the mental nerves and vessels to the skin of the face.

minor palatine f. See lesser palatine *f.*

nutrient f. The opening into the canal which gives passage to the blood vessels of the medullary cavity of a bone.

obturator f. The large oval opening between the ischium and the pubis, anterior, inferior, and medial to the acetabulum, partly closed in by a fibrous membrane. It gives passage to the obturator vessels and nerves.

olfactory foramens. Numerous foramens in the cribriform plate of the ethmoid, giving passage to the fila olfactoria of the olfactory nerves.

optic f. The canal at the apex of the orbit, the anterior termination of the optic groove, just beneath the lesser wing of the sphenoid bone. It gives passage to the optic nerve and ophthalmic artery.

palatine f. See greater palatine *f.*, lesser palatine *f.*

papillary f. The orifice of a papillary duct in a minor calyx of the kidney.

parietal f. That near the posterior superior angle of the parietal bone; inconstant. It gives passage to an emissary vein of the superior longitudinal sinus and occasionally a small branch of the occipital artery.

posterior sacral f. One of the eight (four on each side) on the posterior surface of the sacrum, external to the articular processes, and giving passage to the posterior branches of the sacral nerves.

posterior superior alveolar f. One of the two or more openings on the infratemporal surface of the maxilla which is the external orifice of a superior alveolar canal.

primitive interatrial f. See *f.* primum.

pterygoalar f. See porus crotaphitico-buccinatorius.

pterygospinous f. A foramen formed by the ossification of the pterygospinous ligament running between the lateral pterygoid lamina and the angular spine of the sphenoid bone.

quadrate f. A passage in the diaphragm for the inferior vena cava.

sciatic foramens. The greater sciatic foramen is the oval space between the sacrotuberous ligament and the innominate bone, conveying the piriformis muscle, the gluteal, sciatic, and pudendal vessels and nerves. The lesser sciatic foramen is the space included between the sacrotuberous and sacrospinous ligaments and the portion of the innominate bone between the spine and tuberosity of the ischium, giving passage to the internal obturator muscle and the internal pudendal vessels and pudendal nerves.

sphenopalatine f. The space between the sphenoid and orbital processes of the palatine bone; it opens into the nasal cavity and gives passage to branches from the sphenopalatine ganglion and the sphenopalatine branch of the internal maxillary artery.

spurious jugular f. A foramen in the temporal bone of the embryo. It gives passage to a vein from the lateral sinus to the external jugular vein.

stylomastoid f. One between the styloid and mastoid processes of the temporal bone; the external aperture of the facial canal.

supraorbital f. A notch in the superior orbital margin at the junction of the middle with the inner third, sometimes converted into a foramen by a bony process or a ligamentous band. It gives passage to the supraorbital artery, veins, and nerve.

thyroid f. One in the ala of the thyroid cartilage.

transverse accessory foramens. Anomalous foramens in the transverse processes of the cervical vertebrae giving passage to an inconstant accessory vertebral artery.

vascular f. Any small opening, especially on the surface of a bone, for the passage of a blood vessel.

vertebral f. The space included between the body and arch of a vertebra, giving passage to the spinal cord and its appendages.

vertebroarterial f. Foramen transversarium.

fo·ra·mi·na. Plural of *foramen.*

fo·ram'i·nule [dim. of *foramen*]. A very small foramen. —**foraminulate,** *adj.*

force [OF., from *L. fortis,* strong]. 1. Strength, power; physical might, vigor. 2. That which initiates, changes, or arrests motion. 3. Binding power, validity. —**forced,** *adj.*

animal f. Muscular energy.

catabolic f. The energy derived from the breakdown of food.

catalytic f. Chemical work initiated by a catalyst.

chemical f. That form of energy which holds atoms together in a molecule.

coercive f. The magnetic force required to remove the magnetic induction in a previously magnetized material.

electrical forces of the heart. Forces produced by electrical depolarization and repolarization of the myocardium.

electromotive f. The force which tends to alter the motion of electricity, measured in volts. Abbreviated, E, emf, e.m.f., E.M.F.

nerve f. The capacity of nerve tissue to conduct stimuli.

occlusal f. The force exerted upon opposing teeth when biting.

psychic f. Mental power or force generated by thinking; contrasted with physical force.

reserve f. Energy latent within an organism or part over and above that required for normal functions. Cardiac reserve is the latent force of the heart available to meet any additional burden placed on the circulation.

rest f. The cardiac energy expended in maintaining the circulation when the body is at rest.

vital f. The energy or power characteristic of living organisms.

for'ceps [L., pincers]. 1. A surgical instrument with two opposing blades or limbs, controlled by handles or by direct pressure on the blades. Used to grasp, compress, and hold tissue, a part of the body, needles, or other surgical material. 2. Fiber bundles in the brain resembling forceps. —**forcip'ial,** *adj.*

alligator f. A special type of forceps having long slender angulated handles designed to be used with such instruments as an operating cystoscope or proctoscope.

alveolar f. Dental forceps for biting into the alveolar process.

anterior f. The U-shaped bundles from the radiation of the corpus callosum that are distributed to the frontal pole of the cerebral hemisphere. Syn., *f. minor*

artery f. Any forceps used for seizing and compressing an artery; usually self-locking, with scissors handles. Frequently various types are named for individual surgeons who devised them, as Halsted, Jones, Kelly, Mayo-Ochsner. Syn., *hemostatic f.*

aural f. A delicate dressing forceps used in aural surgery.

axis-traction f. An obstetric forceps, the so-called high forceps instrument, equipped with mechanism to permit rotation of the fetal head and traction in the line of the pelvic axis.

bone-cutting f. A double-jointed or single-jointed, powerful, heavy-bladed cutting forceps, with great power derived from the leverage exerted by the long handles. Syn., *rongeur f.*

bone-holding f. A forceps with heavy jaws and long handles, for use in holding bone during an operation. Syn., *lion-jawed f.*

Brewing's f. A forceps for biopsy in rectal disease.

bulldog f. Forceps with strong teeth and a clasp to prevent slipping.

bullet f. Instrument for extracting bullets.

crushing f. A forceps, usually in the form of a clamp, for crushing heavy tissues or pedicles prior to ligation.

dental f. Any one of a variety of forceps adapted for the extraction of teeth.

disk f. A type used in ophthalmic surgery.

dissecting f. Any of a variety of forceps used for dissection. They may have sharp, smooth, or notched points, may be curved or straight, or self-closing, and come in various sizes.

dressing f. A two-bladed, slender-bladed instrument or spring forceps, with blunt or serrated teeth; for use in surgical dressings.

epilating f. Special forceps used for removing the hairs of the lashes, eyebrows, or other areas where hair is not desired.

esophageal f. A special forceps for removing foreign bodies from the esophagus.

extracting f. Dental forceps.

f. major See posterior *f.*

f. minor See anterior *f.*

hemostatic f. See artery *f.*

high f. An obstetric forceps applied to the fetal head which has descended into the pelvic canal, when its greatest diameter is still above the superior strait.

lion-jawed f. See bone-holding *f.*

lithotomy f. A special type of forceps for removing a stone from the urinary bladder or ureter.

low f. An obstetric forceps applied to the fetal head when it is well within the lower portion of the pelvic canal.

mid f. An obstetric forceps applied when the presenting part is at, or immediately above, the ischial spines.

mosquito f. A delicate, sharp-pointed hemostat. Also called *Halsted mosquito f.*

mouse-tooth f. A dressing forceps with interlocking fine teeth at the tips of the blades.

needle f. A needle holder.

obstetric f. A large, fenestrated, double-bladed traction forceps; the blades are demountable and are applied separately before interlocking at the handles, in order to fit the fetal head. Employed in difficult or delayed labor.

posterior f. The U-shaped bundles from the radiation of the corpus callosum that are distributed to the occipital pole of the cerebral hemisphere. Syn., *f. major*

rib-cutting f. A type of forceps with one heavy semicircular cutting edge and one heavy hook-shaped blade designed to cut ribs and firm cartilages.

roller f. A forceps equipped with small rollers; used for compressing the eyelids in cases of trachoma.

rongeur f. Bone-cutting forceps.

sequestrum f. Forceps designed for removing spicules or sequestra of bone.

tenaculum f. A slender forceps with scissors handles and one or two long, overlapping teeth or hooks at the end of the blade; adapted especially for gynecologic surgery.

towel f. A snap, clamp, or forceps with sharp hooked ends which overlap; adapted to holding towels fast to the skin during operations. Also called *towel clamp, skin-holding f.*

vulsella f. A type of tenaculum forceps.

Forchheimer, Frederick [American physician, 1853–1913]. Described a maculopapular rose-red eruption on the soft palate and uvula, characteristic of rubella, in the absence of cutaneous eruption; called *Forchheimer's sign*.

for'ci·pate [*forceps*]. Shaped like a forceps.

for"ci·pres'sure [*forceps*; L. *pressura*, pressure]. Pressure exerted on a blood vessel by means of forceps, to prevent hemorrhage.

Fordyce, John Addison [American dermatologist, 1858–1925]. Described a condition affecting the mucous membrane of the lips and buccal region and characterized by numerous yellowish-white, millet-sized granules due to the presence of sebaceous glands (1896); called *Fordyce's disease*. With G. H. Fox, described a rare disease, called *Fox-Fordyce disease*, affecting principally the axillae and characterized by an itching papular eruption (1902). This is thought to be due to dysfunction of the apocrine glands.

fore- [AS.]. A prefix signifying *before* (in time or place) or *front*.

fore'arm" [*fore*; AS. *earm*]. That part of the upper extremity between the wrist and the elbow.

fore'brain" See *prosencephalon*.

fore·con"scious [*fore*; L. *conscius*, knowing with another]. In *psychoanalysis*, that portion of the unconscious containing mental experiences which are not in the focus of immediate attention, but which may be recalled to consciousness.

fore·con"scious. Capable of being recalled into the conscious mind, although not in the realm of consciousness. Syn., *coconscious, preconscious*.

fore'fin"ger [*fore*; AS. *finger*]. The index finger.

fore'foot" [*fore*; AS. *fōt*]. Anterior part of the foot; from a clinical standpoint, that portion of the foot which includes the toes, metatarsal, cuneiform, and cuboid bones.

fore'gut. The cephalic part of the embryonic digestive tube that develops into pharynx, esophagus, stomach, part of the small intestine, liver, pancreas, and respiratory ducts.

fore'head [AS. *forhēafod*]. That part of the face above the eyes.

fore'kid"ney [*fore*; M.E. *kidney*]. The pronephros.

Forel, Auguste Henri [1848–1931]. Swiss neurologist, psychiatrist, and entomologist who contributed to the neuron doctrine (1887), made an important study of sexual problems (1905), and described the ventral tegmental decussation, formerly called *decussation of Forel*.

fore'milk" [*fore*; AS. *meoluc*]. Colostrum.

fo·ren'sic [L. *forensis*, of the forum]. Relating to a law court.

fore pleas"ure. *I psychoanalysis*, the erotic pleasure, both physical and emotional, accompanied by rise in tension, which precedes the culmination of the sexual act, or end pleasure.

fore skin" [*fore*; ON *skinn*]. The prepuce.

fore wa"ters [*fore*; AS *waeter*]. Hydrorrhea gravidarum.

Forlanini, Carlo [*Italian physician*, 1847 1918]. First to induce artificial pneumothorax in pulmonary tuberculosis (1892)

form [L. *forma*, form]. The configuration, shape, or particular appearance of living things or tissues, especially when modified under particular conditions.

stab f., staff f See band cell.

form- f'de hyde. Formic aldehyde or methanal, HCHO A colorless gas obtained by the oxidation of methyl alcohol. It is soluble in water and in alcohol.

f. sodium sulfoxylate. $CH_2OHSO_2Na.2H_2O$. A white, crystalline, water-soluble compound, introduced as an antidote for poisoning by mercury bichloride Syn., *sodium formaldehyde sulfoxylate, rongalite, formopone*. Also called *sodium sulfoxylate, formaldehyde hydrosulfite*.

f solution (*liquor formaldehydi*) An aqueous solution containing not less than 37% by weight of formaldehyde It is powerful antiseptic. By means of oxidizing agents or heat, it may be converted into gas for the disinfection of rooms and dwellings previously exposed to contagion.

para-f (CH_2O) A solid polymer of formaldehyde. On heating, portion of it is converted to formaldehyde.

formalin. A trade-mark for formaldehyde solution. See under *fixing fluid*.

form am'ide, form' m ide. 1. HCONH the amide of formic acid. 2. A compound containing the HCONH— radical.

for'ma mol. See *bisimetol*.

for'mate, for'mi ate. A salt of formic acid.

for ma'tion [L. *formatio* from *formare*, to form]. 1. The process of developing shape or structure. 2. That which is formed; structure or arrangement.

reticular f. That in the central nervous system, consisting of small islands of gray matter separated by fine bundles of nerve fibers running in every direction, in the medulla oblongata, it fills the interspaces among the larger fiber tracts and nuclei. Also called *formatio reticularis*.

form tive [*formare*]. 1 Relating to the process of development, as of tissue or of the embryo. 2. Forming, producing, originating.

for'ma zan. A generic name for deeply colored pigment obtained by reducing 2,3,5-triphenyltetrazolium chloride or certain other related tetrazolium salts by highly labile enzyme systems. The reaction is utilized in testing the ability of seeds to germinate also, the extent of pigment production is sometimes employed in estimating the spread of carcinoma. The red pigment obtained when 2,3,5-triphenyltetrazolium chloride is used in such tests is specifically designated *2,3,5-triphenyl formazan*.

for'ma-zin. Formalazin an insoluble white, amorphous compound formed from hydrazine salt te and hexamethylenetetramine. I gelatin suspension, it is used in making permanent albumin standards in the Hf insurance method for the determination of protei 1 urine.

formes frustes' (form f rûst *See* Notes § 35) An incomplete or atypical form of disease.

for'mi te See *formate*.

for'mic [L. *formica*, ant]. Relating to, or derived from ants; or pertaining to formic acid.

for'mic ac'id. 1. The anhydrous liquid HCOOH; strong reducing agent, dangerously caustic to the skin. Syn., *methanoic acid*. 2. An aqueous solution containing 24-26% HCOOH; it is counterirritant and astringent.

for mic al'de-hyde. Formaldehyde.

for"mi-ca tion [L. *formicatio*, from *formica*]. Paresthesia an abnormal sensation as of insects crawling in or upon the skin; common symptom in diseases of the spinal cord and the peripheral nerves.

formin. A trade-mark for methenamine.

for"mo-cre sol. A mixture of equal parts of formaldehyde solution and cresol, used in dentistry for treating putrescent pulps.

formohydrin. Trade-mark for granular effervescent salt containing methenamine and sodium biphosphate. The salt is employed as urinary acidifier and antiseptic.

for'mol. A solution of formaldehyde.

for"mo ni'trile (for mo-nigh tril, -treel, -tryle) Hydrocyanic acid.

for mo-pone. See *formaldehyde* sodium sulfoxylate.

for'mose. The mixture of sugar and sugarlike compounds formed by formaldehyde in alkaline solution.

for mox'yl. Formyl.

for'mu la [L., small pattern]. 1. A prescribed method. 2. The representation of chemical compound by symbols. 3. A recipe or prescription. Abbreviated, F

Arneth' f. See Joseph *Arneth*.

constitutional f. One that indicates the relation to each other of various radicals and atoms in compound. It does not show the linkage of each atom.

dental f One showing the number and arrangement of teeth.

Einthoven formulas. Used for the determination of the mean electrical axis from the electrocardiogram (Leads I, II, III)

$$\tan \quad = \frac{2E_3 - E}{E\sqrt{3}}$$

$$\tan \quad = \frac{E_2 - E_3}{(E_2 - E_3)\sqrt{3}}$$

where equals angle and E_1, E_2, E_3 equal net of positive and negative deflection of QRS in leads I, II and III

empirical f One that indicates only the constituents and their proportions in molecule, as $C_6H_{12}O_6$ dextrose.

graphic f. See structural *f*

official f One given in an official publication.

officinal f A pharmaceutical formula which, though not official, is commonly followed by pharmacists.

structural f One which shows the arrangement and relation of every atom in molecule. One in which the symbols are united by the bonds of affinity according to their valences, as H—O—H

vertebral f. One used t indicate the number and arrangement of the vertebrae.

for'mu lar"y (for mew lerr"ee) [*formula*]. A collection of formulas for making medicinal preparations.

for'myl. 1 HCO— the radical of formic acid. Also called *formoxyl*. 2. The trivalent radical, HC≡

f.-amide. See *formamide*.

f bromide Bromoform

f. chloride. Chloroform. Also called *f perchloride*.

f. iodide. Iodoform.

f. tribromide. Bromoform.

f. trichloride. Chloroform.

f. triiodide. Iodoform.

for'myl·ase. An enzyme, present in the liver of certain experimental animals, which effects hydrolysis of formylkynurenine to tryptophan.

for"myl·fo'lic ac'id. The formyl derivative (at the nitrogen atom of the p-aminobenzoyl component) of folic acid; it may be an intermediate in the biogenesis of folic acid. See also *rhizopterin*.

for"myl for'mic ac'id. Glyoxylic acid.

for"myl gly'cine. NH CH(CHO)COOH postulated intermediate in the conversion of serine to glycine; it represents serine in which the CH_2OH group has been converted to CHO

for"myl·ky·nur'e·nine. A compound resulting from oxidation of tryptophan in certain experimental animals; upon hydrolysis in the presence of formylase it is converted to kynurenine and formic acid.

for"myl·pter·o'ic ac'id. Rhizopterin.

for'ni·cate [L. *fornicatio* from *fornicari*, to commit fornication]. Commit fornication.

for'ni·cate [L. *fornicatus*, from *fornix*, arch]. Arched

for"ni·ca'tion [L. *fornicatio* from *fornicari*, to commit fornication]. The illicit sexual intercourse of unmarried persons.

for'nix [L., arch]. 1 An arched body or surface; concavity or cul-de-sac. 2. A nerve fiber that arises in the hippocampus and dentate gyrus and ends in the mammillary body (corticomammillary tract) habenular nucleus (corticohabenular tract) and septal and preoptic areas. See Plate 18. —*fornical*, *adj*.

f of stomach. See *fundus ventriculi*.

f. of the conjunctiva. The cul-de-sac at the line where the bulbar conjunctiva is reflected upon the lid.

f. of the vagina. The vault of the vagina the upper part of the vagina which surrounds the cervix of the uterus.

Forssman antigen. See under *antigen*.

forthane. Trade-mark for methylhexaneamine, volatile amine employed for vasoconstrictor action on nasal mucosa.

Foshay's serum. See Foshay' *test*.

Foshay's test. See under *test*.

fos'sa (pl. *fossae*) [L., ditch]. A depression or pit.

acetabular f A depression in the center of the acetabulum.

antecubital f One in front of the elbow

anterior cranial fossae. The most elevated in position of the three pairs (right and left) of fossae into which the internal base of the skull is divided. They lodge the frontal lobes of the brain and are formed by the orbital part of the frontal bone, the cribriform plate of the ethmoid bone, and the small wings of the sphenoid bone.

axillary f. The armpit.

canine f A depression on the external surface of the maxilla, above and to the outer side of the socket of the canine tooth.

cecal f. A fold of peritoneum forming pouch upon the surface of the right iliopsoas muscle and extending t the pex of the cecum.

cerebellar fossae. Two shallow concave recesses on the lower part of the inner surface of the occipital bone for the reception of the hemispheres of the cerebellum. Also called *inferior occipital fossae*.

cerebral fossae. Two shallow concave recesses on the upper part of the internal surface of the occipital bone for the reception of the occipital lobes of the cerebrum. Also called *superior occipital fossae*

condylar condyloid f Either of two small pits on the lower surface of the basilar part of the occipital bone, one situated behind each occipital condyle.

coronoid f. A depression in the humerus into which the apex of the coronoid process of the ulna fits in extreme flexion of the forearm.

costal fossae. The facets on the bodies of the vertebrae where articulation occurs with the heads of the ribs.

cranial f. Any of the three depressions, **anterior middle**, and **posterior** in the base of the skull.

cubital f See antecubital *f*

cystic f A depression on the lower surface of the right lobe of the liver in which the gallbladder is situated also called *f vesicae felleae*.

digastric f. (a) A deep groove on the inner aspect of the mastoid process marking the attachment of the posterior belly of the digastric muscle. (b) A depression on the inside of the mandible for the attachment of the anterior belly of the digastric muscle.

digital f ( ) A depression at the base of the inner surface of the greater trochanter of the femur (b) A cul-de-sac in the serous membrane which separates the body of the epididymis from the testis. Also called **epididymal** *sinus*. ( ) A depression on the posterior inferior end of the fibula.

duodenojejunal f A pouch formed by fold of peritoneum from the terminal portion of the duodenum blending with parietal peritoneum.

epigastric f. The midline infrasternal depression.

f. ductus venosi. A narrow groove on the posterior surface of the liver between the caudate and left lobes, occupied by the ductus venosus in fetal life and by the ligamentum venosum after birth.

f. innominata. A shallow depression between the ventricular and the aryepiglottic fold.

f. occipitalis. That portion of the posterior cranial fossa which is bounded by the inner surface of the occipital bone it may be further subdivided into a superior occipital fossa lying above the groove for the transverse sinus and an inferior occipital fossa lying below the groove.

f. of the incus. That in the posterior wall of the tympanic cavity for attachment of the short crus of the incus. Also called *fossa incudis*.

f ovalis. ( ) An oval fossa in the interatrial septum; its floor is derived from the embryonic septum primum, and its rim from the septum secundum. (b) An opening in the fascia lata of the thigh which gives passage to the great saphenous vein.

f. poplitea. See popliteal *space*.

f. venae cavae. A groove on the posterior surface of the liver between the caudate and right lobes occupied by the inferior vena cava.

f. vesicae felleae See cystic *f*

genital f The embryonic urogenital groove bounded by the urethral folds and the urethral portion of the cloacal membrane.

glenoid f. Old term for mandibular fossa.

helical f. A furrow between the helix and antihelix.

hyaloid f. A depression in the anterior surface of the vitreous body for the crystalline lens.

hypophyseal f A depression in the sphenoid bone lodging the hypophysis; also called *f hypophyseos*, *pituitary f*

ileocecal fossae. Peritoneal recesses in the region of the ileocecal junction.

iliac f. A wide depression on the internal surface of the ilium.

incisive f. (a) A bony pit behind the upper incisors into which the incisive canals open. (b) A depression on the maxilla at the origin of the depressor muscle of the nose. (c) A depression on the mandible at the origin of the mentalis muscle.

inferior duodenal f. A small pocket of peritoneum formed on the left of the terminal portion of

the duodenum by a triangular fold of peritoneum and having the opening directed upward.

infraclavicularis f. The depression of the skin below the clavicle.

infraspinous f. The recess on the posterior surface of the scapula occupied by the infraspinatus muscle.

infratemporal f. An irregular space situated below and medial to the zygomatic arch, behind the maxilla and medial to the upper part of the ramus of the mandible also called *zygomatic f.*

intercondyloid f. One on the back of the femur between the condyles.

interpeduncularis f. A deep groove in the anterior surface of the midbrain.

intersigmoid f. See subsigmoid *f.*

intertrochanteric f. That located medial to the intertrochanteric crest of the femur

ischiorectal f. The region on either side of the rectum, bounded laterally by the obturator internus muscle, medially by the levator ani and coccygeus muscles, and posteriorly by the gluteus maximus muscle.

jugular f. One between the carotid canal and th stylomastoid foramen, co taining the superior bulb of the internal jugular vein.

lacrimal f. The depression in the frontal bone for the reception of the lacrimal gland.

lateral pharyngeal f. A depression in the lateral wall of the nasopharynx posterior to the opening of the auditory tube. Also called *pharyngeal recess, Rosenmueller f.*

mandibular f. The fossa in the temporal bone that receives the condyle of the mandible.

mastoid f. That on the lateral surface of the temporal bone, behind the suprameatal spine.

middle fossae of the skull. One of the three pairs (right and left) of fossae into which the interior base of the cranium is divided; they are deeply concave on much lower level than the anterior cranial fossae, and lodge the temporal lobes of the cerebrum.

nasal f. (a) Old term for nasal pit of the embryo. (b) Old term for nasal cavity

navicular f. (a) The dilated portion of the urethra in the glans penis. (b) I the vulva, the depression between the posterior commissure and the fourchette.

navicular f. of the ear Helical fossa.

olecranon f. One at the dorsal side of the distal end of the humerus, for the reception of the olecranon.

palatine f. The incisive fossa.

paracecal f. An infrequent peritoneal pouch behind and to one side of the cecum.

paraduodenal f. See paraduodenal *recess.*

pararectal f. A pouch of the peritoneum on either side of the rectum.

paravesical f. One on either side of the urinary bladder

phrenicohepatic f. A pouch of the peritoneum between the left lateral ligament of the liver and the extremity of the left lobe.

pituitary f. The hypophyseal fossa.

postauditory f. A crescentic notch on the temporal bone separating the temporal ridge from the auditory plate.

posterior cra ial fossae. The lowest in position of the three pairs (right and left) of the cranial fossae they lodge the cerebellum, pons, and medulla blongata. Each fossa is formed by the posterior surface of the petrous and inner surface of the mastoid portion of th temporal bone and the inner surface of the occipital bone below the horizontal limb of the confluence of the sinuses.

pterygoid f. The groove between the medial and lateral laminae of the pterygoid process of the sphenoid bone.

pterygopalatine f. The gap between the pterygoid process of th sphenoid bone and the maxilla and palatine bone; also called *sphenomaxillary f.*

radial f. The depression on the humerus above the capitulum which accommodates the head of the radius in extreme flexion of the forearm.

rectouterine f. The peritoneal pouch between rectum and uterus, the pouch, or cul-de-sac, of Douglas.

retroduodenal f. See retroduodenal recess.

rhomboid f. The diamond-shaped floor of the fourth ventricle of the brain.

Rosenmueller's f. See lateral pharyngeal *f.*

scaphoid f. (a) A depression in the base of the medial pterygoid plate of the sphenoid bone. (b) A furrow between the helix and antihelix of the auricle. Syn., scapha.

sigmoid f. See sigmoid *sulcus.*

sphenomaxillary f. See pterygopalatine *f.*

subarcuate f. An orifice situated in the newborn on the superior margin of the petrosal portion of the temporal bone, through which the vessels pass to the temporal bone. This opening disappears after birth and is represented in the adult by depression beneath the arcuate eminence.

subauricular f. The depression just below the external ear

subinguinal f. The depression of the anterior aspect f the thigh over the femoral triangle.

subli gual f. A depression on the internal surface of the mandible next to the sublingual gland.

submaxillary f. The oblong depression on the internal surface of the mandible, next to the submaxillary gland.

suborbital f. See canine *f.*

subscapular f. The ventral concave surface of the scapula.

subsigmoid f. A peritoneal recess t the apex of the attachment of the mesosigmoid; also called *intersigmoid f.*

sulciform f. A shallow furrow in the inner fore part of the cavity of the vestibule of the ear behind the f vea hemielliptica and the fovea hemisphaerica, into which the vestibular aqueduct opens.

superior duodenal f. A small pocket of peritoneum formed on the left of the terminal portion of the duodenum by triangular fold of peritoneum and having the opening directed downward.

supraclavicular f. The depression on either side of the neck above the clavicle.

supraspinous f. The triangular depression on the posterior surface of the scapul bove the spine.

suprasternal f. The depression in the midline of the base of the neck above the upper border of the sternum and between the insertion of the sternal portions of the two sternocleidomastoid muscles. Also called *jugular notch.*

supratonsillar f. The upper recess of the tonsillar sinus between the faucial pillars and above the palatine tonsil. It is covered by semilunar fold.

temporal f. The depression that lodges the temporal muscle.

tonsillar f. The depression between the glossopalatine and pharyngopalatine arches, in which the palatine tonsil is situated. It is approximately at the site of the second visceral pouch.

triangular f. The fossa of the anthelix.

trochanteric f. A hollow at the base of the inner surface of the greater trochanter of the femur

trochlear f. A hollow in the frontal bone, below the internal angular process, furnishing attachment to the pulley of the superior oblique muscle.

umbilical f. A narrow groove on the visceral and anterior surfaces of the liver occupied by the falciform ligament and round ligament of the liver (the left umbilical vein of the fetus).
urachal f. The prevesical space.
zygomatic f. See infratemporal *f.*
fos-sette' [F., dim. of *fosse*, canal, ditch]. 1. A dimple or small depression. 2. A small, deep ulcer of the cornea.
fos'su-la [L., little ditch]. A small fossa; any one of the numerous slight depressions on the surface of the cerebrum.
f. post fenestram. A small inconstant outpouching from the vestibule into the otic capsule just posterior to the fenestra vestibuli.
f. rotunda. Fenestra cochleae, or round window of the ear.
f. tonsillaris. A crypt of the palatine tonsil.
Foster, Michael [*English physiologist*, 1836–1907]. One of the great teachers of physiology of modern times. Investigated the contractility of the heart. Wrote works on general physiology (1877) and the history of physiology (1901).
Fothergill, John [*English physician*, 1712–80]. Described an epidemic of either diphtheria or anginal scarlet fever, perhaps of both (1748); anginal scarlet fever is called *Fothergill's sore throat*. Called attention to the influence of weather on certain diseases. Gave the first clear account of migraine (1777). Described facial neuralgia, called *Fothergill's disease, trigeminal neuralgia, tic douloureux*.
Fothergill, William Edward [*English gynecologist*, 1865–1926]. Emphasized the importance of the parametrial tissue as a support for the uterus. Modified Donald's colporrhaphy by exposing the parametrium and suturing the right and left sides together. Called *Fothergill* or *Manchester operation*.
fou'a-din (foo'ah din, -deen). See *fuadin*.
foun'der [OF. *fondrer*, to fall in]. 1. An acute gastroenteritis in cattle, horses, and sheep caused by the overeating of foods with a high caloric content. 2. Condition of lameness in horses.
found'ling [AS. *funden*]. An infant found after being abandoned by its parents.
four-chet. 1. In veterinary medicine, foot rot. 2. Incorrect spelling for fourchette.
four-chette' (foor-shet') [F.]. 1. A fold of skin just inside the posterior commissure of the vulva. 2. A fork used in dividing the frenulum linguae.
Fourneau, Ernest François Auguste [*French chemist and pharmacologist*, 1872–1949]. Introduced amylocaine hydrochloride (1903) and suramin (1920).
Fourneau 309. See *suramin*.
Fournier, Jean Alfred [*French syphilologist*, 1832–1914]. Noted for his profound study of prenatal syphilis. Pointed out the syphilitic nature of the parasyphilitic diseases. Made important contributions to the knowledge of extragenital chancre (1897). Dome-shaped molars are called *Fournier molars*. See under molar.
fo've-a [L., small pit]. A small pit or depression; applied to many depressions in the body, but especially to the **fovea centralis** of the retina (the spot of most distinct vision), a small pit in the macula lutea in the visual axis. —**foveate,** adj.
coccygeal f. A persistent depression near the tip of the coccyx at the site of the terminal attachment of the embryonic neural tube to the dermis; also called *postanal dimple, f. sacrococcygea*.
costal f. A costal depression on a vertebra, demifacet for the head of a rib.
f. articularis superior atlantis. Either of the superior articular surfaces of the atlas.
f. of the head of the femur. That giving attachment to the *ligamentum teres femoris*. Also called *f. capitis femoris*.
f. of the head of the radius. That for articulation with the capitulum of the humerus. Also called *f. capituli radii*.
f. of the pharynx. An inconstant depression in the median line of the pharynx.
f. palatina. See *foveola palatina*.
f. pterygoidea mandibulae. A small depression on the anterior aspect of the neck of the mandible where the external pterygoid muscle is inserted.
f. sublingualis mandibulae. A smooth shallow depression on the internal surface of the body of the mandible above the mylohyoid line for the sublingual gland; also called *sublingual fossa, sublingual pit*.
f. submaxillaris mandibulae. A smooth shallow depression on the internal surface of the body of the mandible below the mylohyoid line for the submaxillary gland; also called *submaxillary fossa, submaxillary pit*.
hemielliptical f. A small depression on the inner wall of the labyrinth. It is perforated for the passage of filaments of the auditory nerve.
hemispherical f. A depression in the roof of the bony labyrinth.
inferior f. That in the inferior part of the floor of the fourth ventricle, marking the end of the sulcus limitans.
lateral inguinal f. A depression in the anterior wall of the peritoneal cavity lateral to the epigastric fold.
medial inguinal f. A depression in the anterior wall of the peritoneal cavity between the lateral umbilical fold and the ridge made by the inferior epigastric vessels, the epigastric fold.
oblong f. A shallow depression on the external surface of an arytenoid cartilage.
superior f. That in the floor of the fourth ventricle near the facial colliculus, formed by the widening of the sulcus limitans.
supravesical f. A depression in the anterior wall of the peritoneal cavity between the medial and lateral umbilical folds.
triangular f. A deep depression on the external surface of an arytenoid cartilage.
trochlear f. A hollow in the orbital plate of the frontal bone for the trochlea of the superior oblique muscle.
fo-ve'o-la [dim. of *fovea*]. A small fovea or depression. —**foveolate,** *adj.*
f. palatina. One of a pair of small depressions in the mucous membrane at the boundary between hard and soft palate, into which several palatine glands open. Syn., *fovea palatina*.
gastric f. One of the pits or grooves in the mucous membrane of the stomach, which receive the secretions of the gastric glands.
granular f. Any one of the small pits in the cranial bones produced by the Pacchionian bodies.
triangular f. A triangular depression between the anterior pillars of the *fornix*, 2.
Foville, Achille Louis François [*French neurologist*, 1799–1878]. Remembered for his important contributions to neurology. Described syndrome of conjugate ocular deviation palsy with or without peripheral facial paralysis on one side and upper motor paralysis of the bulbar muscles and limbs on the opposite side, due to lesions of the pons (1858); called *crossed paralysis, Foville's syndrome* or *paralysis, unilateral* or *bilateral pons paralysis*.
Fowler, George Ryerson [*American surgeon*, 1848–1906]. Credited with introducing thoracopl

(1893) Described an incision somewhat similar to the gridiron incision, but slightly nearer the median line, for appendectomy Devised an operation, now rarely used, of decortication of the lung for chronic empyema; called *Fowler* or *Fowler-Delorme operation*. See also F wler position.

Fowler Thomas [*English physician*, 1736–1801]. Introduced *Fowler' solution*. See *potassium arsenite solution*.

Fox, George Henry [*American dermatologist*, 1846–1937]. With Fordyce, described rare disease, called *Fox-Fordyce disease*, characterized by an itching papular eruption affecting principally the axillas (1902) This is thought to be due to dysfunction of the sweat glands.

Fox, William Tilbury [*English dermatologist*, 1836–79]. Internationally known for his many contributions to the knowledge of dermatology Gave first description of impetigo contagiosa (1864) called *impetigo of Tilbury Fox*. Gave first description of dyshidrosis or pompholyx (1873) First to describe epidermolysis bullosa (1879) called *Goldscheider disease* (1882) G ve first description of dermatitis herpetiformis (1880) also called *Duhring' disease*.

fox'glove" See *digitalis*.

FP Abbreviation for flavin phosphate (riboflavin-5-phosphate)

Fracastoro, Girolamo (Fracastorius) [*Italian pathologist*, 1483–1553] Author of the famous medical poem, *Syphilis Sive Morbus Gallicus*, which included all the knowledge of the time regarding syphilis and gave the disease its name (1530) Recognized the origin of syphilis and suggested mercury treatment. Contributed greatly to the knowledge of infectious and contagious disease and suggested the germ theory of infection (1546) Has been described as the founder of scientific epidemiology Gave the first authentic account of typhus (1546)

frac'tion al [L. *fractio*, from *frangere*, to break]. 1. Pertaining to fraction. 2. *I chemistry* divided successively pplied to any one of the several processes for separating mixture into its constituents through differences in sol bility boiling point, etc., such as fractional distillation, fractional sterilization, etc.

frac"tion tion [*fractio*] 1 *I chemistry* the separation of mixture into its constituents, as in fractional distillation. 2. *I microbiology*, the process of obtaining pure culture by successive culturing of small portions of colony Also called *fractional cultivation*. 3. *I physiology* the phenomenon whereby maximal stimulation of given efferent nerve produces contraction of only fraction of the fibers in the responding muscle.

fract ure [L. *fractura*, fractura, from *frangere*]. The breaking of bone or cartilage. See Plates 25, 26, 27

articular f. A fracture entering into joint.

avulsion f. The tearing off of bony prominence, as tuberosity by the forcible pull of its tendinous or muscular ttachments.

bumper f. A fracture of the leg from collision with the bumper of motor car

buttonhol f. See puncture *f*

hip f. A minor fracture involving bony process.

closed f A simple fracture

Colles' f A fracture of the distal end of the radius within one inch of the articular surface characterized by dorsal displacement of the distal fragment, radial and dorsal deviation of the wrist and hand, and disturbance of the radioulnar articulation. See Plate 25.

comminuted f. A fracture in which there is splintering or fragmentation of the bone.

complete f. One in which the continuity of the entire bone is destroyed.

complicated f One associated with injury of the surrounding soft parts, which will complicate treatment and/or recovery

compound f One in which the point of fracture is in contact with the external surface of the body also called *open f*

compression f. One in which surface of bone is driven toward another bony surface commonly found in vertebral bodies.

congenital f. See intrauterine *f*

Cotton's f See trimalleolar *f*

dentate f. One in which the ends of the fragments are toothed and interlocked.

depressed f. A fracture of th skull in which the fractured part is depressed below the normal level.

double f One in which there are two fractures in the same bone.

epicondylar f One involving an epicondyle of one of the long bones.

epiphyseal f One occurring along the epiphyseal line.

extracapsular f A fracture near joint but not entering within the joint capsule.

fatigue f See march *f*

fissured f One in which there is an incomplete break; crack or fissure extending into, but not through, bone.

f. by contre-coup. A fracture of the skull caused by transmitted violence to the cranial vault, causing break at point distant from, and usually opposite, the site of trauma.

greenstick f An incomplete fracture of long bone, seen in children; the bone is bent but splintered only on the convex side.

gutter f A form of depressed fracture of the skull with an elliptic depression often caused by missile.

impacted f. A fracture in which th harder cortical bone of one fragment has been driven int the softer cancellous bon of another fragment.

incomplete f. One which does not extend through the entire bone.

intracapsular f. On within the joint capsule.

intrauterine f. A fracture occurring during fetal life.

march f Fracture of the metatarsal bones without obvious trauma, as result of marching Syn., *fatigue f* *stress f*

multiple f Two or more fractures occurring in the same or different bones.

open f. See compound *f*

pathologi f One which occurs at the site of local disease in bone (as metastatic carcinoma) without external violence.

Pott's f Fracture of the inferior tibiofibular joint usually associated with splitting off of the tip of the medial malleolus, rupture of the tibial collateral ligament, and outward displacement of the foot. See Plate 26.

puncture f One in which there is loss of bone without disruption of continuity as hole drilled through bone by projectile.

pyramidal facial f A fracture of the face in which the upper jaw is completely separated from the rest of the skull. The break extends upward through each maxillary sinus to the ethmoid region and base of the nose, assuming pyramidal shape with base upward.

silver-fork f. See Colles *f*

simple f One in which there is no communication with the outside.

spontaneous f One occurring without pparent trauma, occurs in cases of bone atrophy or other general diseases of the bone.

sprain f. A sprain, usually of the ankle joint, complicated by fracture or chipping of the bone.
stellate f. One in which there are numerous fissures radiating from the central point of injury.
stress f. See march f.
subperiosteal f. One in which the overlying periosteum is intact.
supracondylar f. A fracture of the lower end of the humerus above the condyles. See Plate 35.
T f. A fracture of the end of long bone, in the form of the letter T. Specifically the intercondylar fracture of the lower end of the humerus, with splitting of the shaft.
trimalleolar f. A fracture in which the medial and lateral malleoli and the posterior lip of the tibia are fractured, usually associated with posterior dislocation of the talus; also called Cotton f.
ununited f. One in which, after the normal period, there is failure of union.

frac'ture box. A wooden case for immobilizing fractures of the leg.
frac'ture-dis"lo-ca'tion. See under *dislocation*.
frad'i-cin. An antibiotic substance isolated from cultures of *Streptomyces fradiae*; it is active against certain fungi.
Fraenkel, Albert [*German physician*, 1848–1916]. Showed the causal relation of the *Diplococcus pneumoniae* to pneumonia (1886). The organism had been isolated previously by both Pasteur and Sternberg.
frae nu lum (free yoo-lum, free yoo lum) See *frenulum*.
frae num (free'num) See *frenum*.
fra gil'i tas [L.]. Brittleness.
f. crinium. Atrophic condition of the hair in which the individual hairs split into numerous fibrils or break off.
f. ossium. Osteogenesis imperfecta.

fra-gil'i ty [*fragilitas*]. Quality of being easily broken or destroyed. —frag'ile *adj*
capillary f. Weakness of the capillaries, as in purpura.
erythrocytic f. See osmotic f. and mechanical f.
mechanical f. The susceptibility to breakage of erythrocytes when mechanically agitated, as with glass beads in flask. Also see under *test*.
osmotic f. The susceptibility to the lysis of the erythrocytes when placed in hypotonic saline solutions. Also see under *test*.

frag"men-ta'tion [L. *fragmentum*, piece, from *frangere*, to break]. 1 Division into small portions. 2. Amitosis.
fragments of Spengler See Carl *Spengler*
fram be'si a (fram-bee zhah, -see-ah) See *yaws*.
fram be si form Of, pertaining to, or like frambesia said especially of cutaneous eruption simulating or identical to that of yaws.
France, Ehmoll, and Wilhelmj's method. See under *method*.
Francis, Edward (1872–) American bacteriologist and physician, principal investigator of transmission of tularemia by insects among small animals to man. H discovered the essential requirement of cystine for the growth of *Pasteurella tularensis* (1923)
Francis, Thomas, J [*American pathologist* 1900–]. Introduced skin test for the presence of antibody in pneumococcal pneumonia. See Francis *test*.
fran ci um [after *France*]. Element number 87 symbol Fr isolated in 1939 by Perey; formerly called virginium.
Franco, Pierre [*French surgeon*, 1500–61]. Gave first description of an operation for strangulated hernia (1556) and performed first suprapubic cystotomy in the same year

fran'gu la [L. *frangere*, to break]. The bark of *Rhamnus frangula*, or glossy buckthorn. The fresh bark is strongly irritant and causes violent catharsis; when dried it is laxative. Dose 1 2 Gm. (15–30 gr.) The dose of the fluidextract is 1 cc. (15 min.)
fran'gu lin. $C_{21}H_{20}O_9$. 4,5,7-trihydroxy-2-methylanthraquinone-L-rhamnoside; glycoside occurring in *Rhamnus* species. On hydrolysis it yields emodin and L-rhamnose. Syn., *avorin*, *emodin-L-rhamnoside*, *frangularole*, *rhamnoxanthin*.
fran'gu lo-side. Frangulin.
frank, *l* medicus, actual, unmistakable, bylons jargon.
Frank, Alfred Erich [*German physician*, 1884–]. Described essential thrombopenia (1915) Nonthrombopenic purpura is also called *Frank' capillary toxicosis*. Demonstrated the relationship of the posterior lobe of the pituitary body to diabetes insipidus (1912)
Frank, Fritz [*German gynecologist*, 1856–1923]. Described an operation of Cesarean section in which the uterus is drawn out of the abdomen before incising.
Frank, Johann Peter [*German physician*, 1745–1821]. Called one of the founders of the science of public health. First to differentiate between diabetes insipidus and diabetes mellitus.
Frank, Rudolph [*Austrian surgeon*, 1862–1913] Devised an operation of gastrostomy equivalent to that described by Sabaneev. A cone of stomach is pulled through high rectus incision and under the costal arch, passing through skin tunnel, to be anchored. Called *Frank' operation*, *Sabaneev-Frank operation*.
Franke's method. See Benedict and Franke *method*.
frank'in-cense [O F *franc*, free *encens*, incense]. An aromatic gum resin. See *olibanum*.
Franklin, Benjamin [*American scientist and statesman*, 1706–90]. Influenced American medicine by his gospel of fresh air and his modern views on catching cold. Invented bifocal spectacles, called *Franklin glasses*. Gave an account of the success of inoculation for smallpox in England and America (1759) His investigations of static electricity were of the first importance.
Frapolli, Francesco [*Italian physician*, d. ca. 1773]. Remembered for his description of pellagra, in which he gave the disease its name (1771)
Fraser John [*English botanist* 1750–1817]. Remembered for his discovery of the tonic properties of the root of the American columbo or *Frasera carolinensis*.
Fraser Thomas Richard [*British pharmacologist*, 1841 1920] Remembered for his introduction of *Strophanthus* as medicine (1892) Did valuable work in immunization against cobra venom in India, leading to his production of antivenin (1895) With Alexander Crum Brown, was first to study the chemical constitution of drugs in relation to their physiologic action.
Fraunhofer' lines. See *absorption* bands.
frax'in. A glycoside, $C_{16}H_{18}O_{10}$, from the bark of the European ash, *Fraxinus excelsior* it is diuretic.
Frazier Charles Harrison [*American neurologist and surgeon*, 1870–1936]. With Spiller introduced intracranial trigeminal neurotomy of the sensory root for the relief of trigeminal neuralgia (1901) called *Frazier' operation*, *Spiller' operation*. He made cordotomy practical surgical procedure. *Frazier' needle* is hollow needle to be inserted in the lateral ventricles of the brain when continuous drainage is desired.
F.R.C.P Fellow of the Royal College of Physicians.

F.R.C.P.E. Fellow of the Royal College of Physicians of Edinburgh.

F.R.C.P.I. Fellow of the Royal College of Physicians of Ireland.

F.R.C.S. Fellow of the Royal College of Surgeons.

F.R.C.S.E. Fellow of the Royal College of Surgeons of Edinburgh.

F.R.C.S.I. Fellow of the Royal College of Surgeons of Ireland.

Fredet, Pierre [French surgeon, 1870–1946]. Distinguished for his original work on the relief of congenital pyloric stenosis by incision of the serosa and muscular layer to the mucosa without opening the duodenum. Called *Fredet-Ramstedt operation*.

free mar'tin. An intersexual female calf, commonly sterile, twinborn with a male; produced by masculinization by sex hormones of the male twin when the placental circulations are partially fused.

free rad'i-cal. A non-ionic compound, highly reactive and of relatively short life, in which the central element is linked to an abnormal number of atoms or groups of atoms.

Frei, Wilhelm Siegmund [German dermatologist, 1885–1943]. Established a specific test for venereal lymphogranuloma (1925). This consists of an intradermal antigen injection prepared from material containing the virus, called *Frei test*, *Frei' reaction*. Venereal lymphogranuloma is known as *Frei' disease*, *Durand-Nicolas-Favre disease*.

Freiberg, Albert Henry [American orthopedic surgeon, 1868–1940]. Described osteochondrosis of the epiphysis of the head of the second metatarsal bone of adolescents, called *Freiberg' disease*, *Freiberg' infraction of metatarsal head*, *Köhler' disease*.

frem'i-tus [L., resounding, murmuring noise]. A palpable vibration.

echinococcus f. The vibration felt over an echinococcus cyst.

friction f. The vibrations produced by the rubbing together of two dry surfaces.

rhonchal f. Vibrations produced by the passage of air through a large bronchial tube containing mucus.

tactile f. The vibratory sensation conveyed to the hand when applied to the chest of a person speaking.

tussive f. Thrill felt by the hand when applied to the chest of a person coughing.

vocal f. The sounds of the voice transmitted to the ear when applied to the chest of a person speaking.

Frenkel, Heinrich S. [Swiss neurologist, 1860–1931]. Devised a system of muscular exercises for the treatment of incoordination in tabes dorsalis in which the limbs are flexed and extended, abducted and adducted; this is followed by sitting and rising, then stepping forward and backward. Called *Frenkel' exercise treatment of ataxia* (1890). Described a sign of hypotony of the muscles of the lower extremities in tabes, called *Frenkel' sign*.

fre-not'o-my [L. *frenum*, curb; G. *tomē*, cutting]. The cutting of any frenum, particularly of the frenulum of the tongue for tongue-tie.

fren'u-lum, fre'nu-lum (fren'yoo-lum, free') [L., dim. of *frenum*]. A small frenum; a slight ridge on the upper part of the anterior medullary velum.

f. of Giacomini. A narrow band between the uncus and the fascia dentata. Also called *band of Giacomini*.

f. of the clitoris. Either of two folds of skin coming from the labia minora and being united under the glans of the clitoris.

f. of the ileocecal valve. The upper or lower lip of the ileocecal valve.

f. of the lips. One of the folds of mucous membrane in the median line uniting each lip to the corresponding gum.

f. of the prepuce. The fold on the lower surface of the glans penis connecting it with the prepuce.

f. of the pudendum. The fourchette.

f. of the tongue. The vertical fold of mucous membrane under the tongue.

f. of the velum. The thickened median portion of the anterior medullary velum.

f. valvulae coli. The fold at either extremity of the ileocecal valve where the upper and lower margins fuse.

fre'num, free'num [L.]. A fold of integument or mucous membrane that checks or limits the movements of any organ. See *frenulum*. —**frenal**, *adj.*

fren'zy [G. *phrēn*, mind]. Violent mania.

freon. Trade-mark for a group of halogenated hydrocarbons containing one or more fluorine atoms; widely used as refrigerants and propellants for the dispersion of insecticidal mists.

freon-12. Trade-mark for dichlorodifluoromethane, CCl_2F_2, used as a refrigerant and propellant.

fre'quen-cy [L. *frequens*, crowded, frequent]. 1. Rate of occurrence of a periodic process. 2. *In biometry*, the ratio of the number of observations falling within a classification group to the total number of observations made.

audible f. Any one or all of the frequencies within the audible range.

electromagnetic f. The number of complete electromagnetic waves, or cycles, per second.

fusion f. The lowest frequency at which flashes of light produce on the retina the impression of a steady light rather than a flicker. Also called *critical fusion f.*

gene f. The ratio in which the members of a given gene pair, *A* and *a*, are present in the population, or the relative number in which the three types of individuals, *AA*, *Aa*, and *aa* occur in the population.

radio f. Any one or all of the frequencies above the audible range.

fre'quen-cy dis"tri-bu'tion. *In biometry*, a statistical table showing the frequency or number of observations (as test scores, ages, etc.) falling in each of certain classification groups or intervals (as 10–19, 20–29, etc.)

Frerichs, Friedrich Theodor von [German pathologist and clinician, 1819–85]. Discovered leucine and tyrosine in the urine in acute yellow atrophy of the liver (1855). Gave the first scientific description of multiple sclerosis (1849) and the first description of progressive lenticular degeneration (1861).

Freud, Sigmund (1856–1939). Austrian psychiatrist, who first suggested the use of cocaine as a surface analgesic. With J. Breuer he is credited with the discovery of the unconscious mind. From his observations of neurosis, especially hysteria, he developed a system of psychology first employed as a technique in the therapeutic management of psychoneurotic disorders, which he named *psychoanalysis* and which evolved into the *psychoanalytic theory*. Stressing the formative years of childhood, it approaches mental phenomena of the present by a study of the individual' past. By studying dreams, neurotic symptoms, slips of tongue, hypnotic phenomena, common errors, and the like, Freud demonstrated many unconscious mental forces. He introduced a hypothetical but useful division of the mind into the *id*, *ego*, and *superego*; the pleasure-pain principle; the phase or stage concept of child development (oral, anal, phallic, latent,

and genital); the Oedipus complex; and many other concepts and their terminology now employed in psychiatry as well as by society at large. —**Freud'ian**, *adj.*

Freud'i an (froyd'ee-un) [*Freud*]. One who adheres to Freud's school of psychoanalysis.

Freundlich, Herbert Max Finlay [*German physiological chemist*, 1880–1941]. Known for his description of an adsorption equation as one relating the amount of a solute adsorbed and its concentration; called *Freundlich's adsorption equation*.

Freyer, Peter Johnston [*English surgeon*, 1851–1921]. Did much to popularize the suprapubic prostatectomy. Although his claim to its origination (1900) was antedated by Fuller, the operation is still called *Freyer's operation*.

Frey's syndrome. See auriculotemporal *syndrome*.

F.R.F.P.S. Fellow of the Royal Faculty of Physicians and Surgeons.

F.R.F.P.S.G. Fellow of the Royal Faculty of Physicians and Surgeons of Glasgow.

fri'a-ble [L. *friare*, to break into small pieces]. Easily broken or crumbled.

Frick, George [*American ophthalmologist*, 1793–1870]. Remembered for his operation for entropion, a blepharoplasty in which a tongue-shaped flap is taken from the temple or cheek; called *Frick's operation*. Published first important textbook on ophthalmology in America (1823).

fric'tion [L. *frictio*, from *fricare*, to rub]. 1. The act of rubbing, as rubbing the body for stimulation of the skin. 2. The resistance offered to motion between two contacting bodies.

Friderichsen, Carl (1886–). Danish pediatrician, who described a syndrome, previously observed by R. Waterhouse, and now called *Waterhouse-Friderichsen syndrome*.

Friedemann and Graeser's method. See under *method*.

Friedländer, Carl [*German pathologist*, 1847–87]. First to describe thromboangiitis obliterans (1876). Isolated *Klebsiella pneumoniae* (1883), called *Friedländer's bacillus*, the causative agent of Friedländer pneumonia. He also described the large connective-tissue cells of the decidua, called *Friedländer's cells*.

Friedman, Maurice Harold (1903–). American physiologist who investigated the mechanisms of ovulation in the rabbit, and the physiology of the female reproductive tract. He is known for his test for pregnancy. See Friedman *test*.

Friedman test. See under *test*.

Friedmann, Max [*German neurologist*, 1858–1925]. Remembered for his description of relapsing spastic spinal paralysis and for his observations on postconcussion syndrome, which he attributed to a slowly developing encephalitis with acute exacerbations. See Friedmann's vasomotor symptom complex.

Friedreich, Nikolaus [*German neurologist*, 1825–82]. Described paramyoclonus multiplex (1881), called *Friedreich's disease*. First to describe a hereditary spinal sclerosis with impairment of speech, lateral curvature of the spine, and lower limb palsy (1863), called *Friedreich's ataxia*. Described a sign for cavitation of the lungs, in which there is a change in the percussion note during inspiration and expiration; called *Friedreich's sign*.

Friedrich, Paul Leopold [*German surgeon*, 1864–1916]. Described his operation, now obsolete, for lung collapse, in which he employed extrapleural thoracoplasty from the second to the ninth ribs, removing periosteum and muscle bundles; called *Friedrich-Brauer operation*.

fright [AS. *fyrhto*]. Sudden and extreme fear.

precordial f. The precordial sensations of impending physical collapse experienced in the acute panic of an anxiety neurosis.

fri gid'i ty [L. *frigidus*, cold]. Coldness; absence of sexual desire in women, probably of psychic origin.

frig"o-ther'a py [L. *frigus*, cold; G. *therapeia*, treatment]. The treatment of disease by cold.

fringe [OF., from L. *fimbria*, fringe]. One of a number of bands, light or dark, produced by the interference of light.

Frisch, Anton Ritter von [*Austrian surgeon and bacteriologist*, 1849–1917]. Known for his description of *Klebsiella rhinoscleromatis*, called *Frisch bacillus*, found in cases of rhinoscleroma.

Fritsch, Gustav Theodor [*German neurologist*, 1838–1927]. Made experimental studies with Hitzig (1870) on electric stimulation of the cerebral cortex of the frontal lobe, proving the existence of a motor area.

Froehlich, Alfred [*Austrian neurologist and pharmacologist in the United States*, 1871–]. Gave a classic description of adiposogenital dystrophy (1901), also called *Froehlich's syndrome*, *Babinski-Froehlich disease*.

frog [AS. *frogga*]. 1. A leaping amphibian of the genus *Rana*; it is tailless, smooth-skinned, and has webbed feet. 2. An elastic, horny pad, in the middle of the sole of a horse's hoof; it is triangular in shape and serves to separate the two bars.

Frohde's reagent. See under *reagent*.

Froin's syndrome. See loculation *syndrome*.

frôle ment' (frawl mahn'. See Notes § 35) [F.]. A succession of slow brushing movements in massage, done with the palmar surfaces of the fingers.

Froment's sign. See under *sign*.

Frommann, Carl [*German anatomist*, 1831–92]. Described the transverse striae or lines appearing in the axis cylinder of medullated nerve fibers after staining with silver nitrate, called *Frommann's lines*.

Frommel, Richard [*German gynecologist*, 1854–1912]. Described an operation for retrodisplacement of the uterus by shortening the uterosacral ligaments by the abdominal route, called *Frommel's operation*. Drew attention to the atrophy of the uterus sometimes occurring after prolonged lactation, called *Frommel's disease*.

front'ad (frun'tad, fron'tad) [L. *frons*, forehead; *ad*, toward]. Toward the frontal aspect.

fron'tal (frun'tul, fron'tul) [*frons*]. 1. Pertaining to the anterior part or aspect of an organ or body. 2. Belonging to the forehead. See Table of Bones in the Appendix.

fron ta'lis (fron tah'lis, -tay'lis, -tal'is) [*frons*]. The frontal portion of the epicranius muscle.

fron'tal nerve. See Table of Nerves in the Appendix.

fron"to- [*frons*]. In anatomy and zoology, a combining form denoting *anterior position* or expressing *relation with the forehead or frontal region*.

fron"to-ma'lar [*frons*; L. *mala*, cheek-bone]. Relating to the frontal and to the zygomatic bones.

fron"to-max'il lar"y (fron"to-mack'si lerr"ee) [*frons*; L. *maxilla*, jawbone]. Relating to the frontal bone and the maxilla.

fron"to-men'tal [*frons*; L. *mentum*, chin]. Running from the top of the forehead to the point of the chin, or relating to the forehead and chin.

fron"to-na'sal [*frons*; L. *nasus*, nose]. Pertaining to the frontal and nasal bones, as frontonasal suture; also *nasofrontal*.

fron"to-oc-cip'i tal (fron"to-ock-sip'i-tul) [*frons*; L. *occiput*, back part of the head]. Pertaining to the forehead and the occiput or to the frontal and occipital bones, as fronto-occipital muscle.

fron to-tem"po ra'le (fron to-tem po-rah'lee, -ray'lee) (pl. *fronto-temporalia*) [*frons*; L. *tempus*, temple]. That point on the superior temporal line on the zygomatic process of the frontal bone which is located most anteriorly and medially. The two fronto-temporalia form the points of departure for measuring the least frontal diameter of the skull.

Froriep, August von [*German anatomist*, 1849–1917]. Described fibrous myositis, called *Froriep' induration*. See also Froriep *ganglion*.

Frosch, Paul [*German physician*, 1860–1928]. With Loeffler was first to discover filtrable virus to be the cause of disease of animals (foot and mouth disease, 1897)

frost'bite [AS. *frost*, *bitan*]. A condition similar to the lesions produced by burns, resulting from exposure to severe degrees of cold. The three stages of frostbite are marked by erythema, vesication, and necrosis, respectively. The parts most commonly affected are the ears, tip of the nose, fingers, and toes.

frost'-itch" [*frost*, AS. *gicce*]. Pruritus hiemalis.

froth sta'bi li"zer Certain oils and chemicals which produce stable froths in water; they function best in the presence of finely divided solids.

frot"tage' (fraw tahzh *See* NOTES § 35) [F.]. 1. Massage, rubbing. 2. A form of sexual perversion in which orgasm is induced by rubbing against someone.

frot"teur' (fraw tur' *See* NOTES § 35) [F.]. A sexual pervert who practices frottage.

fro'zen sec'tions. Histologic sections cut from frozen tissues or organs, as from those removed from the body during operation and examined immediately for possible malignancy

F.R.S. Fellow of the Royal Society

F R.S.E. Fellow of the Royal Society of Edinburgh.

fruc"to-fu ran'o-san. One of the polysaccharides of fructose.

fruc"t fu'ran-ose. A fructose with 2-5 butylene oxide or furanose ring.

fruc"to fu-ran o-side. A glycoside of fructofuranose

fruc"to py'ran-ose. A fructose with 2-6 pyranose ring.

fruc'to-san. See *levulosan*.

fruc'tose [L. *fructus*, fruit]. Levulose

fruc'tose-1,6-di phos'phate. $C_6H_{10}O_{11}P_2$, D-fructose-1,6-diphosphoric acid; an ester formed from fructose-6-phosphate and adenosinetriphosphate in the presence of magnesium ion and phosphohexokinase; it is an intermediate in carbohydrate metabolism. Syn., *Harden-Young ester hexose-diphosphate*.

fruc'tose-1-phos phate. $C_6H_{13}O_9P$ D-fructose-1 phosphoric acid, formed by the action of liver hexokinase upon fructose; presumably it is then converted to fructose-6-phosphate in the presence of phosphofructomutase.

fruc'tose-6-phos'phate. $C_6H_{13}O_9P$; D-fructose-6-phosphoric acid, present in animal tissues in equilibrium with glucose-6-phosphate, into which it may be reversibly converted in the presence of phosphohexose isomerase it is an intermediate in carbohydrate metabolism. Syn *fructose monophosphate, hexosemonophosphate, Neuberg ester*

fruc to-side. A glycoside which yields fructose (levulose) on hydrolysis.

fruc"to-su'ri [*fructus*; G *ouron*, urine]. The presence of fructose i the urine; levulosuria.

fru giv' -rous (froo jiv' rus, giv'o-rus) [L. *fruz*, fruit *vorare*, t devour]. Fruit-eating

fruit [L. *fructus*, fruit]. The developed ovary of plant, including the succulent, fleshy parts gathered about the same.

fruit sug' r Levulose.

fru"men ta ceous [L. *frumentum*, grain]. Belonging to or resembling grain.

fru men'tum [L.]. Wheat or other grain.
spiritus frumenti. Whisky

frus'trane [L. *frustra*, without effect]. Faintly heard, as frustrane extrasystole.

frus-tra tion [L. *frustratio*, from *frustrari*, to frustrate]. 1 The condition that results when an impulse to act or the completion of an act is blocked or thwarted, preventing the satisfaction of attainment. 2. The blocking or thwarting of an impulse.

frus'tule. Th siliceous shell of diatom, consisting of two overlapping valves.

FSH Abbreviation for follicle-stimulating *hormone*.

ft. 1. *I pharmacy*, fiat or fiant; let there be made. 2. Abbreviation for foot.

ft.-lb. Abbreviation for foot-pound.

fuadin. The trade-mark of sodium-antimony-bispyrocatechol-3,5-sodium disulfonate, employed in the treatment of granuloma inguinale and of schistosomiasis. See *stibophen*.

Fuchs, Alfred [*Bohemian neurologist in Austria*, 1870–1937]. With Robert Rosenthal, devised chamber for cytologi counting ther than blood counting. The *Fuchs-Rosenthal counting chamber* which is 0.2 mm. deep, has triple lines marking 16 divisions 1 mm. square, and single lines dividing each of these squares into 16 smaller squares.

Fuchs, Ernst [*Austrian ophthalmologist*, 1851 1930]. Described peripheral optic nerve atrophy (1885) called *Fuchs atrophy* His textbook (1889) became classic and was translated into many languages A crescentic conus is known as *Fuchs conus*. *Fuchs black spot* is observed in choroidal changes in myopia.

Fuchs, Leonhard [*German botanist*, 1501–66]. Author of the most widely known herbal of the sixteenth century the most extensive study of pharmacology of the time (1542) Described many varieties of American plants, including the *fuchsia*, whose name is derived from the author's.

fuch sin (fōōk sin, fōōk sin) A red dyestuff occurring in two forms, acid and basic.
acid f. (a) A mixture of sodium and ammonium salts of rosaniline sulfonic acids reddish brown crystals. (b) (C C.) The disodium salt of rosaniline, or pararosaniline, trisulfonate, or mixture of these; used as biologic stain. Also called *acid magenta, acid rubin, fuchsin S SN SS, ST* or *SIII*
basic f (C.C) A dye, or group of dyes, of the triphenyl methane group; mixtures of the chlorides or acetates of pararosaniline and rosaniline and magenta II in varying proportions. Used as bacterial stain and in general histologic work; 0.05% aqueous solution of basic fuchsin (90% dye content) is employed. The lustrous green crystals are used as germicide and granulating agent in skin diseases, generally in 1% strength. Also called *diamond fuchsin, magenta, aniline red, rubin*.

fuch-sin'o-phil (fōōk sin o-fil, fōōk) Stainable with fuchsin.

fu'co-san. Polysaccharide yielding L-fucose, an aldohexose, upon hydrolysis. Occurs in the seaweed J panese nori.

fu cose. $C_6H_{12}O_5$; an aldose, terminating in methyl group at the umber 6 carbon atom, existing in D- and L-forms. D-Fucose is obtained by hydrolysis of convolvulin, jalapin, and other glycosides; L-fucose occurs in certain seaweeds. Syn., *6-deoxygalactose, D-galactomethylose, rhodeose* (D-fucose)

fu"co ster ol. $C_{29}H_{47}OH$; the typical sterol of the marine brown algae of the class Phaeophyceae.

fu″co-xan′thin. A carotenoid pigment found in fresh brown algae of the class Phaeophyceae.

fu′cus. The dried thallus of *Fucus vesiculosus* and other common brown algae of the rockweed group. It contains small amount of combined iodine, and has been used in the treatment of obesity.

Fuerbringer, Paul [German physician, 1849–1930]. Remembered for his description of sign of subphrenic abscess in which respiratory movement is transmitted to needle inserted into the abscess, whereas in an abscess situated above the diaphragm, the inserted needle does not move; called *Fuerbringer's sign.*

Fuerstner, Carl [German psychiatrist, 1848–1906]. Described pseudospastic paralysis accompanied by tremor; called *Fuerstner's disease.*

fu·ga′cious [L. *fugax*, flying swiftly]. *I* biology falling off, as the falling off or fading of petals after the full bloom of flower.

-fuge (-fewdj) [L. *fugere*, to flee]. A combining form denoting *that which causes to flee* or *drives away.*

fu′gi·tive [L. *fugitivus*, fugitive]. Wandering or transient, as pain.

fugue (fewg) [L. *fuga*, fleeing]. A state of amnesia of considerable duration, sometimes involving flight from familiar surroundings. During the fugue, the patient appears to act in conscious way and retains his mental faculties, but after recovery has no remembrance of the state.

fu′gu poi′son. A poison in the roe and other parts of certain fish of the *Tetrodon* genus, found in Japanese and other eastern Asiatic waters.

ful′gu·ra″ting, ful′gu·rant [L. *fulgurare*, to lighten]. Lightninglike; used to describe sudden excruciating pain.

ful″gu·ra′tion [L. *fulguratio* from *fulgurare*]. Destruction of tissue, usually malignant tumors, by means of electric sparks.

fu·lig′i·nous (few-lidj′i·nus) [L. *fuliginosus*, full of soot]. Smokelike; very dark; soot-colored.

Fuller, Eugene [American surgeon, 1858–1930]. First to publish an account of the successful removal of both intravesical and intraurethral enlargements of the prostate by enucleation, using the suprapubic route (1895). Devised *Fuller's operation* for drainage of the seminal vesicles.

ful′mi·nant, ful′mi·na″ting [L. *fulminare*, to lighten]. Sudden, severe, and rapid in course.

Fulton, John Farquhar (1899–). American neurophysiologist, best known for his writings on the physiology of the nervous system, the history of medicine, and his biography of Harvey Cushing.

Fulton's stain. See *Schaeffer-Fulton modification of Wirtz method* under *stain.*

fu″ma·gil′lin. Generic name for an antibiotic substance produced by certain strains of *Aspergillus fumigatus*, occurring in light-yellow crystals, practically insoluble in water. It possesses an extremely narrow pathogenic spectrum, showing little or no activity as an antimicrobial or antifungal agent; it has specific activity against *Endamoeba histolytica*, and is used in treating acute intestinal amebiasis. See *fumidil.*

fu′ma·rase. An enzyme occurring in bacteria, molds, yeasts, higher plants, and animals, particularly in liver and muscle. It is specific catalyst for the conversion of fumaric acid (plus water) to *l*-malic acid.

fu′mar·ate. A salt of fumaric acid.

Fu·ma·ri·a·ce·ae (few-mair″ee-ay′see-ee) [L. *fumus*, smoke]. A family of plants including the genera *Adlumia*, *Corydalis*, *Dicentra*, and *Fumaria*; by some authorities this family is ranked as subfamily (Fumarioideae) of the Papaveraceae. Many alkaloids are found among the plants of the Fumariaceae.

fu·mar′ic ac′id. COOH.CH:CH.COOH. Trans-ethylene dicarboxylic acid. A dibasic acid, the trans-isomer of maleic acid. It occurs in *Fumaria officinalis* and in mammalian tissues as an intermediate in the metabolism of carbohydrate.

fu′ma·rine (few′muh-reen, ·rin). An alkaloid, $C_{20}H_{19}O_5N$, found in the opium poppy and other Papaveraceae, as well as in plants of the Fumariaceae. It is identical with protopine and macleyine.

fumidil. Trade-mark for the antibiotic substance *fumagillin.*

fu·mi·ga·cin. An antibiotic substance produced by different strains of *Aspergillus fumigatus*. It is identical with helvolic acid.

fu·mi·ga′tin. A maroon-colored, crystalline substance, 3-hydroxy-4-methoxy-2,5-toluquinone, $C_8H_8O_4$, isolated from cultures of *Aspergillus fumigatus*. It has antibacterial properties, but differs from fumigacin.

fu″mi·ga′tion [L. *fumigare*, to smoke]. Disinfection by exposure to the fumes of vaporized disinfectant.

fu′ming [L. *fumus*, smoke]. Emitting smoke or vapor, as fuming nitric acid.

func′tion [L. *functio*, performance, from *fungi*, to perform]. 1. The normal or special action of part. 2. The chemical character, relationships, and general properties of substance. —**func′tion,** *v.*

func′tion·al, *I* psychiatry nonorganic.

fun′da·ment [L. *fundamentum*, foundation]. 1. The foundation or base. 2. The buttocks.

fun·dec′to·my. See *fundusectomy.*

fun′di·form [L. *funda*, sling; *forma*, shape]. Shaped like sling, or loop.

fun′dus (pl. *fundi*) [L., bottom]. The base of an organ; the part farthest removed from the opening of the organ. —**fundic,** *adj.*

central f. The area of the fundus of the eye that includes the macular and perimacular regions.

f. meatus acustici interni. The bottom or lateral end of the internal auditory canal.

f. oculi. The posterior portion of the interior of the eye. See Plate 19.

f. of the gallbladder. The wide, anterior end of the gallbladder.

f. uteri. That part of the uterus most remote from the cervix. See Plate 41.

f. ventriculi. The large, rounded cul-de-sac cephalad to the cardia of the stomach, when that organ is dilated; also called *fornix of the stomach.*

f. vesicae. The posterior part or base of the urinary bladder.

pepper-and-salt f. A fundus oculi in which yellowish-red, gray, and black spots are present in the choroid; often found in syphilis.

fun′du·scope [L. *fundus*, bottom; G. *skopein*, to examine]. An instrument for the visualization of the fundus of th eye.

fun″du·sec′to·my [L. *fundus*, base; G. *ektomē*, excision]. Surgical removal of the fundus of an organ, as of the uterus; often the removal of wedge-shaped portion of the fundus of the stomach. This operation, removing much of the parietal cell area, is used in the treatment of postoperative jejunal ulcer. Syn., *fundectomy.*

fun′gate (fung′gate, fun′gate) [L. *fungus*, mushroom]. Grow up rapidly like fungus, as certain pathologic growths.

fun·gi (fun′jye). Plural of fungus.

fun·gi·cide [*fungus*; L. *caedere*, to kill]. An agent that destroys fungi. —**fungici′dal,** *adj.*

fun·gi·form [*fungus*; L. *forma*, form]. Having the form of mushroom, as the fungiform papillae of the tongue.

Fun'gi im"per fec'ti (fun'jye im pur-feck'tye) Fungi which lack a known sexual phase of reproduction in their life history.

fun"gin ert'ness. Failure to support fungus growth because of absence of the necessary nutrients; to be distinguished from *fungistasis*. —**fungInert'**, *adj*

fun"gi sta sis. The active prevention or hindrance of fungus growth by a chemical or physical agent; to be distinguished from *funginertness*.

fun"gi stat'ic. Inhibiting or preventing the growth of fungi. —**fungistat'ic**, *n.*

fun'goid [*fungus*; G. *eidos*, form]. Resembling fungus.

fun-gos'i ty [*fungus*]. 1. A fungous excrescence. 2. Fungous quality.

fun gus (pl. *fungi*) [L.]. 1. A low form of plant life, a division of the Thallophytes without chlorophyll. The chief classes of fungi are the Phycomycetes, Ascomycetes, Basidiomycetes, and Fungi Imperfecti. Most of the pathogenic fungi belong to the last group. 2. A spongy morbid excrescence. For a list of the fungi pathogenic to man, see Table in the Appendix. —**fungous, fungal**, *adj*

imperfect f. See *Fungi imperfecti*.

mosaic f. An artefact consisting of a deposition of cholesterol crystals deposited around the borders of epithelial cells.

ray f. Any fungus of the genera *Actinomyces* or *Nocardia*; asteroid bodies.

thread f. Any kind of *Trichophyton*.

fu'ni cle [L. *funiculus*, dim. of *funis*, a cord]. A slender cord; a funiculus.

fu nic"u li tis [*funiculus*; G. *-itis*, inflammation]. Inflammation of a funiculus, specifically of the spermatic cord.

fu nic u lus (plural *funiculi*) [L.]. 1. One of the three main divisions of white matter which are named with reference to the gray matter of the cord as dorsal, lateral, and ventral. 2. Old term for fasciculus. 3. Old term for the umbilical or spermatic cord. —**funicular**, *adj*

f. separans. A white ridge of thickened ependyma, separating the ala cinerea from the area postrema.

fu'nis [L.]. A cord, particularly the umbilical cord. —**funic**, *adj*

Funk, Casimir [*American biochemist*, 1884–]. Pioneer in the study of vitamins. Credited with introducing the term vitamine, now called vitamin. In a study of multiple neuritis, induced in birds by a diet of polished rice, isolated a curative substance (vitamin B_1) found in rice polishings.

Funke, Otto [*German physician*, 1828–79]. Discovered hemoglobin (1851).

fun'nel [L. *fundere*, to pour]. A wide-mouthed, conical vessel ending in an open tube; for filling bottles or other containers, and as a support for filter papers.

mitral f. A funnellike deformation of the mitral valve sometimes present in mitral stenosis.

muscular f. The space bounded by the four rectus muscles of the eye (the superior, inferior, lateral, and medial muscles) said to resemble a funnel.

vascular f. The opalescent central depression in the retinal disk.

fun ny bone. The region behind the medial condyle of the humerus, crossed superficially by the ulnar nerve. Blows upon it give a painful tingling sensation to the cutaneous area supplied by the ulnar nerve.

fur [ME. *furre*]. 1. A coating of epithelial debris, as on the tongue. 2. The hairy coat of some animals. —**furred**, *adj*

furacin. Trade-mark for nitrofurazone.

furadantin. Trade-mark for the antibacterial agent *nitrofurantoin*.

fur al'de-hyde. See *furfural*.

fu ran, fu'rane. CH·CH.CH·CH (ring closed through O). A constituent of wood tars; a colorless liquid, insoluble in water. Also called *furfuran*, *furfurane*.

2-fu"ran-car"box yl'ic ac'id. Furoic acid.

fu ran-ose. A sugar having a ring structure resembling that of furan.

fur'ca [L.]. A fork. —**furcal, furcate**, *adj*

f. orbitalis. The orbital fork; one of the earliest signs of the orbit seen in the embryo; it is a mere trace of bifurcated bony tissue.

fur'cal is. Old name for the fourth lumbar nerve.

fur'cu la (pl. *furculae*) [L., a forked prop]. 1. A crescentic median elevation of the floor of the embryonic pharynx, at the level of the third and fourth visceral arches, differentiates into epiglottic and aryepiglottic folds. Also called *hypobranchial eminence*. 2. A forked process, especially the joined clavicles of a bird; wishbone.

fur'cu lum [incorrect form of *furcula*]. A furcula, especially the wishbone.

fur'fur [L., bran]. Dandruff; a branny desquamation of the epidermis. —**furfura ceous**, *adj*

fur'fur al. $C_4H_3O.CHO$. A liquid obtained by distillation of oat hulls and corn cobs with diluted sulfuric acid. Used as a solvent and reagent, and as an insecticide and fungicide. Also called *furol*, *furole*, *furaldehyde*, *furfuraldehyde*.

fur'fur-an, fur'fur ne. Furan.

fur'fur yl [*furfur*; G. *hylē*, material]. The monovalent radical C_5H_5O— derived from furfural.

fur'fur yl al co hol. $C_5H_6O_2$. A poisonous liquid obtained from furfural, and also by steam distillation of roasted coffee bean; used as a solvent and in various syntheses.

fu'ri bund [L. *furibundus*, raging]. Raging; maniacal; applied to certain insane patients. *Obs.*

furmethide iodide. Trade-marked name for furtrethonium iodide.

fu"ro-cou'ma rins. A substance present in herbs and plants that modifies the light sensitivity of the skin and causes the appearance of irregularly shaped, erythematous, and slightly pigmented lesions in phytophotodermatosis.

fu ro'ic ac'id. The acid resulting when the aldehyde group of furfural is oxidized to carboxyl; it occurs in crystals, soluble in water. The acid is sometimes employed for standardizing basic volumetric solutions. Also called *2-furoic acid*, *α-furoic acid*. Syn., *2-furancarboxylic acid*, *pyromucic acid*.

fu'ror [L.]. Madness; fury; a mania or maniacal attack.

f. amatorius. Excessive sexual desire. *Obs.*

f. genitalis. See *erotomania*. *Obs.*

paroxysmal f. Unprovoked attacks of intense anger occurring in patients with epileptic psychoses, not associated with convulsions. Also called *f. epilepticus*.

fu ro-yl. The radical O.CH·CH.CH:C.CO— (ring closed between O and C) known as 2-furoyl, or the radical

CH.CH.O.CH·C.CO— (ring closed between the first CH and C)

known as 3-furoyl.

fur'row [AS. *furh*]. A groove.

digital f. One of the transverse lines or furrows on the palmar surface of the fingers.

genital f. A groove appearing on the genital tubercle of the fetus at the end of the second month.

gluteal f. The groove between the nates.

interventricular furrows. Two longitudinal grooves separating the two ventricles of the heart.

fur"tre-tho'ni-um i'o-dide. Furfuryltrimethylammonium iodide, $C_8H_{14}INO$, white to cream-colored crystalline powder very soluble in water. A parasympathomimetic agent having greater and more selective action on the urinary bladder than other cholinergic agents used to encourage micturition. See *furmethide iodide*.

fu'run-cle (few'rung-kul, -run kul) [L. *furunculus*, boil, dim. of *fur*, thief]. A boil; cutaneous abscess a few millimeters or less in size, usually the result of infection of a hair follicle or more rarely of ducts of cutaneous glands by pyogenic bacteria, especially by *Micrococcus aureus* (*Staphylococcus aureus*). —furun'cular, *adj*.

fu run"cu-lo'sis [*furunculus*; G. -*osis*, increase]. A condition marked by affection with numerous furuncles, or in which new crops of furuncles follow repeatedly after healing of preceding crops.
f. orientalis. Obsolete term for cutaneous leishmaniasis.

fu-run'cu-lus. See *furuncle*.

fu'ryl. The radical O.CH-CH.CH C— known as alpha-furyl, or the radical O.CH.CH.C.CH, known as *beta-furyl*.

Fu-sa ri-um (few-sair'ee-um, -zair'ee-um) [L. *fusus*, spindle]. A genus of fungi, including species that may act as allergens, and that are pathogenic for plants. Produces verticillate conidiophores, which give rise to sickle-shaped, multiseptate conidia. The spores are airborne.

fus'cin (fus'in, few'sin) [L. *fuscus*, dusky]. The brown melanin pigment of the retina.

fus"co-cae-ru"le-us oph thal"mo-max-il-la ris of O'ta. An aberrant Mongolian spot.

fu"seau' (few"zo. See Notes § 35) (pl. *fuseaux*) [F. spindle]. An oat-shaped spore which may be connected with mycelium or may be free; produced by fungi of the genus *Trichophyton*.

fu'sel oil. See under *oil*.

fu si ble (few zi bul) [L. *fusum*, from *fundere*, to pour]. Capable of being melted.

fu'si form (few zi form, few'si) [L. *fusus*, spindle; *forma*, shape]. Spindle-shaped.

Fu"si for'mis (few"si-for'mis, few"si-) [*fusus*; *forma*]. Bacteria with the form of elongated spindles. There are aerobic and anaerobic types.
F. dentium. A bacillus found in Vincent's angina. Syn., *Fusobacterium plauti-vincenti*. Also called *fusiform bacillus*.

fu sion [L. *fusio*, from *fundere*, to pour]. The process of melting; the act of uniting or cohering.
flicker f. threshold. See under *threshold*.
spinal f. The fusion of two or more vertebrae, for immobilization of the spinal column. Used in the treatment of spinal deformities, tuberculosis of the spine, and severe arthritis of the spine.
vulvar f. Cohesion of the labia minora occluding all or part of the vestibule. It may be congenital, but is more generally acquired following irritation. Also called *atresia vulvae*, *synechia vulvae*, *acquired gynatresia*, *vulvar atresia*, *agglutination of the vulvae*.

Fu"so-bac-te'ri-um (few"zo-back-teer'ee-um, few"so-) [L. *fusus*, spindle; G. *baktērion*, little staff]. A genus of bacteria, including slender Gram-negative, anaerobic, rectilinear or incurving bacilli, which are frequently spindle-shaped and which stain irregularly. They are obligatory parasites of man and animals, and are found in necrotic areas, often in association with spirochetes.
F. plauti-vincenti. A species present in certain forms of gingivitis, in Vincent's angina, and in abscesses in the lungs and other organs. Also called *Fusiformis dentium*.

fu so-cel'lu-lar [*fusus*; L. *cellula*, small storeroom]. Consisting of spindle-shaped cells, as spindle-cell sarcoma.

fu"so-spir"il lo'sis. See Vincent's angina.

fu"so-spi"ro-che'tal (few zo-spy"ro kee'tul, few" so-) [*fusus*; G. *speira*, coil; *chaitē*, hair]. Pertaining to the association of fusiform bacteria and spirochetes.

fu"so spi" o-che to sis (few"zo-spy'ro-ki-to sis, few so-) [*fusus*; *speira*; *chaitē*; G. -*osis*, condition]. Infection characterized by the presence of fusiform bacilli and spirochetes. These organisms are present in certain forms of gingivitis, Vincent's angina, and in abscesses in the lungs and other organs.

Futaki Kenzo [Japanese physician, 1873–]. Futaki and his colleagues, Takaki, Taniguchi, and Osumi, discovered the cause of rat-bite fever (sodoku) to be *Spirillum minus* (1916).

G

G 1. Gravitation constant or Newtonian constant. A constant in Newton's law of gravitation which gives the attraction f between two particles m_1 and m_2 at a distance r as

$$f = G\frac{m_1 m_2}{r^2}$$

G is a constant whose value depends on the units in which f, m_1, m_2 and r are expressed. If f is given in dynes, m_1 and m_2 in grams, and r in centimeters, then G is 6.673×10^{-8} dyne cm^2/gm^2. Also written g. 2. In aviation, the force of acceleration is expressed as the number of pounds of force per pound of mass of the pilot; G is one gravitational unit and equals one pound of force divided by one pound of mass. Greater accelerations are expressed as multiples of G. Blackout occurs above 7G in most pilots. 3. In electrocardiography, symbol for the ventricular gradient as projected on the frontal plane of the body; also written g, Ĝ, ĝ.

Ĝ See G 3.

G. Gauss.

G See G 1 and G 3.

ĝ Same as G 3.

g. Gram(s); gage. G 1.

g 1. Abbreviation for gram(s). 2. In electrocardiography, symbol for the ventricular gradient as projected on the frontal plane of the body; also written ĝ. 3. Abbreviation for gravity; one g represents the normal force of gravity; two g's, twice as much force, and so on.

Ga Chemical symbol for the element gallium.

Gabbett's stain. See under *stain*.

gad"o-lin'i-um [NL., after Johan *Gadolin*, Finnish chemist, 1760–1852]. Gd = 156.9. A rare earth

metal discovered in 1880 by Marignac in gadolinite because of its scarcity it is of scientific interest only

Ga dus [G *gados*, fish]. A genus of soft-finned fish. **G morrhua**, The common cod fish from the livers of which cod liver oil is obtained

Gaebler's method. See Brehm and Gaebler *method*.

Gaertner Gustav [*Austrian physician, 1855–1937*]. Devised an instrument for measuring the blood pressure by means of a heavy ring compressing the finger (1899) called *Gaertner' tonometer*

Gaffky Georg Theodor August [*German bacteriologist*, 1850–1918]. First to produce pure cultures of the typhoid bacillus; proved that the bacillus is the causative agent of the disease (1884) Devised a formula for the prognostic classification of specimens of sputum in tuberculosis. According to the *Gaffky scale* as modified by Lawrason Brown, specimens are graded as follows (I) Less than five bacilli in the whole preparation. (II) No more than one bacillus on an average in each of many microscopical fields. (III) An average of one bacillus in each field. (IV) An average of two or three bacilli in each field. (V) An average of four to six bacilli in each field. (VI) An average of 7 to 12 bacilli in each field. (VII) An average of 13 to 25 bacilli in each field (VIII) About 50 bacilli in each field. (IX) About 100 bacilli in each field.

Gaff'ky-a [*Gaffky*]. A genus of the Micrococcaceae. **G. tetragena.** Synonym for *Micrococcus tetragenus*.

gag [imitative in origin]. An instrument placed between the teeth to prevent closure of the jaws.

gag. To retch; to cause to heave.

gage, gauge. An instrument for measuring the size of a structure, or the status of a process or phenomenon, as blood pressure.

Gaisböck, Felix [*Austrian physician*, 1868–]. Described polycythemia with hypertension; called *polycythemia hypertonica, Gaisböck' disease*.

gait [ON *gata*]. The manner of walking

ataxic g. A gait in which the foot is raised high, thrown forward, and brought down suddenly the whole sole striking the ground at once It is characteristic of lesions of the posterior column of the spinal cord. Syn *tabetic g, hypotonic g*.

cerebellar g. A staggering, lurching gait, causing a zigzag line of travel.

cow g A swaying movement due to knock-knee.

equine g. That seen in peroneal nerve paralysis. Because of foot drop, the leg must be raised high by flexing the thigh on the abdomen. Syn., *steppage g.*

festinating g. See *festination*

frog g The hopping gait of infantile paralysis.

hemiplegic g. That seen in partially paralyzed patients. There is a characteristic swing to the leg and dragging of the foot on the affected side, and the arm usually hangs stiffly

hypotonic g. See ataxic *g*

paraparetic g. That observed in chronic myelitis in which the steps are short and the feet are dragged, from inability to lift them.

paretic g. A gait in which the steps are short, the feet are dragged, and the legs are held more or less widely apart; as the disease progresses, there is uncertainty shuffling and staggering

scissors g. That seen in congenital or acquired infantile paraplegia and in certain brain tumors. The gait is spastic and the legs are adducted.

spastic g. That seen in lesions of the spinal pyramidal tracts. The leg is extended at the knee and hip, the thigh adducted, and the heel raised causes a stiff gait in which the foot is circumducted because it cannot be lifted.

staggering g. That resulting from central nervous system intoxication, or cerebellar or other severe diseases.

steppage g. See equine *g.*

tabetic g. See ataxic *g.*

waddling g. That of pseudohypertrophic muscular dystrophy resembling the gait of a duck.

ga lact', ga-lac'to- [G *gala*, milk]. A combining form meaning *milk, milky fluid*.

ga-lac"ta-cra si (ga-lack"tah kray'zhah, -zee-uh) [*gala*; G *akrasia*, bad mixture]. Deficiency of or abnormality in mother' milk.

gal"ac-tae mi-a (gal ack-tee mee-uh) See *galactemia*.

ga lac ta gogue [*gala*, G *agōgos*, leading]. An agent that induces or increases the secretion of milk also called *galactopoietic*.

ga lac'tan [*gala*]. Any polysaccharide composed of galactose units; on hydrolysis it yields galactose. The major part of gelose, the gelatinizing principle of agar is galactan. Syn., *galactosan*.

ga lac tase [*gala*; *-ase*, enzyme]. A soluble proteolytic enzyme present normally in milk.

gal"ac te mi a, gal"ac tae mi a (gal ack-tee mee-uh) [*gala*, G *haima*, blood]. A milky state or appearance of the blood.

ga-lact"hi-dro si [*gala*, G. *hidrōsis*, sweating]. Sweating of a milklike fluid.

ga lac'tic [*gala*]. Relating to or promoting the flow of milk.

ga lac'tin [*gala*]. 1 An amorphous substance derived from milk. 2. Pituitary hormone stimulating lactation. See *prolactin*.

gal"ac-ti chi a (gal ack-tis'kee-uh) [*gala*; G. *ischein*, to check]. Suppression of the secretion of milk, galactoschesis.

ga lac'to-blast [*gala*, G *blastos*, germ]. Old term for colostrum corpuscle.

ga lac'to-cele [*gala*, G *kēlē*, tumor]. 1 A cystic tumor in the ducts of the breast. 2. Hydrocele with milky contents.

ga lac to-fla vin. An analog of riboflavin in which D-galactose replaces D-ribose; it is a potent riboflavin antagonist.

ga lac'to-gen [*gala*; *gennaō*, from *gignesthai*, to be produced]. A carbohydrate comparable to glycogen has been prepared from the protein gland of the snail, *Helix pomatia*. It is hydrolyzed by dilute acids, forming galactose.

ga lac'toid [*gala*; G *eidos*, form]. Resembling milk.

ga lac"to-ke"to-hep tose. See *perseulose*.

ga lac"to lip'id. Any phosphorus-free, nitrogenous, fatty substance, containing also galactose, found in large amounts in the brain on acid hydrolysis galactolipide yield galactose, sphingosine, and fatty acid. Kerasin and phrenosin are galactolipids. Syn., *cerebroside, galactolipin*.

ga-lac"to-lip'in. Galactolipid.

gal"ac-to ma. See *galactocele* 1

gal"ac-tom'e-ter [*gala*, G *metron*, measure]. 1 Graduated glass funnel for determining the fat in milk. 2. Instrument for determining the specific gravity of milk

gal"ac-ton'ic ac'id. $C_6H_{12}O_7$. Pentahydroxyhexoic acid a monobasic acid derived from galactose

gal"ac-toph'a-gous [*gala*, G *phagein*, to eat]. Subsisting on milk.

gal"ac toph'ly-sis [*gala*; G *phlysis*, breaking out]. 1 A vesicular eruption containing a milklike fluid. 2. Crusta lactea.

ga lac to-phore [*gala*, G *phoros*, bearing]. A lactiferous duct. —**galactoph'orous**, *adj*

gal"ac toph o-ri'tis [*gala*; *phoros*; G. *-itis*, inflammation] Inflammation of a lactiferous duct.

gal"ac-toph'thi sis (gal ack-tof'thi-sis, ga-lack' tof thigh sis, -thees'is) [*gala*; G *phthisis*, wast-

ing way]. Old term for emaciation and debility due to excessive secretion of milk.

gal″ac·toph′y·gous [*gala*; G. *pheugein*, to avoid]. Arresting the secretion of milk.

ga·lac″to·poi·et′ic, ga·lac″to·po·et′ic [*gala*; G. *poiētikos*, from *poiein*, to make]. Pertaining to the formation and secretion of milk. —**galactopoiet′ic**, *n.*

ga·lac″to·py′ra [*gala*; G. *pyr*, fire]. Milk fever. See under *fever*. —**galactopyret′ic**, *adj.*

ga·lac″to·py′ra·nose. A pyranose-type, closed-chain form of galactose.

ga·lac″tor·rhe′a, ga·lac″tor·rhoe′a (ga·lack″to·ree′uh) [*gala*; G. *rhoia*, flow]. Excessive flow of milk.

ga·lac″to·sac·char′ic ac′id. D-Galactosaccharic acid or mucic acid.

ga·lac″tos·a·mine′. Galactose containing an amine group in 2-position, hence 2-amino-D-galactose. Syn., *chondrosamine*.

ga·lac′to·san. Galactan.

gal″ac·tos′che·sis (gal″ack·tos′ki·sis) [*gala*; G. *schesis*, retention]. Retention or suppression of milk.

ga·lac′to·scope [*gala*; G. *skopein*, to examine]. Instrument for determining the quality of milk.

ga·lac′tose (ga·lack′toce, -toze). CHO.HCOH.-HOCH.HOCH.HCOH.CH_2OH. A D-type aldohexose obtained by hydrolysis of lactose, occurring also as a component of cerebrosides and of many oligosaccharides and polysaccharides. It exists in α- and β-forms. On oxidation it yields mucic acid. L-Galactose occurs in small amounts in certain polysaccharides, as the mucilage of agar and flaxseed.

gal·ac″to·se′mi·a. A congenital metabolic disorder in which there is an increased galactose level in the blood; also called *galactose diabetes*.

ga·lac″to·si′dase. See *lactase*.

ga·lac′to·side. A glycoside which, on hydrolysis, yields the sugar galactose and an aglycone.

gal″ac·to′sis [*gala*; G. *-ōsis*, condition]. The secretion of milk by the mammary glands.

gal″ac·tos′ta·sis, ga·lac″to·sta′si·a (ga·lack″to·stay′zee·uh, ·see·uh) [*gala*; G. *stasis*, standing]. 1. Suppression of milk secretion. 2. An abnormal collection of milk in a breast.

ga·lac″to·su′ri·a [*gala*; G. *ouron*, urine]. Passage of urine containing galactose.

ga·lac″to·ther′a·py [*gala*; G. *therapeia*, treatment]. 1. The treatment of disease in suckling infants by the administration of drugs to the mother or wet nurse. 2. Milk cure. 3. Hypodermal use of milk to produce fever in fever therapy.

ga·lac″to·tox′i·con [*gala*; G. *toxikon*, poison]. The active agent or toxin present in poisonous milk.

ga·lac″to·tox′in [*gala*; *toxikon*]. A poisonous substance or ptomaine generated in milk by the growth of microorganisms.

ga·lac″to·tox′ism [*gala*; *toxikon*]. Milk poisoning.

gal″ac·tot′ro·phy [*gala*; G. *trophē*, nourishment]. Nourishing with milk only.

ga·lac″to·zy′mase (ga·lack″to·zy′mace, ·maze) [*gala*; G. *zymē*, leaven; -*ase*, enzyme]. A ferment found in milk capable of liquefying starch.

gal″ac·tu′ri·a [*gala*; G. *ouron*, urine]. Milkiness of the urine; chyluria.

ga·lac″tu·ron′ic ac′id. The monobasic acid resulting from oxidation of the primary alcohol group of D-galactose to carboxyl. It is widely distributed as a constituent of pectins and many plant gums and mucilages.

gal′a·lith [*gala*; G. *lithos*, stone]. An absorbent material made of casein and formol.

ga·lan′ga, ga·lan′gal (ga·lang′gul, gal′ang·gul) [Per. *khalanjān*]. The rhizome of *Alpinia officinarum*. The active principles are a volatile oil and a resin; the actions are those of a stimulant aromatic, with effects similar to those of ginger.

gal′ba·num [G. *chalbanē*, resinous juice of all-heal, from Heb. *helbenah*]. A gum resin of *Ferula galbaniflua*; formerly used as a stimulant and expectorant and externally in plasters.

Galbiati, Gennaro [*Italian obstetrician*, 1776–1844]. Remembered for his use of symphysiotomy with double pelviotomy in cases of difficult birth; called *Galbiati's operation*. Also devised a special knife for dividing the tissues.

ga′le·a (gay′lee·uh, gal′ee·uh) (pl. *galeae*) [L., helmet]. 1. Any structure resembling a helmet. 2. A form of head bandage. 3. The aponeurotic portion of the occipitofrontal muscle, called the *galea aponeurotica*.

g. capitis. The thin sheath of cytoplasm covering the nucleus and acrosome of the sperm head.

gal″e·an′thro·py (gal″ee·an′thro·pee, gay″lee-) [G. *galeē*, weasel, polecat; *anthrōpos*, man]. A form of zoanthropy in which the patient believes himself to be transformed into a cat.

Galeazzi, Domenico Maria Gusmano (Galeatti) [*Italian anatomist and physician*, 1686–1775]. Described short, simple, tubular glands in the intestinal mucosa (1731); called *Galeati's glands*, *Lieberkühn's glands*, *crypts of Lieberkühn*.

Ga·le′ga [G. *gala*, milk]. A genus of the Leguminosae.

G. officinalis. Goat's rue; formerly used mistakenly as a galactagogue. See *galegine*.

ga·le′gine (ga·lee′jeen, ·jin). An alkaloid, $C_6H_{13}N_3$, from *Galega officinalis*, or goat's rue. It is said to reduce blood sugar.

Galen, Claudius [*Mysian physician in Rome*, ca. 130–ca. 200]. One of the greatest figures in medical history. Galen is called the father of experimental physiology. He seems to have recognized cholera, rabies, malaria, and empyema as definite medical entities. Many parts of the body have been known by his name. See *veins of Galen* under *vein*. See also *Galen's four humors* under *humor*.

ga·le′na. Native lead sulfide.

Ga·len′ic (ga·len′ick, ·lee′nick), **Ga·len′i·cal** (ga·len′i·kul, ·lee′ni·kul) [*Galen*]. Relating to, or consistent with, the teachings of Galen.

Ga·len′i·cal [*Galen*]. Medicine prepared from plants, according to standard formulas, as contrasted with definite chemicals.

gal″e·o·phil′i·a [G. *galeē*, weasel, polecat; *philein*, to love]. Excessive love of cats.

gal″e·o·pho′bi·a [*galeē*; G. *phobos*, fear]. A morbid fear of cats. Also called *gatophobia*, *ailurophobia*.

gal″e·ro′pi·a, gal″e·rop′si·a [G. *galeros*, cheerful; *opsis*, appearance]. An abnormally clear and light appearance of objects due to some defect in the visual apparatus.

Galezowski, Xavier [*Ukrainian ophthalmologist*, 1833–1907]. Devised an operation for cataract, the incision being entirely within the cornea, the point of the knife dividing the capsule. Introduced a special type of operation for pterygium, turning the apex under the base, called *Galezowski's operation*. With Parinaud, described an infectious conjunctivitis transmissible from animals to man (1889), called *Parinaud's conjunctivitis*, *leptotrichosis of the conjunctiva*.

Galilei, Galileo [*Italian physicist and astronomer*, 1564–1642]. One of the founders of modern experimental science. Exercised great influence on the development of scientific medicine. Inventor of the hydrostatic balance and the telescope.

Gall, Franz Joseph [*German anatomist*, 1758–1828]. Made important contributions to the knowledge of cerebral anatomy. With Johann Caspar

Spurzheim, projected the theory of the localization of cerebral function (1810–19) Founder of the pseudoscience of phrenology

gall (gawl) [AS. *gealla*]. The bile.

gall (gawl) [ME. *gall* from L. *galla*, gall-nut]. A sore on the skin of horse, caused by saddle or harness.

gal lac″e-to-phe-none (ga lase″l-to-fi-nohn -fee nohn) Trihydroxyacetophenone, $CH_3CO\ C_6H_2(OH)_3$. White to brownish powder used as 10% ointment or solution in skin diseases. Also called *alizarin yellow C*.

gal′la mine tri″eth i′o-dide. Generic name for the curariform substance supplied under the trade-marked name *flaxedil* (triethiodide)

gall′blad″der (gawl′blad ur) [AS. *gealla; blædre*]. A hollow pear-shaped, musculomembranous organ, situated on the under surface f the right lobe of the liver for the storage and concentration of bile and the secretion of mucus. See Plate 13.

sandpaper g. Roughness of the lining of the gallbladder due to deposition of cholesterin crystals.

strawberry g. A benign papilloma or hyperplasia of the folds lining the organ. It is soft, friable, reddish mass containing cholesterin crystals and fat, which may fill the entire gallbladder the color and appearance giving it the name.

gal′le-in. $C_{20}H_{12}O_7$ Pyrogallolphthalein. An indicator: brownish yellow in acid, red in alkali.

gal′lic ac′id (*acidum gallicum*) $(OH)_3C_6H_2COOH.H_2O$. Trihydroxybenzoic acid, occurring in white to yellowish crystals 1 Gm. dissolves in 87 cc. of water Occasionally used for its astringent effect. Dose, 0.3–1.3 Gm. (5–20 gr)

Gallie, William Edward [*Canadian surgeon*, 1882–]. With Le Mesurier devised an original operation for the radical cure of inguinal hernia, using living fascial strips obtained from the thigh and passing them as running sutures through the aponeurotic layers of the oblique and transverse muscles to form sort of basketwork. Called *Gallie′ peration, Gallie and Le Mesurier′ operation*. The strips are called *Gallie′ transplant*.

gal′li um [L. *Gallia*, Gaul]. Ga = 69 72. A gray-white metal which melts at 29.7° C. It is used in thermometers for measuring temperatures bet een 500° and 1000° and for certain other special purposes.

gal′lo- [L. *galla*, gall-nut]. *I chemistry,* combining form denoting *gallic acid*.

gal″lo-cy′ nin. A basic oxazine dye; used in an aqueous solution with chrome alum as stal for Nissl bodies; sometimes used as uclear stain.

gal′lon [OF *jalon*, of obscure origin]. A standard unit of volumetric measurement Capacity in the United States 231 cubic inches four quarts. In the pothecaries measure the Latin equivalent, congius, abbreviated C is frequently employed.

imperial g. I Great Britain, capacity equivalent to 1.20094 U S. gallons.

gal″lo-tan-nic ac′id. Tannic acid.

gall′stone (gawl stone″) [AS. *gealla*, ME. *ston*]. A concretion formed in the gallbladder or the biliary ducts, composed, in varying amounts, of cholesterol, bilirubin, and other elements found in bile.

Galton, Francis [*English scientist*, 1822 1911] Considered the founder of eugenics Suggested hereditary basis for genius (1869) See Galton's *law* of filial regression. Invented *Galton whistle* for testing the hearing of high tones. Was among the first to suggest the use of fingerprints for the identification of criminals (1892) See Galton *system of identification*.

galv Galvanic galvanized; galvanism.

Galvani Luigi [*Italian physician and anatomist*, 1737–98]. In experiments with frog legs, he discovered the electri properties of animal tissue (1791)

gal van′ic. Pertaining to galvanism. Abbreviated, galv

gal va nism [*Galvani*]. Primary direct current electricity prod ced by chemical action, as opposed to that produced by heat, friction, or induction. Abbreviated, galv

gal″va ni za′tion [*Galvani*]. The transmission of direct current of low electromotive force through any part of the body for th purpose of diagnosing or treating disease. —**gal′vanize**, *v.*

gal″va no- (gal″vuh-no- gal-van o-) [*Galvani*]. A combining form denoting *galvanic* or *direct current of electricity; employing or produced by the galvanic current.*

gal″va no-cau′ter y Electrocautery

gal″va no-con″trac-til′i ty [*Galvani*; L. *contractus*, from *contrahere*, to contract] The property of being contractile under stimulation by direct galvanic current.

gal″va no-far″ di za tion [*Galvani*; Michael *Faraday* English physicist]. The simultaneous use of direct galvanic currents and rapidly alternating faradic currents.

gal″va nol′y sis [*Galvani*; G. *lysis*, loosing]. Old term for electrolysis.

gal″va nom e-ter [*Galvani*; G *metron*, measure]. An instrument for measuring relatively small electri currents.

aperiodic g. A galvanometer devoid of periodicity one in which the indicator comes quickly to rest.

string g. A galvanometer for use in electrocardiography; the current is measured by lateral displacement of wire carrying the current across strong magneti field. Also called *Einthoven g.*

gal″va no-mus cu lar [*Galvani*; L. *musculus*, muscle] Denoting reaction produced by the pplication of direct galvanic current to muscle.

gal″va-no punc″ture. Electropuncture.

gal″va no-scope gal van o-scope [*Galvani*; G. *skopein*, to examine]. An instrument for detecting the presence and direction of small direct or galvanic currents. —**galvanos′copy** *n.*

gal″va no sur′ger y [*Galvani*, OF *surgerie*, contr from G *cheir* hand; *ergon*, work]. The surgical use of direct or galvanic currents.

gal″va-no-tax′is. See *galvanotropism*.

gal″va n ther′ py [*Galvani*, G. *therapeia*, treatment]. Treatment of disease through the use of direct or galvanic currents.

gal′va no-ther″my (gal vuh-no-thur″mee, galvan o- gal vuh-no-thur mee, gal van o-) [*Galvani*, G *thermē*, heat]. The production of heat by direct or galvanic currents.

gal″va not nus [*Galvani*, G *tonos*, tension]. 1. Electrotonus. 2. The continued tetanus of muscle between the make and break contraction of direct or galvanic current. —**galvanoton′ic**, *adj*

gal″va not′ro-pism [*Galvani*; G *tropein*, to turn]. The turning movements of living structure or beings, under the influence of direct current of electricity

gal″ve. See brass founder′ ague.

gal′ziek″te (gahl zeek′tuh, gahl-seek′tuh) [S. Afr D *gal*, gall *ziekte*, sickness]. A South African cattle disease of infectious origin and febrile characteristics spread by ticks.

gam″ -asi-da sis. Infestation by Gamasidae (family including the fowl mite)

gam′bir [Malay] (*gambir*) An aqueous extract from the twigs and leaves of *Uncaria gambir* Gambir yields catechutannic acid and catechin. Used as an astringent and in dyeing and tanning.

gam·boge (gam·bohdj′, bōōdj′, -bōōzh′) [*Cambodia*] (*cambogia*). The gum resin obtained from *Garcinia hanburyi*. It is a drastic, hydragogue cathartic; a constituent of compound mild mercurous chloride pills. Dose, 0.03–0.2 Gm. (½–3 gr.)

Gam·bu′si·a (gam·bew′zee·uh, -see·uh) [Amer Sp. *gambusino*, nothing]. A genus of top-feeding minnows, found in the southern United States and other warm climates. Their surface-feeding habits make them valuable in the destruction of mosquito larvae.

gam·e·tan′gi·um [G *gamein*, to marry; *angeion*, vessel]. A gamete-producing organ occurring especially in the lower plants.

gam′ete (gam·eet, ga·meet—*the latter commonly in compounds*) [G *gametē*, wife, *gametēs*, husband, from *gamein*, to marry]. A male or female reproductive cell capable of entering into union with another in the process of fertilization or of conjugation. In higher animals, these sex cells are the egg and sperm; in higher plants, the male gamete is part of the pollen grain, while the ovum is contained in the ovule. In lower forms, the gametes are frequently similar in appearance and their union is called conjugation. —**gamet′ic**, *adj.*

ga·me′to·cyte (ga·mee′to·sight, gam′i·to·sight) [*gametē*; G *kytos*, cell]. A cell which by division produces gametes; a spermatocyte or oocyte. See Plates 27, 28, 29.

gam″e·to·gen′e·sis [*gametē*; G *genesis*, production]. The origin and formation of gametes.

gam″e·tog′o·ny (gam″i·tog′o·nee) [*gametē*; G *gonē*, seed]. A process of reproduction leading to the formation of gametocytes and gametes in the sexual phase of the life cycle in certain protozoa.

ga·me′to·phyte (ga·mee′to·fight, gam′i·to·fight) [*gametē*, G. *phyton*, plant]. A sexual, gamete-producing individual which alternates in the life history of plants with the asexual sporophyte. The leafy moss plant is a gametophyte, but the leafy fern plant is a sporophyte. In the seed plants, the male and female gametophytes are microscopic and are contained in the pollen grain and ovule, respectively.

gam′ic [G. *gamos*, marriage]. Sexual; applied especially to the members of the bisexual generation in such animals as aphids, in which there is a parthenogenetic-bisexual cycle.

gam′ma [G]. 1. The third letter of the Greek alphabet (Γ, γ) equivalent to English g. For many terms beginning with gamma, see the specific noun. 2. In *chemistry*, microgram (one thousandth of a milligram). 3. In *photography*, the contrast of a negative or print, usually controlled by developing time, and expressed as a relationship between the density of the negative and the time of exposure.

g. roentgen. A unit of radium dosage such that the same amount of ionization in air is produced as by one roentgen unit of gamma rays; also called *gamma-ray roentgen*.

gam′ma·cism [*gamma*]. Guttural stammering; difficulty in pronouncing guttural consonants, especially hard g and k.

gam′mexane. Trade-mark for gamma-hexachlorocyclohexane, $C_6H_6Cl_6$, an insecticide more powerful than DDT and effective in the treatment of scabies. The chemical is also known as *666* and *benzene hexachloride*. See *lindane*.

Gamna nodules. See *siderotic nodules* under *nodule*.

Gamna spleen. See Gandy-Gamna *spleen*.

gam·o- [G. *gamos*, marriage]. 1. In *biology*, a combining form denoting *sexual union*. 2. In *botany*, combining form signifying *union* or *fusion of parts*.

gam″o·ma′ni·a [*gamos*; G *mania*, madness]. Insane desire for marriage.

gam′one. Hypothetical hormonelike substance present in gametes, concerned with fertilization.

gam″o·pet′al·ous [*gamos*; G *petalon*, leaf]. In *biology*, sympetalous.

gam″o·pho′bi·a [*gamos*; G *phobos*, fear]. A morbid fear of marriage.

gam·o·sep′al·ous [*gamos*; NL. *sepalum*, proposed by Necker from G. *skepē*, covering]. In *biology*, synsepalous.

Gandy-Gamna nodules. See *siderotic nodules* under *nodule*.

Gandy-Gamna spleen. See under *spleen*.

gan·gli·a″ted (gang·glee·ay tid, gang′lee-) **gan′gli·on·a″ted** [G. *ganglion*, encysted tumor on tendon]. Supplied with ganglions.

gan″gli·ec′to·my (gang″glee·eck′to·mee, gang″lee-) See *ganglionectomy*.

gan·gli·i′tis (gang″glee·eye′tis, gang″lee-) See *ganglionitis*.

gan′gli·o- (gang·glee·o-, gang′lee·o-) [*ganglion*]. A combining form meaning *ganglion*.

gan′gli·o·blast″ [*ganglion*, G *blastos*, germ]. 1. An embryonic ganglion cell. 2. A neuroblast. *Obs.*

gan″gli·o·blas·to′ma. Ganglioneuroma.

g. of neon. See heterotopic *glioma*.

gan·gli·o·cyt [*ganglion*; G *kytos*, cell] A ganglion cell. *Obs.*

gan″gli·o·cy·to′ma. See *neuroastrocytoma*.

gan″gli·o·cyt″o·neu·ro′ma. See *ganglioneuroma*.

gan″gli·o·gli·o′ma. Neuroastrocytoma.

g. of nose. See heterotopic *glioma*.

gan′gli·oid (gang·glee·oyd, gang′lee·oyd) [*ganglion*, G *eidos*, form]. Resembling a ganglion.

gan″gli·o′ma. See *ganglioneuroma*.

gan′gli·on (gang·glee·un, gang′lee·un) (pl. *ganglions*, *ganglia*) [G]. 1. A group of nerve cell bodies, usually located outside of the brain and spinal cord, as the dorsal root ganglion of a spinal nerve. 2. A cystic, tumorlike localized lesion in a tendon sheath or joint capsule, especially of the hands, wrists, and feet, but also occasionally within their connective tissues. It is composed of stellate cells in a matrix of mucoid hyaluronic acid and reticular fibers. Also called *cystic tumor of tendon sheath*, *cyst of joint capsule*, *cyst of semilunar cartilage*, *weeping sinew*. —**gan′gliar**, **gan·gli·on′ic**, *adj.*

accessory g. One of several vestigial ganglions associated with the embryonic dorsal roots of the vagus nerve; also with the hypoglossus in certain mammals.

acoustic g. The embryonic ganglionic mass which separates into cochlear and vestibular ganglions. Syn., *vestibulocochlear g.*

acousticofacial g. See acousticofacial *primordium*.

aorticorenal g. An outlying portion of the celiac ganglion, near the origin of each renal artery; also called *g. renale*.

Auerbach's ganglions. Nerve cell bodies in the myenteric plexus.

basal ganglions. An old term for the corpus striatum, or the corpus striatum and the thalamus considered together as the important subcortical centers.

Bidder's g. See Friedrich H. *Bidder*.

Bochdalek's g. A gangliform enlargement at the junction of the middle and anterior branches of the superior dental plexus; a pseudoganglion.

cardiac g. A ganglion of the superficial cardiac plexus, located between the aortic arch and the bifurcation of the pulmonary artery. Formerly called *Wrisberg's g.*

carotid g. A small enlargement sometimes found

in the internal carotid plexus inferior to the internal carotid artery.
celiac g. A collateral sympathetic ganglion lying in the celiac plexus near the origin of the celiac artery; formerly called *semilunar g.*
cervical g. (a) One of two or three ganglions on the sympathetic chain in the neck, named superior (see Plate 15), middle (sometimes absent), and inferior. (b) A ganglion of the craniosacral autonomic system, located at the uterine cervix; also called *Frankenhäuser's g.*
ciliary g. That at the back of the orbit; from it arise postganglionic parasympathetic fibers to the ciliary muscle and the constrictor muscle of the iris. See Plate 15.
Cloquet's g. A plexiform intermingling of fibers of the two nasopalatine nerves in the incisive canal. It is not a true ganglion.
coccygeal g. The terminal ganglion formed by the fusion of the caudal ends of the sympathetic trunks of both sides, situated in front of the coccyx. Syn., *g. impar*.
cochlear g. See spiral g.
collateral g. Any of the ganglia of the sympathetic nervous system located in the mesenteric nervous plexuses around the abdominal aorta and its larger visceral branches. Syn., *prevertebral g.*
dorsal root g. One of the sensory ganglions associated with the dorsal root of a spinal nerve.
Ehrenritter's g. See superior g.
enteric ganglions. Small ganglions of the myenteric and submucous plexuses of the intestine.
Frankenhäuser's g. See cervical g. (b).
Froriep's g. A rudimentary or vestigial dorsal root ganglion of the hypoglossal nerve.
g. habenulae. Old term for habenular nucleus.
g. impar. See coccygeal g.
g. molle. Enlarged and engorged, but nonindurated lymph node found in African trypanosomiasis.
g. renale. See aorticorenal g.
gasserian, Gasserian g. See semilunar g.
geniculate g. The sensory ganglion of the nervus intermedius, lying in the genu of the facial nerve in the facial canal of the temporal bone.
inferior g. See petrosal g.
inferior mesenteric g. An outlying or collateral sympathetic ganglion lying in the inferior mesenteric plexus near the aorta at the origin of the inferior mesenteric artery. See Plate 15.
intermediate g. The middle cervical ganglion.
interpeduncular g. See interpeduncular nucleus.
jugular g. (a) The superior ganglion of the vagus nerve. (b) The superior ganglion of the glossopharyngeal nerve.
lateral chain g. Any ganglion of the sympathetic trunk.
lateral g. (a) In fishes and certain amphibians, ganglion associated with cranial nerve VII and another with X, whose postganglionic fibers supply the lateral line organs. (b) *In comparative anatomy*, ganglion of the sympathetic trunk.
lumbar g. Any of the ganglia of the lumbar sympathetic trunk.
Meckel's g. See sphenopalatine g.
nodose g. The lower ganglion of the vagus nerve.
otic g. That immediately below the foramen ovale of the sphenoid bone, medial to the mandibular nerve; from it arise postganglionic parasympathetic fibers to the parotid gland. See Plate 15.
paravertebral g. Any of the chain of sympathetic ganglia of the sympathetic trunks; according to location they are grouped into cervical, thoracic (dorsal), lumbar, and sacral.
pelvic g. The ganglion cells located in the pelvic nerve plexus.
peripheral g. See terminal g.
petrosal g. The inferior sensory ganglion of the glossopharyngeal nerve, located in a depression at the lower orifice of the jugular foramen; also called *Andersch's g.*, *inferior g.*
phrenic g. One located at the junction of the right phrenic nerve with the phrenic plexus, which sends nerve fibers to the inferior vena cava, right adrenal gland, and the hepatic plexus.
posterior root g. See dorsal root g.
prevertebral g. See collateral g.
pterygopalatine g. The sphenopalatine g.
Remak's g. See Robert *Remak*.
Scarpa's g. See vestibular g.
semilunar g. (a) The large ganglion of the sensory root of the trigeminal nerve; from it arise the ophthalmic, maxillary, and mandibular divisions of the trigeminal nerve. Syn., *trigeminal g.* Also called *gasserian g.* See Plate 17. (b) Old term for *celiac g.*
sphenopalatine g. One in the pterygopalatine fossa near the sphenopalatine foramen; from it arise postganglionic parasympathetic fibers to the lacrimal gland and to the mucous membrane of the nose and palate. Also called *Meckel's g.* See Plate 15.
spinal g. One of the sensory ganglions associated with the dorsal roots of spinal nerves. Syn., *dorsal root g.*
spiral g. That of the cochlear nerve, lodged in the spiral canal of the modiolus.
splanchnic g. One located on the greater splanchnic nerve near the disk between the eleventh and twelfth thoracic vertebras.
stellate g. That formed by the fusion of the inferior cervical and the first thoracic sympathetic ganglions. See Plate 15.
submaxillary g. A small fusiform ganglion lying on the hyoglossus muscle above the deep part of the submaxillary gland; from it arise postganglionic parasympathetic fibers to the submaxillary and sublingual glands. See Plate 15.
superior g. The superior ganglion of the glossopharyngeal nerve, located in the upper part of the jugular foramen; also called *Ehrenritter's g.*, *jugular g.*, *g. superius*.
superior mesenteric g. A collateral sympathetic ganglion lying in the superior mesenteric plexus near the origin of the superior mesenteric artery. See Plate 15.
sympathetic ganglions. The ganglions of the sympathetic nervous system, including those of the sympathetic trunk, the collateral, and the peripheral or terminal ganglions.
terminal g. One of the smaller, most peripheral, of the sympathetic ganglions; also called *peripheral g.*
thoracic g. One of the ganglions of the thoracic sympathetic trunk.
trigeminal g. See semilunar g.
tympanic g. A ganglion of the tympanic nerve lying on the promontory of the middle ear.
Valentin's g. A gangliform enlargement at the junction of the middle and posterior branches of the superior dental plexus; pseudoganglion.
vestibular g. That of the vestibular nerve, located in the internal auditory meatus. Also called *Scarpa's g.*
vestibulocochlear g. See acoustic g.
Wrisberg's g. See cardiac g.
gan gli on at ed (gang'glee-uh-nay"tid, gang'lee-) See *gangliated*.
gan gli on ec to my [*ganglion*; G. *ektomē*, excision]. The surgical excision of a ganglion.

gan″gli-o-neu″ro-blas-to′ma. See *ganglioneuroma, neuroastrocytoma.*

gan″gli-o-neu″ro-cy-to′ma. See *ganglioneuroma.*

gan″gli-o-neu-ro′ma [*ganglion*; G. *neuron*, nerve; -*oma*, tumor]. A tumor composed of sympathetic ganglion cells and large numbers of sheathed nerve fibers, principally located in the sympathetic ganglia and the adrenal medulla. Some are incompletely differentiated, showing some features of the sympathicoblastoma, and some may metastasize. The differentiated forms are variously also called *gangliocytoneuroma, ganglioma, ganglioneuroblastoma* (*sympathicum* or *simplex*) *ganglioneuroma telangiectaticum cysticum, myelinated neuroma gangliocellulare, neurofibroma gangliomare, neuroganglioma myelinicum verum, neuroma gangliocellulare* (*amyelinicum, benignum*), *neuroma verum gangliosum amyelinicum, sympathicocytoma.* The partly differentiated forms are also called *gangliocytoma, ganglioneuroblastoma, immature, malignant, metastasizing* or *mixed ganglioneuroma, neuroma gangliocellulare malignum, sympathetic neuroma.*

dumbbell g. See dumbbell *tumor*

hourglass g. See dumbbell *tumor*

gan″gli-o-ni′tis [*ganglion*; G. -*itis*, inflammation]. Inflammation of ganglion.

gan″gli-o-schwan″no-sper″gi-o-blas-to′ma. See heterotopic *glioma.*

gan′gli-o-sides. Brain cerebrosides which contain special fatty acid, called neuraminic acid, and which yield more than one equivalent of galactose.

gan″gli-o-sym-path″i-co-blas-to′ma. See *sympathicoblastoma.*

gan-go′sa [Sp., muffling]. Destructive lesions of the nose and hard palate, sometimes more extensive, considered to be tertiary stage of yaws also called *rhinopharyngitis mutilans.*

gan′grene (gang′green, gang green′) [G *gangraina*, gangrene]. 1. Mortification or death of part due to failure of the blood supply to disease, or to injury 2. The putrefactive changes in dead tissue. —**gan′gre-nous,** *adj*

amebic g. An extensive destruction of the skin surrounding drainage wound, following removal of an amebic abscess of the liver

arteriosclerotic g. Senile *g.*

carbolic acid g. See chemical *g.*

chemical g. That following burns from caustic or poisonous chemicals, as carbolic acid

cutaneous g. Skin gangrene. See decubital *g.*

decubital g. A pressure gangrene of the skin and adjacent tissues; occurs in patients who are bedridden for long periods. Also called *decubitus.*

diabetic g. A moist type occurring in the course of diabetes mellitus; often the result of slight injuries.

direct g. That due to direct destruction of tissue from injury pressure, burns, chemical action, etc.

dry g. Local death of part which does not become infected and undergoes mummification. Seen commonly following blocking of blood supply as that due to freezing or embolism.

Egyptian g. A characteristic, necrotizing lesion of the eyelids found in North Africa; it may be of viral origin and perhaps may be associated with necrotizing desert sore.

foudroyant g. Infectious, fulminating, or spreading gangrene.

fusospirochetal g. Gangrenous lesions, believed to be due to *Borrelia refringens* (spirochetes) and fusiform bacilli. They are seen in the oropharynx as complication of Vincent's angina, following penetrating wounds involving the oropharynx, following human bites, or as venereal infection, usually in males with redundant prepuce.

g. of the appendix. Necrosis of the appendix in appendicitis, with sloughing of the organ.

g. of the lung. A diffuse, putrefactive necrosis of the lung or of lobe due to anaerobic or other bacteria usually termination of lung abscess in patient with low resistance.

gas g. A form occurring in massive wounds, where there is crushing and devitalization of tissue and contamination with earth. The organisms found are anaerobes, including *Clostridium perfringens* Type A and *Clostridium septicum.* It is marked by high fever offensive, thin, purulent discharge from the wound, and the presence of gas bubbles in the tissues.

hospital g. An infectious type especially involving amputation stumps.

line of separation in g. The deepening groove of ulceration and granulation which gradually separates living and dead tissue.

moist g. Local death of part which becomes infected, so that the signs and symptoms of infection are superimposed upon those of gangrene.

pudendal g. See *noma pudendi.*

senile g. A dry gangrene of the extremities due to failure of the terminal circulation in elderly persons or those afflicted with arteriosclerosis. Also called *arteriosclerotic g g of the aged.*

symmetric g. See Raynaud *disease.*

wet g. Moist *g.*

white g. Gangrene with anemia of the tissues.

gangue [F from G *gang*, metallic vein] The earth or stone of an ore.

gan′ja, gan′jah [Hind.]. Gunjah. See *cannabis.*

gan blast [G *ganos*, brightness; *blastos*, germ]. An enamel-forming cell. Syn., *ameloblast.*

Ganser syndrome. See under *syndrome.*

Gant, Frederick James [*English surgeon*, 1825–1905]. Remembered for his introduction of subtrochanteric osteotomy of the femur for ankylosis of the hip joint with flexion and adduction. He divided the femur below the lesser trochanter and overcorrected the deformity in abduction, immobilizing the fracture until bony union occurred.

gantrisin. Trade-mark for 3,4-dimethyl-5-sulfanilamido-isoxazole, a sulfonamide characterized by high solubility in neutral or slightly acid body fluids. See *sulfisoxazole, sulphafurazole.*

gap [ON.]. Any break or opening.

auscultatory g. A zone of silence which occasionally occurs, for some unknown reason, in auscultatory determination of human arterial pressure while cuff pressure is declining.

cranial gaps. Occasional congenital fissures of the skull.

silent g. The interval occasionally noted in auscultatory blood-pressure estimations where sound is heard even though no interruption is detected at the wrist.

sphere g. A spark gap between two polished spheres, connected in parallel to an x-ray tube. The length of the spark for spheres of given diameter measures the voltage at the tube.

gapes. See *gapeworm.*

gape′worm″ A disease of young fowls; caused by the presence of nematode worm, *Syngamus trachealis*, in the trachea.

gar′an-tose. Saccharin.

gar′bled (gahr′buld) [It. *garbellare*, from L. *cribrum*, sieve]. Applied to crude drugs which have been separated from worthless material and made ready for market. *Obs.*

Gar-cin′i-a [after Laurent *Garcin*, French botanist, 1683–1752]. A genus of the Guttiferae. *G. hanburyi* the Siam gamboge tree, yields the gum oleoresin, gamboge. *G. mangostana* yields the palatable fruit called mangosteen.

Garel, Jean [*French physician*, 1852–1931]. Described *Garel's sign* of empyema of the maxillary sinus: when an electric bulb is placed in the oral cavity the eye on the sound side perceives the light but the eye on the affected side does not.

gar'get (gahr'ghit) [ME., from L. *gurges*, whirlpool]. A progressive inflammation of the udder; usually applied to cattle.

gar'gle [F. *gargouiller*, to gargle]. A solution for rinsing the pharynx and nasopharynx.

gar'gle. To rinse the pharynx and nasopharynx.

gar'goyl·ism [L. *gurgulio*, gullet]. A congenital disease characterized by dwarfism, with short, kyphotic spinal column, short fingers, depression of bridge of the nose, and heavy ugly facies, stiffness of joints, cloudiness of cornea, hepatosplenomegaly, and mental deficiency. It may represent a form of lipoidosis. In contrast to *chondro-osteodystrophy*, the changes of the vertebral bodies and hip joints are quite distinct, and also there are changes of the bones of skull and face. Also called *Hurler's syndrome*, *dysostosis multiplex*, *lipochondrodystrophy*.

Garland's triangle. See under *triangle*.

gar'lic [AS. *gārlēac*]. The fresh bulb of *Allium sativum*. It contains a volatile oil consisting of allyl compounds of sulfur. It is sometimes used in pulmonary conditions, and in the dehydrated form, as a carminative.

Garré, Carl [*Swiss surgeon*, 1857–1928]. Described chronic sclerosing osteomyelitis with little suppuration, characterized by small areas of necrosis, called *Garré's disease*, *Garré's osteomyelitis*.

Garretson, James Edmund [*American dentist*, 1828–95]. Pioneer in oral and maxillary surgery and often called the father of oral surgery.

Garrison, Fielding H. (1870–1935). American medical librarian and historian, author of *An Introduction to the History of Medicine*, the standard English textbook of medical history. He was associated for many years with the *Index Medicus* and the Army Medical Library.

Garrod, Archibald Edward [*English physician and biochemist*, 1857–1936]. Showed that constitutional metabolic variations can produce such conditions as cystinuria, pentosuria, and alkaptonuria (1909). Devised *Garrod's test* for porphyrins in the urine. See under *test*.

gar·rot'ing (ga·ro'ting, ga·rot'ing) [Sp. *garrote*]. In *legal medicine*, forcible compression of a victim's neck from behind with intent to rob or kill.

Gärtner, August [*German bacteriologist*, 1848–1934]. Described the bacillus known as *Gärtner's bacillus*, now classified as *Salmonella enteritidis*, as a cause of food poisoning (1888).

Gartner's cyst. See under *cyst*.

Gartner's duct. See under *duct*.

gas [invented by van Helmont; suggested by G. *chaos*, chaos]. 1. The vaporous or airlike state of matter. A fluid which distributes itself uniformly throughout any space in which it is placed, regardless of its quantity. 2. Any combustible gas used as a source of light or heat. —**gas'eous**, *adj.*

asphyxiating g. Carbon monoxide.

blister g. In *military medicine*, a gas used for casualty effect; it injures the eyes and lungs and blisters the skin; formerly called *vesicant*.

choking g. In *military medicine*, a casualty gas which causes irritation and inflammation of the bronchial tubes and lungs. Phosgene is an example of this type of gas.

Clayton g. Sulfurous acid gas generated by means of the Clayton furnace, for disinfection and for destroying rats and other vermin.

laughing g. Nitrous oxide.

marsh g. Methane.

mustard g. $(C_2H_4Cl)_2S$. Dichlorodiethylsulfide. Syn., *yperite*.

nerve gases. A group of war gases having a rapid, profound, cumulative, and only slowly reversible effect on the central, peripheral, and parasympathetic nervous systems. They exert their effects by specifically inhibiting cholinesterase; treatment is primarily with atropine. They are derivatives of organic esters of phosphoric acid, and are not to be confused with hydrogen cyanide, carbon monoxide, and various fluorophosphates.

olefiant g. Ethylene.

persistent war g. In *military medicine*, one which is normally effective in the open at the point of dispersion more than 10 minutes, used against troop concentrations for casualty effect or on materiel and terrain to restrict use through threat of casualties. A moderately persistent war gas is normally effective in the open at the point of dispersion from 10 minutes to 12 hours.

sewer g. The mixture of gases and vapors which emanate from a sewer.

tear g. Substances used by civil authorities to produce physical discomfort without injury by causing inflammation of the mucous membranes of the eyes and nose, followed by lacrimation. Especially useful in dispersing mobs.

vomiting g. In *military medicine*, a chemical agent that causes coughing, sneezing, pain in nose and throat, nasal discharge, sometimes tears, often followed by headache and vomiting; formerly called *irritant smoke* or *sternutator*. Adamsite is an example of a vomiting gas.

war g. A chemical agent which, in field concentrations, produces a toxic or strongly irritant effect. May be a finely dispersed liquid or solid as well as a true gas. Based on physiologic action, five classes of war gases, or chemical warfare agents, are recognized. The *lacrimators* include chloroacetophenone and bromobenzylcyanide. The *sternutators* include diphenylchloroarsine and diphenylaminechloroarsine (adamsite). The *lung irritants* are chlorine, phosgene, and chloropicrin, the latter being lacrimatory and emetic as well. The *vesicants* include dichloro-diethylsulfide (mustard gas) and chlorovinyldichloroarsine (lewisite), which is also a lacrimator, lung irritant, and systemic poison. Other *systemic poisons* are hydrocyanic acid and carbon monoxide.

Gaskell, Walter Holbrook [*English physiologist and anatomist*, 1847–1914]. Made important studies of the innervation of the heart and of cardiac rhythm. Demonstrated that the preganglionic neurons originate in the central nervous system (1886). His work laid the histologic foundation for later investigations of the autonomic nervous system. The atrioventricular bundle is called *Gaskell's bridge*, *bundle of His*.

gas·om'e·ter [gas; G. *metron*, a measure]. A device for holding and measuring gas. See also *spirometer*. —**gasomet'ric**, *adj.*

Tissot g. See *Tissot spirometer*.

gasp [ON. *geispa*, to yawn]. To breathe spasmodically with open mouth.

Gasser, Herbert Spencer (1888–). American physiologist and medical administrator; one of the first to use amplifiers in physiology. He and J. Erlanger combined this instrument with the cathode-ray oscillograph and studied the highly differentiated functions of the individual nerve fibers. Nobel laureate in medicine and physiology with Erlanger (1944).

gas·se'ri·an, Gas·ser'i·an gan'gli·on. See *semilunar ganglion*.

gas'sing [*gas*, suggested by G. *chaos*, chaos]. 1. In warfare, the drenching of an area with poisonous

gas. 2. The execution or attempted execution of a person by means of toxic gas. —**gassed**, *adj.*

-gas'ter [G. *gastēr*, belly]. 1. *In anatomy* and *biology*, a combining form denoting *part of* or *like a stomach*.

gas'ter-o-, **gaster-** [*gastēr*]. A combining form denoting *pertaining to the stomach*.

Gas"ter-oph'i-lus [*gastēr*; G. *philein*, to love]. A genus of botflies. The larvae are parasites of horses and occasionally infest the cutaneous and subcutaneous tissues in man.

G. haemorrhoidalis. A species which attacks the lower lip or jaw.

G. intestinalis. A species attacking the inner side of the legs and the sides of the abdomen. This species produces a cutaneous lesion in man, the hatched larvae causing an eruption similar to that produced by the *Ancylostoma braziliense*.

G. nasalis. The chin fly, which attacks the lower lip or jaw.

gastr-. See *gastro-*.

gas-tral'gi-a [*gastēr*; G. *algos*, pain]. Pain in the stomach.

gas"tral-go-ke-no'sis (gas"tral-go-keh-no'sis, gastral-go-) [*gastēr*; *algos*; G. *kenos*, empty; *-ōsis*, condition]. Pain due to emptiness of the stomach; relieved by taking food.

gas"tras-the'ni-a [*gastēr*; G. *astheneia*, want of strength]. Debility of the stomach. *Obs.*

gas"tra-tro'phi-a [*gastēr*; G. *atrophia*, want of food]. Atrophy of the stomach.

gas-trec'ta-sis [*gastēr*; G. *ektasis*, extension]. Dilatation of the stomach.

gas-trec'to-my [*gastēr*; G. *ektomē*, excision]. Excision of the whole or a part of the stomach.

gas'tric [*gastēr*]. Pertaining to the stomach.

gas'trin [*gastēr*]. A hormone, originating in the pyloric glands of the stomach, purported to excite secretion of the fundic cells.

gas-tri'tis [*gastēr*; G. *-itis*, inflammation]. Acute or chronic inflammation of the stomach. —**gastrit'ic**, *adj.*

atrophic g. A chronic form with atrophy of the mucous membrane.

cancer g. A diffuse subacute gastritis with atrophy of the gastric glands, considered to be precancerous inflammation.

catarrhal g. A type, usually acute, with mucinous exudate.

corrosive g. An acute gastritis which is caused by corrosive poisons.

fibrinous g. An acute inflammation with a large amount of fibrin in the exudate. Also called *croupous g.*, *diphtheritic g.*, *membranous g.*, *pseudomembranous g.*

hypertrophic g. A chronic form with increased thickness of mucosa, exaggerated granulation, and larger, more numerous rugae. Polyps may develop.

infectious g. Acute gastritis associated with infectious diseases such as measles, scarlet fever.

interstitial g. An uncommon, chronic gastritis; characterized by increase in thickness and density of the submucosa.

phlegmonous g. An extended form of acute, suppurative gastritis.

simple exogenous g. The acute type often associated with enteritis and characterized by vomiting, pain, and malaise; may be due to ingested food or to an infection.

suppurative g. Acute, purulent gastritis.

gas'tro-, **gastr-** [*gastēr*]. A combining form meaning *stomach* or *belly*.

gas"tro-a-ceph'a-lus [*gastēr*; G. *a-*, not; *kephalē*, head]. A monster having an acephalic abdominal parasite.

gas"tro-a-mor'phus [*gastēr*; *a-*; G. *morphē*, form]. A form of cryptodidymus in which fetal parts are included within the abdomen of the host. Syn., *endocyma*.

gas"tro-an-as"to-mo'sis [*gastēr*; G. *anastomōsis*, opening]. In hour-glass contraction, the formation of a communication between the two pouches of the stomach. Also called *gastrogastrostomy*.

gas'tro-cele [*gastēr*; G. *kēlē*, hernia]. A hernia of the stomach.

gas"troc-ne'mi-us [G. *gastroknēmia*, calf of the leg]. A muscle on the posterior aspect of the leg, arising by two heads from the posterior surfaces of the lateral and medial condyles of the femur and inserted with the soleus muscle into the Achilles tendon, and through this into the back of the calcaneus.

gas'tro-coel (gas'tro-seel). Archenteron.

gas"tro-col'ic [*gastēr*; G. *kolon*, colon]. Pertaining to the stomach and the colon.

gas"tro-co-lot'o-my [*gastēr*; *kolon*; G. *tomē*, a cutting]. Incision into the stomach and colon.

gas"tro-col-pot'o-my [*gastēr*; G. *kolpos*, vagina; *tomē*]. The operation of Cesarean section in which the opening is made through the linea alba and continued into the upper part of the vagina. *Obs.*

gas"tro-di'a-phane [*gastēr*; G. *diaphainein*, to show through]. An electric apparatus for illuminating the interior of the stomach so that its outlines can be seen through the abdominal wall. —**gastrodiaph'any**, *n.*

gas"tro-di-aph"a-nos'co-py [*gastēr*; *diaphainein*; G. *skopein*, to examine]. The examination of the stomach by means of the diaphanoscope; gastrodiaphany.

gas"tro-did'y-mus [*gastēr*; G. *didymos*, twin]. A monster consisting of equal conjoined twins united at the epigastric region. Syn., *omphalopagus*, *omphalodidymus*, *coelosodidymus*.

gas"tro-dis-ci'a-sis (gas"tro-dis-kigh'uh-sis) [*gastēr*; G. *diskos*, disk; NL. *-iasis*, condition]. Infestation of the cecum by the *Gastrodiscoides hominis*, causing inflammation and producing diarrhea.

Gas"tro-dis-coi'des (gas"tro-dis-koy'deez) [*gastēr*; G. *diskoeidēs*, disk-shaped]. A genus of flukes of the family Gastrodiscidae.

G. hominis. A species which has as its natural host the hog; man serves as an accidental host.

Gas"tro-dis'cus hom'i-nis. Synonym for *Gastrodiscoides hominis*.

gas'tro-disk [*gastēr*; G. *diskos*, disk]. In *embryology*, the germinal disk.

gas"tro-du"o-de'nal (gas"tro-dew"o-dee'nul, -dew-od'i-nul) [*gastēr*; L. *duodeni*, twelve]. Pertaining to the stomach and the duodenum.

gas"tro-du"o-de-ni'tis [*gastēr*; *duodeni*; G. *-itis*, inflammation]. Inflammation of the stomach and duodenum.

gas"tro-du"o-de-nos'to-my [*gastēr*; *duodeni*; G. *stoma*, mouth]. Establishment of an anastomosis between stomach and duodenum.

gas"tro-en"ter-al'gi-a [*gastēr*; G. *enteron*, intestine; *algos*, pain]. Common but incorrect term for pain in the stomach and intestine.

gas"tro-en'ter-ic. Pertaining to the stomach and the intestines; gastrointestinal.

gas"tro-en"ter-i'tis [*gastēr*; *enteron*; G. *-itis*, inflammation]. Inflammation of stomach and intestine.

acute nonbacterial g. An infectious, brief, self-limited viral disease of the digestive tract occurring most frequently in late fall and early winter. Clinical diagnosis is made after other diagnoses have been ruled out, and when two or more of the following major symptoms are present: fever, diarrhea, vomiting, and abdominal pain. It is epidemic if another member of the patient's

family acquires one of the above four symptoms within ten days of the patient's recovery. Recent evidence suggests two types: an afebrile type caused by Marcy strain virus and characterized by frequent watery stools; a febrile type caused by FS strain virus in which constitutional symptoms are more severe but watery diarrhea is absent.

gas″tro-en″ter-o-a-nas″to-mo′sis [*gastr-*; *enteron*; G. *anastomōsis*, opening]. Anastomosis between the intestine and the stomach. See *gastroenterostomy*, *gastroduodenostomy*, *gastrojejunostomy*.

gas″tro-en″ter-ol′o-gist [*gastr-*; *enteron*; G. *logos*, word]. One who specializes in diseases of the stomach and intestine.

gas″tro-en″ter-ol′o-gy [*gastr-*; *enteron*; *logos*]. The study of the stomach and intestine and their diseases.

gas″tro-en″ter-op-to′sis. Sagging or prolapse of the stomach and intestines.

gas″tro-en″ter-os′to-my [*gastr-*; *enteron*; G. *stoma*, mouth]. The formation of a communication between the stomach and the small intestine, usually the jejunum. See *gastroduodenostomy*, *gastrojejunostomy*.

gas″tro-ep″i-plo′ic [*gastr-*; G. *epiploon*, fold]. Pertaining to the stomach and omentum, as the gastroepiploic artery. See Table of Arteries in the Appendix.

gas″tro-e-soph″a-gi′tis [*gastr-*; G. *oisophagos*, gullet; *-itis*, inflammation]. Combined inflammation of the stomach and the esophagus.

gas″tro-gas-tros′to-my [*gastr-*; *gastr-*; G. *stoma*, mouth]. The surgical anastomosis of one portion of the stomach with another.

gas″tro-ga-vage′ (gas″tro-gah-vahzh′) [*gastr-*; F., from *gaver*, to gorge]. Artificial feeding through an opening in the stomach wall; gavage.

gas′tro-graph [*gastr-*; G. *graphein*, to write]. An apparatus for registering the peristaltic movements of the stomach from the outside.

gas″tro-he-pat′ic [*gastr-*; G. *hēpar*, liver]. Relating to the stomach and liver, as the gastrohepatic ligament.

gas″tro-hy″per-ton′ic [*gastr-*; G. *hypertonos*, strained to the utmost]. Relating to morbid or excessive tonicity or irritability of the stomach.

gas″tro-hys″ter-ec′to-my [*gastr-*; G. *hystera*, womb; *ektomē*, excision]. Removal of the uterus through the abdominal wall; abdominal hysterectomy. *Obs.*

gas″tro-hys′ter-o-pex″y [*gastr-*; *hystera*; G. *pēxis*, fixing]. Ventrofixation of the uterus by an operation. *Obs.*

gas″tro-hys″ter-ot′o-my [*gastr-*; *hystera*; G. *tomē*, cutting]. Old term for high abdominal Cesarean section. *Obs.*

gas″tro-in-tes′ti-nal [*gastr-*; L. *intestinum*, intestine]. Pertaining to the stomach and intestine.

gas″tro-je-ju′nal [*gastr-*; L. *jejunus*, empty]. Pertaining to the stomach and to the jejunum, as gastrojejunal anastomosis.

gas″tro-je″ju-ni′tis (gas″tro-jee-jew-nigh′tis, jedj″oo-nigh′tis) [*gastr-*; *jejunus*; G. *-itis*, inflammation]. Inflammation of both the stomach and jejunum; may occur after gastrojejunostomy.

gas″tro-je″ju-nos′to-my (-jee-jew-nos′to-mee, jedj″oo-nos′to-mee) [*gastr-*; *jejunus*; G. *stoma*, opening]. The surgical anastomosis of the jejunum to the anterior or posterior wall of the stomach; gastroenterostomy.

gas″tro-lav′age (gas″tro-lav′idj, la-vahzh′) [*gastr-*; L. *lavare*, to wash]. Washing out of the stomach; gastric lavage.

gas″tro-li′e-nal (gas″tro-lye′i-nul, -lee′i-nul). Incorrect form for gastrosplenic.

gas′tro-lith [*gastr-*; G. *lithos*, stone]. A calcareous formation in the stomach.

gas″tro-li-thi′a-sis [*gastr-*; *lithos*; NL. *-iasis*, condition]. A morbid condition associated with the formation of gastroliths.

gas-trol′o-gy [*gastr-*; G. *logos*, word]. The science of the stomach and its functions and diseases.

gas-trol′y-sis [*gastr-*; G. *lysis*, a loosing]. The breaking-up of adhesions between the stomach and adjacent organs.

gas″tro-ma-la′ci-a (gas″tro-ma-lay′shee-uh, -see-uh) [*gastr-*; G. *malakia*, softness]. An abnormal softening of the walls of the stomach. *Obs.*

gas″tro-meg′a-ly [*gastr-*; G. *megas*, large]. Abnormal enlargement of the stomach.

gas-trom′e-lus [*gastr-*; G. *melos*, limb]. An individual with an accessory limb attached to the abdomen.

gas″tro-my-co′sis (gas″tro-migh-ko′sis) [*gastr-*; G. *mykēs*, fungus; *-ōsis*, condition]. Gastric disease due to fungi.

gas″tro-my-ot′o-my (gas″tro-migh-ot′o-mee) [*gastr-*; G. *mys*, muscle; *tomē*, a cutting]. Incision of the circular muscle fibers of the stomach. See *pyloromyotomy*.

gastron. A proprietary preparation representing the soluble contents of the gastric mucosa; used in gastric dysfunction.

gas″tro-par″a-si′tus [*gastr-*; G. *parasitos*, parasite]. A monster having a parasite attached to its abdomen.

gas-trop′a-thy [*gastr-*; G. *pathos*, disease]. Any disease or disorder of the stomach.

gas′tro-pex″y, **gas″tro-pex′y** [*gastr-*; G. *pēxis*, fixing]. The fixation of a prolapsed stomach in its normal position by suturing it to the abdominal wall or other structure.

Gas″tro-phil′i-dae (gas″tro-fil′i-dee) [*gastr-*; G. *philein*, to love]. A family of the Diptera, whose larvae, known as bots, are parasitic in the stomach and intestine of horses and related animals. The principal genus is *Gasterophilus*.

gas″tro-pho′tor [*gastr-*; G. *phōs*, light]. A stomach camera which takes pictures of the inside of the stomach.

gas″tro-phren′ic. Pertaining to the stomach and diaphragm, as gastrophrenic ligament.

gas″tro-plas′ty, **gas′tro-plas″ty** [*gastr-*; G. *plassein*, to form]. Plastic operation on the stomach.

gas″tro-pli-ca′tion [*gastr-*; L. *plicare*, to fold]. An operation for relief of chronic dilatation of the stomach, consisting in suturing a large horizontal fold in the stomach wall; quilting of the stomach wall for redundancy due to chronic dilatation. See *gastroplasty*, *gastrorrhaphy*.

gas′tro-pore. See *blastopore*.

gas″trop-to′sis [*gastr-*; G. *ptōsis*, a falling]. Prolapse or downward displacement of the stomach.

gas″tro-py″lo-rec′to-my [*gastr-*; G. *pylōros*, gatekeeper; *ektomē*, excision]. Excision of the pyloric portion of the stomach; pylorectomy.

gas″tror-rha′gi-a [*gastr-*; G. *rhēgnynai*, to break forth]. Hemorrhage from the stomach.

gas-tror′rha-phy [*gastr-*; G. *rhaphē*, a suture]. Surgical repair of a stomach wound by infolding of the edges and employing repeated rows of sutures.

gas″tror-rhe′a [*gastr-*; G. *rhoia*, a flow]. Excessive secretion of gastric mucus or of gastric juice.

gas-tros′chi-sis (gas-tros′ki-sis) [*gastr-*; G. *schisis*, cleavage]. A congenital malformation in which the abdomen remains open.

gas′tro-scope [*gastr-*; G. *skopein*, to examine]. An instrument for examining the interior of the stomach. —**gastros′copy**, *n.*

gas′tro-spasm [*gastr-*; G. *spasmos*, spasm]. Stomach spasm.

gas"tro-splen'ic [*gastr-*; G. *splēn*, spleen]. Relating to the stomach and the spleen.

gas"tro-stax'is [*gastr-*; G. *staxis*, dripping]. The oozing of blood from the mucous membrane of the stomach.

gas-tros'to-my [*gastr-*; G. *stoma*, mouth]. The establishing of a fistulous opening into the stomach, with an external opening in the skin, usually for artificial feeding.

gas"tro-tho-ra-cop'a-gus [*gastr-*; G. *thōrax*, thorax; *pagos*, that which is fixed]. A monster consisting of conjoined twins united at the abdomen and thorax.

gas-trot'o-my [*gastr-*; G. *tomē*, a cutting]. Incision into the stomach.

gas"tro-tox'in [*gastr-*; G. *toxikon*, poison]. A cytotoxin which has a specific action on the cells lining the stomach.

gas"tro-tym-pa-ni'tes (gas"tro-tim-puh-nigh'teez, -nigh'tis) [*gastr-*; G. *tympanitēs*, from *tympanon*, drum]. Gaseous distention of the stomach.

gas'tru-la [NL., dim. from *gaster*]. An embryo at that stage of its development when it consists of two cellular layers, the primary ectoderm and entoderm, and a primitive gut or archenteron opening externally through the blastopore. The simplest type is derived by the invagination of the spherical blastula, but this is greatly modified in the various animal groups. —**gastrula'tion**, *n.*

gas war'fare. See *chemical warfare*.

Gatch, Willis Dew [*American surgeon*, 1878–]. Inventor of a surgical bed with adjustable frame and springs for raising and lowering the head and maintaining a semisitting position; called *Gatch bed*.

gat"o-phil'i-a [It. *gatto*, from LL. *cattus*, cat; G. *philein*, to love]. Fondness for cats.

gat"o-pho'bi-a [*cattus*; G. *phobos*, fear]. A morbid fear of cats.

-gat'tal [Indonesian, itch]. In Indonesia, suffix of names of plants, contact with which causes severe itching.

Gaucher, Philippe Charles Ernest [*French physician*, 1854–1918]. Described familial splenic anemia (1882) called *cerebroside lipoidosis*, *Gaucher's disease*. The characteristic cells are called *Gaucher's cells*.

gauge. See *gage*.

Gault's reflex. See under *reflex*.

gaul-the'ri-a [after Jean François *Gaultier*, Canadian physician and botanist, 1708–56]. The plant, *Gaultheria procumbens*, the leaves of which yield a volatile oil. Syn., *teaberry*, *wintergreen*.

g. oil. Contains 90% of methyl salicylate; used in acute rheumatism and as a local antiseptic and flavoring agent. Dose, 0.3–1.2 cc. (5–20 min.)

synthetic g. oil. See *methyl salicylate*.

gaul'ther-in. A glycoside obtained from the bark of the sweet birch, *Betula lenta*, and from wintergreen, *Gaultheria procumbens*. On enzymatic hydrolysis it yields methyl salicylate and primeverose; on acid hydrolysis the latter yields D-glucose and D-xylose.

gaul-ther'i-lene. Methyl salicylate.

gaunt'let [F. *gantelet*, dim. of *gant*, glove]. A bandage that covers the hand and fingers like a glove.

Gauss, Karl Friedrich [*German mathematician and optician*, 1777–1855]. Devised Gaussian points, addition and subtraction logarithms, and the probability curve.

gauze [F. *gaze*]. A thin, open-meshed cloth of varying degrees of fineness, used in surgical operations and for surgical dressings. When sterilized, it is called *aseptic gauze*; when packaged for use in the operating room, the individual folded pieces are called *sponges*.

ga"vage' (gah-vahzh') [F.]. The administration of liquid nourishment through the stomach tube.

Gavard, Hyacinthe [*French anatomist*, 1753–1802]. Described the oblique muscular fibers of the stomach wall, called *Gavard's muscle*.

Gay-Lussac, Joseph Louis [*French chemist and physicist*, 1778–1850]. Isolated boron and cyanogen. Studied the expansion of gases. *Gay-Lussac law* states that the volumes of interacting gases and of the reaction products are in simple proportions that can be expressed in whole numbers.

g-compartment. See *gynandromorphy*.

Gd Chemical symbol for gadolinium.

Ge Chemical symbol for germanium.

Gee, Samuel Jones [*English pediatrician*, 1839–1911]. First to describe celiac disease (1888), a nontropical disease similar to if not identical with sprue; see under *disease*.

Gegenbaur, Carl [*German anatomist*, 1826–1903]. One of the first to study comparative anatomy in relation to evolution. Demonstrated that the vertebrate ovum is a single cell (1861). See *muscle of Gegenbaur*.

Gehuchten, Arthur van (1861–1914). Belgian neurologist, known for his studies of the central nervous system and his contributions to the neuron doctrine.

Geigel's reflex. See under *reflex*.

Geiger, Hans [*German physicist*, 1882–1945]. Made important studies of radioactivity. See *Geiger-Müller counting circuit*, *Geiger-Müller tube*, *Geiger-Müller counter*.

Geiger, Philipp Lorenz [*German pharmacologist*, 1785–1836]. Isolated atropine (1833) with Hermann Hesse.

Gei'ger-Mül'ler count'er. An instrument for the detection of individual ionizing particles; entry of a charged particle into the apparatus produces ionization and a momentary flow of current which is relayed to a counting device; also called *Geiger counter*.

Gei'ger re'gion. The voltage interval of a Geiger counter tube in which the charge transferred per isolated count is independent of the charge produced by the initial ionizing event.

Gei'ger thresh'old. The lowest voltage at which all pulses produced by an ionizing event in a Geiger counter tube are the same size regardless of the energy of the initial ionizing radiation.

gei-so'ma (guy-so'muh) [G. *geisōn*, cornice]. The eyebrows of the face, or the supraorbital ridges of the skull. Also called *geison*.

gei'son (guy'son). See *geisoma*.

Geissler tube. See *roentgen rays* under *ray*.

gel (jel). A colloidal system comprising a solid and liquid phase which exists as a solid or semisolid mass.

inelastic g. One that loses its property of elasticity and pulverizes when dried, becoming amorphous.

irreversible g. One transformed from a sol, which cannot be reversed to a sol.

gel'a-tin. A preparation of agar-agar.

ge-las'mus (jeh-laz'mus, -lass'mus), **ge-las'ma** (jeh-laz'muh, -lass'muh) [G. *gelasma*, smile]. Insane or hysterical spasmodic laughter.

ge-lat"i-fi-ca'tion [L. *gelare*, to freeze; *facere*, to make]. The conversion of a substance into a jelly-like mass.

gel'a-tin [*gelare*] (*gelatinum*). The product obtained by the partial hydrolysis of collagen, derived from the skin, white connective tissue, and bones of animals. Gelatin derived from an acid-treated precursor exhibits an isoelectric point between pH 7 and pH 9, while gelatin derived from an alkali-treated precursor has an isoelectric point

between pH 4.7 and 5.0. It occurs in sheets, flakes, shreds, or as coarse or fine powder insoluble in cold water but soluble in hot water. Gelatin is used in many pharmaceutical preparations, as an ingredient of bacteriological culture mediums, and as food. In medicine it finds some use in accelerating coagulation of blood by intravenous injection. It is of some interest as possible blood substitute. —**gelat'inoid, gelat'inous,** *adj*

glycerinated g. (*gelatinum glycerinatum*) A preparation of gelatin and glycerin, used as vehicle for suppositories and bougies also called *glycerin jelly*

medicated g. Gelatin disks or lamellae mixed with medicated substances. The gelatin lamellae of the British Pharmacopoeia contain small amounts of alkaloids, for introduction into the conjunctival sac. They are dissolved by the tears, and the effects of the alkaloids are thus obtained.

ossein g. A gelatin obtained by boiling bone.

ge-lat'i nase. An enzyme liquefying gelatin. It is found in various molds and yeasts.

ge lat'i nize [*gelare*]. Convert into jellylike mass.

ge lat"i no-lyt'ic [*gelare*; G. *lysis*, loosing] Dissolution or splitting up of gelatin.

ge-lat"i no sa. See *substantia gelatinosa* Rolandi.

gel tion. 1 The change of colloid from sol to gel. 2. Freezing.

gel'a-tose. A product of the hydrolysis of gelatin by acid, alkali, or enzyme.

geld (gheld) [ON *geldr* barren] T castrate, as horse; t emasculate.

geld'ing (ghedd'ing) [*geldr*]. 1 Castration. 2. A castrated stallion.

gelfoam. Trade-mark for partly denatured gelatin, in the form of powder or light porous matrix, employed as hemostatic agent, often in combination with thrombin.

Gélineau, Jean Baptiste Edouard [*French physician*, 1859–]. First to describe narcolepsy (1880) called *Gélineau disease* or *syndrome*, *Gélineau-Redlich syndrome*.

Gellé, Marie Ernest [*French aural surgeon*, 1834–1923] Described hearing test, called *Gellé test*, to detect complete or partial fixation of the stapes. A tuning fork is placed in contact with rubber tube whose nozzle is inserted into the external auditory meatus. If the sound is diminished in intensity when air is compressed in the tube by pressure upon connecting bulb, the test is positive, and the ear is normal.

gel'ose (jel'ose, jee'loce, jeh loce') 1 The gelatinizing principle of agar being the calcium salt of complex carbohydrate substance composed of galactose units. 2. A culture medium for bacteria. See *agar-agar*

gel'o-sin (jel'o-sin, jeh lo sin) A mucilage from Japanese alga.

ge lot o-lep sy gel' to lep sy [G *gelōs*, laughter; *lēpsis*, seizing]. A sudden loss of muscle tone during laughter with transitory loss of consciousness

gel sem'i cine (jel sem'i-seen, -sin) An alkaloid from gelsemium.

gel sem'i dine. An alkaloid from gelsemium.

gel se mine (jel'se meen, -min) An alkaloid, $C_{20}H_{22}O_2N_2$ from gelsemium.

gel-sem'in ine. An alkaloid from gelsemium.

gel-se mi um (jel see mee-um, -sem ee-um) [NL. from It. *gelsomino*, jessamine] (*gelsemium*) The dried rhizome and roots of *Gelsemium sempervirens*, used as an antispasmodic and antineuralgic. Dose, 0 03–0 13 Gm. (½–2 gr) Also called *yellow jasmine root*.

ge-mel'lus [L., twin]. A name applied to certain paired muscles. See Table of Muscles in the Appendix.

gem'i nate gem'i nous [L. *geminare*, to double]. 1 In pairs; coupled. 2. Double become double. —**g mina'tion,** *n.*

gem"i na tion [L. *geminatio*, doubling]. The formation of two teeth, separate or more or less fused, where only one tooth is normal.

gem'i nous. See *geminate*.

ge-mi to-cyte [Ger *mästen*, to fatten; G. *kytos*, cell]. Anglicized form of Nissl *gemästete Zellen* or plump astrocyte a large, round cell with pale, acid philic, homogeneous cytoplasm and eccentrically displaced nucleus, observed in certain neuropathological conditions, as in so-called gemistocytic astrocytoma. —**gemis"tocyt'ic,** *adj*

gem ma [L., bud]. An asexual, budlike body either unicellular or multicellular

gem ma'tion [L. *gemmare*, to put forth buds] Budding; mode of reproduction seen in low forms of animal and vegetable lif characterized by the formation of small projection from the parent organism, which is constricted off and forms another organism.

gem mule [L. *gemmula*, little bud]. 1. A small bud or gemma. 2. A term applied to the short thorny processes of the dendrites of pyramidal nerve cells.

gemonil. Trade-mark for metharbital, chemically 5,5-diethyl-1-methylbarbituric acid; barbituric acid derivative useful in treating epilepsy

gen. See *gene*.

-gen [G *gennathai*, from *gignesthai*, to be produced]. 1. *I chemistry*, combining form denoting *substance that produces or generates*. 2. *In biology* combining form denoting *thing produced or generated*.

ge na [L] The cheek. —**genal** *adj*

Gendre' fixing fluid. See under *fixing fluid*.

gene, gen [G *gennathai*, from *gignesthai*, to be produced]. Any hereditary factor the ultimate unit in the transmission of hereditary characteristics, regarded as an ultramicroscopic particle, capable of self-reproduction and imitation, which occupies definit locus on chromosome. Any known gene is modifier of development and is regarded as cellular physiologi agent which acts as center of specific chemical activity

gen er a. Plural of genus

gen er al [L *generalis*, of or belonging to species, from *genus*, kind]. Common to class distributed through many parts; diffuse. —**generalize,** *v.t.*

gen"er tl o (jen ur y tee-o) See *generation*.

gen er-a tion [L. *generare*, to produce]. 1. The act or process of producing offspring. 2. A period xtending from the birth of an individual to the birth of his offspring, in humans usually third of century 3. The production of gas or electric current. —**gen erative,** *adj* **gen'erate,** *v.t.*

alternate g. See *alternation of generations*.

asexual g. Reproduction without sexual union reproduction by fission or gemmation.

sexual g. Reproduction by the union of male and female gametes.

spontaneous g. See *abiogenesis*.

gen'er "tor [L., from *generare*]. 1 *I electricity*, machine which transforms mechanical power int electric power 2. *I radiology* machine which supplies the roentgen-ray tube with the electric energies necessary for the production of roentgen rays. 3 *I chemistry* an apparatus for the formation of vapor or gas from liquid or solid by heat or chemical action.

cascade g. A generator in which the transformers are arranged in cascaded series with separate insulation for the production of high voltages. Used in supervoltage roentgen therapy

electrostatic g. Apparatus for producing voltages up to several million volts by accumulating small static charge on an insulated high-voltage metal collector.

supervoltage g. One that produces voltages over 250,000; used in the production of short-wave roentgen rays.

ge-ner'ic [L. *genus*, kind]. 1. Pertaining to genus. 2. General.

gen-es er ine (jen-es'ur-een, -in). Eseridine.

ge-ne'si-al [G. *genesis*, production]. Old term for pertaining to generation.

ge-nes'ic (ji-ness'ick, ji-nee sick) [*genesis*]. Of or relating to generation or to the genital organs.

ge-ne"si-ol'o-gy (ji-nee see-ol'o-jee, ji nee zee-) [*genesis*; G. *logos*, word]. The science of reproduction or heredity

gen'e-sis [G.]. The origin or generation of anything; the developmental evolution of specific thing or type.

-gen e-sis [G.]. A combining form signifying *origination, development, evolution of thing or type.*

ge-net'ic [*genesis*]. 1. Pertaining to or having reference to origin, mode of production or development. 2. Pertaining to genetics. 3. Produced by genes.

ge-net'i-cist [*genesis*]. A specialist in genetics.

ge-net'ics [*genesis*]. The branch of biology which deals with the phenomena of heredity and variation. It seeks to understand the causes of the resemblances and differences between parents and progeny and, by extension, between all organisms related to one another by descent.

ge-net"o-troph'ic. 1. Of or pertaining to genetics and nutrition. 2. Of, pertaining to, or descriptive of disease caused by high inherited demand for some nutrient which is not included in the consumed foods, e.g., some cases of alcoholism.

gen'e-tous [G *gennethei*, from *gignesthai*, to be produced]. Old term for congenital.

Ge-ne va con-ven'tion. An agreement signed by the European powers in Geneva, Switzerland, in 1864, guaranteeing humane treatment of the wounded and those caring for them in time of war In July 1906, full revised convention was adopted in Geneva. In 1907 this was again revised at The Hague Peace Conference, and was adopted as Convention X.

Gengou, Octave [*French bacteriologist*, contemporary]. With Bordet, discovered the complement-fixation reaction, also called *Bordet-Gengou reaction* (1900), and described *Hemophilus pertussis*, called *Bordet-Gengou bacillus* (1906) See also *Bordet-Gengou medium* under *Bordet.*

ge'ni-al (jee nee-ul, ji-nigh ul) [G. *geneion*, chin]. Pertaining to the chin. Syn., *mental.*

ge-nic'u lar [L. *geniculum*, little knee]. Pertaining to the knee joint. as the genicular artery See Table of Arteries in the Appendix.

ge-nic'u-late, ge nic u-la"ted [L. *geniculare*, to bend the knee]. Abruptly bent.

ge-nic'u-lum [L.]. A small, kneelike structure; sharp bend in any small organ.

gen'in (jen'in) See aglycone.

ge ni-o- (jee nee-o-, ji-nigh o-) [G. *geneion*, chin]. I anatomy, combining form meaning chin.

ge"ni-o-glos'sus [*geneion*, G. *glossa*, tongue]. An extrinsic muscle of the tongue, arising from the superior genial tubercle of the mandible

ge"ni-o-hy"o-glos'sus [*geneion*, G *hyoeides*, Y shaped; *glossa*, tongue]. Old name for the genioglossus muscle.

ge"ni-o hy oid [*geneion*, *hyoeides*]. A muscle arising from the inferior genial tubercle of the mandible and inserted into the body of the hyoid.

ge ni-on (jee nee-on, ji nigh on) [*geneion*]. The point at the tip of the mental spine. If several spines are present, the point is located between them in the sagittal plane.

ge"ni-o-pha ryn'ge-us [*geneion*, G *pharynx*, throat]. A variant part of the genioglossus muscle, which blends with the superior constrictor of the pharynx.

ge ni-o-plas"ty (jee nee-o-plas tee, ji-nigh o-) [*geneion*, G *plassein*, to form]. Plastic operation on the chin.

gen'i tal [L. *genitalis*, from *gignere*, to produce]. Pertaining to the organs of generation or to reproduction.

gen"i ta'li-a (jen"i-tay'lee-uh, -tal'ee-uh) [*genitalis*]. The organs of generation. The male has two testes or seminal glands, with their excretory ducts, the prostate, the penis, and the urethra. (See Plate 44.) The *female* genitalia include the vulva, the vagina, the ovaries, the uterine tubes, and the uterus. (See Plate 41.)

indifferent g. The genitalia of the embryo before sexual differences are recognizable.

infantile g. The organs of generation of an infant; more commonly underdevelopment to marked degree of the chronologically adult organs of generation.

gen'i ta-loid [*genitalis*; G *eidos*, form]. Pertaining to the primordial germ cells, and indicating potentialities for either sex.

gen'i tals. Genitalia: common usage.

gen'i to- [*genitalis*]. A combining form signifying genital.

gen"i to-cru'ral [*genitalis*; L. *crus*, leg]. Pertaining to the genitalia and the leg.

gen"i to-fem o ral [*genitalis*; L. *femur* thigh]. Pertaining to the genitals and the thigh genitocrural.

gen"i to-u'ri nar"y (jen"i-to-yoor'i-nerr"ee) [*genitalis*; L. *urina*, urine]. Relating to the genitalia and the urinary organs or functions.

gen'i us [L., tutelar deity from *gignere*, to produce]. 1. Distinctive character or inherent nature. 2. Unusual artistic or creative ability· mental superiority

g. epidemicus. The totality of conditions, atmospheric, cosmic, supernatural, etc., formerly regarded as most favorable to the prevalence of an endemic or of an epidemic disease. *Obs.*

g. morbi. The special or predominant feature of disease.

Gennari Francesco [*Italian anatomist*, ca 1750–ca. 1795]. Described the single tangential striation of the cerebral cortex (1782); called *line, stria*, or *stripe of Gennari, Gennari' layer*

gen o-cide [G. *genos*, race; L. *caedere*, to kill]. The killing off of entire human groups, as homicide is the killing of an individual human being.

gen o-der-ma to sis. Any congenital skin disease, as ichthyosis, pachyonychia congenita, epidermolysis bullosa, or phacomatoses.

ge'nome, ge nom [G. *gennethei*, from *gignesthai*, to be produced; *-ome*, group]. A complete set of the hereditary factors, such as is contained in haploid set of chromosomes.

gen"o-mor'phine. The N-oxide of morphine, occurring in white crystals, slightly soluble in water It has been proposed as substitute for morphine, but causes true addiction.

gen o-pho'bi-a [G. *genos*, sex; *phobos*, fear]. A morbid fear of sex.

genoscopolamine. Trade-mark for the N-oxide of scopolamine.

gen o-type [G *gennethei*, from *gignesthai*, to be produced; *typos*, impression]. 1 The hereditary constitution of an organism resulting from its particular combination of genes. 2. A class of

ge-ron"to-pho'bi a. Morbid fear of old age.

ge-ron"to-ther'a py [*geras*, G *therapeia*, treatment]. Treatment of the aging process.

ger"on tox'on [*geras*; G. *taxon*, bow]. The arcus senilis.

Gerota, Dumitru (1867–1939) Rumanian surgeon who studied the lymphatic system by the injection method. The lymphatic drainage from the mammary glands through the abdominal lymphatics to the liver or subdiaphragmati nodes by which breast cancer may spread is called *paramammary route of Gerota;* the renal fascia is called *Gerota fascia*, the space enclosed by the renal fascia of the two sides, *Gerota space*.

Gerson method. See Altmann-Gersh *method*.

Gerson diet. See S.H.G. *diet*.

Gersdorff, Hans von [*German surgeon*, ca. 1456–1517]. Famous military surgeon. His classic *Feldbuch* on the treatment of wounds contains the first known illustration of an amputation (1517)

Gerstmann, Josef (1887–) American neurologist and psychiatrist who described complex disorder of cerebral function due to lesion in the left angular and the adjoining area of the middle occipital gyri, giving rise to right-left disorientation, agraphia, acalculia, and hemianopsia, called *Gerstmann syndrome*.

Gersuny Robert [*Austrian surgeon*, 1844–1924]. Described his operation, now obsolete, for fecal incontinence in which the rectum is freed and twisted on its long axis and sutured in place; called *Gersuny' operation*.

Gesell, Arnold (1880–) American psychologist and pediatrician, known widely for his studies on the genesis of behavior and the growth and devel opment of the infant and child.

Gesell developmental schedule. See under *test*.

Gesner Conrad [*Swiss physician and naturalist* 1516–65]. His *Historia Animalium* is considered one of the cornerstones of modern zoology Compiled umerous bibliographies in various fields, and also universal bibliography Called the German Pliny and the f ther f bibliography

ge-stalt' Ge-stalt (ge-shtalt') [Ger form, shape]. Form shape the configuration of separate units into pattern or shape which itself seems to function as unit. See gestalt *psychology*.

ge-stalt'ist, Ge-stalt'ist (ge-shtol tist) A psychologist of the gestalt school. See gestalt *psychology*

ges ta'tion [L. *gestatio*, from *gestare*, to carry]. Pregnancy

abdominal g. The form of extrauterine gestation in which the product of conception is developed in the abdominal cavity

double g. (a) Twin pregnancy (b) The coexistence of uterine and extrauterine pregnancy

ectopic g. See extrauterine *g*.

extrauterine g. Development of the ovum outside of the terine cavity See *pregnancy*.

ges to sis (pl *gestoses*) [*gestare*; G. *-osis*, condition]. Any toxemic manifestation in pregnancy

Getsowa adenoma. See under *adenoma*.

Getsowa truma postbranchialis of See under Getsowa *adenoma*.

geu"mo pho'bi (gew'mah fo'bee-uh) [G. *geuma*, taste *phobos*, fear]. A morbid fear of taste.

-geu si-a (-gew see uh, -jew see uh) [G *geusis*, sense of taste]. A combining form denoting *condition of the taste sense*.

ghat'ti gum. The gummy exudate from stems of *Anogeissus latifolia*, tree of India and Ceylon. *It forms viscous mucilage*, and may be used in certain pharmaceutical preparations in place of acacia. Syn., *Indian gum*.

Ghon, Anton [*Austrian pathologist*, 1866–1936] Described the development of lesions in juvenile pulmonary tuberculosis. The primary lesion is called *Ghon primary focus* or *lesion*, *Ghon tubercle*. The *Ghon complex*, also called *primary complex*, *Küss-Ghon focus*, comprises the Ghon tubercle plus the satellite lymph node involvement.

Giacomini, frenulum of. See under *frenulum*.

Giacosa, Piero [*Italian physician*, 1853–1928]. Remembered for his study of the transformation of nitrates in the body

Gianuzzi cells of. See *demilune cells* under *cell*.

gi'ant [G *gigas*, giant]. A being or organism of abnormally large size.

gi'ant in"tra-can al ic'u lar fi"bro-ad" -noma myx o ma. See *cystosarcoma phylloides*.

gi'ant ism. See *gigantism*.

Gi-ar'di a [after Alfred *Giard*, 1846–1908, French biologist]. A genus of protozoan parasites.

G. lamblia. A species found in the small intestine of man. It is ot tissue invader and its pathogenicity is doubtful.

gi"ar di' sis (jee ahr-dye ah-sis, jy"ahr-) [*Giard*, NL. *-iasis*, condition]. Presence of the *Giardia lamblia* in the small intestine of man. Although this protozoan is found in large numbers in chronic recurring diarrheas, its pathogenicity is doubtful.

Giauque William Francis (1895–) American physical chemist, known for his extensive research on the third law of thermodynamics, low temperature calorimetry and isotopes and band spectra. He originated the magnetic method of attaining temperatures below 1 absolute. In 1949 he received the Nobel prize in chemistry for his work in thermodynamics, especially for his investigations of the properties of substances t extremely low temperatures.

gib bos'i ty (ghi bos'i tee, ji bos'i-tee) [L. *gibbus*, hunched]. The condition of being humpbacked.

gib'bous (ghib'us, jib us) [*gibbus*]. Humpbacked; swollen, convex, or protuberant, especially on one side.

Gibbs, Josiah Willard [*American physicist*, 1839–1903] A distinguished pupil of von Helmholtz. The *Gibbs-Helmholtz equation* for determining the amount of work of which galvanic cell is capable is considered one of the first principles of physical and physiological chemistry Gibbs pplied the second law of thermodynamics (all energy flows or tends to flow from state of concentration to state of dissipation) to all physical and chemical phenomena. The *Gibbs adsorption law* states that substance which lowers interfacial or surface tension of dispersion medium will collect at the surface or interfaces, whereas substances which increase surface tension are more concentrated within the interior of the liquid. Also called *Gibbs-Thomson principle*.

Gibbs's test. See under *test*.

gib'bus (ghib us, jib us) [L. *gibbus*, hump]. A hump; specifically the dorsal convexity seen in tuberculosis of the spine; Pott disease.

Gibert, Camille Melchior [*French dermatologist*, 1797 1866]. First to show pityriasis rosea, also called *Gibert' disease*, to be clinical entity (1860)

Gibson, George Alexander [*Scottish physician*, 1854–1913]. Remembered for his rule in the prognosis of lobar pneumonia. *Gibson rule* states that if the systolic blood pressure in millimeters does not fall below the pulse rate, the prognosis for recovery is good, and vice versa.

Gibson, Kasson Church [*American dentist*, 1849–1925] Remembered for the bandage he devised for holding in position the fragments in fracture of the mandible; called *Gibson bandage*.

Gibson, Robert Banks [*American physiological chemist*, 1882–]. With Geneva C. Goodrich,

devised modification of van den Bergh's method for bile pigment. See van den Bergh's *method*.

gid (ghid) [AS. *gydig*, insane]. A chronic brain disease of sheep, less frequently of cattle characterized by forced movements of circling, rolling. Caused by the larval form of the tapeworm, *Multiceps multiceps*.

gid'di ness [*gydig*]. Dizziness; an unpleasant sensation of disturbed relation to surrounding objects in space. It differs from vertigo in that there is no experience of the external world or of the patient being in motion.

Giemsa, Gustav (1867 1948) German chemist, best known for devising Giemsa stain. Other contributions include his work on the chemotherapeutic effect of derivatives of quinine, arsenic, and bismuth; the control of rats on ships with a mixture of carbon dioxide, carbon monoxide, and nitrogen; and the control of mosquitoes with a mixture of formaldehyde and soap.

Giem sa stain (ghem sah, -zah, ghem) (C.C.) A neutral stain used in staining blood and as a general cytologic stain the compound formed from eosin with one of the derivatives of methylene blue, such as azure II.

Gierke, Edgar von [*German pathologist*, 1877–1945]. Described glycogenosis, also called von *Gierke's disease*.

Gierke, Hans Paul Bernhard [*German anatomist*, 1847–86]. Described thymic corpuscles, also known as *Gierke' corpuscles*, *Hassall' corpuscles*. *Gierke' respiratory bundle* is the tractus solitarius.

Gifford, Harold [*American ophthalmologist*, 1858–1929]. Described sign indicative of exophthalmic goiter *Gifford' sign* consists of inability to evert the upper eyelid in early stages of the disease. Described *Gifford' reflex*. If the eyelids are held apart, the pupil contracts when the subject makes strong effort to close the eye. Delimiting keratotomy is known as *Gifford' operation*.

gi gan'tic ac'id (jye-gan tick) An antibiotic substance from *Aspergillus giganteus*; identical with aspergillin, flavacidin, flavicin, flavatin, and parasiticin.

gi-gan'tism (jye-gan tiz-um) [G *gigas*, giant]. Abnormal size and tallness; height in man in excess of 78 inches; due to an oversupply of growth hormone of the anterior pituitary before the fusion of the epiphyses, or to an enhanced ability of the body tissues to respond to growth stimuli. Gigantism may be normal, the type in which bodily proportions and sexual function are normal; or eunuchoid, the type in which there are eunuchoid proportions and sexual insufficiency; or acromegalic, the form in which features of acromegaly are superimposed on those of gigantism.

gi-gan'to-blast [*gigas*; G *blastos*, germ]. A large nucleated erythroblast.

gi-gan"to-chro mo-blast [*gigas*; G. *chrōma*, color; *blastos*]. A gigantoblast.

gi gan'to-cyte [*gigas*; G. *kytos*, cell]. A large, nonnucleated red blood corpuscle.

Gigli, Leonardo [*Italian surgeon and gynecologist*, 1863–1908]. Described pubiotomy for contracted pelvis in cases of dystocia; called *Gigli' operation*. Devised chain saw for dividing bone, originally for use in his operation, but later adopted for general surgical use; see Gigli saw.

Gi'la mon ster (hee'lah) *Heloderma suspectum*.

Gilbert, Augustin Nicolas [*French physician*, 1858–1927]. Described sign observed in cirrhosis of the liver *Gilbert' sign* is the fact that more urine is excreted in given time during fasting than following full meal.

Gilchrist's disease. See North American blastomycosis.

Giles, Carl Prausnitz (1876–). German bacteriologist and hygienist, born Carl Willy Prausnitz, but later changed his name legally to C. P Giles. With Heinz Küstner he produced local hypersensitivity in man by using injections of serum from hypersensitive person (1921) this reaction is known as *Prausnitz-Küstner reaction* or *Prausnitz-Küstner test*.

Gilford, Hastings [*English physician*, 1861–1941]. Described progeria (1904) also called *Hutchinson-Gilford disease*.

gill (ghill) [ME. *gile*]. A respiratory organ of water-breathing animals.

gill (jill) [OF *gille*]. One-fourth of pint.

Gil le'ni-a (ji-lee'nee-uh, gil) [L after Arnold *Gille*, German botanist, seventeenth century]. A genus of rosaceous herbs, **G. trifoliata**, or bowmans root, and **G. stipulata** or Indian physic, having emetic power Dose, 1.3–2.0 Gm. (20–30 gr.)

Gilles de la Tourette, Georges [*French neurologist*, 1857 1904]. Described motor incoordination associated with echolalia and coprolalia (1884); called *Gilles de la Tourette' disease*.

Gilliam, David Tod [*American gynecologist*, 1844–1923]. Known for his description of his operation for displacement of the uterus, in which loop of each round ligament is drawn through the abdominal wall and fixed to the abdominal fascia.

Gillies, Harold Delf [*English surgeon*, 1882–]. Celebrated for his skill and invention in plastic surgery of the face. Devised an operation for ectropion, excising scar tissue and grafting the defect, and one for plastic repair in which tubed pedicle flap is formed. Called *Gillies operations*.

Gimbernat, Antonio de [*Spanish surgeon and anatomist*, 1734–1816]. Described *Gimbernat' operation* for strangulated femoral hernia. The lacunar ligament is also called *Gimbernat' ligament*.

gin'ger [G *zingiberis*] (*zingiber*) The dried rhizome of *Zingiber officinale*, containing not less than 4.5% of ether-soluble extractive and not less than 12% of cold water extractive. A carminative in dyspepsia and flatulent colic. Dose, 0.6–1.3 Gm. (10–20 gr.) See *zingerone*.

g. fluidextract (*fluidextractum zingiberis*) Dose, 0.3–1.0 cc. (5–15 min.)

g. oleoresin (*oleoresina zingiberis*) Used like ginger in dose of 0.03–0.12 Gm. (½–2 gr)

g. syrup (*syrupus zingiberis*) A stomachic and flavor Dose, 4–15 cc. (1–4 fluidrachms)

wild g. See *asarum*.

gin ger-ol. Zingerone.

gin gi va (pl. *gingivae*) [L., gum]. That part of the oral mucous membrane which surrounds the tooth distal to the alveolar crest. —**gingival** (jin ji-val, jin jy val) *adj*., **gingivally** *adv*.

attached g. That portion of the gingiva firmly attached to the tooth and to the periosteum of the alveolar crest.

free g. That portion of the gingiva which lies occlusally or incisally to the floor of the gingival sulcus. Syn., *marginal gingiva*.

marginal g. Free *g*.

gin"gi val'gi a [*gingiva*; G. *algos*, pain]. Neuralgia of the gums.

gin"gi vec'to-my [*gingiva*; G. *ektomē*, excision]. Excision of portion of the gums.

gin"gi-vi'tis [*gingiva*; G. *-itis*, inflammation]. Inflammation of the gingiva.

expulsive g. Osteoperiostitis of tooth, which is gradually expelled from its socket.

interstitial g. An inflammation of the gums and alveolar processes preceding periodontoclasia.

necrotizing ulcerative g. An infection of the gums characterized in the acute form by necrosis

of the gingival margins, pain, foul odor and the formation of gray pseudomembrane. A spirillum and fusiform bacillus are associated with this disease. Also called *trench mouth, Vincent' infection, Vincent' gingivitis, Vincent' periodontitis, ulceromembranous gingivitis.* See also Vincent *angina,* Vincent' *stomatitis.*

pregnancy g. Changes in the gums seen most frequently during pregnancy they are thought to be related to endocrine imbalance, since similar changes are also seen t puberty in both sexes marked by bleeding, hypertrophy of interdental papillae, inflammation, and, occasionally tumorlike formation.

ulceromembranous g. See necrotizing ulcerative *g.*

Vincent' g. See necrotizing ulcerative *g.*

gin gi vo glos si' tis [*gingiva,* G *glōssa,* tongue; *-itis*]. Inflammation of the gums and tongue; stomatitis.

gin gi vo sis [*gingiva,* G *-osis,* condition]. A disease of the gums of poorly nourished children, characterized by degenerative changes in the connective tissue and edema, and later by necrosis, ulceration, and recession.

gin gi vo-sto ma ti'tis (jin"ji-vo-sto muh-tye tis, -stom uh tye tis) [*gingiva;* G. *stoma,* mouth; *-itis*]. See *gingivitis.*

gin gly-mus (jing gli mus, ghing') [G. *ginglymos,* hinge]. A hinge joint. —**ginglymoid,** *adj*

gin seng [Chin.]. The root of several species of *Panax.* It has medicinal virtues other than those of demulcent.

Giovannini, Sebastiano [*Italian dermatologist,* 1851 1920] Described rare nodular disease of the hair (1887) of fungus origin, called *Giovannini' disease.*

"**gip'py tum my**" A diarrheal condition occurring in tropical and subtropical countries which probably is caused by one of the usual dysentery organisms but is precipitated by sudden chilling.

Giraldès, organ of See *paradidymis.*

gir'dle [AS. *gyrdel*]. A band designed to go around the body structure resembling circular belt or band.

pelvic g. The two hip bones united at the pubic symphysis; they support the trunk on the lower extremities.

shoulder g. The system of bones supporting the upper limbs or arms; it consists of the clavicles, scapulae, and, for some authorities, the manubrium of the sternum. Also called *pectoral girdle.*

Girdlestone, Gathorne Robert [*English surgeon,* 1881 1950]. Described an operation for radical drainage of dangerously infected hip joint. A wedge of skin and muscle with the detached great trochanter is removed, exposing the upper portion of the joint capsule. The femoral head is removed and the joint saucerized. Called *Girdlestone' operation.*

Girdner John Harvey [*American physician,* 1850-1933]. Devised an electrically operated apparatus, now obsolete, for the detection of bullets embedded in the tissues. C[illegible] *dner' probe.*

git' [illegible] in (jit oh-In, ji-ta [illegible] 'In) $C_{41}H_{64}O_{14}$. A glycoside from dig[illegible] ea. It probably represents hydroly[illegible] of precursor actually present in t[illegible] decomposed during extraction. Smal[illegible] ttes, sol ble in alcohol. On hydrolysis [illegible] molecules of the sugar digitoxose [illegible] d th steroid aglycone, gitaligenin, [illegible] te of gitoxigenin. See *digitalin, gi[illegible]*

git o-gen'in (jit o-jen' [illegible] The steroid aglycone of gitonin.

[illegible] o-nin (jit o-nin, ji[illegible] [illegible] ponin from *Digitalis purpurea.* On acid hydrolysis it yields the steroid aglycone gitogenin, galactose and pentose.

gi tox"i ge nin (ji tock'si jee nin, -jen'in, ji tock' si-ji-nin) The steroid aglycone or sugar-free component of gitoxin and of lanatoside B.

gi tox'in. $C_{41}H_{64}O$ One of the partially hydrolyzed glycosides obtained from both *Digitalis purpurea* and *Digitalis lanata,* on complete hydrolysis it yields the steroid aglycone gitoxigenin and three molecules of the sugar digitoxose.

git'ter fi bers. See *reticular fibers* under *fiber*

Giuffrida-Ruggeri Vincenzo [*Italian anthropologist,* 1872-1922]. Noted absence or incompleteness of the glenoid fossa, called *Giuffrida-Ruggeri' stigma.*

giz'zard (ghis urd) [L. *gigeria,* cooked entrails of poultry]. The strong muscular stomach of birds used for triturating the food.

Gl Chemical symbol for glucinum, an obsolete name for beryllium.

gla bel'la [L. *glabellus,* dim. of *glaber* smooth]. 1. The bony prominence on the frontal bone joining the supraorbital ridges. 2. A craniometric point found in the sagittal plane of the bony prominence joining the supraorbital ridges, usually the most anteriorly projecting portion of this region.

coccygeal g. A minute hairless area located in the coccygeal region at the vortex of the hair whorls. It may become small pit, the foveola coccygea.

gla'brate [*glaber*]. Glabrous.

gla'brous [*glaber*]. Smooth; devoid of hairs.

gla cial [L. *glacialis,* icy]. Icy; resembling ice in appearance, as glacial acetic or phosphoric acid.

glad"i ol'ic ac'id. An antibiotic substance, isolated from cultures of *Penicillium gladioli,* it is active against some bacteria and has marked fungistatic properties.

glad"i o'lus (glad"ee 'lus, gla-dye o-lus) [L., small sword]. The middle or second piece of the sternum. O T

glair'in [OF *glaire,* white of egg]. A peculiar organic gelatinous substance found on the surface of some thermal waters.

glair'y [*glaire*]. Slimy; viscous; mucoid. Resembling the white of an egg.

gland [L. *glans,* an acorn]. 1 A cell, tissue, or organ which elaborates and discharges substance which is used elsewhere in the body (secretion) or eliminated (excretion) 2. Acorn-shaped termination of the penis or clitoris see *glans clitoridis; glans penis.* 3. Obsolete term for lymph node. —**glan dular** *adj*

accessory g. A mass of glandular tissue separate from the main body of gland of similar structure.

accessory parotid g. A small auxiliary parotid gland also called *socia parotis.*

acid glands. Glands of the stomach which secrete acid. Syn., *fundic glands.*

acinotubular g. One with both tubular and saccular elements.

acinous g. One in which the secretory end-pieces have the form of an acinus.

adipose gla ds. Hibernating glands of certain mammals, containing pigmented multilocular fat cells (brown fat)

admaxillary g. The accessory parotid gland.

adrenal g. An endocrine gland located immediately above the superior pole of the kidney It consists of two portions cortex, which elaborates [illegible] roid hormones, the adrenal cortical hormones, *medulla,* which elaborates epinephrine. Syn. *[illegible]renal g* See Plates, 7 8, 9, 14, 45.

[illegible]gate g. Old term for aggregate lymphatic [illegible] s. Also called *agminated g., Peyer' patch.*

[illegible]rari's g. See subcervical *g.*

albuminous g. See serous g.
alveolar g. One in which the secretory end-pieces have the form of an alveolus.
anal g. Any gland of the anal region.
apocrine glands. Those in which part of the free end of the glandular cell is pinched off with the secretion, leaving the nuclei and most of the cytoplasm intact. Specifically those sweat glands periodically producing viscous milky sweat of characteristic odor; they are larger, branched, and more deeply situated than the common eccrine sweat glands, and found in the axillary, mammary, anal, and genital areas. Their exact function is not known, but activity has been correlated with production of sex hormones.
areolar glands. Glands in the areola about the nipple in the female breast. They are intermediate in character between mammary glands and sudoriparous sweat glands. Syn., *Montgomery' glands.*
arytenoid glands. Mixed glands, found in large numbers along the posterior margin of the aryepiglottic fold in front of the arytenoid cartilages.
axillary glands. The axillary lymph nodes.
Bartholin's glands. The major vestibular glands.
Blandin's g. The anterior lingual gland, a mixed gland on the under surface of the tongue. Syn., *Nuhn g.*
Bowman's glands. Serous glands found in the olfactory mucous membrane. Also called *olfactory glands.*
bronchial glands. (a) The mixed glands of the mucous membrane of the bronchi. (b) The chain of lymph nodes along the bronchi.
Brunner's glands. The duodenal glands.
buccal glands. The mixed glands of the mucous membrane of the cheek.
bulbourethral g. One of two compound tubular glands situated in the urogenital diaphragm, anterior to the prostate gland. Also called *Cowper' g.* See Plate 44.
cardiac glands. (a) Glands of the cardia of the stomach. (b) Branched tubular glands of the upper and lower cardiac patches of the esophagus.
carotid glands. See *carotid bodies* under *body.*
ceruminous glands. The sweat glands of the external auditory meatus which secrete the watery component of the cerumen.
cervical glands. The lymph nodes of the neck.
ciliary glands. Modified sweat glands of the eyelids. Also called *Moll' glands.*
circumanal glands. The anal glands.
Cloquet' g. See Rosenmueller g.
closed g. A ductless or endocrine gland. Obs.
coccygeal g. See *coccygeal body.*
coil g. Old term for sweat gland.
compound g. A gland which has a branching system of ducts.
conglomerate glands. Acinous glands.
conjunctival glands. The accessory lacrimal glands. Also called *Krause' glands.*
convoluted g. Sweat gland.
Cowper's g. The bulbourethral gland.
cutaneous g. Any gland of the skin.
cytogenic g. A gland producing living cells, as the testis or ovary.
deep g. A gland which has its secreting portion deep to a mucous membrane, usually in the tunica submucosa.
ductless glands. Glands without ducts, secreting directly into the blood stream. See endocrine g.
duodenal glands. The deep mixed glands of the first part of the duodenum. Also called *Brunner' glands.*
Ebner's glands. The serous glands opening into the trenches of the vallate papillae of the tongue. Also called *von Ebner' glands.*
eccrine glands. The small sweat glands distributed all over the human body surface. Histologically they are tubular coiled merocrine glands that secrete the clear aqueous sweat important for heat regulation and chemically different from apocrine sweat.
endocrine g. One secreting hormonal substance into the blood stream; a ductless gland. See *pancreas, parathyroid, pineal g., thyroid g.* See also *pituitary, suprarenal, thymus.* See Plate 45.
epithelial g. A group of glandular cells within an epithelial layer.
exocrine glands. Glands which secrete onto an epithelial surface.
Fraenkel' glands. Minute mixed glands immediately inferior to the vocal folds.
fundic glands. Those of the corpus and fundus of the stomach. Syn., *acid glands.*
gastric glands. Glands of the stomach, including the cardiac, fundic, and pyloric glands.
glands of Shambaugh. The epithelium along the outer wall of the cochlear duct, modified to resemble a glandular epithelium, which rests upon the stria vascularis.
Gley' glands. See Marcel Eugène Émile *Gley.*
hair glands. The sebaceous glands of hair follicles.
Harderian g. The lacrimal gland of the third eyelid in many mammals; vestigial in man.
Haversian glands. Fat lobules in some synovial fringes.
hemal g. See hemal node.
hemolymph g. See hemal node. Also called *hemal g.*
hibernating g. The brown fat of certain rodents, once believed concerned with hibernation.
holocrine g. One which forms its secretion by degeneration of its cells. Also called *holocrinous g.*
Henle's g. See subtrigonal g.
incretory g. Endocrine gland.
interscapular g. The brown fat between the scapulae of certain rodents. See hibernating g.
interstitial g. (a) Mass of epithelioid cells in the medulla of the ovary of many lower animals. It is questionable whether or not it is present in women. The term has been applied to the hypertrophic theca cells about the periphery of follicles. (b) Cell-groups in the testis which secrete androgens; Leydig cells.
intraepithelial g. A small aggregation of mucous cells within an epithelial layer.
Krause' glands. Accessory lacrimal glands in the eyelids.
lacrimal g. The compound tubuloalveolar gland secreting the tears, situated in the orbit in a depression of the frontal bone. See Plate 19.
Lieberkühn's glands. The simple straight tubular glands of the intestinal mucous membrane.
Littré' glands. The small mucous glands of the male urethra. Formerly called *glands or lacunae of Morgagni.* Syn., *urethral glands.*
Luschka' glands. Aberrant bile ducts in the wall of the gallbladder. Also called *Luschka' ducts.*
lymph, lymphatic g. See *lymph nodes.*
mammary g. One which secretes milk. See Plate 43.
mandibular g. The submaxillary gland.
Meibomian glands. Tarsal glands.
merocrine g. One in which the secreting cells maintain their integrity in successive cycles of secretory activity. Also called *merocrinous g.*
mixed g. A gland containing both serous and mucous components, such as the submaxillary.
molar glands. A group of mixed (buccal) glands near the opening of the parotid duct.

Moll's glands. See *ciliary glands* under *gland.*
monkey g. Testis of monkey once used as an implant in *Voronoff operation.*
Montgomery's glands. The areolar glands.
Morgagni's g. See *Littré glands* under *gland.*
mucous g. One which forms mucus also called *muciparous g.*
myometrial g. A collection of cells appearing between the muscle cells of the rabbit uterus about the middle of pregnancy
Naboth's glands. The mucous glands of the external os of the cervix uteri.
Nuhn s glands. The anterior lingual glands. See Blandin g.
oil g. Old term for sebaceous gland.
olfactory glands. See Bowman's *glands* under *gland.*
parathyroid g. See *parathyroid.*
paraurethral glands. Small vestigial glands opening into the posterior wall of the female urethra close to its orifice. The homolog of the distal prostatic glands of the male. Syn., *Skene' glands* or *tubules.*
parotid g. The salivary gland in front of and below th external ear It is compound racemose gland Its duct is Stensen duct See Plate 3.
peptic glands. The fundic glands of the stomach.
perspiratory g. See *sweat g.*
pilous g. The sebaceous gland of hair follicle.
pineal g. See pineal *body.*
pituitary g. See *pituitary.*
preen g. Uropygial g.
preputial glands. Sebaceous glands in the prepuce of the penis.
prostate g. See *prostate.*
pyloric glands. The glands of the mucous membrane of the pyloric portion of the stomach.
racemose g. A compound alveolar or tubuloalveolar gland.
retrolingual g. A large salivary gland in certain mammals other than man, the equivalent of the human sublingual gland.
Rivinus' g. The sublingual gland.
Rosenmueller' g. The large lymph node in the femoral canal. Syn., Cloquet' g.
saccular g. Same as alveolar gland.
salivary g. One that secretes saliva, as the parotid.
sebaceous g. One which secretes sebum, an unctuous material composed primarily of fat.
seminal g. Old term for testis.
seromucinous g. See mixed g
serous g. One which secretes watery albuminous fluid.
serous li gual g. See Ebner' g.
sexual g. Old term for gonad.
simple g. (a) A gland which is entirely composed of secretory cells, without differentiated ductile portion. (b) A gland with but one secretory endpiece and an unbranched duct.
Skene's glands. The paraurethral glands.
subcervical g. One of group of small subsidiary prostatic glands which lie beneath the neck of the urinary bladder also called *Albarran g*
sublingual g. A complex of small salivary glands situated in the sublingual fold on each side of the oral floor See Plate 15.
submaxillary g. A large salivary gland situated below each lower j w also called *mandibular g.*, *submandibular g.* See Plate 15
subtrigonal g. One of group of small subsidiary prostatic gland which lie beneath the mucosa of the trigone also called *Home' g* lobe.
sudoriferous glands. The sweat glands.
sudoriparous glands. The sweat glands.
superficial g. One lying entirely within the limits of mucous membrane.
suprarenal g. See adrenal g
sweat g. One of the coiled tubular glands of the skin which secrete perspiration. See also *apocrine glands* and *eccrine glands* under *gland.*
target g. Any gland directly affected by the hormone of another gland.
tarsal glands. Sebaceous glands in the tarsal plates of the eyelids. Also called *Meibomian glands.*
thyroid g. One of the endocrine glands, lying in front of the trachea and consisting of two lateral lobes connected centrally by an isthmus. The organ is composed of follicles lined by epithelium, producing colloid material. Hypertrophy of the gland (goiter) is sometimes associated with peculiar disease known as exophthalmic goiter; hypofunction of the gland leads to cretinism or myxedema. See Plates 13, 45.
tubular g. A secreting gland, tubelike or cylindrical in shape.
tubuloalveolar g. On whose secretory endpieces are tubular and alveolar T this group belong most of the larger exocrine glands. An obsolete term for this is *tubuloacinous gland.*
Tyson's glands. Sebaceous glands of the prepuce which secrete the smegma.
unicell lar g. One consisting of single cell.
urethral glands. Small, branched, tubular mucous glands in the mucous membrane of the urethra. Syn., *Littré's glands.*
uropygial g. A large bilobed sebaceous gland found dorsal to the last sacral vertebra of fowl. Its oily secretion reaches the surface of the skin by way of short duct. Syn., *preen gland.*
uterine g. A gland of the endometrium.
vaginal g. On of the mucous glands found exceptionally in the mucous membrane of the fornix of the vagina.
vestibular glands. Glands of the vestibule of the vagina. They comprise the compound tubuloalveolar **major vestibular glands** (of Bartholin), one in each lateral wall, and the **minor vestibular glands**, which are several small branched tubular mucous glands around the urethral orifice.
Zeis's glands. The sebaceous glands associated with the cilia.

glan'ders [OF *glandres*, glands, from *gland*] A highly contagious acute or chronic disease of horses, mules, and asses; caused by *Malleomyces mallei* It is communicable to dogs, goats, sheep, and man, but not to bovines. It is characterized by fever inflammation of mucous membranes (especially of the nose) enlargement and hardening of the regional lymph nodes, formation of nodules which have tendency to coalesce and then degenerate to form deep ulcers. In man the disease usually runs an acute febrile course and terminates fatally Syn., *farcy, equinia.*

glans (glans) [L.] Th conical body which forms the distal end of the clitoris (**glans clitoridis**) or of the penis (**glans penis**). See Plate 44.

Glaser Hans Heinrich (Glaserius) [*Swiss anatomist*, 1629–75] Described the petrotympanic fissure, called *Glaserian fissure.* Described the tympanic artery called *Glaserian artery.*

glass [AS. *glaes*]. 1 A brittle, hard, transparent substance, consisting usually of the fused amorphous silicates of potassium and calcium, or sodium and calcium, with an excess of silica. 2. Any article made of glass.
crown g. A very hard glass silicate of sodium and calcium.
flint g. That composed of lead and potassium silicates.
soluble g. Potassium or sodium silicate, used as substitute for plaster of Paris. Syn *waterglass.*

glass'es [glass]. The popular term for spectacles or eyeglasses.

bifocal g. Those that have a different refracting power in the upper part from that in the lower; the effect usually is produced by the superposition of segment lenses.

prismatic g. Those formed of prisms; used in insufficiency and paralysis of the ocular muscles.

trifocal g. Glasses or spectacles having three refractive powers to correct for distant, intermediate, and near vision.

glass'pox" [glass; ME. pokkes]. Alastrim.

glass wool. White, silky threads obtained by the action of a powerful blast of air on a falling stream of molten glass; it is used in draining wounds and in filtering strong acids and alkalies; also called *slag wool*.

glass'y [glass]. 1. Having the appearance of glass; vitreous; hyaline. 2. Expressionless; dull, lifeless.

Glauber's salt. See *sodium sulfate*.

glau·co·ma (glaw-ko'muh) [G. *glaukōma*, opacity of the crystalline lens]. A disease of the eye marked by heightened intraocular tension; results in hardness of the globe, excavation of the optic disk, restricted field of vision, corneal anesthesia, colored halo seen surrounding artificial lights, and lessening of the visual power; it may lead to blindness.

absolute g. The completed glaucomatous process when the eyeball is exceedingly hard and totally blind.

acute g. The first (or the renewed) attack, with the characteristic and inflammatory symptoms.

auricular g. That associated with a great increase in the intralabyrinthine pressure.

congenital g. See *infantile g.*

hemorrhagic g. That associated with retinal hemorrhage. Also called *apoplectic g.*

infantile g. That affecting infants or children; due to a failure of development of Schlemm's canal and a consequent lack of normal drainage for the intraocular fluid. May be very mild with low tension, or may be clinically severe with distention and stretching of the eye due to its increased fluid contents (buphthalmia or hydrophthalmos). Syn., *congenital g.*, *intercalary staphyloma*.

malignant g. A grave form attended with violent pain and rapidly leading to blindness.

secondary g. That consequent upon other ocular disease.

simple g. That chronic form occurring without inflammatory symptoms.

gleet [OF. *glete*]. The chronic stage of urethritis, characterized by a slight mucopurulent discharge. —**gleet'y**, *adj.*

Glénard, Frantz [French physician, 1848–1920]. Known for his observations on nervous dyspepsia, in which he described enteroptosis and gastroptosis (1884). Described the neurasthenic implications of enteroptosis (1886), called *Glénard's disease*.

gle"no·hu'mer·al [G. *glēnē*, socket of a joint, honeycomb; L. *humerus*, shoulder]. Pertaining to the glenoid cavity and the humerus, as the glenohumeral ligament.

gle'noid [G. *glēnoeidēs*, like a socket]. Having a shallow cavity; resembling a shallow cavity or socket.

gle'noid. The articular surface on the scapula for articulation with the head of the humerus.

Glio·clas·po·ra [glia; G. *sporos*, seed]. A genus of fungi of the class Fungi Imperfecti, species of which have been isolated in cases of mycetoma.

Gley, Marcel Eugène Emile [French physiologist, 1857–1930]. Described the interstitial cells of the testis called *Gley cells*, *Leydig cells*. Described the parathyroids, showing that they are necessary for life (1891); called *Gley's glands*, *Sandström bodies*.

gli'a [G. *glia*, glue]. The neuroglia. —**gli'al**, *adj.*

gli'a·cyte [glia; G. *kytos*, cell]. A neuroglia cell. *Obs.*

gli'a·din. A protein derived from gluten of wheat, rye, oats, and other grains. See American Classification of Proteins in the Appendix.

gli"a·bac·te'ri·a [glia; G. *baktērion*, little staff]. Bacteria embedded in a gelatinous matrix.

gli"o·blas·to'ma·as"tro·blas·to'ma. See *astroblastoma*.

gli"o·blas·to'ma i"so·morphe'. See *medulloblastoma*.

gli"o·blas·to'ma mul"ti·for'me. The most frequent glioma of the central nervous system, usually the brain, composed of a few normal astrocytes, and varying numbers of pleomorphic cells. Giant nuclei and multinucleated giant cells are common in contrast to the astrocytoma and astroblastoma. Also called *ameboid glioma*, *astrocytoma gigantocellulare*, *glioneuroblastoma*, *gliofibrosarcoma*, *glioma sarcoides*, *gliosarcoma*, *spongioblastoma multiforme*. Syn., *astrocytoma*, *Grade 3* and *Grade 4*.

gli"o·blas·to·ma of ret'i·na. Neuroepithelioma of the retina.

gli"o·car"ci·no'ma. See *glioblastoma multiforme*.

gli"o·coc'cus [glia; G. *kokkos*, berry]. A micrococcus having a gelatinous envelope.

gli"o·fi"bro·sar·co·ma. See *glioblastoma multiforme*.

gli·o·ma (glye-o'muh) [glia; G. *-ōma*, tumor]. A tumor composed of cells and fibers representative of the special supporting tissue of the central nervous system, and derived from neuroglial cells or their antecedents; occurs principally in the brain, spinal cord, peripheral nerves, and adrenals. —**gli·om'a·tous**, *adj.*

ameboid g. See *glioblastoma multiforme*.

astrocytic g. See *astrocytoma*.

extramedullary g. One arising in heterotopic glial tissue.

ganglion-cell g. See *astroblastoma*.

g. of retina. Neuroepithelioma of the retina.

g. sarcoides. See *glioblastoma multiforme*.

g. sarcomatoides. See *medulloblastoma*.

heterotopic g. A rare tumor composed largely of masses of fibrillar astrocytes and occasionally a few ganglion cells. Its more common site of origin is in the orbit outside of the optic nerve, but it also appears in the form of subcutaneous nodules over the bridge of the nose or as an intranasal polypoid growth. The latter is also called *nasal g.*, *astroblastoma*, *astrocytoma*, *astroglioma*, *fibroglioma*, *ganglioblastoma*, *ganglioglioma of nose*, *ganglioneuroma*, *spongioblastoma*.

malignant peripheral g. See *malignant schwannoma*.

nasal g. See *heterotopic g.*

perineural g. See *neurofibroma*.

peripheral g. See *neurilemmoma*.

retinal g. See *neuroepithelioma of the retina*.

gli"o·ma·to'sis. The proliferation of gliomas.

meningeal g. Widespread involvement of the subarachnoid space by cells originating in a glioma. Also called *gliosarcoma of meninges*, *meningeal sarcomatosis*.

gli"o·neu"ro·blas"to'ma. See *neuroastrocytoma*.

gli"o·neu·ro'ma. See *neuroastrocytoma*.

gli"o·sar·co'ma. Glioblastoma multiforme.

g. of meninges. See *meningeal gliomatosis*.

gli·o·sis (glye-o'sis) [glia; G. *-ōsis*, condition]. Proliferation of neuroglia in the brain or spinal cord, as a replacement process or due to low-grade inflammation; may be diffuse or focal. Gliosis of the spinal cord is the earliest pathologic change in syringomyelia.

anisomorphous g. See heteromorphous g.
heteromorphous g. Gliosis in which the glial fibrils appear as a network. Syn., *anisomorphous g.*
isomorphous g. Gliosis in which the glial fibrils appear as parallel bundles.

gli'o·some [*glia*; G *sōma*, body]. One of the small granules in the cytoplasm of neuroglial cells.

gli"o·tox'in [*glia*, G *toxikon*, poison]. An antibiotic, $C_{13}H_{14}N_2O_4S_2$, obtained from cultures of *Trichoderma*, *Gliocladium*, and *Aspergillus fumigatus*. It is bacteriostatic toward certain Gram-positive and certain Gram-negative bacteria, and is sensitive to heat and oxygen.

Glisson, Francis [*English physician*, 1597-1677]. Gave a classic description of rickets (1650) called *Glisson's disease*, and the first clear description of the liver stroma, called *Glisson's capsule*, and its blood supply (1654). Invented an apparatus, called *Glisson's sling*, for use in the treatment of spinal deformities.

globe. *In ophthalmology*, the eyeball.
g. lag. See Kocher's *sign*.

glo'bin [L. *globus*, ball]. One of a class of proteins, histone in nature, obtained from the hemoglobins of various animal species. Globin is soluble in water, soluble in acids and alkalis, coagulable by heat.

glob"u·lar'i·tin, glob"u·la·re'tin. A hydrolysis product of globularin obtained by the action of dilute acids. A diuretic and purgative; has been used in gout.

glob·u·lar'in, glob·u·lar·in. A glycoside from the leaves of *Globularia alypum*. Its action upon the heart and nervous system is similar to that of caffeine, but it diminishes the quantity of the urine. Has been used in the treatment of gout, rheumatism, etc.

glob'ule [L. *globulus*, little ball, globule]. A small spherical droplet of fluid or semifluid material.
milk g. A fat drop in milk.

glob·u·li·cide, glob·u'li·cide" [*globulus*; L. *caedere*, to kill]. 1. Destructive of blood cells. 2. An agent that destroys blood cells. —**globulici'dal,** *adj.*

glob'u·lin [*globulus*]. A general name for a group of animal and plant proteins characterized by solubility in dilute salt solutions and differentiated from albumins by lesser solubility, more alkaline isoelectric points, larger molecular weight, faster sedimentation rates, and slower electrophoretic mobilities. **Alpha-, beta-, gamma-globulins** are fractions of serum globulin separated by electrophoresis. See *euglobulin*, *pseudoglobulin*. **Alpha-g.** contains certain sero-enzymes and hormones; **beta-g.** contains the blood group antibodies, prothrombin, and certain fractions of complement; **gamma-g.** includes most antibodies.
Ac g., accelerator g. A factor which accelerates the activation of purified prothrombin by thromboplastin. See *plasma accelerator globulin*, *serum accelerator globulin*.
antihemophilic g. See *thromboplastinogen*.
coagulation g. A substance derived from normal plasma that reduces the coagulation time of hemophilic blood. Also called *fraction I*.
gamma-g. (human) A sterile, concentrated, and refined preparation of globulin, prepared from human blood and meeting certain requirements of electrophoretic mobility. It contains protective antibodies against certain bacterial and viral infections. Injection of the globulin preparation from pooled bloods may, under certain conditions, provide short-term passive immunity; hence it has been used in the prevention and treatment of measles, notably in cases of previously unexposed pregnant mothers, and against poliomyelitis in individuals risking exposure in an area where the disease is epidemic.
g. substance. See antihemophilic *factor*, *thromboplastinogen*.
g. X. An intracellular protein found in muscle tissue.
immune g. See gamma-g.
poliomyelitis immune g. See gamma-g.
serum g. The globulin fraction of blood serum. By definition, it is the fraction of serum protein precipitated by half-saturation with ammonium sulfate in contrast to the albumin fraction which is soluble in this salt concentration.

glob"u·lin·u'ri·a [*globulus*; G *ouron*, urine]. The presence of globulin in the urine.

glob'u·lus (pl. *globuli*) [L.]. See *globule*.

glo'bus [L.]. A ball or globe.
g. hystericus. The choking sensation, or so-called lump in the throat, occurring in hysteria.
g. major epididymidis. The larger end or head of the epididymis, consisting largely of the efferent ductules. Syn., *caput epididymidis*.
g. minor epididymidis. The lower end of the epididymis. Syn., *cauda epididymidis*.
g. pallidus. The inner and lighter part of the lenticular nucleus of the corpus striatum.

gloe·a (glee'uh) [G *gloia*, glue]. A mucuslike substance secreted about the spore heads of some fungi.

glo·man·gi·o·ma. See glomus *tumor*.

glome [L. *glomus*, ball]. 1. Glomerulus. 2. One of the two rounded prominences which form the backward prolongations of the frog of a horse's foot.

glom·er·ate [L. *glomerare*, to wind into a ball]. Rolled together like a ball of thread.

glom·er·ule. See glomus.

glo·mer"u·lo·ne·phri'tis [dim. from L. *glomus*, ball; G *nephros*, kidney; *-itis*, inflammation]. A diffuse nonsuppurative inflammation of the kidneys, affecting the glomeruli primarily. Proliferative, degenerative, and exudative changes may occur. Classified as to duration, there are acute, subacute, chronic, and latent types, which may or may not represent progressive stages. Symptoms include *hematuria*, *albuminuria*, *edema*, *hypertension*, and also cardiac and cerebral involvement.
acute g. A form of glomerulonephritis occurring principally in (male) children and lasting up to three months. In the majority of cases, there is an antecedent or associated infection, usually of the upper respiratory tract. Streptococci *Group A*, *Type 12*, and to a lesser extent *Type 4*, have been most frequently implicated and an immunologic reaction postulated.
chronic g. A form of glomerulonephritis characterized clinically by its prolonged duration, hypertension, and progressive uremia. Pathologically there is progressive fibrosis and hyalinization of the glomeruli.
embolic g. See focal g.
focal g. A type usually seen in patients with subacute bacterial endocarditis, and which results from the lodging in glomerular tufts of minute emboli derived from the valve lesion. The emboli are scattered over the kidney giving it a flea-bitten appearance. Resulting renal failure is rare. Also called *focal embolic g.*
focal nonembolic g. A type which is focal rather than diffuse, which may result from damage to the glomerular tuft capillaries by toxins from a distant site of infection, as minor acute upper respiratory infections.
membranous g. See lipoid *nephrosis*.
subacute g. A type of glomerulonephritis similar to chronic g. but lasting only a few months.

glo·mer"u·lo·scle·ro'sis. See *intercapillary glomerulosclerosis.*

glo·mer'u·lus (pl. *glomeruli*) [*glomus*]. 1. A small rounded mass. 2. The tuft of capillary loops projecting into the lumen of a renal corpuscle. —**glomerular, glomerulose,** *adj.*

olfactory g. A group of nerve cells, a number of which are embedded in the olfactory bulb.

pancreatic glomeruli. The islets of the pancreas. *Obs.*

glo'mus (pl. *glomera*) [L.]. 1. A fold of the mesothelium arising near the base of the mesentery in the pronephros, and containing a ball of blood vessels. Also called *glomerule of the pronephros.* 2. The part of the choroid plexus of the lateral ventricle which covers the thalamus. Also called *glomus choroideum.* —**glomic,** *adj.*

cutaneous g. See *g.* body.

g. aorticum. See *aortic bodies* under *body.*

g. body. An arteriovenous anastomosis which has a special arrangement of muscle and nerve tissue; usually present in the cutis and subcutis of fingers and toes; also called *cutaneous glomus.*

g. caroticum. Old term for the carotid body.

g. coccygeum. Old term for the coccygeal body.

g. jugulare. Any of a number of tiny masses of epithelioid tissue similar in structure to that of the carotid body. They are usually situated in the adventitia of the superior bulb of the internal jugular vein.

glon'o·in (glon'o·in, glo·no'in, glo·no'in) [from Gl = glyceryl; O = oxygen; N = nitrogen, in the formula $C_3H_5O_3(NO_2)_3$, in which C_3H_5 stands for glyceryl]. Glyceryl trinitrate or nitroglycerin.

glos'sa [G. *glōssa,* tongue]. The tongue. —**glossal,** *adj.*

-glos·sa [*glōssa*]. A combining form meaning *tongue.*

glos·sal'gi·a [*glōssa;* G. *algos,* pain]. Pain in the tongue.

glos·san'thrax [*glōssa;* G. *anthrax,* carbuncle]. Anthrax, or carbuncle, of the tongue.

glos·sec'to·my [*glōssa;* G. *ektomē,* excision]. Excision of the tongue.

Glos·si'na, Glos'si·na [*glōssa*]. A genus of blood-sucking flies, known as tsetse flies, confined to tropical and subtropical Africa. The species *G. fusca, G. palpalis,* and *G. morsitans* transmit the trypanosomes of sleeping sickness in man and of nagana and the souma disease of horses, cattle, and sheep.

glos·si'tis [*glōssa;* G. *-itis,* inflammation]. Inflammation of the tongue. —**glossit'ic,** *adj.*

acute g. Swelling of the tongue accompanied by high fever, salivation, pain referred to the ears.

chronic superficial g. A rare glossitis usually seen in adult females. There are smooth, red areas involving part or all of the dorsum of the tongue; contact with food may elicit a burning sensation. Syn., *glossodynia exfoliativa.*

median rhomboidal g. A diamond-shaped inflammatory patch on the tongue anterior to the vallate papillae.

Moeller's g. See chronic superficial *g.*

glos'so-, gloss- [*glōssa*]. A combining form meaning *tongue.*

glos'so·cele [*glōssa;* G. *kēlē,* tumor]. Swelling, or edema, of the tongue, with consequent extrusion of the organ.

glos'so·dy"na·mom'e·ter (glos"o·dye·nuh·mom'i·tur, ·din·uh·mom'i·tur) [*glōssa;* G. *dynamis,* power; *metron,* measure]. An apparatus for measuring the capacity of the tongue to resist pressure.

glos"so·dyn'i·a [*glōssa;* G. *odynē,* pain]. Pain in the tongue.

g. exfoliativa. Chronic superficial glossitis.

glos"so·ep"i·glot'tic, glos"so·ep"i·glot·tid'e·an [*glōssa;* G. *epiglōttis,* epiglottis]. Pertaining to both tongue and epiglottis.

glos'so·graph [*glōssa;* G. *graphein,* to write]. An instrument for registering the movements of the tongue in speech.

glos"so·hy'al, glos"so·hy'oid [*glōssa;* G. *hyoeidēs,* shaped like the letter upsilon]. Pertaining to the tongue and the hyoid bone.

glos"so·kin"es·thet'ic [*glōssa;* G. *kinein,* to move; *aisthēsis,* perception]. Relating to the motions of the tongue in speech.

glos"so·la'bi·al [*glōssa;* L. *labium,* lip]. Relating to the tongue and lips, as glossolabial paralysis.

glos"so·la'li·a (glos"o·lay'lee·uh, ·lal'ee·uh) [*glōssa;* G. *lalia,* talk]. Unintelligible jabbering; talk in strange or unknown tongues; jargon.

glos·sol'o·gy [*glōssa;* G. *logos,* word]. 1. The study of the tongue and its diseases. 2. The definition and explanation of terms; nomenclature.

glos"so·man'ti·a (glos"o·man·tee·uh, ·man·tye·uh) [*glōssa;* G. *manteia,* divination]. Prognosis of disease based on the appearance of the tongue. *Obs.*

glos"so·pal'a·tine (·pal'uh·tyne, ·tin) [*glōssa;* L. *palatum,* palate]. Relating to the tongue and the palate, as the glossopalatine arch, or anterior pillar of the fauces.

g. nerve. Variant term for the sensory root of the nervus intermedius.

glos"so·pal·a·ti'nus [*glōssa;* L. *palatum,* palate]. A muscle extending from the soft palate to the tongue in the glossopalatine arch.

glos·sop'a·thy [*glōssa;* G. *pathos,* disease]. Any disease of the tongue.

glos"so·pha·ryn'ge·al (glos"o·fa·rin'jee·ul, ·far"in·jee'ul) [*glōssa;* G. *pharynx,* throat]. Pertaining to tongue and pharynx, as glossopharyngeal nerve.

glos"so·pha·ryn'ge·us (·fa·rin'jee·us, ·far·in·jee'us) [*glōssa; pharynx*]. A portion of the superior constrictor muscle of the pharynx, attached to the tongue.

glos'so·plas"ty, glos"so·plas'ty [*glōssa;* G. *plassein,* to form]. Plastic surgery of the tongue.

glos"so·ple'gi·a [*glōssa;* G. *plēgē,* stroke]. Paralysis of the tongue.

glos"so·py·ro'sis (glos"o·pye·ro'sis) [*glōssa;* G. *pyr,* fire; *-ōsis,* condition]. A condition characterized by burning sensation in the tongue.

glos·sor'rha·phy [*glōssa;* G. *rhaphē,* suture]. Surgical suturing of the tongue.

glos·sos'co·py [*glōssa;* G. *skopein,* to examine]. Diagnostic inspection of the tongue.

glos'so·spasm" [*glōssa;* G. *spasmos,* spasm]. Spasm of the tongue.

glos·sot'o·my [*glōssa;* G. *tomē,* a cutting]. 1. The dissection of the tongue. 2. An incision of the tongue.

glos"so·trich'i·a (glos"o·trick'ee·uh) [*glōssa;* G. *thrix,* hair]. Hairy tongue.

glot'tic [G. *glōttis,* glottis]. Pertaining to the glottis.

glot'tis [G.]. The opening between the free margins of the vocal folds. —**glottal, glottid'ean,** *adj.*

glu'ca·gon, glu'ca·gone. A protein believed to be formed by alpha cells of the islets of Langerhans, and by some considered to serve a hormonal function, which causes glycogenolysis and hyperglycemia. It occurs in some, but not all, preparations of insulin. Also called *hyperglycemic factor, hyperglycemic-glycogenolytic factor* (abbreviated HGF), *glycogenolytic hormone.*

glu'case. The enzyme that converts starch into glucose. *Obs.*

glu'cide [G. *glykys,* sweet]. A group term for carbohydrates and glycosides. —**glucid'ic,** *adj.*

glu'cin. Sodium amidotriazinesulfonate, a substance resembling saccharin, but less sweet.

glu·ci'num. Beryllium; symbol, Gl. *Obs.*

glu'co-, gluc- [glykys] 1. *In chemistry*, combining form signifying *glucose*. 2. See *glyco-*.

glu"co-a-scor'bic ac'id. CO COH:COH.CH.HCOH.HCOH.CH₂OH; D-glucoascorbic acid, homolog of ascorbic acid; it has been claimed and denied that it has antivitamin-C activity.

glu"co-chl ral. See *chloralose*.

glu"co-cor'ti-coid. An adrenal cortex hormone which affects the metabolism of glucose by extension, any related natural or synthetic substance which functions similarly.

glu"co-fu ran ose. A cyclic form of glucose having furanose structure in which carbon atoms 1 and 4 are bridged by an oxygen atom.

glu'co-gen. See *glycogen*.

glu"co-he'mi a, glu"co hae mi a (glōō"ko-hee' mee-uh) Old term for glycemia.

glu"co-ki nase. An enzyme, present in liver which in the course of glycogenesis catalyzes phosphorylation of D-glucose, by adenosinetriphosphate, to glucose-6-phosphate.

glu co-kin'in. Vegetable insulin.

glu-col'y sis. See *glycolysis*.

glu"co ne o-gen e-sis [glykys; G neos, new; genesis, production]. The formation of glucose by the liver from noncarbohydrate sources.

glu-con'ic ac'id. $CH_2OH(CHOH)_4COOH$. An acid resulting from the oxidation of dextrose and other sugars. Several of its salts, notably calcium gluconate and ferrous gluconate, are used medicinally.

glu"co no-ki nase. An enzyme, present in microorganisms adapted to growing on D-gluconic acid, which catalyzes phosphorylation of the acid, by adenosinetriphosphate, to 6-phosphogluconic acid.

glu"co-no-lac'tone. The ring structure of D-gluconic acid.

glucophylline. Trade-mark for an equimolecular mixture of theophylline and N-methylglucosamine, having the action and uses of aminophylline.

glu"co-pro'te in. Old term for glycoprotein.

glu"co-py'ran-ose. *A cyclic form of glucose having* pyranose structure in which carbon atoms 1 and 5 are bridged by an oxygen atom.

glu"co-sac-char'ic ac'id. D-Glucosaccharic acid, dibasic acid resulting from oxidation of D-glucose. Syn., *saccharic acid*, 2.

glu"cos-a mine (glōō"ko-suh-meen -sam'in, glōō-ko suh-meen, -min) CHO HC(NH₂) HOCH.HCOH HCOH CH₂OH an amino sugar derived from D-glucose it is structural component of chitin, chondroitin, and heparin, and occurs also in mucus, fungi, and lichens. Syn., *2-amino-D-glucose*, *chitosamine*, *glycosamine*.

glu'co san. A polysaccharide which yields glucose upon hydrolysis.

glu-co sa zone (glōō ko suh-zone, koes uh-zone, glōō"ko-say zone) See *phenylglucosazone*.

glu co scil'lar-en A. A cardioactive glycoside present in the fraction of squill glycosides, identified by the trade-marked name *scillaren-B*.

glu co scil"li phe side. A cardioactive glycoside present in the fraction of squill glycosides identified by the trade-marked name *scillaren-B*.

glu cose. 1 The crystalline monosaccharide dextrose, $C_6H_{12}O_6$ sometimes called *dextro*-glucose, but properly designated D-glucose. See *dextrose*. 2. A product obtained by the incomplete hydrolysis of starch, consisting chiefly of dextrose (D-glucose) dextrins, maltose, and water; being liquid, it is more correctly designated liquid glucose (*glucosum liquidum*). It is colorless or yellowish, thick, syrupy liquid, odorless, possessing sweet taste, and very soluble in water. Liquid glucose is employed for its food value, for its local dehydrating effect, for its diuretic action, and in various pharmaceutical and industrial manufacturing operations. See Table of Normal Values of Blood Constituents in the Appendix.

glu"cose-1-phos'phate. $OH_2OHCH(CHOH)_3CH.OPO(OH)_2$ (with O bridge). The postulated first product in the breakdown of glycogen; hexosemonophosphate. See *phosphoglucomutase*.

glu c s -6 ph s phate (OH) OPOCH₂ CH(CHOH)₃CHOH (with O bridge). A product, resulting from reversible change of glucose-1-phosphate, obtained in the breakdown of glycogen hexosemonophosphate. See *phosphoglucomutase*.

glu'co si dase. 1 An enzyme which catalyzes the hydrolysis of glucosides. 2. Emulsin.

glu'co side. 1 Any member of series of compounds, usually of plant origin, that may be hydrolyzed into dextrose (D-glucose) and another principl ; the latter is often referred to as an aglucone. 2. Any substance, commonly a plant principle, which on hydrolysis yields sugar and another principle. Now called glycoside.

glu'co-sin. 1. Any one of series of bases obtained by the action of ammonia on dextrose. 2. Trade name of substitute for sugar.

glu c son CHO CO HOCH.HCOH HCOH. CH₂OH hydrolysis product of the osazone of D-glucose; possible intermediate compound in the conversion of glucose to glucosamine.

glucosulfathiazole. Trade-mark for solution of sulfathiazole with sodium lactate, potassium citrate and glucose, intended for oral administration.

glu-co'sum. Glucose.

glu"co-su'ri a. Old term for glycosuria.

glu-cu'ron-ate. A salt or ester of glucuronic acid. **conjugated g.** A glucuronide.

glu cu ron'ic ac'id, gly"cu ron'ic ac'id. CHO.HCOH.HOCH.CHOH.CHOH.COOH; D-glucuronic acid the acid resulting from oxidation of the CH_2OH of D-glucose to COOH; it is also part of the aldobionic acid component of the polysaccharides of certain gums and of Type 3 pneumococcus polysaccharide. It is an excretion product in animals, generally in the form of conjugates called *glucuronides*.

glu"cu ron'i dase, gly"cu ron'i dase. An enzyme which catalyzes hydrolysis of glucuronides.

glu-cu'ron ide, gly cu'ron-ide. A compound resulting from the interaction, commonly referred to as conjugation, of glucuronic acid with a phenol, an alcohol, or an acid containing a carboxyl group. In man many of the latter substances are excreted in the form of glucuronides. Also called *conjugated glucuronate*.

glue [OF *glu*, from LL. *glus*]. An impure gelatin prepared by boiling the skin, hoofs, and horns of animals. It is adhesive, and is used to unite surfaces.

fish g. Isinglass, prepared from the swim-bladder of fishes.

Gluge, Gottlieb [*German histologist in Belgium*, 1812-98]. Described the compound granular cells, called *Gluge cells* or *corpuscles*, occurring usually in nervous tissues undergoing fatty degeneration.

glu'side. See *saccharin*.

glu ten'us (gloo-tee us) See *gluteus*.

glu tam'ic ac'id. COOH.(CH₂)₂ CHNH COOH; 2-aminopentanedioic acid or α-aminoglutaric acid; an amino acid obtained by hydrolysis of various proteins. It has been used in treating muscular dystrophies. Syn., *glutaminic acid*.

g. a. hydrochloride. A water-soluble glutamic acid salt which releases hydrochloric acid in the stomach.

glu·tam'i·nase. The enzyme which catalyzes the conversion of glutamine to glutamic acid and ammonia.

glu'ta·mine (gloo'tuh·meen, -min, gloo·tam'een, -in) The monamide of glutamic acid, COOH.CHNH$_2$.CH$_2$.CH$_2$.CONH$_2$. It is found in the juice of many plants and is essential to the development of certain bacteria.

glu"tam·in'ic ac'id. Glutamic acid.

glu·tam'i·nyl. The univalent radical, H_2NCO-$CH_2CH_2CH(NH_2)CO$— of glutamine, the monamide of glutamic acid.

glu·tam'yl. The divalent radical, —$OOCH_2CH_2$-$CH(NH_2)CO$— of glutamic acid, an amino acid having two carboxyl groups.

glu·tam'yl. The univalent radical, $HOOCCH_2CH_2$-$CH(NH_2)CO$— of glutamic acid, an amino acid having two carboxyl groups.

glu·tar'ic ac'id (gloo·tar'ick, -tahr'ick) COOH-$(CH_2)_3COOH$; 1,3-propanedicarboxylic acid; crystalline acid, soluble in water. It occurs in green sugar beets and in water extracts of crude wool, and is formed from lysine by liver homogenates of certain animals.

glu"ta·thi'one (gloo"tah·thigh'ohn, -thigh·ohn') HOOC.CH(NH$_2$).(CH$_2$)$_2$.CONH.CH(CH$_2$SH).CONH.CH$_2$.COOH. A tripeptide widely distributed in plant and animal tissues. It is important in tissue oxidations, acting through the sulfhydryl group (—SH) with the formation of disulfid (—S—S—) linkages.

glu·te'al, glu'te·al [G. *gloutos*, buttock]. Pertaining to the buttocks.

glu'te·lin [L. *gluten*, glue]. A class of simple proteins occurring in seeds of cereals; soluble in dilute acids and alkalies, insoluble in neutral solutions, and coagulated by heat. See American Classification of Proteins in the Appendix.

glu'ten [L.]. A mixture of proteins found in the seeds of cereals. It confers the property of toughness to dough.

g. sulfate. A cream-colored solid prepared from wheat gluten, and suggested as a pharmaceutical vehicle and suspending agent. It absorbs up to 300 times its weight of water to form an almost clear gel.

glu'ten bread. Bread made from wheat flour from which all the starch has been removed; it is used as a substitute for ordinary bread in diabetes.

glu'te·nin [*gluten*]. A protein of wheat.

glu·te'us, glu'te·us (gloo·tee'us) [G. *gloutos*, buttock]. One of the large muscles of the buttock, attached to the ilium and femur. See Table of Muscles in the Appendix.

g. maximus. The largest and most superficial gluteal muscle.

g. medius. The gluteal muscle lying between the gluteus maximus and gluteus minimus.

g. minimus. The smallest and deepest gluteal muscle.

small anterior g. An isolated slip of the gluteus minimus muscle, occasionally present along the anterior margin of the main muscle.

glu'tin. 1. A protein obtained from gelatin. 2. Vegetable casein.

glu"tin·in'in. An antibiotic substance isolated from cultures of *Metarrhizium glutinosum*. It inhibits, in vitro, a variety of bacteria.

glu'ti·nous [L. *gluten*, glue]. Viscid; gluelike.

glut'ton·y [L. *gluto*, glutton]. Abnormally excessive indulgence in eating.

gly'case (glye'case, -kays) Old term for maltase.

gly·ce'mi·a, gly·cae'mi·a (glye·see'mee·uh) [G. *glykys*, sweet; *haima*, blood]. The presence of glucose in the blood.

glyc"er·al'de·hyde. Glyceric aldehyde; the simplest aldose exhibiting optical activity, formed by mild oxidation of glycerin. It exists as CHO.HCOH.CH$_2$OH, called D-glyceraldehyde, as CHO.HOCH.CH$_2$OH (called L-glyceraldehyde) or as a racemic mixture of the two, designated DL-glyceraldehyde. The D- and L-forms are the configurational reference standards for carbohydrates. Glyceraldehyde and phosphoric acid derivatives of it are intermediates in certain biochemical reactions of carbohydrates.

gly·cer'ic ac'id. CH$_2$OH.CHOH.COOH; α,β-dihydroxypropionic acid or 2,3-dihydroxypropanoic acid, occurring in dextrorotatory and levorotatory forms, variously obtained, as by oxidation of glycerin; both forms are liquid and are miscible with water.

gly·cer'ic al'de·hyde. Glyceraldehyde.

glyc'er·i·dase. An enzyme catalyzing hydrolysis of glycerides. If the glyceride is also a lipid, the enzyme is more commonly called *lipase*.

glyc'er·ide (gliss'ur·ide, -id) An ester in which glycerin provides the alcohol radical. Fats are glycerides of certain long-chain organic acids.

glyc'er·in (gliss'ur·in) [G. *glykeros*, sweet]. 1 (*glycerinum*) Trihydroxypropane. $C_3H_5(OH)_3$. A clear colorless, syrupy liquid of sweet taste, miscible with alcohol and water. It is obtained by the hydrolysis of fats, especially by their saponification in soap manufacture. It is used as a vehicle, an emollient, and, rectally as a prompt laxative, particularly in the form of suppositories. Syn., *glycerol*. 2. British Pharmacopoeia name for glycerite.

g. suppositories (*suppositoria glycerini*) Prepared from glycerin, sodium stearate, and water.

glyc'er·ite (gliss'ur·ite) [*glycerin*]. A solution of one or more medicinal substances in glycerin.

boroglycerin g. (*glyceritum boroglycerini*) A viscid, yellowish liquid prepared by heating together boric acid and glycerin. It is miscible in all proportions with water but is decidedly acid in reaction.

glyc"er·o·gel'a·tin (gliss"ur·o·jel'ah·tin) [*glykeros*; L. *gelare*, to freeze]. One of a class of pharmaceutical preparations composed of glycerin, gelatin, water and one or more medicinal substances; they are soft solids, melting at body temperature, and can be applied to the skin or molded as suppositories.

glyc'er·ol (gliss'ur·ole, -ol, -awl) Glycerin.

glyc"er·ol·cho'line phos'phate. A postulated intermediate product in the hydrolysis of lecithin.

glyc"er·o·phos'pha·tase. An enzyme, found in pancreatic juice, and generally in cells capable of liberating phosphoric acid from glycerophosphoric acid and certain of its derivatives.

glyc"er·o·phos'phate. A salt of glycerophosphoric acid.

compound glycerophosphates elixir (*elixir glycerophosphatum compositum*) Contains the glycerophosphates of sodium, calcium, ferric iron, and manganese. Dose, 8 cc. (2 fluidrachms) Also called *compound glycerophosphates solution*.

glyc"er·o·phos·phor'ic ac'id. CH$_2$OH.CHOH.CH$_2$O.PO(OH)$_2$. A pale yellow oily liquid, soluble in water. Its salts, especially calcium and sodium glycerophosphate, have been used in the mistaken belief that their phosphorus was more readily utilized than that of other compounds.

glyc'er·ose. An equilibrium mixture of the interconvertible isomers, glyceraldehyde and dihydroxyacetone, obtained by mild oxidation of glycerin.

glyc"er·ose-3-phos'phate. Glyceraldehyde-3-phos-

phoric acid, $CHO.CHOH.CH_2OPO(OH)_2$, an intermediate in a postulated cleavage of carbohydrates to form lactic acid.

glyc'er·yl (glis'ur·il) The trivalent radical, C_3H_5, combined with fatty acids in fats and in animal and vegetable oils.

g. diacetate. Diacetin.

g. guaiacolate. Guaiacol glyceryl ether.

g. monostearate. $(C_{17}H_{35}COO)(OH)_2C_3H_5$, a white waxlike solid, insoluble in water; it is employed as a stabilizing agent in various dermatologic preparations.

g. triacetate. $(CH_3COO)_3C_3H_5$, a colorless, somewhat oily liquid, soluble in water. It is used as a solvent, as for certain local antiseptics. Syn., *triacetin*.

g. tributyrate. Butyrin.

g. trinitrate. $C_3H_5(NO_3)_3$. A colorless, or pale yellow volatile liquid used in the preparation of explosives. Physiologically it possesses the actions of the nitrites. In medicinal doses it reduces blood pressure in 2–3 minutes, the effect lasting about half an hour. Dose, 0.3–1.2 mg. ($\frac{1}{200}$–$\frac{1}{50}$ gr.) Syn., *nitroglycerin, glonoin*.

g. trinitrate spirit (*spiritus glycerylis trinitratis*). A 1% alcoholic solution used as a rapid and fleeting vasodilator. Dose, 0.06–0.12 cc. (1–2 min.)

g. trinitrate tablets (*tabellae glycerylis trinitratis*). Administered sublingually. Dose of active ingredient, 0.3–1.2 mg. ($\frac{1}{200}$–$\frac{1}{50}$ gr.)

g. trioleate. Olein.

g. tripalmitate. Palmitin.

g. tristearate. Stearin.

gly'cin. A poisonous photonegative developer, p-hydroxyphenylaminoacetic acid.

gly'cin·ate. Any salt of aminoacetic acid (glycine).

gly'cine (glye'seen, ·sin, glye·seen') Aminoacetic acid.

g. oxidase. An enzyme, present in liver and kidney, which catalyzes conversion of glycine to glyoxylic acid and ammonia; its prosthetic group is flavin adenine dinucleotide.

gly'ci·nin. The principal protein of the soybean.

Gly·ciph'a·gus do·mes'ti·cus. The mite causing grocer's itch.

gly'co-, glyc- [G. *glykys*, sweet]. A combining form meaning *sweet*, or denoting *glycerin*.

gly"co·bi·ar'sol. The official name for *bismuth glycolylarsanilate*, an intestinal amebicide.

gly"co·cho'late (glye"ko·ko'late, ·kol'ate). A salt of glycocholic acid.

gly"co·chol'ic ac'id. $C_{26}H_{43}O_6N$. An acid obtained by the conjugation of cholic acid with glycine; found in bile, especially of herbivorous animals.

gly'co·coll. Aminoacetic acid.

gly"co·cy"a·mine'. $COOHCH_2NH.C(:NH).NH_2$; guanidinoacetic acid; a product of interaction of aminoacetic acid (glycine) and arginine which on transmethylation with methionine is converted to creatine; also called *guanidine-acetic acid*, incorrectly called *guanidoacetic acid*.

gly'co·gen. $(C_6H_{10}O_5)_n$. A carbohydrate found in the liver cells, in all tissues in the embryo, in the testes, muscles, leukocytes, fresh pus cells, cartilage, and other tissues. It is formed from carbohydrates and is stored in the liver, where it is converted, as the system requires, into sugar (glucose). It is also known as *animal starch*. Glycogen is soluble in water, is dextrorotatory, and is colored red by iodine.

gly'co·ge·nase" (glye'ko·ji·nace, glye"ko·ji·nace, glye·ko'ji·nace). An enzyme found in the liver which hydrolyzes glycogen to maltose and dextrin.

gly"co·gen'e·sis [*glykys*; G. *genesis*, production]. Formation of sugar in the liver. —**glycogenet'ic, glycog'enous,** *adj.*

gly"co·gen'ic [*glykys*; G. *gennaein*, from *gignesthai*, to be produced]. Pertaining to glycogen or to glycogenesis.

gly"co·ge·nol'y·sis [*glykys*; G. *genesis*, production; *lysis*, a loosing]. The conversion of glycogen into glucose by hydrolysis.

gly"co·ge·no'sis [*glykys*; *genesis*; G. *-ōsis*, increase]. A disturbance of glycogen metabolism occurring in early infancy, characterized by abnormal deposit of glycogen, predominantly in the heart, which as a result becomes enlarged (cardiomegalia glycogenica). In the circumscribed form, glycogen is distributed locally in the heart, predominantly subendocardially (cardiomegalia glycogenica circumscripta). Other organs, as liver, kidney, and skeletal muscle, may also contain excessive glycogen deposits. Syn., *glycogen disease*, von *Gierke's disease*.

gly·cog'e·ny (glye·kodj'i·nee). See *glycogenesis*.

gly"co·he'mi·a, gly"co·hae'mi·a (gly"ko·hee'mee·uh). Old term for *glycemia*.

gly'col. 1. An aliphatic compound containing two hydroxyl groups. 2. Ethylene glycol.

gly·col·al'de·hyde. $CHO.CH_2OH$; the simplest sugar—a diose. It may be an intermediate in the biochemical breakdown of certain sugars. Also called *glycolic aldehyde*.

gly·col'ic ac'id (glye·kol'ick). $CH_2OH.COOH$. Hydroxyacetic acid produced by the reduction of oxalic acid.

gly"co·lip'id. Any lipid which, on acid hydrolysis, yields a carbohydrate, an alcohol, and a fatty acid. Syn., *glycolipin*.

gly"co·lip'in. Glycolipid.

gly'co·lyl. 1. Properly, the univalent radical $CH_2OH.CO$—. 2. The bivalent radical —CH_2CO—.

gly·col'y·sis (glye·kol'i·sis) [*glykys*; G. *lysis*, loosing]. The process of conversion of carbohydrate, in tissues, to pyruvic acid or lactic acid. Commonly it is considered to begin with hydrolysis of glycogen to glucose (glycogenolysis) which subsequently undergoes a series of chemical changes. —**glycolyt'ic,** *adj.*

gly"co·me·tab'o·lism [*glykys*; G. *metabolē*, change]. The metabolism of sugar in the body. —**glycometabol'ic,** *adj.*

gly"co·ne·o·gen'e·sis [*glykys*; G. *neos*, new; *genesis*, production]. The formation of carbohydrates from substances which are not carbohydrates, such as protein or fat.

gly'co·nin. Glycerite of egg yolk. An emulsifying agent prepared by mixing together 45 Gm. of strained egg yolk and 55 Gm. of glycerin.

gly·co·pe'ni·a [*glykys*; G. *penia*, poverty]. Tendency to hypoglycemia.

gly"co·pex'is [*glykys*; G. *pēxis*, a fixing]. The storing of glucose or glycogen.

gly"co·phil'i·a [*glykys*; G. *philein*, to love]. Tendency to hyperglycemia, after the ingestion of very little glucose.

gly"co·phos"pho·glu·co·mu'tase. An enzyme which catalyzes the reaction glucose-1-phosphate ⇌ glucose-6-phosphate.

gly"co·pro'te·in [*glykys*; G. *prōteios*, of first rank]. One of a group of conjugated proteins which upon decomposition yield a protein and a carbohydrate, or derivatives of the same. See American Classification of Proteins in the Appendix. Syn., *mucoprotein*.

gly"co·pty'a·lism (gly"ko·ty'uh·liz·um) [*glykys*; G. *ptyalon*, saliva]. Excretion of glucose in the saliva.

gly"cor·rha'chi·a (gly"ko·ray'kee·uh, ·rack'ee·uh) [*glykys*; G. *rhachis*, spine]. Glucose in the cerebrospinal fluid.

gly"cor·rhe'a, gly"cor·rhoe'a (gly"ko·ree'uh)

[*glykys*; G. *rhoia*, flow]. Discharge of sugar-containing fluid from the body.

gly"cos-a mine (gly"ko-sah-meen, -sam een, -in, gly-ko sah-meen, -min). Glucosamine.

gly"co-se-cre to-ry [*glykys*; L. *secretum*, from *secernere*, to separate]. Concerned in the secretion of glycogen.

gly"co-se'mi-a, *gly"co-sae mi-a* (gly"ko-see mee-uh). See *glycemia*.

gly"co-si-al"i-a (gly"ko-sigh-al'ee uh, -ay'lee-uh) [*glykys*; G. *sialon*, saliva]. The presence of glucose in the saliva.

gly"co-si" lor-rhe a [*glykys*; *sialon*; G. *rhoia*, flow]. Excessive salivary secretion containing glucose.

gly'co-side. Any plant principle which yields on hydrolysis sugar and another substance designated as an aglycone. In order to indicate the specific sugar which is formed, a more descriptive term such as glucoside, galactoside, etc., may be used. Many glycosides are therapeutically valuable. See also *glucoside*. —**glycosi'dal, glycosid'ic,** *adj.*

gly"co-su'ri a [*glykys*; G. *ouron*, urine]. The presence of sugar in the urine.

alimentary g. That due to excessive ingestion of carbohydrates.

anxiety g. A transitory form due to worry.

artificial g. Glycosuria resulting from puncture of the floor of the fourth ventricle in the inferior part of the medulla. Formerly called *traumatic g.*, *piqûre diabetes*.

diabeti g. That resulting from diabetes mellitus.

renal g. An anomalous condition characterized by low renal threshold for sugar together with normal blood sugar level of little or no pathologic significance. Erroneously called renal diabetes.

toxic g. That observed after poisoning by chloral, morphine, or curare, after the inhalation of chloroform or carbon monoxide, or after the ingestion of phlorhizin.

traumatic g. See artificial g.

gly"co-su'ri ac'id. Homogentisic acid.

glyco-thymoline. A proprietary liquid similar to alkaline aromatic solution.

glyc"u-re'sis (glick yoo-ree sis, gly'cue) [*glykys*; G. *ouresis*, making water]. Excretion of sugar seen normally in the urine.

gly"cu-ron'ic ac'id. Glucuronic acid.

gly"cu-ron'i dase. Glucuronidase.

gly-cu'ron ide. Glucuronide.

gly"cu ro-nu'ri [*glykys*; G. *ouron*, urine; *ouron*]. The presence of glucuronic acid in the urine.

gly'cyl. The univalent radical, H_2NCH_2CO— of the amino acid glycine.

glyc"yr rhe'tic ac'id (glis"ir-ree tic). Glycyrrhetinic acid.

glyc"yr-rhe-tin'ic ac'id (glis"ir-ri-tin ic). $C_{30}H_{46}O_4$, pentacyclic terpene, obtained by hydrolysis of glycyrrhizic acid; its structure resembles that common to steroids. It possesses certain of the physiological actions of desoxycorticosterone. Syn., *glycyrrhetic acid*.

glyc"yr rhi'za (glis"i-rye'zah) [*glykys*; G. *rhiza*, root]. Licorice. The dried rhizome and roots of several varieties of *Glycyrrhiza glabra*. Glycyrrhiza extract and pure glycyrrhiza extract are used as *diluents*, *excipients*. *Glycyrrhiza fluidextract* is used as vehicle. **Compound opium and glycyrrhiza mixture**, also called *brown mixture*, is administered in bronchitis. Dose, 4 cc. (1 fluidrachm). **Glycyrrhiza elixir** is used as vehicle for disguising or obtunding the taste of bitter substances.

glyc"yr hi'zi ac'id (glis"i-rye zick). A very sweet, crystalline glycoside, probably of the formula $C_{44}H_{64}O_{19}$, salts of which occur in glycyrrhiza; on hydrolysis it yields two molecules of glucuronic acid and one molecule of glycyrrhetinic acid. It appears to have certain of the physiological actions of desoxycorticosterone. Syn. *glycyrrhizin*.

glyc"yr rhi'zin (glis"i-rye zin). Glycyrrhizic acid.

ammoniated g. A sweet preparation consisting of an impure form of glycyrrhizin combined with ammonia.

glymacol. A trade-mark for *theophylline sodium glycinate*.

gly' -dine. Generic name for the fungicidal substance 2-heptadecyl-2-imidazoline acetate, also known as 2-heptadecylglyoxalidine acetate $C_{22}H_{44}N_2O_2$; light-orange crystalline compound.

gly-ox'al. OHC.CHO; compound resulting from oxidation of acetaldehyde it occurs as yellow crystals, polymerizing on standing or on contact with water in which violent reaction takes place.

gly-ox'a lase (glye-ock suh-lace). An enzyme present in various body tissues which catalyzes the conversion of methylglyoxal into lactic acid.

gly"ox-al'ic ac'id. Glyoxylic acid.

gly ox'a-line (glye-ock suh leen, -lin). Imidazole.

gly"ox yl'ic ac'id. CHO COOH; constituent of various plant and animal tissues it may be btained by oxidative deamination of glycine but it may also serve as precursor of glycine. It is used as reagent for tryptophan (Hopkins-Cole reaction). Syn., *formylformic acid*, *glyoxalic acid*, *oxoethanoic acid*.

glytheonate. Trade-mark for *theophylline sodium glycinate*.

Gm, Gm. Gram(s); gramme(s).

gm, gm. Gram(s); gramme(s).

Gmelin Leopold [*German chemist and physiologist*, 1788–1853]. Made important studies of bile. See also Gmelin test.

gnat [AS. *gnaet*]. Any on of various dipterous insects belonging to the suborder Nematocera. Mosquitoes, black flies, biting midges, and sand flies are included.

gnath-. See gnatho-.

gnath al'gi (na-thal'juh, -jee-uh) [G. *gnathos*, j w *algos*, pain]. Pain or neuralgia of the jaw.

gnath'ic (nath'ick, nay'thick) [*gnathos*]. Pertaining to the jaw.

gna thi on (nayth ee-on, nath) [*gnathos*]. The most inferior point on the inferior border of th mandible, in the sagittal plane. Also called *menton*.

gnath-i'tis (na thigh tis) [*gnathos*; G. *-itis*, inflammation]. Inflammation of the jaw or cheek.

gnath o- (nath o- nayth o-), **gnath-** [*gnathos*]. A combining form signifying *the jaw*.

gnath"o-ceph lus [*gnathos*; G *kephalē* head]. A monster lacking all parts of the head except large jaws.

gnath"o-dy"na mom ter (-dye nuh mom'i-tur -din ah-mom -tur) [*gnathos*; G *dynamis*, power; *metron*, measure]. An instrument for recording the force exerted in closing the jaws.

gnath -dyn'i a [*gnathos*; G *odynē*, pain]. Pain in the jaw; gnathalgia.

gnath-ey' gus par" sit'i-cus. See *epignathus*.

gnath o-plas"ty [*gnathos*; G *plassein*, to form]. Plastic surgery of the cheek or jaw.

gnath-os chi-sis (na-thos'ki-sis) [*gnathos*; G. *schisis*, cleavage]. Cleft alveolar process.

Gnath-os to ma [*gnathos*; G *stoma*, mouth]. A genus of nematode worms of the family Gnathostomatidae.

G. hispidum. A species infesting the stomach walls of hogs and sometimes of cattle in Europe, Asia, Africa, and Australia. Of little pathologic importance in man.

G. spinigerum. A species infesting the subcutaneous tissues and intestinal walls of domestic and wild felines, dogs, hogs, and mink, restricted geographically to India, Malaya, China, and Japan. Man serves as an accidental host in whom the parasites do not fully develop.

gnath"o-sto-mi'a-sis [*gnathos*; *stoma*; NL. *-iasis*, condition] Infestation with *Gnathostoma spinigerum* larvae; deep burrows, boils, and abscesses in the skin are caused by this parasite.

gnos'co-pine (nos'ko-peen, -pin) Racemic narcotine from opium.

gno·sis (no sis) [G., knowledge]. The faculty of knowing in contradistinction to the function of feeling, in respect to any external stimulus.

gnos'tic (nos tick) [G *gnōstikos*, of knowing, from *gignōskein*]. Relating to discriminative or epicritic sensations in contradistinction to vital or protopathic sensations.

G a powder (go uh) See *araroba*.

goat pox" [AS. *gat*, ME. *pokkes*]. An acute disease seen in goats marked by vesicular eruption.

Goblet. See *Gubler*

gob'let cell. See under *cell*.

god'et. See *scutulum*.

Goethe Johann Wolfgang von [*German comparative anatomist and poet*, 1749–1832]. Pioneer student of evolution. Coined the term morphology. Discovered the human intermaxillary bone (1821) called *Goethe's bone*.

Goetsch, Emil (1883–) American surgeon known for his description of the epinephrine hypersensitiveness test to differentiate hyperthyroidism from functional nervous disorders, tuberculosis, and asthma, in which the subject is given subcutaneous injection of epinephrine hydrochloride. A positive reaction is characterized by an increase in blood pressure and pulse rates of at least 10 points with an exaggeration of the symptoms of hyperthyroidism lasting 1 to 1½ hours. The test is also called *Goetsch test*.

goi ter goi'tre [OF *goitron*, from L. *guttur* throat]. Enlargement of the thyroid gland. Also see *struma*. —goitrous, *adj*

aberrant g. That of supernumerary thyroid gland. Also called *accessory g*

acute g. One which develops rapidly

adenomatous g. An asymmetric type due to isolated nodular masses of thyroid tissue (adenomas)

adolescent g. Diffuse enlargement of the thyroid in adolescents. Also called *juvenile g*

be ign metastasizing g. See follicular carcinoma of thyroid.

cabbage g. One produced experimentally by the feeding of cabbage to rabbits and other animals.

cancerous g. Carcinoma of the thyroid gland. Also called *carcinomatous g*

colloid g. A diffuse, soft, sometimes large goiter in which many of the acinar spaces are distended with colloid.

congenital g. One present at birth.

cyanide g. A goiter produced experimentally by the administration of cyanide; associated with deficient use of the thyroid hormone by the tissues.

cystic g. One in which cyst, or cysts, forms by the degeneration of tissue, as within preexisting adenomata.

diffuse g. A type in which the thyroid gland is diffusely enlarged, in contrast to adenomatous goiter

endemic g. That occurring commonly in iodine-poor and mountainous areas.

exophthalmic g. A disease caused chiefly by overproduction of the thyroid hormone characterized by goiter tachycardia, nervous excitability fine involuntary tremor exophthalmos and other ocular signs, loss of weight, muscular weakness, and tendency to intense, acute exacerbations called thyroid crises. There is excessive excretion of nitrogen and increased excretion of calcium, leading to osteoporosis and disturbance in carbohydrate metabolism. Also called *Basedow disease*, *Flajani' disease*, *Graves disease*, *hyperthyroidism*, *Parry disease*, *thyrotoxicosis*, *toxic g*.

hyperplastic g. One characterized by an increased number of cells, particularly those lining the acini, with an accompanying increase in vascularity of the gland. Also called *parenchymatous g*.

intrathoracic g. A goiter which has portion lying within the thoracic cavity

lingual g. A tumor composed of thyroid tissue, at the upper end of the original thyroglossal duct, near the foramen cecum of the tongue.

lymphadenoid g. See *struma lymphomatosa*.

malignant g. One which is the seat of carcinoma or sarcoma.

nod lar g. See adenomatous g.

parenchymatous g. See hyperplastic g

sarcomatous g. Sarcoma of the thyroid gland.

simple g. A diffuse goiter either colloid or hyperplastic in type usually unassociated with constitutional features.

sporadic g. Goiter which occurs in limited geographic areas.

sulf namide g. That due to continued administration of one of the soluble sulfonamides.

thiocyanate g. One due to prolonged administration of thiocyanate.

thiourylene g. One due to administration of thiourylene compound as thiourea, thiouracil, thiobarbital; associated with hyperplasia of the thyroid gland and thought to be due to prevention of synthesis of thyroglobulin.

toxic g. See exophthalmic g.

goi'tre. See *goiter*

goi"tro-gen'ic [*goitron*, G. *gennaein*, from *gignesthai*, to be produced]. Producing goiter as iodine-deficient diets or experimentally diets of cabbage and other brassica plants, the feeding of sulfonamides, drugs of the thiourea group, etc.

gold [AS.] (*aurum*) Au = 197.0. A yellow metal, easily malleable and ductile. Gold salts are used in rheumatoid arthritis and in various forms of tuberculosis. Toxic effects are numerous.

g. bromide. Gold tribromide, auric bromide, AuB Used in epilepsy and in whooping cough. Dose, 8–12 mg (⅛–⅕ gr)

g. leaf. Pure gold in very thin, transparent sheets of blue-green color

g. sodium thiomalate.

A white to yellowish-white powder very soluble in water used in the treatment of rheumatoid arthritis and lupus erythematosus. See *myochrysine*.

g sodium thiopropanolsulfonate. See *allochrysine*.

g. sodium thiosulfate (*auri sodii thiosulfas*). Sodium aurothiosulfate N $Au(S_2O_3)_2.2H_2O$, occurring in white crystals, freely soluble in water, and used in rheumatoid arthritis and lupus erythematosus. See *sanocrysin*. Also see *triphal*.

g. thioglucose. Aurothioglucose

g. trihydroxide. See *auric acid*.

Goldberger Joseph [*American pathologist* 1874–1929]. With J F Anderson, studied the experi-

mental transmission of measles to monkeys (1911). Pioneered in the study of vitamins and of pellagra. With G. A. Wheeler, R. D. Lillie, and L. M. Rogers, discovered the pellagra-preventive factor later identified as nicotinic acid.

Goldblatt, Harry [*American pathologist*, 1891–]. Author of theory on the mechanism of hypertension; devised clamp for gradual occlusion of arteries, called *Goldblatt clamp*. See experimental renal *hypertension*, Goldblatt *method*. With Louis Gross he invented the Autotechnicon (1929).

gold'en rod" [AS.]. The common name for several species of the genus *Solidago* of the Compositae. Their pollen produces hay fever.

Goldflam, Samuel Vulfovich [*Polish neurologist*, 1852–1932]. Remembered for his description of myasthenia gravis (1893), called *Erb-Goldflam disease*, *Hoppe-Goldflam symptom complex*.

Goldmann's test. See Baumann and Goldmann *test*.

Goldscheider, Johannes Karl August Eugene Alfred [*German neurologist*, 1858–1935]. Made important studies of cutaneous sensation (1884–85). Described epidermolysis bullosa (1882), known as *Goldscheider's disease*.

Goldstein-Scheerer test. See under *test*.

gold'thread". See *Coptis groenlandica*.

Goldthwait, Joel Ernest [*American orthopedic surgeon*, 1866–]. Introduced his operation for recurrent dislocation of the patella, in which an incision is made over the patella and patellar tendon and carried to point over the medial condyle of the tibia. The tendon is split lengthwise, and the outer half is detached from the tibial tubercle, transplanted beneath the inner half, and sutured to the periosteum of the inner anterior surface of the tibia. Known as *Goldthwait operation*.

Golgi, Camillo [*Italian histologist*, 1844–1926]. Introduced the use of silver nitrate for staining nerve cells; see *Golgi's silver method* under *stain*. Described the development of the quartan malarial parasite (1886) and distinguished it from the tertian (1889). See endogenous *cycle*, also called *cycle of Golgi*. Described the internal reticular apparatus, network of fibers or canals of unknown significance, found in the cytoplasm of cells, called *Golgi apparatus, network, material*. These fibers or canals, which may take the form of rods, granules, or spheres, react selectively to osmic acid. See also organ of Golgi (also called *Golgi's corpuscle*); *Golgi cells*; *Mazzoni's corpuscle* (also called *Golgi-Mazzoni corpuscle*). The acroblast is known as the *Golgi remnant*. Nobel laureate with Ramón y Cajal (1906).

gol"gi-o-kin-e'sis. The division of the Golgi apparatus during karyokinesis.

Goll, Friedrich [*Swiss anatomist*, 1829–1903]. Described the fasciculus gracilis (1860), also called *Goll's column* or *tract*. See also gracile *nucleus*; formerly called *nucleus of Goll*.

Goltz, Friedrich Leopold [*German physiologist*, 1834–1902]. Known especially for his researches on the physiology of the nervous system. Made an experimental study of reflex actions, with frogs (1869) and decorticated dogs. See also *static theory*, called *Goltz's theory*.

Gombault, François Alexis Albert [*French physician*, 1844–1904]. Described the triangular area formed by the septomarginal tract in the sacral region of the spinal cord, at the dorsomedian angle of the dorsal funiculus. This was described also by Claudien Philippe, and is called *Gombault-Philippe triangle*.

gom-pho'sis [G. *gomphios*, molar; NL. *-iasis*, condition]. Looseness of the teeth in their sockets; periodontosis. *Obs.*

gom-pho'sis [G. *gomphos*, bolt; *-ōsis*, condition]. A form of synarthrosis.

gon"a-cra'ti-a [G. *gonē*, seed; *akrateia*, incontinence]. Spermatorrhea. *Rare.*

go'nad [*gonē*]. 1. A gland or organ producing gametes; a general term for ovary or testis. 2. The embryonic sex gland before morphologic identification as ovary or testis is possible. Also called *indifferent g.* —**gonadal**, *adj.*

female g. The ovary.

male g. The testis.

gon'ad-arche. The time when ovarian or testicular activity begins in the adolescent.

gon"-ad-ec'to-my [*gonē*; G. *ektomē*, excision]. Surgical removal of gonad.

gon"-ad-o-cen'tric [*gonē*; G. *kentron*, center of circle]. Relating to focusing of the sex urge upon the genitals; phase of sex development normally occurring in puberty.

gonadophysin. Trade-mark for purified pituitary gonadotropin.

gon"-ad-o-ther'a-py [*gonē*; G. *therapeia*, treatment]. Treatment with gonadal extracts or hormones.

gonadothyn. Trade-mark for purified pituitary gonadotropin.

gon"a-do-tro'phin. See *gonadotropin*.

gon"a-do-tro'pin [*gonē*; G. *-tropos*, turning]. A gonad-stimulating hormone. The principal sources are (a) the anterior pituitary gland of various animal species; (b) the urine of pregnant women (chorionic gonadotropin); (c) the serum of pregnant mares (serum gonadotropin). Formerly written *gonadotrophin*. Syn., *gonadotropic substance*.

anterior pituitary g. The multiple gonadotropin produced by the anterior lobe of the pituitary gland, consisting of (a) follicle-stimulating hormone (FSH, prolan A); (b) luteinizing hormone (LH, prolan B), which is also an interstitial-cell-stimulating hormone (ICSH).

chorionic g. The water-soluble gonadotropic substance, originating in chorionic tissue, obtained from the urine of pregnant women. It is recommended in treating cryptorchism, and has been used in treating hypogonadism in the adult, and in uterine bleeding of functional nature.

luteotropic g. See *luteotropin*.

serum g. The water-soluble follicle-stimulating substance, by some believed to originate in chorionic tissue, obtained from the serum of pregnant mares. It may be identical with the follicle-stimulating hormone obtained from the anterior lobe of the pituitary gland. It is used to supplement the action of estrogens in the treatment of delayed puberty and amenorrhea and hypomenorrhea, and also of acne vulgaris in the female.

gon'-duct [*gonē*; L. *ductus*, leading]. Duct of a gonad; oviduct or sperm duct.

go-nag'ra (go-nag'ruh, -nay'gruh, gon'ag-ruh) [G. *gony*, knee; *agra*, catching]. Gout of the knee joint.

go-nal'gi-a [*gony*; G. *algos*, pain]. Pain in the knee joint.

gon"an-gi-ec'to-my (gon"an-jee-eck'to-mee, gonan"jee-) [G. *gonē*, seed; *angeion*, vessel; *ektomē*, excision]. Excision of part of the ductus deferens.

gon"ar-thri'tis [G. *gony*, knee; *arthritis*, from *arthron*, joint, *-itis*, inflammation]. Inflammation of the knee joint.

gon"ar-throc'a-ce (gon"ahr-throck'uh-see) [*gony*; *arthron*; G. *kakos*, bad]. White swelling of the knee joint. *Obs.*

gon"ar-throt'o-my [*gony*; *arthron*; G. *tomē*, a cutting]. Incision into the knee joint.

go nat'o-cele [*gony;* G *kēlē*, tumor]. A swelling or tumor of the knee.

Gonda reflex. See under *reflex*.

gon e-cyst, gon e-cys'tis [G *gonē*, seed; *kystis*, bladder]. A seminal vesicle. —**gonecys'tic,** *adj*

gon e-cys-ti'tis [*gonē; kystis*, G *-itis*, inflammation]. Inflammation of the seminal vesicles.

gon″e-cys'to lith [*gonē; kystis;* G *lithos*, stone] A concretion or calculus in seminal vesicle.

gon e-cys″to py o sis [*gonē; kystis;* G *pyōsis*, suppuration]. Suppuration of seminal vesicle.

gon″e-poi sis [*gonē;* G. *poiēsis*, production]. The formation of semen. —**genepoiet'ic,** *adj*

Gon″gy-lo ne ma (gon jil-o-nee'mah) [G *gongylos*, round; *nēma*, thread]. A genus of nematode parasites of the family Spiruridae. The variously named species are usually grouped under the single species *G. pulchrum*.

G. pulchrum. A parasite found in the upper digestive tract of sheep, cattle, goats, hogs, and horses. In cases of accidental human infestation, the worm invades the buccal mucosa.

gon″gy lo-ne-mi a sis (gon jil lo-nee-my uh-sis) [*gongylos; nēma;* NL. *-iasis*, condition]. Infestation with *Gongylonema*, genus of filarial nematodes.

gon'ic [*gonē*]. Pertaining t semen or to generation.

Gonin, Jules [*Swiss ophthalmologist*, 1870–1935]. Devised an operation of ignipuncture for detachment of the retina, in which he employed thermocauterization of the retinal fissure through an opening in the sclera (1937)

go″ni-o-chei los'chi-sis (go nee-o-kigh-los'ki-sis) [G. *gōnia*, angle *cheilos*, lip; *schisis*, cleavage]. Transverse facial cleft intermaxillary fissure, macrostomia genal cleft.

go ni -cra″ni om'e-try [*gōnia;* G *kranion*, skull; *metron*, measure]. Measurement of the various angles of the skull.

go ni-om e ter [*gōnia, metron*]. An instrument for measuring angles, as the angle of the mandible.

go ni-on [*gōnia*]. A craniometri point, the tip of the angle of the mandible. —**go nial** *adj*

go ni o-punc'ture. A filtering operation for congenital glaucoma achieved by puncturing the filtration angle with goniotomy needle.

go ni-o-scope [*gōnia;* G *skopein*, to examine]. A special optical instrument for studying in detail the angle of the anterior chamber of the eye, and for testing ocular motility —**gonios copy** *n.*

go ni t o-my [*gōnia*, G. *tomē*, cutting]. An operation for glaucoma in which Schlemm canal is opened under direct vision.

go ni'tis [G. *gony* knee *-itis*, inflammation] Inflammation of the knee joint.

go ni um (pl. *gonia*) [G *gonē*, seed]. A general term for spermatogonium and oogonium

gon blast [*gonē;* G. *blastos*, germ]. Old term for germ cell.

gon o-coc-ce mi a, gon″o-coc-cae'mi-a (gon o-sock see mee uh) [*gonē;* G *kokkos*, grain *haima*, blood] The presence of gonococci in the blood.

gon″o-coc'ci (gon o-sock'sigh) Plural of gonococcus.

gon″o-coc'cide. Any substance or agent having properties which destroy gonococci Less desirable terms sometimes used are *gonocide gonococcicide*. —**gonococ cide** *adj*

gon o-coc cin (gon o cock'sin) A glycerin extract of gonococci, employed in testing for gonorrhea by the autireaction. *Obs.*

gon -coc'cus (pl. *gonococci*) [*gonē; kokkos*] The common name for the organism causi g gonorrhea *Neisseria gonorrhoeae* —**gonococcal gonococcic,** *adj*

go -cyte [*gonē*, G *kytos*, cell]. A germ cell

primary g. A primordial germ cell derived from endoderm and found i the germinal epithelium of the gonads.

secondary g. The definitive or functional germ cells derived from the germinal epithelium of the gonads, but not necessarily from primary gonocyte.

go nom er y [*gonē;* G *meros*, part]. The independence of the pronuclei or their chromosomes in th zygote and the first few cleavage stages.

gon″or rhe a [G *gonorroia*, from *gonē; rhoia*, flow]. A specific infectious inflammation of the mucous membrane of the urethra and adjacent cavities, due to the *Neisseria gonorrhoeae* The disease is characterized by pain, burning urination, profuse mucopurulent discharge, and may be accompanied by complications: prostatitis, periurethral bscess, epididymitis, cystitis, purulent conjunctivitis. It may also cause arthritis (gonorrheal rheumatism) endocarditis, and salpingitis. —**gonorrhe al,** *adj*

gon″y ba'ti-a [G *gony*, knee *bainein*, to walk]. Walking upon the knees; symptom in some paralyti and paretic cases.

gon″y camp'sis [*gony;* G *kampsis*, bending]. Deformity of knee due to bnormal bending or curving.

gon y o-cele″ See *gonyoncus*.

gon″y on cus [*gony;* G *onkos*, mass]. A tumor or swelling of the knee.

Goodell's sign. See under *sign*.

good'ness of fit. A measure of how accurately particular mathematical formula fits series of bservations.

Goodpasture, Ernest William [*American pathologist*, 1886–]. Known for his investigation of viruses by means of chick embryos. This study led the way to the production f vaccines against fowlpox, smallpox, yellow fever and typhus. See also *Goodpasture' stains* under *stain*, carbolaniline fuchsin *stain*.

Goodrich method. See van den Bergh's *method* (Gibson and Goodrich modification)

goose flesh. Skin marked by prominence bout the hair follicles. Results from contraction of the arrectores pilorum muscles also called *goose skin, cutis anserina*.

Gor″di ce-a [*Gordius*, who tied the Gordian knot] A subclass of the Nematomorpha; the so-called hair snakes.

Gordon, Alfred (1874–) American neurologist who described great-toe reflex elicited in diseases of the pyramidal tract, called Gordon s *reflex*.

Gordon Mervyn Henry [*English bacteriologist*, 1872–]. Described a test for Hodgkin's disease. See Gordon *test*.

Gorgas, William Crawford [*American Army surgeon*, 1854–1920]. As chief sanitary officer of the Panama Canal Commission (1904–13) directed the anti-yellow-fever and antimalaria campaign which made the construction of the Canal possible. Surgeon General of the Army during World War I.

gor'get (gor jit) [OF *gorgete*, dim. of *gorge*, throat] A channeled instrument similar to grooved director formerly used much in lithotomy

probe g. One whose tip is probe-pointed.

gorit. Trade name of preparation of calcium peroxide.

go-ron'dou (go-ron dōō) See *goundou*.

Gos syp'i um [L. *gossypion*, cotton-tree]. A genus of plants of the Malvaceae from which cotton and cotton-root bark are obtained.

gos'sy pol. A phenolic compound sometimes found in the oil cak after expression of the oil from cottonseed. It has produced toxic symptoms in cattle fed such oil cake

Gottlieb's cuticle. See enamel *cuticle*.

Gottschalk, Sigmund [*German surgeon*, 1860–1914]. Described an operation for displacement of the uterus. In *Gottschalk' operation*, the uterosacral ligaments are shortened by the vaginal route.

gouge [F from LL. *gubia*] A transversely curved chisel for cutting or removing bone or other hard structures.

Gougerot, Henri [*French physician*, 1881]. With de Beurmann, described sporotrichosis (1906) which is known as *de Beurmann-Gougerot disease*, *Schenck' disease*. Nodular dermal allergid is known as *Gougerot' trisymptomatic disease*

Goulard' extract. See *lead* subacetate solution.

Gould, Alfred Henry [*American surgeon*, 1873–1907] Devised an interrupted mattress suture for intestinal repair so pplied as to evert the cut edges of the intestine. Called *Gould' suture*.

Gould, George Milbry [*American ophthalmologist and medical lexicographer* 1848–1922]. Editor of various medical dictionaries from 1890 on. *Blakiston New Gould Medical Dictionary* is based on *Gould' Medical Dictionary*, 5th edition, which was the sum of all his previous work. H described *Gould' bowed-head sign*, indicativ of retinitis pigmentosa or other disease destroying the peripheral part of the retina the subject walks with the head bowed in order to bring the image of the ground onto the functioning area of the retina.

Gouley John Williams Severin [*American surgeon*, 1832 1920]. Invented solid, curved steel instrument grooved on its inner aspect for passing over guide inserted through stricture into the urinary bladder called *Gouley' catheter*

goun dou (gōōn dōō) An exostosis of the face probably sequela of yaws, involving the nasal and adjacent bones to produce projecting, tumorlike mass. Also called *anakhre*, *big nose*, *henpue*.

gout [OF *goute*, from L. *gutta*, drop]. A constitutional hereditary condition of uric acid metabolism, associated with high blood level and decreased urinary excretion of uric acid often with fever and leukocytosis. There are sudden ttacks of acute, painful arthritis which may last few days to few weeks, recurring at irregular intervals with complete remission between attacks Usually one joint is involved, the great toe being the part most commonly affected. The joint involved may be hot, red, and tender and the surrounding skin is shiny Repeated attacks may result in deformity —**gout y** *adj*

abarticular g. That in which structures other than the joints are involved.

atypical g. That marked by unusual symptoms, affecting unusual portions of the body

calcium g. See pathologic *calcification* (a)

chalk g. Circumscribed calcinosis.

guanine g. Pathologic accumulations of guanine.

latent g. Hyperuricemia ithout gouty symptoms; sometimes recognized in the relatives of gouty people.

rheumatic g. Rheumatoid arthritis. *Obs.*

tophaceous g. A condition associated with deposits of sodium urate (tophi) in the skin over the cartilage of the ear and about the fingernails and in the cartilages of the joints.

Gowers, William Richard [*English neurologist*, 1845–1915]. Described retinal changes in Bright disease (1876) Invented the hemoglobinometer (1878) Described tract of ascending anterolateral fibers in the spinal cord (1880); called *Gowers col mn* or *tract* Gave notable description of epilepsy (1881) With V A. H. Horsley was first t remove tumor of the spinal cord successfully (1888) Described distal myopathy (1902) form of progressive muscular atrophy called *distal myopathy of Gowers*. *Gowers sign*, seen in tabes dorsalis, is an irregular contraction of the pupil in response to light Paroxysmal vasovagal attacks constitute *Gowers' syndrome*. See also Gowers' *phenomenon*.

gr Grain(s)

Graaf Reinier [Regnier] **de** [*Dutch anatomist*, 1641 73]. Studied digestion and the anatomy of the genital organs. The efferent ductules are known as the *graafian vessels*. See also *graafian follicle* under *follicle*.

graaf'i an, Graaf'i n follicle. See under *follicle*; see liquor folliculi. See also Reinier de *Graaf*

Grace, Arthur William [*American dermatologist*, 1894–]. With Florence H. Suskind, developed standardized mouse-brain antigen for use in test for venereal lymphogranuloma.

grac'i li (gras -lis) [L., slender]. A long, slender muscle on the medial aspect of the thigh. See Table of Muscles in the Appendix.

gra da tim [L.]. Gradually

Gradenigo, Giuseppe [*Italian otolaryngologist*, 1859–1926]. Described the syndrome of intense pain in the temporoparietal region, with paralysis of the lateral rectus muscle of the eye associated with otitis media and mastoiditis, as indicative of extradural abscess involving the apex of the petrous bone. Called *Gradenigo' sign*, *syndrome*. Author of monograph on the auricular manifestations of hysteria (1901)

gra di nt [L. *gradi*, to step]. 1. The rate of increase of variable magnitude or the curve which represents it. 2. *I biology*, system of relations within the organism, or part of it, which involves progressively increasing or decreasing differences in respect to rate of growth, rate of metabolism, or of any other structural or functional property of the cells.

ventricular g. *I electrocardiography*, term introduced by F N Wilson to express the electric effects produced by local variations in the excitatory process of the heart determined by measurement of the areas of the ventricular deflections of the ECG in two simultaneous limb leads, an ex pression of those electric forces which appear whe the sequence of repolarization differs from the sequence of depolarization. Symbol, G g. Ĝ, ĝ.

grad'u ate [L. *gradus* step]. A vessel, usually of glass, marked with lines at different levels; used for measuring liquids.

grad'u ted [*graduel*]. Divided into units by series of lines, as barometer graduate, thermometer

Graefe, Alfred Karl [*German ophthalmologist*, 1830–99] Made an important study of pathologic movements of the) (1858)

Graefe Carl Ferdinand von [*German surgeon*, 1787 1840]. Has been called the father of modern plastic surgery Devised an operation for the repair of cleft palate. Introduced improvements in the technic of rhinoplasty and in that of Cesarean section.

Graefe, Friedrich Wilhelm Ernst Albrecht von [*German ophthalmologist*, 1828–70]. Introduced iridectomy for the treatment of glaucoma, iritis, and iridochoroiditis. Devised an operation for strabismus. Was among the first t point out that impairment of vision or blindness accompanying cerebral disorders usually is due to optic neuritis (1860) By improving the techni of linear extraction (1865) reduced eye loss in operations for cataract. Gave classic description of sympathetic ophthalmia (1866) and an important account of the symptomatology of ocular paralysis (1867) Described keratoconus (1868) See also von Graef 's *sign*.

Graeser's method. See Friedemann and Graeser's *method*.

graft [OF. *grafe*, from G. *grapheion*, to write]. A portion of tissue, such as skin, periosteum, bone, fascia, or rarely an entire organ, used to replace a defect in the body. See *autograft*, *flap*, *heterograft*, *homograft*, *implantation*, *implants transplant*, *transplantation*, *zoograft*.

accordion g. A full-thickness graft in which multiple slits are made so that the graft may be stretched to cover a large area; also called *Dragstedt g.*

arterial g. See arterial *bridge*.

autogenous g. See *autograft*.

autoplastic g. See *autograft*.

bone g. One composed of osseous tissue, may be cortical, cancellous, or medullary; used to repair bone defects, to afford support, or to supply osteogenic tissue.

bridging g. One which connects the cut ends of arteries, bones, nerves, etc., where there is loss of substance and the divided ends cannot be approximated.

cable g. In neurosurgery, the placing together of several sections of nerve to be transplanted, to bridge a gap in a nerve larger than the sections available for the grafting.

cartilage g. Cartilage autograft or homograft, commonly used for replacing damaged or destroyed cartilage, or to replace bone loss.

chorioallantoic g. A graft of tissue onto the chorioallantoic membrane of the hen's egg, which furnishes a favorable environment for growth. Also used for culturing viruses for the preparation of vaccines.

corneal g. Corneal tissue, usually human, transplanted into a defective cornea to provide a clear window.

dermo-fat-fascia g. A tissue graft employing full-thickness skin, fat, and fascia.

dermic g. A skin graft.

fascial g. A strip of fascia lata or aponeurosis; used either for the repair of a defect in muscle or fascia, or for suturing.

fat g. A portion of fat, implanted to fill a hollow and improve a contour.

free g. A graft of any type of tissue which is cut free and transplanted to another area.

full-thickness g. A skin graft including all layers of the skin; also called *Krause-Wolfe g.*

heterogenous g. A heterograft.

heteroplastic g. See *heterograft*.

homogenous g. See *homograft*.

homologous g. See *homograft*.

homoplastic g. See *homograft*.

ileal g. In urology, the use of a loop of ileum to replace a part of the genitourinary tract, usually a ureter.

implantation g. See *implantation*, 1.

inlay g. One placed beneath the tissue, as a bone graft placed in the medullary cavity of a bone, or an Esser inlay beneath the skin or mucous membrane.

intermediate split g. A graft consisting of the epidermis, papillary layer, and reticular layer of intermediate thickness; also called *Blair-Brown g.*

isograft. See *homograft*.

mucosal g. A graft of oral mucous membrane or of conjunctiva to repair a defect.

muscle g. A portion of muscle sutured in place, for checking hemorrhage where a bleeding vessel cannot be secured.

nerve g. A portion of a nerve sutured in place to restore the continuity of a severed nerve trunk where apposition cannot be secured.

Ollier g. Intermediate split-skin g.

omental g. A portion of omentum transplanted to fill a defect or to check a hemorrhage, or placed over an intestinal suture line to prevent adhesions.

onlay g. A bone graft which is laid on the surface of a bone where bone substance has been lost and where conditions are unsuited to inlay grafts. Onlay grafts are fixed in place by vitallium screws.

osteoperiosteal g. One of bone and periosteum.

ovarian g. A portion of ovary implanted anywhere except in its normal bed, usually in the abdominal wall, for the preservation of the hormone production.

pedicle g. See pedicle *flap*.

periosteal g. One consisting entirely of periosteum and used for minor bone defects to promote healing or union. See bone *g*.

pinch g. A small, full-thickness graft lifted from the donor area by a needle and cut free with a razor. Many such small deep grafts are fitted together to cover the defect. Also called *implant pinch g.*, *Braun g.*

rope g. A tubed pedicled flap.

sieve g. A large skin graft, with openings throughout, corresponding to skin islands left on the donor area; also called *Douglas g.*

skin g. A portion of skin, of any size or thickness, cut from a donor area and transferred to the recipient site where repair is needed.

split g. A free graft of skin using less than full thickness, varying from the very thin epidermal graft (Thiersch g.) to the intermediate split-skin graft (Ollier g.) and the thick-split graft; also called *split-skin g.*, *split-thickness g.*

surface g. A graft applied anywhere on the surface of the body where part of the skin is missing.

tendon g. One of tendon to bridge a gap in a tendon. Also see tendon *transplantation*.

testis g. The grafting by implantation of an entire testis or portion to replace one lost or destroyed, for the production of hormones.

Thiersch g. A thin epidermal split *g.*

tunnel g. A skin graft with the epithelial side inward, introduced into tissues under a contracted scar, etc. The tunnel is split later and the epithelial surface becomes superficial or is left in place to replace a part, such as the urethra.

zooplastic g. A graft of tissue obtained from an animal.

Graham, Evarts Ambrose (1883–) American surgeon who with W. H. Cole, introduced cholecystography (1924), also called *Graham-Cole test*. With J. J. Singer he successfully removed an entire lung for carcinoma (1933).

Graham, Roscoe Reid [Canadian surgeon, 1890–1948]. Described an operation, called *Graham operation*, for closure of a perforated gastric or duodenal ulcer. Sutures are placed at the top, middle, and bottom of the perforation, and an omental plug is then sutured over the area.

Graham, Sylvester [American reformer, 1794–1851]. Popularized bread made from unbolted flour called *graham flour*. Whole-wheat bread is also called *graham bread*.

Graham, Thomas [Scottish chemist, 1805–69]. Studied diffusion of gases, osmotic force, and dialysis. *Graham's law* states that the rates of diffusion of any two gases are inversely proportional to the square roots of their densities.

Graham Steell murmur. See under *murmur*.

grain [OF., from L. *granum*, grain]. 1. The seed or seedlike fruit of the cereal grasses. 2. A minute portion or particle, as of sand, or of starch. 3. A unit of weight of the troy, the avoirdupois, and the apothecaries' systems of weights. Abbreviated, gr.

grains of paradise (*grana paradisi*). The seed of *Aframomum melegueta*, a reedlike herb of Western Africa. Its pungency is due to an oily substance

called paradol which is chemically related to gingerol. Used as flavor and as a carminative chiefly in veterinary medicine.

grain′age [grain]. Weight expressed in grains or fractions of grains.

Gram, Hans Christian Joachim [*Danish bacteriologist*, 1853–1938]. Introduced method for staining bacteria. See Gram stain, *Gram-Weigert staining method, Lugol's solution* under *stain*.

gram, gramme [F *gramme*, from G *gramma*, letter, a small weight]. The basic unit of mass, and of weight, in the metric system, and one of the fundamental units of physical measurement; corresponds almost exactly to the weight of a milliliter or cubic centimeter of water at the temperature of maximum density. Abbreviated Gm, Gm., gm, gm., g, g.

gram″i-ci′din (gram″i-sigh′din, gram i-sid′in, gramis′i-din). A potent germ-killing chemical obtained from cultures of soil bacilli. It appears to be antibacterial chiefly to Gram-positive organisms.

gram″i-ci′din S. A heat-stable antibiotic obtained from *Bacillus brevis* and reported to be more effective than gramicidin against Gram-negative organisms but not less toxic. Its clinical use for application to infected wounds and for other local therapy has been recommended.

gram ion. That weight of an ion, in grams, equivalent to its atomic weight or to the sum of the atomic weights of its constituent atoms.

gramme. See *gram*.

gram′-me-ter, gram-me′ter [gramme; G. *metron*, a measure]. A unit of work, equal to the energy used in raising one gram to a height of one meter.

gram′mole. See *gram-molecule*.

gram-mol′e-cule. That weight of any substance, in grams, equivalent to its molecular weight. Syn., *grammole, mol, mole*.

Gram′-neg′a-tive. Remaining unstained by the Gram method.

Gram′-pos′i-tive. Holding the dye after being stained by the Gram method.

gra′na. Minute disks of chlorophyll in the stroma of plants.

gra-na′tum [L., having many seeds, pomegranate]. Pomegranate. The bark of the stem and root of *Punica granatum*; contains several alkaloids, notably pelletierine, $C_8H_{15}ON$. The chief use of pomegranate and its preparations has been as a taenicide. Pelletierine salts usually are used now instead of bark. See *pelletierine tannate*.

Grancher, Jacques Joseph [*French physician*, 1843–1907]. Described hepatization of the lung in pneumonia, called the *hepatization stage of pneumonia, Dessus' pneumonia, Grancher's pneumonia*. The boarding out of children from tuberculous households is known as *Grancher's system*.

gran di ose [It. *grandioso*]. In psychiatry, characterized by a feeling of being important, wealthy or influential, when there is no true basis for such feeling.

grand″ mal″ (grahn mahl′. See Notes § 35) [F.]. A complete epileptic seizure; see under *epilepsy*.

gran o-plas′ma (gran o-plaz′mah) [L. *granum*, grain; G. *plasma*, anything formed]. Granular cytoplasm.

gran u la. *Granule*.

gran′u-lar lids. Trachoma.

gran u-la″ted lids. Lay term for chronic blepharitis.

gran″u-la′tion [L. *granulum*, small grain]. 1. The tiny red granules which are grossly visible in the base of an ulcer; made up of loops of newly formed capillaries and fibroblasts. 2. The process of formation of granulation tissue in or around foci of inflammation. 3. The formation of granules. —**gran ulated,** *adj.*

arachnoidal granulations. Prolongations of the arachnoid layer of the cerebral meninges through the dura mater into the superior sagittal sinus and into the parasinoidal sinuses; also called *arachnoid villi, Pacchionian bodies*.

exuberant g. An excess of granulation tissue in the base of an ulcer or in a healing wound. Also called *fungous g., proud flesh*.

g. tissue. The mixture of newly formed capillaries and fibroblasts in connection with inflammation, especially of exudative character, representing the early stages of healing. Followed by growth into exudate or destroyed tissue, the process becomes one of organization. As it progresses to cicatrization by atrophy of blood vessels and maturation of connective tissue, inflammatory foci are cicatrized, or such foci or foreign bodies are encapsulated; on surfaces, especially serous, fibrous adhesions are formed; wounds are healed. See Plate 40.

gran′ule [granulum]. 1. A minute particle or mass. 2. A small, intracellular particle, usually staining selectively. 3. A small pill. —**granular,** *adj.*

acidophil granules. Those staining with acid dyes, especially eosin, acid fuchsin, or orange G.

alpha granules. Those of the alpha cells of the hypophysis or of the pancreatic islets.

Altmann's granules. Old term for mitochondria.

amphophil granules. Those staining with both acid and basic dyes.

azurophilic granules. Fine granules, azure-staining with a stain containing methylene azure; they are frequently but inconstantly present in the cytoplasm of lymphocytes and monocytes.

basal granules. Blepharoplast.

basophil granules. Those staining with basic dyes, especially those of the methylene blue series, or hematoxylin.

beta granules. Those of the beta cells of the hypophysis or pancreatic islets.

brain-sand granules of pineal body. See *corpora arenacea* under *corpus*.

chromophil granules. Small granules of chromophil substance in nerve cells; also called *Nissl bodies*.

cone granules. Those of the outer nuclear layer of the retina, connected externally with the cones of the ninth layer and internally by a thick process which becomes bulbous (the *cone foot*); they terminate in fine fibers in the outer molecular layer. They are the nuclei of the cone cells. Obs.

delta granules. Those of the delta cells of the pancreatic islets.

Ehrlich-Heinz granules. See *Heinz-Ehrlich bodies* under *body*.

eosinophil granules. Those staining selectively with eosin, erythrosin, and similar dyes.

gamma granules. Those of the chromophobe cells of the hypophysis.

interstitial granules. Those occurring in the sarcoplasm of muscle.

metachromatic granules. (a) Granules which take on a color different from that of the dye used to stain them. (b) Those in bacteria which stain differently from the surrounding cytoplasm. Also called *metachromatic bodies*.

Much's granules. See Hans Christian R. *Much*.

neutrophil granules. Granules which take up simultaneously both a basic and an acid dye, assuming a combination tint.

Nissl granules. Chromophil bodies of nerve cells.

oxyphil granules. Those staining with acid dyes.

pigment g. One of the minute structureless masses of which pigment consists.

sulfur g. A characteristic mass of hyphae found in cases of actinomycosis.

tannophil granules. Cell granules which stain specifically by various methods after mordanting with tannin.

yolk granules. The elements composing the yolk.

zymogen granules. Secretion antecedent granules in gland cells, particularly those of the pancreatic acini and of the *chief* cells of the stomach, which are precursors of the enzyme secretion.

gran'u·li·form" (gran'ew·li·form") [*granulum*; L. *forma*, form]. Resembling small grains.

gran'u·lo·blast [*granulum*; G. *blastos*, germ]. See *myeloblast*.

gran'u·lo·cyte [*granulum*; G *kytos*, cell]. A mature granular leukocyte: polymorphonuclear leukocyte, either eosinophilic, basophilic, or neutrophilic. Also called *polymorph*, *polymorphonuclear eosinophil*, *basophil*, *neutrophil*. —**granulocyt'ic**, *adj*.

gran"u·lo·cyt'ic se'ries. The cells concerned in the development of the granular leukocytes (*basophil*, *eosinophil*, or *neutrophil*) from the primitive myeloblasts to the adult segmented cells. Other terms applied to this series are *myeloid*, *myelogenous*, *myelocyt* or *myelocytic*, and *leukocyte* or *leukocytic*. See *myeloblast*, *promyelocyte*, *myelocyte*, *metamyelocyte*; *band cell* and *segmented cell* under *cell*.

gran"u·lo·cy"to·pe'ni·a. Agranulocytosis.

gran"u·lo·cy"to·poi·e'sis [*granulum*, *kytos*; G. *poiēsis*, production]. The process of development of the granular leukocytes, occurring normally in the bone marrow. —**granulocytopoiet'ic**, *adj*.

gran'u·lo·fil" [*granulum*; L. *filum*, thread]. See *reticulocyte*.

gran"u·lo'ma [*granulum*; G. *-ōma*, tumor]. A localized nodule of inflammatory tissue in which the process of granulation is significant. —**granulom'atous**, *adj*.

amebic g. A massive, usually focal, involvement of the colon by *Endamoeba histolytica*, resulting in a chronic proliferative inflammation that may be clinically confused with carcinoma; also called *ameboma*.

apical g. See dental *g*.

coccidioidal g. Progressive coccidioidomycosis.

dental g. Localized nodule of organizing and cicatrizing inflammation in the dental alveolus, at or near the apex of a tooth; often contains islands of epithelium (epithelial rests).

eosinophilic g. A disease principally of childhood characterized by one or more foci of destruction of bones, and possibly related to Hand-Schüller-Christian disease and Letterer-Siwe disease. The granulomas contain lipids, mononuclear cells, giant cells, and a variable number of eosinophils; also called *eosinophilic xanthomatous g*. Syn., *solitary granuloma*.

g. annulare. A chronic, self-limiting disease of the skin, usually on the extremities, characterized by reddish nodules, arranged in a circle.

g. contagiosa. See *g*. inguinale.

g. faciale. Eosinophilic granuloma of the face, consisting of well-defined soft, purplish, patches of skin. Histologically there is a granulomatous infiltration into the dermis only, which contains many eosinophils and which has been divided into an early leukocytic and a late fibrotic stage.

g. fissuratum. Discoid mucous membrane tumor indented by a deep fissure and located in the labioalveolar sulcus of the mouth. Acanthotic epidermis, proliferation of connective tissue in the skin, and polymorphonuclear leukocyte infiltration are seen histologically.

g. fungoides. See *mycosis fungoides*.

g. inguinale. A chronic, often serpiginous, destructive ulceration of the external genitalia due to a Gram-negative rod, *Donovania granulomatis*, and exhibiting encapsulated forms in infected tissue, called Donovan bodies; also called *g. contagiosa*, *g. genitoinguinale*, *g. pudenda tropicum*.

g. pendulum. A granuloma pyogenicum which hangs by a stalk.

g. pudenda tropicum. See *g*. inguinale.

g. pyogenicum. Growth of capillaries from larger parent vessels, which forms lobulations and produces a growth somewhat like hyperplastic granulation tissue. It occurs spontaneously beneath an intact epidermis or mucosa without known cause. Also called *g. telangiectaticum*. Syn., *capillary hemangioma of granuloma type*.

g. tropicum. The third stage of nodule formation in yaws.

g. venereum. See venereal *lymphogranuloma*.

Hodgkin's g. See Hodgkin's *disease*.

infectious g. A disease due to a specific microorganism, which in some stage exhibits the formation of a granuloma, as tuberculosis, syphilis, or leprosy.

lipophagic g. A granuloma with loss of fat in the surrounding tissue.

malignant g. The type of granuloma found in Hodgkin's disease.

Miescher's g. A nodule seen histologically and composed of polymorphous histiocytes, leukocytes, and lymphocytes, found in the subcutis in erythema nodosum.

paracoccidioidal g. A chronic granulomatous disease of the skin and mucous membranes which may involve the lymph nodes and viscera; it is usually fatal. The etiologic agent is *Blastomyces brasiliensis*. Syn., *paracoccidioidomycosis*, *South American blastomycosis*.

silicotic g. See talcum-powder *g*.

solitary g. See eosinophilic *g*.

talcum-powder g. A granulomatous reaction to the talcum powder frequently used in surgical rubber gloves. Syn., *surgical glove talc g.*, *talc g.*, *silicotic g.*, *pseudosilicotic g.*

gran"u·lo·ma·to'sis [*granuloma*, *-oma*; G. *-ōsis*, increase]. A disease characterized by multiple granulomas.

allergic g. A form of polyarteritis nodosa in which allergic manifestations predominate; severe asthma is frequent and eosinophilia in peripheral blood is marked. Histologically there appear, in addition to the usual lesions of polyarteritis nodosa, extravascular granulomas, consisting of foci of central necrosis surrounded by histiocytes and giant cells within areas of inflammation rich in eosinophils.

g. disciformis chronica progressiva. A skin disorder similar to necrobiosis lipoidica but without lipid deposits.

lipoid g. See Hand-Schüller-Christian *disease*.

reticuloendothelial g. A group of rare diseases characterized by generalized reticuloendothelial hyperplasia with or without intracellular lipid deposition. Included in this group are Letterer-Siwe disease, Hand-Schüller-Christian disease, and eosinophilic granuloma. Also see lipoid storage *disease*.

gran"u·lo·pe'ni·a. See *agranulocytosis*.

gran'u·lo·plasm [*granulum*; G. *plasma*, anything formed]. Old term for granular cytoplasm.

gran"u·lo·plas'tic [*granulum*; G. *plassein*, to form]. Forming granules.

gran"u·lo·poi·e'sis [*granulum*; G. *poiēsis*, production]. The formation of granulocytes. —**granulopoiet'ic**, *adj*.

gran'u·lose (gran'yoo·loce, ·loze) [*granulum*]. The

inner and soluble portion of starch-granules; *β*-amylose.

gran″u·lo·sis ru′bra na′si (gran yoo-lo sis roo brah nay′sigh). A rare disease seen in under nourished children, affecting the nose, cheeks, and chin; characterized by a diffuse redness, persistent hyperhidrosis, and small, red papules.

gra′vum. See *grain*.

Granville, Joseph Mortimer [*English physician*, 1833–1900]. Devised *Granville′ hammer*, an instrument for vibratory massage, used in the treatment of neuralgia.

graph [G. *graphein*, to write]. A representation of statistical data by means of points, lines, surfaces, or solids, their position being determined by system of coordinates.

graph″es·the′si·a [*graphein*; G. *aisthēsis*, feeling]. The sense or sensation of recognizing numbers, figures, or letters which are traced on the skin.

Grapheus. See *Grassi*.

graph′ite [*graphein*]. Plumbago, or black lead; an impure allotropic form of carbon.

graph o– [*graphein*]. A combining form denoting *pertaining to writing*.

graph·ol′o·gy [*graphein*; G. *logos*, word]. The study of the handwriting: may be used in diagnosing nervous disorders.

graph″o·ma′ni·a [*graphein*; G. *mania*, madness]. An insane desire to write. —**graphomaniac,** *n.*

graph″o·mo′tor [*graphein*, L. *motor* from *movere*, to move]. Relating to graphic movements or to the movements concerned in writing.

graph″o·pho′bi·a [*graphein*, G. *phobos*, fear]. A morbid fear of writing.

graph″or·rhe′a [*graphein*, G. *rhoia*, flow]. In psychiatry, an uncontrollable desire to write, in which pages are covered with usually unconnected and meaningless words; an intermittent condition, most often seen in manic patients.

Graser, Ernst [*German surgeon*, 1860–1928]. Described false diverticulum of the sigmoid colon (1899), called *Graser′ diverticulum*.

Grassi law. See *Landouzy-Grasset law* under *Landouzy*.

Grassi, Benevenuto (Grapheus, Grassus) [*Palestinian physician in Italy*, twelfth century]. His book on diseases of the eye was considered the classic text in this field for five centuries. This was also the first book on ophthalmology to appear in print (1474).

grass sick′ness. A disease of horses occurring mainly in Scotland. It is most common in June when the grass is most luxuriant. The etiology is still in doubt, but the cause is thought to be virus similar to that causing poliomyelitis in man.

grass tet′a·ny. Lay term for disease of cows which overeat on green fodder; probably caused by magnesium deficiency.

gra·ti′o·la [NL. dim. from L. *gratia*, grace]. Hedge-hyssop: diuretic, cathartic, and emetic.

Gratiolet, Louis Pierre [*French anatomist and zoologist*, 1815–65]. Described the visual projection from the lateral geniculate body to the calcarine cortex. Called *optic* or *occipitothalamic radiation*, *Gratiolet′ optic radiation*.

grat·tage (gra-tahzh′) [F.]. Brushing, scrubbing, or scraping: method sometimes used in treatment of trachoma. A hard brush, as toothbrush, is used to scrub the conjunctival surface of the eyelid in order to remove the granulations.

Graunt, John [*English haberdasher*, 1620–74]. Pioneer medical statistician. His analyses of the *Bills of Mortality* which were published at that time by various London parishes, and which listed deaths from all causes, probably was the first study of its kind (1662).

Gravel, Gaston [*French physician*, nineteenth century]. Described paralysis of the medial rectus muscle of one eye occurring with that of the lateral rectus muscle of the other eye. Called *Foville-Grasset ocular palsy*.

grav′el [OF. *gravele*, dim. of *grave*, sandy shore]. A granular sandlike material forming the substance of urinary calculi and often passed with the urine.

Graves, Robert James [*Irish physician*, 1797–1853]. One of the founders of the Irish school of medicine. Gave the first satisfactory account of exophthalmic goiter (1835), called *Graves′ disease*, *Basedow′ disease*, *Flajani′ disease*, *Parry′ disease*. Said to have discarded the then universal custom of starving fever patients.

grav′id [L. *gravidus*, heavy with child]. Pregnant; heavy with child, as the gravid uterus. Used also of other than human females when carrying young or eggs. —**gravid′ity,** *n.*

gra vi·da [*gravidus*]. A pregnant woman.

grav′i·din. Kyestein.

grav″i·do·car′di·ac [*gravidus*; G. *kardia*, heart]. Relating to cardiac disorders due to pregnancy.

gra·vim′e·ter [L. *gravis*, heavy; G. *metron*, measure]. An instrument used in determining the specific gravity of substance, especially hydrometer, aerometer, or urinometer. —**gravimet′ric,** *adj.*; **gravimetry,** *n.*

grav″i·stat′ic [*gravis*; G. *statikos*, causing to stand]. Due to gravitation, as gravistatic congestion.

grav″i·ta′tion [L. *gravitas*, heaviness]. The force by which bodies are drawn together.

g. constant. See under *G* 1.

grav′i·ty [*gravitas*]. The effect of the attraction of the earth upon matter.

specific g. The measured mass of substance compared with that of an equal volume of another taken as standard. For gases, hydrogen or air may be the standard; for liquids and solids, distilled water at a specified temperature. Abbreviated, sp. g., sp. gr.

Grawitz, Paul Albert (1850–1932). German pathologist who investigated and hypothesized the origin of hypernephroma (1884), also called *Grawitz tumor* and now generally classified as *clear-cell carcinoma*. He also described minute granules, called *Grawitz′ granules*, which stain with basic dyes, and are seen in red blood cells in certain pathologic conditions.

Gray′s stain. See under *stain*.

grease. See *grease-heel*.

grease -heel″. An infection of the fetlock joint of horse characterized by cracking of the skin and oily exudate.

Greenberg′s method. See under *method*.

green blind′ness. Achloropsia; variety of color blindness in which green is not distinguished; also called *green sightlessness*.

gref′fo·tome [OF. *grefe* from G. *graphein*, to write; *tomos*, cutting]. A knife for cutting surgical grafts. Obs.

Greg″a·ri′na [L. *gregarius*, from *grex*, herd]. A genus of Sporozoa, parasitic in insects.

greg′ ·rine (greg′uh ryne, -rin) [*gregarius*]. Any member of the genus *Gregarina*. —**greg′a·rine** *adj.*

acephaline gregarines. Sporozoa with single unsegmented mass of cytoplasm.

cephaline gregarines. Sporozoa in which the body is divided into two portions: the anterior protomerite, and the posterior deutomerite. Also called *dicystid g.*

gre ga ri·ous·ness [*gregarius*]. The herd instinct.

Gregersen test. See under *test*.

Gregory′s powder. See *compound rhubarb powder*.

Greig, David Middleton [*Scottish physician*, 1864–

1936]. Said to have been the first to describe hypertelorism as an entity (1934); called *ocular hypertelorism, Greig' hypertelorism.*

Grenacher' stain. See *borax carmine* under *stain*

Griesinger Wilhelm [*German neurologist*, 1817-68]. Made important contributions to the knowledge of mental disease (1845). Was among the first to abandon harsh measures in the control of psychotic patients. Described pseudohypertrophic progressive muscular dystrophy (1865) later described by Duchenne and Erb called *Duchenne-Griesinger disease, Erb paralysis* or *dystrophy*. Gave the first report of infantile splenic anemia (1866). Ancylostomiasis was once called *Griesinger' disease*. See also Griesinger sign.

grif'fin claw Clawhand.

Griffith's method. See under *method*.

grin de'li-a [after David Hieronymus *Grindel*, German botanist in Latvia, 1770-1836] (*grindelia*) The leaves and flowering tops of *Grindelia camporum, G. humilis*, or *G. squarrosa*. It contains considerable amorphous resin. It has been used in bronchitis and asthma as stimulating expectorant and antispasmodic.

g. fluidextract (*fluidextractum grindeliae*) Diluted with an equal volume of water it has been used locally in rhus poisoning.

grip, grippe [F *grippe*]. Old term for influenza.

gripes [AS. *gripan*]. A lay term for colic.

gris'e-in. An antibiotic substance isolated from cultures of *Streptomyces griseus*; it is active, in vitro, against a variety of bacteria but several susceptible organisms show rapid development of resistant strains.

gris e-o ful'vin. An antibiotic substance, isolated from *Penicillium griseofulvum* and other species of *Penicillium*; it is active against a number of fungi and some bacterial species

gris'le ne'id. An antibiotic substance isolated from cultures of species of *Basidiomycetes*.

Grisolle Augustin [*French physician*, 1811-69]. Described *Grisolle' sign* since the early eruption of smallpox is papular it is palpable even when the skin is tightly stretched, and thus can be distinguished by touch from the eruptions of other exanthemas.

Gritti, Rocco [*Italian surgeon*, 1828-1920]. Devised an operation for amputation above the knee (1857). He made long anterior and short posterior flaps, the patellar tendon being preserved and raised with the flap. The articular portion of the patella was removed, and the femur divided through the condyles to provide anchorage for the patella on the lower end of the femur. The operation was modified by William Stokes the younger who divided the femur above the condyles in order to make a better anchorage for the patella (1870). Called *Gritti' operation, Gritti-Stokes amputation*.

Grocco's sign. See under *sign*.

Grocco's triangle. See paravertebral *triangle*

groin [ME. *grynde*]. The depression between the abdomen and thigh. Also called *inguinal region*. See Plate 4.

Grollman Arthur (1901-) American physiologist who investigated the physiology of the heart and determined the cardiac output of normal and diseased hearts by the acetylene method (indirect method of Fick)

groove [ME *grofe*]. An elongated depression. Also see *sulcus, furrow*. —**grooved** *adj*

alveolingual g. One between the tongue and the lower jaw

atrioventricular g. The coronary sulcus.

auriculoventricular g. See atrioventricular *g*.

bicipital g. The deep groove on the anterior surface of the humerus, separating the greater and lesser tuberosities and containing the long tendon of the biceps. Syn., *intertubercular g*

branchial g. The external groove or furrow between two embryonic visceral arches, lined by ectoderm. Syn., *visceral g*

carotid g. That lodging the cavernous sinus and the internal carotid artery; it lies lateral to the sella turcica, from the foramen lacerum to the medial side of the anterior clinoid process.

cavernous g. The carotid groove.

chiasmatic g. A groove between the optic foramens, anterior to the tuberculum sellae.

costal g. A deep furrow lying along the lower border and inner surface of a rib, for lodgment of the intercostal vessels and nerve.

digastric g. A groove on the medial surface of the mastoid process, which serves for the origin of the digastric muscle. Also called *mastoid notch*.

Harrison's g. See Edward *Harrison*.

infraorbital g. A groove in the middle of the floor of the orbit, lodging the infraorbital nerve and vessels.

interatrial g. That separating the atria of the heart.

intertubercular g. See bicipital *g*.

interventricular g. External, longitudinal groove indicating the beginning of separation of right and left ventricles in the developing heart.

labial g. A groove, developing in the labial lamina by disintegration of its central cells, which deepens to form the vestibule of the oral cavity

lacrimal g. See nasolacrimal *g*.

laryngotracheal g. A gutterlike groove of the floor of the embryonic pharynx, which is the anlage of the respiratory system.

lateral phallic g. A groove on either side of the phallus, separating it from the labioscrotal swellings.

medullary g. See neural *g*.

musculospiral g. One on the posterior aspect of the humerus, which lodges the radial nerve, formerly called the musculospiral nerve, and the deep brachial vessels. Also called *radial g*.

mylohyoid g. A groove running obliquely downward and forward on the medial surface of the ramus of the mandible, below the lingula mandibulae; it lodges the mylohyoid vessels and nerve.

nasal g. One between the nasomedian and maxillary process on either side along the course of bucconasal membrane

nasolacrimal g. The groove or furrow between the embryonic maxillary and lateral nasal processes, the epithelium of which is said to form part of the lacrimal duct.

nasomaxillary g. See nasolacrimal *g*.

nasopalatine g. That on the vomer lodging the nasopalatine nerve and vessels.

neural g. A longitudinal groove between the neural folds of the embryo before the neural tube is completed.

obturator g. The furrow at the superior border of the obturator foramen, lodging the obturator vessels and nerves

occipital g. That medial to the digastric groove, lodging the occipital artery

olfactory g. That formed by the cribriform plate of the ethmoid, lodging the olfactory bulb.

optic g. See chiasmatic *g*.

peroneal g. One on the lateral aspect of the calcaneus, lodging the tendon of the peroneus longus.

pharyngeal g. See branchial *g*.

primitive g. The longitudinal groove in the primitive streak between the primitive folds.

pterygopalatine g. (a) One on the ventral aspect of the pterygoid process of the sphenoid. (b) A furrow on the vertical part of the palatine bone

radial g. See musculospiral g.
rhombic g. One of the seven transverse furrows between the neuromeres of the rhombencephalon.
Schwerf's grooves. Those resulting from emphysematous inflation of those portions of the lungs which lie between the ribs.
sigmoid g. See sigmoid sulcus.
sphenobasilar g. The depression on the body of the sphenoid bone and the basilar portion of the occipital bone, upon which the pons rests. The sphenoid part is called the clivus. Also called *spheno-occipital g.*
subcostal g. See costal g.
tracheobronchial g. See laryngotracheal g.
urethral g. A groove on the caudal surface of the genital tubercle or phallus, bounded by the urethral folds and urethral membrane. Also called *urogenital g.*, *genital fossa*.
urogenital g. See urethral g.
ventricular grooves. Two furrows, one on the anterior, one on the posterior surface of the heart; they indicate the interventricular septum.
vertebral g. That formed by the laminas of the vertebrae and the sides of the spinous processes; it lodges the deep muscles of the back.
visceral g. See branchial g.

Gross, Robert Edward [*American surgeon*, 1905–]. With John Perry Hubbard, reported an operation for patent ductus arteriosus. Transpleural ligation was performed by exposing the heart, entering the mediastinal pleura, and isolating the ductus, which was tied with a double silk ligature but left undivided.

Gross, Samuel David [*American surgeon*, 1805–84]. One of the outstanding surgeons of his time. Studied the character and treatment of intestinal wounds (1843). Formulated principles of treatment for foreign bodies in respiratory passages (1854).

Gross, Samuel Weissel [*American surgeon*, 1837–89]. Devised a urethrotome with which stricture is divided from behind forward in internal urethrotomy.

ground sub'stance. The fluid, semifluid, or solid material, in the connective tissues, cartilage and bone, which fills in part or all of the space between the cells and fibers. Syn., *matrix* in the strict sense, see *matrix*, 3; *interstitial substance*.

group'ing. See blood groups.

growth [AS. *growan*]. 1. The increase in the amount of actively metabolic protoplasm, accompanied by an increase in cell number or cell size, or both. In a broader sense, growth is the increase in the size of the organism or its parts, measured as an increase in weight, volume, or linear dimensions. See Plates 23, 24. 2. Any abnormal, localized increase in cells, such as a tumor or neoplasm.

growth hor'mone. See under *hormone*.

Gruber, Josef [*Austrian otologist*, 1827–1900]. Invented an ear speculum, called *Gruber's speculum*. Devised *Gruber's test* of the hearing: when the sound of a tuning fork held near the ear becomes inaudible, a finger is inserted in the ear and the tuning fork is placed in contact with the finger; the sound should again become audible to the subject.

Gruber, Max von [*German bacteriologist*, 1853–1927]. With Durham, discovered specific agglutination (1896), the basis of the Widal test for typhoid. See under *test*. Also called *Gruber's reaction*, *Gruber-Durham* or *Gruber-Widal reaction*.

Gruber, Wenzel Leopold [*Bohemian anatomist in Russia*, 1814–90]. Described internal mesogastric hernia (1863), called *Gruber's hernia*. See *muscle of Gruber*.

Grübler stain. See panchrome stain.

Gruby, David [*French dermatologist*, 1810–98]. Described the fungi of favus as causative agents of the disease (1841). Gave the first description of *Trichophyton ectothrix* (1842). Discovered *Candida albicans* in thrush (1842). Described *Microsporum audouini* (1843) and discovered *Trichophyton tonsurans* (1844); tinea capitis is called *Gruby's disease*. Discovered trypanosomes in the frog (1843) and applied the name to Protozoa.

gru'mous [L. *grumus*, a little heap]. A clot, as of blood; thick and viscid fluid. —**gru'mous**, *adj.*

Grünfelder's reflex. See under *reflex*.

Grünwald stain. See May-Grünwald stain.

gru'tum. See *milium*.

Grynfeltt, Joseph Casimir [*French surgeon*, 1840–1913]. Described the triangular space through which lumbar hernia may occur. It is bounded above by the twelfth rib and lower border of the serratus posterior inferior, behind by the quadratus lumborum, and anteriorly by the posterior border of the internal oblique. Called *Grynfeltt's triangle*.

gry'o-chrome [G. *gry*, morsel; *chrōma*, color]. Old term for a nerve cell with a large amount of cytoplasm in which the chromophil substance tends to form threads.

gry·po'sis (grye-po'sis, gri-po'sis) [G. *grypōsis*, crooking]. Curvature; especially abnormal curvature of the nails.

g stress. Structural and functional stress on the body of aviators who experience rapid changes in velocity and direction of flight.

G sub'stance. See under *substance*.

g suit. See *anti-g suit*.

gt. *Gutta*, drop.

gtt. *Guttae*, drops.

guae'ti·tin (gwae'ti-tin). See *guaiacetin*.

gua·cha·ma'ca (gwah-chah-mah'kah, gwah-chah-mah-kah') [Sp., from Cumanagoto *guachamaca*]. The bark of the *Malouetia nitida* (Apocynaceae) used as a source of a type of curare.

gua'cin (gwah'sin, gway'sin, gwaw'sin) [Sp. *guaco*, prob. of Taino origin]. A bitter resin from guaco; it is diaphoretic, stimulant, and emetic.

gua'co (gwah'ko) [Sp.]. The plants *Mikania guaco* and other species of *Mikania* and *Aristolochia*; used in South America for snake-bites; formerly also used as an antirheumatic, antisyphilitic, and anthelmintic.

guai'ac (gwy'ack) [NL. *guaiacum*, from Taino *guayacan*] (*guaiacum*). The resin of the wood of *Guaiacum officinale* or of *G. sanctum*. It contains guaiaconic acid, guaiaretic acid, guaiac yellow, guaiacene, guaiacol, and pyroguaiacin. It has been used in treatment of syphilis, chronic rheumatism, and gout.
ammoniated g. tincture (*tinctura guaiaci ammoniata*). A solution of the resin in aromatic ammonia spirit. Dose, 2–8 cc. (½–2 dr.)
g. tincture (*tinctura guaiaci*). A solution of the resin in alcohol. Dose, 2–8 cc. (½–2 dr.)
g. yellow. A coloring matter present in guaiac.

guai'a·cene (gwy'ah-seen). C_5H_8O. An oily crystallizable liquid obtained from guaiac resin by dry distillation.

guai·ac'e·tin (gwye-ass'i-tin, gwye-ah-see'tin). Pyrocatechin monoacetic acid, $C_6H_4OH \cdot OCH_2 \cdot COOH$. It was formerly used like guaiacol, in the treatment of tuberculosis.

guai'a·col (*guaiacol*). A liquid consisting principally of $C_6H_4(OH)(OCH_3)$ 1:2, usually obtained from wood creosote; or a solid, consisting almost entirely of $C_6H_4(OH)(OCH_3)$ 1:2, usually prepared synthetically. It is used internally chiefly as a stimulating expectorant in pulmonary tuberculosis and bronchitis; externally, it is employed for its

1936]. Said to have been the first to describe *hypertelorism as an entity (1924); called ocular hypertelorism, Greig's hypertelorism.*

Grenacher's stain. See borax carmine under *stain.*

Griesinger, Wilhelm [*German neurologist,* 1817–68]. Made important contributions to the knowledge of mental disease (1845). Was among the first to abandon harsh measures in the control of psychotic patients. Described pseudohypertrophic progressive muscular dystrophy (1865) later described by Duchenne and Erb; called *Duchenne-Griesinger disease, Erb's paralysis or dystrophy.* Gave the first report of infantile splenic anemia (1844). Ancylostomiasis was once called *Griesinger's disease.* See also Griesinger's *sign.*

griffin claw. Clawhand.

Griffith's method. See under *method.*

grin·de'li·a [after David Hieronymus *Grindel,* German botanist in Latvia, 1776–1836] (*grindelia*). The leaves and flowering tops of *Grindelia camporum, G. humilis,* or *G. squarrosa.* It contains considerable amorphous resin. It has been used in bronchitis and asthma as stimulating expectorant and antispasmodic.

g. fluidextract (*fluidextractum grindeliae*). Diluted with an equal volume of water it has been used locally in rhus poisoning.

grip, grippe [F. *grippe*]. Old term for influenza.

gripes [AS. *gripan*]. A lay term for colic.

gris'e·in. An antibiotic substance isolated from cultures of *Streptomyces griseus;* it is active, in vitro, against a variety of bacteria but several susceptible organisms show rapid development of resistant strains.

gris·e·o·ful'vin. An antibiotic substance, isolated from *Penicillium griseofulvum* and other species of *Penicillium;* it is active against a number of fungi and some bacterial species.

gris'e·o·lu·te'ic ac'id. An antibiotic substance isolated from cultures of species of *Streptomyces.*

Grisolle, Augustin [*French physician,* 1811–69]. Described *Grisolle's sign:* since the early eruption of smallpox is papular, it is palpable even when the skin is tightly stretched, and thus can be distinguished by touch from the eruptions of other exanthemas.

Gritti, Rocco [*Italian surgeon,* 1828–1920]. Devised an operation for amputation above the knee (1857). He made long anterior and short posterior flaps, the patellar tendon being preserved and raised with the flap. The articular portion of the patella was removed, and the femur divided through the condyles to provide anchorage for the patella on the lower end of the femur. The operation was modified by William Stokes the younger who divided the femur above the condyles in order to make a better anchorage for the patella (1870). Called *Gritti's operation, Gritti-Stokes amputation.*

Grocco's sign. See under *sign.*

Grocco's triangle. See paravertebral *triangle.*

groin [ME. *gryndе*]. The depression between the abdomen and thigh. Also called *inguinal region.* See Plate 4.

Grollman, Arthur (1901–). American physiologist who investigated the physiology of the heart and determined the cardiac output of normal and diseased hearts by the acetylene method (indirect method of Fick).

groove [MD. *groeve*]. An elongated depression. Also see *sulcus, furrow.* —**grooved,** *adj.*

alveolingual g. One between the tongue and the lower jaw.

atrioventricular g. The coronary sulcus.

auriculoventricular g. See atrioventricular *g.*

bicipital g. The deep groove on the anterior surface of the humerus, separating the greater and lesser tuberosities and containing the long tendon of the biceps. Syn., *intertubercular g.*

branchial g. The external groove or furrow between two embryonic visceral arches, lined by ectoderm. Syn., *visceral g.*

carotid g. That lodging the cavernous sinus and the internal carotid artery; it lies lateral to the sella turcica, from the foramen lacerum to the medial side of the anterior clinoid process.

cavernous g. The carotid groove.

chiasmatic g. A groove between the optic foramens, anterior to the tuberculum sellae.

costal g. A deep furrow lying along the lower border and inner surface of a rib, for lodgment of the intercostal vessels and nerve.

digastric g. A groove on the medial surface of the mastoid process, which serves for the origin of the digastric muscle. Also called *mastoid notch.*

Harrison's g. See Edward *Harrison.*

infraorbital g. A groove in the middle of the floor of the orbit, lodging the infraorbital nerve and vessels.

interatrial g. That separating the atria of the heart.

intertubercular g. See bicipital *g.*

interventricular g. External, longitudinal groove indicating the beginning of separation of right and left ventricles in the developing heart.

labial g. A groove, developing in the labial lamina by disintegration of its central cells, which deepens to form the vestibule of the oral cavity.

lacrimal g. See nasolacrimal *g.*

laryngotracheal g. A gutterlike groove of the floor of the embryonic pharynx, which is the anlage of the respiratory system.

lateral phallic g. A groove on either side of the phallus, separating it from the labioscrotal swellings.

medullary g. See neural *g.*

musculospiral g. One on the posterior aspect of the humerus, which lodges the radial nerve, formerly called the musculospiral nerve, and the deep brachial vessels. Also called *radial g.*

mylohyoid g. A groove running obliquely downward and forward on the medial surface of the ramus of the mandible, below the lingula mandibulae; it lodges the mylohyoid vessels and nerve.

nasal g. One between the nasomedian and maxillary process on either side along the course of bucconasal membrane.

nasolacrimal g. The groove or furrow between the embryonic maxillary and lateral nasal processes, the epithelium of which is said to form part of the lacrimal duct.

nasomaxillary g. See nasolacrimal *g.*

nasopalatine g. That on the vomer lodging the nasopalatine nerve and vessels.

neural g. A longitudinal groove between the neural folds of the embryo before the neural tube is completed.

obturator g. The furrow at the superior border of the obturator foramen, lodging the obturator vessels and nerves.

occipital g. That medial to the digastric groove, lodging the occipital artery.

olfactory g. That formed by the cribriform plate of the ethmoid, lodging the olfactory bulb.

optic g. See chiasmatic *g.*

peroneal g. One on the lateral aspect of the calcaneus, lodging the tendon of the peroneus longus.

pharyngeal g. See branchial *g.*

primitive g. The longitudinal groove in the primitive streak between the primitive folds.

pterygopalatine g. (a) One in the ventral aspect of the pterygoid process of the sphenoid. (b) A furrow on the vertical part of the palatine bone.

guin'ea pig. A prolific rodent of the genus *Cavia*, of South American origin; widely domesticated and used experimentally in bacteriology and genetics.

Guin'ea worm. See *Dracunculus medinensis*.

Guin'ea worm in·fec'tion. See *dracunculosis*.

Guinterius Andernacus. See *G. von Andernach*.

guipsine. A proprietary preparation of mistletoe (*Viscum album*) for reducing hypertension.

Guist, Gustav [*German ophthalmologist*, contemporary]. Described his operation for detachment of the retina, in which he employed multiple trephining and chemical cauterization of the choroid (1931)

Guldberg-Waage law. See law of mass action.

Gull, William Withey [*English physician*, 1816–90]. One of the first to recognize the cause of myxedema atrophy of the thyroid gland with myxedema is called *Gull's disease*. With H. G. Sutton, described arteriocapillary fibrosis generalized arteriosclerosis has come to be known as *Gull and Sutton disease*. The *Gull-Toynbee law* states that when otitis media extends to the brain, mastoiditis usually affects the cerebellum and the lateral sinuses, whereas inflammation of the tympanic roof usually affects the cerebrum.

gul'let. See *esophagus*.

Gullstrand, Allvar [*Swedish ophthalmologist*, 1862–1930]. Made an important study of dioptrics. Discovered the intracapsular mechanism of accommodation (1911) Introduced *Gullstrand's slit lamp*. Nobel laureate (1911) *Gullstrand's law* states that, when patient turns his head while focusing his eyes on distant object, if the reflected image on the cornea moves in the direction in which the head turns, this is always toward the weaker muscle.

gu·lon'ic ac'id. A sugar acid, $C_6H_{12}O_7$, representing gulose in which the CHO group has been oxidized to COOH the acid occurs in D- and L-forms, corresponding to D- and L-gulose.

gu'lose. An aldohexose, $C_6H_{12}O_6$ synthetically produced; it occurs in D- and L- forms.

gum [AS. *góma*, palate]. The mucous membrane and underlying connective tissue covering the alveolar processes and the necks of erupted teeth; the gingiva.

raspberry red gums. Inflamed tissue of raspberry red color occurs in one type of pregnancy gingivitis.

receding gums. See alveolar *pyorrhea*.

spongy g. Hyperplastic gingival tissue, associated with inflammation and other gingival swelling.

gum [L. *gummi*, G. *kommi*, gum, from the Egyptian]. A concrete vegetable juice exuded from many plants, insoluble in alcohol or ether but swelling or dissolving in water into viscid mass. The gums consist of glycosidal hexose-uronic acids, partly or wholly combined with calcium, potassium, or magnesium.

acacia g. Gum arabic. See *acacia*.

British g. Dextrin.

g. arabic. See *acacia*.

g. benjamin. See *benzoin*.

g. resin. A concrete vegetable juice insoluble in water but soluble in organic solvents.

g. tragacanth. See *tragacanth*.

gum"boil" See alveolar abscess.

gum'ma [gummi]. The specific lesion of tertiary or late syphilis, which may occur in almost any tissue but is observed particularly in the brain, liver and heart. Grossly it is well defined mass few millimeters to centimeter or more in diameter with tendency to encapsulation and surrounding fibrosis, and with gelatinous, hyalinized, necrotic center which has the elastic consistency of firm rubber or gum. Microscopically the necrotic mass is surrounded by lymphocytes, epithelioid cells, and few Langhans giant cells —gummatous, *adj*

miliary g. A localized lesion of late syphilis differing from the usual gumma in its small size.

gum mle ac'id. Arabin.

gun cot"ton. See *pyroxylin*.

gun'jah. See *cannabis*.

Gunn, Robert Marcus [*English ophthalmologist*, 1850–1909]. Described the brilliant white dots seen with the ophthalmoscope above the macula lutea called *Gunn's dots*. Described an anomalous, congenital maldistribution of cranial motor fibers causing ptosis of the upper eyelid, which can be activated only by an associated movement of the jaw called *Gunn's syndrome*.

Gunning, Jan Willem [*Dutch chemist*, 1827–1901]. With C. Arnold, made an important modification of the Kjeldahl method for determining total nitrogen. See Arnold and Gunning *method*.

Gunning, Thomas Brian [*American dentist* 1813–89]. Invented an apparatus employed in caring for fractured jaws. *Gunning's splint* is made in one solid piece, resembling double dental plate, with frontal aperture for feeding purposes.

gur'ney gurr'nay A stretcher with wheels for transporting recumbent patient. Sometimes spelled *girney*.

Gurvich radiation. See mitogenetic *radiation*.

gus·ta'tion [L. *gustatio* from *gustare*, to taste]. The sense of taste; the act of tasting.

gus'ta·to·ry [gustare]. Pertaining to the sense of taste.

gut [AS. plural *guttas*]. 1. The intestine. 2. The embryonic digestive tube, consisting of *foregut*, *midgut*, and *hindgut*. 3. Short term for catgut. Also see *suture*.

blind g. The cecum.

head-g. See *foregut*.

postanal g. A transient part of the hindgut caudal to the cloaca.

primary g. See *archenteron*.

primitive g. See *archenteron*.

tail g. See postanal g.

gut'ta (pl. *guttae*) [L.]. A drop. Abbreviated, gt.

gut'tae (gut ee) Plural of gutta. Abbreviated, gtt.

gut'ta-per'cha. The latex of various trees of the family Sapotaceae. It is essentially polymerized hydrocarbon of the general formula $(C_5H_8)_n$ with other resinous substances. Used to make splints, as wound dressing, as an insulator etc.

gut'tate [L. *gutta*, drop] *In biology* spotted as if by drops of something colored resembling drop.

gut ta'tim [L.]. Drop by drop.

gut'ter (OF *goutiere*, from L. *gutta*, drop]. A shallow groove.

gut'ter T shape bone to eliminate dead spaces in the operation for chronic osteomyelitis. Syn., *saucerize*.

hepatic g. The anlage of the liver and gall bladder See hepatic *diverticulum*.

gut'ti form [gutta; L. *forma*, form]. Drop-shaped.

Guttmann, Paul [*German physician*, 1834–93]. Described sign in exophthalmic goiter *Guttmann's sign* is thrill or bruit heard with stethoscope over the thyroid.

gut"tu ro·tet ry [L. *guttur* throat; G *tetanos*, convulsive tension]. A stammering due to tetanoid spasm of the laryngeal muscles.

Gutzeit's test. See under *test*.

gu·va cine (gew-vay seen, -sin, guh-vay' gew vah) Tetrahydronicotinic acid, $C_6H_9NO_2$. An alkaloid from seeds of *Areca catechu*, the areca nut or betelnut. Has been used as an anthelmintic but is stated to be inactive.

Guy de Chauliac [*French surgeon*, ca. 1300–68"

1868]. His book covering the surgical practices of his time was the standard authority until the time of Paré.

Guy's method. See Leake and Guy *method*.

Gwathmey, James Tayloe [American surgeon, 1863–1944]. Devised a method of producing general anesthesia by rectal injection of liquid ether with olive oil or liquid petrolatum. Called *synergistic anesthesia, Gwathmey's method*.

gym·nas·tics [G. *gymnazein*, to exercise]. Systematic exercise for restoring or maintaining bodily health. —**gymnastic,** *adj.*

medical g. Systematic muscular movements designed to bring an ailing or feeble part back to normal.

ocular g. Regular muscular exercise of the eye by the use of prisms or other means to overcome muscular insufficiency.

Swedish g. A system of movements made by the patient against the resistance of an attendant.

gym·ne·mic ac·id (jim-nee'mick, jim'ne-mick). $C_{32}H_{55}O_{12}$. A substance obtained from the leaves of *Gymnema sylvestre*, said to obtund certain taste sensations temporarily.

gym″no·pho′bi·a [G. *gymnos*, naked; *phobos*, fear]. A morbid fear of a naked person or a naked part of the body.

gym·no·spore [*gymnos*; G. *spora*, seed]. In biology, a naked spore.

gyn·ae- (jin'i-, jy'ni-). For words beginning with *gynae-* see *gyne-*.

gy·nan·der (ji-nan'dur, jy-nan'dur) [G. *gynē*, woman; *anēr*, man]. A pseudohermaphrodite.

gy·nan·dri·a (ji-nan'dree-uh, jy-nan'dree-uh). See *gynandry*.

gy·nan′drism [*gynē*; *anēr*]. See feminine *pseudohermaphroditism*.

gy·nan″dro·blas·to′ma. A rare ovarian tumor histologically characterized by elements resembling arrhenoblastoma and granulosa-cell tumor. Clinically, masculinizing effects are said to dominate, but excessive estrogen-induced bleeding has also been reported.

gy·nan′dro·morph [*gynē*; *anēr*; G. *morphē*, form]. A sex mosaic in which certain areas of the organism have male characters and others female characters due to genetic differences in the cells.

gy·nan″dro·mor′phism [*gynē*; *anēr*; *morphē*]. An abnormality in which the individual contains both genetically male and genetically female tissue.

gy·nan′dro·mor″phy [G. *gynē*, woman; *anēr*, man; *morphē*, form]. Bisexuality. In the *somatotype*, the degree or prominence of feminine characteristics in a male physique, or vice versa, expressed numerically as the g-component.

gy·nan·drous [*gynē*, *anēr*]. In *biology*, having the stamens and pistils more or less united.

gy·nan′dry, gy·nan′dri·a [*gynē*; *anēr*]. Feminine pseudohermaphroditism. —**gynandroid,** *adj.*, *n.*

gy·nan′thro·pus [*gynē*; G. *anthrōpos*, man]. A gynander. See *pseudohermaphroditismus femininus*. Obs.

gyn·a·tre·si·a (jin-uh-tree'zhuh, -zee-uh, -shuh, -see-uh) [*gynē*; G. *a-*, not; *trēsis*, perforation]. Imperforate condition of the vagina or, less commonly, of other areas of the female genital system; often, occlusion of any portion of the female genital system.

gy·ne·cic, gy·nae·ci (ji-nee'sick, -nee'sick, jye-) [*gynē*]. Relating to women or the female sex.

gyn″e·co·gen′ic (jin"i-ko-jen'ick, guy"ni-ko-) [*gynē*; G. *genesthai*, from *gignesthai*, to be produced]. Causing or producing female characteristics; estrogenic.

gyn·e·cog′ra·phy. A roentgenologic method of visualization of the female internal genitalia by means of the injection of air or carbon dioxide intraperitoneally. The pelvic organs can then be visualized on the x-ray plate by contrast shadows.

combined g. Gynecography plus the injection of a contrast medium into the uterus and oviducts (hysterosalpingography).

gyn′e·coid (jin'i-koyd, jy'ni-, jin"i-koyd') [*gynē*; G. *eidos*, form]. Pertaining to or like a woman.

gyn″e·col′o·gist (jin"i-kol'o-jist, guy"ni-, jy"ni-) [*gynē*; G. *logos*, word]. One who practices gynecology.

gyn·e·col′o·gy (jin"i-kol'o-jee, guy"ni-, jy"ni-) [*gynē*; *logos*]. The science of the diseases of women, especially those affecting the sexual organs. —**gynecolog′ic, gynecolog′ical,** *adj.*

gyn″e·co·ma′ni·a (jin"i-ko-may'nee-uh, guy"ni-ko-, jy"ni-ko-) [*gynē*; G. *mania*, madness]. Satyriasis.

gyn″e·co·mas′ti·a [*gynē*; G. *mastos*, breast]. Enlargement of the mammary gland in the male, more frequently unilateral. Microscopically there is multiplication of ducts and proliferation of lining epithelium; increase in amount of supporting connective tissue; infiltration of lymphocytes, plasma cells, large mononuclear cells, and, sometimes, polymorphonuclear leukocytes and eosinophils. The condition may accompany certain endocrine disorders, especially of the adrenals and of the testes, and neoplasms such as choriocarcinoma; may follow administration of estrogenic substances, or may have no apparent cause, appearing often in adolescence. **Anisogynecomastia** is unequal enlargement of the breasts. **Pseudogynecomastia** is enlargement of the breasts due to deposition of adipose tissue. Also called *gynecomazia, gynecomasty*.

gyn″e·co·path′y (jin"i-kop'uth-ee, guy"ni-, jy"ni-) [*gynē*; G. *pathos*, disease]. Any disease of, or peculiar to, women.

gyn·e·pho′bi·a (jin"i-fo'bee-uh, jy"ni-) [*gynē*; G. *phobos*, fear]. Morbid fear of the society of women.

gyn″e·phor′ic [*gynē*; G. *phoros*, bearing]. Pertaining to a mode of inheritance in which phenotypically normal heterozygous women transmit the recessive gene to some of their sons, as in sex-linked recessive characters (e.g., hemophilia).

gynergen. Trade-mark for ergotamine tartrate.

gyn″i·at′rics (jin-ee-at'ricks, -ay'tricks, jy-nee-) [*gynē*; G. *iatrikos*, healing]. Treatment of the diseases of women.

gyn′o- (jin'o-, jy'no-), **gyn-** [*gynē*]. 1. A combining form denoting *women*. 2. In *botany and medicine*, a combining form denoting a *female reproductive organ*.

gyn″o·car′dic ac′id. An acid from the oil of *Gynocardia odorata*, formerly used as an antisyphilitic and antirheumatic.

gyn″o·gam·one. A gamone present in an ovum.

gyn″o·gen′e·sis [*gynē*; G. *genesis*, production]. Development of the egg without the participation of the sperm nucleus, but after penetration of the egg by the sperm.

gyn·og′ra·phy. Contraction of *gynecography*.

gyn·o·plas·ty, gyn″o·plas′ty [*gynē*; G. *plassein*, to form]. Plastic surgery of the female genitals. —**gynoplas′tic,** *adj.*

gyp·sum. $CaSO_4.2H_2O$. Native calcium sulfate. Deprived of the major portion of its water of crystallization, it constitutes plaster of Paris.

gy·ra′tion (jye-ray'shun) [G. *gyros*, circle]. 1. A turning in a circle. 2. Old term for arrangement of gyri in the cerebral hemisphere. —**gy′rate,** *adj.*

Gy·rau′lus [*gyros*]. A genus of fresh-water snails. **G. saigonensis.** A species of China and Formosa which serves as the intermediate host of the oriental fluke, *Fasciolopsis buski*.

gyre. See *gyrus. Obs.*

gy·rec'to·my The surgical excision of any gyrus of the brain.

frontal g. Surgical excision of block of cortex, bilaterally from the frontal lobes of the brain, as a treatment for certain mental illnesses; also called *bilateral subtotal ablation of frontal cortex.*

gyr"en·ceph'a·late (jirr en·sef'uh late, jy"ren-) [gyros; G. *enkephalos*, brain]. Having the surface of the brain convoluted.

gyr"en ce·phal'ic. See *gyrencephalate.*

gyr"en·ceph lous. See *gyrencephalate.*

gy're·mele [gyros; G *melē*, sort of cup] A probe with rotating center fitted with various attachments for treating the stomach. *Obs.*

gy'rose [gyros]. Marked with curved or undulating lines.

gy're·spasm. See *spasmus nutans.*

gy'rus (pl. *gyri*) [L., from *gyros*]. A convolution on the surface of the cerebral hemisphere. See Plate 18. —**gyral,** *adj.*

angular g. A cerebral convolution which forms the posterior portion of the inferior parietal lobule and arches over the posterior end of the superior temporal sulcus.

annectant g. Any one of many short bridges of gray substance which may connect two neighboring gyri across the intervening fissure.

anterior central g. See ascending frontal *g.*

ascendi g frontal g. The cerebral convolution which lies between the precentral sulcus and the central sulcus and extends from the superomedial border of the hemisphere to the posterior ramus of the lateral fissure. Syn., *g. centralis anterior precentral g anterior central g* See Plate 18.

ascending parietal g. The cerebral convolution which lies immediately posterior to the central sulcus and extends from the longitudinal fissure above to the posterior ramus of the lateral fissure below Syn., *posterior central g., postcentral g g. centralis posterior* See Plate 18.

callosal g. The convolution which lies immediately above the corpus callosum on the medial aspect of each cerebral hemisphere. Syn., *g. cinguli.* Aso called *cingulate g g callosus.*

dentate g. A narrow band of gray matter extending downward and forward above the hippocampal gyrus but separated from it by the hippocampal fissure; anteriorly it is continued int the uncus. Also called *fascia dentata hippocampi.*

diagonal g. The posterior part of the anterior perforated substance which is relatively free from foramina and borders on the optic tract. Syn., *diagonal band of Broca.*

fusiform g. A long gyrus situated on the inferior aspect of the occipital and temporal lobes between the collateral fissure and the inferior temporal sulcus. Syn., *occipitotemporal g.*

gyri Andreae Retzii. Two or three inconstant, small, rudimentary gyri, which occupy the angle between the gyrus dentatus and the gyrus hippocampi immediately beneath the splenium of the corpus callosum.

gyri breves insulae. Three or four short gyri which make up the anterior part of the insula or island of Reil.

gyri profundi. Annectant gyri which connect two neighboring gyri across the bottom of the intervening fissure.

gyri transitivi. Annectant gyri which are located superficially on the surface of the brain.

g. ambiens. A lateral elevation of the upper concealed surface of the uncinate gyrus of the temporal lobe

g. centralis anterior See ascending frontal *g.*

g. centralis posterior See ascending parietal *g*

g. cinguli. See callosal *g*

g. epicallosus. See supracallosal *g.*

g. fasciolaris. A small cylindrical strand of cortical substance situated between the gyrus dentatus (dentate gyrus) and fimbria in the fimbriodentate sulcus; also called *fasciola cinerea.*

g. fornicatus. A convolution on the medial sur face of the brain, consisting of the gyrus cinguli, isthmus hippocampi, and gyrus hippocampi.

g. frontalis inferior See supracallosal *g.*

g. frontalis medius. See supracallosal *g*

g. frontalis superior See supracallosal *g.*

g. hippocampi. A convolution between the hippocampal and the collateral fissures.

g. intralimbicus. A portion of the uncinate gyrus situated above the frenulum of Giacomini.

g. lingualis. See lingual *g*

g. longus insulae. A long gyrus of th posterior part of the insula.

g. of Broca. The left inferior frontal gyrus; location of Broca's center for articulate speech.

g. rectus. A narrow strip of cortex medial to the olfactory sulcus on the inferior surface of the frontal lobe and continuous with the superior *frontal gyrus* on the medial surface. Syn., *straight g.*

g. reinsulicus. A rare anomalous gyrus found in the presence of two central fissures in the brain.

g. semilunaris. A median elevation of the upper concealed surface of the uncinate gyrus of the temporal lobe.

g. subcallosus. See subcallosal *g*

g. supracallosus. See supracallosal *g.*

Heschl's gyri. Transverse temporal *gyri.*

hippocampal g. A gyrus of the medial portion of the temporal lobe, continuous caudally with the gyrus cinguli above and the lingual gyrus below and lying between the hippocampal fissure and the anterior part of the collateral fissure. Also called *g. hippocampi.*

inferior frontal g. The most inferior of the three frontal convolutions, situated in relation to the horizontal and ascending branches of the Sylvian fissure. Also called *g frontalis inferior* See Plate 18

inferior temporal g. A convolution of the temporal lobe which lies below the middle temporal sulcus and extends around the inferolateral border onto the inferior surface of the temporal lobe, where it is limited by the inferior sulcus.

li gual g. A gyrus of the medial surface of the occipital lobe, lying between the calcarine fissure and the posterior part of the collateral fissure. Syn *g. lingualis.*

marginal g. The medial part of the superior frontal gyrus, lying between the cingulate sulcus and the supero-medial margin of the hemisphere.

middle frontal g. A convolution of the frontal lobe lying below and parallel to the superior frontal gyrus and above the inferior frontal gyrus. Also called *g frontalis medius.* See Plate 18.

middle temporal g. A convolution of the temporal lobe which lies between the superior and middle temporal sulci. See Plate 18.

occipital gyri. Two gyri, superior and inferior on lateral aspect of occipital lobe. See Plate 18.

occipitotemporal g. See fusiform *g.*

orbital gyri. Four convolutions—the anterior posterior lateral, and medial orbital gyri—which compose the inferior surface of the frontal lobe.

parietal gyri. The postcentral, superior parietal, and inferior parietal convolutions which form the lateral aspect of the parietal lobe of the brain.

postcentral g. See ascending parietal *g.*

posterior central g. See ascending parietal *g*

precentral g. See ascending frontal *g*

sigmoid g. The S-shaped cerebral fold about and behind the cruciate fissure in carnivora.

straight g. See *g. rectus.*

subcalcarine g. A narrow convolution ventral to the cuneus and lying between the collateral and calcarine fissures.

subcallosal g. A convolution at the rostrum of the corpus callosum limited anteriorly by the posterior parolfactory sulcus.

subcollateral g. A convolution connecting the occipital and temporal lobes.

superior frontal g. A convolution of the frontal lobe situated between the dorsal margin of the hemisphere and the superior frontal sulcus, immediately above the middle frontal gyrus. Also called *g. frontalis superior.* See Plate 18.

superior temporal g. A convolution of the temporal lobe lying between the lateral cerebral fissure and superior temporal sulcus. See Plate 18.

supracallosal g. A thin layer of gray matter in contact with the upper surface of the corpus callosum and continuous laterally with the gray matter of the cingulate gyrus. Also called *g. epicallosus, indusium griseum, g. supracallosus.*

supramarginal g. A cerebral convolution which forms the anterior portion of the inferior parietal lobule and arches over the upturned end of the lateral cerebral fissure.

transverse temporal gyri. Two or three gyri which cross the upper surface of the superior temporal gyrus transversely. Syn. *Heschl's gyri.*

uncinate g. The recurved, hooklike end of the hippocampal gyrus. Also called *g. uncinatus, uncus.*

H

H 1. Chemical symbol for hydrogen. 2. *In electrocardiography*, symbol for the longitudinal anatomic axis of the heart as projected on the frontal plane; also written Ĥ. 3. Abbreviation for henry.

Ĥ Same as H, 2.

H⁺ Symbol for hydrogen ion.

H¹ Symbol for protium.

H² H² Symbol for deuterium.

H³ Symbol for tritium.

H Abbreviation for hypermetropia.

h Symbol for quantum constant; henry.

h. Latin *hora*, hour; height; hundred.

Haab, Otto [*Swiss ophthalmologist*, 1850–1931]. Described the cerebral cortex reflex, called *Haab reflex* and invented the powerful *Haab magnet*, for removing metallic particles from the eyeball.

ha·be'na [L., rein, thong, strap]. Old term for frenum or bandage. —**habenal**, *adj.*

ha·ben'u·la [L., dim. of *habena*, small strip of diseased flesh which is cut out from the body]. 1. The stalk of the pineal body attaching it to the thalamus. 2. A ribbonlike structure. —**habenular**, *adj.*

h. perforata. The upper surface of the tympanic lip of the spiral lamina, having a regular row of holes.

Haber, Fritz (1868–1934). German organic chemist, known for his work in electrochemistry and his synthesis of ammonia from the elements nitrogen and hydrogen. Nobel laureate in chemistry (1918).

hab'it [L. *habitus*, state]. 1. A behavior pattern fixed by repetition. 2. The body build, as associated with a disease or a predisposition thereto; as an **apoplectic habit**, said of a stocky, thick-necked, plethoric individual, presumably liable to apoplexy. Syn., *habitus.*

hab'i·tat [L. *habitare*, to dwell]. The natural home of an animal or vegetable species.

ha·bit"u·a'tion [L. *habituare*, to bring into a habit of body]. 1. A condition of tolerance to the effects of a drug or a poison, acquired by its continued use; marked by a psychic or emotional craving for it when the drug is withdrawn. 2. Drug addiction, especially a mild form in which withdrawal does not result in severe abstinence symptoms.

hab'i·tus. See *habit.*

ha·bu (ha·boo'). See *Trimeresurus flavoviridis.*

Hacker, Viktor von [*German surgeon*, 1852–1933]. With Courvoisier introduced an operation for pyloric obstruction, in which a posterior gastroenterostomy is performed through an opening in the mesocolon.

hack'ing [AS. *haccian*]. Form of massage consisting of a succession of chopping strokes with the edge of the extended fingers or with the whole hand.

hack'ing cough. Lay term for a short, dry cough.

Haden method. See under *method.*

Haden–Hausser method. See under *method.*

ha·de·pho'bi·a [G. *Haidēs*, Hades; *phobos*, fear]. A morbid fear of hell.

Hadfield, Geoffrey [*English pathologist*, 1889–]. With Cecil Clarke, described pancreatic infantilism, called *Clarke-Hadfield syndrome.*

hae-. For words beginning with *hae-* not found here, see *he-.*

Haeckel, Ernst Heinrich Philipp August [*German biologist*, 1834–1919]. Made important studies of morphology and embryology. See *cycle of generation, cytode; recapitulation theory.*

Hae"ma·dip'sa (hee"muh·dip'suh, hem"uh·) [G. *haima*, blood; *dipsa*, thirst]. A genus of terrestrial leeches species of which produce external hirudiniasis. The most commonly encountered species is the **H. zeylanica.**

Hae"ma·gog'us (hee"muh·gog'us, ·go'gus, hem"uh·) [*haima*; G. *agōgos*, leading]. A genus of mosquitoes, one species of which, **H. capricorni** has been incriminated in the transmission of jungle yellow fever.

Hae·man'thus (hi·manth'us) [*haima*; G. *anthos*, flower]. Blood-lily. A genus of the Amaryllidaceae. **H. toxicarius** yields an alkaloid that has been found to produce effects similar to those of scopolamine.

Hae"ma·phy'sa·lis (hee"muh·figh'suh·lis, hem"uh·) [*haima*; G. *physallis*, bladder]. A genus of ticks which includes the dog tick and the rabbit tick.

H. leporis-palustris. A species of ticks limited to rabbits as hosts, and known to be a reservoir of Rocky Mountain spotted fever virus in nature.

haem"a·tin (hem'uh·tin, hee'muh·tin). See *hematin.*

Haem"a·to'bi·a (hem"uh·to'bee·uh, hee"muh·) [*haima*; G. *bios*, life]. A genus of small flies of the family Muscidae similar to the common stable fly but more slender.

H. irritans. A species known as the horn fly; a great pest of cattle; annoys man but seldom bites him.

Haem"a-to-ther'ma (hem ah to thur muh, hee muh to-) [*haima*; G., *thermē*, heat]. The warm-blooded vertebrates; birds and mammals.

haem" to ther'mal, haem a-to-ther'mous, hem to-ther'mal hem to-ther'mous [*haima*; *thermē*]. Warm-blooded; of or pertaining to the Haematotherma.

hae"mo-coe'lom (hee mo-see'lum, hem o-) [*haima*; G. *koilōma*, hollow]. The body cavity of the embryo which contains the heart. *Rare*.

Hae-mon'chus (hee-mong'kus) A genus of nematode worms infesting sheep and cattle.

H. contortus. A species parasitic to sheep and other herbivores throughout the world; occasionally infects man.

Hae"mo pro teus (hee mo-prot yoos, pro teeus, hem o-) [*haima*, G *Prōteus*, sea-god who could change his shape readily]. A genus of intracellular parasites found in the red blood cells of birds. Observations on species of this genus helped explain exflagellation in the life cycle of malarial parasites.

Hae"m spo rid'i a (hee m -spo rid h, hem o-) [*haima*, G. *spora*, seed]. An order of sporozoa which live for part of their life cycle within the red blood cells of their hosts.

Haenel' sign. See under *sign*.

Haenel's variant. Progressive muscular atrophy affecting only the upper extremities.

Haeser Heinrich [*German physician and medical historian*, 1811–84]. Introduced *Haeser' for mula* for estimating the amount of solids in urine the last two figures of the specific gravity are multiplied by 2.33 (*Haeser' coefficient*); the result is the approximate number of grams in 1000 cc. of urine.

Haff disease. Poisoning by resin acid. The condition is manifested by muscular weakness, pains in the limbs, and myoglobinuria. The first cases were reported near Königsberg Haff an arm of the Baltic Sea. These were found to be caused by eating fish affected by the waste prod cts of a celluloid factory The disease has also occurred in epidemic form in Sweden and Karelia. Inactivation of vitamin B_1 by substance found in certain fish may be involved.

Haffkine, Waldemar Mordecai Wolff [*Russian bacteriologist*, 1860–1930]. Introd ced method of inoculation against cholera, using first an ttenuated culture of *Vibrio comma* and later virulent culture. Also introduced vaccine for bubonic plague. A six-week-old culture of *Pasteurella pestis* is killed by heat, and 0.5% of carbolic acid is added. The use of *H ffkine'* vaccines is called *haffkinizing*.

haf'ni-um (haf'nee um, hahf'nee-um) [*H fnia*, L. name of Copenhagen]. Hf = 178.6. A rare earth element.

Hagedorn, Werner [*German surgeon*, 1831–94]. Devised curved surgical cutting needle with flat sides, in graded sizes, called *Hagedorn needle*.

Hagedorn and Jensen's method. See under *method*.

Hagner Francis Randall [*American surgeon*, 1873–1940]. I troduced rubber bag for packing the cavity resulting from suprapubic prostatectomy The *Hagner bag* is distended by water through a rubber tube thereby controlling urinary bladder hemorrhage. Surgical drainage of the epididymis in epididymitis following gonorrhea is called *Hagner' operation*.

Hague con-ven'tion. See *Geneva convention*.

Hahn, Eugen [*German surgeon*, 1841 1902] Introduced nephropexy in which sutures are passed through the fatty capsule of the kidney and the outer edges of the wound (1881) Devised operation of gastrostomy in which the stomach is brought out through the eighth intercostal space.

Hah'ne-mann ism. Homeopathy

Haidinger Wilhelm Karl von [*Austrian mineralogist and geologist*, 1795–1871]. Described images, called *Haidinger brushes*, seen after polarized light has been directed into the eye. These probably are accounted for by the double refractive ction of the cone fibers around the fovea.

Haight, Cameron [*American surgeon*, 1901–]. Devised type of anterior thoracoplasty combined with conventional posterior operative procedure called *Haight' peration*. *Haight' method* consists of intratracheal and intrabronchial catheter aspiration in postoperative atelectasis.

haimased. A proprietary solution of sodium thiocyanate.

Haines's reagent. See under *reagent*.

Haines's test. See under *test*.

hair [AS. *hǣr*]. A keratinized filament growing from the skin of mammals; collectively all the filaments covering the skin. Hair is modified epidermal structure, consisting of shaft, which is the hair itself, exclusive of its sheaths and papilla, and root. The root is found in the **hair follicle**, an epithelial ingrowth into the corium and hypodermis, and is expanded at its lower end into the **hair bulb**. This caps the **hair papilla** por tion of the corium which projects pward into the center of the bulb. The epithelial parts of hair and its sheaths are developed from the **hair column**, an epithelial ingrowth. The space in this hair column through which the developing hair shaft grows toward the surface is known as the **hair canal**.

Hajek, Markus [*Austrian laryngologist*, 1861 1941]. A thor of classic work on the paranasal sinuses (1899) He devised an operation for the relief of frontal sinus disease, in which the anterior wall of the sinus is removed and the frontonasal canal enlarged, with removal of diseased tissue.

hal a-kone [L. *halare*, to breathe G *kōnos*, cone]. A small cone of stiffened gauze, designed to fit the nostril it is filled loosely with bsorbent material which may be medicated, and through which inhaled air must pass.

ha la tion [G. *halōs*, circular threshing-floor; also, disk of the sun or moon]. Blurring of the visual image under powerful direct light coming from direction different from the line of vision.

halazone (*halazone*) *p*-Sulfonedichloramidobenzoic acid, $C_6H_4(SO_2NCl_2)COOH$—1,4. A white, crystalline powder sparingly soluble in water; in strengths of 1 200,000 to 1 500 000, it sterilizes water **Halazone tablets** contain 4 mg. of halazone, with sodium borate and sodium chloride. One or two tablets are used per liter of water

Halban, Josef (1870–1937) Austrian gynecologist who introduced an operation for uterine prolapse in which he amputated the cervix, called *Halban operation*.

Halberstaedter bodies. See *Prowazek-Halberstaedter bodies* under *body*.

Haldane John Scott [*Scottish physiologist*, 1860–1936]. Made important contributions to the knowledge of the physiology of respiration. Invented the *Haldane chamber* or *apparatus for* analyzing respiratory gases (1862) With Claude Gordon Douglas, Yandell Henderson, and Edward Christian Schneider studied the physiologic effects of atmospheric pressure at high altitudes (1911) With Johannes Christiansen and Douglas, made study of carbon dioxide in the blood (1914) Introduced modern oxygen therapy (1917) See also *Haldane scale*.

Haldane scale A standard for establishing hemo-

globin levels in which 13.8 Gm. in 100 cc. of blood equals 100 per cent.

Hales, Stephen [*English clergyman and physiologist*, 1677–1761]. First to measure blood pressure; invented a manometer (1733), the precursor of modern apparatus for measuring blood pressure. Pioneer in the study of plant physiology. Invented a ventilator for use in ships, mines, etc.; called the originator of artificial ventilation.

half-life. The time during which half of any given amount of a radioactive substance will have undergone transmutation; a constant for any given radioactive isotope.

effective h.-l. In *radiobiology*, the half-life of a radioactive substance in a biological system: a combination of the radioactive half-life and biological alteration or excretion of the chemical substance.

half-val′ue lay′er. In *radiology*, an internationally accepted index of the quality of a roentgen-ray beam: a layer or thickness of an absorbing material, which reduces the intensity of a roentgen-ray beam or a gamma-ray beam of a radioactive substance to one-half of its original value. Also called *half-value thickness*.

hal′i but-liv′er oil (*oleum hippoglossi*). The fixed oil from the livers of *Hippoglossus hippoglossus*. Each gram contains at least 60,000 U.S.P. units of vitamin A and at least 600 U.S.P. units of vitamin D. It has the advantage over cod-liver oil of a much smaller dose, but contains a smaller proportion of vitamin D.

hal′ide. A binary salt in which a halogen serves as anion.

ha lis″ter e′sis [G. *hals*, salt; *sterēsis*, deprivation]. The loss of lime salts from previously well-calcified bone. —**halisteret′ic**, *adj.*

hal′ite [*hals*]. Rock salt; a native sodium chloride occurring in extensive deposits.

hal″i to′sis [L. *halitus*, breath; G. *-ōsis*, condition]. The state of having offensive breath. Syn., *bromopnea*, *fetor oris*.

hal′i tus [L.]. A vapor, as that expired from the lung.

haliver oil. Trade-mark for a brand of halibut liver oil.

Hall, Maurice Crowther [*American physician*, 1881–1938]. Introduced the carbon tetrachloride treatment of ancylostomiasis (1921).

hal′lachrome. 5,6-Dihydro-5,6-dioxo-2-indolinecarboxylic acid; an intermediate compound in the series of transformations by which tyrosine is converted, through the action of tyrosinase, to the black pigment, melanin.

Hallé, Adrien Joseph Marie Noël [*French physician*, 1859–1947]. Remembered for his description of a point on the surface of the abdomen. *Hallé's point* represents the level at which the ureter crosses the brim of the pelvis and can be palpated most easily.

Haller, Albrecht von [*Swiss physiologist, anatomist, botanist, and poet*, 1708–77]. Credited with establishing physiology as a special branch of science. In his *Elementa Physiologiae Corporis Humani* he organized the physiologic knowledge of his time (1757–66). Demonstrated experimentally that contractility is a specific property of muscle tissue. Made numerous contributions to descriptive anatomy. The constriction separating the ventricle from the arterial bulb in the fetal heart is called *Haller's isthmus*. The solid cord of cells formed when the canal of the vaginal process of the peritoneum closes is called *Haller's habenula*; this persists for some time after birth. The vascular circle of the optic nerve formerly was called the *circle of Haller*. Haller compiled extensive bibliographies of botany, anatomy, medicine, and surgery.

Hallervorden, Julius [*German neurologist*, 1882–]. With H. Spatz, described an extrapyramidal syndrome of athetosis, mental deterioration, and speech defect, beginning in childhood (1922); called *Hallervorden-Spatz syndrome*.

hal′lex. See *hallux*.

Hallion, Louis [*French physiologist and biologist*, 1862–1940]. *Hallion's law*, which no longer is accepted, states that extracts of an organ have a stimulating effect on that organ.

Hallopeau, François Henri [*French dermatologist*, 1842–1919]. Described acrodermatitis continua, called *Hallopeau's acrodermatitis*.

hal·lu″ci na′tion [L. *hallucinari*, to wander in mind]. Perception without external stimulus, which may occur in every field of sensation: auditory, visual, olfactory, gustatory, and tactile (*haptic*). It is a sensation, implicitly felt by the individual to originate in or from an object in the external environment, but in reality arising within himself. Seen most often in psychotic reactions, hallucinations may also occur in response to certain drugs and toxic substances, and to mechanical irritation of certain brain areas as part of organic disease. In healthy individuals, hallucinations may occur in hypnosis and in partial sleep states. In general, they are projections of deep needs and conflicts. —**hallu′cinative, hallu′cinatory**, *adj.*

extracampine h. One which occurs outside of the normal field of perception of the sense organ(s) involved, as seeing someone behind one's head.

haptic h. See *tactile h.*

hypnagogic h. One occurring while falling asleep; a normal phenomenon, usually a pseudohallucination, as the subject commonly realizes the unreal nature of the perception.

hypnopompic h. One occurring while waking from sleep; a normal phenomenon, usually a pseudohallucination.

Lilliputian h. A visual one in which all objects and persons appear diminutive, often seen in febrile or intoxicated states, and the manic-depressive reactions. Syn., *microptic h.*

psychomotor h. The vivid but unfounded sensation that a part or parts of the body are being manipulated or are moving.

sexual h. One of sexual excitement or experience, occurring most frequently in certain schizophrenic reactions and often associated with grotesque delusions in which nongenital parts of the body are sexualized.

tactile h. One of touching or being touched; also called *haptic h.*

teleologic h. One which fits into the delusional scheme of the patient, often directing him to carry out certain acts.

hal lu″ci no′sis [*hallucinari*; G. *-ōsis*, condition]. In *psychiatry*, the condition of being possessed by more or less persistent hallucinations.

hal′lux (pl. *halluces*) [NL., from L. *hallex*]. The great toe. —**hal′lucal**, *adj.*

h. flexus. A condition allied to and perhaps identical with hammertoe, or flexion of the first phalanx of the great toe. The second phalanx is usually extended upon the first, and there is more or less rigidity of the metatarsophalangeal joint.

h. rigidus. A condition in which there is restriction in the range of motion in the first metatarsophalangeal joint; it is frequently secondary to degenerative joint disease.

h. valgus. A deformity of the great toe, in which the head of the first metatarsal deviates away from the second metatarsal and the phalanges

are deviated toward the second toe, causing undue prominence of the metatarsophalangeal joint.

h. varus. A deformity of the great toe, in which the head of the first metatarsal deviates toward the second metatarsal and the phalanges are deviated away from the second toe.

hal"ma to-gen'e-sis [G. *halma*, jump; *genesis*, production]. A sudden change of type from one generation to another

hal'o- [G. *hals*, (masc.) salt, (fem.) sea]. 1. A combining form denoting the sea, salt. 2. In *chemistry* combining form signifying *of* or *pertaining to* salt or denoting *the presence of* halogen.

hal"o-chro mism. The phenomenon of the development of color when certain colorless organic compounds, notably those containing carbonyl group, are dissolved in acids.

hal'o-gen [G. *hals*, salt; *gennethai*, from *gignesthai*, to be produced] Any one of the nonmetallic elements chlorine, iodine, bromine, and fluorine.

hal'oid [*hal*- G *eidos*, form]. Resembling, or derived from halogen.

ha-lom'e-ter [G *halōs*, threshing-floor circle *metron*, measure]. An instrument for measuring the mean diameter of erythrocytes by the diffraction areas produced also called *eriometer*

Halsted, William Stewart [*American surgeon*, 1852–1922]. Introduced regional block anesthesia. Made pioneer study of infiltration anesthesia (1885) Made many contributions to the development of surgical technic. Introd ced an interrupted intestinal suture, called *Halsted' suture*. Devised an operation, similar to Bassini's, for the radical cure of inguinal hernia, and also one for radical amputation of the breast; each of these is called *Halsted' operation*. Introduced the use of sterile rubber gloves in surgery Devised metal band for use instead of ligature for the occlusion of large artery *Halsted' mosquito forceps* is delicate, sharp-pointed hemostat.

Haly Jesu. See *Jesu Haly*

Haly Abbas ('Ali ibn Abbās) [*Persian physician and surgeon*, d. 994]. Author of an encyclopedia of medicine which was regarded as authoritative for several centuries.

ham [AS.]. 1. The posterior portion of the thigh above the popliteal space and below the buttock. 2. The popliteal space. 3 Colloquial term for the buttock, hip, and thigh.

Ham"a-dry'as ham'nah. Synonym for *Naja hannah*

Ham" ame'lis [G *hamamēlis*, medlar] A genus of small trees or shrubs.

H virginiana. The witch hazel. Its dried leaf **hamamelis leaf** (*hamamelidis folium*) is sometimes used in the form of the fluidextract as mild astringent. Witch hazel extract, or **hamamelis water** (*aqua hamamelidis*) is used as an embrocation.

ham ame'lose. CH₂OH.HOC(CHO) HCOH. HCOH.CH₂OH; an unusual hexose occurring in the bark of *Hamamelis virginiana*.

ha mar'ti-a [G fault]. A nodular or localized fault of embryonal development; cells and structures natural to the part are not in normal orderly arrangement, giving rise to hamartoma.

ham ar"t -blas-to ma [G. *hamartanein*, to fail, err; *blastos*, germ; *-ōma*, tumor]. A neoplasm arising from hamartoma.

h. of kidney See Wilms's *tumor*

ham"ar to'ma [*hamartanein*; *-ōma*]. A nodular or tumorlike mass resulting from faulty embryonal development of cells and tissues natural to the part, as exemplified in vascular birthmarks (angiomas) and nevi. They are not true neoplasms but may undergo neoplastic transformation.

tubular h. of ovary See adrenocorticoid adenoma of ovary

ham"ar to-pho'bi a [*hamartanein*, G *phobos*, fear]. A morbid fear of error or sin.

ha-ma'tum [L. *hamatus*, hooked]. The hamate bone; the most ulnar of the distal row of carpal bones. Formerly called *unciform bone*. See Table of Bones in the Appendix.

Hamberger, Georg Erhard [*German physician*, 1697 1755]. Described the mechanism of respiratory movement, recognizing the function of the external intercostal muscles as inspiratory and that of the internal intercostal muscles as expiratory

Hamburger Hartog Jakob [*Dutch physiologist*, 1859–1924]. Remembered for his studies of osmosis (1902–04) Described the chloride shift, which is called *Hamburger's phenomenon*.

Hamman, Louis Virgil [*American physician*, 1877–1946]. Described crunching sound heard over the pericardium on auscultation, due to the presence of air between the anterior parietal pericardium and the thoracic cage, in cases of pneumomediastinum; called *Hamman sign*.

Hammarsten, Olof [*Swedish physiologist*, 1841–1932]. Investigated the mechanism of blood coagulation (1875). Devised test for globulin to the neutral solution, powdered magnesium sulfate is added to the point of saturation, this precipitates the globulin, which can then be filtered and washed.

ham mer [AS. *hamor*]. 1. *In anatomy* the malleus. See Table of Bones in the Appendix. 2. An instrument for striking.

percussion h. A small hammer with rubber head; used to tap the surface of the body to elicit sounds of diagnostic value. Syn., *plexor*

reflex h. One used to elicit reflexes by tapping on muscles, nerves, and tendons.

Hammerschlag, Albert [*Austrian physician*, 1863–1935]. Devised method for determining the specific gravity of blood. A drop of blood is suspended in mixture of benzene and chloroform, and the specific gravity is then determined by means of hydrometer Called *Hammerschlag' method*.

ham'mer toe" [AS. *hamor*; ME. *too*]. A condition of the toe, usually the second, in which the proximal phalanx is extremely extended while the two distal phalanges are flexed.

Hammond, William Alexander [*American neurologist*, 1828–1900]. Described athetosis, called *Hammond' disease*. Founder of the Army Medical Museum.

ham ster [Ger.]. A short-tailed rodent with large cheek pouches, belonging to the family Cricetidae. Found in Europe, western Asia, and Africa. It is susceptible to variety of microorganisms, and is used for laboratory purposes.

ham'string" [AS. *ham*; *streng*]. The tendon bounding the ham on the outer and inner side. See Table of Muscles in the Appendix.

inner h. The tendon of the semimembranosus and semitendinosus muscles

outer h. The tendon of the biceps femoris muscle.

ham string" T cripple by cutting the hamstring tendons.

ham'u-lus [L., small hook]. A hook-shaped process, as of the hamate bone, of the medial plate of the pterygoid process of the sphenoid bone, and of the osseous cochlea at the cupula (h. laminae spiralis) —**ham'ular ham'ulate**, *adj*

Hanau, Arthur Nathan [*German pathologist*, 1858–1900]. First to make successful transplantation of cancer in mammals (1889)

Hand, Alfred (1868–1949) American physician who described a rare disease, occurring in children, which he called polyuria and tuberculosis (1893). The syndrome was later described more accurately by Artur Schüller (1915) and H. A. Christian (1919). See Hand-Schüller-Christian *disease*.

hand [AS.]. The organ of prehension composed of the carpus, metacarpus, and phalanges.

accoucheur's h. A characteristic cone-shaped deformity of the hand seen in tetany with carpal spasm and muscular dystrophy. Also called *obstetrician's h.*

ape h. An unusual shape of the hand, resembling that of apes, caused by wasting pollex muscles, as in progressive muscular atrophy.

battledore h. The large hand seen in acromegaly.

claw h. A deformity resulting from paralysis of the ulnar and/or median nerve.

cleft h. A congenital deformity of the hand in which the cleft between adjacent fingers extends into the metacarpal region.

club h. See *clubhand*.

forceps h. One which has lost the three middle fingers.

ghost h. A slowly developing depigmentation of the palm with scattered areas of hyperpigmentation, and with thickened, dry, taut skin, thought to be due to tertiary yaws.

opera-glass h. Hand changes including shortening of fingers and/or wrists caused by bone resorption, increased range of motion, and skin redundancy. It may occur after generalized, long-standing, severe rheumatoid arthritis. Also called *main en lorgnette*, *doigts en lorgnette*.

trailing h. In synchronous writing of both hands, that upon which the attention, visual or central, is not fixed.

hand'ed·ness [*hand*]. The tendency to use the right or left hand more frequently according to cerebral dominance, preference, or habit.

Handley, William Sampson (1872–) English surgeon who stressed the importance of the lymphatic spread of mammary carcinoma to the surrounding tissues (1906).

Hanger's test. See cephalin-cholesterol flocculation *test*.

hang'nail" [corruption from *agnail*, AS. *angnaegl*, from *ang*, painful, *naegl*, nail]. A partly detached piece of skin of the nail fold, friction against which has caused inflammation.

Hanot, Victor Charles [*French physician*, 1844–96]. Described hypertrophic cirrhosis of the liver called *Hanot's disease*.

Hansen, Gerhard Henrik Armauer [*Norwegian physician*, 1841–1912]. Discovered *Mycobacterium leprae* (1871), called *Hansen's bacillus*. In some classifications the preferred term for leprosy is *Hansen's disease*.

Han'sen·id. See tuberculoid *leprosy*.

Hanson, Samuel [*American obstetrician*, 1895–]. Devised an instrument for making internal pelvic measurements (1933). *Hanson's pelvimeter* consists of a vaginal and rectal blade; it is useful in determining the bisciatal and intertuberal diameters and the anteroposterior diameter at the outlet.

Hanus' method. See *iodine* value.

hap a lo-nych'i (hap uh-lo-nick'ee uh) [G. *hapalos*, soft; *onyx*, nail]. A condition in which the nails are soft, may fold, and split easily. They become atrophied due to defective nail production.

hapamine. Trade-mark for a product made from histamine and despeciated horse serum globulin; used subcutaneously in allergic conditions.

haph al ge si a (haf"al jee zee uh, -see uh) [G. *haphē*, touch; *algos*, pain]. A sensation of pain experienced upon the mere touching of an object.

haph"e·pho'bi a [*haphē*; *phobos*, fear]. A morbid fear of being touched.

hap'lo-, hapl- [G. *haploos*, single]. A combining form signifying *single*, *simple*.

hap'lo-dont [*haploos*; G. *odous*, tooth]. *In biology*, having or pertaining to molar teeth having simple or single crowns.

hap'loid [*haploos*; G. *eidos*, form]. Having the reduced number of chromosomes, as in mature germ cells, as distinguished from the diploid or full number of chromosomes in normal somatic cells.

hap"lo phy'tine. $C_{21}H_{11}N_2O$; an insecticidal alkaloid present in the Mexican plant *Haplophyton cimicidum*. See also *cimicidine*.

hap lo pi a [*haploos*; G. *ōps*, eye]. Single vision, as opposed to *diplopia*.

hap'lo-scope [*haploos*; G. *skopein*, to examine]. An instrument for measuring the visual area.

mirror h. An instrument for observing the effects of varying degrees of convergence of the visual axes.

hap'ten, hap'tene [G. *haptein*, to fasten]. A partial antigen which reacts with a specific antibody in vitro only; when combined with a protein it may behave as a true antigen.

hap"to pho'bi a [G. *haptesthai*, to touch; *phobos*, fear]. Morbid fear of being touched.

hap'tics [G. *haptikos*, sensitive to touch]. The branch of psychology dealing with the tactile sense. —**haptic**, *adj.*

hap"to dys pho'ri a [G. *haptesthai*, to touch; *dysphoros*, hard to bear]. The disagreeable sensation aroused by touching certain objects, as velvet, peach, or russet apple.

hap"to-glo'bin. An α-globulin, with a probable molecular weight of about 120,000, occurring in normal blood serum to the extent of 1 to 2% of the total protein content. It appears to contain about 5% of carbohydrate, but no lipid.

hap'to-phore [*haptesthai*; *phoros*]. Ehrlich's term for the specific molecular group by which toxins or agglutinins become attached to antibodies or antigens.

Harder, Johann Jacob [*Swiss anatomist*, 1656–1711]. Described a racemose gland at the inner canthus of the eye in vertebrates, especially in those having a well-developed nictitating membrane; called *Harder's gland*, *Harderian gland*.

Hardisty's test. See Rutten and Hardisty *test*.

hard'ness. *In radiology*, the penetrating power of roentgen rays; increased hardness is associated with increased penetrating power, greater energy, and shorter wavelengths.

Hare, Edward Selleck [*English surgeon*, 1812–38]. Remembered for his description of a syndrome of pressure symptoms from irritation of the cervical and brachial plexuses. Called *Hare's syndrome*.

hare'lip [AS. *hara*, *hyppe*]. A cleft, or clefts, in the upper lip, so called from its resemblance to a hare's lip.

acquired h. A cleft in the lip, due to accidental means, giving the same appearance as congenital harelip.

congenital h. Congenital fissure of the upper lip, due to failure of fusion of embryonic facial processes, often associated with cleft palate. The fissure may be of varying degrees, from a notch at the vermilion border to complete separation between the median nasal process and the maxillary process, the cleft extending into the nostril.

double h. One in which there is a cleft on both sides of the upper lip. Also called *bilateral h.*

median h. See *facial cleft*.

single h. One in which the cleft occurs on one side only. Also called *unilateral h.*

hare's-eye. See *lagophthalmos*.

Harger, Rolla Neil (1890–) American chemist and toxicologist who invented an instrument called the drunkometer. See alcohol breath *method*. He also invented a viscosity-allusion meter. See under *meter*.

Harkins, Henry Nelson (1905–) American surgeon who, in cases of shock due to burns, advised the *administration of* 100 cc. *of* plasma for every point by which the hematocrit exceeds 45; called *Harkins' method*.

Harley, George [*English physician*, 1829–96]. Described paroxysmal hemoglobinuria (1865) called *Harley's disease*.

har'ma·line (hahr'muh·leen, ·lin). An alkaloid, $C_{13}H_{14}N_2O$ in wild rue, *Peganum harmala*; toxic to helminths and protozoa.

har'ma·lol. An alkaloid in wild rue, *Peganum harmala*.

har'mine (hahr'meen, ·min). $C_{13}H_{12}N_2O$. An alkaloid from wild rue chemically identical with banisterine from *Banisteria caapi*. Used in encephalitic lethargies as stimulant to the central nervous system.

har'mo·zones, har'mo·zones [G. *harmozein*, to govern]. Name applied by Gley to class of hormones which influence growth.

har"pax·o·pho'bi·a [G. *harpax*, robber; *phobos*, fear]. Morbid fear of robbers.

Harrington, Francis Bishop [*American surgeon*, 1854–1914]. Remembered for his employment of solution of mercury bichloride, hydrochloric acid, water and alcohol. *Harrington solution* was formerly in wide use for hand sterilization.

Harrington, Stuart William (1889–) American surgeon who devised radical operation for the repair of diaphragmatic hernia, performing temporary left phrenic nerve interruption by crushing the nerve.

Harris, Malcolm La Salle [*American surgeon*, 1862–1936]. Described method of segregating urine from the right and left kidneys by using double catheter in the urinary bladder and lever in the rectum or vagina. The use of *Harris' segregator* is now obsolete.

Harris, S. Harry [*Australian surgeon*, 1880–1936]. Devised an operation for removal of the prostate by the suprapubic route, in which he repaired the urethra and controlled bleeding by suture.

Harris' hematoxylin. See under *stain*.

Harrison, Edward [*English physician*, 1766–1838]. Described groove or sulcus extending from the xiphoid process laterally and corresponding to the attachment of the diaphragm. *Harrison's groove* is diagnostic in rickets.

Harrison, Ross Granville [*American biologist*, 1870–]. Known for his researches in embryology. Reported the growth of tissues in vitro (1907) and advanced the study of tissue cultures originated by Leo Loeb (1898). He also observed the outgrowth of nerve fibers from ganglion cells.

Harrison Act. The federal law regulating the possession, sale, purchase, and prescription of habit-forming drugs.

Harrower Erickson test. See under *test*.

Hartley, Frank [*American surgeon*, 1856–1913]. Originator of an operation of intracranial neurectomy of the fifth nerve for the relief of facial neuralgia (1892). Called *Hartley-Krause operation*.

Hart"man·nel'la. A genus of nonparasitic, free-living amebas. The species H. hyalina has been found in the feces of man.

Hartmann's fossa. A small infundibular fossa of the peritoneum near the mesoappendix.

Hartmann's pouch. A dilatation of the neck of the gallbladder.

harts'horn" [AS. *heort*; *horn*]. 1. Cornu cervi, the horn of stag; formerly source of ammonia, or hartshorn spirit. 2. A name popularly given to ammonia water and sometimes applied to ammonium carbonate.

h. liniment. Ammonia Liniment. A rubefacient.

Harvey, William [*English physiologist*, 1578–1657]. Discovered the mechanism of the circulation of the blood; his *Exercitatio de Motu Cordis et Sanguinis in Animalibus* (*Essay on the Motion of the Heart and Blood in Animals*) 1628 has been called the most important book in the history of medicine. Also made an important study of generation.

Harvie, John. English obstetrician of obscure dates, remembered as the author of monograph in which he gave directions for expressing the placenta without violence (1767). In this he anticipated Credé by nearly 90 years.

Häser's coefficient. See under Heinrich *Haeser*.

Hashimoto's disease. See *struma lymphomatosa*.

Hashimoto's struma. See *struma lymphomatosa*.

hash'ish (hash'eesh, ·ish). hash'eesh. See *cannabis*.

Haskins test. See Osgood-Haskins *test*.

Hasner, Josef von [*Bohemian ophthalmologist*, 1819–92]. Described the lacrimal fold, also called *Hasner's valve*. Devised an operation for the repair of defects of the eyelid in which he raised bifurcated pedicle flap.

Hassall's body. See thymic *corpuscle*.

Hassall's corpuscle. See thymic *corpuscle*.

Hasselbalch, Karl [*Danish biochemist and physician*, 1874–]. Did important research on the acid-base balance of the blood. See the *Henderson-Hasselbalch equation*, under Lawrence Joseph *Henderson*.

Hata, Sahachiro [*Japanese physician and bacteriologist*, 1873–1938]. With Ehrlich, discovered arsphenamine (1909). Was first to use arsphenamine in rat-bite fever (1912).

Haudek, Martin [*Austrian roentgenologist*, 1880–1931]. Drew attention to the characteristic niche of gastric ulcer (1910); called *Haudek's niche*.

haunch [OF. *hanche*]. Colloquial term for the part of the body which includes the hip and the buttock of one side.

Hausser method. See Hedon-Hausser *method*.

haus'trum (haw'struhm) (pl. *haustra*) [NL., from *haurire*, to draw]. One of the pouches or sacculations of the colon. —**haustral**, *adj*.

Haüy, Valentin [*French teacher of the blind*, 1745–1822]. Inaugurated systematic education of the blind, for whom he established school in 1784. Introduced the use of embossed paper to enable the blind to read.

Haverhill fever. Epidemic arthritic erythema. An epidemic occurred in Haverhill, Mass., in 1926. See under *erythema*.

Havers, Clopton [*English anatomist*, d. 1702]. Made an important study of bone structure and growth (1691). See *Haversian canal* under *canal*. The concentric plates of bone which surround the canals are called the *Haversian systems*. The *Haversian glands* are fat lobules found in some synovial fringes.

hawk [imitative]. To clear the throat by forcible expiration.

Hawkins, Caesar Henry [*English surgeon*, 1798–1884]. Described cicatricial hypertrophy resembling true keloid; called *Hawkins' keloid*.

Hawley, George Walter [*American orthopedic surgeon*, 1874–1940]. Devised table for use in the operative treatment of fractures of the long bones, especially when traction and the application of plaster are contemplated.

Haworth, Walter Norman (1883–1940) English

chemist noted for his synthesis of vitamin C (ascorbic acid). Nobel laureate in chemistry (1937).

Hay's test. See under *test*.

Hayem, Georges [*French physician*, 1841–1933]. Contributed much to the development of modern hematology. Gave the hematoblast its name (1877). The achromacyte is also called *Hayem corpuscle*. *Hayem's solution*, composed of sodium chloride, sodium sulfate, and mercuric chloride in water, is used as a diluting fluid in counting erythrocytes. Hayem gave a classic account of cirrhosis of the liver (1874). He described acquired hemolytic jaundice (1898), later described by Widal and Abrami, called *Hayem-Widal disease*, *Widal-Abrami disease*.

hay fe'ver. An acute affection of the conjunctiva and upper air passages; due to hypersensitivity to pollen. In common usage, the term refers to that produced by ragweed or biologically related pollens. May be caused by other allergens, as tree and flower pollens and atmospheric molds. That caused by grass pollen is known as *rose fever*. In a small percentage of cases, the etiologic factor is undetermined. Chief symptoms are coryza, sneezing, rhinorrhea, headache, and intense itching of the eyes and upper air passages. Also called *perennial h.f.*, *perennial rhinitis*, *vasomotor rhinitis*, *allergic rhinitis*, *pollen coryza*.

Haygarth, John [*English physician*, 1740–1827]. Described the joint swellings in the fingers in arthritis deformans (1805); called *Haygarth's nodes* or *nodosities*.

Haynes, Irving Samuel [*American surgeon*, 1861–1946]. Advised operation in acute suppurative meningitis, in which he drained the cisterna magna; called *Haynes' operation*.

hazeline. Trade-mark for a preparation of *Hamamelis virginiana*.

Hb Hemoglobin.

H d Hansen disk.

h. d. *Hora decubitus*, at the hour of going to bed.

He Chemical symbol for helium.

Head, Henry [*English neurologist*, 1861–1940]. Described the role of the vagus nerve in respiration (1889). With Alfred Walter Campbell, described the pathology of herpes zoster, showing the disease to be an inflammation of the posterior nerve roots and spinal ganglions (1900). Made important contributions to the knowledge of the peripheral nerves. Studied the effects of injuries to the peripheral nerves, with James Sherren (1905) and with William Halse Rivers (1908); in the latter case Head was the subject of the experiment. Made fundamental investigation of referred pain. Wrote a classic work on aphasia (1926).

head [AS. *hēafod*]. 1. The uppermost part of the body containing the brain, organs of sight, smell, taste, hearing, and part of the organs of speech. See Plates 3, 8, 10, 11. 2. The top, beginning, or most prominent part of anything.

aftercoming h. The head of the fetus in a breech presentation.

apple h. The broad, thick skull of certain dwarfs.

floating h. A freely movable fetal head above the pelvic brim.

h. locking. The entanglement of the heads of twins at the time of birth.

scald h. Any crusting disease of the scalp. *Colloquial.*

steeple h. See *oxycephaly*.

sugar-loaf h. See *oxycephaly*.

tower h. See *oxycephaly*.

white h. See *milium*.

head'ache [*hēafod*; AS. *acan*]. Pain in the head. *Syn.*, *cephalalgia*.

anoxic h. A generalized and sometimes throbbing headache caused by the extreme vasodilation of cerebral anoxia.

arterial h. A throbbing headache caused by the pulsating of dilated intracranial arteries.

bilious h. Migraine.

blind h. Migraine.

caffeine-withdrawal h. One caused by the abrupt withdrawal of caffeine after prolonged, excessive drinking of coffee. The headache is throbbing; nausea, rhinorrhea, and lethargy may also occur. It may be terminated by administering caffeine or benzedrine.

cervical myalgic h. Muscle-contraction *h.*

chronic indurative h. Muscle-contraction *h.*

cyclic h. That associated with menstruation.

drainage h. Frontotemporal or suboccipital headache resulting from withdrawal of cerebrospinal fluid. It is aggravated by jugular compression and relieved when the subject assumes the horizontal position. Also called *leakage h.*, *puncture h.*

epinephrine h. A type of pressor headache of short duration in which there is throbbing pain in the frontotemporal region, following injection of epinephrine.

histamine h. A type of headache considered to be due to dilatation of the carotid vascular tree as the result of action by circulating histamine. It is characterized by abrupt onset, pain in the temple, neck, face, and on eye, lacrimation and congestion of the eye, stuffiness of the nostril, and swelling of the temporal vessels.

indurative h. See muscle-contraction *h.*

leakage h. See drainage *h.*

migraineous h. The headache of migraine.

muscle-contraction h. Any headache caused by painful contraction of the head and neck muscles, secondary to noxious stimulation elsewhere in the head, or associated with emotional tension or local muscle or nerve root injury. Terms such as indurative *h.*, nodular *h.*, rheumatic *h.*, and spastic *myalgia* usually refer to muscle-contraction headache associated with emotional tension.

nodular h. See muscle-contraction *h.*

ocular h. Pain in and about the head that results from organic disease or impaired function of the eye.

ophthalmic h. See ocular *h.*

overflow h. See spread *h.*

paraplegic h. A type of pressor headache of brief duration, seen in patients with partial or complete spinal cord transection, following painful stimuli from segments below the lesion; it is probably caused by distended intracranial arteries.

pheochromocytoma h. A transient type of pressor headache associated with paroxysmal hypertension resulting from pheochromocytoma.

posttraumatic h. The persistent and recurrent headache which often follows head injury.

pressor h. Any headache produced by sudden rise in systemic blood pressure, including paraplegic *h.*, epinephrine *h.*, pheochromocytoma *h.*

psychogenic h. Headache associated with tension, anxiety, or a basic personality disorder. Response to diagnostic tests and analgesics may be equivocal, but sedatives generally are effective. See muscle-contraction *h.*

puncture h. See drainage *h.*

rheumatic h. See muscle-contraction *h.*

sick h. Migraine.

spread h. A secondary headache caused by the spread of pain from anywhere in the head; also called *overflow h.*

traction h. Pain arising from traction on the dura mater from whatever cause.

vascular dilatation h. Headache associated with or due to dilatation of intracranial arteries.
vasomotor h. See *histamine h.*

head'band" [*AS. heafod;* ME. *band*]. A strap for securing mirror to the forehead.

heal'er [AS. *haelan*]. 1. One who effects cures. 2. Colloquial term for Christian Science practitioner. 3. One without formal medical education who claims to cure by some form of suggestion.
natural h. One supposed to possess personal magnetism capable of overcoming disease.

heal'ing [*haelan*]. The process or act of getting well or of making whole; the restoration to normal, as in the closure of an ulcer or wound, or the union of broken bone. —**heal,** *v.t., v.i.*
h. by first intention. The primary union of wound when the incised skin edges are approximated and so held and union takes place without the process of granulation.
h. by second intention. The process of wound closure where the edges remain separated; the wound becomes closed after granulation tissue has filled the cavity to the skin level so that epithelium can grow over the unhealed area.
mental h. Psychotherapy. Also called *spiritual h.*

health [AS. *haelth*]. The state of dynamic equilibrium between the organism and its environment which maintains the structural and functional characteristics of the organism within the normal limits for the particular form of life (race, genus, species) and the particular phase of its life cycle. —**health'ful, health'y,** *adj.*
public h. The state of health of population, as that of state, nation, or particular community.

health cer tif'i-cate. A formal or official document signed by physician, attesting to the state of health of the individual named therein.

health of'fi-cer. A quarantine officer or an officer of board of health; an officer of sanitation.

health phys'ics. That branch of radiological physics dealing with the protection of personnel from harmful effects of ionizing radiation.

health so-ci'e-ty. An association which has for its objective the promotion of some phase of public health.

hear [AS. *hieran*]. To perceive by the ear.

hear'ing [*hieran*]. The special sense by which the sonorous vibrations of the air are communicated to the mind.
double h. Diplacusis.
h. loss. Impairment of an individual' hearing compared with the hearing of normal individuals, certain frequency ranges are especially considered.
residual h. In the measurement of hearing loss, the amount of hearing that person retains irrespective of temporary reductions.
visual h. The understanding of speech by means of visual impulses. Also called *lip reading.*

hear'ing aid. An instrument that amplifies the intensity of sound waves for the benefit of those with impaired hearing.
air conduction h. a. An electric hearing aid, the transmitter of which fits into the ear canal.
bone conduction h. a. An electric hearing aid, the transmitter of which is held against the skin over the mastoid process.
carbon h. a. An electric hearing aid of the carbon granule transmitter type, as the telephone.
electric h. a. One getting its source of power from electricity.
fixed h. a. One that is permanently installed, as in church, school, or theater.
mechanical h. a. One that amplifies the intensity of sound waves by some physical means other than electricity.
portable h. a. An electric hearing aid that can be carried with relative ease.
vacuum h. a. An electric hearing aid of the vacuum tube type, as radio.
wearable h. a. One that can be worn on the person.

heart [AS. *heorte*]. A hollow muscular organ, whose function is to pump the blood through the vessels. It is enveloped by the pericardium and consists of two symmetrical halves, right atrium and ventricle and left atrium and ventricle. The right atrioventricular orifice is guarded by the tricuspid valve the left, by valve with two leaflets, the mitral. These valves are broad and thin and consist of two layers of the lining membrane of the heart, the endocardium, separated by slight amount of connective tissue. T support them, thin chordae tendineae join their free margins to the papillary muscles in the wall of th ventricle. The outlet of the right ventricle into the pulmonary artery and of the left into the aorta, are guarded by the semilunar valves. See Plates 5, 7 9, 13.
air in h. See *aerendocardia.*
apex of the h. The lowest and leftmost point of the heart represented by the left ventricle. It is usually described as being behind th fifth left intercostal space 8–9 cm (in the adult) from the midsternal line.
armored h. Chalky deposits on the pericardium, due to chronic inflammation.
athletic h. Generalized enlargement of the heart without disease of the valves, supposedly the result of excessive participation in sports.
base of h. The general area occupied by the roots of the great vessels and the portion of the wall of the heart between them.
beriberi h. Heart failure due to thiamin deficiency characterized by no myocardial changes or hydropic degeneration.
bilocular h. A congenital defect in which there is single atrium and single ventricle with common atrioventricular valve. It may also be one in which there is nonfunctioning right ventricle and gross defect in the atrial septum, creating functionally bilocular heart. Syn., *bilocularis h.*, *cor biloculare.*
boot-shaped h. That caused by aortic disease.
bony h. One with calcareous patches on its walls.
bovine h. The markedly hypertrophied heart which develops as result of aortic valvular disease. Also called *cor bovinum.*
chaotic h. action. Chaos created by the operation of multiple multifocal ectopic pacemakers, which may be atrial or ventricular. It is usually followed by fibrillation.
electrical position of the h. Direction of the mean spatial QRS vector. In the frontal plane, five basic electrical positions of the heart have been described (1) vertical, (2) semivertical, (3) intermediate, (4) semihorizontal, (5) horizontal.
fatty h. A name given to two distinct pathologic conditions of the heart tissue. In the first, there is true fatty degeneration of the cardiac muscular fibers in the second, there is an increase in the quantity of subpericardial and intramyocardial fat, which is true fat infiltration.
fibroid h. Extensive fibrosis of myocardium, the fibrous tissue replacing numerous foci of necrosis.
glycogenic h. Deposits of glycogen in the heart muscles and consequent hypertrophy.
goiter h. A condition characterized by atrial fibrillation, cardiac enlargement, and congestive cardiac failure due to thyrotoxicosis. Also called *thyroid h.*, *thyrotoxic h.*

hairy h. The peculiar shaggy appearance of the heart in acute fibrinous pericarditis, the deposited fibrin existing in long shreds. Also called *cor villosum, shaggy h.*

h. clot. Coagulation of blood in the cardiac cavity

h. disease. The extrinsic form is caused by compression, angulation, and torsion of the heart, or by abnormally high pressure in either the systemic or pulmonary circulation; the intrinsic form by disease of the heart muscle, valves, or coronary arteries.

h. sac. The pericardium.

icing h. One whose entire surface is covered with dense, thick, marble-white tissue.

irritable h. Neurocirculatory asthenia.

kyphotic h. Pulmono-cardiac strain and failure due to deformities of the thorax or spine.

left h. The part which furnishes blood to the systemic and coronary vessels.

low h. See *bathycardia*.

peripheral h. An obsolete term for the muscular coat of the blood vessels

pseudotrilocular h. A heart having two atria with defective interatrial septum and one ventricle.

pulmonary h. The effect of pulmonary hypertension on the right ventricle; caused by dilatation and failure of the left ventricle, mitral valve disease, massive pulmonary embolism, chronic pulmonary disease, severe chest deformity or primary disease of the pulmonary arteries. It is acute or chronic. Also called *cor pulmonale*.

right h. The part which furnishes blood to the lungs

skin h. The peripheral blood vessels.

soldier's h. Neurocirculatory asthenia.

tobacco h. A condition which is characterized by irregular action and palpitation; produced by excessive indulgence in tobacco.

villous h. See hairy h.

heart block. The cardiac mechanism resulting from defective transmission of impulses from atrium to ventricle The first stage is that in which the P R interval is prolonged in the second stage, beats are dropped in the third stage, the ventricular contractions are independent of the atrial

arborization h. b. Heart block occurring in fibers of the Purkinje system See also intraventricular h. b.

atrioventricular (AV) h. b That in which conduction of the impulse between the atria and ventricles is slowed or impeded three forms occur first degree AV block (prolonged AV conduction) second degree (partial AV block) third degree (complete AV block)

bundle-branch h. b. The blocking produced by localized lesion of a branch of the bundle of His, resulting in difference in contraction time of the two ventricles, and producing specific electrocardiographic pattern. See also intraventricular h. b

complete h. b. The third stage of block, when the ventricles assume their own rhythm, about 30–40 beats per minute.

congenital h. b. That due to defective development of the conduction system.

entrance h. b. A term used in electrocardiography to describe the condition in which the ectopic center in the ventricle is constantly operating and is not disturbed by outside stimuli. Also called *protective h. b.*

exit h. b. A term used in electrocardiography to describe the condition in which there is local region of abnormal unidirectional block, which prevents some of the impulses generated by an ectopic pacemaker from passing on to the rest of the heart.

focal h. b. Altered intraventricular conduction due to focal injury of heart muscle.

incomplete h. b. The first stage of blocking, in which the conduction time is prolonged, recognized only by the electrocardiograph.

intraatrial h. b. A type which shows on the electrocardiographic record broad, notched P wave of longer than normal duration.

intraventricular h. b. Any heart condition giving electrocardiograms with QRS interval of 0.12 seconds or more and not fitting the criteria of typical bundle-branch block. It includes arborization heart block, focal heart block, and prolonged QRS interval due to hypertrophy

partial h. b. The second stage of blocking, in which beats are dropped, giving 2:1, 3:1, 4:1, etc., AV ratio.

protective h. b. Entrance heart block.

sinoatrial h. b. A type in which the impulses originating in the sinoatrial node are partially or completely prevented from leaving it.

unidirectional h. b. A type in which the impulses will pass out of, but not into, the area of block.

heart'burn" [*heorte*; AS. *baernan*]. A burning sensation over the precordium or beneath the sternum; usually related to esophageal spasm. Gastric pyrosis.

heart fail'ure. See *cardiac failure, circulatory failure.*

heart mur'mur An adventitious sound heard over the heart and sometimes transmitted to areas not directly over the cardiac dullness. These sounds are described according to intensity pitch, quality duration, and time of their occurrence in the cardiac cycle Also see cardiac murmur

heart rate. The number of heart beats per minute.

heart sounds. Those heard on auscultation over the heart. The first sound is deeper in pitch and longer than the second, and is attributed to ventricular systole and the closure of the AV valves. The second sound is higher pitched, short, and of snapping quality and is attributed to closure of the semilunar valves. Heart sounds are described according to intensity quality duration, and time. Occasionally faint third sound is heard, which is supposedly due to ventricular filling.

heart'wa"ter [*heorte*; AS. *waeter*] Hemoglobinuria of sheep.

heart worm" [*heorte*; AS. *wyrm*]. *Dirofilaria immitis.*

heat [AS. *hǣtu*]. 1. A form of kinetic energy communicable from one body to another by conduction, convection, or radiation It is that form of molecular motion which is appreciated by special thermal sense. 2. The periodic sexual excitement in animals.

atomic h. The specific heat of an atom of an element multiplied by its atomic weight.

h. capacity The specific heat of substance multiplied by its mass.

latent h. The quantity of heat necessary to convert body into another state without changing its temperature.

mechanical equivalent of h. The mechanical energy which is required to produce given amount of heat. One calorie is equivalent to 426.5 gram-meters, or 3.085 foot-pounds, of work.

molecular h. The molecular weight of compound multiplied by its specific heat.

prickly h. See *miliaria*.

relaxation h. Heat evolved by muscle during relaxation.

specific h. The amount of heat required to raise the temperature of 1 Gm. of substance 1 C.

Heath, Charles Joseph [*English otologist*, 1856–

1934]. Devised an operation for mastoid disease in which he removed the posterior osseous wall to low level, small portion of bone being left between the epitympanum and antrum the posterior cartilaginous canal is then divided as in the radical operation. Called *Heath operation*.

heat pros·tra'tion. A syndrome resulting from exposure to high temperatures, seen most frequently in infants and the aged; characterized by moist, cold skin, poor circulation, normal mouth and elevated rectal temperature, restlessness, and anxiety Also called *heat exhaustion*.

heat stroke. See *sunstroke*.

heaves [AS. *hebban*]. A disease of horses, characterized by difficult and laborious respiration. Also called *broken wind*.

he"be·phre'ni·a (hee"bi-free'nee-uh, heb"i) [G. *hēbē*, puberty; *phrēn*, mind]. A type of schizophrenia marked by silliness and mannerisms, often caricaturing certain adolescent behavior See under *schizophrenic reaction*. —**hebephren'ic**, *n., adj*

Heberden, William (Senior) [*English physician*, 1710–1801]. First to distinguish between chickenpox and smallpox (1767) Accurately described angina pectoris, so named by him (1768) and once called *Heberden asthma*, *Rougnon-Heberden disease*. Described degenerative disease producing nodular enlargement about the terminal joints of the fingers called *Heberden arthritis*, *Heberden disease*, *Rosenbach disease*. The swellings are called *Heberden nodes*.

he·bet'ic [G. *hēbētikos*, youthful]. Relating to, or occurring at, puberty or adolescence.

heb'e·tude [L. *hebetare*, to dull]. Dullness of the special senses and intellect. —**hebetu'dinous**, *adj*

he·bos"te·ot'o·my he·bot'o·my Old term for pubiotomy

Hebra, Ferdinand von [*Austrian dermatologist*, 1816–80]. Has been called the founder of modern dermatology Classified skin diseases according to pathologic anatomy (1845) Established the parasitic bases of many skin conditions. Described pityriasis rubra (1857) called *Hebra pityriasis*, and tinea cruris (1860) called *Hebra eczema*. Gave the first description of impetigo herpetiformis (1872) Erythema multiforme exudativum is known as *Hebra disease*. See also compound *sulfur* ointment, also called *Hebra' itch ointment*.

hebulon. Trade-mark for an encapsulated hematinic containing liver extract, ferrous sulfate, and vitamin-B complex.

hec"a·ter·o·mer'ic, hec" ter·om'er·al, hec"a·te·mer'ic. [G. *hekateros*, each of two *meros*, part] Having processes which divide into two parts; as neuron, with one process going to each side of the spinal cord.

Hecht Schlaer night vision test. See under *test*.

Hecker Karl von [*German obstetrician*, 1827–82]. *Hecker' law* states that in successive births, each child usually weighs from 100 to 200 Gm. more than its predecessor

hec'tic [G. *hektikos*, habitual]. 1. Habitual. 2. Pertaining to or having hectic fever

hec'tic. 1. Hectic fever one suffering from hectic fever 2. A hectic flush.

hec'to-, hect [G. *hekaton*, hundred] A combining form signifying *one hundred*.

hec'to·gram [*hekaton*; G *gramma*, letter]. One hundred grams, or 1543.2349 grains. Abbreviated, hg

hec'to·li"ter (heck'to lee"tur) [*hekaton*; F *litre* from G. *litra*, coin, pound]. One hundred liters; equal to 22 imperial or 26.4 United States gallons. Abbreviated, hl.

hec'to me"ter [*hekaton*; G *metron*, measure]. One hundred meters, or 328 feet 1 inch. Abbreviated, hm.

he"de·o·ma (hee dee o muh, hed ee) [NL., perhaps from G. *hēdys*, sweet *osmē*, odor]. American pennyroyal. The leaves and tops of *Hedeoma pulegioides*, the medicinal properties of which are due to volatile oil. It is carminative.

hed"er ag'e·nin (hed ur-adj'i nin) A glycoside, $C_{31}H_{50}O_4$, obtained from English ivy *Hedera helix*.

hed'er in. A glycoside, $C_{64}H_{104}O_{11}$, from the fruit of the English ivy *Hedera helix*.

he·don'ia [G. *hēdonē*, pleasure]. Abnormal cheerfulness; amenomania.

he'don·ism (hee'dun iz-um, hed'un iz-um) [*hēdonē*] The pursuit of pleasure the belief that acts should be directed toward the attainment of pleasure Consequently an unreasoning emphasis on pleasure or on some hobby or whim.

he"do·no·pho'bi·a [*hēdonē*; G *phobos*, fear]. A morbid fear of pleasure.

heel [AS. *hēla*]. The hinder part of the foot.

big h. Epidemic enlargement of the calcaneus, disease found on the west coast of Africa, on the coast of China, and notably in Formosa. It is marked by fever pain, and enlargement of the heel. There are frequent remissions followed by recurrence. The etiology is unknown.

painful h. Tenderness of the heel, causing severe pain on walking; usually due to gonococcal infection or to bony spurs.

Heerfordt, Christian F [*Danish ophthalmologist*, 1871]. Described uveoparotid fever called *Heerfordt' disease*. See also *uveoiditis*.

Hefke-Turner sign. See obturator *sign*.

Hegar Alfred [*German gynecologist*, 1830–1914]. Devised an operation for lacerated perineum triangular excision is made in the posterior wall of the vagina, and the muscles and fascia are sutured in the midline. Inverted metal dilators in graduated sizes for stretching the cervix of the uterus; called *Hegar dilators*. Softening of the lower segment of the uterus is called *Hegar' sign of pregnancy* in the early stages.

he gem ny [G *hēgemonia*, leading the way rule]. Leadership, domination; as the supremacy of one function over number of others.

Heidenhain, Martin [*German histologist*, 1864–1949]. See *Heidenhain azan stain* and *iron hematoxylin (Heidenhain's)* under *stain*.

Heidenhain, Rudolf Peter Heinrich [*German physiologist*, 1834–97]. Remembered for his important work on gastric motility Investigated the effects of poisons on the submaxillary gland (1872) Formulated the secretion theory of renal function (1874) Described the rodlets in cells of the renal tubules; called *Heidenhain rods* or *striae* He also studied the nerve supply of glandular structures (1878) Described denervated portion of the stomach with an exterior fistula, called *Heidenhain pouch*, completely separated from the main organ. See also serous *crescent*, called *demilune of Heidenhain*.

Heim, Ernst Ludwig [*German physician*, 1747 1834]. Observed sign of adherent pericardium retraction of the intercostal spaces occurs with the cardiac systole. Called *Heim-Kreysig sign*.

Heine, Jacob von [*German orthopedist*, 1800–1879]. First to describe the deformities produced by acute anterior poliomyelitis (1840) sometimes called *Heine-Medin disease*. Differentiated the disease from other forms of paralysis Made important contributions to the knowledge of congenital luxations (1842)

Heine, Leopold [*German ophthalmologist*, 1870–

1910]. Introduced cyclodialysis, called *Heine operation*. Made important contributions to the development of modern contact lenses.

Heineke-Mikulicz operation. See *pyloroplasty*.

Heinz, Robert [*German physician and pharmacologist*, 1865–1921]. Described refractile inclusion bodies seen in erythrocytes in hemolytic anemias due to toxic agents (1890) called *Heinz-Ehrlich bodies*. See under *body*.

Heisrath, Friedrich [*German ophthalmologist*, 1850–1904]. Devised his operation for the relief of trachoma by excision of the tarsal folds.

Heister, Lorenz [*German surgeon, anatomist, and botanist*, 1683–1758]. Described the spiral valve of the cystic duct called *Heister' valve*. Described the sinus of the external jugular vein this formerly was called *Heister' diverticulum*.

Hektoen, Ludvig [*American pathologist*, 1863–1951]. Known for his work in general pathology and immunology. Produced experimental cirrhosis of the liver. Contributed to the knowledge of carcinoma. With George J. Rukstinat, devised test for the presence of sperm toxoa; called *Hektoen-Rukstinat test*.

hel'co-, helc- [G. *helkos*, ulcer]. A combining form meaning *an ulcer*.

hel'coid, hel coi'd [*helkos*]. Resembling an ulcer; ulcerative.

hel-co'ma [*helkos*]. An ulcer. *Obs.*

hel cot'ic. See *helcosis*.

he len' lin. A toxic principle, $C_{15}H_{22}O$, from *Helenium autumnale* or wild sunflower. It is intensely irritant to mucous membranes and paralyzant to the heart and voluntary muscles. Proposed as vermifuge and insecticide.

hel'e nin. A stearoptene, $C_{15}H_{20}O_2$, from *Inula helenium*. A bactericide and anthelmintic. Dose, 10–20 mg. (1/6–1/3 gr.). Syn., *alantolactone*.

he-lex'in. Hederin.

he'li an'thin, he'li an'thine (hee"lee-an'thin, -theen). Methyl orange, an acid-base indicator.

he li'ci form (hi lis'i form) [G. *helix*, spiral; L. *forma*, form]. Spiral; shaped like snail shell.

hel'i cin. $CHO.C_6H_4.O.C_6H_{11}O_5$, the β-glucoside of salicylaldehyde, obtained by oxidation of salicin; on hydrolysis it yields D-glucose and salicylaldehyde.

hel'i cine (hell'i sin, -syne) [*helix*]. 1. Ascendingly spiral. 2. Pertaining to the helix.

hel'i-cis [*helix*]. A vestigial muscle associated with the helix of the external ear. **h. major** and **h. minor** have been described.

hel'i co-, helic- [*helix*]. A combining form meaning *spiral*.

hel'i-coid [*helix*; G. *eidos*, form]. Spiral; coiled like snail shell.

hel"i-co pep'sin [*helix*; G. *pepsis*, cooking]. A proteolytic enzyme found in snails.

hel'i-co pod, hel"i co-po di [*helix*; G. *pous*, foot]. Circumduction; movement of the leg in lateral arc as it scrapes the floor; the gait seen in spastic hemiplegia.

hel"i co-pro'te-in [*helix*; G. *prōteios*, of first rank]. A protein obtained from snails of the family Helicidae.

hel"i-co-ru'bin [*helix*; L. *ruber*, red]. A respiratory pigment found in the gut and liver of the snail.

hel"i co-tre ma [*helix*; G. *trēma*, perforation]. The opening connecting the scalae tympani and vestibuli of the spiral canal of the cochlea.

he"li en ceph" li'tis [G. *hēlios*, sun; *enkephalos*, brain; *-itis*, inflammation]. Encephalitis caused by exposure to the sun's rays.

he'li-o-, heli- [*hēlios*]. A combining form signifying *the sun*.

he'li o-phage. See *chromatophore*.

he'li o phobe [*hēlios*; G. *phobos*, fear]. One who is morbidly sensitive to the effects of the sun rays.

he"li o pho'bi [*hēlios*; *phobos*]. Morbid fear of exposure to the sun's rays.

he'li o-stat" [*hēlios*; G. *-statēs*, stationary]. A mirror moved by clockwork in such manner as to reflect continuously the sun's rays on given spot. —**heliostat'ic**, *adj.*

he"li-o tax'is [*hēlios*; G. *taxis*, arrangement]. A form of taxis in which there is attraction toward (positive heliotaxis) or repulsion from (negative heliotaxis) the sun or sunlight.

he"li-o-ther'a-py [*hēlios*; G. *therapeia*, treatment]. The treatment of disease by exposure of the body to sunlight.

he"li-o-tro pin (hee"lee-o-tro pin, -ot ro-pin). Piperonal.

he"li ot'ro-pism [*hēlios*; G. *tropē*, to turn]. In biology, that property of plant or plant organ by virtue of which it bends toward or away from the sunlight. —**heliotrop'ic**, *adj.*

he'li um [*hēlios*]. He = 4.003. A chemically inert, colorless, odorless, noninflammable, gaseous element, occurring in certain natural gases and in small amount in the atmosphere. Next to the lightest element known, it is used as lifting gas in dirigibles and balloons. Mixed with oxygen, it forms an artificial air useful when men are working under pressures of several atmospheres, as in tunnel construction. Being less soluble than nitrogen, less time is required for the adjustment of pressure without danger of bends. A similar mixture, being less dense than ordinary air, is useful in various types of dyspnea and in cases involving respiratory obstruction.

he'li [G.]. The rounded, convex margin of the pinna of the ear.

Hel"ko-mas'tix [G. *helkein*, to drag; *mastix*, whip]. A genus of coprozoic flagellates.

H. faecicola. A species of free-living flagellates found in the feces of man.

hel'le-bore [G. *helleboros*]. A plant of the genus *Helleborus*, particularly *H. niger*, black hellebore. It has been used as drastic purge. It contains the glycosides helleborein, helleborin, and hellebrin. Dose of the powdered root, as purge, 0.13–0.2 Gm. (2–3 gr.).

American h. *Veratrum viride.*

false h. *Adonis vernalis.*

green h. *Veratrum viride.*

white h. *Veratrum album.*

hel"le-bo re in. A poisonous glycoside, $C_{37}H_{56}O_{18}$, from *Helleborus niger* and *H. viridis*. It has digitalislike action but is of doubtful practical value.

hel leb rin (heh-leb rin, hell'i bor-in). A poisonous glycoside, $C_{36}H_{42}O$, from *Helleborus niger* and *H. viridis*. Paralyzes the central nervous system.

hel'le bo rism [*helleboros*]. 1. The treatment of disease with hellebore. 2. The morbid condition induced by the free exhibition of hellebore.

hel'l brin. A glycoside from *Helleborus niger* having an action resembling that of strophanthin.

Heller, Arnold [*German pathologist*, 1840–1913]. Established the role of syphilis in the causation of aortic aneurysm (1899). Syphilitic aortitis is known as *Doehle-Heller aortitis*, *Welch aortitis*.

Heller's test. See under *test*.

Hellin's law. Twins occur in one of 80 pregnancies; triplets in one of 80² or 6,400; quadruplets in one of 80³ or 512,000. A recent modification of this law states that in the United States, twins are to be expected in one of 83 pregnancies, triplets in one of 83² and quadruplets in one of 83³ (Patten).

Helly' fixing fluid. See under Zenker's *fixing fluid*.

Helmholtz, Hermann Ludwig Ferdinand von (1821–1894). German physiologist and physicist. From his studies of muscular contraction, in which he showed that muscles are the chief source of animal heat, he developed and gave the mathematical formulation for the principle of the conservation of energy (1847). He measured the velocity of nerve impulses, and invented the ophthalmoscope (1851) which has been called the greatest event in ophthalmology. He developed Young's theory of color vision. See *Young-Helmholtz theory* under Thomas *Young*. He published fundamental work on physiological optics (1856–66) and acoustics (1862). See Helmholtz's theory of *accommodation*. According to his resonance theory of hearing, the motion of the stapes produces vibrations in the perilymph, and thus produces secondary vibrations in the basilar membrane. He described the tympanum and the ossicles of the ear (1869). Important contributions were also made to thermodynamics, hydrodynamics, electrodynamics, and meteorological physics. He studied electrical oscillation and measured the velocity of propagation of electromagnetic induction. His student Hertz, to whom he gave the problem of measuring possible electrical waves, demonstrated electromagnetic waves and found that their velocity equaled that of light. Helmholtz also explained the principle of least action. The *Gibbs-Helmholtz equation* for determining the amount of work of which a galvanic cell is capable is considered one of the first principles of physical and physiological chemistry.

hel′minth [G. *helmins*, worm]. Originally any parasitic worm; now includes those wormlike animals, either parasitic or free-living, of the phyla Platyhelminthes and Nemathelminthes as well as members of the phylum Annelida. —**helmin′thic, helmin′thous, helmin′thoid,** *adj.*

hel·min′thes gogues (hel·min′thuh·gog). See *anthelmintic*.

hel″min·the·me′e·sis [*helmins*; G. *emesis*, vomiting]. The vomiting of parasitic worms.

hel″min·thi′a·sis [*helmins*; NL. *-iasis*, condition]. The diseased condition produced by the presence of parasitic worms in the body.

h. elastica. Elastic tumors of the axilla and groin due to filarial worms.

hel′minth·ism. Helminthiasis.

hel·min′tho-, helminth- [*helmins*]. A combining form signifying worm.

hel″min·thol′o·gist. A specialist in the studies of helminths.

hel″min·thol′o·gy [*helmins*; G. *logos*, word]. The study of parasitic worms. —**helmintholog′ic,** *adj.*

hel″min·tho′ma [*helmins*; G. *-ōma*, tumor]. A tumor caused by the presence of a parasitic worm.

hel·min″tho·pho′bi·a [*helmins*; G. *phobos*, fear]. A morbid fear of worms or of becoming infested with worms.

helmitol. Trade-mark for a brand of citramin, chemically methenamine anhydromethylene citrate, $C_6H_6O_7(CH_2)_6N_4$. The substance is a urinary antiseptic.

Helmont, Jean Baptiste van [*Flemish physiologist and chemist*, ca. 1577–1644]. One of the founders of biochemistry. Recognized the importance of ferments and gases in physiology. Is credited with coining the word gas. Made important contributions to pharmacology and did basic work in urinalysis.

he′lo- [G. *helos*, marshy ground]. A combining form meaning marsh.

he′lo- [G. *hēlos*, nail]. A combining form meaning nail.

He″lo·der′ma [*hēlos*; G. *derma*, skin]. A genus of lizards composed of two species, which are said to be the only known species of venomous lizards.

H. horridum. A species found in Mexico.

H. suspectum. A species found in Arizona and New Mexico known as the Gila monster.

he·lo′ma [*hēlos*; G. *-ōma*, tumor]. A corn or callosity occurring on the hand or foot. *Rare.*

he·lo·ni′as [G. *helos*, marsh]. The dried rhizome and roots of *Chamaelirium luteum*, a plant of the Liliaceae; used as a tonic and diuretic.

he·lot′o·my [G. *hēlos*, nail; *tomē*, a cutting]. The cutting of a corn; surgery upon a corn.

hel·vol′ic ac′id. An antibiotic substance, now known to be identical with fumigacin.

Helweg, Hans Kristian Saxtorph [*Danish psychiatrist*, 1847–1901]. Described a tract in the upper cervical segments; this is thought to arise in the inferior olive. Called *olivospinal tract* or *Helweg's bundle*.

hem-, haem-. See *hemo-*.

he·ma-, hae′ma- (hee′muh-, hem′uh-) [G. *haima*, blood]. For words beginning with *hema-* or *haema-* not found here, see *hemo-*.

He·ma·cha′tus (hee·muh·kay′tus). A genus of South African snakes of the Elapidae; known as the ringhals.

H. haemachatus. A species capable of ejecting or spitting its venom at its enemies. The venom is directed toward the eyes and causes intense pain and temporary blindness.

he·ma·chrome, hae′ma·chrome [*haima*; G. *chrōma*, color]. The coloring matter of the blood; heme.

he·ma·cy·tom′e·ter. See *hemocytometer*.

he·ma·cy″to·zo′on, hae″ma·cy″to·zo′on. See *hemocytozoon*.

he·ma·dro·mo·graph, hae″ma·dro′mo·graph. See *hemodromograph*.

he″ma·dro·mom′e·ter, hae″ma·dro·mom′e·ter. See *hemodromometer*.

he·ma·dy·nam′ics, hae″ma·dy·nam′ics (hee″muh·dye·nam′icks, ·di·nam′icks, hem″uh-). See *hemodynamics*.

he·ma·dy″na·mom′e·ter, hae·ma·dy″na·mom′e·ter [*haima*; G. *dynamis*, power; *metron*, a measure]. An instrument for measuring the pressure of the blood within the arteries. —**hemadynamometry,** *n.*

he″mag·glu″ti·na′tion, hae″mag·glu″ti·na′tion [*haima*; L. *agglutinare*, to glue]. The clumping of red blood cells.

cold h. Phenomenon caused by the presence of cold agglutinin.

he·mag·glu′ti·nin, hae″mag·glu′ti·nin (hee″muh·gloo′ti·nin, hem″uh-) [*haima*; *agglutinare*]. A substance in normal blood serum which has the power to clump red blood cells.

cold h. See cold agglutinin.

hemagulen. Trade-mark for a brain thromboplastic suspension useful as a hemostatic agent by topical application.

he′mal, hae′mal [*haima*]. 1. Pertaining to the blood or the vascular system. 2. Pertaining to that part of the body containing the heart and major blood vessels.

he·mal′y·sis [*haima*; G. *analysis*, a loosing]. Analysis of the blood.

he·man″gi·ec·ta′si·a, he·man″gi·ec′ta·sis (hee·man″jee·eck·tay′zhuh, ·see·uh, ·shuh, ·zee·uh, hem·an-) [*haima*; G. *angeion*, vessel; *ektasis*, extension]. Dilatation of blood vessels. —**hemangiectat′ic,** *adj.*

he·man″gi·o·blas·to′ma [*haima*; *angeion*; G. *blastos*, shoot; *-ōma*, tumor]. An aggregation of blood vessels comprising a neoplastic disorder

rather than hamartoma. Most frequently found in the cerebellum, where it may be cystic. The brain, retina, pancreas, and kidneys may be involved.

he-man"gi-o-e-las"to-myx-o'ma. A mesenchymoma.

he man gi-o-en do the"li-o-blas to ma. See *hemangioendothelioma*.

he man gi o en do the"li o ma [*haima*; *angeion*, G *endon*, within *thēlē*, nipple -*ōma*]. A locally malignant single or multiple tumor arising from blood vessels, characterized by many atypical endothelial cells and the formation of anastomosing vascular tubes.

h. of bone. See Ewing sarcoma.

he-man gi-o-en"do-the"li o-sar-co ma. See *hemangioendothelioma*.

he-man gi o-lip-o ma. A mesenchymoma.

he-man gi-o ma, hae-man gi ma (hee-man jee m h, hem-an) [*haima*, *angeion*, -*ōma*]. An angioma made up of blood vessels also called *capillary angioma*.

capillary h. Vascular tumor composed solely of capillaries.

capillary h. of granuloma type. See *granuloma pyogenicum*.

cavernous h. Vascular tumor made up of widely dilated capillaries.

multiple hemorrhagic h. of Kaposi. See multiple idiopathic hemorrhagic sarcoma.

sclerosing h. See *dermatofibroma*.

venous h. Vascular tumor made up of vessels containing smooth muscle cells.

he man"gi o-my o li po ma. A mesenchymoma.

he man gi o-per i-cy to ma. An uncommon tumor usually of skin and subcutaneous tissues, arising about capillaries It resembles glomus tumor but characteristically exhibits irregularly proliferating, closely packed pericytes about the vessels

he man gi o-sar-co ma [*haima*; *angeion*; G *sarkōma*, fleshy excrescence]. See *hemangioendothelioma*.

he man'thine (hi-man theen, thin) A alkaloid from *Hemanthus coccineus*; it is poisonous, with the general properties of atropin

he ma poph'y-sis (hee muh pof' -sis, hem uh) [*haima*; G. *apophysis*, process]. That part of an ideal vertebra which forms the ventrolateral part of the hemal arch In man, all the hemapophyses are detached represented by the ribs.

he mar thro sis, hae mar thro'sis (hee mahr thro sis, hem ahr-) [*haima*; G *arthron*, joint -*ōsis*, condition]. Extravasation of blood into joint

he ma t 'in he ma te'in (hee muh tee'in, hem uh hem at ee in) $C_{16}H_{12}O$ The reddish brown substance obtained by oxidation of hematoxylin

he ma tem e sis, hae ma tem -sis [*haima*; G *emesis*, vomiting]. The vomiting of blood.

he ma ther'mous. See *haematothermal*.

he mat hi dro sis, hae"mat hi-dro'si (hee mat hi-dro sis, -high dro sis, hem at) [*haima*, G. *hidrōsis*, sweating] An cretion of blood or blood pigments through the glands of the skin.

he mat'ic [*haima*]. Pertaining to, full of, or having th color of, blood.

h ma tim e-ter hae"ma tim'e-ter Hemocytometer —**hematimetry** n.

hem tin. $C_{34}H_{32}N_4O_4FeOH$ the hydroxide of ferriheme, formed by treating hemin with alkali. I hematin the iron is in the ferric state. —**hematin'ic**, *adj*

alkaline h. A pigment suitable for hemoglobinometry made by diluting blood with 0.1 normal sodium hydroxide.

hem"a ti ne mi a, haem" ti ne mi-a [*haima*; *haima*] The presence of heme in the blood.

hem a tin'ic [*haima*]. An agent which tends to increase th hemoglobin content of the blood.

hem a tin om' ter See *hemoglobinometer*

hem ti nu ri a. See *hemoglobinuria*.

hem'a-tite Ferric oxide, Fe_2O_3 containing little water of hydration red powder See *iron* oxide.

hem a to- haem' to- (hem uh to- hee muh-to-) **hemat haemat** [*haima*]. A combining form signifying *of* or *pertaining to the blood*.

hem a to-aer om' ter [*haima*, G. *aēr* air; *metron*, measure]. A device for recording the pressure of gases in th blood.

hem a to-blast" [*haima*; G *blastos*, germ]. An immature form of erythrocyte.

hem'a to-cele haem' to-cele [*haima*; G *kēlē*, tumor]. A tumor formed by the extravasation and collection of blood in part, especially in the cavity of the tunica vaginalis testis or the pelvis.

hem a to-chy'le cele (hem uh-to-kigh'le seel, hee muh-to-) [*haima*; G. *chylos*, juice; *kēlē*]. A tumor formed by the extravasation and collection of chyle and blood in a part, especially in the tunica vaginalis testis. It is a complication of filariasis.

hem a t -chy lu'ri-a (hem uh-to-kigh-lew'ree-uh, hee muh-to-) [*haima*; *chylos*; G. *ouron*, urine]. The presence of blood and chyle in the urine.

hem a to-col'pos [*haima*; G. *kolpos*, vagina]. A collection of blood within the vagina.

hem a to crit haem a to crit" (hem uh-to-krit") [*haima*, G *krinein*, to separate]. 1 A small centrifuge used to separate blood cells in clinical analyses. 2. The flat-bottomed graduated centrifuge tube in which the blood cells are separated also called *h. tube*. 3. Hematocrit reading: common usage.

hem a to-crit" read'ing. The percentage of the whole blood volume occupied by the blood cells after centrifugation in special graduated tube.

hem"a to-crys'tal lin, haem a-to-crys'tal-lin. See *hemoglobin*.

hem a to-cyst", haem a to-cyst" [*haima*; G. *kystis*, bladder]. A cyst containing blood.

hem to-cyte haem a to-cyte" See *hemocyte*

hem a to-cy tol'y sis (hem"uh-to-sigh tol'i sis, hee muh to) [*haima*; G *kytos*, cell; *lysis*, loosing]. Hemolysis destruction of red blood cells with setting free of the contained hemoglobin.

hem"a to-cy-tom e-ter haem to-cy tom e-ter See *hemocytometer*

hem to-cy"to zo on, haem a to-cy"to-zo on. See *hemocytozoon*.

hem to-dy-nam'ics, haem"a to-dy nam'ics (hem uh to-dye-nam'icks, -di-nam'icks, hee muh-to-) See *hemodynamics*.

hem" to-dy"na mom'e-ter haem a to-dy" na mom'e-ter See *hemodynamometer*

hem to-dys-cra si-a (-dis kray shuh, -see uh. -shuh, see-uh) [*haima*; G *dys*- hard, bad, unlucky; *krasis*, mixing]. A diseased state of the blood.

h m t gen e sis, haem a t g n 1 [*haima*; G *genesis*, production]. Hematopoiesis formation of the blood or blood cells. —**hematogenic, hematog'enous**, *adj*

hem to-glo'bin. See *hemoglobin*.

h m"a t hi dro sis, haem t hi-dro sis (hem uh-to hi-dro sis, high-dro'sis, hee muh-to-). See *hemathidrosis*.

hem" to hi 'tone. See *globin*.

he ma toi'din hae ma-toi din. An iron-free pigment resulting from the decomposition of hemoglobin in tissues probably mixture of several related pigments.

hem a to-krit", **haem a-to-krit.** See *hematocrit.*

hem'a-to-lith, **haem to-lith"** [*haima*; G *lithos*, stone]. Hemolith.

he"ma tol'o-gist (hee muh-tol'o-jist, hem uh) [*haima*, G *logos*, word]. On who specializes in the study of blood.

he"ma-tol'o-gy, hae"ma-tol'o-gy [*haima*, *logos*]. The science of the blood, its nature, functions, and diseases. —**hematolog'ic**, *adj*

h m t lym ph a gi ma h m a t lym"phan gi-o'ma [*haima*, L. *lympha*, water; G *angeion*, vessel -*oma*, tumor]. A tumor composed of blood vessels and lymph vessels.

hem"a-to-lym-phu'ri-a [*haima*; *lympha*; G *ouron*, urine]. The discharge of urine containing lymph and blood. Sometimes occurs in filariasis.

he m t l y sis (hee m h tol'i-sis, hem h) [*haima*, G *lysis*, loosing]. Hemolysis; destruction of red blood cells with setting free of the contained hemoglobin.

he"ma-to'ma, hae"ma to ma (hee muh-to muh, hem uh-to muh) [*haima*; -*oma*]. A focalized extravasation of blood, which soon clots to form solid mass and readily becomes encapsulated by connective tissue. Of such size as to constitute visible, tumorlike swelling. May be due to traumatic injury or to other causes of rupture of blood vessels. May constitute false aneurysm between artery and vein in so-called varicose aneurysm, form of arteriovenous fistula.

chronic subdural h. A hematoma lying underneath the dura, or slightly adherent to it, usually resulting from head injury and giving rise to slowly progressive symptoms and signs of cerebral compression.

dissecting h. See dissecting aneurysm.

tuberous subchorial h. See tuberous mole.

hem to-me di-as ti"num [*haima*; NL., from *medius*, middle]. An effusion of blood into the mediastinal spaces.

he"ma tom'e-ter [*haima*; G *metron*, measure]. An instrument to estimate the properties or constituents of blood. —**hematometry** *n.*

hem"a-to me'tra, haem"a to-me'tra [*haima*, G *metra*, womb]. An accumulation of blood or menstrual fluid in the uterus.

hem t my 'li ha m t my li (hem uh-to migh-ee'lee-uh, hee muh-to-) [*haima*, G. *myelos*, marrow]. Hemorrhage into the spinal cord.

hem to-my"e-li'tis, haem to-my"e-li'tis [*haima*; *myelos*; G. -*itis*, inflammation]. An acute myelitis ttended with an effusion of blood into the spinal cord.

he ma-ton'ic, hae"ma-ton'ic (hee muh-ton ick, hem uh-ton'ick) [*haima*, G *tonikos*, from *tonos*, tension]. A blood tonic which increases the hemoglobin percentage of the blood.

hem to pa thol'o-gy haem t pa thol o-gy [*haima*; G *pathos*, disease; *logos*, word]. The science treating of diseases of the blood

he"ma top thy (hee muh top uh thee, hem uh-) [*haima*, *pathos*]. Any disease of the blood.

hem"a-to-per"i car'di um, haem a to-per"i-car'di-um. See *hemopericardium.*

hem a-to-per"i to ne um, haem" to-per"i-to-ne um. See *hemoperitoneum.*

hem a-to-phage haem' to-phage" (hem uh-to fayj, hee muh to-) See *hemophage.*

hem to-pha gi-a, haem to-pha gi a. See *hemophagia.*

hem a-toph'a gus [*haima*, G. *phagein*, to eat]. A bloodsucking insect. —**hematophagous**, *adj*

hem" to-phil'i-a, haem" to-phil'i a. See *hemophilia.*

hem"a-to-pho'bi-a. Hemophobia.

hem to-phyte haem' to-phyte [*haima*; G. *phyton*, plant]. A vegetable organism, such as a bacterium, living in the blood.

hem a-to-plas'tic, haem"a to plas'tic [*haima*, G *plassein*, to form] Blood-forming.

hem" to-poi-e'sis, haem" to-poi-e sis [*haima*, G. *poiesis*, production]. The formation of blood. —**hematopoiet'ic**, *adj*

extramedullary h. See ectopic *myelopoiesis.*

h m a t p phy i a h m a t p r phy'ri-a (hem'uh-to-por-figh ree-uh, hee muh-to-) See *porphyria.*

hem to por'phy rin. $C_{34}H_{38}O$ N Iron-free heme. A porphyrin obtained in vitro by treating hemoglobin with sulfuric acid. I is closely related to the naturally occurring porphyrins.

hem t por"phy ri ne'mi haem to-por"phy ri ne'mi a (hem uh-to-por"fi-ri nee mee-uh, -por figh-ri-nee mee uh, hee muh-to-) [*haima*; G *porphyra*, purple-fish; *haima*]. Presence of hematoporphyrin in the blood.

hem a-to-por"phy ri nu'ri a, haem"a to-por" phy ri nu'ri a (hem uh-to-por fi-ri new ree-uh, -por figh-ri new ree uh, hee muh-to-) [*haima*; *porphyra*; G. *ouron*, urine]. The presence of hematoporphyrin in the urine.

hem" to-pre-cip'i tin haem"a to-pre-cip'i-tin [*haima*; L. *praecipitare*, to precipitate]. A precipitin specific for blood.

hem"a tor-rha'chis (hem uh-to-ray'kis, hee muh-to- hem uh-tor'uh-kis) [*haima*; G *rhachis*, spine]. Hemorrhage into the spinal meninges producing irritative phenomena.

hem tor rhe'a [*haima*; G. *rhoia*, flow]. Copious or profuse hemorrhage.

hem" to-sal'pinx, haem to-sal'pinx [*haima*, G *salpigx* trumpet] A collection of blood in uterine tube.

hem to-scope [*haima*; G. *skopein*, to examine]. An instrument used in the spectroscopic examination of the blood, by means of which the thickness of the layer of the blood can be regulated.

hem tose, haem tose (hem uh-tose, hee muh-tose) [*haima*]. Full of blood.

hem" to-si phon i' -sis. The polymorphous dermatitis, caused by th bite of *Haematosiphon inodora* (Dugès) generally localized on the extremities and exposed parts of the body and accompanied by intense itching and systemic manifestations following secondary infection.

he ma t sis (hee muh-to sis, hem'uh-) [*haima*; G -*osis*, condition]. The process of the formation of blood the arterialization of blood.

hem to-so-nog'ra phy Quantitative study of blood clotting with ultrasonic device.

hem to-spec'tro-scope, haem"a to-spec tro-scope [*haima*; L. *spectrum*, image; G *skopein*, to examine]. A spectroscope adapted t the study of the blood. —**hematospectroscopy**, *n.*

hem" to-sper'ma-to-cele haem"a to-sper' m t le" (hem uh to pur muh to seel sper mat seel, hee muh-to-) [*haima*, G. *sperma*, seed *kēlē*, tumor]. A spermatocele containing blood

hem t per'mi haem to-sper'mi [*haima*; *sperma*]. The discharge of bloody semen.

hem to-stat'ic, haem a-to-stat'ic. See *hemostatic.*

hem a-to-ther' py haem"a to-ther'a py See *hemotherapy.*

hem to-ther'mal. See *hematothermal.*

hem to tho rax, haem"a-to-tho rax. See *hemothorax.*

hem to-tym'pa-num [*haima*; G. *tympanon*, drum]. Blood in the tympanic cavity

he ma tox'y-lin (hee"muh-tock'si lin, hem uh)

(C.C.) $C_{16}H_{14}O_6$. A colorless crystalline compound occurring in logwood. Upon oxidation, it is converted to hematein, the coloring matter of logwood. Used as stain in microscopy.
chrome h. See under *stain*.
Delafield's h. See under *stain*.
Ehrlich's h. See under *stain*.
he·ma·tox·y·lon, hee·ma·tox'y·lon (hee·muh·tock'si·lon, hem·uh-) [*haima*; G. *xylon*, wood]. Logwood. The heartwood of *Haematoxylon campechianum*, contains tannic acid and coloring principle, hematoxylin, and is mild astringent.
hem·a·to·zo·on, heem·a·to·zo·on (pl. *hematozoa*) [*haima*; G. *zōion*, living being]. Any animal parasite living in the blood. —**hematozoal, hematozoic,** *adj.*
hem·a·tu'ri·a (hem·uh·tew'ree·uh, hee·muh-) [*haima*; G. *ouron*, urine]. The discharge of urine containing blood, often associated with diseases of the kidney.
false h. The passage of red urine, due to the ingestion of food or drugs containing red pigments.
heme (heem) $C_{34}H_{32}N_4O_4Fe$; the ferrous complex of protoporphyrin 9 constituting the prosthetic component of hemoglobin. If the iron of heme is oxidized to the ferric state, the higher valence of the iron imparts positive charge which in alkaline solution attracts hydroxyl ion, forming hematin, and in hydrochloric acid solution attracts chloride ion, forming hemin. Heme combines with variety of nitrogenous bases, forming hemochromogens; the cytochromes and hemoglobin are compounds of this type. Syn., *ferroheme, reduced heme, ferroprotoporphyrin 9*.
hem"er·a·lo·pi·a [G. *hēmera*, day; *alaos*, blind; *ōps*, eye]. Day blindness; frequently incorrectly used to describe the condition of reduced dark adaptation resulting temporarily from vitamin-A deficiency or permanently from retinitis pigmentosa or other peripheral retinal diseases. See also *night blindness*.
hem"er·a·pho·ni·a [*hēmera*; G. *phōnē*, voice]. Loss of voice during the day and recovery of it at night; hysterical symptom.
he"me·ryth'rin, hee·me·ryth·rin (hee·mi·rith'rin, hem"i·heh·merr·thrin) See *hemoerythrin*.
hem'i- [G. *hēmi-*, half]. 1. A prefix signifying *half*. 2. In biology and medicine, prefix denoting either *the right* or *the left half of the body*. 3. In chemistry, prefix denoting *combining ratio of one-half*.
hem"i·a·blep·si·a. See *hemianopsia*.
hem"i·a·car'di·us [*hēmi-*; G. *a-*, not; *kardia*, heart]. A placental parasitic twin (omphalosite) in which the principal parts of fetus are recognizable, with more or less well-formed, rudimentary heart.
hem"i·a·ceph'a·lus [*hēmi-*; *a-*; G. *kephalē*, head]. Anencephalus.
hem"i·a·geu'si·a (hem·ee·a·gyoo'see·uh, hem·ee·a·jew'see·uh) [*hēmi-*; *a-*; G. *geusis*, sense of taste]. Loss or diminution of the sense of taste on one side of the tongue, usually caused by injury to the chorda tympani nerve.
hem"i·al'bu·mose [*hēmi-*; L. *albus*, white]. A product of the digestion of certain kinds of proteins. It is normal constituent of bone marrow and is found also in the urine of patients with osteomalacia. Also called *propeptone*.
hem"i·al·bu"mo·su'ri·a [*hemi-*; *albus*; G. *ouron*, urine]. The presence of hemialbumose in the urine; propeptonuria.
hem"i·am"bly·o'pi·a. See *hemianopsia*.
hem"i·an·a·cu'si·a (hem·ee·an·uh·cue'zee·uh, ·see·uh, ·shuh, ·see·uh) [*hēmi-*; G. *a-*, not; *akousis*, hearing]. Deafness in one ear. Obs.
hem"i·an·al·ge'si·a (·an·al·jee'see·uh, ·see·uh) [*hēmi-*; G. *analgēsia*, want of feeling]. Analgesia of one lateral half of the body and limbs.
hem"i·an·en·ceph'a·ly [*hēmi-*; *a-*; G. *enkephalos*, brain]. Anencephalia on one lateral half only.
hem"i·an"es·the'si·a (·an·es·thee'zhuh, ·zee·uh) [*hēmi-*; G. *anaisthēsia*, lack of sensation]. Anesthesia of either lateral half of the body.
alternate h. That affecting one side of the head and the opposite side of the body.
cerebral h. That due to lesion in the internal capsule or in the lenticular nucleus.
crossed h. See alternate *h.*
hysterical h. Hemianesthesia as a manifestation of hysteria.
hem"i·an·op'si·a [*hēmi-*; G. *a-*, not; *opsis*, vision]. Blindness in one half of the visual field; may be bilateral or unilateral. Also called *hemiopia*, *hemianopia*.
binasal h. Blindness on the nasal side of the visual field, usually due to disease of the outer sides of the optic commissure.
bitemporal h. Blindness on the temporal side of the visual field, due to disease of the central parts of the optic commissure.
heteronymous h. A general term for either binasal or bitemporal hemianopsia.
homonymous h. The form affecting the inner half of one field and the outer half of the other.
lateral h. A form in which the temporal half of one visual field and the nasal half of the other visual field are wanting; vertical line through the center of vision sharply defines the defect. Syn., *vertical h.*
quadrantic h. Blindness in one quadrant; may be bitemporal or homonymous.
vertical h. See lateral *h.*
hem"i·a·tax'i·a [*hēmi-*; G. *ataxia*, disorder]. Ataxia affecting one side of the body.
hem"i·ath"e·to'sis [*hēmi-*; G. *athetos*, not fixed; *-ōsis*, condition]. Athetosis of one side of the body.
hem"i·at'ro·phy [*hēmi-*; G. *atrophia*, want of food]. Atrophy confined to one side of an organ or region of the body.
hem"i·bal·lis'mus, hem"i·bal'lism [*hēmi-*; G. *ballismos*, jumping about]. A form of hemichorea, characterized by sudden, violent, spasmodic movements of the extremities of one side of the body. Caused by destructive lesion of the subthalamic nucleus. The condition ceases suddenly if true hemiplegia intervenes.
Hem"i·bi'a [G. *hēmithnēs*, half-alive]. A genus of operculate snails found only in the Far East. The species H. hupensis and H. quadrasi serve as intermediate hosts of *Schistosoma japonicum*.
he'mic, hee'mic (hee'mick, hem'ick) [G. *haima*, blood]. Pertaining to or developed by the blood.
hem"i·car'di·a [G. *hēmi-*, half; *kardia*, heart]. The presence of only lateral half of the usual four chambered heart.
hem"i·cel'lu·lose. A group of high molecular weight carbohydrates resembling cellulose but less complex.
hem"i·ceph'a·lus [*hēmi-*; G. *kephalē*, head]. A monster exhibiting hemicephaly.
hem"i·ceph'a·ly [*hēmi-*; *kephalē*]. A congenital anomaly with absence of cerebrum but with rudimentary cerebellum and basal ganglions; partial anencephalia.
hem"i·cho·re'a (hem·ee·ko·ree'uh) [*hēmi-*; G. *choreia*, dance]. A form of chorea in which the convulsive movements are confined to one side of the body.
hem"i·co·lec'to·my [*hēmi-*; G. *kolon*, colon; *ektomē*, excision]. Excision of part of the colon.
hem"i·col'lin. An intermediate product, of in-

definite composition, obtained on hydrolysis of protein.

hem"i-cra'ni-a [*hemi-*; G. *kranion*, skull]. 1. Migraine. 2. Pain or headache on one side of the head only. 3. Partial anencephalia.

hem"i-cra"ni-o-sis [*hemi-*; *kranion*; G. *-ōsis*, condition]. Enlargement of one half of the cranium or face.

hem"i-de-cor"ti-ca'tion. Removal of the cortex from one cerebral hemisphere.

hem"i-des'mus (hem"i-dez'mus, -des'mus) [*hemi-*; G. *desmos*, band]. Indian sarsaparilla. The dried root of *Hemidesmus indicus*, imported from India. It contains coumarin and a volatile oil consisting chiefly of 2-hydroxy-4-methoxy benzaldehyde. An infusion has been used as a diuretic.

hem"i-di'a-phragm [*hemi-*; G. *diaphragma*, diaphragm]. 1. A lateral half of the diaphragm. 2. A half diaphragm, designating a diaphragm in which the muscle development is deficient on one side.

hem"i-dro'sis, hem"i-dro'sis. See *hemihidrosis*.

hem"i-dys"es-the'si-a [*hemi-*; G. *dys-*, bad; *aisthēsis*, feeling]. Dysesthesia involving one lateral half of the body.

hem"i-fa'cial [*hemi-*; L. *facies*, form, *face*]. Pertaining to one lateral half of the face.

hem"i-glos-sec'to-my [*hemi-*; G. *glōssa*, tongue; *ektomē*, excision]. Removal of one lateral half of the tongue.

hem"i-glos"so-ple'gi-a [*hemi-*; *glōssa*; G. *plēgē*, stroke]. Unilateral paralysis of the tongue with relatively minor disturbances of motility; the tongue deviates toward the palsied side upon protrusion.

hem"i-gna'thi-a (hem-ee-nayth'ee-uh, hem ee-nath'ee-uh) [*hemi-*; G. *gnathos*, jaw]. Partial or complete absence of the lower jaw on one side. —**hemignath'us**, *n.*

hem"i-hy"pal-ge'si-a (hem-ee-high"pal-jee'zee-uh, -see-uh) [*hemi-*; G. *hypo*, under; *algēsis*, sense of pain]. Hypalgesia, or decreased sensitivity to pain, on one lateral half of the body.

hem"i-hy"per-es-the'si-a (.. high"pur-es-theezh'uh, -zee-uh) [*hemi-*; G. *hyper*, over; *aisthēsis*, perception]. Increased sensitivity on one lateral half of the body.

hem"i-hy"per-hi-dro'sis (.. high"pur-hi-dro'sis, -high"pur-high-dro'sis) [*hemi-*; *hyper*; G. *hidrōsis*, sweating]. Excessive sweating on one side of the body.

hem"i-hy"per-to'ni-a [*hemi-*; *hyper*; G. *tonos*, tone]. Increased muscular tonicity confined to one half of the body; may occur following apoplexy.

hem"i-hy-per'tro-phy [*hemi-*; *hyper*; G. *trophē*, nourishment]. Hypertrophy of half of the body or unilateral hypertrophy of one or more bodily regions (e.g., the head, an arm).

hem"i-hy"pes-the'si-a (hem-ee-high"pes-theezh'uh, -zee-uh) [*hemi-*; G. *hypo*, under; *aisthēsis*, perception]. Decreased sensitivity in one lateral half of the body.

hem"i-hy"po-to'ni-a [*hemi-*; *hypo*; G. *tonos*, tone]. Partial loss of tonicity of one side of the body.

hem"i-lab"y-rin-thec'to-my [*hemi-*; G. *labyrinthos*, labyrinth; *ektomē*, excision]. Removal of one or more of the membranous semicircular canals while leaving the ampullated ends and the saccule.

hem"i-lam"i-nec'to-my [*hemi-*; L. *lamina*, plate; *ektomē*]. Laminectomy in which laminae of only one side are removed.

hem"i-lar"yn-gec'to-my (hem-ee-lar"in-jeck'to-mee) [*hemi-*; G. *larynx*, larynx; *ektomē*]. Extirpation of one lateral half of the larynx.

hem"i-man"di-bu-lec'to-my. The surgical removal of one lateral half of the mandible.

hem"i-me'lus [*hemi-*; G. *melos*, limb]. An individual with incomplete or stunted extremities.

hem"i-me-tab'o-lous [*hemi-*; G. *metabolē*, change]. Pertaining to a mode of insect metamorphosis in which the immature stage, known as a nymph, transforms into the adult without an intervening, quiescent, pupal stage; as in grasshoppers, crickets, roaches, the true bugs, Mayflies, stone flies, and dragonflies.

he'min, $C_{34}H_{32}N_4O_4FeCl$, the chloride of ferriheme, containing iron in the ferric state. It is formed by heating hemoglobin with glacial acetic acid in the presence of sodium chloride, reddish-brown crystals (Teichmann's crystals) being produced; this is the basis of a test for blood.

hem"i-ne-phrec'to-my [*hemi-*; G. *nephros*, kidney; *ektomē*, excision]. Removal of part of a kidney.

hem"i-o'pi-a. Hemianopsia. —**hemiop'ic**, *adj.*

he-mip'a-gus [*hemi-*; G. *pagos*, that which is fixed]. Conjoined twins united laterally by the thoraces and necks and in some cases also by the jaws. Syn., *prosopothoracopagus*.

hem"i-pal"a-to-la-ryn"go-ple'gi-a [*hemi-*; L. *palatum*, palate; G. *larynx*, larynx; *plēgē*, stroke]. Paralysis of the muscles of the soft palate and larynx on one side.

hem"i-pa-re'sis, hem"i-par'e-sis [*hemi-*; G. *paresis*, paralysis]. Paresis of one side of the body.

hem"i-pel-vec'to-my [*hemi-*; L. *pelvis*, basin; G. *ektomē*, cutting]. The surgical removal of an entire posterior extremity including the hipbone.

hem"i-ple'ta. A unilateral distribution of the cutaneous eruption of pinta.

hem"i-ple'gi-a [*hemi-*; G. *plēgē*, stroke]. Paralysis of one side of the body. —**hemipleg'ic**, *adj.*

alternate h. Paralysis of the facial muscles or tongue on one side of the body and of the trunk and the extremities on the other side. Also called *crossed h.*, *h. cruciata*.

capsular h. A hemiplegia due to a lesion in the internal capsule.

cerebral h. That resulting from a lesion of the brain.

congenital h. A spastic type due to a birth injury. Also called *infantile h.*

contralateral h. A paralysis of one side of the body due to a lesion of the opposite side of the brain.

crossed h. See *alternate h.*

facial h. Motor paralysis of one side of the face.

infantile h. Unilateral spastic paralysis of arm, leg, and face, caused by heterogeneous lesions of the contralateral cerebral hemisphere. Characteristically there is adduction at the shoulder, flexion at the elbow, pronation and flexion of the wrist, and sometimes equinovarus deformity of the foot. Choreoathetosis, epilepsy, or mental retardation may be present.

spastic h. A form characterized by rigidity of the affected extremities.

spinal h. One due to a lesion of the spinal cord.

He-mip'ter-a [*hemi-*; G. *pteron*, wing]. An order of insects, the true bugs. Formerly the suborder Heteroptera of the order Hemiptera which also included the suborder Homoptera.

H. heteroptera. Formerly a suborder now classified as the order Heteroptera.

hem"i-py"o-cy'a-nin. See under *pyo* compounds.

hem"i-ra-chis'chi-sis (hem"ee-ra-kis'ki-sis) [*hemi-*; G. *rhachis*, spine; *schisis*, cleavage]. Incomplete spina bifida. See *spina bifida occulta*.

hem"i-scler-o-der'ma al'ter-nans. A skin disease characterized by indurated, and later degenerative, lesions, atrophy and sclerosis, resulting in discoloration, pigmentation, or vitiligo, often accompanied by fibrosis and atrophy of the under

lying muscles and atrophy of the underlying bones. It occurs in zones corresponding to the metameres, indicating neurogenic influence.

hem″i-sco-to′sis [*hemi-*; G. *skotōsis*, darkening]. A dark spot in one half of the visual field.

hem″i-sec′tion [*hemi-*; L. *sectum*, from *secare*, to cut]. Act of division into two lateral halves; bisection. —**hemisect′** *v.t.*

h. of the spinal cord. A section of one lateral half of the spinal cord. See also Brown-Séquard *paralysis*.

hem″i-so′mus [*hemi-*; G. *sōma*, body]. An individual with one side of the body imperfectly developed.

hem″i-spasm [*hemi-*; G. *spasmos*, spasm]. A spasm affecting only one side of the body.

hem″i-sphere [*hemi-*; G. *sphaira*, ball]. The lateral half of the cerebrum or cerebellum.

dominant h. The cerebral hemisphere which controls certain motor activities, such as movements of speech; usually the left hemisphere in right-handed individuals.

hem″i-spher-ec′to-my [*hemi-*; G. *sphaira*, ball; *ektomē*, cutting]. Surgical excision of one cerebral hemisphere.

He-mis′po-ra [*hemi-*; G. *spora*, seed]. A genus of fungi whose species are contaminants.

H. stellata. A species which has been found in osteoperiostitis, cold abscesses, and sporotrichoid lesions.

hem″i-spo-ro′sis [*hemi-*; *spora*; G. *-ōsis*, condition]. Infection by *Hemispora*.

hem″i-syn-er′gi-a [*hemi-*; G. *synergos*, working together]. Synergia on one lateral half of the body; due to asynergia on the opposite side.

hem″i-sys′to-le (hem-ee-sis′to-lee) [*hemi-*; G. *systolē*, contraction]. Contraction of the left ventricle after every second atrial contraction so that for each two beats of the heart only one pulse beat is felt.

hem″i-ter′a-ta [*hemi-*; G. *teras*, monster]. Individuals with malformations not grave enough to be called monstrous. —**hemiterat′ic**, *adj.*

hem″i-ter′pene. Any of a group of hydrocarbons of the general formula C_5H_8, as isoprene, related to terpenes.

hem″i-thy″roid-ec′to-my [*hemi-*; G. *thyreoeidēs*, shield-shaped; *ektomē*, excision]. Removal of one lateral lobe of the thyroid gland.

hem″i-ver′te-bra [*hemi-*; L. *vertebra*, vertebra]. A congenital anomaly of the spine in which one lateral half of a vertebra fails to develop, resulting in the absence of half of the vertebra.

hem″i-zo-na. See *herpes zoster*.

hem″i-zy′gote [*hemi-*; G. *zygōtos*, yoked]. An individual with only one of a given pair of genes, as in the case of the sex-linked genes in the human male, or with only one of each of all the pairs of genes, as in the male bee. —**hemizygous**, *adj.*

hem′lock [AS. *hemlic*]. 1. An evergreen tree (genus *Tsuga*) of North America and Asia. 2. A large herb (*Conium maculatum*) of the carrot family which yields coniine; also called poison hemlock. See *conium*.

he-mo-, hae-mo- (hee-mo-, hem-o-) [G. *haima*, blood]. A combining form signifying *of* or *pertaining to the blood*.

he-mo-al″ka-lim′e-ter, hae″mo-al″ka-lim′e-ter [*haima*; Ar. *al-qili*, ashes of saltwort; G. *metron*, measure]. An apparatus for estimating the degree of alkalinity of the blood.

he-mo-bil″i-ru′bin (-bil-i-roo′bin) [*haima*; L. *bilis*, bile; *ruber*, red]. 1. Bilirubin as it occurs normally in serum before passing through the hepatic cells. 2. The form of bilirubin present normally in blood serum, which is increased in amount in hemolytic jaundice. It gives a negative direct van den Bergh reaction, is determined quantitatively by the indirect reaction, and is extracted by chloroform. Also see *cholebilirubin*.

he-mo-blast, hae-mo-blast. A primitive blood cell. See stem *cell*.

he-mo-cho′ri-al (hee-mo-kor′ee-ul, hem-o-) [*haima*; G. *chorion*, chorion]. Pertaining to maternal blood and chorionic ectoderm.

he″mo-chro″ma-to′sis [*haima*; G. *chrōma*, color; *-ōsis*, condition]. A disease characterized by pigmentation of the skin, cirrhosis, and diabetes mellitus, accompanied by excessive deposition of iron-containing pigments in parenchymal tissues, particularly the liver and pancreas. The cutaneous pigmentation is due only in part to iron-containing pigments. —**hemochromatot′ic**, *adj.*

he″mo-chro-mo-gen. The compound formed by the union of heme with a nitrogen-containing substance, as a protein or base.

he-mo-chro-mom′e-ter, hae-mo-chro-mom′e-ter [*haima*; *chrōma*; G. *metron*, a measure]. Colorimeter; an instrument for estimating the amount of hemoglobin in the blood, by comparing a solution of the blood with a standard solution of picrocarminate of ammonium.

he-mo-cla′si-a (hee-mo-klay′zhuh, -zee-uh, hem-o-), **he-moc′la-sis, hae-moc′la-sis** [*haima*; G. *klasis*, breaking]. Hemolysis; destruction of the erythrocytes. —**hemoclas′tic**, *adj.*

he-mo-con″cen-tra′tion, hae-mo-con″cen-tra′tion [*haima*; L. *con-*, together; *centrum*, center]. An increase in the concentration of blood cells resulting from the loss of plasma or water from the blood stream; anhydremia.

he-mo-co′ni-a, hae″mo-co′ni-a [*haima*; G. *konis*, dust]. Minute, colorless, highly refractive particles of fat found in the blood. Also called *blood dust*, *chylomicrons*.

he-mo-co-ni-o′sis, hae-mo-co″ni-o′sis [*haima*, *konis*, G. *-ōsis*, increase]. The condition of having an abnormal amount of hemoconia in the blood.

he-mo-cry-os′co-py, hae-mo-cry-os′co-py (hee-mo-krye-os′ko-pee, hem-o-) [*haima*; G. *kryos*, icy cold; *skopein*, to examine]. Determining the freezing point of the blood.

he-mo-cu′pre-in. A copper protein, having a molecular weight of about 35,000 and containing 2 atoms of copper per molecule, obtained from erythrocytes of several animals.

he-mo-cy′a-nin, hae-mo-cy′a-nin [*haima*; G. *kyanos*, blue]. A respiratory pigment which contains copper, found in the blood of certain invertebrates.

he-mo-cyte, hae-mo-cyte [*haima*; G. *kytos*, cell]. A blood cell.

he″mo-cy′to-blast, hae″mo-cy′to-blast [*haima*; *kytos*; G. *blastos*, germ]. 1. The cell considered by some to be the primitive stem cell, giving rise to all blood cells. Syn., *lymphoidocyte*. 2. In some terminologies, a large lymphocyte which, under certain conditions, may be a precursor of monocytes and granulocytes (Maximow). —**hemocytoblas′tic**, *adj.*

he-mo-cy″to-blas-to′ma. See *stem-cell leukemia*.

he-mo-cy″to-gen′e-sis, hae″mo-cy″to-gen′e-sis. Hematopoiesis.

he-mo-cy-tol′y-sis, hae″mo-cy-tol′y-sis (hee-mo-sigh-tol′i-sis, hem-o-) [*haima*; *kytos*; G. *lysis*, loosing]. The dissolution of blood cells.

he-mo-cy-tom′e-ter, hae-mo-cy-tom′e-ter [*haima*; *kytos*; G. *metron*, measure]. A instrument for estimating the number of blood cells. —**hemocytometry**, *n.*

he"mo-cy"to-poi-e'sis. Hematopoiesis.

he"mo-cy"to-zo'on, he"mo-cy"to-zo'on [*haima*; *kytos*; G. *zōon*, living being]. A protozoan parasite inhabiting the red blood cells.

he-mo-di- [G. *haimodiaein*, to set the teeth on edge]. Hypersensitivity of the teeth.

he"mo-di"ag-no'sis, hee"mo-di"ag-no'sis [G. *haima*, blood; *diagnōsis*, deciding]. Diagnosis by examination of the blood.

he"mo-di-al'y-sis. The process of exposing blood to a semipermeable membrane, thereby removing from it or adding to it diffusible materials, rate and direction being a function of the concentration gradient across that membrane.

he"mo-di'a-stase. The amylolytic enzyme of blood.

he"mo-di-lu'tion [*haima*; L. *diluere*, to dilute]. A condition of the blood in which the ratio of blood cells to plasma is reduced.

he"mo-drom'o-graph, hee"mo-drom'o-graph [*haima*; G. *dromos*, course; *graphein*, to write]. An instrument for registering small variations in the velocity of the blood stream.

he"mo-dro-mom'e-ter, hee"mo-dro-mom'e-ter [*haima*; *dromos*; G. *metron*, measure]. An instrument for measuring the velocity of the blood current. —**hemodromom'etry**, *n.*

he"mo-dy-nam'ics, hee"mo-dy-nam'ics (hee"mo-dye-nam'icks, -di-nam'icks, hem"...) (*haima*, G. *dynamis*, power). The study of how the physical properties of the blood and its circulation through the vessels affect blood flow and pressure.

he"mo-dy"na-mom'e-ter, hee"mo-dy"na-mom'e-ter. See *hemadynamometer*.

he"mo-en"do-the'li-al [*haima*; G. *endon*, within; *thēlē*, nipple]. Pertaining to maternal blood and to the endothelium of the chorionic villi.

he"mo-e-ryth'rin, hee"mo-e-ryth'rin (hee"mo-eh-rith'rin, hem"o-, hem"o-err'thrin) (*haima*, G. *erythros*, red). A red pigment found in the blood of worms and other invertebrates.

he"mo-flag'el-late, hee"mo-flag'el-late (hee"mo-fladj'e-late, hem"o-) (*haima*, L. *flagellare*, to whip). Any protozoan flagellate living in the blood of its host.

he"mo-fo'lin. An unidentified factor essential for growth of *Leuconostoc citrovorum* but apparently not folinic acid, produced by incubating hemopoietic tissue (human leukocytes or myeloid elements of bone marrow) with folic acid.

he"mo-fus'cin, hee"mo-fus'cin (hee"mo-fuss'in, hem"...) (*haima*, L. *fuscus*, dark). A yellow or brown pigment of unknown origin which gradually accumulates in smooth and cardiac muscle with age and is one of the two principal pigments of hemochromatosis. It contains no iron, but considerable sulfur and has been suggested as being related to melanin.

he"mo-gen'e-sis, hee"mo-gen'e-sis. See *hematogenesis*.

hemo-genic. A proprietary multivitamin capsule with ferrous gluconate.

he"mo-glo'bin, hem"o-glo'bin [*haima*; L. *globus*, ball]. The respiratory pigment of erythrocytes, having the reversible property of taking up oxygen (oxyhemoglobin, HbO_2) or of releasing it (reduced hemoglobin, Hb) depending primarily on the oxygen tension of the medium surrounding it. At tensions of 100 mm Hg or more, hemoglobin is fully saturated with oxygen; at 50 mm Hg, oxygen is progressively more rapidly dissociated. Other factors affecting dissociation of oxyhemoglobin are temperature, electrolytes, and carbon dioxide tension (*Bohr effect*). Human hemoglobin consists of four heme molecules (iron-protoporphyrin) linked to the protein, globin, which is composed of complexly folded polypeptide chains. Globin may vary in its essential properties, resulting in definite normal and genetically determined abnormal types, which may be differentiated on biochemical, pathophysiological, and genetic bases; it may differ in the fetus and in the adult, and also in different animal species. The average molecular weight of hemoglobin is about 67 000. Hemoglobin combines with carbon monoxide to form the stable compound **carboxyhemoglobin**. Oxidation of the ferrous iron of hemoglobin to the ferric state produces **methemoglobin** (also called *ferrihemoglobin*). Abbreviated Hb. Syn., *ferrohemoglobin*. See Table of Normal Values of Blood Constituents and American Classification of Proteins, in the Appendix.

fetal (F) h. The type of hemoglobin present in amounts of 50%–90% at birth and gradually replaced by normal adult hemoglobin; it continues to be present, and may be produced, in small amounts normally after the third year of life. It is distinguished from all other types by its resistance to denaturation by alkali. See *one-minute denaturation value*. It is found in abnormally large amounts in sickle-cell anemia, thalassemia, and sometimes in hereditary spherocytosis, and in some acquired hematologic disorders, as leukemia, lymphoma, multiple myeloma, and aplastic anemia.

h. carbamate. Carbaminohemoglobin.

mean corpuscular h. See *MCH*.

mean corpuscular h. concentration. See *MCHC*.

normal adult (A) h. The type of hemoglobin found in normal adults, which moves as a single component in an electrophoretic field, is rapidly denatured by highly alkaline solutions, and contains two titratable sulfhydryl groups per molecule. It forms orthorhombic crystals. Specific A hemoglobin antibodies have been obtained.

sickle-cell (S) h. The type found in sickle-cell anemia, which moves more rapidly than normal adult (A) hemoglobin in the Tiselius apparatus at pH 6.1, and which contains three titratable sulfhydryl groups per molecule. In its reduced form, S hemoglobin is only one-hundredth times as soluble as oxy-S-hemoglobin, and, most importantly, the molecules line up in an orderly arrangement (tactoids) resulting in the sickled shape of the erythrocytes. In high concentration, S hemoglobin will gel. In sickle-cell anemia, S hemoglobin comprises 75% or more of total hemoglobin, the remainder being of the fetal (F) type; in the heterozygous condition, sickle-cell trait, type S comprises from 20% to 50%, the remainder being the normal adult (A) type of hemoglobin.

type C h. The hemoglobin which has the greatest mobility of the types thus far observed in the electrophoretic field of the Tiselius apparatus at pH 6.1. It is found in a variant of sickle-cell anemia in combination with sickle-cell hemoglobin (type S) or with both the S type and the fetal hemoglobin (F type). It is also encountered in the heterozygous condition (A and C hemoglobin) the homozygous condition resulting in a hemolytic process, and in the C variant of thalassemia in combination with normal and fetal hemoglobin.

type D h. A rare type, resembling sickle-cell hemoglobin (S) in its electrophoretic mobility but being more soluble. It is encountered in a rare variant of sickle-cell anemia (S and D hemoglobin).

type E h. A rare type recently reported, and thought to occur frequently in Thailand, probably producing an anemia resembling thalassemia.

he mo·glo"bi ne mi a, hee"mo-glo"bi ne mi a [*haima; globus; haima*]. A condition in which the hemoglobin is dissolved out of the red cells, and is held in solution in the serum.

he mo·glo"bin if'er·ous [*haima, globus*]. Yielding or carrying hemoglobin.

h mo glo bi nom te ha m gl bi nom e·ter [*haima, globus; G. metron, measure*]. An instrument for determining the hemoglobin concentration of the blood. —**hemoglobinometry** n.

Newcomer h. A small colorimeter with colored glass standards.

Rieoker–Dare h. One of the simplest of the more accurate clinical instruments based on comparison of film of undiluted blood of uniform depth with red glass plate of graduated intensity which has been suitably standardized.

he mo·glo"bi no phil'ic, hee mo gl "bi no·phil'ic. See *hemophilic*, 1.

he m glo"bi nu'ri a [*haima; globus; G. ouron, urine*]. The presence of hemoglobin in the urine, due either to its solution out of the red cells or t disintegration of the red cells. —**hemoglobi u-ric,** *adj*

epidemic h. Hemoglobinuria of the newborn; associated with jaundice, cyanosis, and nervous symptoms. Also called *Winckel' disease*.

march h. A paroxysmal hemoglobinuria noted in soldiers after strenuous marching.

paroxysmal h. A form characterized by repeated acute attacks of hemoglobinuria. It can occur in malaria. See paroxysmal cold *h.*, paroxysmal nocturnal *h.*

paroxysmal cold h. A rare disorder characterized by the sudden passage of hemoglobin in the urine following local or general exposure to cold, often considered manifestation of syphilis.

paroxysmal nocturnal h. A rare disorder of insidious onset and chronic course characterized by hemolytic anemia and marked ttacks of hemoglobinuria occurring chiefly at night. The defect lies with the erythrocytes which cannot tolerate lowering of the blood pH, such as occurs t night.

toxic h. That form due to poisoning.

he'mo·gram [*haima; G. gramma, letter*]. A differential count of the white cells to show the qualitative as well as the quantitative variations in the cells.

he mo·his'ti·o blast [*haima; G histion, web blastos, germ*]. The hypothetical reticuloendothelial cell from which all the cells of the blood are eventually differentiated; stem cell.

he mo·hy per·ox'i·a. Any elevation of the oxygen tension of the blood above that normally existing t sea level.

he mo·hy po 'i·a. Any depression of the xygen tension of the blood below that normally existing t sea level

he"mo·ko ni a, hee"mo-ko ni a. See *hemoconia*.

he mo·ko ni sis, hee"mo ko"ni·o sis. See *hemoconiosis*.

he mo·lith [*haima, G lithos, stone*]. A stone or concretion within the lumen of blood vessel, or incorporated in the wall of blood vessel, as in the pampiniform plexus in the aged

he'mo·lymph, hee mo·lymph [*haima; L. lympha, water*]. 1 Blood and lymph. 2. The circulating nutritive fluid of certain invert brates.

he·mol'y·sin, hee·mol'y·sin (hee mol sn, hem·ol' hee mo lye sin, hem o·) [*haima, G lysis, loosing*]. A substance produced in the blood which frees hemoglobin from th red cells.

bacterial h. That formed by the action of bacteria.

cold h. See cold *agglutinin*.

immune h. One formed by the animal body in response to the injection of erythrocytes of another species.

he·mol'y·sis (hee·mol'i sis, hem·ol') [*haima; lysis*] The destruction of red blood cells and the resultant escape of hemoglobin. —**hemolyt'ic,** *adj.*

conditioned h. A phenomenon observed in hemagglutination tests for American trypanosomiasis in which red blood cells previously sorbed with polysaccharide fraction of *Trypanosoma cruzi* are hemolyzed by contact with the serum of the same patient.

he·mol"y to poi·et'ic, hee mol"y to·poi·et'ic [*haima; G lysis, to loose; poiein, to make*]. Relating to the process of blood destruction and blood making.

he mo lyze, hee mo·lyze [*haima; lysis*]. Produce hemolysis. —**hemolyza'tion,** n.

he mo·ma·nom e·ter hee mo ma nom e·ter [*haima, G manos, thin; metron, measure*]. A manometer used in estimating blood pressure.

he mo·m di as ti num, hee mo·me"di·as·ti num. See *hematomediastinum*.

he·mom e·ter hee mom' ter [*haima; metron*]. 1. Hemoglobinometer 2. Hemadynamometer. —**hemometry** n.

he"mo me'tra hee"mo me'tra. See *hematometra*.

he mo·my' lo·gram" [*haima, G myelos, marrow gramma, letter*]. A differential count of the white blood cells.

h mo pa thol o gy he m p th l' gy [*haima, G. pathos, disease logos, word*]. The science of the diseases of the blood.

he mop thy Any disease of the blood.

hereditary h. Any hereditary disease of the blood, such as sickle-cell anemia, eosinophilia, hereditary spherocytosis, or disturbed hemoglobin metabolism also called *familial hemopathy*.

he mo·per"i car'di um, hee"mo per"i·car' di·um [*haima; G. perikardios, about the heart*]. Blood in the pericardial sac. If abundant, cardiac tamponade may occur

he mo p r"i t n um h mo per"i to·ne um [*haima; G peritonaion, membrane which contains the lower viscera*]. An effusion of blood int the peritoneal cavity

he'mo phage ha mo phage (hee mo·fayd hem o·fayd) [*haima; G phagein, t eat*]. A phagocytic cell which destroys red blood cells. —**hemophag'ic, hemoph agous,** *adj*

he mo pha gi a, hee"mo·pha gi (*haima; phagein*). 1 Ingestion of blood as therapeutic agent. 2. Feeding on the blood of another organism. 3. Phagocytosis of the red blood cells.

he mo·phil [*haima; G philein, to love*]. Denoting an organism growing preferably on blood mediums.

he mo phil'i·a (hee"mo·fill ee·uh, hem o·) [*haima; philein*]. A sex-linked, hereditary disease occurring only in males but transmitted by females. It is characterized by impaired blood coagulation, attributed by some to deficiency in the plasma of effective thromboplastinogen. Sometimes called *hemophilia A*, formerly called *bluterkrankheit*.

h. B In some nomenclatures, this term refers t *Christmas disease*. See *plasma thromboplastin component*.

h. neonatorum. See hemorrhagic *disease* of the newborn.

he mo·phil'i ac [*haima; philein*]. One who is affected with hemophilia.

he mo phil'ic [*haima; philein*] 1. *I biology* pertaining to bacteria growing well in culture media containing hemoglobin 2. Pertaining t hemophilia. 3. Pertaining to hemophiliac.

he"mo-phil'oid. Hemophilialike: used to designate conditions clinically similar to hemophilia, but due to some other defect in the clotting mechanism. See Christmas *disease, PTA deficiency.*

He-moph'i-lus [*haima*; *philein*]. A genus of bacteria of the family Parvobacteriaceae.

H. aegyptius. The causative agent of acute contagious conjunctivitis: also called *Koch-Weeks* bacillus. Syn., *H. conjunctivitidis.*

H. conjunctivitidis. *H. aegyptius.*

H. ducreyi. A species of small, Gram-negative bacilli tending to grow in short chains; the cause of chancroid.

H. duplex. A species responsible for infections of the cornea and conjunctiva; pathogenic for the human eye only. Syn., *Moraxella lacunata.*

H. influenzae. Certain strains of this species produce conjunctivitis and influenzal meningitis and have a definite invasive power, but in respiratory infections commonly follow some other microorganism. Formerly called *Bacillus influenzae,* *Pfeiffer's bacillus.*

H. pertussis. This species is the causative agent of whooping cough: also called *Bordet-Gengou* bacillus.

H. suis. This species together with a filtrable virus produces swine influenza.

he"mo-pho'bi-a (hee"mo-fo'bee-uh, hem"...), **hem"a-to-pho'bi-a** (hem"uh-to-fo'bee-uh, hee"muh-to-) [*haima*; G. *phobos*, fear]. Morbid fear of the sight of blood.

he"moph-thal'mi-a, he"moph-thal'mus [*haima*; G. *ophthalmos*, eye]. Hemorrhage into the vitreous.

he"moph-thi'sis (hee"moff-thigh'sis, hem"off-), **he-moph'thi-sis** [*haima*; G. *phthisis*, wasting away]. Anemia due to undue degeneration or inadequate formation of red blood cells.

he"mo-plas'tic, hem"mo-plas'tic. See *hemato-plastic.*

he"mo-pleu'ra. See *hemothorax.*

he"mo-pneu"mo-tho'rax, hem"mo-pneu"mo-tho'rax (hee"mo-new"mo-thor'acks, hem"o-) [*haima*; G. *pneuma*, air; *thorax*, chest]. A collection of air and blood within the pleural cavity.

he"mo-poi-e'sis, hem"mo-poi-e'sis. See *hemato-poiesis.*

he"mo-poi'e-tin. Intrinsic factor. See under *factor.*

he"mo-por'phy-rin. See *porphyrin.*

he"mo-pre-cip'i-tin, hem"mo-pre-cip'i-tin. See *precipitin.*

hemo-protein. Trade-mark for a mixture of protein fractions of digested ox blood used in nonspecific protein therapy.

he-mop'ty-sis, hee-mop'ty-sis [*haima*; G. *ptysis*, spitting]. The spitting of blood from the larynx, trachea, bronchi, or lungs.

parasitic h. A disease caused by the fluke *Paragonimus westermani,* which lodges in the lungs. The diagnosis is made by finding the characteristic ova in the sputum.

he"mo-pyr'role, he"mo-pyr'rol. Any of several pyrrole derivatives formed by reduction of heme.

hem'or-rhage, hem'or-rhage (hem'o-ridj, hem'...ridj) [*haima*; G. *rhēgnynai*, to burst]. An escape of blood from the vessels, either by diapedesis through intact walls or by flow through ruptured walls. —**hemorrhag'ic** (hem"o-radj'ick) *adj.*

ante-partum h. Bleeding from the uterus before delivery.

autogenous h. One due to causes within the body; not traumatic.

capillary h. Oozing of blood from the capillaries.

cerebral h. Bleeding from blood vessels in the cerebrum, either traumatic or due to disease.

choroidal h. Bleeding of the vessels of the choroid of the eye, discoverable by ophthalmoscopic examination.

cyclic h. (a) Excessive menstruation. (b) Menstrual bleeding of ectopic endometrial implants, as in endometriosis.

external h. Hemorrhage that is visible to the eye by the escape of blood to the exterior of the body from a wound or ruptured tissue.

extradural h. Hemorrhage into the space outside of the dura mater.

internal h. Bleeding which is concealed by escape into a cavity, as the intestine, peritoneal cavity, or within the cranium.

petechial h. Hemorrhage in the form of petechiae, rounded spots.

post-partum h. Bleeding occurring shortly after childbirth.

primary h. One that immediately follows any traumatism.

secondary h. One that occurs some time after the traumatism.

splinter h. A subungual hemorrhage resembling a splinter under the nail; found in cases of subacute bacterial endocarditis.

subarachnoid h. Bleeding between the arachnoid and the pia mater of the brain.

subdural h. Hemorrhage between the dura mater and the pia arachnoid. It usually results from injury to the meningeal vessels on the inner side of the dura mater.

toxemic accidental h. Bleeding resulting from partial or complete, gradual or sudden, separation of the placenta which is normally implanted in a woman 28 weeks or more pregnant and whose catheter specimen urine contains albumin.

hem"or-rhag'ic ne-phro"so-ne-phri'tis. See epidemic hemorrhagic *fever.*

hem"or-rhag'in. See *endotheliolysin.*

hem"or-rhoi'dal, hem"or-rhoi'dal [*haima*, G. *rhein*, to flow]. 1. Pertaining to or affected with hemorrhoids. 2. Of or pertaining to blood vessels, nerves, etc., of the anus.

hem"or-rhoid-ec'to-my, hem"or-rhoid-ec'to-my [*haima*; *rhein*, G. *ektomē*, excision]. Surgical removal of hemorrhoids.

hem'or-rhoids [G. *haimorrhois*, vein liable to discharge blood]. An enlarged and varicose condition of the veins of the lower portion of the rectum and the tissues about the anus. Syn., *piles.*

esophageal h. Varicose veins existing in the lower portion of the esophagus due to portal vein obstruction.

external h. Those outside of the sphincter ani.

internal h. Those within the anal orifice.

prolapsed h. Those in which the enlarged veins protrude through the anal sphincter.

thrombosed h. Those in which the blood within the varicosity has become thrombosed.

he"mo-sal'pinx, hem"mo-sal'pinx. See *hemato-salpinx.*

he"mo-sid'er-in, hem"mo-sid'er-in [G. *haima*, blood; *sidēros*, iron]. An iron-protein complex occurring in tissues, probably a storage form of iron, and by many considered to be a product of the decomposition of hemoglobin. It is in many characteristics similar to ferritin.

he"mo-sid"er-i-nu'ri-a. Hemosiderin in urine, observed in association with hemoglobinemia, pernicious anemia, hemolytic anemia, and hemochromatosis.

he"mo-sid"er-o'sis, hem"mo-sid"er-o'sis. See *hemochromatosis.*

he"mo-sper'mi-a, hem"mo-sper'mi-a. See *hematospermia.*

he"mo-sta'si-a, hem"mo-sta'si-a (hee"mo-stay'zhuh, -zee-uh, -shuh, -see-uh, hem"o-), **he"mo-**

sta sis, hae mo-sta sis [*haima*; G. *stasis*, standing] 1 Stagnation of the blood. 2. Arrest of flow of blood. —hemostat'ic, haemostat'ic, *adj*

he mo-stat, hae mo stat [*haima*, G *statikos*, causing to stand]. An agent or instrument which arrests the flow of blood.

he m stat'ic, hae m stat'ic [*haima*, *statikos*]. An agent that arrests hemorrhage. Syn., *hemostyptic*.

he mo-styp tic. See *hemostatic*.

he"mo-ta-chom ter has mo-ta-chom e-ter (hee mo ta kom'i tur hem o-) [*haima*, G *tachos*, speed *metron*, measure]. An instrument for measuring the rate of flow of blood. —hemotachometry, *n*.

he mo ther" peu'tics, hae mo-ther"a-peu'tics. See *hemotherapy*.

he mo ther' py (hee mo therr uh-pee, hem) [*haima*; G. *therapeia*, treatment]. The treatment of disease by means of blood or blood derivatives.

he"mo-th rax, hae mo-tho rax [*haima*; G. *thōrax*, thorax]. An accumul tion of blood in the pleural cavity Syn. *hemopleura*.

he mo-tox'in, hae mo-tox'in [*haima*; G *toxikon*, poison]. A cytotoxin capable of destroying red blood cells. —hemotoxic, *adj*

he mo-trophe, hae mo-trophe (hee mo troaf trof hem hem-ot ro-fee) [*haima*, G. *trophē*, nourishment]. All the nutritive substances supplied to the embryo from the maternal blood stream in viviparous animals having deciduate placenta. —hemetroph'ic, *adj*

he mo-tym pa num [*haima*; G *tympanon*, drum] Blood in the tympanic cavity

he mo zo'in [*haima*; G *zōion*, living being] A dark brown or red-brown pigment, seen within plasmodia, which has been formed from the disintegrated hemoglobin.

he mo zo on, hae"mo-zo on. See *hematozoon*.

hemp [AS *henep*] *Cannabis sativa*, the bast fiber is used for textile purposes.

black Indian h. Apocynum.

Canada h. Apocynum. Also called *Canadian h.*

I dian h. *Cannabis*

hen'bane Hyoscyamus.

Hench, Philip (1896–) American physician known for his extensive research in the field of rheumatic diseases In 1950 he shared the N bel prize in medicine with E. C. Kendall and T Reichstein for their discovery of cortisone and its properties

Hench and Aldrich s test. See under *test*.

hen dec yl. The univalent organic radical $CH_3(CH_2)_{10}$— Syn *undecyl*.

Henderson Lawrence Joseph [*American biochemist* 1878–1942] Did mportant research on the acid-base balance of the blood. The *Henderson-Hasselbalch equation* expressing the pH of buffered solution is based on the relative quantities of the acid and salt components of the buffer In its usual application to the bicarbonate buffer system of the blood, the equation is.

$$pH = pK_1 + \log \frac{(BHCO_3)}{(H_2CO_3)}$$

Here pK equals 6 1

Henderson Melvin Starkey [*American orthopedic surgeon*, 1883–]. Devised numerous orthopedic procedures, including method of tendon suspension for habitual dislocation of the shoulder in which he drilled through the acromion and the h meral head and tilised section of peroneus longus tendon for anchorage. Called *Henderson operation*.

H nderson, Y ndell [*American physiologist*, 1873–1944]. Made important studies of respiration. With C. G Douglas, J S. Haldane, and E. C. Schneider studied the physiologi effects of atmospheric pressure at high altitudes (1911) In *Henderson test* for determining whether an individual was good risk for anesthesia, bility to hold breath for 30 seconds or more was considered normal, whereas failure to do so, in the bsence of pulmonary or cardiac insufficiency was taken as indicating acidosis and thus contraindicating anesthesia.

Henderson-Hasselbalch equation. See under Lawrence Joseph *Henderson*.

Henke, Philipp Jakob Wilhelm (1834–1896) German anatomist. The potential space between the spinal column and the pharynx is called *Henke's space*. *Henke's triangle* is an area of the lower bdomen between the lateral border of the rectus abdominis muscle and the fold of the groin

Henle, Friedrich Gustav Jakob [*German anatomist* 1809–85]. Made important contributions to histology our knowledge of epithelial tissue is said to have begun with his work. H described the epithelium of the skin and of the intestines, and defined columnar and ciliated epithelium (1837) The hyaline formation of epithelial cells in the cornea is known as *Henle's warts*. He demonstrated the presence of smooth muscle in the walls of arterioles (1841) *Henle fenestrated membrane* is one of the layers of elastic tissue in the media and intima of large arteries. The endoneurium is known as the *sheath of Henle*. The suprameatal spine is called *Henle's spine*. See also *layer* of Henle, *loop* of Henle. The ampulla of the ductus deferens formerly was called *Henle ampulla*. See also *muscle* of Henle.

Henneberg reflex. See *Lasèr-Henneberg hard palate reflex*.

Henoch, Eduard (1820–1910) German pediatrician who made many contributions to pediatrics He described form of nonthrombocytopenic purpura associated with gastrointestinal symptoms, called *Henoch purpura*, and also form of purpura, usually fatal, which he named purpura fulminans.

hen pu-e. See *genender*.

Henriques-Sørensen method for amino-acid nitrogen. See under *method*.

hen ry [after Joseph Henry American physicist, 1797 1878] The unit of electric inductance; the inductance in circuit such that an electromotive force of 1 volt is induced in the circuit by variation of an inducing current t the rate of 1 ampere per second.

Henry William [*English chemist*, 1774–1836]. Discovered *Henry' law* the amount of gas dissolved in liquid is proportional to the pressure of the gas hence, if th temperature is constant, the ratio of the concentrations of the gas in gaseous form and in solution is constant.

Henry' melano-flocculation test. See under *test*.

Henschen, Salom n Eberhard (1847 1930) Swedish pathologist. By astut clinical and gross-pathological observations he first proposed the existence of cortical visual receptive area in the region of the calcarine fissure in the occipital lobe (Brodmann area 17) and of visual association in the parastriate areas (18 and 19 of Brodmann)

H nseleit, Kurt [*German internist*, 1907]. Described the ornithine cycle, also called *Krebs-Henseleit cycl* See under *Krebs*. See also *Krebs cycle*.

Hensen, Victor [*German pathologist*, 1835–1924].

Described the ductus reuniens, also called *Hensen duct* or *canal*. See also *cells* of Hensen, Hensen disk, Hensen's node.

hep"ap-t sis. See *hepatoptosis*.

he'par [G. *hēpar* liver] 1. The liver. 2. An obsolete designation for substances having the color of liver generally compound of sulfur as *hepar sulfuris*.

h. lobatum. See syphilitic *sarrhosis*.

h. siccatum. The dried and powdered liver of swine freed from blood.

h. sulfuris. Sulfurated potash.

hep'a rin, he'pa rin [*hēpar*]. A substance or mixture of substances occurring in liver and other tissues, having the property of prolonging the clotting time of blood, presumably by preventing conversion of prothrombin to thrombin. It appears to be polysulfuric acid ester of the glucoprotein mucoitin. By virtue of its anticoagulant action heparin is used as substitute for citrate in blood transfusions, to prevent postoperative thrombosis and embolism, in treatment of thrombophlebitis, in vascular surgery and for other conditions. —**heparinized**, *adj.* **hep arinize**, *v.* **hep arinoid**, *adj.*

h. sodium. A white or pale-colored amorphous powder; it is official and is used for preparing solutions for intravenous use. It must contain at least 100 U.S.P. Heparin Units per milligram.

hep"a-rin- emia. The presence of heparin in the circulating blood.

hep"a-rin o-cyte. A cell which produces heparin the term suggested for the mast cell.

hep" tal'gi [*hēpar*; G. *algos*, pain]. Neuralgic pain in the liver. —**hepatalgic**, *adj.*

hep" tec'to-my [*hēpar*; G. *ektomē* excision]. Excision of the liver or of part of it.

he-pat'ic [G. *hēpatikos*, of the liver]. Pertaining to the liver.

he-pat'ic. A hepatic medicine.

He-pat'i-ca [*hēpatikos*]. Liverwort; genus of ranunculaceous plants. **H. triloba** and **H. acutiloba** formerly were employed in the treatment of hepatic, renal, and pulmonary complaints.

he-pat'ic ar'ter y. See Table of Arteries in the Appendix.

he-pat'i-co- [*hēpatikos*]. A combining form for *hepatic*.

he-pat"i-co-du" -de-nos to my [*hēpatikos*; L. *duodeni*, twelve; G. *stoma*, mouth]. Anastomosis between the hepatic duct and the duodenum.

he-pat"i-co-en"ter os'to-my [*hēpatikos*; G. *enteron*, intestine; *stoma*]. The surgical establishment of communication between the hepatic duct and the intestine.

he-pat"i-co-gas-tros'to-my [*hēpatikos*; G. *gastēr* stomach; *stoma*]. Anastomosis between the hepatic duct and the stomach.

he-pat"i-co li thot'o-my [*hēpatikos*; G. *lithos*, stone; *tomē*, cutting]. Surgical removal of biliary calculus from the liver or any of its ducts.

he-pat"i-co-pan"cre at'i [*hēpatikos*; G. *pankreas*, pancreas]. Relating to the liver and the pancreas.

he-pat"i-cos'to my [*hēpatikos*; G. *stoma*, mouth]. The formation of fistula in the hepatic duct for the purpose of drainage.

he pat"i cot my [*hēpatikos*; G. *tomē*, cutting]. Incision into the hepatic duct.

he-pat'ic veins. See Table of Veins in the Appendix.

hep tit'i-des (hep uh tit'i dees) (pl. of *hepatitis*). A term denoting various inflammatory diseases of the liver.

hep ti'tis [G. *hēpar* liver; -*itis*, inflammation]. Inflammation of the liver.

amebic h. A diffuse inflammation of the liver due to *Endamoeba histolytica*. It may resolve or lead to hepatic abscess.

anicteric h. Hepatitis without demonstrable jaundice.

arsenical h. Hepatitis occurring in an individual exposed to arsenic. Many cases, formerly attributed to the use of antisyphilitic arsenical compounds, may in fact have been due to the virus of homologous serum hepatitis or infectious hepatitis.

chronic interstitial h. Cirrhosis of the liver.

epidemic h. See infectious *h*.

hemorrhagic h. A term applied to the lesions in the liver which often accompany eclampsia. Grossly the liver is enlarged, showing foci of necrosis and of hemorrhage. Microscopically the necrosis is usually peripheral in the lobule but may be widespread. The widened peripheral sinusoids may contain thrombi of agglutinated erythrocytes. Hemorrhage may be slight in the periphery of the lobule, more extensive in the lobule and, rarely may constitute hematoma. Exudation is absent or only slight; the lesion is not primarily or principally inflammatory.

homologous serum h. A form of viral hepatitis transmitted by the parenteral injection of the human blood or blood products contaminated with the causative agent. The term is sometimes used to designate specifically that form of the disease, due to specific strains of virus, called *SH virus* or *hepatitis virus B*, in which the incubation period is from 2 to 5 months, and transmission by nonparenteral routes is unusual. Also called *postvaccinal h.*, *homologous serum jaundice*, *syringe jaundice*, *inoculation jaundice transfusion jaundice*, *late arsphenamine jaundice*.

infectious, infective h. A form of viral hepatitis probably transmitted by oral spread of the causative agent, and frequently epidemic in form; sometimes specifically that form of the disease due to specific strains of virus, called *IH virus* or *hepatitis virus A*, in which the incubation period is from two to seven weeks and transmission by parenteral routes is rare. This disorder must be distinguished from spirochetal jaundice (Weil's disease). Syn. *catarrhal jaundice*, *epidemic hepatitis*, *epidemic jaundice*.

interstitial h. A condition in which there are associated degeneration or necrosis of hepatic parenchymal cells and infiltration of lymphocytes, plasma cells, and large mononuclear cells, and sometimes polymorphonuclear leukocytes in the portal canals. Also called *acute nonsuppurative h.*

postvaccinal h. See homologous serum *h*.

syphilitic h. An inflammation of the liver usually seen in the latter stages of early syphilis. Also see *syphilitic cirrhosis*.

toxic h. Inflammation of the liver resulting from the action of toxic compounds. Examples of hepatotoxins include such diverse compounds as the chlorinated hydrocarbons, phosphorus, and alkaloids of the retrorsine type.

viral h. Any inflammation of liver due to viral infection, most commonly infectious *h.* and homologous serum *h*.

hep ti za'tion [*hēpar*]. The conversion of tissue into liverlike substance, as of the lungs during pneumonia. **Red hepatization** refers to the gross appearance of the lungs during the first few days of consolidation in lobar pneumonia. **Gray hepatization** refers to their appearance just prior to resolution. —**hep atized**, *adj.*

hep a to-, hepat- [*hēpar*]. A combining form denoting *the liver*, *hepatic*.

hep t h lan gi du o d n t my (hep uh to ko lan"jee o-dew"o-di-nos'to-mee) [*hē-*

par; G. *chole*, bile; *aggeion*, vessel; L. *duodeni*, twelve; G. *stoma*, mouth]. Establishment of communication by surgical means between the hepatic duct and the duodenum.

hep"a·to·cho·lan"gi·o·en"ter·os'to·my [*hepar*; *chole*; *aggeion*; G. *enteron*, intestine; *stoma*]. Anastomosis between the hepatic duct and some portion of the small intestine.

hep"a·to·cho·lan"gi·o·gas·tros'to·my [*hepar*; *chole*; *aggeion*; G. *gaster*, stomach; *stoma*]. Anastomosis between the hepatic duct and stomach.

hep"a·to·cho·lan"gi·o·je"ju·nos'to·my (hep"uh·to·ko·lan"jee·o·jee"joo·nos'to·mee, ·jed"oo·nos'to·mee) [*hepar*; *chole*; *aggeion*; L. *jejunus*, empty; *stoma*]. The surgical establishment of communication between the hepatic duct and the jejunum.

hep"a·to·col'ic [*hepar*; G. *kolon*, colon]. Relating to the liver and the colon.

hep"a·to·cu'pre·in. A copper-containing protein, similar to hemocuprein, but isolated from liver.

hep"a·to·cys'tic [*hepar*; G. *kystis*, bladder]. Pertaining to the liver and the gallbladder.

hep"a·to·du"o·de'nal (hep"uh·to·dew"o·dee'nul, ·dew·od'i·nul) [*hepar*; L. *duodeni*, twelve]. Relating to the liver and the duodenum.

hep"a·to·du"o·de·nos'to·my [*hepar*; *duodeni*; G. *stoma*, mouth]. Old term for hepaticoduodenostomy.

hep"a·to·fla'vin. Riboflavin.

hep"a·to·gen'ic, hep"a·tog'en·ous (hep"uh·tod'ji·nus) [*hepar*; G. *gennaein*, from *gignesthai*, to be produced]. Produced by, or in, the liver.

hep'a·to·gram [*hepar*; G. *gramma*, letter]. A graphic record of the liver pulse.

hep"a·tog'ra·phy [*hepar*; G. *graphein*, to write]. Roentgenography of the liver.

hep"a·to·li·e'nal (hep"uh·to·lye·ee'nul, ·lye'e·nul) [*hepar*; L. *lien*, spleen]. Pertaining to the liver and the spleen.

hep"a·to·li"e·nog'ra·phy [*hepar*; *lien*; G. *graphein*, to write]. Radiographic examination of the liver and spleen.

hep'a·to·lith [*hepar*; G. *lithos*, stone]. A calculus in the biliary passages of the liver.

hep"a·to·li·thec'to·my. Hepaticolithotomy.

hep"a·to·li·thi'a·sis [*hepar*; *lithos*; NL. *-iasis*, condition]. A diseased condition characterized by the formation of gallstones in the biliary passages of the liver.

he·pat"o·ly'sin (hi·pat"o·lye'sin, hep"uh·tol'i·sin) [*hepar*; G. *lysis*, loosing]. A cytolysin acting especially on liver cells.

hep"a·to'ma [*hepar*; G. *-oma*, tumor]. A neoplasm, usually malignant, derived from and composed of cells resembling those of liver parenchyma. It is often multicentric and hence thought to be derived from nodular foci of regeneration. Syn. *liver-cell carcinoma*.

hep"a·to·meg'a·ly, hep"a·to·me·ga'li·a [*hepar*; G. *megas*, large]. Enlargement of the liver.

hep"a·tom·phal'o·cele. See under umbilical *hernia*.

hep"a·to·pex"y [*hepar*; G. *pexis*, fixing]. Surgical fixation of a movable, or ptosed, liver, usually by utilizing additional supportive power of the round and the falciform ligaments.

hep"a·top·to'sis (hep"uh·top·to'sis, hep"uh·to·to'sis) [*hepar*; G. *ptōsis*, falling]. Abnormally low position of the liver in the abdomen, due to stretching of attachments to the diaphragm.

hep"a·to·re'nal [*hepar*; L. *renalis*, of the kidneys]. Relating to both the liver and kidney.

hep"a·tor'rha·phy [*hepar*; G. *rhaphē*, suture]. Suturing of the liver following an injury or an operation.

hep"a·tor·rhex'is [*hepar*; G. *rhēxis*, breaking]. Rupture of the liver. Obs.

hep"a·tos'co·py [*hepar*; G. *skopein*, to examine]. Inspection of the liver, as by laparotomy or peritoneoscopy.

hep"a·to'sis [*hepar*; G. *-ōsis*, condition]. 1. Enlargement of the liver due to obstructive dilatation of intrahepatic biliary passages. 2. A degeneration or inflammation of the liver which cannot be clearly distinguished clinically.

hep"a·to·sple"no·meg'a·ly [*hepar*; G. *splēn*, spleen; *megas*, large]. Enlargement of the liver and spleen.

hep"a·to·sple·nop'a·thy [*hepar*; *splēn*; G. *pathos*, disease]. Any combination of disorders of the liver and spleen.

hep"a·to·ther'a·py [*hepar*; G. *therapeia*, treatment]. Therapeutic use of liver or liver extract.

hep"a·tot'o·my [*hepar*; G. *tomē*, cutting]. Incision into the liver.

hep"a·to·tox'in [*hepar*; G. *toxikon*, poison]. 1. An injurious substance, such as the chlorinated hydrocarbons, phosphorus, alkaloids of the retrorsine type, which acts especially on parenchymal cells of the liver. 2. A poisonous or deleterious product elaborated in the liver. —**hepatotox'ic**, *adj.*

hepicebrin. Trade-mark for a multivitamin product in capsules.

hepicoleum. Trade-mark for several preparations containing vitamins A and D.

hep·tal'de·hyde. Heptyl aldehyde. $CH_3(CH_2)_5CHO$. Colorless liquid of aromatic odor. It has been used experimentally to induce certain retrogressive changes in tumors of animals. Syn., *enanthaldehyde*.

hep'tane. C_7H_{16}. n-Heptane. A liquid hydrocarbon of the paraffin series, contained in petroleum and also obtained by dry distillation from the resin of *Pinus sabiniana*. Used as a solvent and anesthetic.

hep'tose. Any member of the division of the monosaccharides containing seven carbon atoms.

heptuna. A proprietary hematinic consisting of ferrous sulfate with vitamins A, D and vitamin-B complex in capsules.

hep'tyl. The univalent organic radical $CH_3(CH_2)_6$—.

hep"tyl·al'de·hyde. See *heptaldehyde*.

hep"tyl·res·or'ci·nol (hep"til·ri·zor'si·nole, ·nawl). 2,4-Dihydroxyphenyl-n-heptane. A germicidal substance which has been used as an intestinal antiseptic.

her'a·path·ite, **her'ap·a·thite** [after William *Herapath*, English chemist, 1796–1868]. Quinine iodosulfate: platelike crystals of a pale olive-green by transmitted light, and a golden green to reddish green by reflected light. Has strong polarizing ability.

herb (urb, hurb) [L. *herba*, grass]. 1. A plant without a woody stem. 2. A plant used for medicinal purposes or for its odor or flavor. —**herb'al**, *adj.*

her·ba'ceous [L. *herbaceus*, grassy]. *In biology*, applied to stems or other organs that have a tender juicy consistence and perish at the close of the growing season; of the nature of herbs.

herb'al (hur'bul, ur'bul) [L. *herba*, grass]. A book on the medicinal virtues of herbs.

Herbert, Herbert [English ophthalmic surgeon, 1865–1942]. Devised an operation for glaucoma, in which he displaced a wedge-shaped flap of sclera, without completely excising it, in order to produce a filtering cicatrix.

her·biv'o·rous [L. *herba*, grass; *vorare*, to devour]. Living on vegetable food.

Herbst, Ernst Friedrich Gustav [German anatomist, 1803–93]. Described a type of sensory end

organs, resembling Pacinian corpuscles, found in the mucous membrane of the tongue of the duck; called *Herbst' bodies* or *corpuscles*.

herd in'stinct. The fundamental psychic urge to identify oneself with a group and to function in the same manner as the group; group feeling.

he·red'i·ty [L. *hereditas*, heirship]. The inborn capacity of the organism to develop ancestral characteristics; it is dependent upon the constitution and organization of the cell or cells which form the starting point of the new individual. In biparental reproduction this starting point is the fertilized egg. —**hered'itary**, *adj.*

her'e·do- [L. *heres*, heir]. In medicine, a combining form used for *hereditary*. Often used erroneously in the sense of congenital, as in heredosyphilis.

her"e·do·at"ax·i·a (herr"i-do-ack"i-see-uh, -see-uh, -shuh, -see-uh, herr"i-do-ack-sye") [*heres*; G. *a-*, not; *taxis*, motion]. A rare, familial disease characterized by paroxysmal paralysis accompanied by severe pains in the extremities, a feeling of marked weakness, and an inability to carry out movements.

her"e·do·fa·mil'i·al [*heres*; L. *familia*, household]. Characterizing a disease or condition which occurs in more than one member of a family and is suspected of being inherited.

her"e·do·path"i·a a·tac'ti·ca pol"y·neu·ri"ti·for'mis. A disease, seen most often in children of consanguineous marriages, manifested as appetite loss, ataxia, general weakness, muscular atrophy, weak to absent reflexes, dryness and desquamation of skin, progressive development of neurogenic deafness, atypical retinitis pigmentosa, and nyctalopia. Daylight vision, senses, and intelligence are normal.

Hering, Heinrich Ewald [German physiologist, 1866–1948]. Described the carotid sinus reflex. See under *reflex*.

Hering, Karl Ewald Konstantin [German physiologist, 1834–1918]. Advanced a theory of color vision (1872). Devised a test for binocular vision. Described the connection between a hepatic cord and a bile duct, called *Hering's canal*. *Hering's law* states that the distinctness or purity of a sensation depends on the proportion of its intensity to the total intensities of all simultaneous sensations. See also Hering-Breuer *reflex*, *Traube-Hering waves* under *wave*.

her'it·age [L. *heres*, heir]. In genetics, the sum total of the genes or characteristics transmitted from parents to their children.

her·maph'ro·dite [G. *hermaphroditos*, a person partaking of the attributes of both sexes, from *Hermaphroditos*, son of Hermes and Aphrodite]. An individual showing hermaphroditism. See *pseudohermaphrodite*. —**hermaphrodit'ic**, *adj.*

her·maph'ro·dit·ism (hur-maf'ro-dye-tiz-um) **her·maph'ro·dism** [*Hermaphroditos*]. A condition characterized by the coexistence in an individual of ovarian and testicular tissue. It is rare in humans (Young admits only 20 human cases) but more common in lower forms. Pseudohermaphroditism is a more common condition.

bilateral h. That in which the individual has an ovary and testis on each side, seen in humans.

lateral h. The form of human hermaphroditism in which there is an ovary on one side and a testis on the other.

ovotesticular h. The rare form in which an ovotestis is present on one or both sides.

unilateral h. The form in which there is an ovary and testis on one side with either an ovary or testis on the other.

Her·me'ti·a (hur-mee'shee-uh). A genus of the soldier fly family Stratiomyidae. The species

H. illucens is an occasional cause of intestinal myiasis.

her·met'ic [G. *Hermès*, Hermes]. Protected from exposure to air; airtight.

her'ni·a [L.]. The abnormal protrusion of an organ or a part through the containing wall of its cavity beyond its normal confines. The term applies usually to the abdominal cavity and implies the existence of a covering or sac. Syn., *rupture*. Also see *prolapse*. See Plate 39. —**hernial**, *adj.*

abdominal h. See ventral *h.*

acquired h. A noncongenital form resulting from strain, weight lifting, or as the direct sequence of operation, muscular weakening, etc.

annular h. See umbilical *h.*

bladder h. The protrusion of any part of the urinary bladder through any opening in the abdominal wall. Syn., *cystic h.*, *vesical h.*

cerebral h. A protrusion of the brain through an acquired opening in the skull, as a result of operation, injury or disease. Syn., *h. of the brain*.

complete h. One in which the hernial sac and its contents have escaped through the opening; applied especially to inguinal hernias where the sac and its contents are to be found in the scrotum or labium majus.

concealed h. One which is not evident by ordinary manual examination.

congenital h. One in which the defect is present in fetal life and exists at birth. Examples of this form are inguinal hernias in which the processus vaginalis remains patent, leading to the early descent of intestine into the scrotum, and diaphragmatic hernias in which abdominal organs have passed into the thoracic cavity.

crural h. See femoral *h.*

cystic h. See bladder *h.*

diaphragmatic h. One which passes through the diaphragm into the thoracic cavity; may be congenital, acquired, or traumatic, and may contain the stomach, small intestine, and colon. Usually a false hernia.

direct h. An inguinal hernia in which the sac does not leave the abdominal cavity through the abdominal inguinal ring but through a defect in the floor of Hesselbach's triangle, between the inferior epigastric artery and the outer edge of the rectus muscle.

diverticulum h. A type of sliding hernia which contains a diverticulum of the urinary bladder; also hernia of an intestinal diverticulum.

duodenojejunal h. See retroperitoneal *h.*

epigastric h. A hernia in the linea alba, between the umbilicus and the xiphoid process, generally found in young adult males; the contents of the sac are usually extraperitoneal fat, lipomas, and, only rarely, bowel. Also called *preperitoneal h.*, *fatty h.*

false h. One which has no sac covering the hernial contents.

femoral h. That involving the femoral canal; the second most common hernia. Found more often in women, it is usually small and painless, often remaining unnoticed. The neck lies beneath the inguinal ligament and lateral to the tubercle of the pubic bone. Syn., *crural h.* See Plate 4.

foraminal h. (a) A so-called hernia of the medulla into the foramen magnum of the skull, from increased intracranial pressure. (b) A false hernia of a loop of bowel through the epiploic foramen.

funicular h. A variety of congenital, indirect hernia into the processus vaginalis which is closed below and open above.

h. of the brain. See cerebral *h.*

h. of the lungs. A rare, congenital anomaly associated with fissured chest, in which a portion of

the lung protrudes through the opening, the swelling enlarging with each expiration.

h. of the nucleus pulposus. Protrusion of the substance of the intervertebral disk into the spinal canal, causing pressure upon the cord, nerves, or cauda equina.

hiatus h. A form of hernia through the esophageal hiatus, usually small, intermittent hernia of part of the stomach.

ileoappendicular h. See retroperitoneal *h.*

incarcerated h. A term applied either to an irreducible or to strangulated hernia.

incisional h. One occurring from an operative or accidental incision, the predisposing factors being wound infection, prolonged drainage, or interference with nerve supply. Also called *postoperative h.*, *posttraumatic h.*

incomplete h. An inguinal hernia in which the sac has not passed through the subcutaneous inguinal ring; also called *bubonocele.*

indirect h. An inguinal form which follows the spermatic cord into the scrotum or, in the female, the round ligament into the labium majus. The hernial sac leaves the abdomen through the internal abdominal ring, traverses the inguinal canal and passes through the external abdominal ring. See Plate 39. Syn., *lateral hernia, oblique hernia.*

industrial h. An incomplete inguinal hernia, or dilatation of the inguinal canal, producing signs and symptoms which make the subject a poor risk for employment in certain industries.

infantile h. A congenital, indirect, inguinal hernia in which the vaginal process is sealed high in the canal and remains open below. The sac then invaginates or passes behind the tunica vaginalis, so that two or three layers of peritoneum lie over the contents.

inguinal h. A hernia through the inguinal canal. This variety constitutes more than four-fifths of all hernias. See Plate 4.

inguinolabial h. An inguinal hernia which has descended into the labium majus.

intermuscular h. An interstitial hernia in which the sac lies between the muscles of the abdominal wall. Syn., *interparietal h.*

internal h. One occurring within the abdominal cavity; a sac of peritoneum, containing intraabdominal contents, protrudes through a normal or abnormal opening. It may be retroperitoneal or intraperitoneal.

interparietal h. See intermuscular *h.*

intersigmoid h. A hernia involving the prolapse of a loop of intestine into the subsigmoid fossa at the root of the mesosigmoid, left side.

interstitial h. A rare form of congenital hernia in which the sac leaves the inguinal canal and lies between layers of abdominal muscles; often associated with undescended testis.

intraperitoneal h. A type of false, internal hernia in which some of the intraabdominal contents pass through an anomalous opening in the mesentery, omentum, or broad ligaments.

iris h. Prolapse of the iris after iridectomy or following trauma.

irreducible h. A hernia which cannot be returned through the opening by manipulation; due to adhesions or blocking by fecal impaction, not by gaseous distention.

ischiadic h. See sciatic *h.*

ischiorectal h. See perineal *h.*

labial h. Complete, indirect inguinal hernia into the labium majus.

lateral h. See indirect *h.*

lumbar h. A hernia passing out of the abdomen through the lumbar triangle, resulting usually from operation, lumbar abscess, or injury.

masked h. A type of ventral hernia in which the hernial sac is situated within the abdominal wall.

mesenteric h. One in which a loop of intestine or a portion of omentum or other viscus has passed through an opening in the mesentery.

oblique h. See indirect *h.*

obturator h. A rare hernia through the upper part of the obturator foramen; occurs principally in women. Also called *pelvic h.*

omental h. A hernia which contains only omentum.

perineal h. A hernia passing through the pelvic diaphragm to appear as a rectal hernia, vaginal hernia, or bladder hernia; also called *ischiorectal h.*

postoperative h. See incisional *h.*

rectal h. A condition in which the small bowel, or other abdominal contents, protrudes through the rectovesical or rectouterine pouch, carrying the anterior rectal wall through the anus.

reducible h. One whose contents can be replaced through the hernial opening.

retroperitoneal h. Hernia into a recess of the peritoneum, as into a paraduodenal recess. Syn., *duodenojejunal h.*, *ileoappendicular h.*

retrovesical h. A hernia behind the urinary bladder into the retrovesical space.

Richter's h. A form of enterocele in which only part of the intestinal wall is situated within the hernial sac.

sciatic h. That through one of the sciatic notches. Also called *ischiadic h.*

scrotal h. Any hernia which is found within the scrotum. See complete *h.*, inguinal *h.*, sliding *h.* See Plate 39.

sliding h. A variety of indirect, irreducible inguinal hernia in which a section of a viscus, usually cecum or sigmoid colon, forms one wall of the sac; generally a large scrotal hernia.

Spigelian h. A ventral hernia occurring in the semilunar line.

strangulated h. A hernia involving intestine in which circulation of the blood and the fecal current are blocked. If unrelieved, it leads to ileus and necrosis of the intestine.

synovial h. The protrusion of the inner lining of a joint capsule through the outer portion of the capsule.

true h. One having a sac, usually of peritoneum, covering the hernial contents.

umbilical h. One occurring through the umbilical ring, either early in life (infantile) from imperfect closure, or later (acquired) from diastasis of the rectus abdominis muscles, obesity or muscular weakness. Congenital midline defects lead to hernia into the umbilical cord, or omphalocele. If the liver is contained in the sac, it is called *hepatomphalocele.* Syn., *exumbilical h.*

vaginal h. A perineal hernia which follows the course of the vagina after leaving the abdomen, and which may enter the labium majus; resembles labial inguinal hernia.

ventral h. A hernia of any part of the abdominal wall not involving the inguinal, femoral, or umbilical openings. It exists in three varieties: median, lateral, and postincisional. Syn., *abdominal h.*, *epigastric h.*

vesical h. See bladder *h.*

her'ni·ate [*hernia*]. To form a hernia. —**herniated,** *adj.*; **hernia·tion,** *n.*

her'ni·o- [*hernia*]. A combining form used to mean *hernia.*

her'ni·o·plas"ty [*hernia*; G. *plassein*, to form]. Plastic operation for the radical cure of hernia.

her"ni·or'rha·phy [*hernia*; G. *rhaphē*, suture]. Any operation which includes suturing for the repair of hernia.

her'ni-o-tome [*hernia*; G. *tomos*, cutting]. A special knife or curved bistoury with blunt end, sometimes used in operations for hernia.

her"ni-ot'o-my [*hernia*; G. *tomē*, a cutting]. An operation for the relief of irreducible hernia, by cutting through the neck of the sac. Often wrongly used to indicate hernioplasty.

her'o-in. Diacetylmorphine. $C_{21}H_{23}NO_5$. White, odorless, bitter crystalline powder.
h. hydrochloride. $C_{21}H_{23}NO_5.HCl.H_2O$. White, odorless, bitter crystalline powder soluble in two parts of water; sedative and narcotic. Because of the pronounced danger of addiction, federal law forbids the manufacture or importation of heroin or its salts in the U.S.A. See *diamorphine hydrochloride*.

her'o-in-ism [*heroin*, Ger. trade name]. Addiction to heroin; a very prevalent form of drug addiction.

Herophilus [*Alexandrian surgeon and anatomist in Egypt*, 335–280 B.C.]. Has been called the father of anatomy. Systematically studied the anatomy of the brain and spinal cord. Described the ventricles of the brain, and also the spleen, the liver and the genital organs. See *confluens sinuum*, formerly called *torcular Herophili*.

her"pan-gi'na. A mild disease probably caused by a virus of the Coxsackie group and characterized by fever, anorexia, dysphagia, and grayish-white papules or vesicles surrounded by a red areola on the pharynx, uvula, palate, and tonsils, or tongue.

her'pes (hur'peez) [G. *herpēs*, shingles, from *herpein*, to creep]. An acute inflammation of the skin or mucous membrane, characterized by the development of groups of vesicles on an inflammatory base. —**herpet'ic**, *adj.*
h. circinatus. Dermatitis herpetiformis.
h. corneae. See ocular *h.*
h. cornealis. See *h.* ophthalmicus.
h. desquamans. A type of endodermophytosis. See *tinea imbricata*.
h. facialis. A type of herpes simplex occurring on the face, usually about the lips. May also occur in the mouth and pharynx. Syn., *h. febrilis*, *h. labialis*. Also called *coldsore*.
h. febrilis. See *h.* facialis.
h. genitalis. See *h.* progenitalis.
h. gestationis. A type of dermatitis herpetiformis occurring during pregnancy.
h. iris. A form of erythema multiforme, characterized by vesicles growing in a ring. It is usually seen on the backs of the hands and feet.
h. labialis. See *h.* facialis.
h. ophthalmicus. Herpes zoster of the ophthalmic branch of the fifth cranial nerve; also called *h. cornealis*.
h. progenitalis. A form of herpes simplex in which vesicles from the size of a pin head to the size of a small pea occur on the genitalia. Also called *h. praeputialis*, *h. genitalis*.
h. simplex. An acute disorder characterized by groups of vesicles on an erythematous base. Commonly recurrent, and at times seen in the same place. Due to a virus.
h. tonsurans. See *tinea capitis*.
h. zoster. Herpes in which the lesions are distributed in relation to the course of a cutaneous nerve, and, as a rule, unilateral. They are often seen in the line of an intercostal nerve, but may follow in the course of any nerve. The outbreak of the eruption is often preceded and may be followed by severe neuralgic pain, referred to as *herpetic neuralgia*. It is a systemic infection, caused by a virus, and may be serious in elderly or debilitated persons. Syn., *shingles*, *zoster*. Also called *zona*, *ignis sacer*.
h. zoster oticus. Aural herpes associated with facial paralysis and otalgia; due to disease of the seventh cranial nerve. Also called *Hunt's syndrome*.
ocular h. Infection of the lids, conjunctivae, or corneae by the virus of herpes simplex. It is characterized by groups of blisters on an erythematous, edematous base.

her·pet'ic neu·ral'gi·a. See *herpes zoster* under *herpes*.

her·pet'i·form [*herpēs*; L. *forma*, form]. Resembling herpes; having groups of vesicles.

her"pe·tol'o·gy [G. *herpeton*, reptile; *logos*, word]. The branch of zoology concerned with the structure, classification, and habits of reptiles.

Her"pe·to·mo'nas [*herpeton*; G. *monas*, unit]. A genus of the family Trypanosomidae parasitic only in invertebrate hosts. —**herpetomonad**, *adj.*, *n.*

her'que·in. An antibiotic substance obtained from cultures of *Penicillium herquei*.

Herrick, James Bryan [*American physician*, 1861–]. First to describe accurately the sickle-cell type of anemia (1910); sometimes spoken of as *Herrick's anemia*. Gave a classic description of coronary thrombosis (1912).

Herrmannsdorfer diet. See S.H.G. *diet*.

Herter, Christian Archibald [*American biochemist and pathologist*, 1865–1910]. Described infantilism due to a chronic intestinal disease similar to if not identical with sprue (1908). See *celiac disease*.

Herter-Foster method for indole. See under *method*.

Hertwig, Wilhelm August Oskar [*German embryologist*, 1849–1922]. Remembered for his description of the portion of the enamel organ which forms a mold for the root of a developing tooth; called *epithelial sheath of Hertwig*. Demonstrated the fact that the spermatozoon enters the ovum and that union of male and female pronuclei occurs.

Hertzian rays. See under *ray*.

Herxheimer, Karl [*German dermatologist*, 1861–1944]. Described spiral fibers found in the germinative layer of the epidermis, called *Herxheimer's fibers*. With K. Hartmann, described acrodermatitis atrophicans chronica (1902). See also *Jarisch-Herxheimer reaction*.

Herxheimer's technic for staining fat. See the various Sudan stains under *stain*.

Heryng, Théodor [*Polish laryngologist*, 1847–1925]. Described a solitary ulcer of the anterior fauces, of obscure origin resembling a herpetic vesicle, called *Heryng's benign ulcer*. Described a sign indicating empyema of the maxillary sinus; *Heryng's sign* is an infraorbital shadow seen when an electric light is placed in the mouth.

herz'stoss' (hairts'shtoss") [Ger., heartbeat]. The widespread impact of the heart during systole against a large part of the entire precordium, seen especially in thin patients with cardiac hypertrophy, in contradistinction to the point of maximal impulse (*spitzenstoss*) seen normally.

Heschl's gyri. See under *gyrus*.

hes·per'e·tin. $C_{16}H_{14}O_6$; 3',5,7-trihydroxy-4'-methoxyflavanone, the aglycone of hesperidin, obtained by hydrolysis of the latter or by synthesis. Certain derivatives may have a favorable effect in certain types of capillary fragility. See also *citrin*.

hes·per'i·din, **hes"per·i'din.** $C_{28}H_{34}O_{15}$; hesperetin-7-rhamnosido-D-glucoside, occurring in the rind of many citrus fruits; on hydrolysis it yields hesperetin, rhamnose and D-glucose. It is a white, crystalline powder practically insoluble in water. Pure hesperidin provides no protection against capillary fragility; certain water-soluble deriva-

tives of it have such action, commonly attributed to vitamin P. See *citrin*.

Hess, Walter Rudolf (1881–) Swiss physiologist, who studied the control of the autonomic nervous system by the hypothalamus through his technique of applying pin-point electrical stimulation to specific areas in the brain. Nobel laureat in physiology and medicine (1949). He also contributed to knowledge of blood viscosity and strabismus (Hess screen, 1911).

Hesse, Hermann [*German pharmacologist, nineteenth century*]. Remembered for his isolation, with P. L. Geiger, of atropine (1833).

Hesselbach, Franz Caspar (1759–1816) German surgeon and anatomist. A complete femoral hernia and a direct inguinal hernia are each sometimes called *Hesselbach's hernia*. He also described the interfoveolar ligament, formerly called *Hesselbach's ligament*. See also Hesselbach's *triangle*.

het″er·a·del′phi·a. See *thoracoacephalus*.

het″er·a·del′phus [*heteros*; *adelphos*]. Thoracoacephalus. —**heteradelphous,** *adj.*

het″er·a·de·ni·a [*heteros*; G. *adēn*, gland]. Any abnormality in the formation or location of gland tissue. —**heteraden′ic,** *adj.*

het″er·a′li·us [*heteros*; *halios*, useless]. A double monster in which the parasite is only rudimentary and without direct connection with the umbilical cord of its host.

het″er·aux·e·sis [*heteros*; G. *auxēsis*, increase]. A type of allometry which deals with the relation of a part to the whole or to another part, during the course of growth and development of the organism. Also see *allomorphosis*.

het″er·e·cious, het″er·oe·cious [*heteros*; G. *oikos*, house]. Parasitic upon different hosts at different stages of growth. —**heterecism,** *n.*

het″er·es·the·si·a (het″ur·ess·thee′zhuh, -zee·uh) [*heteros*; G. *aisthēsis*, sensation]. A condition characterized by variations in the degree of response to a cutaneous stimulus as it passes from one point to another on the surface.

het′er·o-, heter- [*heteros*]. A combining form signifying *other*, *other than usual*, *different*.

het″er·o·ag·glu′ti·nin [*heteros*; L. *agglutinare*, to glue to]. An agglutinin in normal blood having the property of agglutinating foreign cells, including the blood corpuscles of other species of animals.

het″er·o·al′bu·mose. A variety of albumose soluble in salt solutions, insoluble in water and precipitated by saturation with sodium chloride or magnesium sulfate.

het″er·o·al″bu·mo·su′ri·a [*heteros*; L. *albus*, white; G. *ouron*, urine]. Presence of heteroalbumose in the urine.

het″er·o·at″om. Any atom, linked in the ring of a heterocyclic compound, other than a carbon atom, as, for example, the nitrogen atom of pyridine, C_5H_5N.

het″er·o·aux′in. 3-Indoleacetic acid, $C_{10}H_9NO_2$. White, crystalline powder insoluble in water, soluble in alcohol. An activator of growth substance (auxin). Used experimentally as a plant growth stimulant.

het″er·o·aux·one (het″ur·o·awk′sohn). A growth-promoting substance. See *heteroauxin*.

het″er·o·blas′tic [*heteros*; G. *blastos*, germ]. Arising from tissue of a different kind.

het″er·o·cel′lu·lar [*heteros*; L. *cellula*, small storeroom]. Formed of cells of different kinds.

het″er·o·ceph′a·lus [*heteros*; G. *kephalē*, head]. A fetal monster with two heads of unequal size.

het″er·o·chro′ma·tin [*heteros*; G. *chrōma*, color]. Originally the substance of heterochromosomes; e.g., the Y chromosome. It has been extended to include any chromatin similarly characterized by an excessive amount of desoxyribose-type nucleoprotein, by a looser structure, and functionally by a more generalized metabolism other than the more specific action of genes in the euchromatin which gives the familiar Mendelian ratio. —**heterochromat′ic,** *adj.*

het″er·o·chro′mi·a [*heteros*; *chrōma*]. A difference in coloration in two parts of a structure, or in two structures that are normally alike, as the irises of the two eyes. —**heterochro′mous,** *adj.*

het″er·o·chro′mo·some [*heteros*; *chrōma*; G. *sōma*, body]. An allosome.

het″er·o·chro′ni·a [*heteros*; G. *chronos*, time]. 1. Variation in time relationships. 2. Departure from the typical sequence in the time of formation of organs or parts. 3. Difference in chronaxies of tissue elements functionally related, as between the chronaxie of a muscle and that of its nerve. —**heterochron′ic, heteroch′ronous,** *adj.*

het″er·o·cy′clic (het″ur·o·sigh′click, ·sick′lick) In *chemistry*, pertaining to compounds of the closed-chain or ring type in which the ring atoms are of two or more dissimilar elements. See *homocyclic*.

Het″er·o·der′a [*heteros*; G. *derē*, neck]. A genus of minute nematodes of the superfamily Anguilluloidea.

H. radicicola. A species parasitic on the roots and stems of many edible plants. The ova are sometimes found in the feces of man and may be mistaken for hookworm eggs.

het″er·o·did′y·mus. See *heterodymus*.

het″er·o·dont″ In *biology*, having teeth of more than one shape, as does man. See also *homodont*.

het″er·o·dro′mi·a [*heteros*; G. *dromos*, course]. Better conduction in one than in the other direction in a nerve.

het″er·od′y·mus [*heteros*; G. *-dymos*, -fold]. A type of thoracopagus parasiticus in which the parasitic twin is represented by a head, neck, and thorax implanted in the thoracic or the epigastric wall of the host.

het″er·oe′cious. See *heterecious*.

het″er·o·er′o·tism [*heteros*; G. *erōs*, love]. The direction of the sexual desire toward another person or toward any object other than oneself. —**heteroerot′ic,** *adj.*

het″er·o·fer·men′ta·tive [*heteros*; L. *fermentum*, ferment]. Pertaining to the ability of certain bacteria, such as *Lactobacillus brevis*, *L. buchneri*, and *Leuconostoc dextranicum* to form lactic acid, ethyl alcohol, acetic acid, carbon dioxide, and glycerol from glucose, as well as mannitol from levulose. This reactivity sets aside these organisms as heterofermentative, in contrast to the *homofermentative* lactic acid bacteria which produce only lactic acid from glucose and other sugars.

het″er·o·ga·met′ic (het″ur·o·ga·met′ick, ·ga·mee′tick) [*heteros*; G. *gamos*, marriage]. Referring to the production of two types of germ cells in regard to the sex chromosomes. The male, being XY in constitution, is the heterogametic sex.

het″er·og′a·my [*heteros*; *gamos*]. The conjugation of gametes of unlike size and structure, as in higher plants and animals.

het″er·o·ge·ne·ous [*heteros*; G. *genos*, race]. Differing in kind or nature; composed of different substances; not homogeneous. —**heterogene′ity,** *n.*

het″er·o·gen′e·sis [*heteros*; G. *genesis*, production]. Alternation of generations in the complete life cycle, especially the alternation of a dioecious generation with one or more parthenogenetic generations and sometimes with an alternation of hosts, as in many trematode parasites. —**heterogenet′ic,** *adj.*

het″er·o·gen′ic [*heteros*; G. *gennaein*, from *gignesthai*, to be produced]. Pertaining to polyvalent or

polyploid organisms which contain different alleles for any given locus; similar to the term *heterozygous*, used for diploid organisms.

het″er-og′e-nous [*heteros*; G. *genos*, race]. Of, relating to, or derived from a different species, as heterogenous graft.

het″er-og′e-ny [*heteros*; G. *gonos*, offspring]. An alternation of generations in which a generation of males and females is followed by a hermaphroditic generation.

het′er-o-graft″. A graft of tissue obtained from an animal of one species and transferred to the body of another animal of a different species; common contraction of *heterogenous graft*. Also called *heteroplastic graft*.

het″er-o-he″mag-glu′ti-nin (het″ur-o-hee″muh-gloo′ti-nin, hem″uh-gloo′ti-nin). See *heteroagglutinin*.

het″er-o-he-mol′y-sin (-hem-ol′i-sin, -hee″mo-lye′sin, -hem″o-lye′sin) [*heteros*; G. *haima*, blood; *lysis*, loosing]. A hemolytic amboceptor natural or developed by immunization, against the red cells of a species different from that used to obtain the amboceptor.

het″er-o-hyp-no′sis [*heteros*; G. *hypnos*, sleep; -*ōsis*, condition]. Hypnosis induced by another as opposed to *autohypnosis*.

het′er-oid [*heteros*; G. *eidos*, form]. Formed diversely as enclosed structures which differ from their investment.

het″er-o-i′on. A complex ion resulting from adsorption of a simple ion by a relatively large molecule, as by a protein.

het″er-o-in-tox″i-ca′tion [*heteros*; L. *in*, in; G. *toxikon*, poison]. Intoxication by a poison not produced within the body.

het″er-o-ki-ne′si-a (het″ur-o-ki-nee′shuh, -see-uh, -zhuh, -zee-uh, het″ur-o-kigh-) [*heteros*; G. *kinēsis*, motion]. The execution of body movements which are opposite to those ordered.

het″er-o-ki-ne′sis. *1.* In *physiology*, movement resulting from external stimuli.

het″er-o-lac′tic. Pertaining to a type of sugar fermentation in which lactic acid and several other products, e.g., CO_2 and alcohol, are produced; ordinarily, fermentation by microorganisms.

het″er-o-la′li a. Heterophemy.

het″er-o-lat′er-al [*heteros*; L. *lateralis*, from *latus* side]. Pertaining to, or situated on, the opposite side.

het″er-ol′o-gy [*heteros*; G. *logos*, word]. Deviation from the normal in structure, organization, or time or manner of formation. —**heterol′ogous**, *adj.*

het″er-o-ly′sin (het″ur-o-lye′sin, het″ur-ol′i-sin). See *heterohemolysin*.

het″er-o-mer′ic [*heteros*; G. *meros*, part]. Applied to neurons originating in one lateral side of the spinal cord and sending processes to the other side.

het″er-o-mer′ous [*heteros*, *meros*]. Pertaining to substances unlike in chemical composition.

het″er-o-met″a-pla′si-a (-met″uh-play′zhuh, -zee-uh, -shuh, -see-uh) [*heteros*; G. *metaplassein*, to remodel]. The change in the character of a tissue after transplantation to another part of the body.

het″er-o-me-tro′pi-a [*heteros*; G. *metron*, measure; *ōps*, eye]. The condition in which the refraction in the two eyes is dissimilar.

het″er-o-mor′phic [*heteros*; G. *morphē*, form]. *1.* Differing in size or form as compared with the normal. *2.* In *chemistry*, crystallizing in different forms. *3.* In *zoology*, having different forms at different stages of the life history. *4.* In *cytology*, unlike in form or size; applied to either chromosome of a synaptic pair of unlike chromosomes, as an X and a Y chromosome. —**heteromorphism**, *n.*

het″er-o-mor′pho-sis (het″ur-o-mor″fo-sis, -mor-fo′sis) [*heteros*; G. *morphōsis*, shaping]. In *biology*, the regeneration of an organ or part different from that normal to the site, as the production in certain Crustacea of an antennalike structure after the removal of an eye and its ganglion. See *homeosis*.

het″er-o-mor′phous [*heteros*; G. *morphē*, form]. Differing from the normal in form.

het″er-on′o-mous [*heteros*; G. *nomos*, law]. In *biology*, referring to the condition in which the metameres of a segmented animal are dissimilar.

het″er-on′y-mous [*heteros*; G. *onyma*, name]. In *optics*, relating to crossed images of an object seen double.

het″er-o-os′te-o-plas″ty [*heteros*; G. *osteon*, bone; *plassein*, to form]. The grafting, by operation, of bone taken from an animal. Also see *graft*.

het″er-op′a-gus [*heteros*; G. *pagos*, that which is fixed]. A type of thoracopagus parasiticus in which the parasite, although imperfectly developed, has a head and extremities. Syn., *epigastrius parasiticus*.

het″er-op′a-thy [*heteros*; G. *pathos*, disease]. Abnormal reaction to stimuli. —**heteropath′ic**, *adj.*

het″er-o-pha′si-a (het″ur-o-fay′zhuh, -zee-uh). See *heterophemy*.

het′er-o-phe″my (het′ur-o-fee″mee, het″ur-off′i-mee) **het″er-o-phe′mi-a** [*heteros*; G. *phēmē*, speech]. The unconscious saying of one thing while another is intended; heterolalia; heterophasia.

het′er-o-phil [*heteros*; G. *philein*, to love]. Having an affinity for other than the usual, as a heterophil antigen.

het′er-o-phil. 1. The neutrophil of mammals or birds. 2. The polymorphonuclear leukocyte of mammals. Its granules may vary in size and staining reaction with the animal species.

het″er-o-pho′ni-a [*heteros*; G. *phōnē*, voice]. Abnormal quality or change of voice.

het″er-o-pho-ral′gi-a [*heteros*; G. *phoros*, bearing; *algos*, pain]. Pain caused by heterophoria.

het″er-o-pho′ri-a [*heteros*; *phoros*]. Any tendency of the eyes to turn away from the position correct for binocular vision; latent deviation. Actual deviation does not occur unless one eye is covered, as the desire for binocular vision is sufficient to overcome imbalance of the ocular muscles. In *esophoria*, the tendency is to deviate inward; in *exophoria*, outward; in *hyperphoria*, one eye tends to deviate upward; in *hyperesophoria*, upward and inward; in *hyperexophoria*, upward and outward.

het″er-o-phy-di′a-sis. See *heterophyiasis*.

Het″er-oph′y-es (het″ur-off′ee-eez) [*heteros*; G. *phyein*, to put forth]. A genus of trematode worms, found in Egypt and the Far East, which produces heterophyiasis in man.

H. heterophyes. A species which has as definitive hosts man, cats, dogs, foxes, hogs, and other fish-eating animals; as first intermediate hosts, the snails, and as the second intermediate hosts, mullet fish.

het″er-o-phy-i′a-sis (het″ur-o-figh-eye′uh-sis) [*heteros*; *phyein*; NL. -*iasis*, condition]. Infestation by any flukes of the family Heterophyidae, of which the species *Heterophyes heterophyes* and *Metagonimus yokogawai* are the most important and most common to man. The flukes inhabit the small intestine but may also pass into the muscles of the heart through the lymphatics.

het″er-o-pla′si-a (het″ur-o-play′zhuh, -zee-uh, -shuh, -see-uh) [*heteros*; G. *plassein*, to form]. The formation of tissue abnormal in type or in location. —**heteroplas′tic**, *adj.*

het′er-o-plas″ty [*heteros*; *plassein*]. The operation

of grafting parts taken from another species. —het″er-o-plas′tic, *adj.*

het′er-o-ploid [*heteros*; G. *ploos*, -fold; *eidos*, form]. Having a chromosome number that is not an exact multiple of the haploid number characteristic for the species. —**heteroploidy**, *n.*

het″er-o-pol″y ac′id. Any of a large group of complex oxygen-containing acids, formed by condensation of at least two different types of acid anhydrides, such as the phosphomolybdic acids of the formulas $P_2O_5.24MoO_3.xH_2O$ and $P_2O_5.18MoO_3.xH_2O$, or the silicotungstic acids of the formulas $SiO_2.12WO_3.xH_2O$ and $SiO_2.10WO_3.xH_2O$.

het″er-o-pro-so-pus (het″ur-o-pro-so′pus, -pro-so′pus) [*heteros*; G. *prosōpon*, face]. A diprosopus with three or four eyes and two ears.

het″er-o-pro′te-ose [*heteros*; G. *prōteios*, holding first place]. One of a group of hydrolytic products, intermediate in the conversion of proteins to peptones, formed during gastric digestion or by autolysis of tissue protein.

het″er-op-si-a [*heteros*; G. *opsis*, vision]. Inequality of vision in the two eyes.

Het″er-op′ter-a [*heteros*; G. *pteron*, wing]. The true bugs. Formerly a suborder of the order Hemiptera.

het″er-op′tics [*heteros*; G. *optikos*, of sight]. Perverted vision.

het″er-o-pyk-no′sis. A staining property of nuclei characterized by areas of heavier staining (positive h.) and areas of lighter staining (negative h.). —**heteropyknot′ic**, *adj.*

het″er-o-sac′cha-ride. A polysaccharide which yields, on hydrolysis, both sugars and nonsugars.

het′er-o-scope″ [*heteros*; G. *skopein*, to examine]. An instrument for the determination of the range of vision in strabismus. —**heteros′copy**, *n.*

het″er-o-sex″u-al′i-ty [*heteros*; L. *sexus*, sex]. Sexual feeling directed toward one of the opposite sex.

het′er-o-side. A term proposed for a class of glycosides.

het″er-o′sis [*heteros*; G. -*osis*, increase]. The increased vigor and growth capacity exhibited frequently by first-generation hybrids.

het″er-o-sug-ges″ti-bil′i-ty [*heteros*; L. *suggestio*, from *suggerere*, to suggest]. The state of being susceptible to influence by another.

het″er-o-sug-ges′tion [*heteros*; *suggestio*]. Suggestion originating from a source outside of the individual; suggestion by another.

het″er-o-tax′ia, het″er-o-tax′is, het′er-o-tax″y [*heteros*; G. *taxis*, arrangement]. Anomalous position or transposition of organs. Also see *dextrocardia*, *situs inversus*.

het″er-o-to′ni-a [*heteros*; G. *tonos*, tension]. Variable tension.

het″er-o-to′pi-a [*heteros*; G. *topos*, place]. Displacement or deviation from natural position, as of an organ or a part; especially congenital displacement of gray matter of the spinal cord into the white matter.

het″er-o-top′ic [*heteros*; *topos*]. Occurring in an abnormal location, as intestinal epithelial cells occurring in the gastric epithelium.

het″er-o-tox′in. A toxin introduced into, but formed outside of, the body.

het″er-o-trans-plan-ta′tion. Transplantation of tissue or part from one species to another. —**het″ero-trans′plant**, *n.*

het′er-o-trophs [*heteros*; G. *trophē*, nourishment]. Bacteria, including all those pathogenic for man, which require for growth a source of carbon more complex than CO_2. Wide variation exists in respect to utilizable organic carbon sources and requirements for accessory growth factors.

het″er-o-troph′ic. Of or pertaining to heterotrophs.

het″er-o-tro′pi-a. See *strabismus*.

het″er-o-typ′ic, het″er-o-typ′i-cal [*heteros*; G. *typos*, pattern]. 1. Pertaining to the first division in meiosis, as distinguished from the second, or regular cell division. 2. Relating to a heterotypus.

het″er-o-ty′pus [*heteros*; *typos*]. A double monster in which the parasite hangs from the ventral wall of the autosite.

het″er-o-xan′thine (het″ur-o-zan′theen, -thin). $C_6H_6O_2N_4$. Methyl xanthine; 7-methyl-2,6-diketopurine; a methylated purine, one of the xanthine bases.

het″er-ox-e-nous [*heteros*; G. *xenos*, host]. Infesting more than one kind of host during the life cycle. —**heteroxeny**, *n.*

het″er-o-zy-go′sis (het″ur-o-zye-go′sis) [*heteros*; G. *zygōsis*, a balancing]. The condition of having one or many pairs of genes in the heterozygous phase, which results from crossbreeding; opposed to *homozygosis*, which results from inbreeding.

het″er-o-zy′gote [*heteros*; G. *zygōtos*, yoked]. An individual having the two members of one or more pairs of genes dissimilar. —**heterozygous**, *adj.*

HETP Hexaethyltetraphosphate.

hetrazan. Trade-mark for the basic component of diethylcarbamazine citrate.

Heubner, Otto Johann Leonhard [*German pediatrician*, 1843–1926]. Described syphilitic endarteritis of the cerebral arteries, called *Heubner's disease*. Isolated meningococci from cerebrospinal fluid (1896). With Rubner determined the caloric requirements of infants. He also studied celiac disease.

Heuser's membrane. See *exocoelomic membrane*.

Hewson, William [*English surgeon*, 1739–74]. Remembered for his discovery that fibrinogen is responsible for the clotting of blood (1771). Studied the lymphatic system and divided the lymphatics into two groups, the superficial and the deep.

hexa-betalin. Trade-mark for a brand of pyridoxine hydrochloride.

hexabione hydrochloride. Trade-mark for a brand of pyridoxine hydrochloride.

hex″a-chlo″ro-cy″clo-hex′ane. $C_6H_6Cl_6$. More properly gamma-hexachlorocyclohexane, commonly called *gammexane*.

hex″a-chlo′ro-phene. $HO.Cl_3C_6H.CH_2.C_6HCl_3.OH$; bis-(2-hydroxy-3,5,6-trichlorophenyl)-methane, a germicide active in the presence of soap. Syn., *compound G-11*.

hex″a-chro′mic [G. *hex*, six; *chrōma*, color]. Capable of distinguishing only six of the seven spectrum colors, indigo not being distinguished.

hex′ad [*hex*]. An element the atom of which has a valence of six.

hex″a-dac′tyl-ism [*hex*; G. *daktylos*, finger]. The state of having six fingers or toes.

hex″a-dec″a-no′ic ac′id. An exact chemical name, rarely used, for *palmitic acid*.

hex″a-dec″e-no′ic ac′id. The unsaturated acid $CH_3(CH_2)_5CH{:}CH(CH_2)_7COOH$, occurring as a component of the glycerides of some fats and oils.

hex″a-dec′yl. The univalent hydrocarbon radical $CH_3(CH_2)_{14}CH_2$—. Syn., *cetyl*, *palmityl*.

hex″a-di′e-nol. $CH_3.CH{:}CH.CH{:}CH.CH_2OH$. An amber-colored, semisolid substance insoluble in water but miscible with organic solvents and vegetable oils. A substance which causes sweating when applied locally to the skin. It is suggested as a sudorific and a diagnostic agent in localizing anhidrotic areas in the skin.

hex″a-eth″yl-tet″ra-phos′phate. $(C_2H_5)_6P_4O_{13}$ (?). A synthetic substance having the power to

inhibit cholinesterase. It is probably a mixture of compounds, of which tetraethylpyrophosphate is the predominant and active constituent. It is used as an insecticide. Abbreviated HETP.

hex″a·gen′ic. Referring to genotypes of polyploid or polyploid organisms which contain six different alleles for any given locus.

hex″a·hy′dric. Containing six atoms of replaceable hydrogen.

hex″a·hy″dro·hem″a·to·por′phy·rin (heck″suh-high″dro-hem″uh-to-por′fi-rin, -hee″muh-to-por′fi-rin). A reduction product of hematin.

hex″a·hy·dro·phe′nol. Cyclohexanol.

hex″a·hy·drox″y·cy·clo·hex′ane. Inositol.

hex′al. Methenamine sulfosalicylate; $C_{13}H_{18}N_4O_6 \cdot 2H_2O$; white crystalline powder used as urinary antiseptic. See *hexalet*.

hex al′de·hyde. Hexanal.

hexalet. Trade-mark for methenamine sulfosalicylate. See *hexal*.

hexalin. Trade name for cyclohexanol, $C_6H_{11}OH$; clear viscous liquid used as solubilizer, homogenizer and stabilizer for various liquid mixtures.

hex″a·me·tho′ni·um. One of a homologous series of polymethylene bis(trimethylammonium) ions, of the general formula $(CH_3)_3N^+(CH_2)_nN^+(CH_3)_3$, in which n is 6. It possesses potent ganglion-blocking action, effecting reduction in blood pressure. It is used clinically in the form of one of its salts, commonly the bromide or iodide. Syn., C6. See *hexamethonium bromide*.

hex″a·meth″yl·ene·a·mine′ (heck″suh-meth″il-een-uh-meen′, -am′een, -in). Methenamine.

hex″a·meth″yl·ene·tet″ra·mine′ (-tet″ruh-meen′, -tet′ram-een, -in). Methenamine.

h. tetraiodide. See *siomine*.

hex″a·mine. A former British Pharmacopoeia name for methenamine.

hex′a·nal. n-Hexaldehyde, $C_5H_{11}CHO$. A pleasantly odorous liquid used in the preparation of dyes, perfumes, and other synthetics.

hex′ane. Any one of the isomeric liquid hydrocarbons, C_6H_{14}, of the paraffin series.

hex″ane·di″o′ic ac′id. Adipic acid.

hex″a·ni″tro·di·phen·yl′a·mine. See *dipicrylamine*.

hex″a·va′lent (heck″suh-vay′lunt, heck-sav′uh-lunt). Having a valence of six.

hex″a·vi′ta·min cap′sules or **tab′lets** (*capsulae hexavitaminarum, tabellae hexavitaminarum*). Each capsule or tablet contains not less than 5000 U.S.P. units of vitamin A, 400 U.S.P. units of vitamin D, 75 mg. of ascorbic acid, 2 mg. of thiamine hydrochloride, 3 mg. of riboflavin, and 20 mg. of nicotinamide.

hex′ene·ol. An alcohol, $C_6H_{11}OH$, useful as protective covering for burns.

hex·es′trol. $HOC_6H_4CH(C_2H_5)CH(C_2H_5)C_6H_4OH$; dihydrodiethylstilbestrol, synthetic estrogen said to be more active than diethylstilbestrol.

hex′e·thal so′di·um. Generic name for sodium 5-ethyl-5-n-hexylbarbiturate, sedative and hypnotic having short duration of action. See *ortal sodium*.

hexital. Trade-mark for tablet containing hexestrol and phenobarbital.

hex″o·bar′bi·tal (heck″so-bahr′bi-tawl, -tal). $C_{12}H_{16}N_2O_3$; 5-(1-cyclohexenyl)-1,5-dimethylbarbituric acid, very slightly soluble in water; rapidly acting barbiturate of low toxicity. Dose, 0.25–0.5 Gm. (4–8 gr.). Syn., *hexobarbitone*. See *evipal*.

h. sodium. $C_{12}H_{15}N_2NaO_3$, the monosodium derivative of hexobarbital which, because it is very soluble in water, may be administered intravenously; used to produce anesthesia of short duration. The dose must be individualized. Syn., *hexobarbitone sodium*. See *evipal sodium*.

hex″o·bar′bi·tone. British Pharmacopoeia name for hexobarbital.

h. sodium. British Pharmacopoeia name for hexobarbital sodium.

hexoestrol. Hexestrol.

hex″o·ki′nase, hex·ok′i·nase. The enzyme which catalyzes the transfer of phosphate from adenosinetriphosphate to glucose or fructose, forming glucose-6-phosphate or fructose-6-phosphate and adenosinediphosphate.

hex′one bas′es. Term applied to the diaminomonocarboxylic acids (arginine, lysine, and histidine) which contain six carbon atoms and are basic in reaction.

hex·os″a·mine′ (heck-sohs″ah-meen′, heck″sohs-ah-meen′, -am′in). $C_6H_{11}O_5NH_2$. A primary amino-derivative of a hexose obtained on the hydrolysis of certain glycoproteins, mucins, heparin, chitin, etc.

hex′o·san. Any complex carbohydrate yielding hexose on hydrolysis. Cellulose, starch, and glycogen are important hexosans.

hex′ose. $C_6H_{12}O_6$. Any monosaccharide which contains six carbon atoms in the molecule.

hex″ose·di·phos′phate (heck″sohs-dye-fos′fate). One of the hexosephosphates formed during the decomposition of glucose and glycogen in muscle-tissue metabolism.

hex″ose·mon″o·phos′phate. One of the hexosephosphates formed during the decomposition of glycogen in muscle-tissue action.

hex″ose·phos′phates. Any one of the phosphoric acid esters of a hexose, notably glucose, formed during the utilization of carbohydrates by mammalian tissues.

hex″u·ron′ic ac′id. The name originally given to the substance isolated from lemon juice and later identified as vitamin C.

hex′yl. The univalent radical, C_6H_{13}—.

hex″yl·res·or′cin·ol (heck″sil-ri-zor′sin-ole, -ol, -awl). $C_6H_{13}C_6H_3(OH)_2$. White, needle-shaped crystals of sharp taste, very slightly soluble in water, freely soluble in alcohol and fixed oils, becoming brown on exposure to light and air. Used as germicide, as urinary antiseptic, and as anthelmintic for hookworms and roundworms. Dose, 0.12–1.0 Gm. (2–15 gr.). See *caprokol*, *crystoids anthelmintic*, S.T. 37.

Hey, William [English surgeon, 1736–1819]. Described internal derangement of the knee joint; see under *derangement*. See also *Hey's amputation*, *Hey's saw*.

Heymans, Corneille (1892–). Belgian pharmacologist, who discovered the function of the carotid sinus and aortic mechanisms in the regulation of respiration and blood pressure. Nobel laureate in medicine and physiology (1938).

Hf Chemical symbol for hafnium.

Hg Chemical symbol for mercury (*hydrargyrum*).

hg. Hectogram.

HGF Hyperglycemic factor.

hi·a′tus (high-ay′tus) [L.]. A space or opening. —**hiatal**, *adj.*

adductor h. The hiatus tendineus adductorius [BNA]. The gap in the insertion of the adductor magnus; the point of transition between the femoral and popliteal vessels, the terminal opening of the adductor canal. Syn., *h. adductorius*, *h. tendineus*.

aortic h. An opening behind the diaphragm giving passage to the aorta; also called *aortic foramen*.

buccal h. Transverse facial cleft.

esophageal h. Passage through the diaphragm

for the esophagus; also called *esophageal foramen*.
facial h. See *h.* of the facial canal.
h. adductorius. The adductor hiatus.
h. of the facial canal. The opening which transmits th greater superficial petrosal nerve and the petrosal branch of the middle meningeal artery also called *h. of Fallopius*.
h. of Fallopius. See *h. of the facial canal*.
h. of Schwalbe. A gap occasionally found in th pelvic fascia due t improper fusion of the obturator fascia with the tendinous arch (arcus tendineus)
h. tendineus. The adductor hiatus.
maxillary h. One on the inner aspect of the body of the maxilla, establishing communication between the nasal cavity and maxillary sinus.
pleuroperitoneal h. A small opening in the diaphragm between pleural and peritoneal cavities in the fetus.
sacral h. The lower or caudal opening of the sacral canal.
semilunar h. (a) A groove in the lateral wall of the middl meatus of the nasal cavity The maxillary sinus and anterior ethmoid cells open into it. (b) An opening in the deep fascia of the arm for the passage of the basilic vein.
subarcuate h. A depression on the petrous part of the temporal bone lodging the flocculus.
Hibbs, Russell Aubra [*American orthopedist* 1869–1932]. Devised an operation for ankylosis or fusion of the knee joint in tuberculosis. Also devised an operation, somewhat similar to Albee's, designed to eliminat motion in diseased spine. The spinous processes, the laminae, and th lateral articulations are fused, and cortical bon graft is inserted between the split spinous processes. Called *Hibbs' operation*
hi″ber na′tion [L. *hiberna*, winter quarters]. The dormant condition or winter sleep of certain animals.
hi″ber no′ma. A rare subcutaneous tumor composed of large foamy cells, containing lipid-staining material, and having lobulated arrangement simulating the ppearance of the hibernating organs of certain animals It usually grows slowly may become very large, but is ot known to become malignant.
hic′cup, hic′cough [probably imitative in origin]. A spasmodic contraction of the diaphragm causing inspiration, followed by sudden closure of the glottis.
Hickman, Kenneth C D (1896–) American chemist, known for research in vitamin chemistry H invented many high-vacuum processes. See Hickman molecular distillation *process*.
Hick 's sign. See under *sign*.
Hicks version. See Braxton Hicks *version*.
hid rad″e-ni′tis [G *hidrōs*, sweat *adēn*, gland *-itis* inflammation]. Inflammation of the sweat glands also spelled *hydradenitis*
h. suppurativa. An inflammatory disease of the pocrine sweat glands, especially those of the axillae, characterized by painful red nodules, abscesses, and sinus tracts partial remissions alternat with acute exacerbations. Syn., *hidradenitis axillaris*.
hid rad″ no-car″ci no ma. Sweat-gland tumor
hid rad′ no-cyt (hid rad uh-no site, high-drad′) Cell found in certain cystic conditions of the breast It resembles axillary apocrine sweat gland cells.
hid rad″ no ma. A benign tumor presumably derived from sweat glands, usually composed of solid islands of small basal cells, each group surrounded by hyaline connective tissue. See also *cylindroma*.
nodular h. See *myoepithelioma*.
papillary h. An infrequent benign tumor of the apocrine glands occurring most commonly on the labia majores and perineum of women.
hid′ro- **hidr** [G *hidrōs*, sweat]. A combining form meaning *sweat*.
hid-ro a (hid ro uh, high dro uh) [*hidrōs*]. Any dermal lesion associated with, or caused by profuse sweating.
hid″ro-cys″ta de-no ma. See *hidrocystoma*.
hid″ro-cys to′ma (hid ro-sis-to muh, high dro-) [*hidrōs*; G *kystis*, bladder *-ōma*, tumor]. A group of clear vesicles, usually located around the eyes, composed of cystic sweat glands. Some cysts may contain small papillary projections. Also called *hidrocystadenoma*.
hid″ro-poi-e sis (hid ro-poy-ee sis, high dro-) [*hidrōs*; G *poiēsis*, formation]. The formation of sweat. —**hidropoiet′ic,** *adj*
hid″ror rhe a (hid ro-ree uh, high dro-) [*hidrōs*; G. *rhoia*, flow]. Excessive flow of sweat.
hi″dros-ad″e-ni′tis (high dro sad″i-nigh′tis, hid″ ro-) [*hidrōs*; G *adēn*, gland; *-itis*, inflammation]. Inflammation of the sweat glands. Also called *hidradenitis*, *hydrosadenitis*.
h. axillaris. See *hidradenitis suppurativa*.
hid ros′che sis (hid-ros′ki sis, high-dros′) [*hidrōs*; G *schesis*, retention]. Retention or suppression of the sweat.
hi dro sis (hi-dro sis, high-dro sis) [*hidrōs*; G. *-ōsis*, increase]. 1 The formation and excretion of sweat. 2. Abnormally profuse sweating —**hi′drosed,** *adj*
hi drot′ic (hi-drot′ick, high-drot′ick) [G. *hydrōtikos*, sudorific]. Diaphoretic or sudorific.
hi-drot′ic. A medicine that causes sweating.
hid″ro-to path′i [G *hidrōs*, sweat; *pathos*, disease]. Relating to morbid state of the perspiratory function.
hi″er-on′ sus [G *hieros*, sacred; *nosos*, disease] Old term for epilepsy
hi″er-o-pho′bi [*hieros*; G *phobos*, fear]. A morbid fear of sacred things.
Highmore Nathaniel [*English physician and anatomist*, 1613–85]. Described the maxillary sinus (1651) called the *antrum of Highmore*. Described the seminal ducts and the epididymis. The mediastinum testis formerly was called the *body of Highmore*.
high take-off Colloquial term for unusual elevation—more than one millimeter—of the isoelectric line t origin seen in electrocardiograms in cases of myocardial injury infarction, trauma, and pericarditis.
hi′lar dance. Increased pulsations of pulmonary arteries in cases of widened pulmonary artery pulse pressure.
Hildanus. See *Fabricius Hildanus*.
Hildebrand method for hydrogen-ion concentration. See under *method*.
hi′li (high′lye) Plural of hilus.
Hill, Archibald Vivian (1886–) English biophysicist, who studied thermal changes in muscle and proved that oxygen is not used in the working phase of muscular activity but in the recovery phase. H developed refined techniques to measure the course of heat production during single contraction cycle. With Otto Meyerhof he was named Nobel laureate in medicine and physiology (1922)
Hill, Leonard Erskine [*English physiologist*, 1866–]. With Barnard, introduced modification of the sphygmomanometer with pressure gauge (1897) Made an important study of caisson disease (1912)
Hilliard s l pus. A form of lupus affecting the

hands and arms. The disease was named by Jonathan Hutchinson for patient.

hil'lock [dim. of AS. *hyll*]. A slight prominence or elevation. Also see *colliculus*.

anal h. See anal tubercle.

auricular h. One of several small tubercles on the surface of the mandibular and hyoid arches, incorporated into the pinna of the external ear.

axon h. The region in nerve cell, free from Nissl substance, from which the axon takes origin.

cloacal h. See genital tubercle.

Müller's h. An elevation on the dorsal wall of the embryonic urogenital sinus at the point of entrance of the Müllerian ducts. Also called *Müller's tubercle*.

seminal h. The colliculus seminalis.

Hilton, John [*English surgeon and anatomist*, 1804–78]. Author of classic work, *On Rest and Pain* (1863). Advocated complete rest in surgical disorders. Suggested that symptoms are disordered reflexes. *Hilton's law* states that the nerve trunk supplying joint also supplies the overlying skin and the muscles which move the joint.

hi'lum [L., little thing]. Old term for *hilus*.

hi'lus (pl. *hili*) [*hilum*]. A pit, recess, or opening in an organ, usually for the entrance and exit of vessels or ducts. —**hilar**, *adj.*

hind'brain. See rhombencephalon.

hind'gut" [ME. *hind*; AS. plural *guttas*]. The caudal part of the embryonic digestive t be formed by the development of the tail fold.

Hines and Brown test. See cold pressor test.

Hinkle's pills. See under *pill*.

Hinton test. A macroscopic flocculation test for syphilis.

hip [AS. *hype*]. 1. The upper part of the thigh at its junction with the buttocks. See Plates 2, 4. 2. The hip joint. See Table of Joints and Ligaments in the Appendix. 3. The lateral prominence of the body at the level of the hip joint.

snapping h. An abnormality caused by the presence of tendinous band on the surface of the gluteus maximus muscle. Certain movements of the hip cause this band to slip over the greater trochanter.

hip'bone hip'bone" [*hype*; AS. *ban*]. The innominate bone or os coxae. See Table of Bones in the Appendix.

hip·pan'thro·py [G. *hippos*, horse; *anthrōpos*, man]. A delusional state in which the patient believes he is horse. Also see *zoanthropy*. Rare.

Hippel, Arthur von [*German ophthalmologist*, 1841–1917]. Modern keratoplasty in which circular portion of the cornea extending down to Descemet membrane is removed by means of trephine, is based on the technic introduced by von Hippel.

Hippel, Eugen von [*German ophthalmologist*, 1867–1939]. Remembered for his description of angiomatosis retinae (1895), called *von Hippel's disease*. See also *von Hippel-Lindau's disease*, under *Lindau*.

Hip"pe·la'tes (hip pe lay'teez) [G. driver of horses]. A genus of minute flies of the family Oscinidae.

H. flavipes. A species which transmits yaws and feeds on conjunctival exudates.

H. pusio. The American eye fly pest of both man and animals which feeds on drops of blood on the skin, open wounds, and mucous membranes factor in spreading conjunctivitis.

Hip"po·bos'ci·dae (hip bos dee) [G. *hippos*, horse; *boskein*, to feed]. A family of the Diptera which includes the louse flies and flat flies, blood-sucking ectoparasites of birds and mammals.

hip"po·cam'pus [G. *hippokampos*, monster with horse body and fish tail]. A curved elevation consisting largely of gray matter in the floor of the inferior horn of the lateral ventricle. —**hippocampal**, *adj.*

Hippocrates [*Greek physician*, ca. 460–ca. 377 B.C.]. Called the father of medicine. Best known for his astute clinical descriptions of diseases. His voluminous works include discussions of epidemics, fevers, epilepsy fractures, instruments for reduction, and climate and health. H knew the operations of trephining and paracentesis. He believed that the body tends to heal itself by natural processes, and that the role of the physician should be auxiliary to that of nature. See also *facies hippocratica*, clubbed *finger* also called *Hippocratic finger* or *nail*.

oath of H. An oath setting forth the duties of the physician to his patients, as follows: I swear by Apollo the physician, and Aesculapius, and Health, and All-heal, and all the gods and goddesses, that, according to my bility and judgement, I will keep this Oath and this stipulation—to reckon him who taught me this Art equally dear to me as my parents, to share my substance with him, and relieve his necessities if required to look upon his offspring in the same footing as my own brothers, and to teach them this art, if they shall wish to learn it, without fee or stipulation and that by precept, lecture, and every other mode of instruction, I will impart knowledge of the Art to my own sons, and those of my teachers, and to disciples bound by stipulation and oath according to th law of medicine, but to none others. ¶ I will follow that system of regimen which, according to my ability and judgement, I consider for the benefit of my patients, and abstain from whatever is deleterious and mischievous. I will give no deadly medicine to any one if asked, nor suggest any such counsel and in like manner I will not give to woman pessary to produce abortion. With purity and with holiness I will pass my life and practise my Art. ¶ I will not cut persons labouring under the stone, but will leave this to be done by men who are practitioners of this work. Into whatever houses I enter I will go into them for the benefit of the sick, and will abstain from every voluntary act of mischief and corruption; and, further from the seduction of females or males, of freemen and slaves. ¶ Whatever in connection with my professional practice, or not in connection with it, I see or hear in the life of men, which ought not to be spoken of abroad I will not divulge, as reckoning that all such should be kept secret. While I continue to keep this Oath unviolated, may it be granted to me to enjoy lif and the practice of the art, respected by all men in all times! But should I trespass and violate this Oath, may the reverse be my lot!

hip'po·lith [G. *hippos*, horse; *lithos*, stone]. A calculus or bezoar found in the stomach of the horse.

Hip·pom ne (hi-pom ah-nee) [*hippos*; G. *mania*, madness]. A genus of euphorbiaceous trees.

H. mancinella. The manchineel tree of tropical America extremely acrid and poisonous, even to the touch. Used locally in medicine, especially in skin diseases.

hip po·myx·o ma [*hippos*; G. *myxa*, discharge; *-oma*, tumor]. The swelling attending glanders.

hippuran. Trade-mark for sodium ortho-iodohippurate, $C_6H_4ICONHCH_2COONa.2H_2O$ a radiopaque agent.

hip pur ase. See *hippuricase*.

hip·pu'ri·a [*hippos*; G. *ouron*, urine]. Excess of hippuric acid in the urine.

hip·pu'ric ac'id. $C_6H_5CONHCH_2COOH$. Benzoylaminoacetic acid; an acid found in high concentration in the urine of herbivorous animals and to lesser extent in the urine of man; it is the detoxi-

cation product of benzoic acid. Syn., *urobenzoic acid*.

hip pur'i case. An enzyme found in kidney, liver, muscle, and pancreas which catalyzes the hydrolysis of hippuric acid to benzoic acid and glycine. The hippuricase occurring in liver and kidney probably exerts a synthetic, rather than hydrolytic, action, detoxifying benzoic acid by the formation of hippuric acid. Syn., *hippurase, histozyme*.

hip pus [*hippos*]. Spasmodic pupillary movement, independent of the action of light.

hip"ta gen'ic ac'id. $C_3H_5NO_4$. A water-soluble crystalline substance, toxic to animals, obtained from *Hiptage benghalensis*, a plant native to India, and also from *Indigofera endecaphylla*, the trailing or creeping indigo, which is under investigation as a potential forage crop. The substance appears to be identical with β-nitropropionic acid, and would thus be the only aliphatic nitro compound isolated from natural sources.

Hirschberg, Julius [*German ophthalmologist*, 1843–1925]. Introduced the use of the electromagnet in ophthalmology (1885). Wrote an important history of ophthalmology and compiled a dictionary of the subject. In *Hirschberg's test* the degree of strabismus is estimated from the position of the corneal reflection of a candle flame or flashlight held one foot from the patient's eye. The examiner places his own eye near the light and looks just over it.

Hirschberg's reflex. See under *reflex*.

Hirschfeld, Ludwig Moritz [*Polish anatomist*, 1816–76]. An inconstant lingual branch of the facial nerve is sometimes called *Hirschfeld's nerve*.

Hirschsprung, Harald [*Danish physician*, 1830–1916]. Known for his description of congenital megacolon or congenital dilatation of the colon; known as *Hirschsprung's disease*. Contributed to the knowledge of congenital pyloric stenosis in infants.

Hirst, Barton Cooke [*American gynecologist*, 1861–1935]. Devised an operation for the relief of vaginismus: longitudinal incisions made on either side of the vulva and carried deep into the tissues are closed transversely in order to enlarge the vaginal introitus. Called *Hirst's operation*.

hir'sute (hur'sewt, hur sewt') [L. *hirsutus*, rough, shaggy]. Shaggy; hairy.

hir su'tic ac'id. Generic term for a series of substances, derived from the fungus *Stereum hirsutum*, certain of which have antibiotic activity.

hir"su'ti es (hur-sue'shee eez, -tee eez) [*hirsutus*]. Excessive growth of hair; hypertrichosis.

hir'sut ism (hur'sewt iz um, hur sewt'iz-um) [*hirsutus*]. A condition characterized by growth of hair in unusual places and in unusual amounts.

hir'u-din, hi-ru'din [L. *hirudo*, leech]. The active principle of a secretion derived from the buccal glands of leeches. It prevents the coagulation of blood.

Hir"u-din'e a [*hirudo*]. A class of predatory or parasitic annelids; the leeches.

hir"u-di ni'a sis [*hirudo*; NL. *-iasis*, condition]. Infestation by leeches.

external h. That form produced by leeches of the genus *Haemadipsa*, which attach themselves to, and puncture the skin of humans. The leeches suck the blood and secrete an anticoagulating principle, hirudin.

internal h. A pathologic state caused by the ingestion of aquatic leeches of the genus *Limnatis*, or by their invasion of the genitourinary tract.

hi ru di ni cul"ture [*hirudo*; L. *cultura*, cultivation]. The artificial breeding of leeches.

Hi ru do [L.]. A genus of leeches of the class Hirudinea.

H. medicinalis. The medicinal leech; formerly extensively used for bloodletting.

His, Wilhelm (*Junior*) [*German physiologist*, 1863–1934]. Made important studies of the rhythmic action of the heart. Described the atrioventricular bundle, called *bundle of His, Gaskell's bridge*. The terminal cardiac sulcus on the surface of the right atrium is called *His's sulcus*. H. also described trench fever, called *Werner-His disease*.

His, Wilhelm (*Senior*) (1831–1904). Swiss anatomist and embryologist, considered the founder of modern human embryology. The fetal thyroglossal duct, the perivascular spaces, the trabecular structure of the mammary gland, and many other structures formerly were known by his name. H. showed that axons are outgrowths from primitive nerve cells, and introduced such terms as *dendrite, neuroblast*, and *spongioblast*.

Hiss, Philip Hanson [*American bacteriologist*, 1868–1913]. With F. F. Russell, described a type of *Shigella paradysenteriae*, also called *Hiss and Russell's Y bacillus*. See also *Hiss method* under *stain*, Hiss's serum water.

histadyl. A trade-mark for methapyrilene hydrochloride, a histamine-antagonizing agent.

hi stam i nase, his"tam i nase. An enzyme, obtainable from extracts of kidney and intestinal mucosa, capable of inactivating histamine and other diamines; has been used in the treatment of anaphylactic shock, asthma, hay fever, serum sickness, and other allergic conditions which may be due to, or accompanied by, the liberation of histamine in the body. Syn., *diamine oxidase*.

his'ta mine (hiss'tuh-meen, -min). β-Imidazolyl-4-ethylamine, $C_5H_9N_3$. An amine occurring as a decomposition product of histidine and prepared synthetically from that substance. It stimulates visceral muscles, dilates capillaries, stimulates salivary, pancreatic, and gastric secretions. Used in various allergies, in Ménière's disease, as a diagnostic agent in testing gastric secretion, and to contract the uterus. —**histamin'ic**, *adj.*

h. dihydrochloride. See *imido*.

h. phosphate (*histaminae phosphas*). Clear, colorless crystals soluble in 4 parts of water. Dose, 0.3–1.0 mg. ($\frac{1}{200}$–$\frac{1}{60}$ gr.) intravenously or subcutaneously. Also called *histamine acid phosphate*.

h. phosphate injection (*injectio histaminae phosphatis*). A 1:1000 solution. Dose, 0.3 cc. (5 min.)

his ta min o-lyt'ic. Dissolving histamine.

his"te nor'i a. See histotoxic *hypoxia*.

his'tic [G. *histos*, web]. Relating to tissue. *Obs.*

his'ti dase. An enzyme found only in the liver in higher animals. It is highly specific, acting only upon L-histidine, not upon D-histidine or other imidazole compounds, to open the imidazole ring with the formation of glutamic acid, formic acid, and ammonia.

his ti dine (hiss'ti-deen, -din). $C_3H_3N_2 \cdot CH_2 \cdot CH(NH_2)COOH$. β-Imidazole-α-alanine, an amino acid resulting from the hydrolysis of many proteins. By elimination of a molecule of carbon dioxide it is converted to histamine.

h. decarboxylase. The enzyme which catalyzes decarboxylation of histidine to histamine.

h. hydrochloride. $C_6H_9N_3O_2 \cdot HCl$. White, crystalline powder freely soluble in water. Used in treatment of peptic ulcers. Dose, 5 cc. of 4 per cent solution intramuscularly daily. See *larostidin*.

his"ti di nu'ri a. A state in which histidine is found in the urine, frequently occurring in women

after the first month of pregnancy. Attributed to restricted activity of histidase in the liver.

his'ti·dyl. The univalent radical, $N_2C_3H_3CH_2CH(NH_2)CO—$ of the amino acid histidine.

his'ti·o-, histi- [G. *histion*, web]. A combining form meaning web, cloth, tissue.

his'ti·o·cyte [*histion*; G. *kytos*, cell]. Fixed macrophage of the loose connective tissue. Histiocytes, in common with other cells belonging to the reticuloendothelial system, store selectively certain dyes such as trypan blue or lithium carmine. Formerly called *resting wandering cell*.

his"ti·o·cy·to'ma (hiss"tee·o·sigh·to'muh) [*histion*; *kytos*; G. *-ōma*, tumor]. A tumor containing histiocytes. See *dermatofibroma*.

juvenile h. See *nevoxanthoendothelioma*.

his"ti·o·cy"to·sar·co'ma [*histion*; *kytos*; G. *sarkōma*, fleshy excrescence]. A tumor only slightly malignant, occurring in dermis especially; made up of large, mononuclear cells, supposed by some to be histiocytes. Others believe the cells to be fibrocytes and fibroblasts, and name the lesion fibroma or fibrosarcoma.

his"ti·o·cy·to'sis (·sigh·to'sis) [*histion*; *kytos*; G. *-ōsis*, increase]. Proliferation of histiocytes, especially in lymph nodes and other organs of the hematopoietic system; sometimes occurs with lipoidosis.

lipoid h. See *Niemann-Pick disease*.

nonlipoid h. See *Letterer-Siwe disease*.

his'ti·oid. Histoid.

his"ti·o·troph'ic [*histion*; G. *trophē*, nourishment]. Having a protective or anabolic influence on the energy of cells, as the histiotrophic functions of the autonomic nervous system.

his'to-, hist- [G. *histos*, web]. 1. A combining form meaning *loom*, *web*. 2. *In biology*, a combining form denoting *tissue*.

his'to·blast [*histos*; G. *blastos*, germ]. A cell engaged in the formation of tissue. *Obs.*

his"to·chem'is·try [*histos*; G. *chymos*, juice]. 1. The chemistry of the tissues of the body. 2. The study of microscopic localization and analyses of substances in cells and tissues. —**histochemical**, *adj.*

his'to·cyte. See *histiocyte*.

his"to·di·al'y·sis (hiss"to·dye·al'i·sis) [*histos*; G. *dialysis*, dissolution]. The dissolution of organic tissue.

his"to·flu"o·res'cence [*histos*; L. *fluere*, to flow]. Fluorescence of the tissues during x-ray treatment produced by the prior administration of fluorescing drugs.

his"to·gen'e·sis, his·tog'e·ny (hiss·todj'i·nee) [*histos*; G. *genesis*, production]. Differentiation of cells and cell products from their earliest appearance to the completion of mature tissue. —**histogenet'ic**, *adj.*

his·tog'e·ny. See *histogenesis*.

his·tog'ra·phy [*histos*; G. *graphein*, to write]. Description of the tissues.

his"to·hem"a·tin (hiss"to·hem'uh·tin, ·hee'muh·tin). Old term for cytochrome.

his'toid, his'ti·oid [*histos*; G. *eidos*, form]. 1. Resembling tissue. 2. Composed of only one kind of tissue.

his"to·ki·ne'sis (hiss"to·ki·nee'sis, ·kigh·nee'sis) [*histos*; G. *kinēsis*, motion]. Movement that takes place in the minute structural elements of the body.

his·tol'o·gist [*histos*; G. *logos*, word]. One who is learned in histology.

his·tol'o·gy [*histos*; *logos*]. The branch of biology which deals with the minute structure of tissues; microscopic anatomy. —**histolog'ic, histolog'ical**, *adj.*; **histolog'ically**, *adv.*

normal h. The study of healthy tissues.

pathologic h. The study of diseased tissues.

topographic h. The study of the minute structure of the organs and especially of their formation from the tissues.

his·tol'y·sis [*histos*; G. *lysis*, a loosing]. Disintegration and dissolution of organic tissue. —**histolyt'ic**, *adj.*

his·to'ma [*histos*; G. *-ōma*, tumor]. A tumor whose cells are typical of a tissue, such as a fibroma. Also called *histioma*.

his"to·met"a·plas'tic [*histos*; G. *metaplassein*, to remodel]. Causing the transformation of one tissue into another type. See *metaplasia*.

his"to·mor·phol'o·gy [*histos*; G. *morphē*, form; *logos*, word]. The morphology of the tissues of the body; histology.

his'tone, his'ton [*histos*]. Any one of a group of strongly basic proteins found in cell nuclei, such as thymus histone, soluble in water but insoluble in, or precipitated by, ammonium hydroxide, and coagulable by heat. See American Classification of Proteins in the Appendix.

his"to·neu·rol'o·gy. See *neurohistology*.

his·ton'o·my [*histos*; G. *nomos*, law]. The laws of the development and arrangement of organic tissue.

his"to·nu'ri·a [*histon*; G. *ouron*, urine]. The presence of histone in the urine.

his"to·pa·thol'o·gy [*histos*; G. *pathos*, disease; *logos*, word]. The study of minute changes in diseased tissue.

his"to·phys"i·ol'o·gy (hiss"to·fiz·ee·ol'o·jee) [*histos*; G. *physis*, nature; *logos*]. The science of tissue functions.

His"to·plas'ma [*histos*; G. *plasma*, anything formed]. A genus of parasitic fungi.

H. capsulatum. That species which is the causative agent of histoplasmosis; originally it was thought to be protozoan but now is established as a fungus. See *histoplasmosis* and *histoplasmin test*.

his"to·plas'min. Extract of either the mycelial or yeast phase of *Histoplasma capsulatum*, used by intradermal injection to test for histoplasmosis. Many persons whose chest films show calcification, but who have been negative to tuberculin, have been reactors to histoplasmin.

his"to·plas·mo'sis (hiss"to·plaz·mo'sis) [*histos*; *plasma*; G. *-ōsis*, condition]. A fatal disease caused by the fungus *Histoplasma capsulatum*. It is characterized by fever, anemia, leukopenia, and emaciation. The infection primarily involves the reticuloendothelial system. Also called *Darling's d.* Syn., *cytomycosis*.

his'to·ry [G. *historia*, inquiry]. A written account of events; a record of past events; a narrative or story.

biologic h. The life story of any animal.

medical h. The account obtained from a patient as to his health, past and present, and the symptoms of his disease.

his"to·spec·tros'co·py. The application of spectroscopy to histochemistry.

emission h. The identification of certain elements in tissues by means of emission spectra, which are obtained by consuming in a high-frequency spark a chosen region of a tissue section.

roentgen absorption h. Quantitative estimation of elements in very small histological specimens by means of roentgen absorption spectra.

ultraviolet absorption h. Application of the quartz microscope to measurements of absorption spectra of cellular components in situ.

his"to·ther'a·py [G. *histos*, web; *therapeia*, treatment]. The remedial use of animal tissues.

his"to-throm'bin [*histos*; G. *thrombos*, clot]. A thrombin formed from connective tissue.

his'to tome [*histos*; G *tomos*, cutting]. An instrument for cutting tissue in preparation for microscopic study· microtome.

hi tot'o-my [*histos*; G. *tomē*, a cutting]. 1 The dissection of tissues 2. The cutting of thin sections of tissues microtomy

his"to-tox'ic [*histos*; G *toxikon*, poison]. Designating poisonous condition of the cells.

his'to trip sy [*histos*; G *tripsis*, rubbing]. The crushing of tissue by an ecraseur *Rare*.

his'to-trophe, his'to-troph [*histos*, G. *trophē*, nourishment]. 1 In deciduate placentation, the temporary nutritive substances supplied from sources other than the circulating blood, such as glandular secretion, extravasated blood. Also called *embryotrophe*. 2. In nondeciduate placentation, the uterine secretion and transudates bathing the chorion and furnishing nutritive materials throughout gestation. Also called *uterine milk*. —**histotroph'ic**, *adj*

his"to- 'I [*histos*; G *zōon*, living being]. Living on or within the tissues, denoting certain protozoan parasites.

his'to zyme. Hippuricase.

his tri-o nism [L. *histrio*, actor]. Dramatic action or attitude, as seen in some psychoses and psychoneuroses. —**histrion'ic**, *adj*

Hitchcock's reagent. See Benedict and Hitchcock uric acid *reagent*.

Hitschmann, Fritz [*German gynecologist*, 1870–1926]. With Ludwig Adler described the cyclic change in the endometrium, and demonstrated histologically its ormal nature (1908)

Hittorf method for ionic mobilities. See under *method*.

Hitzig, Eduard [*German neurologist and psychiatrist*, 1838–1907]. With G T Fritsch, made experimental studies of electric stimulation of the cerebral cortex in the frontal lobe, proving the existence of motor area (1870) Accurately defined the limits of the cortical motor area in dogs and monkeys (1874)

hives. Urticaria.

hi-vi-tol. *A proprietary product consisting of* blended fish-liver oils, used as source of vitamins A and D

Hl. Latent hypermetropia.

hl. Hectoliter

Hm. Manifest hypermetropia.

hm. Hectometer

Ho Chemical symbol for holmium.

ho- ng nan' [Chin.]. A Chinese preparation btained from the bark of *Strychnos malaccensis*. Its properties are due to small percentage of strychnine. It has been used in the Orient as an alterative in syphilis, leprosy and similar diseases.

hoar'hou d" See *marrubium*.

hoarse [ME. *hors*]. 1 Harsh, grating· used of sounds. 2. Having harsh, discordant voice, resulting from an abnormal condition of the larynx or throat. —**hoarse ness**, *n*.

hoar'y [AS. *hār*]. Gray or white with age said of the hair —**hoariness**, *n*.

hob'ble 1 *I veterinary medicine* bond or shackle used to confine the foot of an animal. 2. Anything which restrains motion.

hob'ble. *T have an uneven gait; to limp.*

hob nail" **li er** Colloquial term for more or less shrunken stage of Laennec cirrhosis, in which nodules of parenchyma, few millimeters in diameter and fairly uniform in size, project on the outer surface.

Hochberg-Melnick-Oser method for ascorbic acid. See under *method*.

Hochsinger Karl [*Austrian pediatrician*, 1860–]. Described sign suggestive of tetany in which, if pressure is made on the inner side of the biceps muscle of the arm, the fist closes· called *Hochsinger' sign*.

hock [AS. *hōh*, heel]. The joint on the hind leg of quadruped between the knee and the fetlock, corresponding to the ankle joint in man.

Hodge, Hugh Lenox [*American gynecologist and obstetrician*, 1796–1873]. Invented type of bstetric forceps, called *Hodge' forceps*, and pessary with double curve, for the correction of uterine displacement.

Hodgen John Thompson [*American surgeon*, 1826–82]. Invented suspension splint resembling the Thomas splint. The *Hodgen splint* was once widely used in the treatment of fracture of the shaft of th femur

Hodgkin Thomas [*English physician*, 1798–1866]. Described aortic insufficiency several years before Corrigan. Contributed to the knowledge of the pathologic anatomy of membranes, and described form of lymphoma (1832) sometimes subdivided on the basis of the pathologic findings into *Hodgkin granuloma*, *paragranuloma*, and *sarcoma*, generally called *Hodgkin disease*.

Hodgson, Joseph [*English physician*, 1788–1869] Described nonsacculated dilatation of the aortic arch (1815); called *Hodgson s disease*.

ho do-pho'bi a [G *hodos*, road; *phobos*, fear]. Morbid fear of travel.

hoe [OF *houe*]. 1 A scraping instrument used in operations for cleft palate. 2. *In dentistry*, an instrument used in cavity preparation.

Hoehne' sign. See under *sign*.

hof [Ger courtyard]. *I hematology* the little area between the lobes of bilobed nucleus.

Hofbauer cell. See under *cell*.

Hoff Jacobus Henricus va 't [*Dutch physical chemist*, 1852–1911]. Known for his discoveries in pure physics and in stereochemistry *Van't Hoff law* states that in dilute solutions at constant temperature, the osmotic pressure is in direct ratio to the concentration of the solution; if the concentration is constant, the osmotic pressure *varies with the bsolute temperature*. See also van t Hoff' *factor* L N bel laureate (1901)

Hoffa, Albert [*German orthopedic surgeon*, 1859–1908]. Developed the open operation for the red ction of congenital dislocation of the hip (1890); he deepened the acetabulum and divided the muscles to secure reposition of the head of the femur *H fa operation* has been superseded by more modern methods. Traumatic solitary lipoma of the knee joint is known as *H f disease*.

Hoffmann Erich (1868–) German dermatologist, who with Schaudinn, discovered *Treponema pallidum*, the causative agent of syphilis (1905)

Hoffmann, Friedrich [*German physician*, 1660–1742]. Author of an important treatise correlating physiology and pathology (1718) Recognized chlorosis as clinical entity (1731) Ether spirit is called *H fmann drops*. Compound ether spirit is known as *H fmann s anodyne*.

Hoffmann, Johann [*German neurologist*, 1857 1919]. Described hereditary familial spinal muscular atrophy called *H fmann atrophy*, *Hoffmann-Werdnig syndrome*. See *Werdnig*. See also Hoffmann *phenomenon*, digital *reflex*, also called *H fmann sign*.

Hoffmann, Moritz [*German anatomist*, 1622–98]. Credited with discovering the excretory duct of the pancreas in fowl (1642) This is said to have led to Wirsung' discovery of the duct in man in

the same year. Called *Hofmann's duct, duct of Wirsung.*

Hofmann's bacillus. *Corynebacterium pseudodiphtheriticum.*

Hofmeister, Franz [*Czechoslovakian physiological chemist,* 1850–1922]. Known for his researches on metabolism and in colloidal chemistry. See lyotropic series, also called *Hofmeister series.*

Hofmeister, Franz von [*German surgeon,* 1867–1930]. The *Hofmeister-Finsterer operation* is a modification of Pólya's operation of subtotal gastrectomy.

Hogben test. See frog test.

hog chol'er-a. See under *cholera.*

Högyes, Endre [*Hungarian physician,* 1847–1906]. Remembered for his introduction of the subcutaneous injection of 1% rabies virus, diluted from 1:100 to 1:1,000, for the treatment of rabies; called *Högyes' treatment.*

Höjer method for vitamin C. See under *method.*

Hoke, Michael [*American orthopedic surgeon,* 1874–1944]. Known for his method of treating scoliosis by rib resection and plaster jacket. Devised an operation for flatfoot in which he removed portions of the navicular and cuneiform bones and accomplished fusion of the joints, and also lengthened the Achilles tendon; called *Hoke' operation.*

holadin. Trade-mark for an extract of the pancreas used as a digestant.

ho-lan'dric [G. *holos,* whole; *anēr,* man]. Referring to genes carried by the Y chromosomes, or to characteristics inherited only through the paternal line.

Hol''ar-rhe'na an''ti-dys''en ter'i-ca. An ancient Indian remedy for dysentery which has been found to have specific action in amebic dysentery. Also called *kurchi bark.*

holarrsol. Trade-mark for dichlorophenarsine hydrochloride.

Holden, Luther (1815–1905). English surgeon known for his description of an indistinct crease in the anterior thigh lying over the site of attachment of Scarpa's fascia to the fascia lata.

hol''er-ga si-a (hol ur-gay shuh, -see-uh, -shuh, -see-uh) [G. *holos,* whole; *ergasia,* a working]. In psychobiology, a mental disorder which disrupts the entire structure of the personality; a major psychotic reaction, as schizophrenia.

hol'ism. A concept in modern biological thinking which states that for complex systems such as a cell or an organism the whole is greater than the sum of its parts from a functional point of view; also called *organicism.* —**holis'tic,** *adj.*

Holla disease [after *Holla,* a town in Norway]. Epidemic hemolytic jaundice.

hol'low foot''. See talipes cavus.

hol'low horn''. See Texas fever.

Holmes, Oliver Wendell [*American physician and author,* 1809–94]. Recognized the contagiousness of puerperal fever (1842–43).

Holmes phenomenon. Rebound phenomenon.

Holmgren, Alarik Frithiof [*Swedish physiologist,* 1831–97]. Noted retinal action currents (1865). Investigated colorblindness as a cause of railroad accidents. See also the *Holmgren test* for color vision.

hol'mi-um (hole'mee-um, hol'mee um) [L. *Holmia,* Stockholm]. Ho = 164.94. A rare earth element.

hol''o-, ho'lo- [G. *holos,* whole]. A combining form signifying *complete, entire.*

hol''o-a-car'di us [*holos;* G. *a-,* not; *kardia,* heart]. A placental parasitic twin (omphalosite) which lacks a heart. Syn., *acardiacus, acardius.*

h. acephalus. One in which there is no head.

h. acormus. One in which there is little more than a head.

h. amorphus. One in which the parasite consists of a shapeless mass.

hol''o-a-cra ni-a [*holos;* a-; G. *kranion,* skull]. Complete absence of the cranial vault, with partial or complete anencephaly.

hol''o-blas'tic [*holos;* G. *blastos,* germ]. Referring to an egg which divides completely into cells during cleavage.

holocaine hydrochloride. Trade name for the local anesthetic substance *phenacaine hydrochloride.*

hol''o-ce-phal'ic [*holos;* G. *kephalē,* head]. Pertaining to a monster deficient in certain parts but having the head complete.

hol'o-crine (hol''o-kryne, -krin) [*holos;* G. *krinein,* to separate]. Designating a gland in which the secretion is formed by degeneration of the glandular cells. See *merocrine.*

hol''o-di''as tol'ic [*holos;* G. *diastolē,* dilatation]. Relating to the entire diastole.

hol''o-en'zyme [*holos;* G. *en,* in; *zymē,* leaven]. The complete enzyme formed from the purely protein part, or apoenzyme, and the coenzyme.

hol''o-gas tros'chi-sis (hol o-gas-tros'ki-sis) [*holos;* G. *gastēr,* belly; *schisis,* a cleavage]. Fissure involving the entire length of the abdomen.

hol''o-gyn'ic (hol''o-jin'ick, -jy'nick) [*holos;* G. *gynē,* woman]. Descriptive of a mode of inheritance in which a characteristic is transmitted only in the female line from mother to daughter generation after generation, as in the case of attached X chromosomes. Also see *holandric.*

hol''o-met''a bol'ic, hol''o me-tab'o lous [*holos;* G. *metabolē,* change]. Pertaining to a mode of insect metamorphosis in which there is a quiescent pupal stage between the larva and the adult, as in beetles, moths, butterflies, midges, flies, ants, bees, and wasps.

hol''o-ra-chis chi-sis (hol o-ra-kis'ki-sis) [*holos;* G. *rhachis,* spine; *schisis,* a cleavage]. That type of spina bifida in which the entire spinal canal is open.

hol''o-sac'cha-ride. A polysaccharide which yields, on hydrolysis, only sugars. See *heterosaccharide.*

hol''o-so-mat'ic. Referring to the whole patient, in contrast to a local lesion.

hol''o-sys-tol'ic [*holos;* G. *systolē,* contraction]. Relating to the entire systole.

hol''o-zo'ic [*holos;* G. *zōikos,* of animals]. Having the characteristic animal type of nutrition which requires the ingestion of organic food materials.

Holt, Barnard Wight [*English surgeon,* 1818–94]. Remembered for his operation of rapid dilatation and rupture of a urethral stricture.

Holt, Luther Emmett [*American pediatrician and author,* 1855–1924]. Celebrated as medical writer and author of textbook on children's diseases. Proponent of modified milk, with pasteurization, in infant feeding. With W. H. Howell, isolated and named heparin (1918) which had been discovered by Howell's pupil, Jay McLean.

Holth, Sören [*Norwegian ophthalmic surgeon,* 1863–1937]. Introduced an operation of sclerectomy by means of a punch; called *Holth's operation.*

Holtz, Wilhelm [*German physicist,* 1836–1913]. Remembered for his invention of an early form of electrostatic generator for the production of high potentials; called the *Holtz machine.*

Holzmann, W [*German physician, contemporary*]. With Much, claimed that the serum of a dementia precox patient inhibited hemolysis by cobra venom. This is called the *Much-Holzmann reaction.*

hom a lo-ceph'a-lus [G. *homalos,* level; *kephalē,* head]. An individual with a flat head.

hom''a lo-cor'y-phus [*homalos;* G. *koryphē,* head]. A skull with a parietal angle of 132° to 141° indi-

cating a moderate degree of convexity of the parietal bone in the sagittal plane. The angle is formed by locating the point in the arch of the parietal bone that lies highest above the straight line which connects the points bregma and lambda, and then connecting this point with bregma and lambda, respectively. The angle included between these two lines is the parietal angle.

hom"a-lo-me-to-pus [*homalos*; G. *metōpon*, forehead]. A skull having a frontal angle between 130.5° and 141.

hom"a-lo-pis"tho-cra-ni-us [*homalos*; G. *opisthen*, behind; *kranion*, skull]. A skull in which the angle formed by lines joining the external occipital protuberance and the occipital point, with the highest point of the skull, is 140° to 154°.

hom-a-lu-ra-nus [*homalos*; G. *ouranos*, vault]. A skull with an angle of the palatal arch of 147.5° to 164°, indicating a moderately flattened arching of the palate in the sagittal plane. The angle is formed by locating the point in the palatal arch that lies highest above the straight line which connects the inferior point of the premaxilla with the tip of the posterior nasal spine, and then connecting this point with the inferior point of the premaxilla and the tip of the posterior nasal spine, respectively. The angle included between these two lines is the angle of the palatal arch.

Homans, John [*American surgeon*, 1877–]. With S. J. Crowe and Harvey Cushing, made an experimental study of the pituitary and its relation to the reproductive system (1910). See also Homans' *sign* of thrombophlebitis.

hom-arine. A methylated picolinic acid, isomeric with trigonelline; has been isolated from mammalian urine.

hom-at-ro-pine (ho-mat-ro-peen, -pin). $C_{16}H_{21}NO_3$. An alkaloid prepared from tropine and mandelic acid. It causes dilatation of the pupil and paralysis of accommodation, as does atropine, but its effects pass off more quickly, usually in two or three days.

h. hydrobromide (*homatropinae hydrobromidum*). $C_{16}H_{21}NO_3.HBr$; white crystals used as a mydriatic and in the night sweats of tuberculosis. Dose, 0.5–1 mg (1/120–1/60 gr). Application, 1% solution.

h. hydrochloride. $C_{16}H_{21}NO_3.HCl$. Used like the hydrobromide.

h. methylbromide. $C_{16}H_{21}NO_3.CH_3Br$. Used in treating gastrointestinal spasm and hyperchlorhydria. Dose 2.5–5.0 mg. (1/24–1/12 gr). See *mesopin*, *novatrin*.

hom-ax'i-al, hom-ax-o-ni'al [G. *homos*, one and the same, common; *axōn*, axis]. Having all axes equal.

Home, Everard (1756–1832). English surgeon who described the subtrigonal gland, a subsidiary lobe of the prostate, also called *Home's lobe* or *gland*.

ho-me-o-, ho-moe-o- [G. *homoios*, like, resembling]. A combining form meaning *like*, *similar*.

ho-me-o-chrome [*homoios*; G. *chrōma*, color]. Those special serous cells of salivary glands staining with mucin stains after fixation in a formalin-bichromate mixture. Also see *tropochrome*.

ho-me-o-graft". See *homograft*.

ho"me-o-ki-ne'sis [*homoios*; G. *kinēsis*, motion]. A mitosis in which equal amounts of chromatin go to each daughter nucleus.

ho-me-o-mor'phous, ho-moe-o-mor'phous [*homoios*; G. *morphē*, form]. Like or similar in form and structure.

ho-me-o-path'ic al'co-hol. Ethyl alcohol of 87% strength; used in making triturations.

ho-me-op'a-thy, ho-moe-op'a-thy [G. *homoios*, similar; *pathos*, disease]. A branch of medicine which deals with the investigation and application of the *simile phenomenon* or law of similars: *similia similibus curantur*, like is cured by like, i.e., the set of symptoms and signs a drug produces in healthy persons, when present as illness, may be brought back to normal by the same drug (*inverse reaction of drugs*). The significance of the simile phenomenon was known to Hippocrates, and was particularly expounded by Samuel Hahnemann (1755–1843) who coined the name *homeopathy*. Embodied in the homeopathic approach are (1) the testing of drugs on healthy human beings (called *proving*); (2) the giving of small doses of a drug (complete desensitization, active immunization); (3) the administration of not more than one drug at a time, and (4) treating not a single sign or symptom but the totality of signs and symptoms a patient presents (principle of *totality of symptoms*). —**homeopath'ic**, *adj.*; **ho'meopath, homeopathist**, *n.*

ho"me-o-pla'si-a, ho-moe-o-pla'si-a (ho-mee-o-play'zhuh, -zee-uh, -shuh, -see-uh) [*homoios*; G. *plassein*, to form]. The growth of tissue resembling the normal tissue, or matrix, in its form and properties; also the tissue so formed. —**homeoplas'tic**, *adj.*

ho-me-o'sis, ho"moe-o'sis [*homoios*; G. *-ōsis*, condition]. The appearance of an organ or appendage not normal to its location, as a leg in place of proboscis in a fly. —**homeot'ic**, *adj.*

ho-me-o-sta'sis [*homoios*; G. *stasis*, position]. The maintenance of steady states in the organism by coordinated physiologic processes. Thus all organ systems are integrated by automatic adjustments to keep within narrow limits disturbances excited by, or directly resulting from, changes in the surroundings of the organism. This concept, an extension of the *milieu intérieur* of Claude Bernard, was introduced by Walter B. Cannon (1926) and has come to be applied to psychological stability as well as physiological steadiness. —**homeostat'ic**, *adj.*

ho-me-o-ther'mal, ho-moe"o-ther'mal [*homoios*; G. *thermē*, heat]. Pertaining to animals that are warm-blooded, that maintain a uniform temperature despite variation in the surrounding temperature.

home'sick-ness [AS. *hām*; *sēoc*]. Nostalgia; an urgent desire to return to one's home. It may be accompanied by a morbid sluggishness of the functions of the various organs of the body, and may develop into depression and morbid anxiety.

ho-mi-chlo-pho'bi-a [G. *homichlē*, fog; *phobos*, fear]. A morbid fear of fog.

hom'i-cide [L. *homicida*, from *homo*, man, *caedere*, to kill]. 1. The killing of a fellow human being by law. It may be justifiable, excusable, or felonious; felonious homicide is murder or manslaughter. 2. One who takes the life of another. —**homicid'al**, *adj.*

Ho'mo [L., man]. The genus, of the mammalian order Primates, whose single species, *H. sapiens*, includes all extant races of man.

ho-mo- (ho-mo-, hom-o-) **hom-** [G. *homos*, one and the same]. 1. A combining form denoting *common*, *like*, *same*. 2. In *chemistry*, combining form designating a *homolog of* (specified) *compound*.

ho-mo-are-co-line (ho-mo-a-reek'o-leen, -lin, -a-rec'o-leen, -lin). $C_7H_{10}(C_2H_5)NO_2$. The ethyl ether of arecaidine. The hydrobromide, forming colorless soluble crystals, is used like arecoline.

ho-mo-bi'o-tin. A homolog of biotin containing an additional CH_2 group in the side chain; it is a potent antagonist of biotin toward some bac-

teria but is capable of replacing biotin in certain of its functions toward other organisms.

ho mo-cen'tric (ho mo-sen'trick, hom o-) **ho" mo-cen'tri-cal** [*homos*; G *kentron*, center]. Concentric; having the same center —**homocentrically** *adv.*

ho" mo cho'line. $(CH_3)_3N(OH)CH_2CH_2CH_2OH$; trimethyl-γ-hydroxypropyl-ammonium hydroxide, homolog of choline.

ho mo-chro mo [*homos*; G *chrōma*, color]. Referring to one of two types of serous cells of the salivary glands, which takes the same color as the stain.

ho" mo-chro mo-i som'er ism. The phenomenon of two or more organic substances of different structure exhibiting similar absorption spectra in solution.

ho" mo-clad'ic [*homos*; G *klados*, branch]. Referring to an anastomosis between twigs of the same artery

ho" mo-cy'clic. *In chemistry* pertaining to compounds of the closed-chain or ring type in which all the ring atoms are of the same element, usually carbon. See *carbocyclic*, *heterocyclic*.

ho mo-cys'te ine (ho mo-sis'tee-een, -in, -sis-tee in) $SH.(CH_2)_2CHNH_2COOH$. α-Amino-γ-thiol-n-butyric acid. A demethylated product of methionine. Capable of conversion to methionine in the animal body by transmethylation reaction with choline, betaine, etc.

ho mo-cys'tine (ho mo-sis'teen, -tin). $[-S(CH_2)_2CHNH_2COOH]_2$. γ,γ'-Dithiobis (α-amino-butyric acid) The oxidized, disulfide form of homocysteine, analogous to cystine, the oxidized form of cysteine; a compound capable of replacing methionine in the diet provided choline is present. Apparently choline acts as methylating agent to transform homocystine to methionine.

ho mo-dont, hom'o-dont [*homos*; G. *odous*, tooth]. *I biology* having all the teeth alike, as the porpoises. See *heterodont*.

ho" mo-dy'na-my Serial homology the correspondence of parts arranged in series along the main axis of the body —**homodynam'ic**, *adj*

ho moe-o- See *homeo-*.

ho" mo-er'o-tism, ho" mo-e-rot'i cism [*homos*; G. *erōs*, love]. The direction of the libido toward member of the same sex; may find expression in homogenitality homosexuality or may be repressed. In true homoerotism, the erotic feeling is not sexual or genital, but is well sublimated and expressed in socially acceptable behavior —**homoerot'ic**, *adj* *n.*

ho" mo-fer men'ta-tive [*homos*; L. *fermentum*, ferment]. Pertaining to the ability of certain bacteria to produce only lactic acid from glucose and other sugars. See *heterofermentative*.

ho mo-ga met'ic (ho mo ga-met'ick, -ga-mee tick) [*homos*; G *gamos*, marriage]. Referring to the production of one kind of germ cell in regard to the sex chromosomes. The female, being XX in constitution, is the homogametic sex.

ho mog'e-nate [*homos*; G. *gennaein*, from *gignesthai*, to be produced]. A suspension of animal tissue that is ground in the all-glass homogenizer described by Potter and Elvehjem in 1936.

AHK homogenate. A homogenization medium of alkaline isotonic KCl, in which certain cellular elements are maintained intact.

ho" mo-ge'ne-ous (ho mo jee nee-us, hom o-) [*homos*; G. *genos*, race, kind]. Having the same nature or qualities; of uniform character in all parts. —**homogene'ity** *n.*

ho mo-gen'ic [*homos*; G. *gennaein*, from *gignesthai*, to be produced]. Referring to genotypes of polysomic or polyploid organisms which contain the same allele for any given locus; similar to the term homozygous, used for diploid organisms.

ho" mo-gen"i tal'i ty [*homos*; L. *genitalis*, genital]. A form of homoerotism in which the sexual impulses are given genital expression that sexual perversion marked by genital relations between members of the same sex. —**homogeni'tal**, *adj*

ho" mo ge ni za'tion (ho'mo-jee ni-zay'shun, ho-moj -ni zay'shun) [*homos*; G. *genos*, race, kind]. 1 The act or process of becoming homogeneous. 2 The production of uniform suspension or emulsion from two or more normally immiscible substances.

ho-mog' ni zer See *viscolizer*

Potter's h. All glass, consisting of pestle which rotates inside close-fitting ordinary pyrex test tube. Described by Potter and Elvehjem in 1936.

ho-mog' nous [*homos*; *genos*]. 1 Of, or derived from, an individual of related or similar strain of the same species. 2. Of, or derived from another individual of the same species.

ho" mo-gen tis'ic ac'id (ho mo-jen-tis'ick, -jen-tiz'ick, hom o-) $(OH)_2C_6H_3CH_2COOH$. Dihydroxyphenylacetic acid, substance found in urine in alkaptonuria; it is an intermediate in the oxidation of tyrosine and phenylalanine. Formerly called *glycosuric acid*.

ho mo-glan'du lar [*homos*; L. *glans*, acorn]. Pertaining to the same gland.

ho mo-graft. A tissue graft taken from donor of the same species as the recipient common contraction of *homogeneous g.* Also called *homeograft*, *homologous g.*, *homoplastic g.*, *isograft*.

ho-moi'o- See *homeo-*.

ho moi-o-ther'mic. Referring to the ability of an organism to regulate physiologically the rate of heat production and heat loss so as to maintain itself at constant temperature. See also *poikilothermic*.

ho" mo-lac'tic. Pertaining to type of sugar fermentation in which the only product is lactic acid usually said of fermentation by microorganisms.

ho mo-lat'er-al [*homos*; L. *lateralis*, of the side]. On, or of the same side. See *ipsilateral*.

Homolle's amorphous digitalin. See French *digitalin*.

ho-mol'o-gous [G. *homologos*, from *homos*; *logos*, word]. 1 Corresponding in structure, either directly or as referred to a fundamental type. 2. *I chemistry* being of the same type or series differing by multiple, such as CH_2, or an arithmetic ratio in certain constituents. —**hom'olog**, **hom'ologue**, **homology** *n.*

ho-mon o-mous [G *homonomos*, from *homos*, *nomos*, law]. Referring to the condition in which the metameres of segmented animal are similar —**homonomy** *n.*

ho mo-mor'phic. Having similar structure without definite relation to bodily axes.

ho mon'y mous. 1 Having the same name 2. *I ophthalmology*, referring to the same sides of the field of vision, as in homonymous hemianopsia.

ho'mo-plast, hom'o-plast [*homos*; G *plassein*, to form]. *I biology*, plastid composed of one tissue, as opposed to *alloplast*.

ho mo-plas"ty [*homos*; *plassein*]. Surgery using grafts from another individual of the same species. —**homoplas'tic**, *adj*

ho mo po'lar Covalent. See *covalence*.

Ho mop'ter-a [*homos*; G *pteron*, wing]. An order of insects; includes cicadas, plant lice, and scale insects. Formerly suborder of the old order Hemiptera.

ho" mo-qui'nine (ho mo kwye'nine, kwi-neen') A molecular compound of quinine and cupreine obtained from cuprea bark.

ho mo-ser'ine. $HOH_2C.CH_2CH(NH_2)COOH$. An

amino acid formed in the breakdown of cystathionine to cysteine in animal tissues.

ho"mo·sex"u·al'i·ty [*homos*, L. *sexus*, sex]. 1 The state of being sexually attracted by members of one's own sex. 2. The state of being in love with one of the same sex. 3. *In psychoanalysis*, form of homoerotism in which the interest is sexual but sublimated, not receiving genital expression. —**homosex'ual** *adj.*, *n.*

ho mo sex'u al pan'ic. An acute undifferentiated syndrome which comes as the climax of prolonged tension from unconscious homosexual conflicts or sometimes bisexual tendencies. The attack is characterized by a high degree of fear, paranoid ideas, great excitement, and a tendency towards disorganization. It may mark the onset of a schizophrenic reaction.

ho mo-sul"fa nil' amide. Marfanil.

ho·mo·ther'mic, ho mo·ther'mal. Typically maintaining the temperature at a constant level; said of certain animals. See *animal heat*.

hom'o·tope. Any member of a particular group of elements in the periodic classification; thus, sodium is a homotope of lithium, potassium, rubidium, cesium, and francium.

ho mo-trans"plan ta'tion. Transplantation of tissue from one to another individual of the same species.

ho'mo type, hom'o-type [*homos*; G. *typos*, impression]. A part corresponding to a part on the other lateral half of the body.

ho mo zy gote [*homos*; G. *zygōtos*, yoked]. A individual in which the members of a given pair of genes are alike. —**homozygous** (ho mo-zy gus, ho-moz'i-gus) *adj.* **homozygo'sis**, *n.*

ho-mun cu lus [L., little man]. 1 A little man with normal proportion of parts; a dwarf; a manikin. 2. The human fetus.

Hon du'ras bark. Cascara amarga.

hon'ey The saccharine secretion deposited in the honeycomb by the bee, *Apis mellifera*, the principal constituents are levulose and dextrose; it is used as a food and pharmaceutical excipient. 2. A preparation of honey with some medicinal substance. See *mel*.

hoof [AS. *hōf*]. The horny covering of the distal end of a digit in the ungulates. —**hoofed**, *adj.*

hook [AS. *hōc*]. A curved instrument for exerting traction.

blunt h. An instrument for exercising traction upon the fetus in an arrested breech presentation.

squint h. A right-angled or curved instrument used in the operation for strabismus for exerting traction on tendons.

Hooker's method. See Danzer and Hooker's *method*.

hook'worm [*hōc*; AS. *wyrm*]. Any nematode belonging to the superfamily Strongyloidea, particularly the *Ancylostoma duodenale* and *Necator americanus*.

hook'worm dis-ease' See *ancylostomiasis*.

hoove, hoov'en. See *hove*.

hop. See *humulus*.

Hope James [*English physician*, 1801–41]. Made important contributions to the knowledge of diseases of the heart and blood vessels, especially valvular disease and aneurysm. Described an apical systolic murmur associated with mitral regurgitation; sometimes called *Hope's murmur*.

Hopkins, Frederi k Gowland (1861 1947) English physiological chemist known for his work on the estimation of uric acid in urine. With Sydney William Cole, he isolated tryptophan (1901) He is credited with recognizing the significance of, and necessity for accessory factors in diet, now known as vitamins (1906) and demonstrated the growth-promoting effect of milk. His investigations largely gave impetus to vitamin research. With Walter Morley Fletcher he made an important study of the production of lactic acid in muscular contraction (1907); he isolated glutathione (1922) Nobel laureate in medicine and physiology (1929)

Hopmann, Carl Melchior [*German rhinologist*, 1844–1925]. Described papillary hypertrophy of the nasal mucous membrane as presenting the appearance of a papilloma. Called *Hopmann polyp*.

Hoppe, Johann Ignaz [*Swiss physiologist*, 1811–91]. Described myasthenia gravis, which sometimes is known as *Hoppe-Goldflam symptom complex*.

Hoppe-Seyler Ernst Felix Immanuel [*German physiological chemist*, 1825–95]. Known especially for his research on the chemistry of the blood and his spectroscopic studies of hemoglobin. Was first to isolate hemoglobin in crystalline form.

hora [L.]. Hour abbreviated, h.

h. decubitus. At the hour of going to bed abbreviated, h. d.

h. somni. Bedtime; abbreviated, h. s.

hor'de-in [L. *hordeum*, barley]. A protein found in barley the seed of *Hordeum sativum*.

hor'de-nine (hor di-neen, -nin, hor-dee nin) [*hordeum*]. $C_{10}H_{15}NO$. An alkaloid from germinating barley. Has been used in diarrhea and dysentery and as a heart tonic. Its action is similar to that of epinephrine.

hor-de'o lum [L., sty dim. of *hordeum*]. A sty; furuncular inflammation of the connective tissue of the lids, near a hair follicle.

external h. A circumscribed, acute inflammation on the edge of the lid, produced by staphylococcus infection of one of the sebaceous glands of Zeis.

internal h. An infection of a tarsal (Meibomian) gland.

Hor de-um. See *barley*.

hore'hound" See *marrubium*.

ho-ris'me-scope [G. *horisma*, boundary; *skopein*, to examine]. An instrument intended to facilitate the making of ring tests such as Heller's. If care is taken, there is no possibility of mixing the two solutions, and a definitely defined ring is easily obtained at the zone of contact. Also called *albumoscope*.

hor"me pho'bi-a [G. *hormē*, assault, shock; *phobos*, fear]. Morbid fear of shock.

hor mi-on [G. *hormē*, point of starting]. The point in the sagittal plane, between the alae of the vomer where the vomer is attached to the body of the sphenoid bone.

Hor"mo-den'drum [G. *hormos*, chain; *dendron*, tree]. A genus of saprophytic fungi whose species act as common allergens. **H. compactum** and **H. pedrosoi** are pathogenic to man, and have been isolated from chromoblastomycosis.

hor'mone [G. *hormaein*, to excite]. A specific chemical product of an organ or of certain cells of an organ, transported by the blood or other body fluids, and having a specific regulatory effect upon cells remote from its origin. It may be considered an excitatory autacoid. For hormones listed by name, see Table of Hormones in the Appendix. —**hormo nal hormon'ic**, *adj.*

adenohypophyseal h. Any of the hormones produced by the adenohypophysis. The best established are adrenocorticotropin, follicle-stimulating hormone, growth hormone, luteinizing hormone, prolactin, and thyrotropin.

adrenal medullary h. Epinephrine.

adre ocortical h. One of the steroid hormones of the adrenal cortex, which have one or more of

the following biologic activities in adrenalectomized animals: maintenance of life; influence on carbohydrate, electrolyte, and protein metabolism; protection against stress; influence on muscular efficiency. Seven biologically active steroids have been isolated from the adrenal cortex.

adrenocorticotropic h. The adenohypophyseal hormone which stimulates the adrenal cortex; formerly spelled *adrenocorticotrophic h.* Syn., *adrenocorticotropin, corticotropin.*

adrenotrophic h. See adrenotropic h.

adrenotropic h. Adrenocorticotropin; formerly spelled *adrenotrophic h.*

anterior pituitary h. See adenohypophyseal h.

antidiuretic h. A hormone of the posterior pituitary which increases the rate of water reabsorption in the distal convoluted tubules of the kidney, thereby diminishing water excretion and returning more water to plasma to combat plasma concentration.

chorionic gonadotropic h. Chorionic gonadotropin.

chromatophorotrophic h. See chromatophorotropic h.

chromatophorotropic h. Intermedin; formerly spelled *chromatophorotrophic h.*

corpus-luteum stimulating h. See luteinizing h.

cortical h. See adrenocortical h.

corticotrophic h. See corticotropic h.

corticotropic h. Adrenocorticotropin; formerly spelled *corticotrophic h.*

diabetogenic h. See diabetogenic *factor*, growth h.

embryonic h. See morphogenic h.

estrogenic h. A hormone, found principally in the ovary and also in the placenta, which stimulates the accessory sex structures and the secondary sex characteristics in the female; affects also the anterior pituitary. The production in pregnancy is greatly increased.

fat-metabolizing h. See ketogenic h.

follicle-stimulating h. An adenohypophyseal hormone which stimulates follicular growth in the ovary, and spermatogenesis in the testis; also called *follicle-ripening h., gametogenic h., pituitary A, gonadotropin.* Abbreviated, FSH. Syn., *prolan-A, thylakentrin.*

gametogenic h. See follicle-stimulating h.

gastric h. See gastrin.

glycogenolytic h. Glucagon.

glycostatic h. Originally, the factor in crude anterior pituitary extract which increased muscle glycogen in fasting hypophysectomized animals. The metabolic actions which the term designates are now known to be induced by the growth hormone.

gonadotropic h. Any gonad-stimulating hormone. See *gonadotropin.*

growth h. 1. A hormone of the anterior pituitary which promotes growth. Syn., *somatotropic hormone, somatotropin.* 2. Any substance which promotes or stimulates an increase in the size of an organism, such as a plant, or of a part of an organism; also associated with diabetogenic factor or hormone.

interstitial-cell stimulating h. See luteinizing h.

intestinal hormones. Those produced in the intestine: secretin and cholecystokinin.

ketogenic h. Originally, the factor in crude anterior pituitary extract which stimulated the rate of fatty acid metabolism. The metabolic actions which the term designates are now known to be induced by adrenocorticotropin and the growth hormone. Also called *fat-metabolizing h.*

lactation h. Prolactin.

lactogenic h. The adenohypophyseal hormone which stimulates lactation in the mammalian breast. Syn., *prolactin.*

luteinizing h. (LH) An adenohypophyseal hormone which stimulates both epithelial and interstitial cells in the ovary, where together with the follicle-stimulating hormone it induces follicular maturation and formation of corpora lutea. In the male, where it acts only on the interstitial cells of the testis, it is more appropriately called *interstitial-cell stimulating hormone* (ICSH). Also called *corpus-luteum stimulating hormone, metakentrin, pituitary B, gonadotropin.*

luteotropic h. A hormone of the anterior lobe of the pituitary which promotes lactation and is necessary for the maintenance of the corpus luteum; also called *lactation h., lactogenic h., prolactin.*

mammary-stimulating h. 1. See *prolactin.* 2. More appropriately, estrogen and progesterone, which induce proliferation of the ductile and acinous elements of the mammary glands respectively.

mammogenic h. 1. See *prolactin.* 2. Loosely, any hormone known to influence the mammary gland.

melanocyte-stimulating h. A substance found in the pituitary gland which causes darkening of human skin and nevi, formation of new pigmented nevi, and pigmentary changes in fish and amphibia, where it has been called *intermedin.* Formerly called *melanophore h., melanophore-dilating principle.* Abbreviated, MSH.

morphogenetic h. The evocator or chemical substance released by the primary organizer in development.

"N" h. The factor or factors in adrenocortical secretions having nitrogen-retaining, or protein-anabolic, as well as androgenic activity; also called *nitrogen h.*

neurohypophyseal h. Either of the hormones extracted from the neurohypophysis, antidiuretic hormone or oxytocin, thought to be the neurosecretory products of neural cells located in hypothalamic nuclei.

"nitrogen" h. See "N" h.

ovarian hormones. Two types of hormone are produced by the ovary: the follicular or estrogenic hormones, estradiol, estrone, and estriol, produce estrus in the spayed animal; the luteal hormone, progesterone, is produced by the corpus luteum.

oxytocic h. See *oxytocin.*

pancreatic hormones. Those formed by the islets of the pancreas: insulin and lipocaic.

parathyroid h. Parathyrin.

placental h. Estrogenic hormone, chorionic gonadotropin.

posterior pituitary hormones. See neurohypophyseal h.

pregnant mare's serum h. (PMS) A placental hormone which has action similar to those of a combination of follicle-stimulating and luteinizing hormones of the adenohypophysis.

progestational h. The hormone, progesterone, which induces progestational changes of the uterine mucosa.

"S" h. The factor or factors in adrenocortical secretion having carbohydrate-regulatory activity; also called *glucocorticoid factor, sugar h.*

sex hormones. The gonadal hormones, estrogen and androgen, produced respectively by the ovary and testis, and the three hormones produced by the adenohypophysis: follicle-stimulating hormone (FSH), luteinizing hormone (LH), and prolactin.

somatotropic h. Growth hormone.

testicular hormones. Those elaborated by the testis the best known is testosterone, steroid which matures and maintains the male genitalia and the secondary sex characteristics.

thyroid h. Either iodothyroglobulin or one of its component chemical groups, the amino acid compound thyroxin. It accelerates the metabolism of all cells in the body increasing oxygen consumption stimulates growth, maturation, and differentiation of them increases nervous irritability muscular tonus, and circulation; and has diuretic action. Without thyroid hormone, no cell in the body can function normally

thyroid-stimulating h. Thyrotropic hormone. Abbreviated TSH.

thyrotrophic h. See thyrotropic h.

thyrotropic h. A hormone of the adenohypophysis which controls the status of the thyroid formerly spelled *thyrotrophic h.* Syn., *thyroid-stimulating h.*

wound hormones. Substances which can stimulate growth by resumption of division in mature cells.

hor mo no-poi-e sis (hor-mo no poy-ee sis, ho mo no-) [G. *hormaein*, to excite *poiesis*, making]. The production of hormones. —**hormonopoiet'ic,** *adj*

hor mo-zone. One of the hormones which govern metabolism or maintain stable fluid medium.

horn [AS] 1 A substance composed chiefly of keratin. 2 Cornu. —**horn y** *adj*

cutaneous h. Cornu cutaneum.

dorsal h. The posterior column of gray matter in the spinal cord.

lateral h. The lateral column of gray matter in the spinal cord

pulpal h. The extension of the dental pulp into cusp of tooth.

ventral h. The anterior column of gray matter in the spinal cord.

Horner J hann Friedrich [*Swiss ophthalmologist*, 1831–86] Described ptosis of the eyelid, due to section of the cervical sympathetic nerve fibers. *Horner syndrome*, which may result from paralysis of the nerve fibers or from any lesion interrupting the cervical sympathetic chain, includes also constriction of the pupil and vasodilatation, and usually enophthalmos and absence of sweating on the affected side of the head and face. Also called *Bernard-Horner syndrome*.

Horner William Edmonds (1793–1853) American anatomist who described the tensor tarsi muscle (1824) called *muscle of Horner* H also described incisors with grooves due to deficiency of enamel, which are called *Horner teeth*.

horn"i fi-ca'tion. Cornification

ho-rop ter [G *horos*, limit *optēr* observer]. The sum of all the points seen singly by the two retinas while the fixation point remains stationary —**horopter'ic,** *adj*

Horowitz–Beadle method for choline. See under *method*.

hor-rip"i la'tion [L *horripilatio* bristling of the hair] Old term for *piloerection*

horse'foot" See *tal pes* equinus.

horse pox" [AS *hors*; ME *pokkes*]. A term loosely used to include such diseases of horses as pseudotuberculosis, contagious pustular stomatitis, or vesicular exanthema.

horse shoe A metal bow for the attachment of Steinmann pins and Kirschner wires.

horse'tail" *Equisetum*.

Horsley J hn Shelton [*American surgeon*, 1870–1946]. Widely known for his ingenuity in surgical technics. Introduced his operation of pyloroplasty or gastroduodenoplasty for the relief of duodenal ulcer Incision is made into the pylorus anteriorly longer on the gastric than on the duodenal side. The ends of the incision are brought together and sutured, after which the diamond-shaped opening is closed, bringing the line of incision at right angle to its original direction.

Horsley Victor Alexander Haden [*English surgeon*, 1857–1916]. Contributed to the development of neurosurgery and surgery of the endocrine glands. Made important studies of the thyroid gland and of the causal relationship of thyroid deficiency to myxedema and cretinism produced experimental myxedema (1884) With Gowers, was first to remove tumor of the spinal cord successfully (1888) Introduced preparation of phenol, oil, and wax to prevent hemorrhage from the diploë in cranial operations called *Horsley' putty* or *wax*. The *Horsley-Clarke apparatus*, named for Horsley and Robert Henry Clarke, is stereotropic device for locating accurately stimulus in the brain and brain stem it is used in experimental studies of animals. See also *Horsley's sign* of middle meningeal hemorrhage.

Horton, Bayard Taylor [*American physician*, 1895–]. Described and studied histamine headache, called *Horton syndrome*.

hos'pi tal [L. *hospitalis*, relating to guest]. A medical treatment facility primarily intended and appropriately staffed and equipped to provide diagnostic and therapeutic service in general medicine and surgery or in some circumscribed field or fields of restorative medical care, together with bed care, nursing, and dietetic service to patients requiring such care and treatment.

air evacuation h. *In the U.S. Army*, an Air Force hospital, at or near terminus of the Military Air Transport Service, receiving patients evacuated by air from forward area.

rmy h. New designation for named station or general hospital in the Zone of the Interior (U.S.) Capacity varies depending on the type.

base h. An army hospital within the lines of communication, for receiving and caring for sick and wounded returned from field hospitals. *Obs.*

closed h. One closed to all physicians except those on its own staff.

contagious h. One restricted to the care of patients with communicable diseases. Syn., *isolation h.*

evacuation h. *In military medicine*, mobile hospital or semimobile unit designed to provide facilities, as near the front as possible, for major medical and surgical procedures and for the preparation and sorting of casualties for extended evacuation to the rear

field h. *I military medicine*, a hospital, usually under tentage, designed to function as station hospital t isolated posts or airfields, but adaptable to support ground troops in combat. It is classified as fixed hospital but it can be easily moved and even transported by air

general h. ( ) One in which many different types of patients are cared for; consists of various departments, as medicine, surgery pediatrics, obstetrics, tuberculosis, and venereal, nervous, and mental diseases, all completely staffed. (b) *I military medicine*, numbered fixed medical treatment facility especially staffed and equipped for observation, treatment, and disposition of patients requiring relatively long periods of hospitalization or highly specialized treatment normally used in the communications zone.

governmental h. One supported and administered by government subdivision; as munici-

pal, county, state, federal, army, navy, Public Health Service, or Veterans Administration hospital.

isolation h. See contagious h.

maternity h. One restricted to the care of women during pregnancy and parturition.

mobile army surgical h. In military medicine, mobile unit (60 beds) designed to provide early surgical treatment for nontransportable cases. It is designed for establishment with, or in the vicinity of, division clearing station.

numbered h. In military medicine, hospital designed for theater of operations and to which an individual number is assigned. Numbered hospitals may be station hospitals, general hospitals, or other specific types, such as evacuation hospitals.

station h. In U.S. Army medicine, a fixed hospital established in or near post, station, or military installation to give medical and dental care to military personnel.

surgical h. In military medicine, mobile medical unit, attached to an army, that provides special facilities for giving immediate surgical aid to men wounded in combat.

unnumbered h. In U.S. Army medicine, fixed hospital designed normally for operation in the continental United States or any of its possessions. All such hospitals are assigned names such as U.S. Army Hospital, Fort Belvoir or in case of general type hospital, Letterman Army Hospital.

veterinary h. 1. One for the care of animals. 2. In military medicine, a permanent animal hospital established at military station and designed to serve only the needs of that hospital.

hos'pi tal cen'ter. In military medicine, an aggregation of one or more general hospitals, often including schools, central laboratories, and utilities, all administered under the central authority of commanding officer generally an officer of the Medical Department of the army or navy.

hos'pi tal corps'man. In the U.S. Navy an enlisted man of the Medical Department.

hos pit al-i za'tion. 1. Medical care and treatment at hospital for serious cases or those needing care for long time, as contrasted with emergency or first-aid treatment administered at hospital. 2. The placing of person under medical care in hospital.

hos"pit-al-i-za'tion u'nit. In military medicine, complete self-contained hospital unit able to function independently; one of three identical units that make up field hospital.

mobile h. u. Any hospital installation whose organization and equipment permit ready movement under field or combat conditions.

hos'pi tal plant. In military medicine, permanent physical facility operated by medical treatment facility in theater of operations.

hos pi tal re turnee'. In U.S. Army medicine, persons who have been hospitalized, dropped from the rolls of their former unit or organization, carried on the Department of the U.S. Army detachment of patients, and are returning to duty through the replacement system.

hos pi tal ship. In military medicine, an unarmed ship, marked in accordance with the Geneva Conventions, staffed and equipped to provide hospitalization for the armed forces, and also used to evacuate casualties.

h. s. platoon. In military medicine, unit assigned to cargo or transport ships with no special hospital facilities other than that on any transport to care for patients who may be evacuated on the ship as it returns to port of debarkation.

hos'pi tal train. In military medicine, rail unit composed of one or more specially equipped railroad cars for the movement of sick and injured personnel and for the provision of emergency medical treatment en route.

hos'pi tal trans port. In military medicine, transport provided with additional medical personnel and increased facilities for evacuation of casualties.

host [L. *hospes*, host]. 1. The organic body upon or in which parasites live. 2. The relatively normal twin to which parasitic twin or part is attached.

alternate h. See intermediate h.

definitive h. One in which the sexual stages of the parasite develop.

intermediate h. One in which the parasite passes its larval or asexual stage.

reservoir h. Usually vertebrate host which carries on the life cycle of the parasite by being infested when infestation in man is prevented by natural or artificial barriers.

hot. Highly radioactive. *Colloquial*

hot atom. An atom which has high internal energy or high kinetic energy as result of nuclear process, such as neutron capture, beta decay, etc.

Hotchkiss, Lucius Wales [*American surgeon*, 1859–1926]. Devised an operation for the resection of carcinoma involving the jaw. A portion of the mandible and sometimes parts of the maxilla and hard palate were excised, and plastic repair of the cheek defect was made with tissue from the neck. Called *Hotchkiss operation.*

hot flash es or **flush'es.** A sudden, recurring vasomotor phenomenon, generally associated with the menopause, which consists of a warm feeling spreading cephalically. It may be accompanied by a visible flush due to dilatation of the superficial vessels of the skin.

hot lab or-a tor'y. A laboratory designed for research with radioactive materials where the quantities of radioactive sources are so large (approximately 50 millicuries and more) that special facilities and precautions in handling are required.

Hot ten tot a'pron. An overgrowth of the labia minora, seen in the Hottentots.

hot'ten tot ism [S. Afr. D.]. An extreme form of stammering.

Hotz, Ferdinand Carl [*American ophthalmologist*, 1843–1909]. Devised an operation for the correction of entropion and trichiasis in which considerable portion of the orbicularis oculi muscle was removed.

house'fly". See *Musca domestica*.

house maid's" knee. See prepatellar bursitis.

house phy si'cian. A physician who lives in hospital and is constantly available, as an intern.

house staff. The resident physicians and surgeons of hospital. The term generally refers to those having the status of intern or resident.

house sur'geon. A surgeon who lives in a hospital and is constantly available.

Houssay, Bernardo Alberto [*Argentinian physiologist*, 1887–]. Known for his work in experimental physiology and endocrinology. The first to note amelioration of diabetes in the depancreatized animal after hypophysectomy and the diabetogenic action of anterior pituitary extract. An animal in which the pancreas and hypophysis both have been excised is known as the *Houssay animal*. Nobel laureate with G. T. and C. F. Cori (1947).

Houston's valves. See under valve.

hove, ho'ven. Distention of the stomach of a ruminant animal with gas. It is generally due to too much green food.

Howard's method. See under *artificial respiration.*

Howard test. See Howard-Dolman depth perception *test.*

Howe's ammoniacal silver nitrate. See ammoniacal silver nitrate *solution.*

Howell, William Henry [*American physiologist,* 1860–1945]. Made various important studies concerned with the blood, including studies of blood coagulation and of the formed elements of the blood. With L. Emmett Holt, isolated and named heparin (1918) which had been discovered by Howell's pupil, Jay McLean. *Howell's bodies* are nuclear bodies, probably detritus from the nucleus, found in erythrocytes; also called *Howell-Jolly bodies.* See also Howell's *method* of calculating blood coagulation time.

Howship, John [*English surgeon,* 1781–1841]. Described minute depressions or pits observed on the surface of bone undergoing resorption; called *Howship's lacunae.*

H blood fac'tors. See *blood groups.*

h. s. *Hora somni,* bedtime.

H-sub'stance. A substance similar to, if not identical with, histamine; believed to play a prominent role in the response of local blood vessels to tissue damage.

Ht. Total hypermetropia.

Hübener, Erich August [*German bacteriologist,* 1870–]. With Uhlenhuth, was first to describe *Salmonella paratyphi C* (1908). Described anomalous agglutination of human erythrocytes which had been acted upon by certain bacteria. This phenomenon, also described by Oluf Thomsen, is known as the *Hübener-Thomsen phenomenon.*

Huber's stain. See under *stain.*

Hubschmann's pseudoacanthine. See British *acranthine.*

Huchard, Henri [*French physician,* 1844–1910]. Contributed to the knowledge of arteriosclerosis and hypertension. Called attention to the fact that diminution in pulse rate which occurs when the subject changes from the standing to the sitting position is much less in hypertensive than in normal individuals; called *Huchard's sign.* Excessive arterial tension was once called *Huchard's disease.*

Hucker's stain. See under *stain.*

Huddleson's test. See under *test.*

Hudson, W. H. [*American physician,* contemporary]. Designed a drill principally for use in opening the skull. *Hudson's bone drill* is operated by means of a holder similar to a carpenter's brace, and is provided with drills in graded sizes, so designed that the dura, when impinged on, is not injured.

hue. The quality of visual sensation which permits the observer to distinguish different wavelengths of light.

Hueck, Alexander Friedrich [*Estonian anatomist,* 1802–42]. Described the pectinate ligament of the iris, called *Hueck's ligament.*

Hughes reflex. See virile *reflex.*

Hughlings Jackson. See John Hughlings *Jackson.*

Huguier, Pierre Charles [*French gynecologist and surgeon,* 1804–74]. Made important studies of hysterectomy, of the treatment of ovarian cysts, and of amputation of the uterine cervix. Described a canal in the temporal bone, *Huguier's canal,* which transmits the chorda tympani, the *iter chordae anterius.* Leiomyoma is also known as *Huguier's disease.*

Huhner, Max [*American surgeon and urologist,* 1873–1947]. Devised a test for sterility: one hour after coitus, the vagina of the female is aspirated and spermatozoa found therein are examined for motility.

Hulett and Bonner method. See under *method.*

hum [imitative in origin]. A low murmuring sound.

venous h. A continuous blowing or singing sound heard in the large veins of the neck in some cases of anemia. Also called *humming-top murmur.*

hu'man [L. *humanus,* human]. Of, pertaining to, or like mankind.

hu·man'o·scope [*humanus;* G. *skopein,* to examine]. A series of overlapping anatomic plates so arranged as to allow the examiner to study the relative sizes, shapes, and relationships of various parts of the body as the pages are turned.

hu·mec'tant [L. *humectare,* to moisten]. Moistening; diluent.

hu·mec'tant. A diluent; a substance used to moisten.

hu"mer·o·ra'di·al [L. *humerus,* upper bone of the arm; *radius,* radius]. Pertaining to the humerus and the radius; applied to the joint between these two bones and to the ligaments joining them.

hu"mer·o·scap'u·lar [*humerus;* L. *scapula,* shoulder]. Pertaining to both the humerus and the scapula.

hu"mer·o·ul'nar [*humerus;* L. *ulna,* elbow]. Pertaining to the humerus and the ulna; applied to the joint between these two bones and to the ligaments joining them.

hu'mer·us (pl. *humeri*) [L.]. The bone of the upper arm, arm proper, or brachium. See Plates 1, 2. See Table of Bones in the Appendix. —**humeral,** *adj.*

hu'mic ac'id. A general term for any acid substance derived from humus.

hu·mic'o·lin. A weakly acidic antifungal substance produced by *Aspergillus humicola.*

hu·mid"i·fi·ca'tion. The process of moistening or humidifying air; specifically, in respiration, by moisture from mucous membranes.

hu·mid'i·ty [L. *humidus,* moist]. The state or quality of being moist; moisture; dampness. —**hu'mid,** *adj.*

absolute h. The percentage of water vapor in the air.

relative h. The amount of water vapor in the air as compared with the total amount the air would hold at a given temperature.

hu'min. 1. Any of several poorly defined substances, including humic acid, obtained from humus; the term is sometimes applied to humus itself. 2. A dark-colored substance or substances formed when proteins undergo acid hydrolysis, probably resulting by condensation of tryptophan with an aldehyde.

hu'mor [L., liquid]. 1. Any fluid or semifluid part of the body. 2. *In old physiology,* one of the four cardinal body fluids, making up the four humors of Galen: the choleric, the melancholic, the phlegmatic, and the sanguine. They were said to determine a person's constitution, disposition, or temperament. 3. Disposition, temperament.

aqueous h. The aqueous.

crystalline h. The crystalline lens.

ocular h. Any one of the humors of the eye, the aqueous or vitreous, or the crystalline lens.

vitreous h. The vitreous body.

hu'mor·al [*humor*]. A term referring to the so-called humors of the body.

hu'mor·al·ism [*humor*]. An obsolete theory that disease was due to a disturbance of the humors or fluids of the body.

hump'back". See *kyphosis.*

Humphry, George Murray [*English surgeon,* 1820–96]. Devised an operation for excision of the condyle of the lower jaw: he exposed the condyle by reflecting a triangular flap upward, then sawed through the neck of the bone, and removed the condyle and lateral pterygoid plate. Called *Humphry's operation.*

hu'mu·lene. $C_{15}H_{24}$. A sesquiterpene contained in the volatile oil from hops.

hu'mu·lin. Lupulin.

hu'mu·lon, hu'mu·lone. $C_{21}H_{30}O_5$, an antibiotic constituent of humulus or hops. Syn. *α-lupulic acid*.

hu'mu·lus [ML.]. Hops. The dried strobile of *Humulus lupulus* bearing the glandular trichomes known as lupulin. Hops have been used as a sedative, stomachic, and tonic.

hu'mus [L., earth, ground]. A dark material in soil, consisting of decaying organic matter.

hunch'back. Lay term for kyphosis.

hun'ger [AS. *hunger*]. A sensation of emptiness of the stomach, with a longing for food.

air h. Distressing dyspnea marked by deep, labored respiration, as in acidosis of diabetic coma. Also called *Kussmaul breathing*.

Hunner, Guy Le Roy (1868–). American gynecologic urologist, known for his description of interstitial cystitis with ulceration, called *Hunner' ulcer*.

Hunt, James Ramsay [*American neurologist*, 1874–1937]. Remembered for his many contributions to neurologic science. Described a syndrome of facial paralysis, earache, and herpes, appearing about the external auditory meatus, found when both motor and sensory fibers and the geniculate ganglion of the seventh cranial nerve are diseased; called *Hunt' syndrome*. Described neurotrophic atrophy of the small muscles of the hand, without sensory alteration; called *Hunt' atrophy*. See also striocerebellar *tremor*, also called *Hunt' tremor*.

Hunt's test. See spermocytophagic *test*.

Hunter, John [*Scottish surgeon in England*, 1728–93]. Made important contributions to anatomy and physiology and to the development of experimental pathology. In an unsuccessful attempt to differentiate gonorrhea from syphilis, inoculated himself with what he thought was gonorrhea and acquired syphilitic chancre (1767), called *Hunterian chancre*. Classified the teeth (1771). Described post-mortem digestion (1772). Performed proximal ligation of an artery at some distance from the aneurysm, thus so called *Hunter' operation*. Described the descent of the testes and the structure of the placenta (1786). In treatise on gunshot wounds, gave classic description of inflammation (1794). See also adductor *canal*, also called *Hunter' canal*.

Hunter, William [*Scottish surgeon, obstetrician, and anatomist*, 1718–83]. Brother of John Hunter. Described arteriovenous aneurysm. Made an important study of the human gravid uterus (1774).

Hunter, William [*English physician*, 1861–1937]. Described glossitis in pernicious anemia; called *Hunter' glossitis*.

Hunter and Givens' modification of the Krüger Schmidt method. See under *method*.

Huntington, George [*American physician*, 1851–1916]. Remembered for his classic description of chronic progressive hereditary chorea. *Huntington' chorea* is characterized by irregular movements, disturbance of speech, and gradually increasing dementia.

Huntoon stain. See under *stain*.

Huppert, Carl Hugo [*Bohemian physician*, 1832–1904]. Described multiple myeloma, called *Huppert' disease*, *Kahler disease*. See under *Kahler*. See also Huppert *test*.

Hurler, Gertrud [*German pediatrician*, contemporary]. Described lipochondrodystrophy, which is also called *Hurler' disease*.

Hürthle, Karl Wilhelm (1860–1945). German physiologist, known for his investigations on blood circulation and muscle structure. He also described an adenoma of the thyroid gland, composed of large cells, called *Hürthle cells*, with acidophilic cytoplasm and small nuclei.

Hurtley' test. See under *test*.

Huschke, Emil [*German anatomist*, 1797–1858]. An inconstant perforation of the tympanic portion of the temporal bone is called the *foramen of Huschke*.

Hutchinson, Jonathan [*English surgeon*, 1828–1913]. Described the notched or peg teeth seen in congenital syphilis (1861), called *Hutchinson teeth*. Notched teeth, interstitial keratitis, and eighth nerve deafness comprise *Hutchinson' sign* or *triad*, diagnostic of congenital syphilis. Hutchinson performed the first successful operation for intussusception in an infant (1871). He described summer prurigo (1878), called *Hutchinson prurigo*, and serpiginous angioma, called *Hutchinson disease*. Generalized sarcoidosis is called *Hutchinson-Boeck disease*. Progeria is known as *Hutchinson-Gilford disease*.

Hutchison, Robert Grieve [*English physician*, 1871–1943]. Described suprarenal sarcoma in children (1907). This was accompanied by metastases in the skull and exophthalmos, and usually by discoloration about the eyes. Called *Hutchison tumors*.

Huxham, John [*English physician*, 1692–1768]. Known for his *Essay on Fevers* (1739). Gave a classic description of diphtheria (1757) although he did not distinguish it from angina due to streptococcic infection. H. also advocated the use of fruit and fruit juices for the prevention of scurvy.

Huxley, Thomas Henry [*English biologist*, 1825–95]. A leading advocate in his time of Darwin's theories. Made important contributions to comparative anatomy. See *layer* of Huxley.

Huygens, Christiaan [*Dutch physicist, mathematician, and astronomer*, 1629–95]. Postulated the wave theory of light. Improved telescopes and made important astronomic discoveries. See also Huygenian *ocular*.

hy'a·lin [G. *hyalos*, glass]. A clear, structureless, homogeneous, glassy material occurring normally in matrix of cartilage, vitreous body, colloid of thyroid gland, mucin, glycogen, jelly of Wharton; occurs pathologically in degenerations of connective tissues, epithelial cells, and in the form of mucinous and colloid degenerations, glycogen infiltration, etc. —**hyaline**, *adj.*

epithelial h. That produced by epithelial cells or resulting from degenerative change, usually in the form of intracytoplasmic droplets and seen in certain tumor cells, plasmacytes, and in various diseases of the liver and kidney.

mesenchymal h. A form of hyalin which results from degeneration or necrosis of nonepithelial tissue, usually of muscle, as in Zenker' hyaline necrosis, or of blood vessels.

Zenker' h. See Zenker' hyaline necrosis.

hy"a·lin·i·za'tion [*hyalos*]. Changes characterized by replacement or infiltration of tissues by an endogenous, amorphous, and frequently firm or hard material.

hy"a·lin·o'sis [G. *hyalos*, glass; *-osis*, condition]. 1. Hyaline degeneration. 2. A condition produced experimentally in rats by the administration of desoxycorticone, after unilateral nephrectomy. Nephrosclerosis is produced, and large number of the glomerular loops and afferent arterioles become hyalinized. Hyalinization is also seen beneath the endocardium and in many arteries.

hy"a·lin·u'ri·a [*hyalos*; G. *ouron*, urine]. Presence of hyalin or of hyaline casts in the urine.

hy"a·li'tis [*hyalos*; G. *-itis*, inflammation]. Inflammation of the vitreous body, or of the hyaloid membrane of the vitreous body.

hy'a-lo-, hyal- [*hyalos*]. 1. A combining form meaning *glass*. 2. A combining form signifying *of* or *pertaining to hyalin*.

hy"a-lo-cap-su-li'tis. Hyaloserositis of the capsule of the liver or spleen.

hy-al'o-gen (high-al'o-jen) [*hyalos*; G. *gennaesthai*, from *gignesthai*, to be produced]. 1. Insoluble substances resembling mucin, found in the walls of echinococcus cysts, the vitreous body, etc., and yielding hyalin on hydrolysis. 2. An albuminoid found in cartilage.

hy'a-loid [G. *hyaloeidēs*, glassy]. Transparent; glasslike.

hy"a-loid-i'tis. See *hyalitis*.

hy'a-lo-mere [*hyalos*; G. *meros*, part]. The clear part of the blood platelet after staining with stains of the Romanovsky type.

Hy"a-lom'ma [G. *hyalos*, glass; *omma*, eye]. A genus of ticks the males of which are characterized by submarginal eyes, ventral plates, and two protrusions from the tip of the abdomen which are capped with chitinous points. **H. aegyptium**, the most important species, is found on cattle and other large mammals in Africa, Asia, and south Europe.

hy"a-lo-mu'coid. A mucoid found in the fluid of the vitreous body.

hy"a-lo-nyx'is [*hyalos*; G. *nyxis*, a pricking]. Puncture of the vitreous body of the eye.

hy"a-lo-pho'bi-a. A morbid fear of glass.

hy'a-lo-plasm [*hyalos*; G. *plasma*, anything formed]. The fluid portion of the protoplasm. Also called *enchylema*, *interfilar mass*, *paraplasm*, *paramitome*.

hy"a-lo-se-ro-si'tis [*hyalos*; L. *serum*, watery part; G. *-itis*, inflammation]. Chronic inflammation of a serous membrane, observed principally in the capsule of the liver and of the spleen, with production of a thick layer of hyalinized, pearly gray, translucent connective tissue, said to resemble icing on a cake.

hy"a-lu-ron'ic ac'id. A viscous mucopolysaccharide occurring in connective tissues and in bacterial capsules.

hy"a-lu-ron'i-dase. An enzyme occurring in pathogenic bacteria, snake venoms, sperm, etc. It causes the breakdown of hyaluronic acid in protective polysaccharide barriers, promoting invasion of cells and tissues by the invading agent; it is a spreading factor. Hyaluronidase is used to promote the diffusion and absorption of various injected medicaments, also to increase protective urinary colloids in treatment and prevention of urinary calculi. See *alidase*, *wydase*. Syn., *invasin*.

hy'brid [L. *hibrida*, mongrel]. The offspring of parents belonging to different species, varieties, or genotypes. —**hybridism, hybrid'ity.**

hy"brid-i-za'tion [*hibrida*]. Crossbreeding.

hyclorite. Trade-mark for a solution of sodium hypochlorite, sodium chloride, and calcium hydroxide, containing 3.85% available chlorine.

hycodan bitartrate. Trade-marked name for dihydrocodeinone bitartrate, a cough sedative.

hy"dan-to'ic ac'id. $NH_2CONHCH_2COOH$. An acid resulting from the union of aminoacetic acid and carbamic acid which is an intermediary in the production of creatine in the body.

hy-dan'to-in (high-dan'to-in, high"dan-to'in)

NHCONHCOCH. Glycolyl urea. A crystalline substance derived from allantoin and related to urea.

hydase. Trade-mark for a brand of hyaluronidase.

hy'da-tid (high'dat-id) [G. *hydatis*, watery vesicle]. 1. A cyst formed in tissues due to growth of the larval stage of *Echinococcus granulosus* (dog tapeworm), containing a clear watery fluid, lined by an inner germinal cellular layer and an outer laminated layer of hyaline material. Formation of scolices in the germinal layer is followed by deposit of pinched-off scolices and of booklets in the fluid. 2. A cystic remnant of an embryonal structure. —**hydat'ic, hydatid'iform,** *adj.*

h. of Morgagni. A small, cystic remnant of the Mullerian duct attached by a fibrous stalk to the fimbriated end of the oviduct, or, in the male, to the head of the epididymis.

secondary h. Echinococcus cyst due to the rupture of another cyst and deposit of germinal cells and scolices in the neighborhood.

stalked h. The *h.* of Morgagni.

sterile hydatids. Echinococcus cysts in which the germinal layer, brood cysts, and scolices have disappeared; the so-called acephalocysts.

hy"da-tid'o-cele [*hydatis*; G. *kēlē*, hernia]. Scrotal hernia containing echinococcus cysts.

hy-dat"i-do'sis [*hydatis*; G. *-ōsis*, condition]. Multiple infection caused by echinococcus cysts.

Hyde, James Nevin [*American dermatologist*, 1840-1910]. Remembered for his description of prurigo nodularis, called *Hyde's disease*.

hydergine. Trade-mark for a mixture of the methanesulfonates of dihydroergocornine, dihydroergocristine, and dihydroergokryptine used clinically to produce adrenergic blockade and peripheral vasodilatation, being administered intramuscularly.

hyd"no-car'pic ac'id. An acid, $C_{15}H_{27}COOH$, occurring as the glyceride in chaulmoogra oil.

hyd"no-car'pus oil. The British Pharmacopoeia name for the oil obtained by cold expression from fresh, ripe seeds of *Hydnocarpus Wightiana* Blume, but used by the National Formulary as a synonym for *chaulmoogra oil*, (IX) used in the treatment of leprosy.

hydracetin. Trade name for acetylphenylhydrazine.

hy-dra'cid (high-dras'id). An acid containing no oxygen.

hy"dra-den-i'tis. See *hidradenitis*.

hy-drad"e-no'ma. Hidradenoma.

hy-dre'mi-a. See *hydremia*.

hy-dra-er"o-per"i-to-ne'um (high-dray"er-o-perr"i-to-nee'um). See *hydropneumoperitoneum*.

hy'dra-gog, hy'dra-gogue [G. *hydōr*, water; *agōgos*, leading]. Causing the discharge of watery fluid.

hy'dra-gog, hy'dra-gogue. A purgative that causes copious liquid discharges.

hy-dral'a-zine hy"dro-chlo'ride. Generic name for 1-hydrazinophthalazine hydrochloride, an antihypertensive agent supplied under the trade-marked name *apresoline hydrochloride*.

hy-dram'ni-on. See *polyhydramnios*.

hy-dram'ni-os (high-dram'nee-os), **hy-dram'ni-on.** See *polyhydramnios*.

hy-dran'ge-a (high-drain'jah, -jee-uh, high-dran'-) [*hydōr*; G. *angeion*, vessel]. The dried rhizome and roots of *Hydrangea arborescens*; contains a glycoside, hydrangin. Hydrangea has been used as a diuretic and antilithic. Dose, 2 Gm. (30 gr.)

hy-dran'gin (high-dran'jin) [*hydōr*; *angeion*]. A crystalline glycoside from hydrangea.

hy"drar-gyr'i-a (high"drahr-jirr'ee-uh, -jy'ree-uh), **hy"drar-gy-ri'a-sis, hy-drar"gy-rism** [G. *hydrargyros*, quicksilver]. Chronic mercurial poisoning.

hy"drar-gyr"o-pho'bi-a [*hydrargyros*; G. *phobos*, fear]. A morbid fear of mercurial medicines.

hy"drar-gyr"oph-thal'mi-a [*hydrargyros*; G. *ophthalmos*, eye]. Ophthalmia due to mercurial poisoning.

hy-drar'gy-rum (high-drahr'ji-rum). See *mercury*.

hy"drar-thro'sis [G. *hydōr*, water; *arthrōsis*, articulation]. An accumulation of fluid in a joint.
intermittent h. A condition characterized by acute regularly recurring effusions of fluid into the joint cavity.

hy'drase [*hydōr*]. An enzyme which removes or adds water to a substrate without hydrolyzing it. See Table of Enzymes in the Appendix.

hy-dras'tine (high-dras'teen, -tin). An alkaloid, $C_{21}H_{21}NO_6$, from hydrastis; occasionally used, generally in the form of the hydrochloride, as an astringent, hemostatic, and uterine stimulant.

hy-dras'ti-nine (high-dras'ti-neen, -nin). An oxidation product of hydrastine; sometimes used, in the form of the hydrochloride, in uterine hemorrhage as a stimulant and hemostatic.

hy-dras'tis [*hydōr*]. The rhizome and roots of *Hydrastis canadensis*, which contain the alkaloids hydrastine, berberine and canadine. It is a hemostatic and astringent but is rarely employed. Syn., *yellow root*. Also called *goldenseal*.

hy'drate [*hydōr*]. 1. A compound containing water in chemical combination; water of hydration. 2. Hydroxide. Obs. —**hydrated**, adj.; **hydra'ti-on**, n.

hy-drau'lics [G. *hydraulis*, from *hydōr*, and *aulos*, flute]. The science which deals with the mechanical properties of liquids.

hy'dra-zine (high'drah-zeen, -zin). 1. $H_2N.NH_2$. Diamine; a colorless liquid, soluble in water, having a strong alkaline reaction. 2. One of a class of bodies derived from hydrazine by replacing one or more hydrogen atoms by a radical.
h. sulfate. $H_2N.NH_2.H_2SO_4$. Used in tests for blood; a reducing agent.

hy"dre-lat'ic [*hydōr*; G. *elaunein*, to drive]. Pertaining to the secretory effect of nerves upon glands, causing them to discharge the watery part of their secretion. Also called *hydrokinetic*.

hy-dre'mi-a, hy-drae'mi-a (high-dree'mee-uh) [*hydōr*; G. *haima*, blood]. A condition of the blood in which the fluid content is increased but the total amount of the blood does not increase proportionately. —**hydremic**, adj.

hy"dren-ceph'a-lo-cele [*hydōr*; G. *egkephalos*, brain; *kēlē*, hernia]. Protrusion through a defect in the cranium of a sac and brain substance in which a cystic cavity contains fluid.

hy"dren-ceph"a-lo-me-nin'go-cele [*hydōr*; *egkephalos*; G. *mēnigx*, membrane; *kēlē*]. A hernia through a cranial defect of meninges and brain substance, fluid filling the space between them.

hy-dri'a-try (high-dry'uh-tree, high'dree-at-ree). Hydrotherapy. Obs.

hy'dride. A compound containing hydrogen united to a more positive element or to a radical.

hy"dri-od'ic ac'id. The gas hydrogen iodide, HI, or an aqueous solution thereof. Diluted hydriodic acid, containing 10% HI, and hydriodic acid syrup, containing 1.4% HI, are sometimes used medicinally for the effects of iodide ion.

hy-dri'o-dide. An iodide formed by interaction of an organic nitrogenous base with hydriodic acid.

hy-dri'on (high-dry'on, high'dree-on). Hydrogen in the ionized form.

Hydrionic. Trade-mark for glutamic acid hydrochloride used in hydrochloric acid therapy.

hy'dro-, hydr- [*hydōr*]. 1. A combining form meaning *water*. 2. *In chemistry*, a combining form denoting *the presence of hydrogen or the addition of hydrogen to a compound*. 3. *In medicine*, a combining form denoting *a disease characterized by an accumulation of water or other fluid in a bodily part*.

hy-dro'a (high-dro'uh, hid'ro-uh) [*hydōr*; G. *ōon*, egg]. Any skin disease characterized by vesicles or bullae.
h. herpetiforme. See dermatitis herpetiformis.
h. vacciniforme. A skin disease, occurring in the summer on the exposed parts, usually in young males. It is characterized by vesicles and crusted ulcers, and gradually disappears following puberty. Also called *h. aestivale*, *h. puerorum*, *summer prurigo*.

hy"dro-ab-do'men [*hydōr*; L. *abdomen*, belly]. Old term for ascites.

hy"dro-bil"i-ru'bin (high"dro-bil"i-roo'bin, -bil"i-roo'bin) [*hydōr*; L. *bilis*, bile; *ruber*, red]. A red pigment, a reduction product from bilirubin; probably the same as urobilin.

hy"dro-bro'mate. A hydrobromic acid salt; a hydrobromide.

hy"dro-bro'mic. Composed of hydrogen and bromine.

hy"dro-bro'mic ac'id. 1. Hydrogen bromide, HBr; a heavy colorless gas with a pungent irritating odor. 2. An aqueous solution of HBr.
diluted h. a. An aqueous solution containing 10% of HBr; sometimes used for the same purpose as the bromides. Dose, 2–4 cc. (30–60 min.)

hy"dro-bro'mide. A bromide formed by interaction of an organic nitrogenous base with hydrobromic acid.

hy'dro-cal. A trade-mark for certain high-strength gypsum cements suitable for molding purposes.

hy"dro-ca'lix. Cystic dilatation of a renal calix, usually solitary.

hy"dro-cal"y-ce'al sis. See calyceal diverticulum.

hy"dro-car'bon. Any compound composed only of hydrogen and carbon.
saturated h. One that has the maximum number of hydrogen atoms, that is, without double or triple bonds between carbon atoms.
unsaturated h. One that has one or more double or triple bonds between carbon atoms.

hy'dro-cele [*hydōr*; G. *kēlē*, tumor]. An accumulation of fluid in the sac of the tunica vaginalis of the testis. In adults, the cause is unknown and the fluid is clear, slightly viscid, and contains 6–10% of solids, including proteins, salts, and sometimes cholesterol. See Plate 39.
congenital h. The presence of peritoneal fluid in the tunica vaginalis, due to failure of closure of the vaginal process.
encysted h. One which occupies a portion of the vaginal process with closure of the abdominal and scrotal ends.
h. herniosa. An accumulation of peritoneal fluid in a hernial sac, especially when hernia accompanies congenital or infantile hydrocele.
infantile h. Peritoneal fluid in the tunica vaginalis and the vaginal process, but with the process closed at the abdominal ring.
spermatic h. Accumulation of spermatic fluid in the tunica vaginalis of the testis; caused by the rupture of a spermatocele.

hy"dro-ce-lec'to-my [*hydōr*; *kēlē*; G. *ektomē*, excision]. Surgical removal of part of the tunica vaginalis for the cure of hydrocele.

hy"dro-ceph"a-lo-cele" (high"dro-sef"uh-lo-seel"). See *hydrencephalocele*.

hy"dro-ceph'a-lus. 1. An individual with hydrocephaly. 2. Hydrocephaly.

hy"dro-ceph'a-ly [*hydōr*; G. *kephalē*, head]. An increase in the volume of cerebrospinal fluid within the skull. The term is commonly applied to distentions of the ventricular system by cerebrospinal fluid which cannot escape into the subarachnoid space, is blocked in the subarachnoid pathways, or cannot be absorbed into the venous system. Also called *hydrocephalus*. —**hydrocephal'ic**, adj.
communicating h. A form in which there is

normal communication between the ventricles and the subarachnoid space.

congenital h. A progressive form in infancy. Also called *chronic h., infantile h.*

external h. An increased accumulation of fluid in the subarachnoid space, or rarely in the subdural space, usually a passive process due to atrophy of the brain.

internal h. That in which increased cerebrospinal fluid accumulates in the ventricular system as contrasted with *external h.* See *obstructive h.*

obstructive h. That caused by the blocking of the passage of cerebrospinal fluid from the brain ventricles, where it is produced, to the subarachnoid space where it is absorbed. Obstruction may occur at the interventricular foramens in the cerebral aqueduct, or at the foramens of Luschka in the roof of the fourth ventricle. Also called *noncommunicating h.*

hy"dro-chi'none (high dro-kigh nohn, kin ohn) See *hydroquinone.*

hy"dro-chin"o nu'ri a (-kin new ree-uh) [*hydr-*; Sp. *quina*, cinchona bark; G. *ouron*, urine]. The presence in the urine of hydroquinone; due to ingestion of salol, resorcin, etc.

hy"dro-chlo rate. An older name, incorrectly used, for salts formed by hydrochloric acid with certain organic nitrogenous bases, especially alkaloids.

hy"dro-chlo'ric acid. 1. Hydrogen chloride, HCl, a colorless gas of pungent odor which can be liquefied under pressure. 2. An aqueous solution containing 35% to 38% of HCl.

diluted h. a. An aqueous solution containing 10% of HCl used in hydrochloric acid deficiency states. Dose, 0.6–4.0 cc. (10–60 min.)

hy"dro-chlo'ride. A chloride formed by interaction of an organic nitrogenous base with hydrochloric acid.

hy"dro-cho''er-e'sis (high dro-kol ur-ee sis, ko lur-ee sis) [G. *hydōr*, water; *cholē*, bile; *-esis*, denoting process of action]. Choleresis characterized by an increase of water output, or of a bile relatively low in specific gravity, viscosity, and content of total solids. —**hydrocholeret'ic,** *adj.*

hydrocholin. Trade-mark for a brand of dehydrocholic acid.

hy"dro-cin-chon'i dine (high dro sin kon'i-deen, -din) An alkaloid, $C_{19}H_{24}N_2O$, from species of *Cinchona*. Syn., *cinchamidine.*

hy"dro-col'li dine (high dro kol'i-deen, -din) A highly poisonous ptomaine obtained from putrefying mackerel, horseflesh, and oxflesh.

hy"dro-col'loid. *In dentistry*, a type of impression material derived from marine kelp. It is introduced into the mouth as a viscous sol which is shortly converted into a rigid, insoluble gel. See *alginate.*

hy"dro-col'pos [*hydr-*; G. *kolpos*, vagina]. A vaginal retention cyst containing a watery fluid.

hy"dro-co ni-on [*hydr-*; G. *konia*, dust]. An atomizer; a spraying apparatus.

hy"dro con'qui nine (high dro-kon'kwi-neen, -nin) Hydroquinidine.

hy dro-cor'ti sone. Generic name for 17-hydroxycorticosterone. See *cortril.*

h. acetate. Generic name for 17-hydroxycorticosterone-21-acetate. See *hydrocortone acetate.*

hydrocortone acetate. Trade-marked name for hydrocortisone acetate or 17-hydroxycorticosterone-21-acetate.

hy"dro-co-tar'nine (high dro ko-tahr neen, -nin) A crystalline alkaloid derived from narcotine and occurring in small amount in opium.

Hy"dro-cot y le. Pennywort; a genus of umbelliferous herbs, several species of which have been variously employed in therapeutics.

hy"dro-cu'pre-ine. $C_{19}H_{24}N_2O_2$. A reduction product of cupreine employed in synthesis of ethylhydrocupreine and other similar medicinals.

hy"dro-cy an'ic ac'id (high dro-sigh-an'ick, high dro-see an'ick) Hydrogen cyanide, HCN, boiling at 26° C., used as a fumigant to rid vessels, buildings, orchards, etc. of vermin. It is a colorless, powerful, rapidly acting blood and nerve poison, having an odor of bitter almonds, which paralyzes and causes dizziness and coma. Syn., *prussic acid.*

diluted h. a. A 2% aqueous hydrogen cyanide solution occasionally employed for its supposed antispasmodic or sedative action. Dose, 0.06–0.25 cc. (1–4 min.) Syn., *diluted prussic acid.*

hy"dro-cys te'ine. See *hydrocysteine.*

hy"dro-dex'tran. A product of high-pressure catalytic hydrogenation of dextran, used similarly.

hy"dro-dip"so-ma'ni a [*hydr-*; G. *dipsa*, thirst; *mania*, madness]. Periodic attacks of uncontrollable thirst, often seen in schizophrenia and epilepsy.

hy"dro-dy nam'ics (high dro-dye-nam'icks, -di-nam'icks) [*hydr-*; G. *dynamis*, power]. That branch of mechanics which deals with liquids.

hy"dro-er got'i nine (-ur-got neen, nin) A name given to ergotoxine before the latter was found to be a mixture of alkaloids.

hy"dro-flu-or'ic ac'id. 1. Hydrogen fluoride, HF; a highly corrosive, colorless gas. 2. An aqueous solution containing about 50% of HF; used for etching glass.

hy'dro-gel. A colloidal gel with water as the dispersion medium.

hy'dro-gen. H = 1.0080. A univalent, inflammable, gaseous element, the lightest element known. It occurs in water and in practically all organic compounds. It is used in various syntheses, as a reducing agent, for the hydrogenation of vegetable oils to form solid products, and in many other industrial applications. Three isotopes of hydrogen (namely protium, deuterium, and tritium, having atomic masses of approximately one, two, and three, respectively) have been discovered.

arseniuretted h. Arsine. AsH

heavy h. The hydrogen isotope of approximate mass two; deuterium. Its nucleus consists of a proton and a neutron. See *heavy water.*

h. acceptor A substance which, on reduction, accepts hydrogen atoms from another substance called a hydrogen donor. See *coenzyme.*

h. arsenide. Arsine. AsH

h. bond. See *hydrogen bond.*

h. bridge. Hydrogen bond.

h. bromide HBr. A heavy, colorless gas with pungent irritating odor. Also called *hydrobromic acid.*

h. chloride. HCl. A colorless gas of pungent odor; liquefied under pressure. Also called *hydrochloric acid.*

h. cyanide. Hydrocyanic acid.

h. dioxide. See *h. peroxide.*

h. donor *In chemistry*, a chemical compound capable of transferring hydrogen atoms to another substance (hydrogen acceptor) thereby reducing the latter and oxidizing the donor.

h. fluoride. HF. A highly corrosive, colorless gas. An aqueous solution is used for etching glass. Also called *hydrofluoric acid.*

h. iodide. HI. A colorless gas. Also called *hydriodic acid.*

h. ion. The positively charged nucleus of the hydrogen atom, a proton. Acids are characterized by their ability to liberate hydrogen ions when in aqueous solution. Symbol, H⁺. See *hydronium.*

h.-ion concentration. The number of gram ions

of hydrogen per liter of solution. See Table of Normal Values of Blood Constituents in the Appendix.

h. peroxide. H_2O_2. A colorless, caustic liquid, highly explosive in contact with oxidizable material.

h. peroxide solution (*liquor hydrogenii peroxidi*). A 3% aqueous solution used as antiseptic and germicide. One volume is capable of liberating approximately 10 volumes of oxygen. See *perhydrol*.

h. sulfide. H_2S. A colorless, highly toxic gas of unpleasant odor.

light h. Protium.

hy″dro-gen-a′tion. The process of combining with hydrogen.

hy″dro-gen-ly′ase. An enzyme, present in *Escherichia coli*, which catalyzes reversible decomposition of formic acid to molecular hydrogen and carbon dioxide, a reaction which appears to be associated with the anaerobic decomposition, by extracts of *E. coli*, of pyruvic acid to acetic acid and formic acid.

hy″dro-glos′sa [G. *hydōr*, water; *glōssa*, tongue]. Ranula.

hy″dro-gym-nas′tics [*hydōr*; G. *gymnastikos*, skilled in athletic exercises]. Active exercises performed in water; the buoyancy thus obtained enables weakened muscles to move the limbs more easily.

hy″dro-hem″a-to-ne-phro′sis (high″dro-hem″uh-to-ne-fro′sis, high″dro-hee″muh-to-) [*hydōr*; G. *haima*, blood; *nephros*, kidney; -*ōsis*, condition]. The presence of blood and urine in a dilated renal pelvis.

hy″dro-ki-net′ic (high″dro-ki-net′ick, high″dro-kigh-net′ick) [*hydōr*; G. *kinētikos*, of motion]. Concerning or producing water transfer during glandular secretion. *hydrokinetic*.

hy″dro-ki-net′ics [*hydōr*; *kinētikos*]. The science of the motion of liquids.

hy′drol [*hydōr*]. The single molecule of water, H_2O. Sometimes called *monohydrol*. See *dihydrol*, *trihydrol*.

hy″dro-lac-tom′e-ter [*hydōr*; L. *lac*, milk; G. *metron*, a measure]. An instrument used in estimating the percentage of water in milk.

hy′dro-lase (high′dro-lace, -laze). An enzyme causing hydrolysis. See Table of Enzymes in the Appendix.

hy′dro-lin. Methyl benzyl carbinol, $CH_3C_6H_4COH$. A clear viscous liquid used as a solubilizer, homogenizer, and stabilizer for various liquid mixtures. See also *hexalin*.

hy-drol′o-gy [*hydōr*; G. *logos*, word]. Knowledge of water in the widest sense.

hy-drol′y-sate. See *hydrolyzate*.

hy-drol′y-sis [*hydōr*; G. *lysis*, a loosing]. Any reaction with water, frequently of the type AB + HOH → AOH + HB, the latter being the reverse reaction of neutralization. —**hydrolyt′ic**, *adj.*; **hy′drolyze**, *v.*

hy′dro-lyst [*hydōr*; *lysis*]. A catalyst or enzyme causing hydrolysis.

hy′dro-lyte [*hydōr*; G. *lytos*, soluble]. The substance undergoing hydrolysis.

hy-drol′y-zate, hy-drol′y-sate [*hydōr*; G. *lysis*, loosing]. The product of hydrolysis.

hy-dro′ma. See *hygroma*.

hy″dro-ma′nia [*hydōr*; G. *mania*, madness]. A maniacal desire for suicide by drowning. Obs.

hy″dro-mas-sage′. Massage by means of moving water.

hy′dro-mel [*hydōr*; G. *meli*, honey]. A mixture of honey and water with or without a medicinal substance.

hy″dro-me-nin′go-cele [*hydōr*; G. *mēninx*, membrane; *kēlē*, tumor]. 1. A cystic tumor of the meninges protruding through the skull. 2. A form of spina bifida in which the sac contains cerebrospinal fluid.

hy-drom′e-ter [*hydōr*; G. *metron*, a measure]. An instrument for determining the specific gravity of liquids. —**hydromet′ric**, *adj.*; **hydrometry**, *n.*

hy″dro-mi″cro-ceph′a-ly [*hydōr*; G. *mikros*, small; *kephalē*, head]. Microcephaly with increased cerebrospinal fluid.

hy″dro-my-e′li-a (high″dro-migh-ee′lee-uh) [*hydōr*; G. *myelos*, marrow]. A dilatation of the central canal of the spinal cord containing an increased quantity of cerebrospinal fluid.

acquired h. That due to tumors in the cerebellum or injuries to the spinal cord.

congenital h. Usually a diffuse dilatation of the canal with atrophy, mainly of the gray matter.

hy″dro-my′e-lo-cele″ [*hydōr*; *myelos*; G. *kēlē*, tumor]. 1. Excessive accumulation of fluid in the central canal of the spinal cord. 2. Hydromyelia.

hy″dro-myr′inx. Hydrotympanum.

hy″dro-ne-phro′sis [*hydōr*; G. *nephros*, kidney; -*ōsis*, condition]. A collection of urine in the distended pelvis of the kidney from obstructed outflow. The pressure of the fluid in time causes atrophy of the kidney structure, and the whole organ is converted into a large cyst. —**hydronephrot′ic**, *adj.*

hy″dro-ni-um. The solvated hydrogen ion, $H^+(H_2O)$ or H_3O^+, considered to be present in aqueous solutions of all acids.

hy′dro-nol. $(HOH)_2$. A postulated form of water in the double molecule form, in which one of the molecules is resolved into H and OH, with increased chemical activity.

hy-drop′a-thy [*hydōr*; G. *pathos*, disease]. The internal and external use of water for the attempted cure of disease. —**hydropath′ic**, *adj.*

hy″dro-per″i-car-di′tis [*hydōr*; G. *perikardios*, about the heart; -*itis*, inflammation]. Pericarditis accompanied by serous effusion into the pericardium.

hy″dro-per″i-car′di-um [*hydōr*; *perikardios*]. A collection of a serous effusion in the pericardial cavity, resulting from passive congestion or lymphatic obstruction.

hy″dro-per′i-on [*hydōr*; G. *peri*, around; *ōon*, egg]. A seroalbuminous liquid existing between the decidua parietalis and the decidua capsularis.

hy″dro-per″i-to-ne′um [*hydōr*; G. *peritonaion*, peritoneum]. An accumulation of noninflammatory, watery fluid in the peritoneal cavity; ascites.

Hy-droph′i-dae (high-drof′i-dee) [*hydōr*; G. *ophis*, serpent]. A family of poisonous snakes, known as the sea snakes, which because of certain modifications are adapted to life in the sea. These snakes occur most abundantly in the seas of northern Australia and southern Asia, and although their venom is the most toxic known, bites are relatively rare.

hy′dro-phil, hy′dro-phile (high′dro-fil, -file) [*hydōr*; G. *philein*, to love]. A substance, usually in the colloidal state, which is capable of combining with, or attracting, water. —**hydrophil′ic**, *adj.*

hy-droph′i-lism (high-drof′i-liz-um), **hy″dro-phil′i-a** [*hydōr*; *philein*]. The property of colloids, cells, and tissues to attract and hold water.

hy-droph′i-lous [*hydōr*; *philein*]. 1. In botany, applied to plants that are fertilized through the agency of water. 2. Absorbing water.

hy′dro-phobe [*hydōr*; G. *phobos*, fear]. 1. A substance, usually in the colloidal state, which lacks affinity for water. 2. One who has hydrophobia, 1. —**hydropho′bic**, *adj.*

hy"dro pho'bi-a [*hydōr*; *phobos*]. 1. Morbid fear of water. 2. Rabies. —**hydrophobic,** *adj.*

hy"dro pho"bo pho'bi [*hydōr*; *phobos*, *phobos*]. An intense dread of hydrophobia; condition sometimes producing state simulating true hydrophobia. lyssophobia.

hy'dro-phone [*hydōr*; G. *phōnē*, voice]. An instrument used in auscultatory percussion, the sound being conveyed to the ear through liquid column.

hy"droph thal mos, hy"droph thal mi a, hy"droph thal'mus [*hydōr*; G. *ophthalmos*, eye]. An increase in the fluid contents of the eye, causing the organ to become distended. Syn., *buphthalmos*. See infantile *glaucoma*.

hy'dro-plasm [*hydōr*; G. *plasma*, anything formed]. The fluid constituent of protoplasm. *Rare.*

hy dro pleu'ra. See *hydrothorax*.

hy dro pneu"ma t sis (high dro new"muh to sis) [*hydōr*; G. *pneumatōsis*, inflation]. A collection of liquid and gas within the tissues.

hy"dro-pneu m per"i car'di um [*hydōr*; G. *pneuma*, breath; *perikardios*, around the heart]. A collection of serous effusion and gas in the pericardial sac.

hy dro pneu"mo-per"i to-ne um [*hydōr*; *pneuma*; G. *peritonaion*, peritoneum]. A collection of serum and gas within the peritoneal cavity.

hy"dro-pneu mo-tho rax [*hydōr*; *pneuma*; G. *thōrax*, chest]. The presence of serous fluid and gas the pleural cavity.

hy drops [G. dropsy]. Accumulation of the fluid of edema, or more rarely of other watery fluids. —**hydrop'ic,** *adj.*

endolymphatic h. See Ménière *syndrome*.

h. antri. Effusion of serous fluid into the maxillary sinus.

h. articulorum. Hydrarthrosis.

h. fetalis. Erythroblastosis foetalis.

h. gravidarum. Edema in pregnancy.

h. of the abdomen. Ascites.

h. of the gallbladder. Distention of the gallbladder by clear or slightly cloudy somewhat mucinous, white or colorless thin fluid.

h. of the labyrinth. A condition of choked labyrinth caused by chronic high intracranial pressure as in brain tumor. Atrophy of end organs in the cochlea and maculae results.

hy"dro-py"e-lo-ne phro si [G. *hydōr*, water; *pyon*, pus; *nephros*, kidney; *-ōsis*, condition]. Distention of the pelvis of the kidney with urine and pus.

hy dro-q in'i dine (high dro kwin'i deen, -din). An alkaloid, $C_{20}H_{26}N_2O_2 \cdot 2\frac{1}{2}H_2O$, in cinchona bark. Syn., *hydroconquinine*.

hy"dro-quin'ine (high dro kwin een, -in). $C_{20}H_{26}N_2O_2 \cdot H_2O$. An alkaloid obtained from cinchona, and frequently contaminating quinine. It is effective against malaria. Also called *dihydroquinine*.

hy dro q in ol. Hydroquinone.

hy"dro-qui none (high dro kwi nohn, kwin ohn, kin ohn). 1,4-$C_6H_4(OH)_2$. Para-dihydroxybenzene; an isomer of resorcinol and pyrocatechin, obtained synthetically and occurring also as product of the decomposition of arbutin. A photographic developer; has been recommended as an antipyretic and antiseptic.

hy dror rh [*hydōr*; G. *rhoia*, flow]. A flow of watery liquid.

h. gravidarum. A discharge of fluid from the vagina prior to parturition, often mistaken by the patient for amniotic fluid. The so-called forewaters.

hy"dro-sal'pinx [*hydōr*; G. *salpinx*, trumpet]. A distention of uterine tube with fluid.

hy"dro sat'ur nism [*hydōr*; L. *saturnus*, lead]. Lead poisoning that is caused by lead in water supply.

hy dro'sis. See *hidrosis*.

hy'dro sol. A colloid system in which water is the dispersion medium.

hy dro-sol'u ble [*hydōr*; L. *solutum*, from *solvere*, to loosen]. Soluble in water.

hydrosorb. Trade-mark for an ointment base capable of absorbing water.

hy"dro sper ma to cele. See *spermatocele*.

hy"dro sper ma to-cyst" A hydrocele whose fluid contains spermatozoa. See *spermatocele*.

hy"dro spi rom ter (high dro-spy rom'i-tur) [*hydōr*; L. *spirare*, to breathe; G. *metron*, measure]. A spirometer in which column of water acts as an index.

hy'dro-stat [*hydōr*; G. *statos*, standing]. An apparatus for preventing the spilling of the fluid of electric batteries.

hy dro stat'ics. That branch of hydrodynamics which treats of the properties of liquids in state of equilibrium. —**hydrostatic,** *adj.*

hy dro-sul fu'ri ac'id. 1. Hydrogen sulfide, H_2S. 2. Dithionic acid, $H_2S_2O_6$. 3. An organic acid of the formula R.CS.SH.

hy dro sy rin"go my-e'li a (-si-ring go-migh-ee lee-uh) [*hydōr*; G. *syrinx*, tube; *myelos*, marrow]. Dilatation of the central canal of the spinal cord by watery effusion, accompanied by degeneration and the formation of cavities.

hy dro tax'is [*hydōr*; G. *taxis*, arrangement]. Response of organisms to stimulus of moisture. Also see *hydrotropism*.

hy"dro-ther"a peu'tics (high dro-therr uh-pew'ticks) [*hydōr*; G. *therapeutikos*, therapeutic]. Hydrotherapy.

hy"dro-ther' py [*hydōr*; G. *therapeia*, treatment]. The treatment of disease by means of water; hydrotherapeutics.

hy"dro ther'mal [*hydōr*; G. *thermē*, heat]. Pertaining to warm water; said of springs.

hy"dro thi on. Hydrogen sulfide. *Obs.*

hy"dro thi"o-nu'ri [*hydōr*; G. *theion*, brimstone; *ouron*, urine]. The presence of hydrogen sulfide in the urine.

hy"dro tho rax [*hydōr*; G. *thōrax*, chest]. A collection of serous fluid in the pleural space. —**hydrothorac'ic** (high dro thor-ass ick), *adj.*

hy-dro'tis (high dro tis) [*hydōr*; G. *ous*, ear]. Dropsy of, or effusion into, the external ear, the middle ear, or the inner ear, seldom in combination.

hy-drot ro-pism (high drot ro-piz-um, high dro tro piz um) [*hydōr*; G. *tropein*, to turn]. In botany, the tendency of growing plant or organ to turn either way from, or toward, moisture.

hy drot ro-py [*hydōr*; *tropein*]. The power that certain substances have of making water-insoluble substances dissolve in water without any apparent chemical alteration of the dissolved substances, as, for example, the solubilizing action of bile salts on fatty acids. —**hydrotrop'ic,** *adj.*

hy"dro tym pa num [*hydōr*; G. *tympanon*, drum]. Serous effusion into the cavity of the middle ear.

hy"dro-u re'ter (high dro yoor-ee'tur, -yoor tur). Abnormal distention of the ureter with urine, usually due to partial obstruction.

hy'drous [*hydōr*]. Containing water.

hy-drox'ide (high-drock side, -sid). A compound formed by the union of metal, or of an inorganic or organic radical, with one or more hydroxyl (OH) groups.

hy drox y- (high-drock see-). In *chemistry*, combining form indicating *the hydroxyl group —OH*.

p-hy-drox"y ac"et an'i lid. p-Acetaminophenol.

hy-drox″y-a-ce′tic ac′id. Glycolic acid.

hy-drox″y-am-phet′a-mine hy″dro-bro′mide. [$HOC_6H_4CH_2CH(NH_2)CH_3$]Br; p-(2-amino-propyl)phenol hydrobromide; a white, crystalline powder freely soluble in water; a sympathomimetic agent used as a mydriatic agent and nasal decongestant.

hy-drox″y-ap′a-tite. $3Ca_3(PO_4)_2.Ca(OH)_2$. The basic inorganic constituent of bone. In bone, the hydroxyl groups are partially substituted by other elements and radicals, such as fluoride, carbonate, etc.

hy-drox″y-as″per-gil′lic ac′id. An antibiotic substance, a hydroxy derivative of aspergillic acid, accompanying the latter and obtained from cultures of *Aspergillus flavus*.

hy-drox″y-ben′zene. Phenol.

hy-drox″y-ben-zo′ic ac′id. $C_6H_4.OH.COOH$; any of three isomeric acids, differing in the position of the OH and COOH groups, and distinguished by the prefixes ortho-, meta- and para-. Ortho-hydroxybenzoic acid is salicylic acid. Esters of para-hydroxybenzoic acid are used as preservatives against microbial action in various preparations.

β-hy-drox″y-bu-tyr′ic ac′id. $CH_3.CHOH.CH_2.COOH$. An organic acid that is an intermediary in fat metabolism. It is a member of a group of compounds called acetone bodies or ketone bodies. In ketosis, increased amounts of these compounds appear in the blood and in the urine.

17-hy-drox″y-cor″ti-cos′ter-one. $C_{21}H_{30}O_5$; 4-pregnen-11β,17α,21-triol-3,20-dione, a steroid hormone isolated from adrenal cortex and also prepared synthetically. It has the same metabolic and therapeutic effects as cortisone. Its acetate has the advantage over cortisone acetate of causing less irritation and promoting more prolonged and intense local effect when injected into intraarticular spaces affected by rheumatoid arthritis and osteoarthritis. Syn., *hydrocortisone*, *Kendall's compound F*, *Reichstein's substance M*. See *cortril*.

17-h.-21-acetate, $C_{23}H_{32}O_6$, the 21-acetate ester of 17-hydroxycorticosterone, a white solid, practically insoluble in water. It is the usual dosage form of 17-hydroxycorticosterone. Syn., *hydrocortisone acetate*. See *hydrocortone acetate*.

17-hy-drox-y-11-de-hy″dro-cor″ti-cos′ter-one. Cortisone.

17-hy-drox″y-11-des-ox″y-cor″ti-cos′ter-one. $C_{21}H_{30}O_4$. A steroid hormone possessing adrenal cortical activity. See Table of *Hormones*.

hy-drox″y-eth′ane. A chemical name rarely used for ethyl alcohol.

hy-drox″y-eth″a-no′ic ac′id. An exact chemical name, rarely used, for glycolic acid.

hy-drox″y-eth″yl-apo-cu′pre-ine (high-drock″see-eth″il-ap″o-cue′pree-een, -in). A quinine derivative related chemically to ethylhydrocupreine.

hy-drox″y-glu-tam′ic ac′id. $COOH.CH_2.CHOH.CHNH_2.COOH$; β-hydroxyglutamic acid, an amino acid originally thought to be a constituent of proteins but later found not to be present.

hy-drox′yl (high-drock′sil). The univalent radical OH, the combination of which with a base element or radical forms a hydroxide.

hy-drox′yl-amine. NH_2OH. A basic substance, known only in solution in water or in combination with acids.

hy-drox″y-ly′sine. Common name for the amino acid, α,ε-diamino-δ-hydroxy-n-caproic acid, $CH_2(NH_2)CH_2CH_2CH(OH)CH(NH_2)COOH$.

hy-drox″y-man-del′ic ac′id. $HO.C_6H_4.CH(OH).COOH$. A substance found in the urine in cases of yellow atrophy of the liver.

hy-drox″y-pro′line (high-drock″see-pro′leen, -lin). One of the natural amino acids.

$$NH.CH_2.CHOH.CH_2.CH.COOH$$

hy-drox″y-quin′o-line (-kwin′o-leen, -lin). C_9H_7NO; 8-hydroxyquinoline, produced synthetically; it occurs as a crystalline powder almost insoluble in water but freely soluble in alcohol; used as an analytical reagent for metals, and also as a fungicide. Syn., *oxine*, *oxyquinoline*, *8-quinolinol*.

h. citrate, $C_9H_7NO.C_6H_8O_7$; a yellow crystalline powder freely soluble in water. It has been used as an antiseptic. Syn., *oxyquinoline citrate*.

h. sulfate, $(C_9H_7NO)_2.H_2SO_4$; a yellow crystalline powder freely soluble in water. It has been used as an antiseptic. Syn., *oxyquinoline sulfate*. See *chinosol*.

hy-drox″y-stear′in sul′fate. A substance prepared by sulfating hydrogenated castor oil. It is a pale yellow-brown, semisoft, unctuous mass, dispersible in water; used in the formulation of hydrophilic ointment bases.

hy-drox″y-to-lu′ic ac′id. Cresotic acid.

hy-dru′ri-a (high-droor′ee-uh) [*hydr-*; G. *ouron*, urine]. The passage of large amounts of urine of low specific gravity, as in diabetes insipidus; polyuria. —**hydruric**, *adj.*

hy″e-tom′e-try [G. *hyetos*, rain; *metron*, measure]. Measurement of the quantity of rainfall.

hyflavin. Trade-mark for a mixture of methylol derivatives of riboflavin, known collectively by the generic name methylol riboflavin; the substance possesses the activity of riboflavin and is recommended especially for parenteral therapy.

Hygeia. In Greek mythology, the goddess of health; daughter of Asklepios.

hy′giene [G. *hygieinos*, healthful]. The science that treats of the laws of health and the methods of their observation. —**hygien′ic**, *adj.*

industrial h. That branch concerned with the promotion of healthful conditions in industry, the prevention of occupational accidents and sickness, and measures for their emergency treatment.

mental h. That branch of hygiene dealing with the preservation of mental and emotional health.

hy′gi-en-ist [*hygieinos*]. One trained in the science of health; sometimes, specifically, a dental hygienist.

hy″gre-che′ma (high″gri-kee′muh) [G. *hygros*, moist; *ēchēma*, sound]. The peculiar sound produced by a liquid, as heard upon mediate or immediate auscultation. Obs.

hy′gric [*hygros*]. Pertaining or relating to moisture.

hy′grine (high′green, -grin). $C_8H_{15}NO$; N-methyl-2-acetonylpyrrolidine, a liquid alkaloid occurring in the leaves of certain species of coca.

hy′gro-, hygr- [*hygros*]. A combining form denoting moisture or humidity.

hy″gro-ble-phar′ic [*hygros*; G. *blepharon*, eyelid]. Serving to moisten the eyelid.

hy-gro′ma [*hygros*; G. *-ōma*, tumor]. A cystic cavity derived from distended lymphatics and filled with lymph; a congenital malformation, most often seen in young children; also called *h. cysticum colli*, *cystic h.*, *multiloculated h.* —**hygrom′atous**, *adj.*

acute traumatic subdural h. Collection of cerebrospinal fluid in the subdural space following trauma, apparently caused by tears in the arachnoid membrane near the villi. Symptoms include headache and depressed consciousness.

hy-grom′e-ter [*hygros*; G. *metron*, measure]. An instrument for determining quantitatively the amount of moisture in the air. —**hygrometry**

hy″gro-met′ric, hy″gro-met′ri-cal [*hygros*; me

tron]. 1. Pertaining to hygrometry 2. Readily absorbing water hygroscopic. —**hygrometrically** *adv.*

hy"gro·my'cin. A broad-spectrum antibiotic substance obtained from various strains of *Streptomyces hygroscopicus.* It is active, in vitro, against variety of gram-positive and gram-negative bacteria, also against certain actinomycetes.

hy"gro pho'bi·a [*hygros;* G *phobos,* fear]. Morbid fear of liquids or of moisture.

hy'gro·scope [*hygros;* G *skopein,* to examine]. An instrument for indicating the humidity of the atmosphere. —**hygros copy** *n.*

hy"gro·scop'ic [*hygros; skopein*]. 1. Pertaining to hygroscope. 2. Sensitive to moisture; readily absorbing moisture.

hy"gro·sto mi [*hygros;* G *stoma,* mouth]. Chronic salivation.

hykinone. Trade-mark for 2-methyl-1 4-naphthoquinone-3-sodium sulfonate, water-soluble product having vitamin-K activity See *menadione.*

hy'lic [G *hylē,* material]. Of or pertaining to matter; material.

hy'lo-, hyl- [*hylē*] A combining form meaning *wood, material, substance, matter*

hy"lo pho'bi a [G *hylē,* forest; *phobos,* fear]. Morbid fear of forests.

hy"lo·trop'ic [G *hylē,* material; *tropē,* turn]. The capacity of substance for changing its form without changing its composition.

hy"lo zo'ism [*hylē;* G. *zōē,* lif]. The theory that all matter is endowed with life.

hy'men [G membrane]. A membranous partition partially blocking the orifice of the vagina. The opening may be of several forms, such as circular crescentic, etc.; it may be multiple, entirely lacking, or imperforate. —**hymenal,** *adj*

hy"men ec'to my [*hymēn,* G. *ektomē,* excision]. Excision of the hymen.

hy"men i tis [*hymēn;* G *-itis,* inflammation]. Inflammation of the hymen.

hy me·no·le·pi' ·sis [*hymēn,* G *lepis,* husk; NL *-iasis,* condition]. Infestation of the intestine by members of the genus *Hymenolepis* The disease is differentiated and described according to species hymenolepiasi nana and hymenolepiasi diminuta.

Hy"me nol"e·pid'i·dae (high mi nol i·pid' ·dee) [*hymēn, lepis*]. A family of tapeworms (class Cestoda) of the phylum Platyhelminthes (flatworms)

Hy"me nol'e·pis [*hymēn, lepis*] A genus of tapeworms any dwarf tapeworm.

H. dimi uta. A species found commonly in rats and mice and occasionally in man.

H. nana. A species, cosmopolitan in distribution, which infests man; the smallest of the dwarf tapeworms.

hy"me nol gy [*hymēn,* G *logos,* word]. The science of the nature, structure, functions, and diseases of the membranes. *Rare.*

Hy"me nop'ter [*hymēn,* G *pteron,* wing]. An order of insects which includes the bees, ants, wasps, sawflies, and gallflies They are the most highly specialized group of invertebrates. —**hymenop terous,** *adj.*

hy"me·nor rha phy [*hymēn,* G *rhaphē,* suture]. 1 Suture of the hymen t occlude the vagina. 2. Suture of any membrane.

hy men t me [*hymēn;* G *tomos,* cutting]. A surgical instrument used for cutting membranes

hy"me·not'o·my [*hymēn,* G *tomē,* cutting]. 1 Surgical incision of the hymen. 2 Dissection or anatomy of membranes.

hy o-, hy- [G *hyoeidēs,* shaped like the letter psilon]. I anatomy combining form meani g *u,* indicating *connection with the hyoid bone or arch.*

hy o·cho·lal'ic (high o·ko·lal'ick, ·lay'lick) [G *hys,* swine *cholē,* bile Ar *al-kili,* ashes of saltwort]. Derived from pig bile.

hy"o·ep"i glot'tic, hy" ·ep"i glot tid'e an [G *hyoeidēs,* shaped like the letter psilon; *epiglōttis,* piglottis]. Relating to the hyoid bone and the epiglottis.

hy"o glos'sal [*hyoeidēs;* G *glōssa,* tongue]. 1. Pertaining to the hyoglossus. 2. Extending from the hyoid bone to the tongue.

hy" glos'sus [*hyoeidēs; glōssa*]. An extrinsic muscle of the tongue arising from the hyoid bone. See Table of Muscles in the Appendix.

hy'oid [*hyoeidēs*]. A bone between the root of the tongue and the larynx supporting the tongue and giving attachment to some of its muscles. See Plate 45. See T ble of Bones in the Appendix. —**hy' id,** *adj*

hy"o·man·dib u lar [*hyoeidēs;* L. *mandibula,* jaw]. Relating to the hyoid and mandibular arches of the embryo or to the groove and pouch between them.

hy" man dib u lar The upper cartilaginous or osseous element of the hyoid arch in fishes.

hy'os·cine (high seen, ·sin) Scopolamine.

h. hydrobromide. Scopolamine hydrobromide.

hy"os cy'a mine (high"o·sigh uh meen, min) C $H_{23}NO$ An alkaloid occurring in many of the Solanaceae, notably belladonna, hyoscyamus, and stramonium It is the levorotatory component of the racemic atropine, the pharmacologic activity of the latter being due largely to hyoscyamine.

h. hydrobromide. C $H_{23}NO_3.HBr$ used as parasympatholytic agent. Dose, 0.25–1 0 mg ($\frac{1}{240}$–$\frac{1}{60}$ gr)

h. sulfate. $(C_{17}H_{23}NO_3)$ H_2SO use and dose, as of the hydrobromide.

hy"os·cy'a mus [G *hyoskyamos,* henbane] (*hyoscyamus*) Henbane. The dried leaf, with or without flowering tops, of *Hyoscyamus niger* yields not less than 0 04% of alkaloids (hyoscyamine and scopolamine) Its therapeutic effects are similar to those of belladonna but are less intense because of lower alkaloid content; the presence of scopolamine imparts central narcotic effect. It is uncertai in its action. Dose, 0.13–0.33 Gm. (2–5 gr)

h. extract (*extractum hyoscyami*) Contains 0.125–0 175% alkaloids. Dose, 0 03–0.1 Gm. ($\frac{1}{2}$–$1\frac{1}{2}$ gr)

h. tincture (*tinctura hyoscyami*) Contains 0 0031–0.0045% (w/v) alkaloids. Dose, 2–4 cc. (30–60 min.)

hy"o·sta pe di l [G *hyoeidēs; stapes,* stirrup] Of or pertaining to the hyoid bar and the stapes, which are continuous in early embryological development

hy"o·thy'roid. See *thyrohyoid.*

hy"o·ver"te·brot'o·my I veterinary medicine, the operation of incising the guttural pouch.

hyp-. See *hypo-.*

hyp ·cid"i ty See *hypoacidity.*

hyp cu'si (hip ·cue shuh, ·see·uh, hip o· koo high pe·cue') **hyp" cu'sis** (hip ·cue sis, hip koo sis, high pe·cue sis, high"pe koo sis) [G *hypo* under; *akousis,* hearing] Impairment of hearing Also called *hypoacusia.*

hyp al bu"mino·e mi a. Hypalbuminosis.

hyp l bu min o is (hip lb·yoo min·o sis, high palb·yoo min) [*hypo;* L. *albus,* white; G *-ōsis,* condition] Dimi ution in the amount of albumin in the blood. Syn *hypalbuminemia*

hyp l ge si (hip al jee zee·uh, ·see·uh, high pal) [*hypo;* G. *algēsis,* sense of pain]. Diminished

sensitivity to pain. Also called *hypalgia*. —**hyp-algesic,** *adj.*

hyp-am'ni-on (hip-am'nee-on, high-pam-) [*hyp-*; G. *amnion*, inner membrane around the fetus]. A small amount of amniotic fluid.

hy-pan"i-sog-na-thism (hi-pan"i-sog'nath-iz-um, high-pan-) [G. *hypo*, under; *anisos*, unequal; *gnathos*, jaw]. In biology, the condition of having the upper teeth broader than the lower, with lack of correspondence between the jaws. —**hy-panisognathous,** *adj.*

hy-paph'o-rine (high-paf'o-reen, -rin) $C_{14}H_{18}N_2O_2$; the betaine of tryptophan, occurring in various *Erythrina* species. It is a convulsive poison.

hy"par-te'ri-al (high"pahr-teer'ee-ul, hip"ahr-) [*hyp-*; G. *artēria*, artery]. Situated beneath an artery; specifically applied to branches of the stem bronchi.

hy"pas-the'ni-a (high"pas-theen'ee-uh, hip"as-) [*hyp-*; G. *astheneia*, want of strength]. A slight loss of strength.

hy-pax'i-al (high-pack'see-ul, hip-ack'-) [*hyp-*; L. *axis*, axis]. Situated beneath the vertebral column; ventral.

hy-paz"o-tu'ri-a. See *hypoazoturia*.

hy-pen"gy-o-pho'bi-a (high-pen"jee-o-fo'bee-uh) [G. *hypengyos*, having given surety; *phobos*, fear]. Morbid fear of responsibility.

hy"pe-o-sin'o-phil, hy"pe-o-sin'o-phile [G. *hypo*, under; *ēōs*, dawn; *philein*, to love]. A histologic element which does not stain completely with eosin. —**hypeosin"o-phil'ic,** *adj.*

hy'per- [G. *hyper*, beyond, above, over]. 1. A prefix signifying *abnormal* or *excessive*. 2. In *anatomy* and in *zoology*, a prefix denoting *position above*.

hy"per-ab-duc'tion [*hyper-*; L. *abductio*, from *abducere*, to lead away]. Excessive abduction of a limb or part. Syn., *superabduction*.

hy"per-ac'id [*hyper-*; L. *acidus*, acid]. Excessively acid.

hy"per-ac"id-am"i-nu'ri-a [*hyper-*; *acidus*; *amino-*; G. *ouron*, urine]. The presence of an excessive amount of amino acids in the urine.

hy"per-a-cid'i-ty [*hyper-*; *acidus*]. Excessive acidity.

hy"per-ac-tiv'i-ty [*hyper-*; L. *activus*, active]. Excessive or abnormal activity.

hy"per-a-cu'i-ty [*hyper-*; L. *acutus*, sharp]. Unusual sensory acuity or sharpness, especially of vision.

hy"per-a-cu'si-a (high"pur-a-cue'zhuh, -zee-uh, -shuh, -see-uh, high"pur-a-koo'-), **hy"per-a-cu'sis** (high"pur-a-cue'sis, -a-koo'sis) [*hyper-*; G. *akousis*, hearing]. Abnormal acuteness of the sense of hearing; auditory hyperesthesia.

hy"per-ad"e-no'sis [*hyper-*; G. *adēn*, gland; *-osis*, increase]. Enlargement of the lymph nodes.

hy"per-a-dre"nal-cor'ti-cal-ism. See *hyperadrenocorticism*.

hy"per-ad're-nal-ism [*hyper-*; L. *ad*, to; *renes*, kidneys]. A condition due to hyperfunction of the adrenal glands, marked by a tendency toward increased basal metabolism, decreased sugar tolerance, glycosuria, and adrenal hyperplasia; occurs chiefly in relation to adrenal cortical tumors.

hy"per-ad-re'ni-a [*hyper-*; *ad*; *renes*]. Symptoms caused by overactivity of the adrenal gland.

hy"per-ad-re"no-cor'ti-cism. Hyperfunction of the adrenal cortex resulting in the overproduction of its hormones, resulting in Cushing's syndrome, or virilism or rarely feminism. It may be due to a primary abnormality in the adrenal cortex or secondary to pituitary hyperfunction. See also *hypercorticism*.

hy"per-ae-mi-a. See *hyperemia*.

hy"per-a"er-a'tion [*hyper-*; G. *aēr*, air]. An excess of oxygen in the blood, such as occurs in voluntary accelerated respiration. Syn., *hyperventilation*.

hy"per-aes-the'si-a. See *hyperesthesia*.

hy"per-al-ge'si-a (high"pur-al-jee'zee-uh, -see-uh) [*hyper-*; G. *algēsis*, sense of pain]. Excessive sensitivity to pain. Also called *hyperalgia*. —**hyper-algesic,** *adj.*

hy"per-al"i-men-ta'tion [*hyper-*; L. *alimentum*, nourishment]. Overfeeding; superalimentation.

hy"per-al"i-men-to'sis [*hyper-*; *alimentum*; G. *-osis*, condition]. Any disease due to excessive eating.

hy"per-am"in-o-ac"id-u'ri-a. Abnormally high urinary excretion of amino acids.

hy"per-am-ne'si-a (high"pur-am-nee'zhuh, -zee-uh). See *hypermnesia*.

hy"per-am"y-la-se'mi-a (high-pur-am"i-lay-see'mee-uh). Elevated serum amylase level.

hy"per-an"a-ki-ne'si-a (-an-uh-ki-nee'zhuh, -zee-uh, -shuh, -see-uh, -an"uh-high-nee'-) [*hyper-*; G. *anakinēsis*, swinging to and fro]. Excessive activity of a part.

h. ventriculi. Exaggerated activity of the gastric functions.

hy"per-a-phi-a [*hyper-*; G. *haphē*, touch]. Excessive sensitivity to touch. —**hyperaph'ic,** *adj.*

hy"per-az"o-te'mi-a [*hyper-*; G. *a-*, not; *zōē*, life; *haima*, blood]. The presence of an excessive amount of nitrogenous substances in the blood.

hy"per-az"o-tu'ri-a [*hyper-*; *a-*; *zōē*; G. *ouron*, urine]. An excess of nitrogenous matter in the urine.

hy"per-bar'ic [*hyper-*; G. *baros*, weight]. 1. Of greater weight, density or pressure. 2. Pertaining to an anesthetic solution of specific gravity greater than the spinal fluid.

hy"per-bar'ism. A condition resulting from an excess of the ambient gas pressure over that within the body tissues, fluids, and cavities.

hy"per-bil"i-ru"bi-ne'mi-a (-bil"i-roo-bi-nee'mee-uh, -ber"li-) [*hyper-*; L. *bilis*, bile; *ruber*, red; G. *haima*, blood]. Excessive amount of bilirubin in the blood.

hereditary nonhemolytic h. See constitutional hepatic dysfunction.

physiologic h. A rare and benign form of jaundice, not due to increased hemolysis, obstruction of bile outflow or histologically demonstrable disease of liver parenchyma, but due to some dysfunction in excretion of bilirubin by the liver resulting in elevated blood levels of bilirubin. Syn., *constitutional h.* or *jaundice*, *familial* or *hereditary nonhemolytic jaundice*.

hy"per-brach"y-ceph'a-ly (high"pur-brack"i-sef'uh-lee) [*hyper-*; G. *brachys*, short; *kephalē*, head]. Extreme brachycephaly; with a cephalic index over 85.5.

hy"per-bu'li-a [*hyper-*; G. *boulē*, will]. Exaggerated willfulness.

hy"per-cal-ce'mi-a, hy"per-cal-cin-e'mi-a [*hyper-*; L. *calx*, lime; G. *haima*, blood]. Excessive quantity of calcium in the blood. Syn., *calcemia*.

hy"per-cal-ci-nu'ri-a, hy"per-cal-ci-u'ri-a, hy"per-cal-cu'ri-a. An abnormally high level of calcium in the urine.

essential h. A high level of calcium in the urine in the absence of acidosis; also called *idiopathic h.*

idiopathic h. See essential h.

hy"per-cap'ni-a [*hyper-*; G. *kapnos*, smoke]. Excessive amount of carbon dioxide in the blood, causing overactivity in the respiratory center; also called *hypercarbia*.

hy"per-car"o-te-ne'mi-a [*hyper-*; L. *carota*, carrot; G. *haima*, blood]. Excessive carotenemia.

hy"per-ca-thar'sis [*hyper-*; G. *katharsis*, cleansing]. Excessive purgation of the bowels. —**hyper-cathartic,** *adj.*

hy"per-ca-thex'is [*hyper-*; G. *kathexis*, retention]. Excessive concentration of the psychic energy upon a particular focus.

hy"per ce men t sis (high pur-see men-to sis, -sem m-to sis) [*hyper* L. *caementum*, quarrystone; G -*osis*, condition]. Excessive formation of cementum on the root of tooth.

hy"per ce nes the si (se ses thee buh -see-uh, -sen see-) [*hyper* G *koinos*, common *aisthesis*, sensation]. A feeling of extreme well-being; euphoria.

hy"per-cham aer rhine [*hyper* G *chamai*- low; *rhis*, nose]. 1. *In craniometry* designating an aperture piriformis that is relatively very broad and short having nasal index of 58.0 or more. 2. *In somatometry* designating nose that is as broad as, or broader than, it is long having height-breadth index of 100.0 or more.

hy per-chlo re mi a, hy"per-chlo-ree mi a [*hyper* G *chlōros*, pale green *haima*, blood]. An increase in the sodium chloride content of the blood.

hy"per hlo hy d i a (high pur-kl high dree-uh, -hid ree-uh) [*hyper chlōros*; G *hydōr* water]. Excessive secretion of hydrochloric acid in the stomach; may be manifestation of neuroticism.

hy per cho les"ter mi a, hy per cho les ter ee mi a (ko-les tur-ee mee-uh) [*hyper* G *cholē*, bil *stereos*, stiff; *haima*, blood]. Excess of cholesterol in the blood, cells, or plasma.

hy"per cho les"ter-o-le mi hy"per-cho les ter-o-lee mi a (ko-les tur-o-lee mee-uh) [*hyper*; *cholē*; *stereos*, *haima*] Hypercholesteremia.

hy"per-cho'li a (high pur ko'lee-uh) [*hyper*; *cholē*]. Excessive secretion of bile.

hy per chro-mat'ic [*hyper* G *chrōma*, color]. 1. Pertaining to cell or portion of cell which stains more intensely than is normal. 2. Pertaining to or describing the microscopic appearance of cells of the erythropoietic series, which is due not to increased concentration of hemoglobin, but to increased thickness of th cells. —**hyperchromat'ism, n.**

hy"per-chro ma tism [*hyper chrōma*]. The excessive formation of the pigment of the skin.

hy"per chro ma to sis [*hyper chrōma*, G -*osis*, condition]. Excessive pigmentation, as of the skin.

hy"per-chro mi a. Hyperchromatism.

hy per-chy'li (high pur-kigh'lee-uh) [*hyper* G *chylos*, juice]. Excess of secretion excessive formation of chyle.

hy"per ci ne sia. See *hyperkinesia*.

hy"per-cor'ti cism. A syndrome resulting from continued administration of cortisone (compound E) hydrocortisone (compound F) or adrenocorticotropic hormone (ACTH) symptoms and signs simulate those observed in Cushing' syndrome

hy"per cry"al ge'si (-cry al jee see-uh, -see-uh) [*hyper* G *kryos*, icy cold *algēsis*, sense of pain]. Abnormal sensitivity t cold. Syn., *hypercryesthesia*.

hy per-cry"es the i (cry es thee zhuh, -see-uh) See *hypercryalgesia*.

hy per dac tyl'i a. See *polydactyly*.

hy"per di-crot'ic (high pur-dye-krot ick) [*hyper*; G *dis*, twice *krotos*, beat]. Referring to the dicrotic wave of the peripheral pulse which is increased in amplitude, so that it may be detected by palpation —**hyperdi crotism, n.**

hy"per dis ten'tion [*hyper*; L *distentio*, from *distendere* to stretch out]. Forcible or extreme distention

hy"per-dy na mi-a (high pur-dye-nay mee-uh, -di-nay mee-uh, dye am ee uh) [*hyper* G *dynamis*, power]. Excessive strength or exaggeration of function, as of nerves or muscles. —**hyperdynam'ic, adj**

hy per-e-che ma (high pur-eh-kee muh) [*hyper*- G *ēchēma*, sound]. A normal sound abnormally exaggerated. *Obs.*

hy"per em -sis [*hyper* G *emesis*, vomiting] Excessive vomiting. —**hyperemet'ic, adj**

h. gravidarum. Pernicious vomiting in pregnancy

h. lactentium. Vomiting of nurslings.

hy"per-e mi-a [*hyper* G *haima*, blood]. An increased content of blood in part, with distention of the blood vessels. Hyperemia may be active, when due t active dilatation of blood vessels, or passive, when the drainage is hindered. **Active hyperemia** occurs in physiologic activity of glands or other organs and in inflammation. **Passive** or **venous hyperemia** occurs in congestive heart failure and in other conditions where veins are compressed or occl ded. —**hyperemic, adj**

neuroparalytic h Hyperemia which is the result of interruption of stimuli through the vasoconstrictor nerves, as in Horner s syndrome.

peristatic h. See *peristasis*.

prestatic h. See *prestasis*.

hy"per-en ceph a-lus [*hyper* G *enkephalos*, brain]. A type of anencephalus in which the entire cranial vault bove the level of the occipital protuberance is bsent.

hy"per-e o-sin phil'i a. Eosinophilia.

hy"per-eph"i dro sis. See *hyperhidrosis*.

hy"per-ep"i thy mi [*hyper*; G *epithymia*, desire]. Exaggerated desire

hy per-e qui lib ri um [*hyper* L. *aequilibrium*, equilibrium]. Excessive tendency to vertigo on rotary movement.

hy"per er gi [*hyper* G *ergon*, work]. Increased functional activity

hy per er gy [*hyper*; *ergon*] An altered state of reactivity in which the response is more marked than usual hypersensitivity It is one form of allergy or pathergy

hy"per es o-pho ri a [*hyper* G *esō*, inward *phoros*, bearing] A form of heterophoria in which the visual axis tends to deviate upward and inward

hy"per-es the si a hy"per es the si (high pur es thee zh h -see uh) [*hyper* G. *aisthēsis*, sensation]. Excessive sensibility —**hyperesthet'ic, adj**

hy per-es trin ism, hy per-es'tro-gen ism. Excessive or prolonged secretion, or both, of the female estrogenic hormones.

hy per-es"tro ge-ne mi a. An excess of estrogens in the blood also called *hyperestrinemia*.

hy"per ex"o-pho ri a [*hyper* G *exō*, outside of *phoros*, bearing]. A form of heterophoria in which the visual axis tends t deviate upward and outward

hy"per ex ten'sion [*hyper* L *extensio*, from *extendere*, to stretch out] Overextension of limb or part for the correction of deformity or for the retention of fractured bones in proper position and lignment

hy"per flex'ion [*hyper*; L. *flexio*, bending]. Overflexion of limb or part of the body

hy"pe func tion [*hyper* L. *functio* from *fungi*, to perform]. Excessive function.

hy per gen e-sis [*hyper* G *genesis*, production]. Excessive development or redundancy of the parts or organs of the bod —**hypergenet'ic, adj.**

hy per geu'si (high pur-gew see uh, jew see uh) [*hyper* G *geusis*, taste]. Abnormal acuteness of the sense of taste.

hy"per gi gan"t -so ma (high pur jye gan to-so m h) [*hyper* G *gigas*, giant; *sōma*, body]. Extraordinary gigantism. *Obs.*

hy"per glob u li ne mi [*hyper*; L. *globulus*, little ball; G *haima*, blood]. Increased amount of globulin in the blood plasma or serum.

hy″per·gly·ce′mi·a, hy″per·gly·cae′mi·a (·glye·see′mee·uh) [*hyper*; G. *glykys*, sweet; *haima*]. Excess of sugar in the blood.

hy″per·gly″co·ge·nol′y·sis [*hyper*; *glykys*; G. *genesthai*, from *gignesthai*, to be produced; *lysis*, loosing]. Excessive glycogenolysis.

hy″per·gly″cor·rha·chi·a (·glye″ko·ray′kee·uh, ·rack′ee·uh) [*hyper*; *glykys*; G. *rhachis*, spine]. Excess of sugar in the cerebrospinal fluid.

hy″per·gly″co·su′ri·a [*hyper*; *glykys*; G. *ouron*, urine]. The presence of excessive amounts of sugar in the urine.

hy″per·gon′ad·ism [*hyper*; G. *gonē*, seed]. Excessive internal secretion of the sexual glands (testes or ovaries).

hy″per·go′ni·a [*hyper*; G. *gōnia*, angle]. Increase in size of the gonial angle.

hy″per·he·do′ni·a [*hyper*; G. *hēdonē*, pleasure]. 1. An excessive feeling of pleasure in the gratification of a desire. 2. Sexual erethism. Syn., *hyperhedonism*.

hy″per·he·don′i·sm (high″pur·hee·don′iz·um, hed′un·iz·um). See *hyperhedonia*.

hy″per·hi·dro′sis (high″pur·hi·dro′sis, high·dro′sis), **hy″per·i·dro′sis** [*hyper*; G. *hidrōsis*, sweating]. Excessive sweating; may be localized or generalized, chronic or acute; the sweat often accumulates in visible drops on the skin. Syn., *ephidrosis*, *sudatoria*, *polyhidrosis*.

gustatory h. The phenomenon of sweating over facial areas, particularly about the mouth and nose, accompanied by flushing of the involved areas, upon smelling or ingestion of spicy or acid foods, or some foods as chocolate. It may be caused even by the thought of these foods, and is found to varying degrees in most people. Also see *auriculotemporal syndrome*.

psychogenic h. Increased sweating due to psychogenic factors, most often on the palms, soles, axillae, and forehead.

hy″per·his″ta·mi·ne′mi·a [*hyper*; G. *histion*, web; Temple of Jupiter Ammon; *haima*, blood]. An increased amount of histamine in the blood.

hy″per·hor·mo′nal [*hyper*; G. *hormaein*, to excite]. Containing, or due to, excess of a hormone.

hy″per·in″o·se′mi·a [*hyper*; G. *is*, fiber; *haima*, blood]. An exaggerated tendency to the formation of fibrin in the blood.

hy″per·i·no′sis [*hyper*; *is*; G. *-ōsis*, condition]. Hyperinosemia; an exaggerated tendency to the formation of fibrin in the blood.

hy″per·in″su·lin·ism [*hyper*; L. *insula*, island]. The syndrome of spontaneous, intermittent, or continuous loss of consciousness, with or without convulsions, from excessive production of insulin by the pancreatic islands of Langerhans.

hy″per·in″vo·lu′tion [*hyper*; L. *involutum*, from *involvere*, to roll about]. A rapid return to less than normal size of an organ that has been enlarged, as of the uterus after delivery.

hy″per·i″so·ton′ic. See *hypertonic*, 2.

hy″per·ka·le′mi·a, hy″per·kal·i·e′mi·a [*hyper*; NL. *kalium*, potassium, from Ar. *qili*; G. *haima*, blood]. See *hyperpotassemia*.

hy″per·ker″a·tin·i·za′tion. See *hyperkeratosis*.

hy″per·ker″a·to′sis [*hyper*; G. *keras*, horn; *-ōsis*, condition]. 1. Hypertrophy of the cornea. 2. Hypertrophy of the horny layer of the skin, usually associated with hypertrophy of the granular and prickle-cell layers. —**hyperkeratot′ic**, *adj*.

congenital palmoplantar h. See *keratosis palmaris et plantaris*.

follicular h. That form of hyperkeratosis occurring about the openings of the hair follicles. It may be due to vitamin-A deficiency.

h. excentrica. Porokeratosis.

h. follicularis et parafollicularis. A rare disease starting as a follicular papule, becoming enlarged, yellow and crusted. Lesions coalesce forming plaques. Craters are formed as the plaques are removed.

h. lacunaris pharyngis. A condition characterized by numerous hard white masses sometimes developing into long horny spines, projecting from the nodules of the lymphatic ring about the pharynx.

h. linguae. See *black, hairy tongue* under *tongue*.

h. subungualis. That affecting the nail bed.

hy″per·ke″to·nu′ri·a. The presence of an excess of ketone in the urine.

hy″per·ki·ne′mi·a [*hyper*; G. *kinein*, to move; *haima*, blood]. A condition marked by a greater cardiac output of blood than normal.

hy″per·ki·ne′si·a (high″pur·ki·nee′shuh, ·see·uh, ·zhuh, ·zee·uh, high″pur·kigh·nee′), **hy″per·ki·ne′sis** (high″pur·ki·nee′sis, ·kigh·nee′sis) [*hyper*; G. *kinēsis*, motion]. Excessive movement, as that associated with muscular spasm. —**hyperkinet′ic**, *adj*.

essential h. A condition seen in children, marked by excessive and sustained voluntary and involuntary movements; they are not, however, disorganized or dissociated as they are in the choreas and athetoses.

hy″per·lac·ta′tion [*hyper*; L. *lactare*, to give suck]. Excessive or prolonged secretion of milk.

hy″per·lep″tor·rhine [*hyper*; G. *leptos*, thin; *rhis*, nose]. In *somatometry*, designating a nose that is relatively very long and narrow, having a height-breadth index of 54.9 or less.

hy″per·ley′dig·ism (high″per·lye′dig·izm). Abnormally high secretion of the interstitial or Leydig cells, probably due to hypersecretion of pituitary gonadotropic (luteinizing) hormone, or rarely to tumor. In male children, this may result in precocious puberty and somatic development, but gives rise to no known clinical syndrome in the previously normal adult male.

hy″per·li·pe′mi·a [*hyper*; G. *lipos*, fat; *haima*, blood]. Excess of fat in the blood.

hy″per·li·thu′ri·a [*hyper*; G. *lithos*, stone; *ouron*, urine]. Excess of lithic acid in the urine.

hy″per·lo′gi·a (high″pur·lo′juh, ·jee·uh) [*hyper*; G. *logos*, word]. Excessive or maniacal loquacity.

hy″per·ma′ni·a [*hyper*; G. *mania*, madness]. An advanced maniacal state; a mania which has progressed beyond the acute stage. Marked by extreme excitation and acceleration of activity. —**hypermaniac**, *adj*., *n*.

hy″per·mas′ti·a [*hyper*; G. *mastos*, breast]. Overgrowth of the mammary gland.

hy″per·ma·ture′ [*hyper*; L. *maturus*, ripe]. Overmature, overripe, as a cataract.

hy″per·meg″a·so′ma. See *hyperpituitarism*.

hy″per·men″or·rhe′a. Menorrhagia.

hy″per·me·tro′pi·a [*hyper*; G. *metron*, measure; *ōps*, eye]. The condition of the refractive media of the eye in which, with suspended accommodation, the focus of parallel rays of light is behind the retina. It is due to an abnormally short anteroposterior diameter of the eye or to a subnormal refractive power of the media. Abbreviated, H. Also called *hyperopia*. —**hypermetrop′ic**, *adj*.; **hypermet′rope**, *n*.

absolute h. That which cannot be corrected completely by accommodation, so that there is indistinct vision even for distance.

axial h. That due to abnormal shortness of the anteroposterior diameter of the eye, the refractive power being normal.

curvature h. A form often combined with astig

matism due to changes in curvature of the cornea or lens.

facultative manifest h. That part of the manifest hypermetropia that can be concealed by the accommodation.

index h. That due to deficient refractive power of the media of the eye, as from sclerosis of the lens or decrease in sugar content during insulin reaction.

latent h. That part of the total hypermetropia that cannot be overcome by the accommodation, or the difference between the manifest and the total hypermetropia. Abbreviated, Hl.

manifest h. The amount of hypermetropia represented by the strongest convex lens which a person will accept without paralysis of the accommodation. Abbreviated, Hm.

relative h. A high hypermetropia in which distinct vision is possible only when excessive convergence is made.

total h. The entire hypermetropia, both latent and manifest. Abbreviated, Ht.

hy"per·mi"cro·so'ma [*hyper-*; G. *mikros*, small; *sōma*, body]. Extreme dwarfism.

hy"per·mim'i·a (high"pur·mim'ee·uh) [*hyper*; G. *mimos*, actor, mime]. Excessive emotional expression or mimetic movement.

hy"perm·ne'si·a (high"purm·nee'zhuh, ·zee·uh) **hy"perm·ne'sis** [*hyper-*; G. *mnēsis*, remembering]. Increased retentiveness of memory.

hy"per·mo·til'i·ty [*hyper*; L. *movere*, to move]. Increased motility, as of the stomach or intestines.

hy"per·na·tre'mi·a (high"pur·na·tree'mee·uh) Abnormally high sodium level in the blood.

hy"per·no'a. Hyperpsychosis.

hy"per·neph'roid [*hyper-*; G. *nephros*, kidney; *eidos*, form]. Resembling the adrenal gland.

hy"per·ne·phro'ma [*hyper*; *nephros*; G. *-ōma*, tumor]. Originally Grawitz' term for a variety of tumors of the kidney supposed to be derived from embryonal inclusions of adrenal in the kidney; now applied to clear-cell carcinoma of the kidney or other organs.

adrenal h. See cortical *adenoma*.

adrenal h., malignant. See cortical *carcinoma*.

hy"per·no'a. Hyperpsychosis.

hy"per·nu·tri'tion. See *supernutrition*.

hy"per·on"to·morph [*hyper-*; G. *ōn*, being; *morphē*, form]. In *constitutional medicine*, a person of long, thin body type with short intestines. Also called *asthenic type*, *microsplanchnic type*.

hy"per·o·nych'i·a (high"pur·o·nick'ee·uh) [*hyper*; G. *onyx*, nail]. Hypertrophy of the nails.

hy"per·o'pi·a. See *hypermetropia*.

hy"per·o·rex'i·a. Bulimia.

hy"per·or"tho·gna'thy [*hyper-*; G. *orthos*, straight; *gnathos*, jaw]. Excessive orthognathism. 1. The condition of having a profile angle of greater than 93°. 2. The condition of having an exceedingly low gnathic (alveolar) index. —**hyperorthognath'ous**, *adj.*

hy"per·os'mi·a (high"pur·oz'mee·uh, ·oss'mee·uh) [*hyper-*; G. *osmē*, smell]. An abnormally acute sense of smell.

hy"per·os"mo·lar'i·ty. Hypertonicity. In *medicine*, an osmotic pressure of a biological solution greater than that of normal plasma, usually due to hypernatremia.

hy"per·os"te·og'e·ny (·os"tee·odj'e·nee) [*hyper-*; G. *osteon*, bone; *gennān*, from *gignesthai*, to be produced]. Excessive development of bone.

hy"per·os·to'sis [*hyper-*; *osteon*; G. *-ōsis*, condition]. Exostosis or hypertrophy of bony tissue. —**hyperostot'ic**, *adj.*

h. frontalis interna. A thickening of the inner table of the frontal bone, sometimes detected by roentgenologic examination; usually asymptomatic. It is more common in females and the aged. When symptomatic, it is called *Morgagni's syndrome*. See metabolic *craniopathy*.

infantile cortical h. A condition of unknown etiology occurring in infants, characterized by irritability associated with the appearance of tender swellings of soft tissues which overlie bones of the extremities, followed by roentgenographic signs of cortical hyperostosis; also called *Caffey's syndrome*.

hy"per·ox·e'mi·a [*hyper-*; G. *oxys*, sharp; *haima*, blood]. Extreme acidity of the blood.

hy"per·ox"y·gen·a'tion [*hyper-*; *oxys*; G. *gennaein*, from *gignesthai*, to be produced]. A condition of the blood in which it contains more than the normal amount of oxygen. It is caused by hyperventilation.

hy"per·par'a·site [*hyper*; G. *parasitos*, parasite]. A secondary parasite interfering with the development of a previously existing parasite. —**hyperparasitism**, *n.*

hy"per·par"a·thy'roid·ism [*hyper-*; G. *para*, near; *thyreoidēs*, shield-shaped]. A state produced by an increased functioning of the parathyroid glands, as osteitis fibrosa cystica and osteomalacia.

hy"per·path'i·a [*hyper-*; G. *pathos*, disease]. A disagreeable or painful sensation in a region which is really hypoesthetic, observed in thalamic lesions.

hy"per·pep·sin'i·a [*hyper-*; G. *pepsis*, a cooking]. Excessive secretion of pepsin in the stomach.

hy"per·per"i·stal'sis [*hyper-*; G. *peristellein*, to wrap up]. An increase in the rate and depth of the peristaltic waves; nervous diarrhea.

hy"per·pha'gi·a. See *bulimia*.

hy"per·pha·lan'gism [*hyper-*; G. *phalanx*, bone between two joints of the fingers and toes]. The presence of supernumerary phalanges.

hy"per·pho·ne'sis [*hyper-*; G. *phōnēsis*, sounding]. Increase of intensity of the percussion note.

hy"per·pho'ni·a [*hyper-*; G. *phōnē*, voice]. Stammering or stuttering resulting from excessive irritability of the vocal muscles.

hy"per·pho'ri·a. See *heterophoria*.

hy"per·phos·pha·te'mi·a. Increased levels of inorganic phosphate in serum.

hy"per·phos"pha·tu'ri·a. See *phosphaturia*.

hy"per·pi·e'si·a (high"pur·pye·ee'zhuh, ·zee·uh, ·shuh, ·see·uh) **hy"per·pi·e'sis** [*hyper*; G. *piesis*, pressure]. Abnormally high blood pressure, especially, essential hypertension. —**hyperpiet'ic**, *adj.*

hy"per·pig"men·ta'tion [*hyper*; L. *pigmentum*, color]. Excessive or increased pigmentation.

periocular h. See *masque biliaire*.

hy"per·pi·tu'i·ta·rism [*hyper-*; L. *pituita*, phlegm]. Any one of a number of abnormal conditions resulting from overactivity of the cells of the anterior pituitary gland, such as acromegaly, gigantism.

hy"per·pla'si·a (high"pur·play'zhuh, ·zee·uh, ·shuh, ·see·uh) [*hyper-*; G. *plasis*, molding]. Excessive formation of tissue; an increase in the size of a tissue or organ owing to an increase in the number of cells. Syn., *numerical hypertrophy*. —**hyperplas'tic**, *adj.*

lipomelanotic reticular h. See lipomelanotic *reticulosis*.

multiple nodular h. See postnecrotic *cirrhosis*.

hy"per·plat"y·mer'ic [*hyper*; G. *platys*, broad; *mēros*, thigh]. In *osteometry*, designating a femur with an exaggerated anteroposterior compression of the proximal portion of the diaphysis; having a platymeric index of 74.9 or less.

hy"perp·ne'a [*hyper*; G. *pnoē*, a breathing hard]. Increase in depth of inspiration.

hy"per·pe·ro'sis [*hyper*; G. *pōrōsis*, uniting of fractured bones by callus]. An excessive formation of callus in the reunion of fractured bones.

hy"per·pot"as·se'mi·a (high"pur-pot·a·see'mee·uh) Abnormally high level of potassium in the blood; also called *hyperkalemia, hyperkaliemia*.

hy"per·pra'gi·a [*hyper*; G. *prattein*, to achieve, do]. An excess of thinking and feeling, commonly observed in the manic phase of manic-depressive psychoses. —**hyperprag'ic**, *adj.*

hy"per·prax'i·a [*hyper*; G. *praxis*, a doing]. The restlessness of movement characterizing certain forms of mania; hyperactivity.

hy"per·pres"by·o'pi·a (-pres·bee·o·pee·uh, -prez"bee-) [*hyper*; G. *presbys*, old man; *ōps*, eye]. Excessive presbyopia.

hy"per·pro"chre·re'sis (high"pur-pro"kor·ee'sis) [*hyper*; G. *prochōrēsis*, advance]. Excessive motor action of the stomach; hyperperistalsis.

hy"per·pro·sex'i·a [*hyper*; G. *prosexis*, application]. Marked attention to one subject, as, for example, one idea or symptom.

hy"per·pro"te·in·e'mi·a (high"pur-pro"tee·in·ee'mee·uh) Abnormally high blood protein level.

hy"per·psy·cho'sis (high"pur-sigh·ko'sis) Exaggerated mental activity. Syn., *hypernoia*. Obs.

hy"per·py·rex'i·a (high"pur-pye·reck'see·uh) [*hyper*; G. *pyressein*, to be feverish]. Excessively high fever, as above 106° F. —**hyperpyret'ic**, *adj.*

hy"per·re·flex'i·a [*hyper*; L. *reflexus*, bending back]. A condition in which reflexes are increased above normal; due to a variety of causes.

hy"per·res'o·nance [*hyper*; L. *resonare*, to resound]. Full resonance of a percussion note, which is slightly lower in pitch than normal resonance and which possesses also a tympanitic element. It gives the impression of exaggeration of normal resonance. Heard chiefly in certain cases of pulmonary emphysema and of pneumothorax.

hy"per·sal"i·va'tion [*hyper*; L. *salivatio*, from *salivare*, to salivate]. Abnormally increased secretion of saliva.

hy"per·se·cre'tion [*hyper*; L. *secretum*, from *secernere*, to separate]. Excessive secretion.

hy"per·sen"si·tiv'i·ty [*hyper*; L. *sentire*, to feel]. The state of being abnormally sensitive or susceptible, as to the action of allergens. See *allergy*. —**hypersen'sitive**, *adj.*

atopic h. Atopy.

delayed h. A type in which the reactions to antigens are delayed, no relationship to circulating antibodies has been demonstrated, and any tissue is liable to injury after exposure to antigen. Certain drug reactions and contact dermatitides together with reactions of the tuberculin type are examples of this type.

immediate h. That type in which the hypersensitive response occurs quickly following exposure to antigens to which the animal is already sensitive. Circulating antibody is demonstrable in the blood stream; therefore, the sensitivity can be transferred from animal to animal. The allergic manifestations are confined to blood vessels, smooth muscle, and collagen. Some forms are serum sickness, anaphylaxis, Arthus phenomenon, and the atopic allergies.

tuberculin h. A specific delayed type of hypersensitivity (allergic reaction) to tuberculin; also called *tuberculin-type sensitivity*. See *Koch phenomenon* under Robert Koch.

hy"per·sen·si"ti·za'tion. Hypersensitivity.

hy"per·som'ni·a [*hyper*; L. *somnus*, sleep]. Excessive sleepiness.

hy"per·sple'nism. An abnormal activity of the spleen, but generally not considered a disease entity. It is due to unknown causes, with reduction of one or more of the cellular elements of circulating blood, resulting in anemia, thrombocytopenia, or neutropenia, or a combination of these conditions. The bone marrow may be hyperplastic. Splenectomy may be helpful. Also called *hypersequestration*.

hy"per·ster"e·o·roent"gen·og'ra·phy (high"pur-sterr"ee·o·rent"ghin·og'ruh·fee, high"pur-steer"ee·o-) [*hyper*; G. *stereos*, solid; *Röntgen*; G. *graphein*, to write]. Roentgenography with an increased distance between the homologous points, to provide better third-dimensional semblance in the stereogram.

hy"per·sthe'ni·a (high"pur-sthee'nee·uh, high"pur-sthen'ee·uh) [*hyper*; G. *sthenos*, strength]. A condition of exalted strength or tone of the body. —**hypersthen'ic**, *adj.*

hy"per·sus·cep"ti·bil'i·ty. Hypersensitivity.

hy"per·syn·chro'ny [*hyper*; G. *synchronein*, to be contemporary with]. Abnormally high potential waves of any frequency in an electroencephalogram.

hy"per·tel'or·ism [*hyper*; G. *tēle*, at a distance; *horizein*, marking out by boundaries]. Excessive width between two organs or parts; specifically, *ocular hypertelorism*, a deformity of the frontal region of the cranium, resulting in a low forehead and protruded vertex, widened bridge of the nose, and hence increased distance between the eyes and divergent strabismus, often associated with mental deficiency marked by mental and physical retardation and resembling mongolism; also called *Greig's s.*, *Greig's disease*.

hy"per·ten'sin [*hyper*; L. *tensum*, from *tendere*, to stretch]. The pressor substance, a polypeptide, formed as the result of the interaction between an enzyme from the kidney, renin, and hypertensinogen, a globulin in the blood plasma. Syn., *angiotonin*.

hy"per·ten'sin·ase. An enzyme present in blood and tissues which destroys hypertensin. Syn., *angiotonase*.

hy"per·ten·sin'o·gen [*hyper*; *tensum*; G. *genesthai*, from *gignesthai*, to be produced]. A globulin in the blood plasma, the substrate upon which renin acts to produce hypertensin; also called *renin-activator*, *renin substrate*.

hy"per·ten'sion [*hyper*; L. *tensio*, a stretching]. Excessive tension, usually synonymous with high blood pressure; arterial tension. —**hyperten'sive**, *adj.*; **hyperten'sive**, *n.*

arterial h. Elevated blood pressure in the arterial side of the circulatory system.

benign h. That stage of essential hypertension which is very slowly progressive and not associated with any impairment of renal excretory function.

chronic h. A state of increased peripheral resistance to blood flow in which there is an increase in both systolic and diastolic pressure which has persisted for a sufficient period of time and with sufficient severity to have resulted in cardiac hypertrophy.

essential h. Common term for a clinical syndrome of unknown cause at first not associated with renal excretory functional disturbance, and characterized by a relatively sustained elevation in diastolic blood pressure usually accompanied by an increase in systolic pressure. Often it becomes associated with cardiac, cerebral, renal functional impairment, and vascular complications. Sometimes called *primary h.* Also see *hypertensive vascular disease*.

experimental renal h. Hypertension produced

in animals by constricting the main renal arteries, simulating the manifestations of human essential *h*. It was first described by H Goldblatt (1934)
Goldblatt h. Experimental renal *h*.
malignant h. A fulminating progression of severe essential hypertension, with papilledema as constant pathognomonic feature, and predominant cerebral and renal symptoms. Cause for the change is unknown. Death usually occurs within few months from renal or cardiac failure or cerebral vascular lesion.
orthostatic h. Hypertension which persists in the erect position.
portal h. Elevation of blood pressure in the portal vein above 100 mm. H_2O considered to be due to obstruction of portal flow extrahepatic, intrahepatic, or both. The obstruction may be congenital, but generally is acquired as part of variety of diseases, especially cirrhosis or portal-vein thrombosis. When elevation of portal pressure rises to about 250 mm. H_2O or bove, the primary clinical signs of hemorrhages from esophagogastri varices and splenomegaly become manifest.
"primary" h. See essential *h*.
renal h. Hypertension resulting from renal hemodynamic disturbance. Also see experimental renal *h*.
"secondary" h. Term sometimes used to designate hypertension of known organic origin
senile h. Systolic elevation of blood pressure associated with arteriosclerosis, mainly of the aorta and of large arteries.
hy per ten'sive vas cu la dis-ease A disease characterized by degenerative changes in the walls of arteries and arterioles, usually associated with chronic hypertension, but sometimes existing for period of time without elevated blood pressure.
hy"per the'li [*hyper-* G *thēlē*, nipple]. The presence of supernumerary nipples
Hypertherm. Trade name for cabinet designed for the production of therapeutic fever by means of heated and h midified air
hy per ther"mal ge'si (high pur-thur mal jee zee h, -zee-uh) [*hyper-* G *thermē*, heat *algēsis*, sense of pain]. Abnormal sensitivity to heat.
hy"per ther"me-es-the si (-thur mo ees thee zhuh, -zee-uh, -zhuh, -zee-uh) See *hyperthermalgesia*.
hy p r ther'my hy"per ther'mi [*hyper-thermē*]. 1 An abnormally high fever hyperpyrexia. 2. The treatment of disease by the in d ction of fever; this can be done by inoculation with malaria, by intravenous injection of foreign proteins, or by physical means.
hy"per thy'mi [*hyper-* G *thymos*, mind] 1 Mental hyperesthesia morbid oversensitiveness. 2 Vehement cruelty or foolhardiness as symptom of mental disease. 3. Labile or notable emotionality as seen in some psychopathic personalities
hy"per thy'mism. See *hyperthymization*
hy"per thy"mi za'tion [*hyper-*; G. *thymos*, thymus] Exaggerated activity of the thymus gland, ith resulting toxic symptoms
hy"per thy roid ism [*hyper-*; G *thyreoidēs*, shield-shaped] An bnormal condition brought bout by excessive functional activity of the thyroid gland.
hy"per t ni [*hyper-* G *tonos*, tension]. Excess of muscular tonicity
hy"per ton'ic [*hyper-* *tonos*] 1. Exceeding in strength or tension 2 Referring to sol tion whose osmotic pressure is greater than that of physiologic salt solution, or any other solution taken as standard. —**hypertonic'ity** n.

hy"per tri-cho sis (high pur-tri ko sis) **hy"per tri-chi sis** (high"pur-tri-kigh sh-sis) [*hyper-* G *thrix*, hair; *-ōsis*, condition]. Excessive growth of ormal hair; superfluous hair; bnormal hairiness. —**hypertrichot'ic**, *adj*
hy per'tro-phy hy"per tro phi-a [*hyper-* G. *trophē*, nourishment]. An increase in size of an organ, independent of natural growth; due to enlargement or multiplication of its constituent cells usually connotes accompanying increase in functional capacity —**hypertroph'ic**, *adj*
adaptive h. That which adapts an organ to increased functional requirements, as hypertrophy of the heart associated with valvular deformities or hypertension, hypertrophy of the urinary bladder in cases of enlarged prostate.
cardiac h. Hypertrophy of the heart. See concentric *h*. of the heart, eccentri *h*. of th heart.
cicatricial h. Overgrowth of connective tissue in scar increase in scar tissue.
compensatory h. That which follows destruction or injury in the opposite paired organ or in another part of the same organ.
concentric h. of the heart. An increase in the weight and volume of cardiac muscle, especially of the ventricles accompanied by red ction in the volume of the chambers, probably due to rigor mortis rather than to special form of cardiac hypertrophy
eccentric h. of the heart. Hypertrophy accompanied by dilatation, beyond that usually seen in cardiac hypertrophy
false h. An increase in size of an organ due to increase in amount of tissue not associated with functional activity such as connective tissue hyperplasia.
numerical h. That due to multiplication of component cells.
physiologic h. That due to natural physiologi rather than pathologic causes, as hypertrophy of the pregnant uterus.
simple h. That due to an increase in the size of the component cells rather than to their multiplication.
ventricular h. A term used in electrocardiography as either **right ventricular hypertrophy** (designating abnormal right axis deviation and QRS in the limb leads possibly over 0.10 sec.) or **left ventricular hypertrophy** (designating abnormal left axis deviation, QRS in the limb leads over 0.10 sec., T flat or inverted in lead I and at times T similarly changed)
work h. Muscular hypertrophy due to increased work load form of adaptive *h*.
hy"per tro pi a [*hyper-* G *tropein*, to turn] Vertical concomitant strabismus one eye fixes upon an bject and the other deviates upward.
hy"per u re sis. See *polyuria*.
hy per u"ri ce mi a. Abnormally high level of urates in the blood.
hy"per vas'cu lar [*hyper-* L. *vasculum*, small vessel]. Excessively vascular
hy per veg' ta"tive (high pur vedj'i-tay tiv) [*hyper-* L *vegetus*, lively] Referring t constitutional body type in which visceral or nutritional function dominates the somatic or neuromuscular system. Syn., *brachymorphic*, *pyknic*, *megalosplanchnic*.
hy"per ven"ti la'tion [*hyper-* L. *ventilare*, to toss, from *ventus*, wind]. Hyperpnea or forced respiration; an increase in the quantity of air breathed (minute vol me) as result of an increase in the rate or depth of respiration, or both. Symptoms are those of *hyperoxygenation of* the blood and include tingl g of the extremities and buzzing in the head, with occasional syncope.
involuntary h. Occurs in hysteria as physio-

logic concomitant of fear or anger or as a result of diffuse or focal encephalopathy.

hy"per vi"ta min o sis [*hyper*; vitamin; G. *-ōsis*, condition]. A condition due to the administration of toxic amounts of vitamin.

hy"per vo le'mi a [*hyper*; L. *volumen*, volume; G. *haima*, blood]. Blood volume greater than normal.

hyp es the'si a, hyp"aes-the si a (hip ess-thee'zhuh, -zee uh, high pess) [G. *hypo*, under; *aisthēsis*, sensation]. Impairment of sensation; lessened tactile sensibility. —**hypesthesic, hypesthet'ic**, *adj.*

hy'pha (pl. *hyphae*) [G., web]. A filament which develops from the germ tube of a fungus. The septate hyphae are those divided into a chain of cells by cross walls forming at regular intervals. Those without cross walls, the nonseptate hyphae, allow an uninterrupted flow of protoplasm and are described as being coenocytic. —**hy'phal**, *adj.*

hyp"he-do'ni a (hip"hi-do nee-uh, hype"hi-do nee uh) [G. *hypo*, under; *hēdonē*, pleasure]. Diminution of pleasure sensations in acts that normally give pleasure.

hy phe'ma, hy phae'ma (high-fee muh) [*hypo*; G. *haima*, blood]. Blood in the anterior chamber of the eye.

hy phe mi-a (high-fee mee-uh) [*hypo*; *haima*]. 1. Deficiency of blood. Also called *oligemia*. 2. Blood in the anterior chamber of the eye.

hyp"hi-dro sis (hip"hi dro sis, hip"high hype"hi) [*hypo*; G. *hidrōsis*, sweating]. Deficiency of perspiration.

Hy"pho-my-ce'tes (high fo-migh-see'teez). See *Fungi imperfecti*.

hyp"i no sis [*hypo*; G. *is*, fiber; *-ōsis*, condition]. A deficiency of fibrin factors in the blood.

hyp"i so-ton'ic (hip i so-ton ick, high pi-). See *hypotonic*.

hyp"no gog'ic (hip noh god; ick) [G. *hypnos*, sleep; *agōgos*, leading]. Inducing sleep; pertaining to the inception of sleep. Applied to visions seen just preceding complete sleep.

hyp no gogue [*hypnos*; *agōgos*]. An hypnotic, 1.

hypnal. Trade-mark for antipyrine chloralhydrate; a white, crystalline powder soluble in water; used as a hypnotic.

hyp-nal'gi a [*hypnos*; G. *algos*, pain]. Pain occurring during sleep.

hyp nic [G. *hypnikos*, producing sleep]. Pertaining to or inducing sleep.

hyp'nic. An agent that induces sleep.

hyp no-, hypn- [G. *hypnos*, sleep]. A combining form meaning *sleep* or denoting *hypnotism*.

hyp no-a nal'y-sis [*hypnos*; G. *analysis*, dissolution]. A form of psychotherapy combining certain psychoanalytic techniques with hypnosis.

hyp"no-gen'ic, hyp no-ge-net'ic [*hypnos*; G. *genesis*, from *gignesthai*, to be produced]. 1. Producing or inducing sleep. 2. Inducing hypnotism. —**hypnogen esis**, *n.*

hyp noid, hyp noi'dal [*hypnos*; G. *eidos*, form]. Resembling sleep or hypnosis.

hyp'no-lep sy [*hypnos*; G. *lēpsis*, seizing]. Excessive or morbid sleepiness; narcolepsy.

hyp-nol'o-gy [*hypnos*; G. *logos*, word]. The science dealing with sleep or with hypnotism.

hyp"no-nar co sis [*hypnos*; G. *narkōsis*, benumbing]. Deep sleep induced through hypnosis.

hyp no-pho'bi [*hypnos*; G. *phobos*, fear]. Morbid dread of sleep or of falling asleep. —**hypnophobic**, *adj.*; **hyp'nophoby**, *n.*

hyp no-phre no'sis [*hypnos*; G. *phrenōsis*, from *phrēn*, mind; *-ōsis*, condition]. A general term for all forms of sleep disturbance.

hyp no-pom pic [*hypnos*; G. *pompē*, procession]. Pertaining to the state of awakening. Applied to visions seen at the moment of awakening from sleep or prior to complete awakening, as when dream figures persist in waking life.

hyp no-si gen'e-sis [*hypnos*; G. *-ōsis*, condition; *genesis*, production]. Induction of hypnosis.

hyp-no'sis [*hypnos*; *-ōsis*]. A state of sleep or trance, induced artificially in a subject by means of verbal suggestion by the hypnotist or by the subject's concentration upon some object, characterized by extreme responsiveness to suggestions made by the hypnotist.

hyp"no-ther'a-py [*hypnos*; G. *therapeia*, treatment]. The treatment of disease by means of hypnotism.

hyp not'ic [G. *hypnōtikos*, inclined to sleep]. 1. Inducing sleep. 2. Pertaining to hypnotism.

hyp-not'ic. 1. A remedy that causes sleep. 2. A person who is susceptible to hypnotism; one who is hypnotized.

hyp'no-tism [*hypnōtikos*]. 1. The act of inducing hypnosis. 2. The study of hypnosis. —**hypnotist**, *n.*

hyp'no-tize [*hypnōtikos*]. Bring into a state of hypnosis. —**hypnotiza'tion**, *n.*

hyp no-toid [G. *hypnos*, sleep; *eidos*, form]. Resembling hypnotism.

hyp"no-tox'in [*hypnos*; G. *toxikon*, poison]. A hypothetical substance supposed to accumulate in the cerebrospinal fluid during the waking state and credited with the power to produce sleep by stopping the activity of the cortical cells.

hy'po [G. *hypo*, under]. 1. Colloquial term for hypochondriasis; also for hypodermic syringe or medication. 2. Sodium thiosulfate.

hy'po- (high po-, hip o-), **hyp-** [*hypo*]. 1. A prefix denoting *deficiency* or *lack*; *below* or *beneath*. 2. A prefix indicating *acids and salts having the least number of atoms of oxygen in a series of compounds of the same elements*.

hy"po-a-cid'i ty [*hypo*; L. *acidus*, sour]. Deficiency in acid constituents.

hy"po-ac tiv'i ty [*hypo*; L. *activus*, from *agere*, to do]. Diminished activity.

hy"po ad ren al i ne'mi a [*hypo*; L. *ad*, near; *renes*, kidneys; G. *haima*, blood]. A condition in which the adrenalin content of the blood is insufficient.

hy"po-ad re nal-ism [*hypo*; *ad*; *renes*]. Hypoadrenia.

hy"po-ad re ni a [*hypo*; *ad*; *renes*]. Diminished activity of the adrenal glands. See *asthenocoria*.

hy po-ag'na-thus [*hypo*; G. *a-*, not; *gnathos*, jaw]. An individual with no lower jaw.

hy"po-al"bu min-e mi-a. Abnormally low blood content of albumin.

hy"po al"i men ta tion [*hypo*; L. *alimentum*, food]. The state produced by insufficient or inadequate food.

hy"po-al ler gen'ic. Non-allergy-producing: a term applied to a preparation in which every possible care has been taken in formulation and production to insure minimum instances of allergic reactions.

hy"po-az"o-tu'ri [*hypo*; G. *a-*, not; *zōē*, life; *ouron*, urine]. A diminished amount of urea in the urine.

hy"po-bar'ic [*hypo*; G. *baros*, weight]. 1. Of less weight or pressure. 2. Pertaining to an anesthetic solution of specific gravity lower than the spinal fluid.

hy"po-bar'ism. A condition resulting from an excess of gas pressure within the body fluids, tissues, or cavities over the ambient gas pressure.

hy"po ba-rop a thy. See chronic mountain sickness.

hy′po·blast [hypo; G. blastos, germ]. Old term for entoderm. —**hypoblas′tic**, *adj.*

hy″po·bran′chi·al (high″po·brang′kee·ul, hip″o·) [hypo; G. branchia, gills]. A bone or cartilage located below or under the branchial or visceral arches. —**hypobran′chial**, *adj.*

hy″po·bro′mite [hypo; G. brōmos, bad smell]. A salt of hypobromous acid.

hy″po·bro′mous ac′id. HBrO. An unstable acid containing bromine having a positive valence number of one.

hy″po·bu′li·a [hypo; G. boulē, will]. Deficiency of will power.

hy″po·cal·ce′mi·a [hypo; L. calx, lime; G. haima, blood]. Condition in which there is a diminished amount of calcium in the blood.

hy″po·cal″ci·fi·ca′tion [hypo; L. calx, lime; facere, to make]. Reduction of the normal amount of mineral salts in calcified tissues, as bone, dentin, or dental enamel. —**hypocalcif′ic**, *adj.* **hypo·cal′cify**, *v.*

hy″po·cap′ni·a. Subnormal concentration of CO_2 in the blood; also called *hypocarbia*; often incorrectly called *acapnia*.

hy″po·ca·thex′is [hypo; G. kathexis, a holding]. A lack of concentration of the psychic energy upon a particular object.

hy″po·coe′lom. See *hypocoelom*.

hy″po·chlo·re′mi·a, hy″po·chlo″rae′mi·a [hypo; G. chlōros, pale green; haima, blood]. Reduction in the amount of blood chlorides.

hy″po·chlor·hy′dri·a (high″po·klor·high′dree·uh, ·klor·hid′ree·uh, hip″o·) [hypo; chlōros; G. hydōr, water]. A condition in which there is a diminished amount of hydrochloric acid in the gastric juice.

hy″po·chlo′rite. Any salt of hypochlorous acid, HClO. The most important are those of calcium and sodium.

hy″po·chlo″ri·za′tion [hypo; chlōros]. Reduction in the intake of sodium chloride.

hy″po·chlo′rous ac′id. HClO. An unstable compound, known only in solution. It has disinfectant and bleaching properties and is used mostly in the form of its sodium and calcium compounds.

hy″po·chlor·u′ri·a [hypo; chlōros; G. ouron, urine]. A diminution in the amount of chlorides excreted in the urine.

hy″po·cho·les″ter·e′mi·a (·ko·les″tur·ee′mee·uh) [hypo; G. cholē, bile; stereos, stiff; haima, blood]. Decrease or deficiency of the cholesterol of the blood.

hy″po·chon′dri·a (high″po·kon′dree·uh, hip″o·). Hypochondriasis.

hy″po·chon′dri·ac [G. hypochondriakos, of the hypochondrium]. 1. Pertaining to the hypochondrium. 2. Affected with or caused by hypochondriasis.

hy″po·chon′dri·ac. A person who is affected with hypochondriasis.

hy″po·chon·dri′a·sis (high″po·kon·dry′uh·sis, hip″o·) [G. hypochondrion, soft part of the body below the costal cartilages and above the navel; NL. -iasis, condition]. A chronic condition in which the patient is morbidly concerned with his own health, and believes himself suffering from grave bodily diseases traceable to some long-standing intrapsychic conflict. In true hypochondriasis, the symptoms are focused upon one organ.

hy″po·chon′dri·um (high″po·kon′dree·um, hip″o·) [hypochondrion]. The upper lateral region of the abdomen below the lower ribs.

hy″po·chor′dal (high″po·kor′dul, hip″o·) [G. hypo, under; chordē, chord]. Located below or ventral to the notochord.

hy″po·chro·mat′ic. Pertaining to or describing the microscopic appearance of cells of the erythropoietic series which show significant decrease in density of the characteristic hemoglobin color for the stained or unstained cell, due to either thinness of the cells or decreased concentration of hemoglobin, or both. —**hypochromasia**, **hypochro′matism**, *n.*

hy″po·chro′mic. Pertaining to a blood picture in which the erythrocytes have a mean corpuscular hemoglobin concentration (MCHC) or saturation index and usually a mean corpuscular hemoglobin (MCH) or color index more than two standard deviations below the mean normal, determined by the same method on bloods of healthy persons of the patient's age and sex group.

hy″po·chy′li·a (high″po·kigh′lee·uh, hip″o·) [hypo; G. chylos, juice]. Deficiency of chyle.

hy″po·ci·ne′si·a (·si·nee′shuh, ·see·uh, ·zhuh, ·zee·uh), **hy″po·ci·ne′sis.** See *hypokinesia*.

hy″po·coe′lom, hy″po·ce′lom (high″po·see′lum, hip″o·) [hypo; G. koilōma, hollow]. The ventral part of the coelom.

hy′po·cone [hypo; G. kōnos, cone]. The distolingual cusp of an upper molar tooth.

hy″po·con′id [hypo; kōnos]. The distobuccal cusp of a lower molar tooth.

hy″po·con′ule [hypo; dim. from kōnos]. The fifth, or distal, cusp of an upper molar tooth.

hy″po·con′u·lid [hypo; dim. from kōnos]. The fifth, or distal, cusp of a lower molar tooth.

hy″po·cy·clo′sis (high″po·sigh·klo′sis, hip″o·) [hypo; G. kyklōsis, from kyklos, circle]. Deficient accommodation.

ciliary h. That due to weakness of the ciliary muscle.

lenticular h. That due to lack of elasticity in the crystalline lens.

hy″po·cy·the′mi·a. Any deficiency of the formed elements of blood; usually *anemia*.

progressive h. See primary refractory *anemia*.

Hy″po·der′ma [hypo; G. derma, skin]. A genus of the Diptera, whose larvae, parasitic to cattle and occasionally to man, cause the cutaneous swellings known as warbles.

hy″po·der·mat′ic. See *hypodermic*.

hy″po·der″ma·toc′ly·sis. See *hypodermoclysis*.

hy″po·der·mi′a·sis [hypo; derma; NL. -iasis, condition]. A condition in which botfly larvae invade the subcutaneous tissue and produce a form of creeping eruption. See *warbles*.

hy″po·der′mal [hypo; derma]. 1. Pertaining to the region beneath the skin. 2. Placed or introduced beneath the skin.

hy″po·der′mic. 1. An injection under the skin. 2. Syringe used in hypodermic injection.

hy″po·der′mis [G., from hypo; derma]. The outermost layer of cells of invertebrates, which corresponds to the epidermis. It secretes the cuticular exoskeleton of arthropods, annelids, mollusks, and other forms.

hy″po·der·moc′ly·sis, hy″po·der″ma·toc′ly·sis [hypo; derma; G. klysis, a drenching]. The introduction into the subcutaneous tissues of large quantities of fluids, especially saline solution.

hy″po·der″mo·li·thi′a·sis. See *circumscribed calcinosis*.

hy″po·don′ti·a. Deficient development of the teeth.

hy″po·er′gy [hypo; G. ergon, work]. A state of less than normal reactivity in which the response is less marked than usual; hyposensitivity; one form of allergy or pathergy.

hy″po·es″o·pho′ri·a [hypo; G. esō, within; phoros, bearing]. A type of heterophoria in which the visual lines tend downward and inward.

hy″po·es′trin·ism. The state of deficient production of estrogen by the ovaries.

hy″po-ex″o-pho′ri-a [*hypo*; G. *exō*, without; *phora*]. A type of heterophoria in which the visual lines tend downward and outward.

hy″po-fer-re′mi-a. Diminished, or abnormally low iron level in the blood.

hy″po-fi″brin-o-gen-e′mi-a. See *fibrinogenopenia.*

hy″po-func′tion [*hypo*; L. *functio* from *fungi*, to perform]. Diminished function.

adrenal cortical h. See *adrenal cortical hypofunction.*

hy″po-gal-ac′ti-a. Decreased milk secretion.

hy″po-gas′tric [*hypo*; G. *gastēr* belly]. Of or pertaining to the hypogastrium.

hy″po-gas′tri-um [*hypo*; G. *gastēr* belly]. The lowest of the three median regions of the abdomen, above the symphysis pubis and below the umbilical region. Also called **hypogastric region.**

hy″po-gas″tro-did′y-mus [*hypo*; *gastēr*; G. *didymos*, twin]. Hypogastropagus.

hy″po-gas-trop′a-gus [*hypo*; *gastēr*; G. *pagos*, that which is fixed]. A monster consisting of conjoined twins united at the hypogastric region. Syn., *hypogastrodidymus.*

hy″po-gas-tros′chi-sis (high″po-gas-tros′ki-sis, hip″o-) [*hypo*; *gastēr*; G. *schisis*, cleavage]. Abdominal fissure (gastroschisis) limited to the hypogastric region.

hy″po-gen″i-tal-ism [*hypo*; L. *genitalis*, genital]. Underdevelopment of the genital system. See also *eunuchoidism, hypogonadism.*

hy″po-geu′si-a (high″po-gew′see-uh, -jew′see-uh, hip″o-) [*hypo*; G. *geusis*, taste]. Diminution in the sense of taste.

hy″po-glos′sal [*hypo*; G. *glōssa*, tongue]. Situated under the tongue.

hy″po-glos-si′tis [*hypo*; *glōssa*; G. *-itis* inflammation]. Inflammation of the tissue under the tongue.

hy″po-glos′sus [*hypo*; *glōssa*]. The hypoglossal nerve.

hy″po-glot′tis, hy″po-glos′sis [G. *hypoglōttis*, under surface of the tongue]. The under part of the tongue.

hy″po-gly-ce′mi-a (-glye-see′mee-uh) [G. *hypo* under; *glykys*, sweet; *haima*, blood]. The condition produced by low level of glucose in the blood; due to excessive utilization of sugar or to interference with the formation of sugar in the liver. Symptoms, which usually appear when the blood sugar drops to 0.06–0.04%, are hunger, nervousness, profuse sweating, alternate pallor and flushing of the face, and vertigo. Also called *hypoglycemosis.* See *hyperinsulinism.*

hy″po-gly-ce-mo′sis [*hypo*; *glykys*; G. *-ōsis*, condition]. See *hypoglycemia.*

hy″po-gly″co-ge-nol′y-sis [*hypo*; *glykys*; G. *gennaein*, from *gignesthai*, to be produced; *lysis*, loosing]. Diminished glycogenolysis.

hy″po-gnath′ous (high-pog′nath-us) [*hypo*; G. *gnathos*, jaw]. Having the lower jaw abnormally small.

hy″po-gnath′us (high-pog′nath-us) [*hypo*; *gnathos*]. A monster having a parasite attached to the lower jaw. Syn., *paragnathus.*

hy″po-gon″ad-ism (high″po-gon′uh-diz-um, -go′nuh-diz-um, hip″o-) [*hypo*; G. *gonē*, seed]. Diminished internal secretion of the testes or ovaries which may be due to a primary defect or secondary to insufficient stimulation by the adenohypophysis.

pituitary h. See pituitary *eunuchoidism.*

hy″po-gran″u-lo-cy-to′sis. Agranulocytosis.

hy″po-hi-dro′sis (high″po-hi-dro′sis, -high-dro′sis, hip″o-) [*hypo*; G. *hidrōsis*, sweating]. Deficient perspiration.

hy″po-in-su-lin′ism [*hypo*; L. *insula*, island]. Old term for diabetes mellitus.

hy″po-i″so-ton′ic. See *hypotonic, 2.*

hy″po-kal″i-e′mi-a. Abnormally low serum potassium; hypopotassemia.

hy″po-ki-ne′si-a (-ki-nee′zhuh, -see-uh, -zhuh, -zee-uh, -high-nee′) **hy″po-ki-ne′sis** (-ki-nee′sis, -high-nee′sis) [*hypo*; G. *kinēsis*, motion]. Abnormally decreased muscular movement. —**hypokinet′ic,** *adj.*

hy″po-lem′mal [*hypo*; G. *lemma*, rind, husk]. Lying under a sheath, as the motor end-plates under the sarcolemma or sheath of a muscle fiber.

hy″po-lep″si-o-ma′ni-a [*hypo*; G. *lēpsis*, seizing; *mania*, madness]. A general term for all forms of monomania.

hy″po-ley′dig-ism. Retarded sexual development, or loss of some male sexual characteristics, as a result of a decrease or absence in the function of the interstitial (Leydig) cells of the testes.

hy″po-lo′gi-a [*hypo*; G. *logia*, from *logos*, word]. Poverty of speech as a symptom of cerebral disease.

hy″po-mag″ne-se′mi-a [*hypo*; G. *Magnētis lithos*, Magnesian stone; *haima*, blood]. A state of magnesium deficiency in the blood manifested by twitching and convulsions.

hy″po-ma′ni-a [*hypo*; G. *mania*, madness]. A slight maniacal state in which the patient is easily distracted and clang associations occur but no marked behavior differences are present; a less intense form of mania. —**hypoman′ic,** *adj.*

hy″po-mas′ti-a, hy″po-ma′zi-a [*hypo*; G. *mastos*, breast]. Abnormal smallness of the mammary glands.

hy″po-men″or-rhe′a. A deficient amount of menstrual flow at the regular period; to be distinguished from *oligomenorrhea.*

hy″po-mere [*hypo*; G. *meros*, part]. The ventral portion of the mesothelial lining of the coelom of primitive chordates, forming pleura, pericardium, and peritoneum.

hy″po-met″ab′o-lism [*hypo*; G. *metabolē*, change]. Metabolism below the normal rate.

hy″po-me-tro′pi-a [*hypo*; G. *metron*, measure; *ōps*, eye]. Myopia.

hy″po-mi″cro-gnath′us (high″po-migh″kro-nath′us) [*hypo*; G. *mikros*, small; *gnathos*, jaw]. An individual having an abnormally small lower jaw.

hy″po-mi′cron [*hypo*; *mikros*]. A particle capable of being recognized by the ultramicroscope, but not by the ordinary microscope.

hy″po-mi″cro-so′ma (-migh″kro-so′muh, -migh″kro-) [*hypo*; *mikros*; G. *sōma*, body]. The lowest stature which is not dwarfism.

hy″po-mne′si-a (high″pom-nee′zhuh, -zee-uh) [*hypo*; G. *mnēsis*, a remembering]. Weakened memory.

hy″po-mo-til′i-ty. Hypokinesia.

hy″po-nan″o-so′ma [*hypo*; G. *nanos*, dwarf; *sōma*, body]. Extreme dwarfishness.

hy″po-na-tre′mi-a (high″po-nat-ree′mee-uh). Abnormally low blood sodium level.

hy″po-no′ic [*hypo*; G. *nous*, mind]. Pertaining to that behavior which arises from unconscious processes.

hy″po-nych′i-um (high″po-nick′ee-um, hip″o-) [*hypo*; G. *onyx*, nail]. The thickened stratum corneum of the epidermis which lies under the free edge of a nail. —**hyponychial,** *adj.*

hy″po-os-to′sis [*hypo*; G. *osteon*, bone; *-osis*, condition]. Hypoplasia of bone. —**hypoostot′ic,** *adj.*

hy″po-par″a-thy′roid-ism [*hypo*; G. *para*, near; *thyreoeidēs*, shield-shaped]. Insufficiency of the parathyroid gland, usually postoperative and rarely idiopathic, characterized by a well delineated pathologic state in which there is high

serum phosphorus, low serum calcium, manifestations of tetany usually an absence of calcium in the urine, and deposition of calcium in basal ganglia.

hy"po-per"me-a-bil'i-ty [*hypo*; L. *permeare*, to pervade]. A state in which membranes have reduced permeability for electrolytes, and other solutes, or colloids.

hy"po-pha-lan-gism [*hypo*; G. *phalagx*, bone between two joints of the fingers and toes]. Congenital absence of one or more phalanges in finger or toe.

hy"po-phar"yn-gos'co-py [*hypo*; G. *pharygx*, pharynx; *skopein*, to examine]. Inspection of the laryngopharynx.

hy"po-phar'ynx [*hypo*; *pharygx*]. Old term for laryngopharynx.

hy"po-pho'ni-a [*hypo*; G. *phōnē*, voice]. Partial loss of voice owing to lack of coordination of the muscles concerned in voice production. *Rare.*

hy"po-pho'ri-a [*hypo*; G. *phoros*, bearing]. A tendency of the visual axis of one eye to deviate below that of the other.

hy"po-phos"pha-ta'si-a [*hypo*; G. *phōsphoros*, light bringer]. Abnormally decreased phosphatase production.

hy"po-phos"pha-te'mi-a [*hypo*; G. *phōsphoros*, light-bringer; *haima*, blood]. Abnormally low concentration of phosphates in the blood serum.

hy"po-phos'phite. A salt of hypophosphorous acid.
compound hypophosphites syrup (*syrupus hypophosphitum compositus*). Contains the hypophosphites of calcium, potassium, sodium, ferric iron, and manganese. Dose, 8 cc. (2 fluidrachms).
hypophosphites syrup (*syrupus hypophosphitum*). Contains the hypophosphites of calcium, potassium, and sodium. Dose, 8 cc. (2 fluidrachms).

hy"po-phos-pho'rous ac'id (-fos-fo-rus, -fos-for'us) (*acid m hypophosphorosum*). An aqueous solution containing 30-32% of HPH_2O_2. It is easily oxidized and, therefore, serves to prevent the oxidation of substances with which it may be combined.

hy"po-phre'ni-a [*hypo*; G. *phrēn*, mind]. Feeblemindedness. —**hypophren'ic,** *adj.*, *n.*

hy-poph"y-sec'to-my (high-pof"i-seck'to-mee, hi-pof") [G. *hypophysis*, undergrowth; *ektomē*, excision]. Surgical removal of the hypophysis cerebri, or pituitary body. —**hypophysectomize**

hy-poph'y-sis, hy-poph'y-sis ce're-bri (high-pof'i-sis). The pituitary gland or body. See Plates 17, 18, 45. —**hypophys'eal, hypophys'ial,** *adj.*

hy"po-pi-e'si-a (-pye-ee'shuh, -see-uh, -zhuh, -zee-uh), **hy"po-pi-e'sis** (-pye-ee'sis, -pye-'sis) [*hypo*; G. *piesis*, pressure]. Subnormal arterial pressure.

hy"po-pin"e-al-ism (-pin'ee-ul-iz-um, -pi-nee'ul-iz-um) [*hypo*; L. *pinea*, pine cone]. Hypothetical lessened secretion of the pineal gland.

hy"po-pi-tu'i-ta-rism [*hypo*; L. *pituita*, phlegm]. Deficient production of pituitary hormones, especially those of the adenohypophysis or with certain pituitary tumors. There may be impotence, sterility, amenorrhea, hypoglycemia, signs of adrenal cortical failure, hypometabolism and tendency of the tissues and viscera to shrink.

hy"po-pla'si-a (high-po-play'zhuh, -zee-uh, -shuh, -see-uh, hip-o-), **hy"po-plas"ty** [*hypo*; G. *plassein*, to form]. Defective development of any tissue. —**hypoplas'tic,** *adj.*

hy-pop-ne'a [*hypo*; G. *pnoē*, breath]. Shallow breathing. It may accompany sleep, and is sometimes caused by poor posture, partial paralysis of the respiratory muscles, ankylosing spondylitis, or emphysema.

hy"po-po"tas-se'mi-a. Deficiency of potassium in the blood; hypokaliemia.

hy"po-prax'i-a [*hypo*; G. *praxis*, doing]. Deficient activity; inactivity; listlessness.

hy"po-pro-sex'i-a [*hypo*; G. *prosexis*, application]. Inadequate attention; lack of the ability to give attention.

hy"po-pro"te-i-ne'mi-a [*hypo*; *protein*; G. *haima*, blood]. Abnormally low concentration of protein in whole blood or serum.

hy"po-pro-throm"bi-ne'mi-a [*hypo*; G. *pro*, before; *thrombos*, clot; *haima*]. Deficient supply of prothrombin in the blood.

hy"po-psal"a-phe'si-a (high"po-sal-uh-fee'zee-uh, -see-uh, -zhuh, -shuh, hip-o-) [*hypo*; G. *psēlaphēsis*, touching]. Diminution of sensitivity to tactile impressions.

hy"po-psy-cho'sis (high"po-sigh-ko'sis, hip-o-) [*hypo*; G. *psychōsis*, giving life to]. Diminution or blunting of thought.

hy-po-py'on (high-po-pee-on, hi-po-) [*hypo*; G. *pyon*, pus]. A collection of pus in the anterior chamber of the eye.

hy"po-que-bra'chine (-kwi-bray'keen, -kin, kwi-brack'een, -in). $C_{21}H_{26}N_2O_3$. An alkaloid of quebracho.

hy"po-sal"i-va'tion [*hypo*; L. *salivatio*, from *salivare*, to spit out]. Pathologically insufficient secretion of saliva; formerly called *xerostomia*.

hy"po-scle'ral [*hypo*; G. *sklēros*, hard]. Beneath the sclera.

hy"po-se-cre'tion [*hypo*; L. *secretum*, from *secernere*, to separate]. Diminished secretion.

hy"po-sen"si-tiv'i-ty [*hypo*; L. *sentire*, to feel]. A state of diminished sensitiveness, especially to external stimuli. —**hyposen'sitive,** *adj.*; **hyposen'sitiveness,** *n.*

hy"po-sen"si-ti-za'tion. See *desensitization*, 1.

hy-pos'mi-a (high-pos'mee-uh, hi-pos-) [*hypo*; G. *osmē*, smell]. Diminution of the sense of smell.

hy"po-som'ni-a [*hypo*; L. *somnus*, sleep]. An insufficient number of hours of sleep.

hy"po-spa'di-al [*hypo*; G. *spān*, to draw]. 1. Pertaining to hypospadias.

hy"po-spa'di-ac. A person with hypospadias.

hy-po-spa'di-as [*hypo*; *spān*]. 1. A congenital anomaly of the penis and urethra in which the urethra opens upon the ventral surface of the penis or in the perineum. 2. Term also used to denote a congenital malformation in which the urethra opens into the vagina.
balanitic h. The commonest form, in which the opening is at the site of the frenum, which is usually rudimentary or absent.
penile h. That in which the urethra opens ventrally at some point between the sulcus of the glans and penoscrotal junction.
penoscrotal h. A form in which the urethra opens at the junction of the penis and the scrotum.
perineal h. A form in which the urethra opens upon the perineum.
pseudovaginal h. A form in which the opening of the urethra is upon the perineum, and is funnel-like and wide open; this may be interpreted as vagina and lead to confusion of sex. Also see *pseudohermaphroditism*.

hy"po-sper"ma-to-gen'e-sis [*hypo*; G. *sperma*, seed; *genesis*, production]. A decreased production of male germ cells, caused by such factors as diseased testes or hypoleydigism.

hy-pos-phre'si-a (high"pos-free'zh-, -zee-uh, -zhuh, -see-uh, hip"os-) [*hypo*; G. *osphrēsis*, sense of smell]. Hyposmia.

hy'po-spray. A metallic device for administering injections subcutaneously; it operates on the principle that a stream of fluid ejected with high

velocity through an orifice 75 to 80 microns in diameter and held against the skin, penetrates the skin without pain and usually without leaving readily visible mark. Also called *jet injection*.

hy pos'ta sis (high pos ta-sis, hi-pos) [G. sediment]. 1. A deposit which forms at the bottom of liquid; sediment. 2. The formation of sediment, especially the settling of blood in dependent parts of the body.

hy"po-stat'ic [G. *hypostatikos*, belonging to substance]. 1. Due to, or of the nature of, hypostasis. 2. In genetics, subject to being suppressed, as a gene whose effect is suppressed by another gene that affects the same part of the organism.

hy"pos the ni [G. *hypo* under; *sthenos*, strength]. Weakness; subnormal strength. —hypersthenic, hyposthen'ic, *adj.*

hy pos"the nu'ri (high-pos"thi-new ree-uh, hi-pos") [*hypo*; *sthenos*; G. *ouron*, urine]. The secretion of urine of low specific gravity due to the inability of the kidney to concentrate the urine adequately.

hy"po-sto mi [*hypo*; G. *stoma*, mouth]. A form of microstomia in which the mouth is a vertical slit opening into pharyngeal sac.

hy"po-sul'fite. A name, recommended to be abandoned, which has been applied to salts both of thiosulfuric acid and of hydrosulfurous acid.

hy"po syn-er'gi [*hypo*; G. *synergia*, cooperation]. Defective coordination.

hy"po-tax'i [*hypo*; G. *taxis*, arrangement]. A condition of emotional rapport existing in the beginning of hypnosis between the subject and the hypnotizer.

hy"po-tax'is [G. subjection, submission]. Light, hypnotic sleep.

hy"po-tel or-ism. Decrease in distance between two organs or parts; specifically, ocular hypotelorism, a rare craniofacial deformity possibly due to deficient development of the lesser wing of the sphenoid bone and premature closure of cranial sutures, characterized by marked microcephaly, slight oxycephaly, narrowing of the bridge of the nose, and hence decreased distance between the eyes and convergent strabismus; general physical and mental retardation accompany this condition, which may be regarded as the inverse of ocular hypertelorism.

hy"po ten sion [G. *hypo*, under; L. *tensio*, stretching]. Diminished or abnormally low tension, usually synonymous with low blood pressure. —hypotensive, *adj.*

orthostatic h. A fall of blood pressure which occurs when the erect position is assumed.

postural h. That due to sudden change from the horizontal to the upright position or from prolonged standing, causing dizziness, faintness, and sometimes syncope.

hy"po ten sor [*hypo*; L. *tensum*, from *tendere*, to stretch]. Any substance capable of lowering blood pressure. It implies a persistent effect, as opposed to the fleeting effect of a depressor.

hy"po-thal" mus [*hypo*; G. *thalamos*, chamber]. The region of the diencephalon forming the floor of the third ventricle, including neighboring, associated nuclei. It is divided into three regions: 1. *Anterior region* or *pars supraoptica*, which is superior to the optic chiasma. It includes supraoptic and paraventricular nuclei and less differentiated nucleus which merges with the preoptic area called *anterior hypothalamic nucleus*. 2. *Middle region*, *pars tuberalis*, or *tuber cinereum*, including the *lateral hypothalamic* and *lateral nuclei*, lateral to a sagittal plane passing through the anterior column of the fornix, the dorsomedial, ventromedial, and posterior hypothalamic nuclei, medial to the above plane. 3. *Caudal region*, *pars mamillaris*, or *mamillary bodies* including medial, lateral, and *intercalated mamillary nuclei* and *premamillary* and *supramamillary nuclei*. —hypothalam'ic, *adj.*

hy"po the nar (high po-thee nur high-poth'i ur) [*hypo*; G. *thenar* palm]. Designating the fleshy eminence on the ulnar side of the palm of the hand.

hy"po-therm es-the sia. Decreased temperature sensibility.

hy"po ther'mi a, hy"po ther"my [*hypo*; G. *thermē*, heat]. Subnormal temperature of the body. —hypother'mal, *adj.*

hy poth'e-si [G. proposal]. 1. A supposition or conjecture put forth to account for known facts. 2. A theory accepted tentatively as, for example,

Bliergi" h. Drugs possessing identical pharmacological action summate their therapeutic effects when administered simultaneously; potentiation occurs only if the two agents have different pharmacological activity.

Kossel and Siegfried's protamine nucleus h., the theory that all proteins are built around nucleus of the three amino acids, arginine, histidine, and lysine, and that arginine is the most important member of this triad.

Gesell" h. An explanation of the integration of breathing in terms of nervous integration electronically recorded.

lattice h. One which attributes the precipitation of antigen and antibody to the building up of lattice or framework composed of alternating molecules of antigen and antibody.

rrusaatic h. See *mucaric hypothesis*.

arsain h. See *arasin hypothesis*.

hy"po-thy'mi [G. *hypo*, under; *thymos*, spirit]. Despondency; depression of spirits; diminution in the intensity of emotions.

hy"po-thy'roid ism [*hypo*; G. *thyreoidēs*, shield shaped]. A morbid condition due to deficiency of thyroid hormone; in advanced form expressed as cretinism or myxedema. In the mild form, nonmyxedematous condition associated with basal metabolic rates approximating 20% below normal and, to mild degree, with other characteristics of myxedema. Syn., *hypothyreosis*. Also see *cretinism*, *myxedema*.

primary h. That caused by primary loss of functioning thyroid tissue, such as surgical removal, infarction, or atrophy.

secondary h. That due to inadequate stimulation of the thyroid.

hy"po-thy ro sis. Hypothyroidism.

hy"po to'ni hy pot' ny [*hypo*; *tonos*]. Decrease of normal tonicity or tension especially diminution of intraocular pressure.

hy"po ton'ic [*hypo*; G. *tonos*, tension]. 1. Below the normal strength or tension. 2. Referring to solution whose osmotic pressure is less than that of physiologic salt solution, or any other solution taken as standard. —hypotonic'ity *n.*

hy"po-tri cho sis (high"po-tri ko sis, hip o-) See *alopecia congenitalis*.

hy"po-tro'pi [*hypo*; G. *tropein*, to turn]. A form of strabismus in which one eye looks downward.

hy"po-tym pan-um. That part of the tympanum lying below the level of the drum membrane. —hypotympan'ic, *adj.*

hy"po-veg ta"tive (-vedj"I-tay"tiv) [*hypo*; L. *vegetare* to enliven]. Referring to human biotype in which purely somatic systems dominate over the visceral or nutritional organs; corresponds to the microsplanchnic or dolichomorphic body types.

hy"po-vi"ta-min-o'sis [*hypo*; *vitamin*; G. *-osis*,

condition]. A condition due to deficiency of one or more vitamins in the food.

hy"po-vo-le'mi-a [*hypo-*; L. *volumen*, roll; G. *haima*, blood]. Low or decreased blood volume.

hy"po-xan'thine (high"po-zan'theen, -thin, hip"o-) $C_5H_4N_4O$. 6-Oxypurine, 6-ketopurine. An intermediate product resulting when adenine, an amino purine formed by hydrolysis of nucleic acid, is transformed into uric acid and allantoin.

hy"po-xan-thyl'ic ac'id (-zan-thil'ick). Inosinic acid.

hy"pox-e'mi-a [*hypo-*; G. *oxys*, sharp; *haima*, blood]. A condition of insufficient oxygen in the blood.

hy-pox'i-a (high-pock'see-uh, hi-pock'-) [*hypo-*; G. *oxys*, sharp]. Oxygen want or deficiency; any state wherein a physiologically inadequate amount of oxygen is available to, or utilized by tissue, without respect to cause or degree. Clinically usually of mixed type, it is classified by physiologists according to etiology.

anemic h. Reduction in oxygen-carrying capacity of the blood due to decrease in functioning erythrocytes, as in anemia, hemorrhage, or carbon monoxide poisoning.

circulatory h. Stagnant *h.*

histotoxic h. Reduction in oxygen utilization due to interference in cellular metabolism by agents like cyanide which poison the respiratory enzymes, or through deficiency of respiratory enzyme, as in certain infections or deficiency diseases.

hypoxic h., hypoxemic h. Reduction in availability of oxygen to tissue due to a decrease in the partial pressure of oxygen (pO_2) in the arterial blood, as in low oxygen tension in inspired air, interference with gas exchange in the lungs, and arteriovenous shunts.

stagnant h. Reduction in available oxygen due to slowed circulation of the blood, as in local or general circulatory failure. Syn., *circulatory h.*

hypretigen. Trade-mark for certain preparations of protein hydrolysate prepared from casein.

hyp"si-brach"y-ce-phal'ic (hip"si-brack"i-si-fal'ick) [G. *hypsi*, on high; *brachys*, short; *kephalē*, head]. Having a skull which is high and broad.

hyp"si-ceph'a-ly [*hypsi*; *kephalē*]. The condition of a skull with a cranial index of over 75.1.

hyp"si-conch' (hip'si-konk") [*hypsi*; G. *konchē*, shell-like cavity]. *In craniometry*, designating an orbit that appears high because of an elongation of the supero-inferior diameter; having an orbital index of 85.0 or more.

hyp"si-sta-phyl'i-a [*hypsi*; G. *staphylē*, bunch of grapes, swollen uvula]. Condition in which the palatal arch is high and narrow. —**hypsistaphylic, hypsistaph'yline,** *adj.*

hyp"so-ceph'a-ly. See *hypsicephaly*.

hyp-so-chro'mic ef-fect'. The shift of an absorption band to higher frequency caused by some external effect on the chromophore.

hyp"so-pho'bi-a [G. *hypsos*, height; *phobos*, fear]. Morbid dread of being at a great height.

Hyrtl, Joseph [*Hungarian anatomist*, ca. 1810–94]. Author of various works on anatomy which were considered standard. Described an anastomosis sometimes found between the two hypoglossal nerves; called *Hyrtl's loop*.

hys'sop [G. *hyssōpos*, hyssop]. The leaves and tops of *Hyssopus officinalis*, an aromatic stimulant and carminative.

hys"ter-al'gi-a [G. *hystera*, womb; *algos*, pain]. Neuralgic pain in the uterus. —**hysteralgic,** *adj.*

hys"ter-ec'to-my [*hystera*; G. *ektomē*, excision]. Total or partial removal of the uterus. In abdominal hysterectomy the removal is effected through an abdominal incision; in vaginal hysterectomy, through the vagina. In supracervical hysterectomy the cervix is not removed; also called *subtotal* or *supravaginal hysterectomy*.

cesarean h. A hysterectomy done immediately following a cesarean section.

hys"ter-e'sis [G. *hysterēsis*, deficiency]. 1. *In medicine*, a delayed reaction in the formation of gels, as the retraction of a blood clot after coagulation. 2. *In physics*, the retention of a magnetic state of iron in a changing magnetic field. 3. *In chemistry*, the lag of a chemical system in attaining equilibrium. 4. *In colloid chemistry*, the rehydration of a dried protein gel, the amount of water imbibed depending on the original water content of the gel.

hys"ter-eu-ryn'ter (hiss"tur-yoor-in'tur) [G. *hystera*, womb; *eurynein*, to make wide]. A metreurynter used for dilating the cervix uteri.

hys-te'ri-a (hiss-teer'ee-uh, hiss-terr'ee-uh) [*hystera*]. A psychoneurotic disorder characterized by extreme emotionalism involving disturbances of the psychic, sensory, motor, vasomotor, and visceral functions. Frequently a result of repression of conflicts from the conscious mind. —**hysteric, hyster'ical,** *adj.*; **hyster'ic,** *n.*

anxiety h. The combination of an anxiety neurosis with hysteria.

conversion h. See conversion *reaction*, dissociation *reaction*.

major h. A hysteria marked by violent mental excitement and movements suggesting grand mal.

minor h. A mild form of hysteria, as in anorexia nervosa and globus hystericus.

hys-ter'i-cism [*hystera*]. The hysterical diathesis or temperament; proneness to great suggestibility and to the exhibition of hysterical symptoms. *Obs.*

hys-ter'ics [G. *hysterikos*, suffering in the womb, hysterical]. 1. Colloquial term for a hysterical attack. 2. A fit of laughing and crying, similar to that seen in hysteria.

hys-ter'i-form [G. *hystera*, womb; L. *forma*, form]. Resembling hysteria.

hys"ter-i'tis [*hystera*; G. *-itis*, inflammation]. Old term for metritis.

hys'ter-o-, hyster- [*hystera*]. A combining form denoting *connection with*, or *relation to*, *the uterus* or *to hysteria*.

hys"ter-o-bu-bon'o-cele [*hystera*; G. *boubonokēlē*, inguinal hernia]. An inguinal hysterocele.

hys'ter-o-cele" [*hystera*; G. *kēlē*, hernia]. A hernia containing all or part of the uterus.

hys"ter-o-clei'sis (hiss"tur-o-kly'sis) [*hystera*; G. *kleisis*, closing]. The closure of the uterus by suturing the edges of the external os.

hys"ter-o-cys'tic [*hystera*; G. *kystis*, bladder]. Relating to the uterus and the urinary bladder.

hys"ter-o-cys"to-clei'sis (hiss"tur-o-sis-to-kly'sis) [*hystera*; *kystis*; G. *kleisis*, closing]. Operation for relief of vesico-uterovaginal fistula, consisting in turning the cervix uteri into the urinary bladder and suturing it. Also called *Bozeman's operation*. *Obs.*

hys"ter-o-cys'to-pex"y. See *ventromesoduction*.

hys"ter-o-de"mon-op'a-thy [*hystera*; G. *daimōn*, spirit; *pathos*, disease]. Hysteria characterized by demonomania; frequently accompanied by self-reproach and motivated by a strong sense of guilt.

hys"ter-o-dyn'i-a [*hystera*; G. *odynē*, pain]. Pain in the uterus.

hys"ter-o-ep'i-lep"sy [*hystera*; G. *epilēpsia*, a seizure]. A type of hysteria associated with convulsions similar to epileptic convulsions.

hys"ter-o-fren'ic [*hystera*; L. *frenum*, curb]. Capable of checking an attack of hysteria.

hys"ter-og'e-ny (hiss"tur-odj'i-nee) [*hystera*; G.

gennethai, from *gignesthai*, to be produced]. The induction of the hysteric state or paroxysm. —hysterogen'ic, hysterog'enous, *adj*.

hys"ter-og'ra-phy [*hystera*; G. *graphein*, to write]. Roentgenologic examination of the uterus.

hys'ter-oid, hys"ter-oi'dal [*hystera*; G. *eidos*, form]. Resembling hysteria.

hys"ter-o-lap"a-rot'o-my [*hystera*; G. *lapara*, soft part of the body between the ribs and the hip; *tomē*, cutting]. Abdominal hysterectomy.

hys'ter-o-lith [*hystera*; G. *lithos*, stone]. A calculus in the uterus.

hys"ter-o-li-thi'-sis [*hystera*; *lithos*; NL. *-iasis*, condition]. The formation of a concretion in the uterus.

hys"ter-ol'o-gy [*hystera*, G. *logos*, word]. That branch of medical science dealing with the anatomy, physiology, and pathology of the uterus. *Obs.*

hys"ter-ol'y-sis [*hystera*, G. *lysis*, a loosing]. Severing the attachments or adhesions of the uterus.

hys"ter-o-ma'ni-a [*hystera*; G. *mania*, madness]. 1. A state or condition of psychomotor overactivity seen in hysteria. *Rare.* 2. Nymphomania. *Rare.*

hys"ter-om'e-ter [*hystera*; G. *metron*, measure]. An instrument for measuring the length of the intrauterine cavity. —hysterometry, *n.*

hys"ter-o-my-o'ma (hiss"tur-o-migh-o'muh) [*hystera*; G. *mys*, muscle; *-ōma*, tumor]. Myoma of the uterus.

hys"ter-o-my"o-mec'to-my [*hystera*; *mys*; G. *ektomē*, excision]. Surgical removal of a fibroid tumor of the uterus.

hys"ter-o-my-ot'o-my (hiss"tur-o-migh-ot'o-mee) [*hystera*; *mys*; G. *tomē*, cutting]. Incision into the uterus for removal of a solid tumor.

hys"ter-o-o"o-pho-rec'to-my. The surgical removal of the uterus and ovaries.

hys"ter-op'a-thy [*hystera*; G. *pathos*, disease]. Any disease or disorder of the uterus. —hysteropath'ic, *adj.*

hys"ter-o-pex"y [*hystera*; G. *pēxis*, fixing]. Fixation of the uterus by a surgical operation to correct displacement.

hys"ter-o-phil'i-a [*hystera*; G. *philein*, to love]. A term applied to certain psychosomatic disturbances resembling hysteria, such as migraine, asthma, intestinal spasm, or occupational cramps.

hys"ter-o-plas'ty [*hystera*; G. *plassein*, to mold]. A plastic operation on the uterus.

hys"ter-op-to'sis [*hystera*, G. *ptōsis*, falling]. Falling or inversion of the uterus.

hys"ter-or'rha-phy [*hystera*; G. *rhaphē*, a suture]. The closure of a uterine incision or rent by suture.

hys"ter-or-rhex'is [*hystera*; G. *rhēxis*, bursting]. Rupture of the uterus.

hys"ter-o-sal"pin-gec'to-my (-sal-pin-jeck'to-mee) [*hystera*; G. *salpinx*, trumpet; *ektomē*, excision]. Excision of the uterus and oviducts.

hys"ter-o-sal"pin-gog'ra-phy [*hystera*; *salpinx*; G. *graphein*, to write]. Roentgenographic examination of the uterus and oviducts after injection of a radiopaque substance; metrosalpingography. See also combined gynecography.

hys"ter-o-sal-pin"go-o"pho-rec'to-my (-o o-f reck'to-mee, -o off-o-reck'to-mee). Excision of the uterus, oviducts, and ovaries.

hys"ter-o-sal-pin"go-o"o-the-cec'to-my (-o e-thi seck'to-mee). Hysterosalpingo-oophorectomy.

hys"ter-o-sal"pin-gos'to-my [*hystera*, *salpinx*; G. *stoma*, mouth]. The establishment of an anastomosis between an oviduct and the uterus.

hys'ter-o-scope [*hystera*; G. *skopein*, to examine]. A uterine speculum, with a reflector. —hyster-os'copy, *n.*

hys'ter-o-tome" [*hystera*; G. *tomos*, cutting]. An instrument for incising the uterus.

hys"ter-ot'o-my [*hystera*; G. *tomē*, cutting]. 1. Incision of the uterus. 2. A Cesarean section.

hys"ter-o-tra"che-lec'to-my (-tray"ki-leck'to-mee, -track"i-leck'to-mee) [*hystera*; G. *trachēlos*, neck; *ektomē*, excision]. Amputation of the cervix of the uterus.

hys"ter-o-tra-che-lo-plas"ty (-tray'ki-lo-plas"tee, -track'i-lo-plas"tee) [*hystera*; *trachēlos*; G. *plassein*, to form]. Plastic surgery on the cervix of the uterus.

hys"ter-o-tra"che-lor'rha-phy [*hystera*; *trachēlos*; G. *rhaphē*, suture]. A plastic operation for the restoration of a lacerated cervix uteri.

hys"ter-o-tra"che-lot'o-my [*hystera*; *trachēlos*; G. *tomē*, cutting]. Surgical incision of the cervix uteri.

hys"ter-o-trau'ma-tism [*hystera*; G. *trauma*, wound]. Hysteric symptoms due to or following severe injury.

hytakerol. A trade-mark for dihydrotachysterol.

hy'ther [G. *hydōr*, water; *thermē*, heat]. The effect of the atmospheric heat and humidity on an organism.

I

I The chemical symbol for iodine; symbol for permanent incisor.

I^{131} Symbol for the radioactive isotope of iodine of atomic weight 131. See Table of Radioactive and Other Isotopes in Appendix.

i Symbol for deciduous incisor.

i Iso-; optically inactive.

I.A.D.R. International Association for Dental Research.

IALA International Auxiliary Language Association.

i-am"a-tol'o-gy. The science or study of remedies.

i-at-ro- (eye-at-ro-, eye-ay'tro-) [G. *iatros*, physician]. A combining form signifying relation to medicine or to physicians.

i-at"ro-chem'is-try [*iatros*; G. *chymos*, juice]. 1. The application of chemistry to therapeutics; the treatment of disease by chemical means. 2. The theory developed in the seventeenth century that disease and its treatment are explicable on a chemical basis.

i-at"ro-gen'ic [*iatros*; G. *gennethai*, from *gignesthai*, to be produced]. Induced by a physician; referring to the effects of a physician's words or actions upon the patient.

i-at"ro-phys'ics [*iatros*; G. *physikos*, natural]. 1. The treatment of disease by physical measures. 2. The theory that disease and its treatment are explicable on a materialistic or physical basis. The materialistic explanation of disease applied especially to a seventeenth-century theory that sought to explain physiologic and therapeutic facts by means of the principles of physics.

Iberin. Trade-mark for a multivitamin capsule containing ferric iron.
I. ferrous. Trade-mark for a multivitamin capsule containing ferrous iron.

Ibn al-Haitham. See *Alhazen*.

Ibn Rushd. See *Averroës*.

Ibn Sina. See *Avicenna*.

Ibn Zuhr. See *Avenzoar*.

I″bo-ga′ine (eye″bo-gay een, -in, i bo gay-een, -in) $C_{26}H_{32}O_{1}N$ An alkaloid from the roots of *Tabernanthe iboga*, a plant of the Congo. It is said to act as a stimulant like caffein in overdose, it produces hallucination and paralysis.

-ic [L. -icus, G. -ikos]. 1. A suffix signifying *of* or *pertaining to*. 2. *In chemistry*, a suffix denoting *the higher of two valences assumed by an element* and, incidentally in many cases, a *larger amount of oxygen*.

ice [ME. *is*]. Water in its solid state, which it assumes at a temperature of 0° C. or 32° F. It is used externally in the form of applications and internally both as a refrigerant and to combat nausea.
dry i. Carbon dioxide in its solid state; used as an escharotic for the destruction of warts, hairy moles, and vascular nevi.

Ice′land moss. See *Cetraria*, 2.

Ice′land spar. A crystalline form of calcium carbonate, having doubly refracting properties, and used in polariscopes.

Ich′no-gram (ick′no-gram) [G. *ichnos*, track; *gramma*, letter]. *In legal medicine*, the record of a footprint.

I′chor (eye′kor, eye′kur) [G. *ichōr*, juice, serous discharge]. An acrid, thin discharge from an ulcer or wound. —**ichorous, ichoroid,** *adj.*

I″chor-rhe′a, i″chor-rhoe′a (eye″ko-ree′uh) [*ichōr*; G. *rhoia*, flow]. A copious flow of ichor.

I″chor-rhe′mi-a, i″chor-rhae′mi-a (eye″ko-ree-mee-uh) [*ichōr*; G. *haima*, blood]. The presence of purulent material in the blood.

Ichovar. A proprietary quick-drying varnish containing ichthyol, camphor, and charcoal. Used in skin diseases.

Ich′tham-mol (ick′thuh-mole, -mol, -mawl) (*ichthammol*). A reddish-brown to brownish-black, viscid fluid of characteristic odor, obtained by the destructive distillation of certain bituminous schists, followed by sulfonation of the distillate and neutralization with ammonia. It is used as a weak antiseptic and stimulant in skin diseases, usually in ointment form. It has been occasionally used internally as expectorant.
i. ointment (*unguentum ichthammolis*). A 10% ointment.

Ichthargan. Trade-mark for a combination of silver and ichthyolsulfonic acid containing 30% of silver. It has been used as an astringent, antiphlogistic, and bactericide.

Ichthoform. Trade-mark for ichthyol formaldehyde formerly used as an intestinal antiseptic, antiphlogistic, and vulnerary. Dose, 1–2 Gm. (15–30 gr.).

Ich′thu-lin (ick′thew-lin). A variety of protein derived from fish eggs.

Ich″thy-is′mus (ick thee-is mus), **ich′thy-ism** (ick′thee-iz-m) [G. *ichthys*, fish]. Poisoning due to the absorption of mytilotoxin in mussels or from eating spoiled fish.

Ichthymall. A trade-mark for ichthammol.

Ichthynat. A trade-mark for ichthammol.

Ich′thy-o- (ick′thee-o-), **ichthy-** [*ichthys*]. A combining form meaning *fish*.

Ich″thy-o-col′la [G. *ichthyokolla*, fish-glue]. Isinglass; a gelatinous substance prepared from the air bladders of the sturgeon and other fish, occurring in horny, translucent, white sheets which form a jelly when combined with hot water. Used as a food, an adhesive, and a clarifying agent.

Ich′thy-oid [G. *ichthys*, fish; *eidos*, form]. Resembling or shaped like a fish.

Ichthyol. Trade-mark for a brand of ichthammol.

Ich′thy-ol form-al′de-hyde. See *ichthoform*.

Ich″thy-ol′o-gy [*ichthys*; G. *logos*, word]. The study of fishes.

Ich″thy-ol-sul-fon′ic ac′id. $C_{28}H_{36}O_{6}S_{3}$. An acid produced from Tyrolean bituminous material by the action of sulfuric acid. When neutralized with ammonia, it forms a compound of the type of ichthammol.

Ich″thy-oph′a-gous [*ichthys*; G. *phagein*, to eat]. Eating or subsisting on fish.

Ich″thy-o-pho′bi-a [*ichthys*; G. *phobos*, fear]. A morbid fear of fish. —**ichthyopho′bic,** *adj.*

Ich″thy-o′sis [*ichthys*; G. *-ōsis*, condition]. A genodermatosis characterized by a dry harsh skin with adherent scales. *Involvement is most severe* on the extensor surfaces of the extremities. Histologically the epidermis shows hyperkeratosis, absence of the granular layer and thinning, and in the dermis, follicular keratin plugs and atrophy of the skin appendages. Also called *fishskin disease, xeroderma*. —**ichthyot′ic,** *adj.*
i. congenita. A severe form occurring as an intrauterine modification of the skin. The infant at birth is usually a nonviable monstrosity or death occurs after a few days. Its skin resembles a cracked and brittle coat of armor. Also called *harlequin fetus, keratosis universalis congenita*.
i. follicularis. The genodermatosis with moderate ichthyosis and associated baldness, absence of eyebrows and eyelashes, trachoma, and conjunctivitis.
i. hystrix. A disease characterized by warty growths, consisting of elongated and hypertrophied papillae covered by greatly thickened epidermis; a type of nevus.
i. simplex. The common form which develops in early life, characterized by large, finely corrugated, papery scales with deficient secretions of sebaceous glands and sometimes of the sweat glands. Also called *i. vulgaris*.
i. vulgaris. See *i. simplex*.

Ich″thy-o-tox′i-con [*ichthys*; G. *toxikon*, poison]. 1. The toxin present in the serum of certain fishes, as in that of the eel. 2. A general term for the active agent in poisoning from eating fish.

Ich″thy-o-tox′in [*ichthys*; *toxikon*]. The toxic constituent of eel serum, apparently related to one of the bile acids.

Ich″thy-o-tox-is′mus (ick thee-o-tock-siz mus) [*ichthys*; *toxikon*]. Food poisoning produced by eating fish, raw or canned, which contains toxic substances of bacterial origin.

I′con [G. *eikōn*, image]. An image or model.

I″co-nog′ra-phy [*eikōn*; G. *graphein*, to write]. 1. Graphic or plastic representation or illustration. 2. History and theory of the technics and styles of illustration or representation.

I-con″o-lag′ny (eye-kon″o-lag′nee, eye-kon″o-lag nee) [*eikōn*; G. *lagneia*, the act of coition]. Sexual stimulation induced by the sight of statues or pictures.

I-con″o-ma′ni-a [*eikōn*; G. *mania*, madness]. A morbid interest in images.

ICSH Interstitial-cell-stimulating hormone, also *known as the luteinizing hormone*, occurring in the anterior pituitary gland.

ICT Insulin coma therapy.

Ic-ter′ic [G. *ikteros*, jaundice]. Pertaining to or characterized by jaundice.

Ic″ter-o-gen′ic, ic″ter-og′e-nous (ick″tur-o-jen′i-

nus) [*ikteros*; G. *gennethai*, from *gignesthai*, to be produced]. Causing icterus.

ic'ter·oid [*ikteros*; G. *eidos*, form]. Resembling the color of, or having the nature of, jaundice.

ic'ter·us [*ikteros*]. Jaundice. —**icter'ic**, *adj.*
chronic familial i. See hereditary *spherocytosis*.
diffusion i. That due to the hepatic cells having lost their power of holding back the bile, which consequently diffuses into the fluids of the body.
familial hemolytic i. See hereditary *spherocytosis*.
i. febrilis. See spirochetal *jaundice*.
i. gravis. Acute yellow atrophy of the liver; disease characterized by jaundice, marked nervous symptoms, diminution in size of the liver, and rapid, fatal termination. The urine contains bile and crystals of leucine and tyrosine.
i. index. The index of the bilirubin content of the blood as expressed by comparison of the color of the serum with the color of a 1:10,000 potassium dichromate solution. The normal range is from 4 to 6. From 6 to 15 is the zone of latent jaundice, in which the blood holds an amount of bilirubin above the normal without spilling it over into the sclerae or other tissues. With an icterus index above 15, clinical jaundice is present.
i. neonatorum. That which is sometimes observed in infants during the first few days after birth. The causes are various and range from physiologic jaundice, which has no aftereffects, through that of erythroblastosis foetalis and septic jaundice, to the severe jaundice due to absence of the bile ducts.
i. saturninum. Jaundice from lead poisoning.
nuclear i. See *kernicterus*.

ic'tus [L., blow]. 1. An acute apoplectic attack. 2. An epileptic attack with no aura and sudden onset. *Obs.* —**ic'tal**, *adj.*

id [L., it]. In *psychoanalysis*, the primitive, preformed psychic force in the unconscious, which is the source of the instinctive energy necessary for self-preservation and propagation.

-id [G. *-is*, *-ides*]. A suffix pertaining to a sensitivity state of the skin, which reacts to bacterial, fungal, or other agents emanating from a distant focus of infection. The site of the -id reaction is almost always free of the allergen (except in some of the granulomatous infections) and relief is obtained by hyposensitization and by therapy of the infection or focus of the infection.

i·de'a [G., form]. 1. A mental impression or thought; belief or object existing in the mind or thought. 2. In *psychology*, a mental representation of something not actually perceived.
autochthonous i. An idea which appears to the patient as a finished product, having originated in his unconscious.
compulsive i. One involving an irresistible urge for action.
fixed i. An unfounded, delusional idea which the patient refuses to relinquish even after its disproof, and which controls all his actions.
imperative i. One which the patient dislikes, but which persists in his consciousness and dominates his will; characteristic of the compulsive and ruminative ideas in psychasthenia.
ruminative i. One which is pondered repeatedly.

i·de"al·i·za'tion [L. *idealis*, from *idea*]. In *psychoanalysis*, sexual overevaluation of the love object.

i·de'as of ref'er·ence. In *psychopathology*, a symptom complex, in which through the mechanism of projection the individual believes himself to be the object of ill will and evil intentions of those about him. All remarks overheard are taken egocentrically and interpreted as derogatory. The symptom is most commonly observed in various paranoid reactions, the paranoid type of schizophrenic reaction, and in manic-depressive reactions.

i"de·a'tion [idea]. The formation of a mental conception; the cerebral action by which, or in accord with which, an idea is formed. —**idea'tional**, *adj.*

i·den"ti·fi·ca'tion [F. *identifier*, from L. *idem*, the same]. 1. The classification, description, and registration of a specimen or a person by certain physical characteristics. 2. In *psychopathology*, a mental mechanism of defense in which one unconsciously assumes, on the basis of love or aggression, the characteristics of another.
anthropometric i. See Bertillon system of *i*.
Bertillon system of i. That method which uses those skeletal measurements which remain practically unchanged after adult life is reached. Syn., *anthropometric i.*
Galton system of i. That method based upon fingerprints. The records used are the printed impressions of the ten digits placed in definite order upon a card.
palm and sole system of i. An extension of the Galton system to include the palmar and plantar surfaces.

id'e·o- (id'ee-o-, eye'dee-o-) [G. *idea*, form]. A combining form meaning *idea*.

id"e·o·ge·net'ic [*idea*; G. *genesis*, production]. Relating to mental activity in which primary sense-impressions are employed in place of completed ideas.

id"e·o·glan'du·lar [*idea*; L. *glandula*, dim. of *glans*, acorn]. Relating to glandular activity as evoked by a mental concept.

id"e·ol'o·gy (id ee-ol'o-jee, eye"dee-) [*idea*; G. *logos*, word]. The science of ideas.

id"e·o·me·tab'o·lism [*idea*; G. *metabolē*, change]. Metabolic processes induced by mental and emotional causes. —**ideometabol'ic**, *adj.*

id"e·o·mo'tor [*idea*; L. *motum*, from *movere*, to move]. Pertaining to nonvoluntary movement which results from some idea.

id"e·o·mus'cu·lar [*idea*; L. *musculus*, muscle]. Pertaining to nonvoluntary muscular movement produced by a mental concept.

id"e·o·pho'bi·a [*idea*; G. *phobos*, fear]. A morbid fear of ideas.

id'e·o·plas"ty [*idea*; G. *plassein*, to mold]. The process of making the subject's mind receptive to the suggestions of the hypnotizer. —**ideoplas'tic**, *adj.*

id"e·o·syn·chy'si·a (id"ee-o-sin-kigh'see-uh, eye"dee-o-), **id"e·o·syn'chy·sis** (-sing'ki-sis) [*idea*; G. *synchysis*, mixture]. Delirium. *Obs.*

id"e·o·vas'cu·lar [*idea*; L. *vasculum*, small vessel]. Relating to a vascular change resulting from an emotional impression.

id'i·o- [G. *idios*, one's own]. 1. A combining form meaning *one's own*, *separate*, *distinct*. 2. In *biochemistry* and *medicine*, a combining form meaning *self-produced*.

id'i·o·blast". See *bioplasm*.

id"i·o·chro'mo·some [*idios*; G. *chrōma*, color; *sōma*, body]. A sex chromosome.

id"i·oc'ra·sy, **id"i·o·cra'sis** [G. *idiokrasia*, peculiar temperament]. Idiosyncrasy. —**idiocrat'ic**, *adj.*

id"i·oc·to'ni·a [G. *idios*, one's own; *ktonos*, murder]. Self-murder; suicide. *Obs.*

id'i·o·cy [G. *idiōtia*, private person, ignoramus]. The lowest grade of mental deficiency in which the subject's mental age is under 3 years and the I.Q. under 25; usually congenital, and accompanied by physical defects.
amaurotic familial i. See *amaurotic familial idiocy*.

hydrocephalic i. That due to hydrocephaly whether congenital or acquired.

microcephalic i. That form associated with an abnormally small head.

Mongolian i. See *mongolism*.

moral i. That in which all feeling for or interest in others is entirely absent.

id"i-og'a-mist [G. *idios*, one's own; *gamos*, marriage]. One who is capable of coitus only with his marital partner or with a few women, and impotent with women in general.

id"i-o-gen'e-sis [*idios*; G. *genesis*, production]. Self origin; referring to idiopathic diseases.

id"i-o-glos'si-a [*idios*; G. *glōssa*, tongue]. Any form of speech or utterance invented by an individual and unique with him, usually incomprehensible to others. In a very young child, a transition stage towards normal speech which may be understood by his parents and associates; in one in whom normal speech development may be expected, it often represents a psychopathological process. —**idioglot'tic,** *adj.*

id"i-o-hyp'no-tism [*idios*; G. *hypnos*, sleep]. Self induced hypnotism.

id"i-ol'o-gism [*idios*; G. *logos*, word]. A form of utterance peculiar to any person, especially a speech defect.

id"i-o-me-tri'tis [*idios*; G. *mētra*, womb; *-itis*, inflammation]. Inflammation of the parenchymatous substance of the uterus. *Obs.*

id"i-o-mus'cu-lar [*idios*; L. *musculus*, muscle]. Referring to muscular tissue independent of any nerve stimulus.

id"i-o-neu-ro'sis [*idios*; G. *neuron*, nerve; *-ōsis*, condition]. A neurosis. *Obs.*

id"i-op'a-thy [*idios*; G. *pathos*, disease]. 1. A primary disease; one not a result of any other disease, but of spontaneous origin. 2. Disease for which no cause is known. —**idiopath'ic, idiopathet'ic,** *adj.*

id"i-o-plasm" [*idios*; *plasma*, anything formed]. *In biology*, a hypothetic structural unit of the germ plasm, according to Weismann's theory. *Obs.*

id"i-o-psy-chol'o-gy [*idios*; G. *psychē*, soul; *logos*, word]. Psychology based upon introspective study of one's own mental acts.

id"i-o-re'flex [*idios*; L. *reflexus*, from *reflectere*, to bend back]. A reflex arising from a stimulus originating within the organ itself.

id"i-o-ret'i-nal [*idios*; L. *rete*, net]. Peculiar or proper to the retina.

id"i-o-some, id"i-o-zome [*idios*; G. *sōma*, body]. The central apparatus of an auxocyte, especially a spermatocyte, including the surrounding Golgi apparatus and mitochondria.

id"i-o-spasm [*idios*; G. *spasmos*, spasm]. A spasm confined to one part. —**idiospas'tic,** *adj.*

id"i-o-syn'cra-sy [G. *idiosynkrasia*, from *idios*, *synkrasis*, a mingling together]. 1. Any special or peculiar characteristic or temperament by which a person differs from other persons. 2. A peculiarity of constitution that makes an individual react differently from most persons to drugs or treatments. —**idiosyncrat'ic,** *adj.*

id"i-ot. A person afflicted with idiocy.

i.-savant. An individual with general mental deficiency as measured by the intelligence quotient, but with some peculiar and isolated talent along special lines, such as music, mathematics, manual dexterity.

id"i-o-ven-tric'u-lar [*idios*; L. *ventriculus*, dim. of *venter*, belly]. Pertaining to the ventricle of the heart alone, and not affecting the atrium.

id"i-o-zome" See *idiosome*.

id"i-tol, $CH_2OH.HCOH.HOCH.HCOH.HOCH.CH_2OH$; L-iditol; an alcohol formed by reduction of the ketohexose L-sorbose.

Idocol. Trade-mark for a colloidal iodine preparation containing 20% of iodine.

i-dol"o-ma'ni-a (eye-dol-o-may'nee-uh) [G. *eidōlon*, idol; *mania*, madness]. Exaggerated idolatry.

id'ose. A synthetic hexose sugar isomeric with glucose.

i-dro'sis. Hidrosis.

i"ga-su'ric ac'id. An organic acid found in the seeds of nux vomica.

ig-na'ti-a [NL.]. St. Ignatius' bean. The seed of *Strychnos ignatii*, contains the alkaloids strychnine and brucine. Its therapeutic effects are similar to those of nux vomica.

ig"ni-punc"ture [L. *ignis*, fire; *punctura*, a pricking]. Puncture with metal needles heated to either red or white heat.

ig-ni'tion (ig-nish'un) [*ignis*]. The process of heating solids until all volatile matter has been driven off. When performed in the presence of air, oxidizable matter such as carbon is burned.

Il Chemical symbol for illinium.

il"e-ec'to-my [G. *eilein*, to roll; *ektomē*, excision]. Excision of the ileum.

il"e-i'tis [*eilein*; G. *-itis*, inflammation]. Inflammation of the ileum. —**ileit'ic,** *adj.*

regional i. A chronic, nonspecific, granulomatous process frequently involving the terminal portion of the ileum, but occasionally extending into the colon or arising in the more proximal portions of the ileum. Also called *terminal i.*, *Crohn's disease*.

il"e-o- [*eilein*]. A combining form denoting *the ileum*.

il"e-o-ce-cos'to-my [*eilein*; L. *caecus*, blind; *stoma*, mouth]. The formation of an anastomosis between the cecum and the ileum.

il"e-o-ce'cum [*eilein*, *caecus*]. The ileum and the cecum regarded as one organ. —**ileocecal,** *adj.*

il"e-o-col'ic [*eilein*; G. *kolon*, colon]. Pertaining conjointly to the ileum and the colon.

il"e-o-co-li'tis [*eilein*, *kolon*; G. *-itis*, inflammation]. Inflammation of the ileum and the colon.

il-e-op'a-gus. See *iliopagus*.

il"e-o-co-los'to-my [*eilein*, *kolon*; G. *stoma*, mouth]. The establishment of an anastomosis between the ileum and the colon.

il"e-o-il"e-os'to-my [*eilein*, *eilein*, *stoma*]. The establishment of an anastomosis between two different parts of the ileum.

il"e-or'rha-phy [*eilein*; G. *rhaphē*, a suture]. Suture of the ileum.

il"e-o-sig"moid-os'to-my [*eilein*; G. *sigmoeidēs*, crescent-shaped; *stoma*, mouth]. The surgical formation of an anastomosis between the ileum and the sigmoid colon.

il"e-os'to-my [*eilein*, *stoma*]. The surgical formation of a fistula or artificial anus through the abdominal wall into the ileum.

il"e-ot'o-my [*eilein*; G. *tomē*, a cutting]. Surgical incision of the ileum.

Iletin. Trade-mark for a brand of insulin.

il'e-um [*eilein*]. The lower portion of the small intestine, extending from the jejunum to the large intestine. See Pl. 13. —**il'eal, ileac,** *adj.*

il'e-us [G. *eileos*, intestinal obstruction]. Acute intestinal obstruction resulting from the interference of proper propulsion of intestinal contents, due either to functional or mechanical causes. The stasis of intestinal contents is followed by distention of the intestinal lumen and by systemic manifestations, as colicky pain, vomiting, dehydration, blood chemical changes, and toxemia. The condition may end fatally if not relieved.

acute duodenal i. Caused by obstruction of the lumen of the duodenum following operations or resulting from external pressure. Also called *arteriomesenteric i.*, *gastromesenteric i.*

adynamic i. Intestinal paresis thought to be due to hyperactive sympathetic influence, which follows almost all intraabdominal operations or other processes which supposedly cause splanchnic nerve irritation. Also called *inhibitory i.*, *paralytic i.*, *reflex i.*, *reflex inhibition i.*

decompensational i. A late phase in ileus in which the gut is so distended that the smooth muscle has lost its contractile properties.

dynamic i. Spastic i.

inhibitory i. See adynamic i.

mechanical i. Obstruction of the intestines by extrinsic pressure or internal blockage, due to variety of causes.

meconium i. Intestinal obstruction caused by inspissation of the meconium, occurring in the newborn with cystic fibrosis of the pancreas.

metabolic i. Ileus resulting from interference with the function of the smooth muscles of the intestines, due to metabolic disturbances.

paralytic i. See adynamic i.

reflex i., **reflex inhibition i.** See adynamic i.

spastic i. Spastic contraction of a section of the bowel, usually the colon, causing obstruction. Syn., *dynamic i.*

il'i·a. Plural of ilium.

il'i·ac. Pertaining to the ilium.

il·i'a·cus. The portion of the iliopsoas muscle arising from the iliac fossa and sacrum.

i. minor. A variant of the iliacus muscle inserted into the capsule of the hip joint.

il"i·a·del'phus. See *iliopagus*.

il'i·o- [L. *ilium*, flank]. A combining form meaning relating to the ilium, iliac.

il"i·o·cap"su·lar'is. The iliacus minor muscle.

il"i·o·cap"su·lo·tro·chan·ter'i·cus. A variant of the iliacus minor muscle in which some fibers also insert into the lesser trochanter.

il"i·o·coc·cyg'e·al (il"ee-o-cock-sidj'ee-ul) [*ilium*; G. *kokkyx*, cuckoo]. Pertaining to the ilium and the coccyx, as the iliococcygeal muscle.

il"i·o·coc·cyg'e·us. The portion of the levator ani muscle overlying the obturator internus muscle.

il"i·o·cos·tal'is. The BR name for the iliocostalis lumborum muscle.

i. cervicis. That portion of the sacrospinalis muscle arising from the upper six ribs and inserted into the posterior tubercle of the transverse processes of the middle cervical vertebrae.

i. dorsi. That portion of the sacrospinalis muscle arising from the lower six ribs and inserted into the upper six ribs.

i. lumborum. That portion of the sacrospinalis muscle which arises from the lumbar vertebrae and adjacent area and is inserted into the lower six ribs.

il"i·o·cos"to·cer"vi·cal'is [*ilium*; L. *costa*, rib; *cervix*, neck]. A muscle composed of the iliocostalis cervicis and the iliocostalis dorsi. See Table of Muscles in the Appendix.

il"i·o·fem'o·ral [*ilium*; L. *femur*, thigh]. Pertaining conjointly to the ilium and the femur, as the iliofemoral ligament.

il"i·o·hy"po·gas'tric [*ilium*; G. *hypo*, under; *gastēr*, belly]. Pertaining conjointly to the ilium and the hypogastrium, as the iliohypogastric nerve. See Table of Nerves in the Appendix.

il"i·o·in'gui·nal [*ilium*; L. *inguen*, groin]. 1. Pertaining to the ilium and the groin. 2. Lying partly within the iliac and partly within the inguinal region, as the ilioinguinal nerve. See Table of Nerves in the Appendix.

il"i·op'a·gus [*ilium*; G. *pagos*, that which is fixed]. Conjoined twins united in the iliac region. Syn., *iliadelphus*.

il"i·o·par"a·si'tus [*ilium*; G. *parasitos*, parasite]. Parasitic, supernumerary limbs attached to one or both ilia.

il"i·o·pec·tin'e·al (il"ee-o-peck-tin'ee-ul, -peck"ti-nee'ul) [*ilium*; L. *pecten*, comb, hair of the pubes]. Pertaining conjointly to the ilium and the pubis, as iliopectineal line.

il"i·o·pso'as (il"ee-o-so'us, il"ee-op'so-us) [*ilium*; G. *psoa*, muscles of the loins]. Pertaining conjointly to the ilium and the loin, as the iliopsoas muscle.

il"i·o·sa·cral'is. An occasional band of muscle ventral to the coccygeus, extending from the iliopectineal line to the lateral border of sacrum.

il"i·o·tho"ra·cop'a·gus [*ilium*; G. *thōrax*, thorax; *pagos*, that which is fixed]. Conjoined twins united laterally at their thoracic and iliac regions.

il"i·o·xi·phop'a·gus (il"ee-o-zi-fop'uh-gus) [*ilium*; G. *xiphos*, sword; *pagos*]. Conjoined twins united from the xiphoid to the iliac region.

il'i·um (pl. *ilia*) [L.]. 1. The flank. 2. The superior broad portion of the hipbone, a separate bone in the fetus. See Plates 1, 2, 14, and *ilium* in Table of Bones in the Appendix.

ill [ME.]. Not healthy; sick; indisposed.

il·laq"ue·a'tion (i-lack"wee-ay'shun, il-ack-) [L. *illaqueare*, to ensnare]. The correction of an ingrowing eyelash by drawing it with a loop through an opening in the lid. —**il·laq'ue·ate**, *v.*

il"le·git'i·mate [L. *illegitimus*, unlawful]. 1. Not in accordance with statutory law. 2. Born out of wedlock; bastard. —**illegitimacy**, *n.*

il·lic'i·um (i-lish'ee-um) [L., that which entices]. Star anise. The fruit of *Illicium verum*; yields a volatile oil consisting chiefly of anethol; may be used to prepare anise oil. The fruits known commercially as Japanese star anise are poisonous.

il"li·ni'tion (il"i-nish'un) [L. *illinere*, to besmear]. A rubbing in or on; inunction.

il·lin'i·um [from *Illinois*, -ium]. Il = 145 ca. A rare earth element, atomic number 61, reported in 1926 by B. S. Hopkins. Prior discovery has been claimed by Rolla and Fernandes, who named the element *florentium*. Both claims have been challenged, while other investigators have reported discovery of synthetic forms of element 61 and proposed the names *cyclonium* and *prometheum*. It is now called *promethium*.

ill'ness [ME.]. 1. The state of being ill or sick. 2. A malady; sickness; disease; disorder.

il·lu'mi·nance. That amount of light incident per unit area of a surface.

il·lu"mi·na'tion [L. *illuminare*, to make light]. 1. The lighting up or illuminating, as of a surface or cavity in the examination of a patient. 2. The quantity of light thrown upon an object. 3. In microscopy, the type or direction of light thrown upon the object studied.

axial i. Illumination by light conveyed in the direction of the optical axis of the objective and ocular of the microscope.

central i. In microscopy, an illumination produced by the rays of light reflected from the mirror passing perpendicularly through the object.

critical i. That in which the image of a small source of light is focused exactly at the object on the stage of the microscope.

dark-field i. Illumination by which light [illegible] the objective only if reflected, refracted, [illegible]tered by the object, making it or its pa[illegible] bright against a dark background, [illegible] rays of light are obliterated by [illegible] below the condenser; hollow [illegible]

the blood of a donor previously rendered immune by repeated inoculations with given agent.

im·pac·tion [L. *impactio* from *impingere*]. 1. The state of being lodged and retained in part or strait. 2. *In dentistry* confinement of a tooth in the jaw so that its eruption is prevented. 3. *In surgery* condition in which fragment of bone is firmly driven into another fragment of bone so that neither can move against the other. —**im·pact'ed**, *adj.*

im·pal'pa·ble [L. *in-*, not; *palpare*, to feel]. Not capable of being felt; imperceptible to the touch.

im·par [L., unequal]. Without fellow; azygous.

im·par''i·dig''i·tate (im-par''i-didj''i-tayt) [*impar*; L. *digitatus*, having fingers]. Having an uneven number of fingers or toes.

im·passe' *In psychoanalysis*, stalemate in the therapeutic process with breakdown in controlled emotional communication between patient and therapist.

im·pe·dance [L. *impedire*, to entangle the feet, impede]. The apparent resistance of circuit to the flow of an alternating electric current.

im·pe·din [*impedire*]. An agent antagonistic to the antimicrobic powers of the body.

im·per'a·tive [L. *imperare*, to order]. Peremptory; absolute; compulsory; binding.

im·per·a·to·rin. $C_{16}H_{14}O_4$. hydroxy-furocoumarin ether from the rhizome of *Peucedanum ostruthium* (formerly *Imperatoria ostruthium*); identical with ammidin from *Ammi majus*.

im''per·cep'tion [L. *in-*, not; *perceptio* from *percipere*, to perceive]. Defective perception.

im·per'fo·rate [*in-*; L. *perforare*, to bore through]. Without the normal opening. —**imperfora'tion**, *n.*

im·pe·ri·al green. Copper acetoarsenite; Paris green.

im·per'me·a·ble [*in-*; L. *permeare*, to pass through]. Not permitting passage.

im·per'vi·ous [*in-*; L. *pervius*, passable]. Not permitting passage, especially of fluids.

im''pe·tig''i·ni·za·tion (im-pi-tidj''i-ni-zay'shun, -nigh-zay'shun) [L. *impetigo* from *impetere*, to attack]. Lesions of impetigo occurring on previous skin lesion.

im·pe·ti'go [L.]. An acute, inflammatory skin disease which may be circinate, bullous, gyrate, or furfuraceous in character. —**impetig'inous**, **impetig'inoid**, *adj.*

Bockhart's i. See *i. follicularis.*

bullous i. A type of impetigo characterized by bullae. It is seen usually in children, but also in adults with continued exposure to heat and humidity. The lesions develop particularly on the axillae, groins, intergluteal areas, arms, thighs, chest, and abdomen. Also called *tropical i.*, *i. neonatorum.*

i. circinata. A form characterized by circle or semicircle of small vesicles or pustules; there are usually many such circles.

i. circumpilaris. See *i. follicularis.*

i. contagiosa. The highly contagious form of impetigo, due to *Micrococcus pyogenes* or *Streptococcus pyogenes*, characterized by vesicles, pustules, and crusts. It is commonly found on exposed parts of the body and heals without sequelae. Also called *i. vulgaris.* See Plate 31.

i. follicularis. A form of micrococcal (staphylococcal) infection of hair follicles characterized by vesicles 1 to 5 mm in size at the pilosebaceous orifice drying in about 5 days to form yellowish crusts; also called *Bockhart's i.* Syn., *i. circumpilaris.*

i. herpetiformis. A rare disease of the skin characterized by the formation of superficial miliary pustules that may be discrete but tend to form circular groups. Most cases of this disease have occurred in pregnant women; it is often fatal.

i. neonatorum. A form of bullous impetigo occurring in the newborn.

i. variolosa. That form occurring between the drying-up pustules of smallpox.

i. vulgaris. See *i. contagiosa.*

tropical i. See bullous *i.*

im·pin'ger (im-pin'jur) [L. *impingere*, to strike against]. An instrument for determining the number of dust particles in the air. A measured air sample is propelled through an underwater jet against perpendicular plate. The dust is collected in the water which is transferred to shallow chamber in which the suspended particles can be counted under microscope. Other instruments used for the same purpose are the jet dust counter, konimeter, and precipitator. Also see *dust count.*

im''plan·ta'tion [F. *implanter* from L. *in*, in; *planta*, sprout]. 1. The act of setting in, as the transplantation of tissue, tooth, duct, or organ from one place in the body to another or from the body of one person to that of another, implying the placing of the tissue in depth, as distinguished from the placement of surface graft. Tissue implants are sometimes used as guides or ladders for the restoration of damaged nerve trunks and tendons. 2. The placement within the body tissues of substances, such as tantalum, vitallium, wire filigree, for restoration by mechanical means; as, for example, the closure of bone defect or the repair of a ventral hernia. 3. The imbedding of the embryo into, or on, the endometrium. —**implant'**, *v.*, **im'plant**, *n.*

i. of the bile ducts. The placement of the proximal end of the common or the hepatic duct into the wall of the duodenum, stomach, or jejunum for the cure of biliary fistula.

i. of the ureters. The transfer of the distal ends of the ureters into the intestine or the skin after cystectomy for malignant disease and in certain cases of exstrophy.

pellet i. Administration of hormone products by implantation of pellets of solid active material under the skin.

im·plants [*implanter*]. 1. Small tubes or needles which are radioactive, placed deep in tissues for therapeutic reasons. 2. Tissue grafts placed in depth. See *graft.*

basket implant. A fenestrated, inert framework designed to be embedded in the eye socket after enucleation, for use as prosthesis for an artificial eye.

im·pon·der·a·ble [L. *in-*, not; *pondus*, weight]. Incapable of being weighed; without weight.

im·po·tence, im·po·ten·cy [L. *impotentia*, from *impotens*, powerless]. Lack of power, especially inability for sexual intercourse in the man. Syn., *agenesia, asynodia, invirility.* —**impotent**, *adj.*

functional i. Impotence due to disturbance of the nervous mechanism of the sexual act.

organic i. Impotence due to some anatomic defect in the sexual organs; may occur in either male or female.

psychic i. That form of impotence which is due to some mental or emotional disturbance. Also called *cerebral i.*

im·preg'nate [L. *in*, in; *praegnans*, pregnant]. 1. Render pregnant. 2. Saturate or charge with. —**impregna'tion**, *n.*

im·pres·sion [L. *impressio*, from *imprimere*, to press into]. 1. A mark produced upon surface by pressure. 2. *In dentistry* mold, usually of

jaw or its parts, from which a cast is made. Materials employed commonly include plaster of Paris, wax mixtures, and hydrocolloids.

basilar i. See platybasia.

digital impressions. Small, roundish pits on the inner surface of the bones of the skull.

maternal impressions. The effects formerly thought to be produced upon the fetus in the uterus by mental impressions of a vivid character received by the mother during pregnancy.

im-pro'cre-ant [L. *in-*, not; *procreare*, to beget]. Incapable of procreating; impotent. —**impro'creance**, *n.*

im-pu'ber-al, im-pu'bic [*in-*; L. *pubes*, signs of manhood]. Destitute of hair on the pubes; not of adult age.

im'pulse [L. *impulsum*, striking against, from *impellere*]. 1. A push or communicated force. 2. A sudden mental urge to an action. 3. In neurophysiology, nerve i.

cardiac i. The beat of the heart felt in the fifth intercostal space to the left of the sternum.

catabolic i. Generalized tissue breakdown in shock.

ectopic i. An impulse arising in any part of the heart other than the sinoatrial node.

enteroceptive impulses. Afferent nerve impulses which derive their stimulation from internal organs.

exteroceptive impulses. Afferent nerve impulses which derive their stimulation from external sources.

heterogenetic i. One depending for its origin upon abnormal processes in a muscle.

homogenetic i. An impulse depending for its origin upon normal processes in a muscle.

involuntary i. One not activated by the will of the person, as the cardiac impulse.

morbid i. A sudden, almost uncontrollable desire to do an unlawful act.

nerve i. A transient physicochemical change in the membrane of a nerve fiber which sweeps rapidly along the fiber to its termination, where it causes excitation of other nerves, muscle, or gland cells, depending on the connections and functions of the nerve.

voluntary i. One induced by will power.

im-pul'sion [L. *impulsio*, a pushing against, from *impellere*]. The act of driving or urging onward, either mentally or physically.

im-pu"ta-bil'i-ty [L. *imputare*, to bring into the reckoning]. In legal medicine, that degree of mental soundness which makes one responsible for his own acts.

I.M.S. Indian Medical Service (British India).

Imvic. A mnemonic designating four reactions (Indole, Methyl red, Voges-Proskauer, Citrate). *Escherichia coli* forms are indole and methyl red positive. They do not produce acetylmethylcarbinol and do not attack sodium citrate. Organisms classified as *Aerobacter aerogenes* are indole and methyl red negative, produce acetylmethylcarbinol, and attack sodium citrate. A symbol for *E. coli* becomes then $++--$ while the symbol for *Aerobacter aerogenes* is $--++$.

In Chemical symbol for indium.

in- [L. *in*, in]. A prefix signifying *into, within, in, toward, on*.

in- [L. *in-*, not]. A prefix denoting negation; *not, non-, un-*.

in-. See ino-.

-in [L. *-ina*]. 1. In *chemistry*, a termination applied to neutral nitrogenous substances, as proteins and bitter principles; an ester, as palmitin; the names of glycosides and neutral principles. Also see -ine. 2. A suffix to indicate an antigen, prefixed by the generic name of the organism from which the antigen is derived, as tuberculin, coccidioidin.

in"a-cid'i-ty [L. *in-*, not; *acidus*, sour]. Lack of acidity; applied to deficiency of hydrochloric acid in the gastric juice.

in-ac'ti-vate [*in-*; L. *activus*, active]. To render inactive; usually applied to fresh serum, heated at 56° C. for 30 minutes to destroy its complement.

Inada, Ryokichi [Japanese bacteriologist and physician, 1874–1950]. With R. Hoki, Y. Ido, H. Ito, and R. Kaneko, discovered *Leptospira icterohaemorrhagiae*, the causative agent of spirochetal jaundice, and demonstrated its presence in apparently healthy rats.

in-ad'e-qua-cy [L. *in-*, not; *adaequare*, to make equal to]. Insufficiency of function or capacity.

renal i. The condition in which the amount of urinary solids, and often the quantity of urine itself, is considerably diminished.

in-al"i-men'tal [*in-*; L. *alimentum*, nourishment]. Not nourishing; not suitable for food.

in-an'i-mate [*in-*; L. *animatus*, animate]. Not animate; dead; without life.

in"a-ni'tion (in"a-nish'un) [L. *inanire*, to empty]. A pathologic state of the body due to the lack of any foodstuff (including water) which is essential to the living organism.

in-ap"pe-tence [L. *in-*, not; *appetere*, to strive after]. Loss of appetite or desire.

in"ar-tic'u-late [*in-*; L. *articulare*, to divide into joints]. 1. Not jointed or articulated. 2. Not capable of arrangement into syllables, or of being understood, as certain vocal sounds.

in ar-tic'u-lo mor'tis [L.]. At the moment of death; in the act of dying.

in"as-sim'i-la-ble [*in-*; L. *assimilare*, to make like]. Incapable of being assimilated.

in'born" [L. *in*, in; ME. *boren*]. A constitutional characteristic which is inherited or implanted during intrauterine life; innate; congenital.

in'breed"ing [*in*; ME. *breden*]. Any system of mating which gives a smaller number of ancestors than the maximum possible. The closest inbreeding is self-fertilization, as in plants, or brother-by-sister mating in animals.

in'ca bone. See incarial bone.

in"ca-nes'cent [L. *incanus*, hoary]. Hoary white.

in-car"cer-a'tion [L. *in*, in; *carcer*, prison]. The abnormal imprisonment of a part, as in some forms of hernia. —**incar'cerated**, *adj.*

in-ca'ri-al bone. The interparietal bone as an anomaly in which the superior portion of the squama occipitalis is separated from the rest by a suture, or sutures; so-called because common in the ancient Incas. Also called *inca bone*.

in-car'nant, in-car'na-tive [L. *incarnare*, to make flesh]. Flesh-forming; promoting granulation.

in-car'nant, in-car'na-tive. An agent which produces flesh or promotes granulation. —**incarna'tion**, *n.*; **incarn'**, *v.*

in'cest [L. *incestus*, unchaste]. Sexual intercourse between persons of such close relationship that their marriage is prohibited by law.

inch [AS. *ince*, from L. *uncia*, twelfth part]. The twelfth part of a foot; 2.54 cm.

in'ci-dence [L. *incidere*, to fall upon]. 1. The act or manner of falling upon; the way in which one body strikes another. 2. The amount or extent of occurrence, as of a disease.

angle of i. In optics, the angle at which a ray of light strikes a reflecting or refracting surface.

i. rate. The number of cases of a disease appearing per unit of population within a defined time interval.

line of i. The path of a ray or a projectile.

point of i. The point upon which ray or projectile strikes reflecting or refracting surface.
racial i. Incidence rate according to race.
in ci dent [*incidere*]. Falling upon.
in cin er a'tion [L. *in*, in; *cinis*, ashes]. The process of heating organic substances until all organic matter is driven off and only the ash remains cremation.
in cip'i ent [L. *incipere*, to begin] Initial, commencing, as incipient tuberculosis. —**incipience, incipiency** *n.*
in ci'sal (in sigh sul) [L. *incisum*, from *incidere*, t incise]. Cutting used of the cutting edge of incisor and canine teeth.
in cised' (in-sized') [*incidere*]. Cut made by cutting.
in ci'sion (in sizh'un) [L. *incisio* from *incidere*]. 1 A cut or wound of the body tissue. It is named according to the location, as abdominal incision the organ to be operated on, as ppendiceal the shape, as gridiron; the direction, as vertical, oblique; or frequently after the surgeon who first used it, as McBurney Cushing. 2 The act of cutting
buttonhole i. A small, straight cut made into an organ or cavity
crucial i Two cuts at right angles, made deep into the tissues, usually to insure free drainage
exploratory i. One made for the purpose of diagnosis.
muscle-splitting i. One i which the muscles are split in the direction of their fibers in order to secure better line of closure, the M Burney incision.
paramedian i That made to one side of the median line.
rectus i One made through the rectus muscle or through its sheath.
in ci'sive [*incidere*]. 1 Cutting. 2. Pertaining t the incisor teeth.
in ci'sive. The intermaxillary bone.
in ci si'vus la'bi i in"fer i-or'is. A portio of the orbicularis oris muscle extending from the vicinity of the base of the lower canine tooth to the corner of the mouth.
i -ci-si'vus la'bi i su"per i-or'is. A portion f the orbicularis oris muscle extending from the vicinity of the base of the upper canine tooth to the corner of the mouth.
in ci'sor [*incidere*] A cutting tooth; one of the four front teeth of either j w —**inci'sor** *adj*
deciduous i. One of the eight incisors of the temporary (milk) dentition Abbreviated, i
permanent i. One of the eight teeth which replace the deciduous incisors in the permanent (adult) dentition. Abbreviated, I
in"ci su'ra (in sigh-soo ruh, in"s) Incisure.
i i sur'se he'li cis. A vestigial band of muscle occasionally associated with the incisura of the helix of the external ear
i -ci'sure (in-sigh shur in sizh ur) [L. *incisura*, from *incidere*]. A slit or notch Also see *notch*.
angular i. The transient notch in th lesser curvature of the stomach, formed during peristalsis ear the gastric angle. Syn., *angular notch*.
cardiac i. See cardiac *notch*.
i. of Schmidt-Lantermann. One of the oblique partitions interrupting the myelin sheaths of each segment of nerve fiber also called *cleft* of Schmidt-Lantermann.
i. of the acetabul m. See acetabular *notch*.
i. of the cerebell m. One of the notches, anterior or posterior separating the cerebellar hemispheres.
i. of the gallbladder The cystic fossa
i. of the t ntorium. A deep notch in the tentorium of the cerebellum for the midbrain
interaryt noid i. A small vertical notch between the corniculate cartilages and the peces of the arytenoid cartilages of the two sides.
intertragic i. The notch between the tragus and antitragus
pancreatic i. The pancreatic notch.
parietal i. Parietal notch.
radiologic i Any indentation seen in an opaque meal radiograph of the stomach.
temporal i. A small fissure separating the uncus from the apex of the temporal lobe
thyroid i The thyroid notch.
tympanic i. See tympani *notch*.
umbilical i. The umbilical notch.
in cli na tion [L. *inclinatio* leaning]. 1 A propensity leaning. 2. The deviation of the long axis of tooth from the vertical.
i. of the pelvis. In the erect position the angle which the plan of the pelvic inlet makes with th horizontal plane.
i. of uterus. Obliquity f the uterus
in cli nom ter [L. *inclinare*, to incline G *metron*, measure]. A device for determining the diameter of the eye from the horizontal and vertical lines.
in"co g'u la ble [L. *in-* not; *coagulare*, to cause fluid to curdle]. Incapable of coagulation or curdling
in co her'ence [*in-*, L. *cohaerere*, to stick together] The quality of being incoherent bsence of connection of ideas or of language incongruity or inconsequence of diction.
in co her'ent [*in-*; *cohaerere*]. Disconnected, illogical, inconsistent.
in com bus'ti ble [*in-*; L. *combustus*, from *comburere*, to burn up] Incapable of being burned.
in com pat'i ble [*in-* L. *compati*, to suffer with one]. Incapable of being used or put together because of resulting chemical change or of antagonistic qualities, as two drugs or two types of blood. —**incompatibil'ity** *n.*
in"com pen sa tion [*in-* L. *compensatio*, from *compensare*, to weigh several things with one another]. Lack of compensation.
in com pe tence [L. *incompetens*, insufficient]. 1 Insufficiency inadequacy to perform the natural functions. 2. *I legal medicine*, incapacity; want of legal fitness, as the incompetence of drunken man to drive car —**incompetent**, *adj*
valvular i. The state or condition of failure of heart valve to prevent regurgitation of blood; it is due to weakness or dilatation of the valve ring without the valve itself being deformed.
in con gru ence. Incongruity
in con-gru'i ty [L. *incongruus*, unsuitable]. Absence of agreement, correspondence, or needful harmony
retinal i Lack of correspondence in the situation of the percipient elements of the two retinas.
in con'ti nence [L. *incontinentia*, inability of retaining]. Inability to control the natural evacuations, as the feces or the urine specifically involuntary evacuation due to organic causes.
i. of pigment. Loss of melanin from the basal-cell layer of the epidermis due to injury resulting in an aggregation of melanin in the upper corium, both insid and outside melanophores, seen in chronic inflammatory dermatoses as incontinentia pigmenti, lichen planus, lupus erythematosus, and others.
stress i. Involuntary loss of urine on effort, sudden movement, or rapid change of posture.
in-con ti en'ti-a pig men'ti. Latin, literally incontinence of pigment: genodermatosis which is characterized by defective development of the skin and other organs of ectodermal origin, and by bone deformities. Inflammatory or bullous and

verrucous prodromes occur frequently before the final pigmented stage appears.

in co-or″di na tion [L. *in-*, not; *con*, together; *ordinare*, to regulate]. Inability to bring into common, harmonious movement or action, as inability to produce voluntary muscular movements in proper order or sequence.

in-cor″po-ra tion [L. *incorporare*, to make into body]. Th process of intimately mixing the particles of different bodies into practically homogeneous mass.

Incortin. A proprietary analgesic ointment in washable base.

in′cre-ment [L. *incrementum*, increase]. The amount of increase or growth in given period of time. —**incremen′tal**, *adj*

in′cre tin. That fraction of secretin which, upon oral or intravenous administration, produces hypoglycemia and does not stimulate pancreatic secretion; obtained by treatment of secretin by pepsin. Also see *excretin*.

in-cre tion [L. *in*, in E. *secretion*, from L. *secernere*, to separate]. An internal secretion. —**in′cretory** *adj*

in″crus-ta tion [L. *incrustare*, to cover with coat]. The formation of crust or hard coating, as from an exudate scab, scale.

in″cu ba tion [L. *incubatus* from *incubare* to lie on, to hatch]. 1. The act or process of hatching or developing, as eggs or bacteria. 2. The phase of an infectious disease from the time of infection to the appearance of the first symptoms. 3. The process of culturing bacteria for qualitative or quantitative growth studies, as in microbiologic assays. 4. The process of maintaining mixtures of substances in suspension or sol tion at definite temperatures for varying periods of time for the study of enzyme action or other chemical reactions

in cu-ba″tor [L., from *incubare*]. 1 A small chamber with controlled temperature and humidity for the care of prematurely born infants. 2. A laboratory cabinet with controlled temperatur for the cultivation of bacteria or for facilitating biologic tests. 3. A device for the artificial hatching of eggs.

in cu bus [L.] 1 Nightmare. *Obs.* 2. A person or thing that oppresses like nightmare. 3. A demon, said to have sexual intercourse with sleeping men or women, or to nter their bodies and thus direct and influence their behavior *Obs.*

in″cu dec′to-my [L. *incus*, anvil G *ektomē*, excision]. Surgical removal of the incus.

in cu do-mal″le al [incus; L. *malleus*, hammer] Relating to the incus and the malleus, as the ligaments joining these two ossicles.

in″cu do-sta pe di al [incus, LL. *stapes*, stirrup] Relating to the incus and the stapes, as the ligaments joining these two ossicles.

in-cur′a ble [L. *incurabilis*, without remedy]. Not curable.

in-cur′able. A person suffering from an incurable disease.

in′cus [L.]. The middle one of the chain of ossicles in the middle ear so termed from its resemblance to an anvil See Plate 20 See Table of Bones in the Appendix. —**incudal** *adj*

in-cy″clo pho ri [G *en*, in *kyklos*, circle *phoros*, bearing]. A latent inward tilting of the upper pole of the eye See cyclophoria.

in-cy″clo-tro pi [*en*, *kyklos*, G. *trepein*, to turn]. A condition in which the vertical median superior pole of the eye is constantly turned inward.

in d. I die, daily

in da ga tion [L. *indagare*, t trace out]. 1. Close investigation. 2. Digital examination.

indalone. Trade-mark for *butopyronoxyl*.

in da-mines. A highly pigmented, usually blue or green, N-phenyl derivative of quinonediimine, obtained by oxidation of p-diamine with an aromatic monoamine or phenol or condensation of p-nitroso-derivatives of tertiary amines with an amine in acid solution.

in de cent [L. *indecens*, unseemly]. Not decent; obscene

in″de-ci′sion [L. *in-* not *decisio*, decision]. Morbid irresolution; want of firmness or of will; abulia. A symptom of early melancholia.

in″den ta tion [L. *in*, in; *dens*, tooth]. 1 A notch, dent, or depression. 2. A condition of being notched or serrated.

i. of the tongue. The notching of the borders of the tongue made by the teeth; seen after death.

in d pend nt cu ta n u gly″ his tech′i a (glye ko his-teek se-uh) Rise in the skin sugar content alone without corresponding increase in the blood sugar

in′dex (pl. *indexes*, *indices*) [L. pointer]. 1. The forefinger 2. The ratio or the formula expressing the ratio, of one dimension of thing to another dimension. 3. *I* *craniometry* the ratio of one dimension of the skull to another dimension, usually the length, which is taken as the standard and is represented by 100. The formula is

$$i = \frac{\text{breadth} \times 100}{\text{length}}$$

alpha i. *I* *electroencephalography*, the percentage of time during which the record shows alph rhythm

altitudinal i. See length-height *i.*

alveolar i. See gnathic *i.*

anesthetic i. On body-weight basis, the volume of anesthetic agent required to produce respiratory arrest divided by the volume required to produce surgical anesthesia.

Arneth i. See Joseph *Arneth*

atherogenic i. The ratio of the relationship between two major lipoprotein groups, Sf0–12 and Sf12–400 claimed to be measure of coronary atherosclerosis.

Bazett i. Formula for correction for the rate of the heartbeat in measuring the Q-T interval in the electrocardiogram; $K = \frac{\text{Q-T interval}}{\sqrt{\text{cycle length}}}$, normal for K being 0.36–0.42.

cardiac i. Volume per minute of cardiac output per square meter of body surface area. Normal verage 2.2 liters.

cephalic i. The ratio of the greatest width of the head, taken wherever it may be found in horizontal plane perpendicular to the sagittal plane, × 100, to the greatest length, taken in the sagittal plane between glabella and opisthocranion. Its values are lassified as:

dolichocephalic	x 75 9
mesocephalic	76.0–80.9
brachycephalic	81.0–85 4
hyperbrachycephalic	85 5–x

chemotherapeutic i. The relationship existing between the toxicity of compound for the body and the toxicity for parasites. Kolmer represents it as follows:

$$C.I. = \frac{\text{maximal tolerated dose per kg. body wt.}}{\text{minimal curative dose per kg body wt.}}$$

cnemic i. The ratio of the mediolateral (transverse) diameter of the diaphysis of the tibia (distance between the medial margin and the interosseous crest × 100) to the dorsoventral (sagittal) diameter (distance between the crista anterior and the facies posterior) both diameters

taken at the level of the nutrient foramen. Values of the index are classified as

platycnemic	x–64.9
mesocnemic	65.0–69.9
eurycnemic	70.0–

color I. The amount of hemoglobin per cell relative to normal, obtained by the following formula

$$\text{C.I.} = \frac{\text{per cent normal hemoglobin concentration}}{\text{per cent normal erythrocyte count}}$$

Different workers use different normal values in this formula.

Cornell Medical Index. A medical history form, which can be checked by clerks, designed to save the physician time useful for large-volume work.

cranial I. The ratio of the greatest width of the cranium, taken wherever it may be found on the parietal bones or on the squama temporalis in horizontal plane perpendicular to the sagittal plane, × 100, to the greatest length, taken in the sagittal plane between glabella and opisthocranion. Values of the index are classified as

ultradolichocranial	x–64.9
hyperdolichocranial	65.0–69.9
dolichocranial	70.0–74.9
mesocranial	75.0–79.9
brachycranial	80.0–84.9
hyperbrachycranial	85.0–89.9
ultrabrachycranial	90.0–

creatine I. Creatine tolerance the ability of the body to retain ingested creatine, as measured under standard conditions. The percentage retained is low in hyperthyroidism and high in hypothyroidism and so may be used as an index of the level of thyroid function or of potency of administered thyroid substance.

dyspnea I. The ratio of the breathing response to mild exercise, walking ventilation (WV) in L/min. to maximum breathing capacity (MBC) in C/min. stress/capacity ratio.

facial I. The ratio of the height × 100 to the breadth of the facial part of the skull

gnathic I. *In craniometry*, the ratio of the facial length (i.e., the distance between basion and prosthion) × 100, to the length of the cranial base (i.e., the distance between nasion and basion) Values of the index are classified as

orthognathic	x–97.9
mesognathic	98.0–102.9
prognathic	103.0–x

height-breadth I. of the nose. *In somatometry*, the ratio of the width of the nose, taken between the two alaria, or the points of farthest lateral projection of the wings of the nose, to the height *of the nose, taken between nasion and subnasale*, × 100. Its values are classified as.

hyperleptorrhine	–54.9
leptorrhine	55.0–69.9
mesorrhine	70.0–84.9
chamaerrhine	85.0–99.9
hyperchamaerrhine	100.0–x

hemolytic I. The ratio of urobilinogen excretion to total circulating hemoglobin The normal ratio is 11 21 mg per 100 Gm Hb

hieric I. The ratio of the width of the sacrum, taken between the tips of the greatest anterolateral extension of the facies auriculares, to the length, taken in the sagittal plane from the sacral promontory to the ventral edge of the apex, × 100. Values of the index are classified as:

dolichohieric (narrow sacrum)	–99.9
subplatyhieric (moderately broad)	100.0–105.9
platyhieric (broad sacrum)	106.0–x

humeroradial I. The ratio of

$$\frac{\text{length of humerus} \times 100}{\text{length of radius}}$$

hyperglycemia I.

$$\frac{\text{blood glucose after 2 hours} - \text{fasting level}}{\text{maximum level} - \text{fasting level}} \times 100.$$

The index is approximately zero for normal individuals. An index for evaluating the sugar tolerance level.

I. of Flower (a) The nasomalar index, which is

$$\frac{\text{nasomalar width} \times 100}{\text{biorbital breadth}}$$

(b) The dental index, which is

$$\frac{\text{dental length} \times 100}{\text{craniobasal length}}$$

I. of relative refraction. The ratio of the refractive index of a substance to the index of its surrounding medium.

inhibition I. The amount of an antimetabolite which is needed to overcome the biological effect of unit weight of metabolite the index is measure of the antagonism between metabolite and antimetabolite.

iodoacetate I. The ratio of the smallest amount of iodoacetate that, under constant conditions, prevents heat coagulation of serum to the total protein concentration of the serum. A low index occurs after major surgery in some malignancies, and sometimes in other pathological states. Also called *Huggins test, Huggins-Miller-Jensen test.*

ischium-pubis I. The ratio $\frac{\text{length of pubis} \times 100}{\text{length of ischium}}$ by which the sex of an adult pelvis may be determined in most cases, the index being greater than 90 in the female, and less than 90 in the male.

length-height I. The ratio of the basion-bregma height of the skull to its greatest length × 100 also called *altitudinal i., height i.*

leukopenic I. An index depending on the capacity of certain substances to reduce the leukocytes after ingestion. The total count is made before and after taking the specific substance.

Meulengracht icteric I. See Meulengracht *method.*

mitotic I The number of dividing cells per thousand cells used in the estimation of the rate of growth of tissue

nasal I. *In craniometry* the ratio of the greatest width of the apertura piriformis wherever it is found, × 100, to the height of the nasal skeleton, which is the distance between nasion and nasospinale. Its values are classified as

leptorrhine	–46.9
mesorrhine	47.0–50.9
chamaerrhine	51.0–57.9
hyperchamaerrhine	58.0–

opsonic I. The ratio of the phagocytic index of patient serum to that of pooled normal serum.

optical I. A constant applied to objectives for purposes of comparison, taking into account the focal length or magnifying power of the lens and also the numerical aperture.

orbital I. *In craniometry*, the ratio of the orbital height, taken at right angles to the orbital width between the upper and lower orbital margins, × 100, to the orbital width, taken between

maxillofrontale and lateral margin of the orbit in such manner that the line of the orbital width bisects the plane of the orbital entrance. Values of the index are classified as

chamaeconch	x–75.9
mesoconch	76.0–84.9
hypsiconch	85.0–x

orbitonasal i. In somatometry, the ratio of the orbitonasal width, taken with a tape measure from the lateral margins of the orbits at the level of the lateral angles of the palpebral fissures, the tape measure passing over the lowest portion of the root of the nose, × 100, to the external orbital width, taken directly with a sliding or spreading caliper from the stated points. Values of the index are classified as

platyopic	x–109.9
mesopic	110.0–112.9
prosopic	113.0–x

oscillometric i. Ratio of the oscillometric reading at the ankle to that at the wrist. Normal 0.75.

palatomaxillary i. One used to denote the various forms of the dental arch and palate. It is expressed by the formula

$$\frac{\text{palatomaxillary width} \times 100}{\text{palatomaxillary length}}$$

when the width is measured between the outer borders of the alveolar arch just above the middle of the second molar tooth, and the length measured from the alveolar point to the middle of a transverse line touching the posterior borders of the two maxillas.

parasite i. The percentage of individuals in a community showing parasites in the blood.

pelvic i. The relation of the anteroposterior to the transverse diameter of the pelvis.

pelvic-inlet i. That ratio of the sagittal diameter or conjugata vera of the pelvic inlet, taken between the points where the sagittal plane cuts the sacral promontory and the posterior edge of the superior surface of the *symphysis pubis*, to the transverse diameter taken between the points on the arcuate lines that lie farthest lateral from the midline, at right angles to the conjugata vera. When multiplied by 100, values of the index are classified as:

platypellic	x–89.9
mesatipellic	90.0–94.9
dolichopellic	95.0–x

phagocytic i. A figure characteristic for a serum, and denoting the average number of bacteria found per leukocyte after a mixture of the serum, a bacterial culture, and washed leukocytes have been incubated.

platymeric i. The ratio of the anteroposterior diameter of the proximal diaphysis of the femur × 100 to the transverse diameter taken parallel to the plane of the axis of the femoral neck at the level of the greatest width, from 2–5 cm. distal from the base of the trochanter minor. Diameters must be taken at right angles to each other. Values of the index are classified as

hyperplatymeric	x–74.9
platymeric	75.0–84.9
eurymeric	85.0–99.9
stenomeric	100.0–x

Stenomeric femurs are regarded as pathologic.

refractive i. The refractive power of any substance as compared with air. It is the quotient of the angle of incidence divided by the angle of refraction of a ray passing through a substance. Symbol, n.

sacral i. The sacral breadth multiplied by 100, and divided by the sacral length.

saturation i. The amount of hemoglobin per unit volume of red cells relative to the normal. The normal is approximately 0.95.

Schilling i. See Victor *Schilling*.

Schneider's i. A test of general physical and circulatory efficiency consisting of pulse and blood pressure observations under standard conditions of rest and exercise.

social adequacy i. The value assigned to one's hearing as evaluated by a new method suggested by J. H. Davis, S. R. Silverman, and T. E. Walsh.

stephano-zygomatic i. The ratio of the distance between the stephanion points × 100 to that between the zygomatic processes.

sweat chloride, sweating-rate i. A quotient which expresses sweat chloride concentration values relative to the rate of sweating; it may reflect the activity of certain adrenocortical hormones.

therapeutic i. The ratio of the toxicity (usually measured as the lethal dose) to the therapeutic dose.

thoracic i. The ratio of the anteroposterior diameter to the transverse, expressed in percentage.

transverse frontoparietal i. In craniometry, the ratio of the minimum frontal diameter, taken between the fronto-temporalia, × 100, to the greatest width of the cranium, taken wherever found on the parietal bones or on the squamous parts of the temporal bones, provided that the end-points of the line of greatest width lie in the same horizontal and frontal planes. Values of the index are classified as

ultramicrosemic	x–54.9
hypermicrosemic	55.0–59.9
microsemic	60.0–64.9
mesosemic	65.0–69.9
megasemic	70.0–74.9
hypermegasemic	75.0–79.9
ultrahypermegasemic	80.0–x

vertical i. The ratio of the vertical diameter of the skull to the maximum anteroposterior diameter multiplied by 100.

volume i. The relation of the volume of the red corpuscles to their number.

xanthoproteic i. An approximate measure of the amount of phenolic substances present in blood obtained by nitrating a protein-free serum filtrate, alkalizing with a strong base, and comparing the yellow color produced with an appropriate standard.

in'di an gum. Any of several different gums, including sterculia gum and ghatti gum.

in'di·can. 1. Indoxyl glucoside, $C_{14}H_{17}NO_6.3H_2O$, occurring in indigo plants; upon hydrolysis and subsequent oxidation, it is converted to indigotin, the chief constituent of indigo. 2. Indoxyl potassium sulfate, $C_8H_6NSO_4K$, a substance occurring in urine and formed from indole.

in'di·cant [L. *indicare*, to indicate]. Serving as an index or as an indication.

in'di·cant. A fact or symptom that indicates a certain treatment.

in"di·can·u'ri a [L. *indicum*, indigo; G. *ouron*, urine]. The presence of an excess of indican in the urine.

in"di·ca'tion [L. *indicare*, to indicate]. Any symptom, cause, or occurrence in a disease which points out its course of treatment.

in'di·ca"tor [L., from *indicare*]. In chemistry, a substance used to show by a color or other change

when reaction has taken place or a chemical affinity has been satisfied.

Clark and Lubs i. dicators. A sulfonephthalein series of indicators which are especially brilliant and reliable in hydrogen-ion concentration determinations.

radioactive phosphorus i. Indicator for the rate of formation of phospholipids.

in di-ces. Plural of index.

in di-co-phose (in di ko fose) [L. *indicum*, indigo G. *phōs*, light]. A blue-colored phose.

in di-el'la. A genus of f ngi of the class Fungi Imperfecti. It is one of several genera whose species cause mycetoma.

in di'es [L.]. Daily. Abbreviated, in d.

in-dif'fer ent [L. *indifferens*, indifferent]. Neutral; undifferentiated or nonspecialized, as indifferent cells. —**indifferentism** n.

in dig'e-nous (in-did) nus) [L. *indigenus*, native]. Native originating or belonging to certain locality or country

in"di ges'tion [L. *in-* not; *digestio*, from *digerere*, to separate, digest]. Lack of digestion imperfect digestion.

chronic intestinal i. See celiac *disease*.

early postprandial i. That immediately following eating, caused by conscious increase of gastric motility rather than the normal unconscious gastric movements.

late postprandial i. That occurring one to two hours after eating.

in-dig"i ta'tion (in did"i-tay'shun) [L. *indigitare*, to call upon, from *indiges*, native deity confused with *digitus*, finger]. Invagination.

in di glu'cin, $C_6H_{10}O$. A yellow syrup, one of the decomposition products of indican.

in'di go [L. *indicum*, indigo]. A blue pigment formed by the hydrolysis and oxidation of the indican contained in various species of *Indigofera* (*Indigofera tinctoria*, *I. anil*, *I. argentea*) the chief constituent of indigo is indigotin but there are also present varying amounts of the dyes indigo brown, indigo red, indigo yellow etc.

i. blue. $C_{16}H_{10}N_2O$ indigotin.

i. carmine (C.C.) A blue dye, sodium or potassium indigotindisulfonate, very sensitive t oxidizing agents; used in urologi work and as test for kidney function as coloring for foods, drugs, and cosmetics.

i. white. Indigogen; substance btained by the reduction of indigo blue.

in dig'o-tin, in"di go'tin. $C_{16}H_{10}N_2O$. The chief constituent of indigo. Also see *indican*.

in di go-u'ri [ndicum, G *ouron*, urine]. The presence of indigo in the urine; due to decomposition of indican

in"di rect' [L. *in-* not *directus*, straight]. Not direct not in direct line acting through an intervening medium.

in di um [L. *indicum*, indigo]. In = 114.76 A rare metal. It is very soft, resembles lead in its properties, and is used in many alloys.

in"dol ac" tu'ri (in dol ass tew ree-uh, in dohl) [*indicum* E phenol, L *acetum*, vinegar G. *ouron*, urine] Presence of indoleacetic acid in the urine found in intestinal disturbances.

in dol C H N 2 3 benzopyrol substance formed from tryptophan during intestinal putrefaction and in certain bacterial cultures. It is responsible, in part, for the odor f feces In intestinal bstruction t is converted i to indican, which is eliminated in the urine

i dole-a-ce'ti ac'id. Indole-3-acetic acid, bacterial decomposition product of tryptophan, found in the urine and feces It possesses pronounced growth-promoting activity for leaves.

in do lent [L. *in-*, not *dolens*, from *dolere*, to feel pai]. Sluggish usually applied to slowness in healing, as an indolent ulcer or to slow-growing nonpainful tumors.

in dole-pro pi on'ic ac'id. The acid produced when tryptophan loses it NH group.

in dole-py ru'vic ac'id. A product of tryptophan upon deamination of the α-amino group. Believed to be the first oxidative step in the breaking down of tryptophan.

in dol-og'e nous (in do-lodj'i-nus) Producing indole.

in"do lu'ri-a [L. *indicum*, indigo E. phenol; G. *ouron*, urine]. The excretion of indole in the urine.

in"do phe nol (in do-fee nole, -nol, -nawl) Any of series of dyes derived from quinone imine.

in do phe nol x'i-dase. An xidizing enzyme, present in animal and plant tissues, which catalyzes formation of indophenol blue from dimethyl-p-phenylenediamine and α-naphthol when these are injected into tissue It is identical with cytochrome oxidase.

in dox yl. C_8H_7ON A yellow crystalline substance in plants and animals. An oxidation product of indole and skatole It is found in the urine among the products of intestinal putrefaction.

i. glucoside. See *indican*, 1

i. potassium sulfate. Indican. $C_8H_6NSO_4K$. The potassium salt of indoxyl, conjugated with sulfuric acid occurs in urine. Sometimes called *indoxyl sulfate*.

in-dox"yl glu"cu ron'i ac'id. A product formed by the detoxification f indole. It is combination of indoxyl and glucuronic cid.

in dox"yl-og'e-nous (in-dook"si-lodj'i-nus) [L. *indicum*, indigo G. *oxys*, sharp; *genesthai*, from *gignesthai*, to be produced]. Producing indoxyl

in-dox"yl sul fu ric ac'id The substance resulting from conjugation of indoxyl, formed by oxidation of indole in the liver with sulfuric acid, and eliminated in the urine as the potassium salt (Indican)

in dox"yl u ri [*indicum*, oxys; G. *ouron*, urine]. The presence of indoxyl in the urine.

in duc tion [L *inductio* from *inducere* to lead into]. 1. The act of bringing on or causing. 2. The bringing about of an electric or magnetic stat in body by the proximity (ithout actual contact) of an electrified or magnetized body 3 The period from first administration of the anesthetic until consciousness is lost and the patient is stabilized in the desired surgical plane of anesthesia. 4. *I embryology*, the specific morphogenetic effect brought bout by the action of one tissue upon another cting through organizers or evocators.

successive i Facilitation of one reflex by its antagonistic reflex in rhythmic actions, as in stepping reflexes.

in-duc"to-py rex'i (in-duck to-pye reck see uh) [*inducere*; G *pyrexis*, to be feverish]. Artificial fever produced by electromagnetic induction; form of electrotherapy

in duc to ri-um [*inducere*]. *I physiology*, an instrument for the generation and administration of induction shocks; it consists of primary and secondary coil mounted on stand.

in duc t th my (i -d k to-thur mee in duck to thur mee) [*inducere*; G. *thermē*, heat]. The pplication of energy to tissue through the agency of high-frequency magnetic field It is produced by means of heavily insulated conductor wound into coil of ppropriat configuration and umber of turns through which high-frequency current is conducted from oscillator It is usually pplied to local parts but may be used to produce general artificial fever

in du lin. One of group of dyes similar to the *safranines, highly phenylated amino derivatives.* The only important one in medicine is nigrosine. Also called *i. black.*

in"du lin' phil, in"du lin'o phile. Staining with indulin or having an affinity for indulin. —**induli-nophil'ic,** *adj.*

in"du ra tion [L. *indurare,* to harden]. 1. The hardening of tissue or part, resulting from hyperemia, inflammation, or infiltration by neoplasm. 2. A hardened area of tissue. —**in durated, in'durative,** *adj.*

black i. Fibrosis, especially of the lung, due to anthracosis.

brown i. Chronic, passive hyperemia of the lung, usually the result of left ventricular failure or mitral stenosis, with resultant fibrosis and pigmentation by hemosiderin. Histologically heart-failure cells are seen in the alveoli. Also called *cardiac lung.*

gray i. More or less diffuse fibrosis of the lung in chronic interstitial pneumonitis.

red i. Fibrosis of the lung associated with deposit of red oxide of iron; marked passive hyperemia of the lung.

in-du'si-um (in-dew'zee-um) [L., an undergarment, from *induere,* to put on]. 1. A membranous covering. 2. A marginal layer of gray matter on the corpus callosum. Also called *i. griseum.*

-ine (-een, -in) [cf. L. *-inus*]. *In chemistry,* termination indicating *basic nitrogenous compound,* as morphine, purine; *halogen,* as bromine. Also see *-in.*

in-e'bri ant [L. *inebriare,* to make drunk]. Intoxicant; causing inebriation.

in-e'bri ant. An agent that causes inebriation.

in-e"bri a'tion [*inebriare*]. Intoxication.

in"e-bri'e-ty [*inebriare*]. Habitual drunkenness.

in-ef'fi-ca-cy [L. *inefficax,* ineffectual]. Failure to produce the desired effect.

in"e-nu cle-a ble [L. *in-* not; *enucleare,* to take out the kernels]. Not removable by enucleation.

in-er'ti a [L., inactivity]. 1. Dynamic opposition to acceleration, common to all forms of matter including electrons and quanta. 2. *Lack of activity,* said of the uterus when in labor the contractions have diminished or ceased entirely. Also called *uterine i.* —**inert',** *adj.*

in ex tre'mis [L.]. At the end, at the last; at the point of death.

in'fant [L. *infans,* without speech, young child]. 1. A child, usually up to two years. 2. A minor person under legal age according to common law 21, though some states of the United States do not follow this rule. —**infancy,** *n.*

in fan'ti-cide [*infans*; L. *caedere,* to kill]. 1. The murder of an infant. 2. The murderer of an infant.

in'fan-tile (in'fun tile, til) [L. *infantilis,* of infants]. Pertaining to infancy; like an infant in actions.

in fan'til is m [*infantile*]. 1. The persistence of infantile or childish traits and characteristics into adolescent and adult life; the condition is marked by mental, physical, and sexual underdevelopment and sometimes dwarfish stature. Also called *ateleiosis, Lorain syndrome.* 2. *In psychoanalysis,* the state of infancy prolonged into adult life.

angioplastic i. That caused by deficiency of the vascular system.

cachectic i. That due to chronic infection or toxemia.

celiac i. That following celiac disease. Also called *intestinal i.*

dysthyroidal i. Infantilism resulting from impaired thyroid activity.

hepatic i. That form of infantilism associated with liver cirrhosis.

Herter's i. See celiac disease.

idiopathic i. Infantilism of unknown origin.

intestinal i. See celiac disease.

lymphatic i. That form associated with lymphatism. Also called *Paltauf's nanism.*

myxedematous i. The underdevelopment seen in cretinism, characterized by an infantile face, prominent lips and tongue, distended abdomen, rudimentary genitalia, arrested mental and emotional development, and delayed or absent second dentition.

pancreatic i. Arrested development associated with defective functioning of the pancreas; also called Clarke-Hadfield syndrome.

partial i. Arrested development limited to single organ or part, or to special area or system.

pituitary i. Dwarfism resulting from lack of the growth-promoting and gonadotropic hormones of the pituitary gland.

regressive i. That which starts after the body has attained full growth. Also called *reversive i., tardy i.*

renal i. Arrested development resulting from deficiency of the urinary system.

sex i. Continuation of childish sex traits and development beyond puberty.

thyroid i. See *cretinism.*

toxemic i. Delayed development due to toxemia, especially of intestinal origin.

universal i. Generalized retarded physical development associated with absence of secondary sex characters.

in farct', in'farct [L. *infarcire,* to stuff into]. A region of necrosis of tissue due to complete interference with blood flow, usually the result of occlusion of the supplying artery or, rarely, to occlusion of the draining vein. If the region has dual blood supply, hemorrhage without necrosis may result. In viscera, the infarct is generally of conical form, but in extremities it occupies the region supplied by the occluded artery (ischemic necrosis).

anemic i. See white i.

bland i. One free from infection.

cicatrized i. One in which the necrotic mass is replaced or encapsulated by fibrous tissue.

healed i. See cicatrized i.

hemorrhagic i. See red i.

infected i. One in which suppurative inflammation involves or surrounds the lesion, either because the embolus or thrombus causing the infarct contains pathogenic organisms, or because of infection implanted in the infarct, as in the lung.

marginal i. Zone of degeneration forming yellowish white fibrous ring, found at term about the edge of the placenta.

myocardial i. One in the heart muscle.

pulmonary i. One in the lung. It usually results from an embolus due to phlebothrombosis of the deep vessels of the leg or thrombosis in dilated right atrium.

recent i. One which shows no trace of cicatrization.

red i. One in which the necrotic focus is swollen, firm, and either bright or dark red, as the result of hemorrhage.

remote i. One in which shrinkage, or cicatrization, has begun or is advanced.

silent i. Myocardial infarct with no history of pain; pain is thought to be present but unnoticed because of other pathological conditions or high pain threshold.

systemic i. Any infarct other than one of the coronary or pulmonary circulation.

white i. One in which the hemorrhage is slight or the blood and blood pigments have been removed; that is, the infarct has become de

in·farc'tion [*infarcire*]. The process leading to the development of an infarct. Immediately following vascular occlusion, there is successive occurrence of hyperemia, cloudy swelling, fatty degeneration, and necrosis. Necrotic tissue stimulates mild inflammation, which results in the formation of cicatrix or capsule.

diaphragmatic myocardial i. Posterobasilar infarction. See myocardial *i.*

myocardial i. The process by which infarcts are produced in the cardiac muscle. These are usually found in the wall of the left ventricle and such terms as *posterobasila* *anterolateral*, *anterior* *anteroseptal*, *posterior* *posterolateral* all refer to the portion of the left ventricular wall involved.

in·fec'tion [L. *infectio*, infection]. 1 Implantation of an infective agent in the strict sense, the presence of single-called microorganisms (bacteria, rickettsias, protozoa) viruses, or fungi in or on the body of host it is incorrectly but frequently used also for the invasion of host by higher organisms, such as parasitic worms or insects (see *infestation*) 2. The communication of disease from one subject to another 3. Communication of disease from one part of the body t another (autoinfection) —**infectious, infective** *adj* **infect'** *v.*

air-borne i. The transfer of infection from one individual to another without direct contact between them by means of droplets of moisture containing the causative agent Also called *droplet i.*

atrium of i Portal of entry of the infective agent.

concurrent i. Simultaneous existence of two or more forms of infection also called *complex i.* *mixed i.*, *multiple i.*

consecutive i. See secondary *i.*

cross i A nonspecific term applied to any infection which patient develops during hospitalization for another disorder

focal i. One in which bacterial disease process is limited to definite area or focus, as in certain tissues, glands, or organs· not only may the local tissue be destroyed, but toxemia may result if the microorganism produces soluble toxin.

food i. See food *poisoning*

mixed i. See concurrent *i.*

multiple i. See concurrent *i.*

secondary i. Implantation of new infection upon one already in existence.

synergistic i. A concurrent infection wherein two infectious agents exert pathogenic effect of which either agent acting alone would be incapable thus, swine influenza virus, causing mild respiratory disease, in association with *Hemophilus influenzae suis* gives rise to highly fatal disease.

terminal i. An infection occurring late in the course of another disease, causing the death of the patient.

Vincent's i. See necrotizing ulcerative gingivitis

in"fe·cun'di·ty [L. *infecundus*, unfruitful]. Sterility· barrenness.

in·f ri·or [L lower]. Lower pplied to structures nearer the feet, as contrasted to superior nearer the head.

in·fe"ri·or'i·ty [*inferior*]. A state or condition of being lower inferior less adequate less well-developed or adapted; it may be organic or psychic.

feeling of i. *I* *psychology* morbid feeling of personal inadequacy; may result in timidity or submission, or because of overcompensation, in selfish aggression. Also called *i complex*

in"fer·til'i·ty [L. *infertilis* unfruitful]. I vol tary reduced reproductive ability: often incorrectly used synonymously with *sterility*.

in"fes·ta'tion [L. *infestatio* from *infestare*, to infest]. The state or condition of being infested. The term is used with reference to the presence of animal parasites in or on the human or animal body *I* *tropical medicine*, the presence of arthropod parasites (as insects, mites) on the body; also the presence of parasitic multicellular organisms such as roundworms, flatworms, and flukes, in or on the body of host. Confusion with the use of the term *infection* has resulted from the fact that an infesting organism (e.g., louse) may transmit an infection (g., typhus) —**in·fest'**

in·fib·u·la'tion [L. *infibulare*, to clasp or buckle together]. Act of clamping or fastening ring, clasp, or frame to the genital organs to prevent copulation.

in·fil'trate [L. *in*, in ML. *filtrum*, felt]. T pass into tissue spaces or cells, as fluids, cells, or other substances.

in'fil·trate. The material which has infiltrated.

corneal i. An opacity resulting from infiltration of fluids or cells or from scar tissue caused by such infiltration.

in"fil·tra'tion [*in*, *filtrum*]. 1 A process by which cells, fluid, or other substances pass into tissue spaces or into cells. The various substances may be natural to the part or cell, but in xcess or they may be foreign to the part or cell. 2. The material taking part in the process. 3. *I* *radiology*, the production in part or organ of change whereby radioluminescence is decreased.

amyloid i. Deposit in tissues of hyaline material, probably combination of protein and baxoses, with peculiar staining properties In the gross specimen, Lugol solution and dilute sulfuric acid give dark brown or black coloration; in microscopic preparations, red stain with metachromatic dyes such as aniline gentian violet, crystal violet, methyl green; also has special affinity for Congo red in tissue sections.

calcareous i. Deposit of salts of calcium in degenerate or necrotic tissues.

cellular i. Exudation of cells into tissues in the course of acute, subacute, or chronic inflammation, migration or invasion of cells of neoplasms.

fat i. Deposit of neutral fats in tissues or cells as the result of transport.

glycogen i. Deposit of glycogen in cells in excessive amounts or in abnormal situation.

mineral i. Deposit of various kinds of minerals and their salts.

pigmentary i. Deposit of endogenous or exogenous pigments in tissues.

round-cell i. A general term used to indicate an infiltration by such cells as lymphocytes, plasma cells, and macrophages, without specifying cell type.

serous i. An excess of fluid in tissue spaces. part of serous inflammation or of edema.

urinary i. Passage of urine int tissue spaces, as into tissues of the perineum following rupture of the urethra or the urinary bladder

waxy i. See amyloid *i.*

in·fin'i·ty *I* *optics*, distance so great that light rays from point source at that distance may be considered parallel.

in·firm' [L. *infirmus*, not strong, weak]. Weak or feeble.

in·fir'ma·ry [*infirmus*]. 1. A hospital; an institution where ill and infirm persons are maintained during the period of treatment. 2. *I* military medicine, medical treatment facility primarily intended to provide beds and treatment for patients from the local mil tary command or from th imme-

diate vicinity thereof, who are temporarily incapacitated for performance of duty because of relatively minor illness or injury with favorable prognosis for early return to duty.

in·fir'mi·ty [*infirmus*]. 1. Weakness; feebleness. 2. A disease producing feebleness.

in"flam·ma'tion [L. *inflammatio*, from *inflammare*, to set on fire]. The reaction of the tissues to injury. The essential process, regardless of the causative agent, is characterized clinically by local heat, swelling, redness, and pain; pathologically by primary vasoconstriction followed by vasodilatation, with slowing of the blood current, accumulation and emigration of leukocytes, exudation of fluid, and deposition of fibrin. Some authorities include under inflammation the process of repair, the production of new capillaries and fibroblasts, organization, and cicatrization. —**in·flam'ma·to·ry** *adj.* **in·flame'** *v.*

acute i. One in which the progress is rapid and the course is short.

allergic i. That which is excited by localized hyperactive response to an allergen to which the subject is hypersensitive. Also called *hyperergic i.*

alterative i. That in parenchymatous organs, such as the kidney, in which degeneration of parenchymal cells is accompanied by proliferation of cells of capillaries or of other origin, or by slight amount of exudation. Also called *parenchymatous i.*

bacterial i. That caused by bacterial infection.

breast inflammations. See under *mastitis*.

catarrhal i. One affecting mucous membrane usually accompanied by excessive production of mucus.

chemical i. That caused by chemical means.

chronic i. One characterized by slow progression and long course; progressive condition in contrast to an end stage of cicatrization.

croupous i. A fibrinous inflammation at, or below the level of the larynx.

diphtheritic i. A fibrinous exudate due to infection with *Corynebacterium diphtheriae*. Syn. *pseudomembranous i.*, *pseudomembranous mucositis*.

exudative i. That in which exudation is the conspicuous feature.

fibrinous i. One in which the exudate is composed largely of fibrin.

gangrenous i. Severe inflammation complicated by secondary infection with putrefactive bacteria.

hemorrhagic i. Necrotic inflammation in which thrombosis of the blood vessels causes hemorrhage. Syn., *hemorrhagic mucositis*.

interstitial i. One in which the interstitial tissues show slight or moderate exudation, principally by mononuclear cells, that has not proceeded to suppuration.

parenchymatous i. See alterative *i.*

productive i. One in which there is considerable multiplication of fibroblasts. Also called *plastic*.

pseudomembranous i. See diphtheritic *i.*

purulent i. One in which pus is formed. Also called *suppurative i.*

serous i. That in which the exudate is composed largely of serum.

subacute i. A form which has somewhat longer progress and course than acute inflammation, with moderate proliferation of fibroblasts.

subchronic i. Inflammation of somewhat more rapid progress and course than chronic inflammation.

suppurative i. See purulent *i.*

in·fla'tion [L. *inflatio*, from *inflare*, to blow up]. Distention with air.

in·flec'tion, in·flex'ion [L. *inflectere*, to bend]. 1. A bending inward. 2. Modification of the pitch of the voice in speaking.

in"flo·res'cence [L. *in-*, in; *florescere*, to begin to blossom]. The structure and position of the flowering parts of plants and their relation to each other.

in"flu·en'za [It., influence]. An epidemic disease sometimes becoming pandemic, characterized by catarrhal inflammation of the mucous membrane of the respiratory tract, accompanied by mucopurulent discharge, fever, pain in the muscles, and prostration. At times, symptoms are mainly referred to the nervous system. The cause is an influenza virus, the established immunological types being designated as A and B. Complications are common, pneumonia being the most frequent; pleurisy, otitis media, and neuritis also may appear.

abdominal i. That form which has abdominal symptoms, tympanites, diarrhea, pain, etc.

endemic i. That occurring during the winter season which is less severe than pandemic influenza.

equine i. An acute pantropic virus disease of horses which is characterized by inflammation of mucous membranes of the air passages and eyelids; frequently the tendons and subcutaneous tissues are inflamed as well.

swine i. A disease of swine caused by the associated effects of filtrable virus and the *Haemophilus suis*; characterized by inflammation of the upper respiratory tract.

in·fold' [L. *in*, in; AS. *fealdan*]. To enclose within folds, as in the plication of redundant stomach wall.

in"fract'ed. See *infarct*.

in'fra- [L., below, under]. A prefix signifying *below* or *beneath*, *inferior*, or *within*.

in"fra·car'di·ac [*infra*; G. *kardia*, heart]. Situated below or beneath the heart.

in"fra·cla·vic'u·lar [*infra*; L. *clavicula*, little key]. Below the collarbone.

in"fra·cla·vic·u·la'ris. A rare muscle extending from above the clavicular part of the pectoralis major to the fascia over the deltoid muscle.

in"fra·con'dyl·ism [*infra*; G. *kondylos*, knuckle]. Downward deviation of the mandibular condyles.

in"fra·cos·ta'lis. Old name for the subcostal muscle.

in·frac'tion [L. *in-*, not; *fractus*, breaking in pieces]. Incomplete fracture of bone.

in"fra·di"a·phrag·mat'ic [L. *infra*, below; G. *diaphragma*, partition]. Situated below the diaphragm.

in"fra·gle'noid [*infra*; G. *glenoeides*, like the socket of a joint]. Located below the glenoid cavity.

in"fra·glot'tic [*infra*; G. *glottis*, glottis]. Below the glottis.

in"fra·hy'oid [*infra*; G. *hyoeides*, shaped like the letter upsilon]. Situated below the hyoid bone.

in"fra·oc·clu'sion [*infra*; L. *occlusum*, from *occludere*, to close up]. Failure of one or more teeth to reach the plane of occlusion.

in"fra·or'bit·al [*infra*; L. *orbita*, track]. Beneath or below the floor of the orbit.

in"fra·pa·tel'lar [*infra*; L. *patella*, small pan]. Below the patella.

in"fra·phys"i·o·log'ic. Of or having less than normal function; hypofunctional; said of an organ or part.

in"fra·pro·te'in. See *metaprotein*.

in"fra·red' [*infra*; ME. *red*]. Beyond the red end of the spectrum. Pertaining to wavelengths of radiant energy longer than those of the red end of the visible spectrum and shorter than those of Hertzian waves.

in"fra·scap'u·lar [*infra*; L. *scapula*, shoulder blade]. Below the shoulder blade.

in"fra-spi·na'tus. A muscle arising from the infraspinous fossa of the scapula and inserted into the greater tubercle of the humerus.

in"fra·spi'nous [*infra*; L. *spina*, thorn]. Below the spine of the scapula.

in"fra-ster'nal [*infra*; G. *sternon*, chest]. Below the sternum.

in"fra·tem·po·ra'le (in"fruh·tem·po·rah'lee, -ray'lee) [*infra*; L. *tempus*, temple of the head]. A craniometric point on the infratemporal crest of the greater wing of the sphenoid bone; used in measuring the least cranial breadth.

in"fra·ten·to'ri·al [*infra*; L. *tentorium*, tent]. Below the tentorium cerebelli, as increase of infratentorial pressure in the cranium.

in"fra·troch'le·ar. Below a trochlea, as the infratrochlear nerve situated below the trochlea of the superior oblique muscle of the eye.

in·fri'tion [L. *infrictio*, a rubbing]. The rubbing of body surface with an ointment or liniment.

Infron pediatric. Trade-mark for capsules containing 100,000 U.S.P. units of activated ergosterol; used in therapy of rickets.

in"fun·dib'u·li·form" (in"fun·dib'yoo·li·form, in·fun·dib'yoo·li·form") [L. *infundibulum*, funnel; *forma*, form]. Funnel-shaped.

in"fun·dib·u·lo'ma. An uncommon tumor of the floor of the third ventricle, usually occurring in childhood, which histologically resembles the infundibulum of the hypophysis in its vascular pattern, pituicytes, and colloidal material.

in"fun·dib'u·lum [L.]. 1. A funnel-shaped passage or part. 2. The stalk of the neurohypophysis. —**infundibular**, *adj.*

cardiac i. That part of the right ventricle derived from the proximal part of the bulbus cordis of the embryonic heart; the anterosuperior part of the ventricle communicating with the pulmonary trunk.

ethmoidal i. A crescentic groove connecting the anterior ethmoid cells with the middle meatus of the nose.

i. of frontal sinus. See nasofrontal *duct*.

i. of the hypophysis. The stalk of the pituitary gland.

i. of uterine tube. The wide, funnel-shaped portion of the uterine tube at its fimbriated end.

Infu·din. Trade-mark for an aqueous extract of the posterior lobe of the pituitary gland.

in·fu'sion [L. *infusio*, from *infundere*, to pour into]. 1. The process of extracting the active principles of a substance by means of water, but without boiling. 2. The product of such a process. 3. The slow injection of a solution into a vein, into subcutaneous tissues, or into some other tissue of the body, from which it is absorbed into the blood stream, as, an intratibial infusion.

in"fu·so'ri·a (in-few-sor'ee-uh, -sor'ee-uh) [*infundere*]. Formerly a class of Protozoa which is now called Ciliata.

in·ges'ta [L. *ingestum*, from *ingerere*, to put into]. Substances taken into the body, especially foods.

in·ges'tion [L. *ingestio*, from *ingerere*]. 1. The act of taking substances, especially food, into the body. 2. The process by which a cell takes up foreign matter, such as bacilli or smaller cells. —**ingestive**, *adj.*

in·glu'vin, in·gl[illegible]**vin** [L. *ingluvies*, crop, maw]. A preparation obtained from the gizzard of the domestic hen; formerly used in dyspepsia and nausea.

Ingrassia, Giovan Filippo [*Italian physician and anatomist*, 1510–80]. Distinguished chickenpox from scarlet fever. Described the stapes and the sphenoid bone. The lesser wings of the sphenoid bone are known as *Ingrassia's wings*.

in"gra·ves'cent [L. *ingravescere*, to become heavier]. Increasing in weight or in severity.

in·gre'di·ent [L. *ingredi*, to enter]. Any substance that enters into the formation of a compound or mixture.

in'guen (ing'gwen) [L.]. The groin.

in'gui·nal (ing'gwi·nul) [L. *inguinalis*, of the groin]. Pertaining to the inguinal region or groin.

in'gui·no- (ing'gwi·no-), **inguin-** [L. *inguen*, groin]. A combining form signifying *groin*.

in·gui·no·dyn'i·a (ing·gwi·no·din'ee·uh, -dye'nee-uh) [*inguen*; G. *odynē*, pain]. Pain in the groin. *Obs.*

in"gui·no·scro'tal [*inguen*; L. *scrotum*, scrotum]. Relating to the groin and the scrotum.

in·ha'lant [L. *inhalare*, to breathe at]. 1. One who inhales. 2. That which is inhaled, as a medicine. —**in·ha'lant, inhalent,** *adj.*; **inhaler**, *n.*

in"ha·la'tion [*inhalare*]. 1. The breathing in of air or other vapor. 2. A medicinal substance to be used by inhalation. —**inhale**

in'ha·la"tor, in"ha·la'tor [*inhalare*]. A device for facilitating the inhalation of a gas or spray. Used for providing oxygen or oxygen-carbon dioxide mixtures for respiration in resuscitation.

in·ha'ler [*inhalare*]. 1. An apparatus used for filtering air, etc., to protect the lungs against damp or cold air, dust, or gases. 2. Inhalator.

in·her'ent (in·heer'unt, in·herr'unt) [L. *inhaerere*, to adhere to]. Innate; natural to the organism.

in·her'it·ance [L. *in*, in; *hereditare*, to inherit]. 1. The acquisition of characteristics by transmission of germ plasm from ancestor to descendant. 2. The sum total of characteristics dependent upon the constitution of the fertilized ovum; also, the total set of genes in the fertilized ovum.

blending i. The apparent fusion in the progeny of the separate characteristics of the parents, now explained in Mendelian terms as dependent upon several pairs of genes.

collateral i. Term used to describe the appearance of characters in collateral members of a family, as when an uncle and a niece show the same character inherited by the related individuals from a common ancestor.

cytoplasmic i. The acquisition of any trait which is causally dependent upon self-reproducing bodies in the nonnuclear constitution of the egg, as plastid implants.

maternal i. The acquisition of any characteristic that is causally dependent upon a peculiarity of the egg cytoplasm, which in turn is dependent upon genes in the nucleus, as dextral and sinistral coiling of snail shells.

in·her'it·ed [*in*; *hereditare*]. Derived from an ancestor.

in·hib'in. 1. A testicular hormone inhibiting the gonadotropic secretion of the anterior pituitary gland. 2. Antibacterial substance or substances in normal fresh human urine. 3. An antibiotic substance present in honey.

in"hi·bi'tion (in"hi·bish'un) [L. *inhibitio*, from *inhibere*, to restrain]. 1. The act of checking or restraining the action of an organ, cell, or chemical. 2. *In psychiatry*, an unconscious restraining of an instinctual impulse by an opposing impulse; generally synonymous with *repression*, but sometimes also used to cover *suppression*. —**inhibitory**, *adj.*; **inhib'it**, *v.*

central i. A reflex relaxation referred to the point of stimulation.

competitive i. *In physiology*, inhibition of the passage of an impulse through a neuron due to the dominance thereof by a stronger impulse.

Wedensky i. Phenomenon observed in a nerve-muscle preparation wherein a muscle moderately

fatigued by previous stimuli fails to respond to rapid stimulation but still responds to slowly repeated stimuli.

in·hib'i·tor [*inhibere*]. 1. A substance which checks or stops a chemical action. 2. A neuron whose stimulation stops, or suppresses, the activity of the part it innervates, or of a neuron with which it synapses.

competitive i. A compound, similar in structure to a substrate or coenzyme, which competes with that substrate or coenzyme for active centers on the enzyme molecule.

specific i. In metabolic studies, a substance which inactivates particular enzymes.

in"i·en·ceph'a·lus [G. *inion*, occiput; *enkephalos*, brain]. A monster with occipital fissure of the cranium, with protrusion of brain substance, combined with rachischisis and retroflexion of the cervical spine. —**iniencephaly**, *n.*

in"i·od'y·mus [*inion*; G. *-dymos*, -fold]. A monster exhibiting duplicity of the face, with four eyes, two noses, two mouths, and two, three, or four ears. Also called *diprosopus tetrophthalmus*.

in'i·on [G.]. The external protuberance of the occipital bone. See *craniometric point*, *craniometry*.

in"i·op'a·gus [*inion*; G. *pagos*, that which is fixed]. Conjoined twins united by their occiputs. Also called *craniopagus occipitalis*, *cephalopagus occipitalis*.

in'i·ops [*inion*; G. *ōps*, eye]. Conjoined twins with fused thoraxes and a single head which bears two opposite faces, one incomplete. Also called *cephalothoracopagus monosymmetros*, *syncephalus asymmetros*, *janus asymmetros*, *janiceps asymmetros*.

in·i'tial [L. *initialis*, from *initium*, beginning]. Pertaining to the beginning of a process; primary.

in·ject' [L. *injectus*, from *inicere*, to throw in]. Introduce fluids into the skin, subcutaneous tissue, muscle, blood vessels, spinal canal, or any body cavity.

in·jec'tion [L. *injectio*, from *inicere*]. 1. The act of injecting or throwing in. 2. The substance injected. Classification is made according to the organ or region into which the injection is made, as urethral, intramuscular, subcutaneous, intravenous, vaginal injection, etc.

anatomic i. Filling the vessels of a cadaver or of an organ with preservative or coagulating solutions, for purposes of dissection.

coagulation i. Injection of coagulating solutions into the cavity of an aneurysm.

hypodermic i. Injection which is made into the subcutaneous connective tissue, by means of a syringe.

i. pneumonia. A condition of the lung somewhat resembling pneumonia following injections of Koch's tuberculin.

jet i. See *hypospray*.

nutrient i. Injection of nutrient fluids into the rectum or other cavity of the body.

opaque i. For anatomic or microscopic purposes, one made of plaster of Paris, tallow, vermilion and gelatin, lead acetate and potassium bichromate (yellow injection), India ink, or lead acetate and sodium carbonate (white).

repository i. One containing the therapeutic agent in slowly absorbable form so as to delay its absorption and prolong the effect.

transparent microscopic i. One made with carmine for red, potassium bichromate for yellow.

in'ju·ry [L. *injuria*, injury]. In medicine, any stress upon a part or the whole of an organism that disrupts its structure or function, or both, to such a degree as to result in a pathologic process. An injury may be primarily somatic, due to physical, chemical, or biological stresses, or it may be primarily psychic. The cause or causes may be unknown. Injury may be sudden or insidious, localized or generalized, primary or secondary, and the reaction of the organism, including its death or that of any of its parts, will depend upon the severity and extent of the injury as well as upon the capacity of the individual organism to cope with it. Thus injury and not only the reaction thereto is a dynamic process. Infection, trauma, deficiency states, degeneration, neoplastic growth, etc. may be considered specific types. Commonly the word *injury* is used in a limited sense as synonymous with injury by physical means.

abdominal i. Damage to the structures of the abdominal walls, with or without injury to the underlying viscera. It may involve injury to muscles, blood vessels, nerves, and peritoneum, resulting in hematomas, rupture of muscle fibers, concealed hemorrhage from injured blood vessels in the deep layers, and localized abscess. Peritonitis and occasionally ventral hernia may result. Also see *internal*.

air-blast i. Injury to the viscera and to the central nervous system caused by rapid changes in the environmental pressure from air blast, as in bomb explosions.

antipersonnel mine i. Damage suffered by those engaged in military operations from the action of buried high explosives. Includes all varieties of high-explosive wounds, of which a large percentage involve the lower extremities only.

back i. Any injury to the muscles of the back or to the spinal column which gives rise to symptoms; includes sprains, concussions, and twists of the spine, and is frequently associated with lumbar pain which may be due to lesions of fascia, muscles, bones, or ligaments, or to specific ailments such as sacroiliac sprain or lumbosacral sprain, fracture-dislocation of the spine, fracture of a spinous process, or damage to an intervertebral disk.

birth i. See *birth injury*.

bladder i. (a) Damage to the urinary bladder through penetration of the abdominal wall, vagina, rectum, buttock, hernial sac, or by accidental injury during abdominal operation or hernioplasty. (b) Rupture of the urinary bladder, either intraperitoneal or extraperitoneal, from fracture of the pelvis, pressure or injury over a distended organ, or occasionally unrelieved distention in an atonic bladder. Extraperitoneal rupture results in extravasation of urine into the prevesical space.

blast i. See *blast injury*.

brain i. Damage to the brain may be due to contusion and laceration, to disturbance of the cerebral circulation, to cerebral tumors, or in aviators to high velocity and acceleration. Cerebral injury results in edema of the brain, petechial hemorrhage, increased intracranial pressure, and other symptoms.

cauda equina i. A spinal injury from blows or falls, with marked sensory and motor symptoms of varying degree and distribution referred to the end of the spine.

cold i. Trauma from freezing of a body part, seen especially in aviation medicine.

coup-contrecoup i. Lesions produced in the brain as a result of the rebound of the brain against the inner surface of the skull on the same side on which the skull is hit by an external force. See also *contrecoup*.

decompression i. That due to too rapid drop in atmospheric pressure; seen in caisson disease and aeroembolism.

egg-white i. See *egg-white injury*.
gallbladder i. Trauma of the gallbladder and its ducts from cholecystectomy; the common or hepatic ducts may be accidentally wounded, crushed, or divided; often followed by biliary fistula.
gunshot i. One from the penetration of any small-arms bullet, as from revolvers, pistols, rifles, machine guns, or shotguns.
high-explosive i. Damage to tissues from the action of high explosives, as shells, dynamite, or TNT; may be of all degrees of severity.
industrial i. Any injury due to one's employment in industry, as from tools, machinery, fumes, dust, or chemicals.
internal i. Damage from violence to the organs of the abdominal or thoracic cavity.
kidney i. See renal *i*.
latent tissue i. *In radiobiology*, injury which first becomes manifest at some time after exposure to radiation, usually a matter of days or weeks.
liver i. (a) Contusion or laceration of the liver, usually of the right lobe; may be due to crushing injuries, fractured ribs, gunshot wounds, stab wounds, or operations. (b) Necrosis of liver cells from poisoning and infectious disease, as from malaria or jaundice.
occupational i. Any injury which is brought about solely by an individual's occupation, whether it is industrial or otherwise.
parathyroid i. Damage to the parathyroid gland, resulting in tetany; it may occur during thyroidectomy, especially when the posterior portion is removed, as in total thyroidectomy.
prostate i. That resulting from unskillful instrumentation, or rarely from penetrating wounds or pelvic fracture.
radiation i. Localized injurious effects due to alpha or beta particles, gamma rays, and x-rays, which are not ordinarily associated with any systemic reaction, and most commonly due to prolonged and repeated exposure of a particular body area to radium or x-rays.
recurrent nerve i. Trauma or accidental division of the recurrent laryngeal nerve; may occur during thyroidectomy, postoperatively from the formation of scar tissue, or as a pressure injury from a malignant growth; it results in paralysis of the intrinsic laryngeal muscles, and in the case of involvement of both nerves, in suffocative symptoms.
renal i. Damage of the kidney as a result of trauma, crushing, *rib fractures*, *missiles*, *or muscular action*; involves rupture, penetration, and tears of the ureter.
shell i. Damage due to shell explosions from artillery fire; due largely to bursting fragments and to secondary missiles set in motion by the burst. Also called *shell wound*.
traffic i. Any injury sustained in traffic, irrespective of whether the injured person is a passenger or a pedestrian.
ureteral i. That resulting from renal traumas, pelvic fractures, or accidental instrumental damage suffered during deep pelvic operations.
urethral i. Damage to any portion of the urethra, occurring during prostatectomy or from unskilled instrumentation or accidentally.
war i. Any wound or traumatism caused by small-arms or artillery fire, bomb burst, or other war weapons, incurred during battle action or during the disposition of military or naval forces in a theater of operations.

in'ju·ry cur'rent. Injury potential.
in'ju·ry po·ten'tial. A potential difference, measuring about 20–40 millivolts, between the injured and the uninjured portions of a damaged cell or tissue. Syn., *injury current*, *demarcation potential*.
in'-knee. Knock-knee. *Obs.*
in'lay [L. *in*, in; ME. *leien*]. *1. In dentistry*, fillings which are first made and then cemented into a cavity.
bone i. A bone graft fitted into the two fragments and lying across a fracture or filling a gap between the fragments.
in'let [*in*; ME. *leten*]. The entrance to a cavity.
i. of the pelvis. The space within the brim of the pelvis; the superior pelvic strait.
in'nate, in·nate' [L. *innatus*, inborn]. Dependent upon the genetic constitution.
in"ner·va'tion [L. *in*, in; *nervus*, nerve]. 1. The distribution of nerves to a part. 2. The amount of nerve stimulation received by a part.
reciprocal i. The reciprocal effect of reflex excitation by antagonistic muscles, as extensors and flexors, by which the one set relaxes as the other contracts.
in'no·cent [L. *innocens*, from *in-*, not; *nocere*, to harm]. Benign, not malignant, not apparently harmful.
in·noc'u·ous [L. *innocuus*, harmless]. Not injurious; harmless.
in·nom'i·nate [L. *innominatus*, unnamed]. 1. Unnamed, unnamable, as innominate artery. 2. The irregular bone forming one side and anterior wall of the pelvic cavity, and composed of the ilium, ischium, and pubis; the hipbone.
in·nox'ious (i-nock'shus, in-nock'shus) [L. *innoxius*, harmless]. Innocuous.
in'o- (in-o-, eye'no-), **in-** [G. *is*, fiber]. A combining form denoting *fibrous tissue* or *fibrous components of a tumor*.
in'o·blast [*in-*; G. *blastos*, germ]. Old term for fibroblast.
in·oc·ci·pi'ti·a (in-ock-si-pit'ee-uh) [L. *in-*, not; *occiput*, back part of the head]. Deficiency of the occipital lobe of the brain.
in"o·chon·dri'tis (in-o-kon-dry'tis) [G. *is*, fiber; *chondros*, cartilage; *-itis*, inflammation]. Inflammation of fibrocartilage.
in·oc·u·la'tion [L. *inoculatio*, from *inoculare*, to ingraft a bud]. 1. The act of introducing the agent of a disease into an animal or plant; specifically, the intentional introduction of an organism for the purpose of producing a mild form of a disease which would be severe if spontaneously introduced. This is known as **preventive inoculation**. See *vaccination*. 2. *In bacteriology*, the planting of microorganisms in or on a culture medium.
in·oc'u·la"tor [L., an ingrafter]. One who or that which inoculates; an instrument used in inoculation.
in·oc'u·lum [L. *inoculare*, to ingraft a bud]. A small amount of bacteria-containing substance used to grow a culture of the bacteria or to infect an experimental animal.
in'o·cyte [G. *is*, fiber; *kytos*, cell]. Old term for fibrocyte, fibroblast.
in'o·gen [*in-*; G. *gennaein*, from *gignesthai*, to be produced]. A term used for a hypothetical complex substance of high energy in muscle whose breakdown was thought to supply the energy for muscular contraction. *Obs.*
in·og'li·a (in-og'lee-uh, in-o-glee-uh) [*in-*; G. *glia*, glue]. Old term for fibroglia.
in"o·lem'ma. See *sarcolemma*.
in·o·lo'min. An antibiotic substance derived from the fungus *Inoloma traganum*.
in·op'er·a·ble [L. *in-*, not; *opera*, work]. Not to be operated upon; of or pertaining to a condition

in which the prognosis is unfavorable if an operation is undertaken.

in"or-gan'ic [in-; G. *organikos*, serving as organs]. Not organic; not produced by animal or vegetable organisms.

in-os'cu-late [L. *in*, in; *osculare*, to supply with mouth]. Unite by small openings; anastomose.

in-os"cu-la'tion [in; *osculare*]. The joining of blood vessels by direct communication.

in'ose. See inositol.

in"o-sa-mi-a [G. *is*, fiber; *haima*, blood]. 1. An excess of fibrin in the blood. 2. The presence of inositol or muscle sugar in the blood.

in'o-sine (in'o-seen, -sin, eye'no-) A compound occurring in muscle which is formed by the union of hypoxanthine and ribose. It is a decomposition product of the nucleotide, inosinic acid.

in"o-sin'ic ac'id (in o-sin ik, eye no-) A nucleotide constituent of muscle, formed by deamination of adenylic acid; on hydrolysis with acid it yields hypoxanthine and d-ribose-5-phosphoric acid. Syn., *hypoxanthylic acid*.

in'o-site (in o-sight) See inositol.

in-o'si-tol (in o'si tole, -tol, -tawl, in-oss'i-; in o-sigh-) $C_6H_6(OH)_6.2H_2O$ *Hexahydroxycyclohexane*; a sugarlike alcohol occurring in muscle tissue, brain, red blood cells, and the tissues of the eye; also in leaves and seeds of plants. It resembles the aliphatic polyhydric alcohols rhamnitol and sorbitol in many properties, and is essential for the growth of certain microorganisms and for the prevention of alopecia in mice. It is rarely found in urine. See Table of Vitamins in the Appendix.

in-o si tol hex" phos-phor'ic ac'id. A compound of inositol in which all six hydroxyl groups have been esterified with phosphoric acid; it occurs in certain cereal grains. Syn., *phytic acid*.

in" o-si tu'ri-a (i o-sigh tew'ree-h, -si tew'ree-uh) **in" -su'ri-a** [in; G. *ouron*, urine]. The presence of inositol in the urine. *Rare.*

in" trop'ic [in; G. *trepein*, to turn]. Pertaining to influences which modify muscular contractility.

in'quest [L. *inquaesitus*, sought for]. *In legal medicine*, judicial inquiry as a coroners' inquest, for the purpose of determining the cause of death of one who has died by violence or in some unknown way.

in"qui-si'tion (in"kwi-zish un) [L. *inquisitio*, from *inquirere*, to search for]. An inquiry especially one into the sanity or lunacy of a person.

in sal"i-va'tion [L. *in*, in; *salivare*, to salivate]. The mixture of the food with saliva during mastication. —**insal'ivate**, *v.*

in"sa-lu'bri-ous [L. *in-*, not; *salubris*, healthy]. Unhealthful; not wholesome.

in sa-lu'bri ty [in-; *salubris*]. Unwholesomeness or unhealthfulness, as of air or climate.

in-san'i-tar"y (in-san i-terr ee) [in-; L. *sanitas*, health]. Not sanitary; not in a proper condition as respects the preservation of health.

in-san"i-ta'tion [in-; *sanitas*]. Lack of proper sanitary conditions; defect of sanitation.

in-san'i ty [L. *insanitas*, from *insanus*, insane]. 1. Loosely, any mental disorder or derangement. See *psychotic disorders*. 2. *In legal medicine*, mental disorder of such severity that the individual is unable to manage his own affairs and fulfill his social duties or is dangerous to himself or others. —**insane**, *adj.*

affective i. See affective-reaction psychosis.

alcoholic i. See alcoholic psychosis.

alternating i. See circular.

circular i. That marked by alternating mania and depressive episodes. Syn., *alternating i.*

climacteric i. That occurring at or near the menopause.

communicated i. See *folie à deux*.

consecutive i. That following some disease or injury not of the brain.

cyclic i. See circular i.

delusional i. An acute condition in which delusions or hallucinations are the outstanding symptoms.

depressive i. Melancholia.

deuteropathic i. That caused by disorders of, or developmental changes in, organs other than the brain.

doubting i. A form of anxiety neurosis; also called *folie de doute*.

emotional i. See affective-reaction psychosis.

hysterical i. Severe hysteria resembling psychosis. *Rare.*

ideal i. An old term embracing all the forms in which ideas dependent upon the senses are perverted.

imitative i. A form of folie à deux marked by mimicry of the insane characteristics of another.

imposed i. Delusional ideas imposed by one person upon another individual weaker than himself.

impulsive i. A form in which the patient possesses an uncontrollable desire to commit acts of violence.

intermittent i. Recurrent insanity.

melancholic i. Paranoid melancholia.

moral i. A form marked by perversion and depravity of the moral sense, apparently without impairment of the reasoning and intellectual faculties. Rare.

notional i. An old term which covered roughly the schizophrenias and psychoneurotic reactions of today.

periodic i. Manic-depressive psychosis.

pubescent i. Old term for hebephrenia.

puerperal i. Psychotic reaction in a woman at the time of childbirth.

recurrent i. That marked by a succession of many attacks.

senile i. That due to old age.

stuporous i. Old term for anergic stupor.

toxic i. An acute form due to systemic poisoning by certain drugs.

in-scrip'tion [L. *inscriptio*, from *inscribere*, to write on]. The body or main part of a prescription; contains the ingredients and amounts to be used.

in-scrip"ti-o nes ten-din'e-ae (in skrip tee o'neez ten-din ee-ee) Transverse, fibrous bands between segments of the rectus abdominis muscle.

in'sect [L. *insectum*, from *insecare*, to cut in]. A member of the class Insecta of the phylum Arthropoda. In the adult, the body is segmented and is divided into head, thorax, and abdomen; there are three pairs of legs and a single pair of antennae. Usually there are one pair or two pairs of wings, but sometimes none.

in-sec'ti-cide [*insectum*; L. *caedere*, to kill]. A substance that is destructive to insects.

in-sec'ti fuge [*insectum*; L. *fugare*, to put to flight]. Any substance which repels insects.

in"se-cu'ri ty [L. *in-*, not; *securitas*, freedom from care]. The state, feeling, or quality of being uncertain or unsafe; an attitude of apprehensiveness, as in respect to one's social status, circumstances, or safety.

in-sem"i na'tion [L. *inseminare*, to implant]. 1. The planting of seed. 2. The introduction of semen into the vagina. 3. Impregnation.

artificial i. The instrumental injection of semen into the vagina or uterus to induce pregnancy.

in-sen'si ble [L. *insensibilis*, insensible]. 1. Incapable of sensation or feeling; unconscious. 2. Incapable of being perceived or recognized by the senses. —**insensibil'ity**, *n.*

in·ser′tion [L. *inserere*, to ingraft]. 1. The act of setting or placing in. 2. That which is set in. 3. The point at which anything, as muscle is ttached the place or the mode of attachment of an organ to its support. The insertion of muscle is contrasted with its origin as being the attachment t relatively more movable part.
velamentous i. The attachment of the umbilical cord to the margin of the placenta.

in·sheathed′ (in-sheethd′ in-sheetht′) [L. *in*, in; AS. *sceath*]. Enclosed, as within sheath; invaginated encysted.

in·sid′i·ous [L. *insidiosus*, deceitful]. Coming on gradually or almost imperceptibly as disease whose onset is gradual or inappreciable.

in′sight″ [L. *in*, in; AS. *gesiht*]. I psychiatry the patient′ bility to understand his symptoms and their origi and to know that they indicate abnormalities.

in sip′id [L. *insipidus*, insipid]. Tasteless.

in si′tu (in sigh tew) [L.]. In given or natural position; undisturbed.

in″so·la′tion [L. *insolatio*, from *insolare*, to place in the sun]. 1 Exposure to the rays of the sun. 2. Treatment of disease by such exposure. 3. Sunstroke.

in sol′u ble [L. *in-*, not; *solubilis*, from *solvere*, to dissolve] Incapable of dissolving in liquid. —**insolubil′ity** n.

in·som′ni [L., want of sleep]. Sleeplessness; disturbed sleep prolonged condition of inability to sleep.

in·spec′tion [L. *inspectio* from *inspicere*, to look upon]. I medicine, the examination of the body or any part of it by the eye.

in″spi ra tion [L. *inspiratio* from *inspirare*, to breathe into]. The drawing in of the breath; inhalation. —**inspire′**

in spi·ra″tor [*inspirare*]. An inhaler or respirator

in spi ra t ry [*inspirare*]. Pertaining to the act of inspiration.

in″spi rom e·ter [*inspirare*; G. *metron*, measure]. An instrument for measuring the amount of air inspired.

in spi ssant [L *in*, in *spissare*, to thicken]. Tending to thicken thickening, as of the bile or other fluids.

in spis′sant. An agent that tends to increase the thickness of blood or other fluid.

in·spis′sate [*in*; *spissare*] Make thick by vaporation or by bsorption of fluid —**inspissated,** *adj*

in sta·bil′i ty [L. *instabilitas*, from *instabilis*, unsteady]. 1 Lack of firmness; insecurity of support or balance. 2. Lack of fixed purpose; inconstancy in opinions or beliefs

in stance [L. *instantia*, being near or close upon] I psychoanalysis, the dominance or perseverance of one level of mental function in comparison t others.

in′st p [L *in*, in AS *staepe*]. The arch on the medial side of the foot

in″still la tion [L *instillare*, to pour in by drops]. The introduction of liquid into cavity drop by drop.

i still la″tor [*instillare*]. An apparatus for introducing, by drops, liquid int cavity or space.

in′stinct [L. *instinctum*, from *instinguere* to incite]. 1. A precise form of behavior in which there is an invariable association of particular series of responses with specific stimuli an unconditioned compound reflex. 2. I psychoanalysis, primary tendency as toward life, reproduction, and death.
death i. See *thanatos*.
life i. See *eros*.

in stinc tive [*instinctum*]. Prompted or determined by instinct; of the nature of instinct.

in sti tutes of med′i·cine. The fundamental principles of medicine, especially of physiology pathology therapeutics, and hygiene. *Obs.*

in′stru ment [L. *instrumentum*, utensil]. A mechanical tool or implement. —**instrumen′tal,** *adj*.
stitching i A surgical appliance consisting of needle holder which utilizes all varieties of surgical needles, the suture material feeding from continuous spool supply ttached to the handle.

in stru men ta tion [*instrumentum*]. The use of instruments in treating patient.

in suf fi′cien·cy [L. *in-* not *sufficere*, to suffice]. The state of being inadequate; incapacity to perform normal function.
adrenal cortical i Inadequate secretion by the adrenal cortex It may be acut or chronic as in Addison disease.
aortic i. Incompetent aortic valve action caused mainly by aortic cusp lesions, either rheumatic or syphilitic. Diagnostic symptoms consist of diastolic murmur and water-hammer pulse.
cardiac i. See *cardiac failure*.
hronic intestinal i. See *celiac disease*
chronic jejuno-ileal i. See *celia disease*.
coronary i Incompetent heart ction caused by restriction of blood supply to th myocardium and consequent lack of oxygen supply in that organ It is characterized by anginal pains.
energetodynamic cardiac i. A disorder involving disturbed metabolism of the myocardium. It is always complication of some general disease
i. of a muscle. Inability on the part of muscle to contract sufficiently to produce the normal effect; pplied especially to the eye muscles.
i. of the externi. A condition in whi h the contraction of the lateral muscles f the eye is weak and is overbalanced by that of the medial muscles, producing esophoria.
i. of the interni. Defective power on the part of the medial muscles, producing exophoria.
ovarian i. Deficiency of ovarian function, either primary or secondary which can result in either amenorrhea, oligomenorrhea, or bnormal dysfunctional uterine bleeding clinical term.
pancreatic i. Absence of or reduced pancreatic secretion into the duodenum, and resultant poor digestion and bsorption of fat, vitamins, nitrogen, and carbohydrates It usually occurs after prolonged disease of the pancreas.
renal i. Inadequate function of the kidney characterized by its failure to remove urea from the blood at normal rate.
respiratory i. Incompetence of the respiratory processes.

in″suf fla tion [L. *insufflare*, to breathe into]. The act of blowing into, as blowing gas, powder or vapor into one of the cavities of th body
endopharyng al i. A method of inducing anesthesia through tube introduced through the mouth or nose to the ba k of the pharynx.
intratracheal i. Insufflation through tracheal t be introduced into the larynx.
mouth-to-mouth i. The blowing of air into the mouth of person, usually newborn infant, to distend the lungs and counteract asphyxia.
perirenal i. I roentgenography the injection of air or carbon dioxide int the perirenal tissue to outline the adrenal glands and kidneys.
tubal i. See Rubin *test*

in′suf fla″tor [*insufflare*]. A instrument used in insufflation.

in su la [L island] Portion of cortex overlying the corpus striat m It lies hidden from view in the adult brain at the bottom of the lateral fissure. See Plate 17 —**insular** *adj*

insulated plastic boot. A high boot, consisting of an inner and outer sleeve with filler of spun glass, used to increase blood flow to the lower extremities by conserving body heat and raising cutaneous temperature.

in su lin [*insula*]. The antidiabetic hormone arising from the beta cells of the islets of Langerhans of the pancreas. It is protein which in monomeric form has a molecular weight of about 12,000 or possibly even 6,000 crystallizes in the form of twin rhombohedra in solutions slightly bove its isoelectric point, provided the solutions contain salts of zinc, nickel, cadmium, or cobalt; is rich in sulfur with several constituent amino acids is relatively stable in acid solution and readily hydrolyzed in alkaline solution. The United States Pharmacopeia Reference Standard is crystalline sample of insulin containing 23 units per mg. Therefore, the unit corresponds to 1/23 mg of the *United States Pharmacopeia Reference Standard* insulin. It is inactive orally Insulin, when injected parenterally in the diabetic organism, pproximates normal ability to utilize sugars and fats; glycogen is deposited normally in the liver and muscle glycogen may be increased blood-sugar levels are reduced; glycosuria disappears; hyperlipemia and ketosis disappear excessive destruction of protein is prevented, and the respiratory quotient rises Its action may be modified greatly by various mechanisms, including pituitary thyroid, and certain adrenal hormones. In normal animals or in man, insulin causes reduction in blood-sugar levels. Large doses in the nondiabetic organism may reduce liver glycogen. —**insulinoid**, *adj*

amorphous i. The form of insulin obtained in commercial processes in the absence of added zinc or certain other metal ions (see under *insulin*) In aqueous solution it is most effective usually bet een the second and the sixth hours after injection. It is marketed in strengths of 20 40, 80, or 100 units per cc. Also called *regular i* *unmodified*

crystalline i. The crystalline product obtained when insulin is precipitated in the presence of added zinc ion. It contains 0 016 to 0 04 mg of zinc per 100 units of insulin. The rapidity and duration of action are probably no different from that of amorphous insulin. It is considered advantageous in insulin-allergic patients.

globin i. with zinc. A preparation of insulin modified by the addition of globin (derived from the haemoglobin of beef blood) and zin chloride the commercial product is solution, adjusted to pH between 3.4 and 3.8, containing 40 or 80 U.S.P units of insulin per cc. and from 3 6 to 4 0 mg. of globin for each 100 units of insulin. Its maximum effectiveness is between 8 and 16 hours after injection.

hexamine i. A combination of hexamethylenetetramine and insulin. Its effect is evident two to four hours after injection but has sustained action rather comparable to protamine zinc insulin

histone i. A preparation containing insulin and thymus histone which precipitates the insulin, the resulting suspension producing prolonged hypoglycemic effect, as compared to amorphous or crystalline insulin solutions. Also combined with zinc as histone zinc insulin, comparable i action to protamine zinc insulin.

i. allergy The tissue reaction to insulin which may be represented by varying degrees of local tissue reaction, urticaria, or anaphylaxis. Local reactions may be haracterized by stingi g, itching, soreness, heat, and induration bout the site of injection. The reaction may depend upon the animal source of the insulin. Contamination or alteration of the proteins in solution must be considered. Similar reactions may be due to substances such as protamine in the mixture injected.

i. atrophy Atrophy of the subcutaneous, chiefly fatty tissues about the site of injection of insulin. Such lesions are disfiguring but not dangerous. Also called *fat atr phy*

i. hypertrophy A painless, locally indurated, raised, rubbery area of fatty hypertrophy seen in some patients in an area epeatedly injected with insulin.

i. resistance. A condition in which insulin injected produces an unusually slight response. It varies from mild to severe degrees. Also called *i. insensitivity*

i. sensitivity A term used to describe the *comparative degree of effectiveness* of insulin. In juvenile diabetes the blood-sugar level is depressed quickly and markedly by relatively small doses. The opposite is commonly true in middle-aged and older patients.

i. shock. The reaction of the body to doses of insulin which produce hypoglycemia. Common symptoms are sense of nervous agitation, weakness, trembling, sweating, speech difficulty pallor listlessness, negativism, unconsciousness; in severe attacks, convulsions, vomiting, diarrhea, and incontinence. Also called *i. action*

i. tannate. A combination of tannic acid and insulin which precipitates at approximately pH 7 Its maximum effect occurs at about the fifth hour after injection.

i. tolerance. The relative degree of response of the body to insulin.

isophane i A preparation of protamine and insulin in which the two substances are present in their combining proportion (isophane ratio) which is approximately 0 5 mg. of protamine for each 100 U.S.P units of insulin. NPH insulin is an isophane insulin.

lente i. One of series of protein-free injectable preparations of insulin, having varying duration of action, obtained by mixing proper proportions of crystalline, long-acting zinc insulin with amorphous, short-acting zinc insulin, the mixture being suspended in phosphate-free saline and acetate medium of pH 7.3.

NPH i. *Neutral Protamine Hagedorn* insulin; preparation of isophane insulin developed by Hagedorn, consisting of crystals containing insulin, protamine, and zinc, suspended in buffered medium of pH 7 1 to 7 4. It contains between 0.3 and 0.6 mg of protamine for each 100 U.S.P units of insulin, the two being present in isophane ratio The injection contains 40 or 80 U.S P units of insulin in each cc. The verage duration of action is somewhat longer than that of globin insulin but less than that of protamine zinc insulin

pectin i. A slowly absorbed preparation of insulin in viscous medium containing 4 to 5 per cent pectin and adjusted to pH 4.0 to 4.4. See *dextran*.

protamine calcium i. A mixture of insulin and calcium salts in solution, formerly used in an attempt to prolong insulin action.

protamine i. A preparation of insulin combined with protamine, protein prepared from the sperm of fishes of the trout family; the mixture by the gradual release of insulin produces prolonged depressing effect upon blood-sugar levels. Its effect is evident between the third and sixth hours, is maximal from the twelfth t the

eenth hours, and disappears almost completely about 24 hours after injection.

protamine zinc i. A preparation similar to protamine insulin; the commercial products are suspensions providing 40 or 80 U.S.P units of insulin per cc. and containing 1 0 to 1.5 mg. of protamine and 0.20 to 0.25 mg of zinc for each 100 units of insulin. Its action is longer than that of protamine insulin. The full cumulative effect of daily doses occurs in two or three days.

vegetable i. Any one of several noninsulin blood-sugar-depressing plant extracts, such as myrtillin which is made from the leaves of the blueberry plant, *Rehmannia glutinosa* extract, *Oplopanax horridus* (devil's-club) extract.

in su lin e mi a [*insula*, G *haima*, blood]. The presence of an abnormal, or dangerous, amount of insulin in the circulating blood.

in″su lin-o ma **in-su l oma.** See *islet-cell tumor*

in sult. Trauma or other stress to tissues or organs.

in sus-cep ti bil′i ty [L. *in-* not *susceptum*, from *suscipere*, to take up]. Absence of contagious quality want of susceptibility

in″te gra′tion [L. *integrare*, to make whole]. 1. The process of unifying different elements into single whole. 2. The combination of bodily activities to cooperate in the welfare of the whole organism. 3. *I neurology*, the impingement of impulses from various centers upon one final, common pathway resulting in an adaptive response.

in teg u ment [L., covering]. A covering, especially the skin. —**integument tary** *adj*

fetal i. The fetal membranes. *Obs.*

in′tel lect [L. *intellectus*, understanding]. The mind, the understanding, or the reasoning power

in tel′li gence [L. *intelligentia*, intelligence]. 1 The understanding, intellect, or mind 2 The ability to perceive qualities and attributes of the objective world, and to employ purposively means toward the ttainment of an end.

in tel′li gence quo′tient. A figure used to designate person intelligence; can be arrived t by dividing the mental age by the chronologic age (up to 16 years) The three grades of mental deficiency (idiocy imbecility and moronity) are marked by intelligence quotients of 69 or lower Above 69, the classification is as follows dull normal, 70–90; normal, 90–110 superior 110–125 very superior 125–140; and genius, 140 and bove. Abbreviated, I.Q

in tem per-ance [L. *intemperantia*, want of moderation]. Want of moderation; immoderate indulgence, especially in alcoholic beverages. —**intemperate,** *adj* **a.**

in-tense [L. *intensus*, stretched]. 1. Extreme in degree; showing to high degree the characteristic attribute 2. Feeling deeply

in ten si fi-ca′tion [*intensus*] The condition occurring in cutaneous sensory disturbances in which certain sensations are abnormally vivid.

in″ten-sim ter (in ten-sim -tur in-ten si-mee tur) [*intensus*; G. *metron*, a measure]. An instrument for measuring the intensity or dosage of -rays.

in ten si ty [*intensus*] 1 The state or condition of being intense. 2 Amount or degree of strength or power 3 *I radiology*, the amount of energy per unit time passing through unit area perpendicular to the line of propagation.

i. of magnetic fi ld. At any point, the force per unit pole upon free pole, placed at that point.

i. of an electri field. At any poi t, the force per unit charge upon charged particle, placed t that point.

i. of x-rays. The dose of radiation in roentgens divided by the time required to deliver it.

luminous i From point source of light, the flux emitted per unit angle in certain direction.

in ten′tion [L. *intentio*, purpose]. 1 The end or purpose. 2. A process or manner of healing.

in′ter [L., between]. A prefix signifying *between* or *among mutual, intervening*, or *within*.

in ter-ac-ces′so ry (in tur-ack-sess o-ree) [*inter* L. *accedere*, t add to]. Situated between accessory processes of the vertebrae.

in″ter ac′i nous (in tur-ass′i-nus, **in″ter ac′i-nar** (in tur-ass i-nur) [*inter* L. *acinus*, berry] Situated between acini.

in″ter l ve lar (in tur-al-vee lur -al′vee o-lur) [*inter* L. *alveolus*, small hollow]. Between alveoli.

in″ter a y te-noid e us. A variant name for the combined oblique and transverse arytenoid muscles.

in″ter ′tri-al (in tur-ay tree-ul, -at ree-ul) [*inter* L. *atrium*, atrium]. Between the atria of the heart.

in′ter brain″ See *diencephalon*.

in ter′ca la″ted [L. *intercalare*, to insert] Placed or inserted between as intercalated disks of cardiac muscle.

in″ter-cap′il lar″y glo mer″u lo-scle-ro′sis (in tur-cap′ lerr ee) A lesion of the renal glomeruli which is accompanied by diabetes mellitus, renal edema, pronounced albuminuria, and sometimes hypertension and renal insufficiency However it occurs in diabetic persons without the associated phenomena mentioned and may occur in those without diabetes. Microscopically the glomerular tufts show spherical, oval, or less well-defined foci of acellular acidophilic, hyalinized tissue, with concentric argyrophilic laminae, situated between the capillaries. Said to be more specific morphologic evidence of diabetes tha is hyalinization of the islets of the pancreas. Syn. *Kimmelstiel-Wilson disease* or *syndrome*.

in″ter-car′pal [L. *inter* between G *karpos*, wrist]. Between the carpal bones, as intercarpal ligaments. See T ble of Joints and Ligaments in the Appendix.

in″ter cav′ern-ous [*inter* L. *caverna*, cavern]. Situated between the two cavernous sinuses, as the intercavernous sinuses.

in″ter-cel′lu lar [*inter* L. *cellula*, small storeroom] Between cells, as intercellular substance of tissue.

in″ter-chon dral (in tur-kon dral) [*inter* G *chondros*, cartilage]. Between cartilages.

in″ter cli′noid [*inter* G *kline*, bed; *eidos*, form]. Bet een the clinoid processes of the sphenoid bone.

in″ter co lum nar [*inter*; L. *columna*, column] Between pillars or columns.

in″ter con′dy lar **in″ter-con′dy-loid** [*inter*; G *kondylos*, knuckle] Between condyles, as the intercondylar fossa, the notch between the condyles of the femur

in″ter-con ver′sion (*of protein, carbohydrate, and fat*) See *Krebs cycle*.

in″ter-cos tal [*inter* L. *costa*, rib]. Between the ribs. as i tercostal spaces or muscles.

in″ter cos″to-bra chi-al. Associated with an intercostal space and the arm, as intercostobrachial nerve.

in″ter-coup′ler (in tur-cup′lur) [*inter* L. *copula*, band] An apparatus used during the administration of an inflammable anesthetic to equalize the electric potential among anesthetist, patient, operating table, and anesthetic machine; designed to prevent explosions or fires due to stati electricity

in″ter-course [L. *intercursus*, from *intercurrere*, to run between]. Communication; intimate connection between persons.

sexual i. Sexual connection; coitus.

in"ter-cri"co-thy-rot'o-my (in-tur-cry"ko-thigh-rot'o-mee) [L. *inter*, between; G. *krikos*, ring; *thyreoidēs*, shield-shaped; *tomē*, a cutting]. A cut into the larynx by transverse section of the cricothyroid membrane.

in"ter-cris'tal [*inter*- L. *crista*, crest]. Between the surmounting ridges of a bone, organ, or process. Used particularly in intercristal diameter of the pelvis, the distance between the two iliac crests.

in"ter-cru'ral [*inter*- L. *crus*, leg]. Situated between the crura, particularly of the subcutaneous inguinal ring.

in"ter-cur'rent [*inter*- L. *currere*, to run]. Occurring or taking place between, as a disease arising or progressing during the existence of another disease in the same person.

in"ter-cusp'ing [*inter*- L. *cuspis*, pointed end]. *I* dentistry, the fitting together of the occlusal surfaces of opposing teeth.

in"ter-den'tal [*inter*- L. *dens*, tooth]. Located or placed between the teeth.

in"ter-den ti um (in tur-den shee-um) [*inter*; *dens*]. The space between any two of the teeth.

in"ter dic'tion [L. *interdictio*, from *interdicere*, to prohibit]. *I* *legal medicine*, a judicial or voluntary restraint placed upon an insane person or one suspected of insanity preventing him from the management of his own affairs or the affairs of others.

in"ter-dig"i ta'tion (in tur-didj"i-tay'shun) [L. *inter*, between; *digitus*, finger]. 1. The locking or dovetailing of similar parts, as the fingers of one hand with those of the other or of the ends of the obliquus abdominis externus muscle with those of the serratus anterior. 2. *I* *dentistry* in closure of the buccal teeth, the striking of the cusps of one denture fairly into the occluding sulci of the other denture.

in"ter face. A surface which forms the boundary between two phases or systems.

in"ter fere [*inter*- L. *ferire*, to strike]. In horses, to strike one hoof or the shoe of one hoof against the opposite leg or fetlock.

in"ter fer'ence [*inter*- *ferire*]. 1. *I* physics, the mutual action of two beams of light, or of two series of sound vibrations, or in general, of two series of any type of waves when they coincide or cross. 2. The mutual extinction of two excitation waves that meet in any portion of the heart. **dissociation 1.** See atrioventricular *dissociation* with interference.

in"ter fer-om' ter (in tur-feer-om'i-tur) [*inter*- *ferire*; G. *metron*, a measure]. An apparatus for the production and demonstration of interference fringes between two or more wave trains of light from the same area. It is chiefly used to compare wave lengths with a standard wave length, by means of interference fringes.

in"ter fer-om' try (in tur-feer-om'i-tree) [*inter*- *ferire*; *metron*]. Use of the interferometer to compare wave lengths with observable displacements of reflectors.

in"ter-fi"bril lar (in"ter-figh"bril-ur, -figh-bril'ur) [*inter*; dim. from L. *fibra*, fiber]. Situated between the fibrils of tissues, as interfibrillar substance.

in"ter fol lic'u lar [*inter*- L. *folliculus*, small bag]. Between follicles.

in"ter-glob'u-lar [*inter*- L. *globulus*, little ball]. Situated between globules, as interglobular dentine.

in"ter go ni-al [*inter*- G. *gōnia*, corner]. Between the two gonia (angles of the lower jaw).

in-te ri-or [L., inner]. Situated within, with reference to a cavity, part, or organ.

in"ter kin-e sis. A period in the life of a cell during which there is no mitotic activity; also called interphase.

in"ter la'bi-al [L. *inter*, between; *labium*, lip]. Between the lips, or between the labia pudendi.

in"ter la-mel'lar [*inter*- L. *lamella*, small plate of metal]. Between lamellae.

in"ter-lam'i nar [*inter*- L. *lamina*, plate]. Situated between laminae.

In"ter-lin'gua (in ter-ling'gwah). A linguistic system developed by the International Auxiliary Language Association (IALA) and proposed for use as a medium of international communication in science, technology, medicine, and other fields of science. The vocabulary includes all words common to English, French, Italian, Spanish, and Portuguese, with some German and Russian alternates.

in"ter lo'bar [*inter*- G. *lobos*, lobe]. Situated between lobes, as interlobar pleurisy.

in"ter lob'u lar [*inter*; *lobus*]. Between lobules.

in"ter mar'riage [*inter*- OF *mariage*, from L. *maritare*]. 1. Marriage of blood relations. 2. Marriage between persons of different races.

in"ter max'il lar"y (in tur-mack'si-lerr"ee) [*inter*; L. *maxilla*, jaw]. Between the maxillary bones.

in"ter max'il lar"y. The os incisivum, a small bone that receives the upper incisors, situated between the maxillary bones of the fetus. Also called premaxilla.

in"ter me din [L. *intermedius*, that which is between]. A hypophyseal substance influencing pigmentation and found in greatest concentration in the intermediate portion of the pituitary in certain animal species. A similar or identical principle active in man is now called *melanocyte-stimulating hormone* (MSH).

in"ter me"di-o-lat'er al [*intermedius*; L. *latus*, side]. Both lateral and intermediate, as the intermediolateral tract of the spinal cord, lying between the anterior and posterior gray columns.

in"ter mem'bra nous [L. *inter*, between; *membrana*, membrane]. Lying between membranes.

in"ter me-nin'ge-al [*inter*- G. *mēninx*, membrane]. Between the dura and the arachnoid, or between the latter and the pia, as intermeningeal hemorrhage.

in"ter men'stru-al [*inter*- L. *menstrualis*, monthly]. Between menstrual periods.

in ter'ment [L. *in*, in; *terra*, earth]. The burial of a body.

in"ter mes"o-blas'tic [L. *inter*, between; G. *mesos*, middle; *blastos*, germ]. Between the layers or between the lateral plates of the mesoderm. *Obs.*

in"ter met"a mer'al [*inter*- G. *meta*, between; *meros*, part]. Between two metameres, as the intermetameric or intersegmental ribs.

in"ter mi-cel'lar fluid. *I* *colloid chemistry* a liquid medium in which the colloidal particles (micelles) are dispersed.

in"ter mi tot'ic. Pertaining to a period or stage during mitosis.

in"ter mit'tent [L. *intermittere*, to leave off]. Occurring at intervals, as intermittent fever, intermittent insanity, intermittent pulse, intermittent sterilization.

in"ter mu'ral [L. *inter*, between; *murus*, wall]. Situated between the walls of an organ.

in"ter mus'cu-lar [*inter*- L. *musculus*, muscle]. Situated between muscles.

in'tern [F. *interne*]. A resident physician in a hospital, usually in his first year of service.

in ter'nal [L. *internus*, internal]. Situated within or on the inside. —**internal**, *adv.*

in ter'nal il'i-ac. The hypogastric artery.

in"ter na ri al [L. *inter*, between; *nares*, nostrils]. Situated between the nostrils.

International Red Cross. The Swiss Red Cross. Also see *Red Cross Society*.

in"ter·neu·ron [*inter-*; G. *neuron*, nerve]. A short neuron with its cell body in the dorsal horn of the spinal cord; one of the elements of a simple reflex arc. Also called *internuncial neuron, intercalated neuron*.

in"ter·neu·ro·nal [*inter-*; *neuron*]. Between neurons.

in·ter'nist [L. *internus*, internal]. A physician who specializes in internal medicine.

in'ter·node [L. *inter*, between; *nodus*, knot]. The space between two nodes of a nerve fiber, as the internode between the nodes of Ranvier. Also called *internodal segment*. —**interno'dal**, *adj.*

in"ter·nun'ci·al (in"tur·nun'shul) [*inter-*; L. *nuncius*, messenger]. Serving as a connecting or announcing medium, as internuncial neurons, nerve cells between two others in a nervous pathway.

in·ter'nus. See *internal*.

in"ter·o·cep'tor [L. *internus*, internal, perhaps by analogy with *externus*, *capere*, to take]. Any one of the end organs situated in the viscera which receive stimuli from visceral activities, such as digestion, excretion, circulation. Also called *visceroceptor*.

in"ter·o·fec'tive [*internus*; L. *facere*, to bring about]. Bringing about internal changes: the term applied by Cannon to the nerves of the autonomic nervous system.

in"ter·o·fec'tive sys'tem. That part of the nervous system that is concerned with the regulation of the internal environment of the body; essentially equivalent to the autonomic nervous system.

in"ter·ol'i·var"y (in"tur·ol'i·verr"ee) [L. *inter*, between; *oliva*, olive]. Between the inferior olives.

in"ter·os'se·ous [*inter-*; L. *os*, bone]. Between bones, as interosseous arteries, membranes, muscles, or ligaments.

in"ter·os'se·us [*inter-*; *os*]. Interosseous muscle of the hand or foot, one of the small muscles inserting on the phalanges. See Table of Muscles in the Appendix.

in"ter·pal'pe·bral [*inter-*; L. *palpebra*, eyelid]. Between the palpebrae, or eyelids.

in"ter·pa·ri'e·tal [*inter-*; L. *paries*, wall]. Between walls; between the parietal bones, as interparietal suture; between parts of the parietal lobe, as interparietal fissure. Cf. *incarial bone*.

in"ter·pe·dun'cu·lar [*inter-*; L. *pedunculus*, little foot]. Situated between the cerebral or cerebellar peduncles.

in"ter·pha·lan'ge·al [*inter-*; G. *phalagx*, bone between two joints of the fingers and toes]. Between the phalanges of the fingers or toes. See Table of Joints and Ligaments in the Appendix.

in'ter·phase. See *interkinesis*.

in"ter·prox'i·mal [*inter-*; L. *proximus*, nearest]. *In dentistry*, between two adjacent teeth, as an interproximal space.

in"ter·prox'i·mate [*inter-*; *proximus*]. Interproximal.

in"ter·pu'pil·lar·y dis'tance. The distance between the centers of the pupils of the two eyes.

In'terrenin. A trade-mark for a preparation of the adrenal cortex in solution and capsule form.

in"ter·sex' [*inter-*; L. *sexus*, sex]. An individual whose constitution is intermediate between male and female and who may be a true or pseudohermaphrodite; sex-intergrade. —**intersex'ual**, *adj.*; **intersexual'ity**, *n.*

in'ter·space [*inter-*; L. *spatium*, space]. An interval between the ribs, or between the fibers or lobules of a tissue or organ.

in"ter·spi·na'les. Variable small muscles running between adjacent spinous processes of the vertebrae.

in"ter·spi·nous [*inter-*; L. *spina*, thorn]. Situated between spinous processes.

in·ter'sti·ces (in·tur'sti·siz) [L. *interstitium*, a place between]. Spaces or intervals; pores.

in"ter·sti'tial (in·tur·stish'ul) [*interstitium*]. 1. Situated between important parts; occupying the interspaces or interstices of a part. 2. Pertaining to the finest connective tissue of organs.

in"ter·sti"ti·o'ma (in·tur·stish"ee·o'muh). See *interstitial-cell tumor*.

in"ter·tar'sal [L. *inter*, between; G. *tarsos*, flat of the foot]. Located between adjacent tarsal bones.

in"ter·trans·ver·sal'es. Old name for the intertransversarii muscles.

in"ter·trans·ver·sa'ri·i (in·tur·trans·vur·sair'ee·eye) [*inter-*; L. *transversus*, lying across]. Short bundles of muscular fibers extending between the transverse processes of contiguous vertebrae. They are sometimes divided into anterior and lateral. Also called *intertransversales*. See Table of Muscles in the Appendix.

in"ter·trans·verse (·trans·vurss', ·trans·) [*inter-*; *transversus*]. Connecting the transverse processes of contiguous vertebrae.

in"ter·tri'go (in·tur·try'go, ·tree'go) [L., from *inter-trītus*, from *terere*, to rub]. An erythematous eruption of the skin produced by friction of adjacent parts. —**intertrig'inous**, *adj.*

in"ter·tro·chan·ter'ic (in·tur·tro·can·terr'ick) [*inter*; G. *trochantēr*, trochanter]. Between the trochanters.

in"ter·tu'bu·lar [*inter-*; L. *tubulus*, small pipe]. Between tubes or tubules.

in'ter·val [L. *intervallum*, interval]. 1. The time intervening between two points of time. 2. The lapse of time between two recurrences of the same phenomenon. 3. The empty space between any two things or parts of the same thing.

a-c i. The time between the beginning of the (presystolic) and the (systolic) waves of the venous pulse, used to estimate atrioventricular conduction. It actually measures the time elapsing between the right atrial contraction and the onset of the left ventricular ejection, normally two seconds or less.

A-V i. The interval between inception of atrial and ventricular contractions determined from cardiograms, pressure pulses, or volume curves of the heart.

cardioaortic i. The interval between the apex beat and the arterial pulse.

electrocardiographic i. 1. The duration of the waves (P, QRS, T) of an electrocardiogram. 2. The intervals between the waves (P-R, Q-T, R-R, ST-T, T-Q).

focal i. The distance between the anterior and posterior focal points.

isometric i. Period from the beginning of ventricular contraction to the beginning of ejection of blood; also called *presphygmic i.*

lucid i. *In psychiatry*, a transitory return of the normal mental faculties, seen in psychoses or delirious conditions.

P-Q i. The time interval from the beginning of the P wave to the beginning of the QRS complex of the electrocardiogram; the time taken for the activation process leaving the sinoauricular (SA) node to reach the ventricles.

P-R i. The time between the rise of the P wave and the Q wave if present, or the R wave of standard electrocardiogram; used to measure conduction time of impulses from the S-A node to the ventricles.

QRS i., Q-S i. The duration of the process of excitation of the ventricles, measured from the beginning of Q (or R) to the end of S on the electrocardiogram; usually 0.10 second or less.

Q-T i. The time from the beginning of the QRS complex to the end of the T wave. It measures the duration of electric systole. Bazett's formula is used to calculate the ideal Q-T interval for any rate: $QT = K\sqrt{C}$, where C = cycle length, K = 0.36 to 0.42.

R-R i. In the electrocardiogram, the time from one R wave to the next.

S-T i. The time between the end of the QRS complex and the end of the T wave. It represents the time between the completion of depolarization of the ventricles and their complete repolarization.

in"ter·vas'cu·lar [L. *inter*, between; *vasculum*, small vessel]. Located between vessels.

in"ter·ven·tric'u·lar [*inter*; L. *ventriculus*, belly]. Situated between ventricles, as interventricular septum.

in"ter·ver'te·bral [*inter*; L. *vertebra*, vertebra]. Between the vertebras, as an intervertebral disk.

in"ter·vil'lous [*inter*; L. *villus*, tuft of hair]. Situated between villi.

in"ter·zo'nal [*inter*; G. *zōnē*, belt]. Between zones. Applied to filaments between daughter cells in the telophase of mitosis.

in·tes'tine [L. *intestinum*, intestines]. The part of the digestive tube extending from the pylorus to the anus. It consists of the small and large intestine. The former is about 6½ meters (20 feet) in length, and extends from the pylorus to its junction with the large intestine at the cecum. Three divisions are described—the duodenum, 23 cm. long, the jejunum, 2.3 meters long, and the ileum, 4 meters long. The large intestine is about 1.6 meters (5 feet) long, and consists of the cecum (with the vermiform appendix), the colon, and the rectum. The wall of the intestine is made up of four coats, mucous, submucous, muscular and serous. Embedded in the wall are minute glands, and projecting from the surface in the small intestine, are the villi. See Plates 13, 14. —intestinal, *adj.*

in"tes·ti'num [L.]. See intestine.

i. caecum. The cecum.

i. crassum. The large intestine.

i. ileum. The ileum.

i. jejunum. The jejunum.

i. rectum. The rectum.

i. tenue. The small intestine.

i. tenue mesenteriale. That portion of the small intestine which has a mesentery, namely the jejunum and ileum.

in'ti·ma [L. *intimus*, innermost]. The innermost of the three coats of a blood vessel. See Plate 8. —intimal, *adj.*

in'tine (in'tyne, -tin) [G. *intus*, within]. The thin inner coat of an endospore.

Intocostrin. Trade-mark for a physiologically standardized curare extract or for its active component tubocurarine chloride; administered intravenously or intramuscularly. Used to produce relaxation of the voluntary muscles in the treatment of certain neurologic conditions. Also used to improve relaxation during anesthesia.

in'toe"ing [L. *in*, in; M.E. *to*]. Pointing the toes inward in walking.

in·tol'er·ance [L. *intolerantia*, from *intolerans*, intolerant]. 1. Lack of capacity to endure, as intolerance of light or pain. 2. Sensitivity as to a drug.

in·tor'tor [L. *intortus*, from *intorquere*, to twist]. The muscle tilting the vertical meridian of the eye toward the superior rectus muscle.

in·tox'i·cant [L. *in*, in; G. *toxikon*, poison]. Intoxicating; capable of producing intoxication or poisoning.

in·tox'i·cant. An agent capable of producing intoxication.

in·tox"i·ca'tion [*in*; *toxikon*]. 1. Poisoning, as by a drug, serum, alcohol, or any poison. 2. State of being intoxicated, especially the acute condition produced by overindulgence in alcohol; drunkenness.

pathologic i. An alcoholic psychosis marked by unusual symptoms, as epileptiform seizures, confusion, illusions, anxiety, rage, violent criminal tendencies, and sometimes hallucinations; it is usually followed by amnesia for the episode. May occur in susceptible individuals after only a small amount of alcohol is consumed. Syn., *mania à potu*.

septic i. A form of poisoning resulting from absorption of products of putrefaction.

water i. A condition characterized by cramps, dizziness, headache and vomiting; produced by the administration of large quantities of water with the resulting dilution of body salts. May occur in an experimental animal or in man, if certain diseases are present.

in"tox·im'e·ter (in"tok·sim'e·tur). See breath alcohol method.

in'tra- [L., within]. 1. A prefix signifying within or into. 2. In anatomy, a prefix denoting situated within a specified part.

in"tra·ab·dom'i·nal [*intra*; L. *abdomen*, belly]. Within the cavity of the abdomen, as intraabdominal pressure.

in"tra·ac'i·nar (in·truh·ass'i·nur) [*intra*; L. *acinus*, grape]. Situated or occurring within an acinus.

in"tra·ar·tic'u·lar [*intra*; L. *articulus*, joint]. Within a joint.

in"tra·a'tri·al [*intra*; L. *atrium*, atrium]. Within one of the atria of the heart.

Intracaine. Trade-mark for β-diethylamino-ethyl-p-ethoxy-benzoate, also known as diethoxin, a local anesthetic.

in"tra·cap'su·lar [*intra*; L. *capsula*, small box]. Within the fibrous capsule of a joint, as intracapsular fracture.

in"tra·car"ti·lag'i·nous (·kahr"ti·ladj'i·nus) [*intra*; L. *cartilago*, cartilage]. Within a cartilage, as intracartilaginous ossification; endochondral.

in"tra·cav'i·ty [*intra*; L. *cavus*, from *cavus*, hollow]. Within a cavity.

in"tra·cel'lu·lar [*intra*; L. *cellula*, small storeroom]. Within a cell.

in"tra·cra'ni·al [*intra*; G. *kranion*, skull]. Within the skull, as intracranial pressure.

in"tra·cu·ta·ne·ous [*intra*; L. *cutis*, skin]. Within the skin substance; applied to injection of substances into the skin.

in"tra·cys'tic [*intra*; G. *kystis*, bladder]. Situated or occurring within a cyst or bladder.

in"tra·der'mal, in"tra·der'mic [*intra*; G. *derma*, skin]. Within the skin.

in"tra·du'ral. Within the dura mater.

in"tra·fu'sal (in·truh·few'sul) [*intra*; L. *fusus*, spindle]. Pertaining to the striated muscular fibers contained in a muscle spindle.

in"tra·gem'mal (in·truh·jem'ul) [*intra*; L. *gemma*, bud]. Within a bud or a bulbous nerve end, as a taste bud of the tongue.

in"tra·ge·ner'ic. Within a genus.

in"tra·group', in"tra·group'al [*intra*; It. *gruppo*, group]. Within a group.

in·tra·he·pat'ic [*intra*; G. *hēpar*, liver]. Within the liver.

in"tra·lo'bar [*intra*; G. *lobos*, lobe]. Within a lobe.

in·tra·lob'u·lar [*intra*; dim. from *lobus*]. Within lobule, as an intralobular vein of the liver.

in·tra·lu'mi·nal [*intra*; L. *lumen*, light]. Within the lumen of a hollow or tubelike structure.

in"tra·med'ul·lar·y 1. Within the substance of the spinal cord or medulla oblongata. 2. Within the substance of the bone marrow, as an intramedullary nail. 3. Within the substance of the adrenal medulla.

in"tra·mem'bra·nous [*intra*; L. *membrana*, skin]. Developed or taking place within a membrane, as intramembranous ossification.

in"tra·mu'ral [*intra*; L. *murus*, wall]. Within the substance of the walls of an organ, as intramural fibroid of the uterus.

in"tra·mus'cu·lar [*intra*; L. *musculus*, muscle]. Within the substance of a muscle, as intramuscular injection of drugs.

in"tra·na'sal (in-truh-nay'zul) [*intra*; L. *nasus*, nose]. Within the cavity of the nose.

in"tra·nu'cle·ar [*intra*; L. *nucleus*, kernel]. Within a nucleus.

in"tra·oc'u·lar [*intra*; L. *oculus*, eye]. Within the globe of the eye, as intraocular hemorrhage.

in"tra·o'ral [*intra*; L. *os*, mouth]. Within the mouth.

in tra·or'bit·al [*intra*; L. *orbita*, orbit]. Within the orbit.

in"tra·pa·ri'e·tal [*intra*; L. *paries*, wall]. 1. Within the wall of an organ. 2. Within the parietal region of the cerebrum, as the intraparietal fissure. 3. Within the body wall.

in"tra·pel'vic [*intra*; L. *pelvis*, basin]. Within the pelvic cavity.

in"tra·per"i·to·ne'al [*intra*; G. *peritonaion*, membrane which contains the lower viscera]. Within the peritoneum, or peritoneal cavity, as intraperitoneal injection of drugs.

in"tra·pleu'ral (in-trah-ploor'ul) [*intra*; G. *pleura*, rib]. Within the pleural cavity.

in"tra·scro'tal [*intra*; L. *scrotum*, scrotum]. Within the scrotal sac.

in"tra·spi'nal [*intra*; L. *spina*, thorn]. Within the spinal canal, as intraspinal anesthesia.

in"tra·stro'mal [*intra*; G. *strōma*, mattress, bed]. Within the stroma of an organ, part, or tissue.

Intra-sul. Trade-mark for an aqueous preparation containing 1% of a valuable sulfur and used in arthritis by intravenous or intramuscular injection.

in"tra·the'cal [*intra*; G. *thēkē*, a case]. Old term for intraspinal.

in"tra·tra·che·al (in-trah-tray'kee-ul) [*intra*; G. *tracheia*, rough]. Within the trachea, as intratracheal insufflation through a tracheal tube introduced through the larynx.

in"tra·tu'bal [*intra*; L. *tubus*, pipe]. Within a tube within a uterine tube.

in"tra·u·re'thral [*intra*; G. *ourēthra*, urethra]. Within the urethra.

in tra·u'ter·ine (in-truh-yoo'tur-in, -yoo'tuh-ryne) [*intra*; L. *uterus*, womb]. Within the uterus.

in tra·vas'cu·lar [*intra*; L. *vasculum*, small vessel]. Within the blood vessels.

in tra·ve'nous [*intra*; L. *vena*, vein]. Within, or into, the veins, as intravenous injection.

in"tra·ven·tric'u·lar [*intra*; L. *ventriculus*, belly]. Located, or occurring, within a ventricle.

in tra·ves'i·cal [*intra*; L. *vesica*, bladder]. Within the urinary bladder.

in"tra·vi'tal [*intra*; L. *vita*, life]. Occurring during life, as intravital staining of cells.

in·trin'sic [L. *intrinsecus*, inward]. Inherent; situated within a peculiar to a part, as the intrinsic muscles of the larynx.

in'tro- [L. *intro*, inwardly]. A prefix signifying *within* or *into*; *inward*.

in"tro·ces'sion [L. *introcessum*, from *introcedere*, to go into]. A depression, as of a surface.

in'tro·fi·er A liquid which, when not added in too great quantity, will help emulsification by lowering the interfacial tension.

in tro·flex'ion [L. *intro*, inwardly; *flexio*, bending]. A bending in; inward flexion. *Obs.*

in tro'i·tus [L.]. An aperture or entrance, particularly the entrance to the vagina.

in"tro·jec'tion [L. *intro*, inwardly; *iacere*, to throw]. 1. A mechanism by which there is possible an absorption of parts of the environment or of the personality of others into one's own personality. 2. In psychiatry and psychoanalysis, the absorption into and toward oneself of concepts and feelings generated toward another person or object; an unconscious process. It is a partial form of identification (in which the person behaves like another person). Its effect in mental disorders is to motivate irrational behavior toward oneself, e.g. self-neglect or suicide arising from aggression stimulated by others, then introjected.

in"tro·mis'sion [L. *intromissum*, from *intromittere*, to send into]. Insertion, the act of putting in, the introduction of one body into another, as of the penis into the vagina.

in"tro·mit'tent [*intromittere*]. Conveying or allowing to pass into or within, as into a cavity; refers to the penis, which carries the semen into the vagina.

in"tro·spec'tion [L. *introspectum*, from *introspicere*, to look into]. The act of looking inward, as into one's own mind.

morbid i. The morbid habit of self-examination; irrational and obsessive dwelling upon one's own thoughts, feelings, impulses, fears, or conduct.

in"tro·sus·cep'tion. See *intussusception*.

in"tro·ver'sion (in-tro-vur'shun, -zhun) [L. *introversus*, inward]. 1. A turning within, as a sinking within itself of the uterus. 2. In psychopathology, a turning inward of psychic energy in the form of introspection and subjective thinking.

in'tro·vert" [L. *intro*, within; *vertere*, to turn]. One whose interests are directed inwardly upon himself and not toward the outside world.

in"tro·vert' To turn one's interests to oneself rather than to external things.

in"tu·ba'tion [L. *in*, in; *tubus*, tube]. The introduction of a tube into a hollow organ to keep it open, especially into the larynx to insure the passage of air in edema of the glottis or in the acute stage of diphtheria.

in'tu·ba"tor [*in*; *tubus*]. An instrument used for the introduction of an intubation tube.

in"tu·mes'cence [L. *intumescere*, to swell up]. 1. A swelling of any character whatever, as an increase of the volume of any organ or part of the body. 2. The process of becoming swollen. 3. In neuroanatomy, the cervical and lumbar enlargements. Syn. *tumescence*.

in"tus·sus·cep'tion [L. *intus*, within; *suscipere*, to receive]. The receiving of one part within another; especially the invagination, slipping, or passage of one part of the intestine into another, occurring usually in young infants. Acute intussusception is characterized by the symptom complex of paroxysmal pain, vomiting, the presence of a sausage-shaped tumor in the lower abdomen, and the passage of blood and mucus per rectum.

agonal i. Single or multiple areas of intussusception, sometimes found in the small intestine at the time of death.

chronic i. One occurring gradually without acute symptoms.

colic i. One involving the colon only.

double i. One in which another area of bowel invaginates into an existing intussusception.

enteric i. One involving the small intestine only. Also called *ileal i.*

enterocolic i. Invagination of the ileum into the colon. See ileocecal i., ileocolic i.

gastric i. One in which a jejunal loop may escape through a gastroenterostomy into the stomach.
ileocecal i. One which takes place at the ileocecal valve, the cecum as well as the ileum being invaginated into the colon.
ileocolic i. An intussusception of the ileum through the ileocecal valve, without invagination of the cecum.
multiple i. An enteric intussusception in which there are more than two areas of small intestine involved.

in"tus-sus-cep'tum [*intus*; *susceptus*]. In intussusception, the invaginated portion of intestine.

in"tus-sus-cip'i-ens (in"tus-suh-sip'ee-enz) [*intus*; *suscipere*]. In intussusception, the segment of the intestine receiving the other segment.

in'u·lin [L., elecampane]. Elecampane. The root of *Inula helenium*, of the family Compositae. It contains a carbohydrate inulin, a volatile oil, and certain crystallizable principles. See alantolactone.

in'u·lase. An enzyme capable of converting inulin into levulose.

in'u·lin. $(C_6H_{10}O_5)_n$. A carbohydrate from many plants of the Compositae, yielding levulose on hydrolysis: white amorphous powder or granules, odorless, almost tasteless, and soluble in hot water: used to measure glomerular filtration rate (*inulin clearance*). After intravenous injection, it is not metabolized and is quantitatively excreted by the kidney by glomerular filtration only.

in·unc'tion [L. *inunctio*, from *inunguere*, to anoint]. 1. The act of rubbing an oily or fatty substance into the skin. 2. The substance used.

in u'te·ro [L.]. Within the uterus; not yet born.

in vac'u·o [L.]. In a vacuum; in a space from which most of the air has been exhausted.

in·vag"i·na'tion (in-vadj"i-nay'shun) [L. *in*, in; *vagina*, sheath]. 1. The act of ensheathing or becoming ensheathed. 2. The process of burrowing or infolding to form a hollow space within a previously solid structure, as the invagination of the nasal mucosa within a bone of the skull to form a paranasal sinus. 3. Intussusception. 4. *In embryology, the infolding of a part of the wall of the blastula to form a gastrula.* —**invag'inate,** *adj.*, *v.*
basilar i. See platybasia.

in'va·lid [L. *invalidus*, not strong]. 1. Not well. 2. One who is not well, especially one who is chronically ill or whose convalescence is slow. 3. Suitable or adapted for an invalid person, as invalid diet, invalid chair. —**invalidism,** *n.*

in·va'sin. See hyaluronidase.

in·va'sion [L. *invasio*, from *invadere*, to attack]. 1. That period in the course of disease, especially an infectious disease, immediately following inception or infection, and preceding prodromal signs and symptoms. 2. The process whereby bacteria or other microorganisms enter the body and subsequent multiplication of pathogens causes disease.

in·ver"mi·na'tion. Helminthiasis.

in·ver'sion (in-vur'zhun, -shun) [L. *inversio*, from *invertere*, to turn upside down]. 1. The act of turning inward. 2. A turning upside down. 3. *In chemistry*, usually the change of a compound having optical activity into one or more other compounds conferring opposite optical activity on the product. Also the change of any compound into an isomeric form.
i. of bladder. A condition, occurring only in females, in which the urinary bladder is in part or completely pushed into the dilated urethra.
i. of the foot. A turning of the sole of the foot inward, so that the medial margin is elevated.
i. of uterus. A rare condition in which the fundus of the uterus is forced or pulled through the cervix and comes into close contact with, or protrudes through, the external os and even through the vagina.
sexo-esthetic i. The adoption of the habits, manners, and costume of the opposite sex. Also see *eonism*, *transvestitism*.
sexual i. *In psychiatry*, the direction of the sexual instinct toward one of the same sex; homosexuality.

in·ver'sive [*invertere*]. Applied to enzymes which convert sucrose into invert sugar.

in·vert'. To turn inward.

in'vert [*invertere*]. *In psychiatry*, a homosexual.

in·ver'tase (in-vur'tace, in'vur-tase). See saccharase.

in·ver'te·bral [L. *in-*, not; *vertebra*, joint]. Without a spinal column.

In·ver"te·bra'ta [*in-*; *vertebra*]. A division of the animal kingdom which includes all except the animals with a notochord.

in·ver'te·brate [*in-*; *vertebra*]. Without a spinal column, invertebral.

in·ver'te·brate. An animal without a notochord or vertebral column.

in·ver'tin, in'vert·in. See saccharase.

in·ver'tose. See invert sugar.

in'vert sug'ar. A mixture of approximately equal parts of dextrose and levulose, obtained from the hydrolysis of sucrose. It is levorotatory, fermentable, and reduces Fehling's solution. Also called *invertose*.

in·vest'ing [L. *investire*, to clothe]. Enveloping, enclosing, embedding.

in·vest'ment [*investire*]. A sheath; a covering.
fibrous i. General term describing an outer sheath of connective tissue found about various organs outside the proper capsule of the organ.

in·vet'er·ate [L. *inveteratus*, of long standing]. Long established, chronic, resisting treatment.

in"vi·ril'i·ty [L. *in-*, not; *virilitas*, manhood]. Lack of virile power; male impotency.

in"vis·ca'tion [L. *in*, in; *viscare*, to besmear]. Insalivation.

in vit'ro [L.]. In glass; referring to a process or reaction carried out in a culture dish, test tube, etc., as opposed to in vivo.

in vi'vo [L.]. In the living organism: used in contrast to in vitro.

in"vo·lu'crum [L., that in which something is wrapped]. 1. The covering of a part. 2. New bone laid down by periosteum around a sequestrum in osteomyelitis.

in·vol'un·tar"y [L. *involuntarius*, involuntary]. Performed or acting independently of the will, as involuntary muscles of viscera.

in'vo·lute [L. *involutum*, from *involvere*, to roll up]. *In biology*, rolled up, as the edges of certain leaves in the bud.

in"vo·lu'tion [L. *involutio*, from *involvere*]. 1. A turning or rolling inward. 2. The retrogressive change to their normal condition that certain organs undergo after fulfilling their functional purposes, as the uterus after pregnancy. 3. The period of regression or the process of decline or decay which occurs in the human constitution after middle life. —**involutional,** *adj.*
buccal i. The folding in of the ectoderm, which forms the stomodeum. Obs.
i. forms. A form seen in microorganisms that have undergone degenerative changes as a result of unfavorable environment.
i. of the uterus. The return of the uterus to its normal weight and condition after childbirth.
senile i. Senile atrophy.

in'ward [AS. *inweard*]. Toward the inside or center.

Iocamfen. Trade-mark of a liquid obtained by the interaction of iodine, phenol, and camphor. It contains about 7.25% of free iodine and is used as an antiseptic and fungicide.

Iocapral. A proprietary tablet containing theobromine, mebaral, and calcium iodide di-triethanolamine. Used as a vasodilator sedative, and antispasmodic.

Iodalbin. Trade-mark for compound of iodine and blood albumin the substance is brown powder containing bout 21.5% of iodine and has been used where iodin therapy is indicated.

I-o-da-moe'ba (eye-o-duh-mee'buh, eye-od uh) [G. *ioeidēs*, violetlike; *amoibē*, change]. A genus of amebas.

I. butschlii. A small, sluggish ameba which is nonpathogenic but is parasitic in the large intestine of man.

I. williamsi. Synonym for *I. bütschlii*.

I'o-date. Any salt of iodic acid.

Iodeikon. A trade-mark for iodophthalein sodium, $C_{20}H_8O_4I_4Na_2$ used as radiopaque medium.

Iod-ethamin. Trade-mark for ethylenediamine dihydriodide, $C_2H_4(NH_2)_2 \cdot 2HI$, used in iodine therapy

Iodex. A proprietary ointment containing iodine in organic combination with fatty acid; also with methyl salicylate Used for minor cuts, wounds, and abrasions.

I-od'ic ac'id (eye-od'ick) HIO_3 A crystalline powder soluble in water In 1 to 3% solution it has been employed in the treatment of trachoma and indolent corneal ulcers.

Iodisin. Trade-mark for calcium iodoricinoleate used in iodine therapy

I' dide. Any binary compound, such as salt or ester containing iodine having negative valence of one.

I o-dim try [*iodine*; G. *metron*, measure]. Usually volumetric analysis by titration with iodine solution.

I'o-dine (eye dyne, -deen, -din) [*ioeidēs*] (*iodum*) I = 126.91 A nonmetallic element occurring as gray-black plates or granules with metallic luster and characteristic odor It is only sparingly soluble in water but more soluble in iodide solutions, soluble in 13 parts of alcohol or 80 parts of glycerin. A local irritant and germicide, generally pplied for the latter purpose in the form of 2 or 3% solution. An ointment or tincture is used for fungous infections Iodine is normal constituent of the thyroid gland and essential for its proper functioning. It is used as preventive of simple goiter and in the treatment of exophthalmic goiter In syphilis and tuberculosis it causes breaking down of the local lesions, and in pleurisy bronchitis, etc it exerts liquefying action on viscid secretions For internal administration, preference is usually given to use of the iodides, although the strong iodine solution is sometimes employed See Table of Normal Values of Blood Constituents in the Appendix

I. antiseptic solution. Iodine tincture.

I. number A measure of unsaturation of fatty acids (*Hanus method*) the mber of grams of iodine capable of being absorbed by 100 gm of lipid. (*Schmidt Nielsen method*) Unsaturated bonds of the lipid are saturated with excess bromine and the excess is determined iodometrically (*Kretchmer Holman-Burr method*) Same as Schmidt-Nielson method, using pyridine sulfate dibromide as the brominating agent.

I. ointment (*unguentum iodi*) An antiseptic and counterirritant; contains 4% each of iodine and potassium iodide.

I. pentoxide. I_2O_5 Iodic anhydride. White crystalline powder used i determining carbon monoxide conte t of gases

I. solution (*liquor iodi*) A solution of 20 Gm. iodine and 24 Gm. sodium iodide in distilled water to 1000 cc.

I. tincture (*tinctura iodi*) A solution of 20 Gm. iodine and 24 Gm. sodium iodide in diluted alcohol to 1000 cc.

I. value See *i.* number

phenolated I. solution (*liquor iodi phenolatus*) A solution prepared by exposing to sunlight until almost colorless mixture of 15 cc. strong iodine solution, 6 cc. liquefied phenol, 165 cc. glycerin, and water to make 1000 cc. Also called *Boulton solution*, *French mixture*, *carbolized i. solution*.

protein-bound I. (PBI) Iodine attached to protein, commonly iodine bound to the protein fraction of the blood; in most instances, it reflects the level of circulating thyroid hormone.

strong I. solution (*liquor iodi fortis*) A solution of 50 Gm. iodine and 100 Gm. potassium iodide in distilled water to 1000 cc.; used for systemic effect of iodine. Dose, 0 12–0 3 cc. (2–5 min.) t i.d. Also antidotal to many alkaloids. Also called *Lugol's solution*, *compound i. solution*.

strong I. tincture (*tinctura iodi fortis*) A solution of 70 Gm. iodine and 50 Gm. potassium iodide in 50 cc. distilled water and alcohol to 1000 cc.

I od'i nin (eye-od' nin) A purple-bronze antibiotic pigment produced by *Chromobacterium iodinum*, it is di-N-oxide of dihydroxyphenazine. Iodinin inhibits the growth of streptococci, even in very dil te solutions.

I'o-din' phil I' din o-phile [*iodine*; G. *philein*, to love]. 1 Having an affinity for iodine stain. 2 A histologi element staining readily with iodine. —**iodinophil'ic,** *adj*

I'o-din phil'i a. See *iodophilia*.

Iodipin. Trade-mark for an iodized vegetable oil. The substance is yellowish brown liquid containing 0 54 Gm. of combined iodine per cc. Used as are the alkaline iodides or in 40% strength as contrast medium in roentgen diagnosis.

I'o-dism [*iodine*] A condition arising from the prolonged use of iodine or iodine compounds marked by frontal headache, coryza, ptyalism, and various skin eruptions, especially acne.

Iodival. Trade-mark for alpha-monoiodoisovalerylcarbamide. The substance is used where iodine therapy is indicated.

I'o dized [*iodine*]. Impregnated with iodine. —**iodize,**

I-o do- (eye-o do- eye do-) **iod-** [*iodine*]. *In chemistry*, combining form signifying *iodine* or *an iodine compound*.

I de- -ca tic ac'id. ICH_2COOH; compound of importance in experimental biochemistry because it has the bility to interfere with phosphorylating enzyme activity thereby inhibiting absorption of glucose generally employed in the form of salt.

I-o do- l'phi on ic ac'id. $C_6H_5.CH(COOH)CH_2.C_6H_2I_2OH$ β-(4-hydroxy-3,5-diiod phenyl)-α-phenylpropionic acid, white or faintly yellowish crystalline powder insol ble in water It is used orally as contrast medium in cholecystography Average dose, 3 Gm. (45 gr.) See *priodax*.

I-o"do- n"ti py'rine (-an ti-pye reen, -rin) See *iodopyrine*.

Iodobismitol. Trade-mark for sol tion of sodium iodobismuthite and sodium iodide with either benzocaine or saligenin. It has been used as an antisyphilitic

Iodo-casein. Trade-mark for compound of iodine combined with milk casein. The substance is yellowish brown powder containing 18% of iodine. Used in iodine therapy

I d -chlor"hy drox'y q in. C_9H_5ClINO 5-chloro-7-iodo-8-hydroxyquinoline; brownish-yellow powder practically insoluble in water Introduced as surgical dusting powder it is now

used for treating amebic dysentery; in combination with boric acid, lactic acid, zinc stearate, and lactose (compound iodochlorhydroxyquin powder) it is administered by intravaginal insufflation in treatment of *Trichomonas vaginalis* vaginitis. See *vioform*.

Iodochlorol. Trade-mark for an iodized and chlorinated peanut oil used as radiopaque medium.

I-o″do-der ma [*iodide*, G. *derma*, skin]. Skin eruptions due to iodine; generally used in reference to pustular eruption caused by the ingestion of iodine compounds.

I-o do-form (*iodoformum*) Triiodomethane, CHI. A yellow finely crystalline powder having peculiar penetrating odor. It is readily soluble in chloroform and ether, less readily in alcohol, and only slightly in water. An antiseptic and anesthetic used as local dressing to wounds and painful ulcers. Suppositories containing 0.2–0.6 Gm. are used in internal hemorrhoids.

I-o do gor go′ic ac′id. Diiodotyrosine.

Iodol. Trade-mark for tetraiodopyrrole; C_4HI_4N; yellowish-gray powder which has been used as surgical dusting powder.

I-o do-meth ane. Methyl iodide.

I″o-dom try [*iodide*; G. *metron*, measure]. Usually volumetric analysis for iodine present in, or liberated by compound. —**iodomet ric**, *adj.*

I-o do pa no′ic ac′id. Generic name for 3-(3-amino-2,4,6-triiodophenyl)-2-ethylpropanoic acid, cholecystographic medium available under the trade-marked name *telepaque*. See *iopanoic acid*.

I-o″do-phe nol. 1. C_6H_4OHI. Para-iodophenol; has been used as an antiseptic. 2. A solution of 20 parts of iodine in 76 parts of fused phenol with 4 parts of glycerin.

I o′do-phil. See *iodinophil*.

I-o do phil′i-a [*iodide*; G. *philein*, to love]. A pronounced affinity for iodine; the term is applied to the protoplasm of leukocytes in purulent conditions.

I-o″do-phthal′ein (eye-o do thal′een, -thal′ee-in, eye o-do-). Tetraiodophenolphthalein. $C_{20}H_{10}I_4O_4$. A light yellow powder used externally as an antiseptic dusting powder. See *nosophen*.
soluble I. See *iodophthalein sodium*.

I-o″do phthal′ein so di um (*iodophthaleinum sodicum*) $C_{20}H_8I_4O_4Na_2.3H_2O$. The disodium salt of tetraiodophenolphthalein; pale, blue-violet powder soluble in about 7 parts of water. It is employed to render the gallbladder opaque for roentgenologic examination. It may be administered intravenously or orally; the dose is to be adjusted to the weight of the patient. Syn., *soluble iodophthalein*, *tetiothalein sodium*. See *iodeikon*.

I″o-dop sin [*iodide*; G. *opsis*, vision]. Visual violet; conjugated carotenoid protein found in the cones of the retina.

I-o do py′ra-cet in jec′tion. Generic name for an injectable aqueous solution of the diethanolamine salt of 3,5-diiodo-4-pyridone-*N*-acetic acid $C_7H_5I_2NOCH_2COONH_2(CH_2CH_2OH)_2$; radiopaque medium. A 35% w/v solution is used for intravenous urography and retrograde pyelography, also for cholangiography, venography and arteriography. A concentrated solution, 70% w/v, is used for cardioangiography. Syn., *diodone injection*. See *diodrast*.

I-o do py rine (eye-o do-pye reen, -rin, eye o-do-). Iodoantipyrine. A chemical compound of iodine and antipyrine of the composition $C_{11}H_{11}IN_2O$. Formerly used as antipyretic.

I″o-do″sa-lic yl′ ac′id. $C_6H_3IOHCOOH$. A colorless, crystalline compound which has been used as an antiseptic in the same manner as iodoform.

Iodostarine. Trade-mark for an iodine addition product of taririe acid, derived from the fruit of species of *Picramnia*. The product contains 47.5% iodine. A white, crystalline solid. Used where iodide therapy is indicated.

I-o do-ther′ py [*iodide*; G. *therapeia*, treatment]. The treatment of disease by the use of iodine or its compounds.

I-o do-thy′mol. See *aristol*.

I-o do-thy′rine. Thyroiodine.

I″o-do-thy″re-glob u lin [*iodide*; G. *thyreos*, shield; L. *globulus*, little ball]. An iodine-containing globulin found in the thyroid gland.

I″o-dox″y-ben-zo′ic ac′id. $C_6H_4(IO_2)COOH$. A colorless, crystalline compound whose salts, notably the calcium compound, are used for antiarthritic and analgesic effects.

I″o-dox′yl. The official British Pharmacopoeia title for *sodium iodomethamate*. See *neo-iopax*.

I-om tar (eye-om′i tur) [G. *ion*, from *ienai*, to go; *metron*, measure]. A special type of monitor ionization chamber for the measurement of roentgen rays.

I′ n [*ion*]. An atom or group of atoms which, by suitable application of energy (for example, through the action of roentgen or radium rays, or by the dissociation of molecule) has lost or gained one or more orbital electrons and has thus become capable of conducting electricity.
dipolar I. Zwitterion.
I. exchange. The reversible exchange of ions in solution with ions present in solid material, called an *ion exchanger*. This consists of matrix of insoluble material, which may be inorganic or organic, interspersed with cations and anions, certain of which may participate in the exchange process.
I. transfer. The migration of ionic medication through intact skin under the influence of direct electric current; also called *iontophoresis*.
negative I. Anion.
positive I. Cation.
zwitter I. See *zwitterion*.

Ionescu, Toma [*Rumanian surgeon*, 1860–1926]. Known for his early studies of spinal anesthesia at high level. Introduced an operation of cervical sympathectomy for angina pectoris (1916).

I-on′ic strength (eye on ick). Measure of the intensity of the electric field in solution; half the sum of the activity of each ion in solution, multiplied by the square of its ionic charge.

I-o ni-um (eye-o nee-um) [G. *ion*, from *ienai*, to go]. A radioactive element which emits alpha particles; an isotope of thorium and the direct parent of radium.

I″on i za tion [*ion*]. Electrolytic dissociation; the production of ions. —**I′onize**,
intermittent I. Further ionization of ions at surface, occurring at the same time as neutralization of electrons at the surface.
specific I. *In radiobiology*, the number of ion pairs produced per unit length of path of radiation, e.g., per cm of air or micron of tissue.

I″on-iz′i g e-vent′ Any occurrence of process in which an ion or group of ions is produced, as by passage of alpha or beta particles or gamma rays, through gas.

I″on-om′ ter [*ion*, G. *metron*, measure]. An instrument for measuring -ray dosages, based upon the production of ions in air by -rays.

I″o-none′ I′ -none. A ketone, $C_{13}H_{20}O$ prepared from citral and used as synthetic violet odor.

I-on -phose (eye-on fose, eye on-o-fose) [G. *ion* violet; *phōs*, light]. A violet phose.

I-on″to pho-re sis (eye-on to-fo-ree sis) [G. *ion* from *ienai*, to go; *phoresis*, from *pherein*, to bear]

1 The movement of charged particles through a field under the influence of an electric current. 2. *I medicine*, a method of introducing charged particles into the skin or other tissues by means of an electric current. It utilizes the principle that ions are repelled from an electrode of like charge.

I on to quan tim e-ter (eye-on to-kwon-tim'i-tur) See *ionometer*.

I''o-pa no'ic ac'id. U.S.P name for *iodopanoic acid*.

Iopax. Trade-mark for sodium 2-oxy-5-iodopyridine-N-acetate, a water-soluble compound used as a contrast medium in radiology.

I'' phen dyl ate in-jec'tion. U.S.P. name for a sterile mixture of isomers of ethyl iodophenylundecylate; $I.C_6H_4.CH(CH_3)CH_2(CH_2)_8CH_2COOC_2H_5$ of uniform but unknown proportions: a colorless to pale yellow viscous liquid, very slightly soluble in water; used as a radiopaque medium, particularly for study of the lumbar region. Syn., *ethyl iodophenylundecylate*, *ethyl iodophenylundecylate injection*. See *pantopaque*.

I''o-pho'bi a [G *ios*, poison; *phobos*, fear]. A morbid fear of poison.

I''o-pro pane. See *iothion*.

Iothion. Trade-mark for a brand of iopropane, chemically diiodohydroxypropane. The substance is a yellowish, oily liquid containing about 80% of iodine; used externally in oil solution or as an ointment for systemic effect of iodine.

Ip e-cac [from the Tupi] (*ipecacuanha*) The dried rhizome and roots of *Cephaelis ipecacuanha*, known as Rio or Brazilian ipecac, or of *C acuminata*, known as Cartagena, Nicaragua, or Panama ipecac. It yields not less than 2% of ether-soluble alkaloids, the most important from a therapeutic standpoint being emetine and cephaeline. Among other alkaloids present are psychotrine, O-methylpsychotrine, and emetamine. The action of ipecac depends on the dosage employed. emetic, 1 2 Gm. (15–30 gr); nauseating expectorant and diaphoretic, 0 03–0.12 Gm. (½–2 gr) stomachic, 16–32 mg. (¼–½ gr)

I. and opium powder (*pulvis ipecacuanhae et opii*) A diaphoretic and sedative. Dose, 0 3–0.6 Gm. (5–10 gr) preferably in conjunction with hot drinks. Syn., *Dover's powder*.

I. fluidextract (*fluidextractum ipecacuanhae*) Contains 2% of ether-soluble alkaloids. Dose, emetic, 1 2 cc. (15–30 min.); expectorant, 0 06–0.12 cc (1 2 min.)

I. syrup (*syrupus ipecacuanhae*) The preferred form of administration for expectorant purposes. Dose, emetic, 15 cc. (4 fluidrachms); nauseating expectorant, 1 2 cc. (15–30 min.)

I. tincture (*tinctura ipecacuanhae*) Contains 0.2% of alkaloids. Dose, emetic, 8 cc. (2 fluidrachms) expectorant, 0 3–1.0 cc. (5–15 min.)

I. wine. The tincture is now used in place of this.

undulated I. The root of *Richardia scabra*, an adulterant of ipecac.

white I. The emetic root of *Ionidium ipecacuanhae*; an adulterant of ipecac.

wild I. The North American plant, *Euphorbia ipecacuanhae*. The root is emetic and cathartic.

Ip e-cine (ip'i-seen, -sin) Emetine.

''I''-per-so na. The sum of all the cortical or discriminative functions of the human brain which produce sentiment and partitive feeling, as contrasted with the primary instinctual and affective functions which motivate the organism as a whole.

Ipesandrine. Trade-mark for a liquid cough sedative containing opium alkaloids, emetine hydrochloride, and ephedrine hydrochloride.

Ip o-me a, Ip mo (ip o-mee uh, eye po-) [G. *ips*, woodworm; *homoios*, like]. The dried root of *Ipomoea orizabensis*, yielding not less than 18% of resins. Syn., *Mexican scammony*, *Orizaba jalap*.

I. resin. (*resina ipomoeae*) An active cathartic with a tendency toward griping. It consists largely of glycosides and methyl pentosides of jalapinolic acid, $C_{15}H_{30}(OH)COOH$, and its methyl ester. Dose, 0.13–0.32 Gm. (2–5 gr)

Ipral calcium. Trade-mark for probarbital calcium or calcium 5-ethyl-5-isopropyl barbiturate. The substance is used as a sedative and hypnotic.

Ipral sodium. Trade-mark for probarbital sodium or sodium 5-ethyl-5-isopropyl barbiturate. The substance is used as a sedative and hypnotic.

I''pro ni'a zid. Generic name for the antituberculosis drug 1-isonicotinyl-2-isopropyl hydrazine. See *marsilid*.

Ip''si lat'er al [L. *ipse*, self; *latus*, side]. Situated on the same side, as paralytic (or similar) symptoms which occur on the same side as the cerebral lesion causing them; homolateral.

IQ I.Q. Intelligence quotient.

Ir Chemical symbol for iridium.

I ral'gi a (eye-ral juh, jee-uh) See *iridalgia*.

I ras''ci bil'i ty [L. *irasci*, to be angry]. The quality of being choleric, irritable, or of hasty temper. It is a frequent symptom in some psychoses and in neurasthenia.

Ir''i-dad''e-no sis (irr''i-dad''i-no sis, eye ri-) [G *iris*, iris; *adēn*, gland; *-ōsis*, condition]. A lymphocytic affection of the iris.

I'ri dal (eye ri-dul, irr'i-dul) **I rid'i al** (eye rid'ee-ul, i-rid'ee-ul) **I rid'i an** [*iris*]. Relating to the iris.

Ir''i dal'gi a (irr i-dal'juh, -jee-uh, eye ri) [*iris*; G. *algos*, pain]. Pain referable to the iris.

Ir''i daux e'sis [*iris*; G *auxēsis*, increase]. Increase or tumefaction of the iris.

Ir''i da-vul'sion [*iris*; L. *avulsio*, a plucking off]. Surgical avulsion of the iris, iridoavulsion. Also see *iridectomy*.

Ir''i dec'tome [*iris*; G *ek*, out; *tomos*, cutting]. A cutting instrument used in iridectomy.

Ir''i dec'to-mize [*iris*; G *ektomē*, excision]. Excise a part of the iris; perform iridectomy.

Ir''i dec'to-my [*iris*; *ektomē*]. The cutting out of part of the iris.

Ir''i-dec tro pi um [*iris*; G *ektropē*, a turning aside]. Eversion of a part of the iris.

Ir''i de'mi a, Ir''i dae mi a (irr i-dee mee-uh, eye ri) [*iris*; G *haima*, blood]. Hemorrhage of the iris.

Ir''i den-clei'sis (irr''i-den klye sis, eye ri). See under *iridotasis*.

Ir''i de tro pi um [*iris*; G. *entropē*, a turning in]. Inversion of a part of the iris.

I rid'' re mi [*iris*; G *erēmia*, bareness]. Total or partial absence of the iris aniridia.

Ir'i des (irr'i-deez, eye ri-deez) Plural of *iris*.

Ir''i-des'cence [*iris*] A rainbowlike display of intermingling and changing colors, as in mother-of-pearl. —**iridescent**, *adj*

I rid'e-sis, Ir''i-de sis. See *iridotasis*.

Ir''i-di''ag no sis. See *iridodiagnosis*.

I-rid'i-al (ye-rid'ee-ul, i-rid') See *iridal*.

I rid'i an (eye-rid'ee-un, i-rid') See *iridal*.

I rid'ic (i-rid ick, eye-rid'ick) [*iris*]. Pertaining to the iris.

I'ri-din (eye ri-din, irr'i din) 1. A precipitated extract of blue flag. See *Iris*. 2. A glycoside from the rhizome of *Iris florentina*.

I rid'i um (i rid'ee um, eye rid'ee-um) [*iris*]. Ir = 193.1. An element of the platinum family; alloyed in small percentage with platinum, it confers rigidity upon the latter.

ir″i-di-za′tion (irr″i-di-zay′shun, -dye-zay′shun, eye″ri-) [*iris*]. The appearance of an iridescent halo, seen by persons affected with glaucoma.

ir′i-do- (irr′i-do-, eye′ri-do-), **irid-** [*iris*]. A combining form denoting *the iris*.

ir″i-do-a-vul′sion [*iris*; L. *avulsio*, plucking off]. Avulsion of the iris.

ir″i-do-cap″su-li′tis [*iris*; L. *capsula*, small box; G. *-itis*, inflammation]. Inflammation involving the iris and the capsule of the lens.

ir″i-do-cap″su-lot′o-my [*iris*; *capsula*; G. *tomē*, cutting]. An incision through the iris and adherent secondary membrane to create a pupillary opening.

i-rid′o-cele (i-rid′o-seel, eye-rid′o-seel, irr′i-do-, eye′ri-do-) [*iris*; G. *kēlē*, hernia]. Protrusion of part of the iris through a wound or ulcer.

ir″i-do-cho″roid-i′tis (-ko-roy-dye′tis) [*iris*; G. *choroeidēs*, choroid; *-itis*, inflammation]. Inflammation of both the iris and the choroid of the eye.

ir″i-do-col″o-bo′ma [*iris*; G. *kolobōma*, the part taken away in mutilation]. A coloboma of the iris.

ir″i-do-cy-clec′to-my (-sigh-klek′to-mee) [*iris*; G. *kyklos*, circle; *ektomē*, excision]. Excision of the iris and of the ciliary body.

ir″i-do-cy-cli′tis (irr″i-do-sigh-klye′tis, eye″ri-) [*iris*; *kyklos*; G. *-itis*, inflammation]. Inflammation of the iris and the ciliary body. Also see *uveitis*.

ir″i-do-cy″clo-cho″roid-i′tis (-sigh″klo-ko-roy-dye′tis, -sick″lo-ko-roy-dye′tis) [*iris*; *kyklos*; G. *choroeidēs*, choroid; *-itis*]. Combined inflammation of the iris, the ciliary body, and the choroid; uveitis.

ir″i-do-cys-tec′to-my [*iris*; G. *kystis*, bladder; *ektomē*, excision]. An operation for making a new pupil; the edge of the iris and the capsule are drawn out through an incision in the cornea and cut off.

ir′i-do-cyte″ [*iris*; G. *kytos*, cell]. A special cell in which an insoluble substance, guanine (2-amino-6-oxypurine), is deposited in crystalline form. Responsible for the beautiful iridescence of many fishes.

ir″i-dod′e-sis. See *iridesis*.

ir″i-do-di″ag-no′sis [*iris*; G. *diagnōsis*, deciding]. Diagnosis of disease in general from examination of the iris.

ir″i-do-di-al′y-sis (irr″i-do-dye-al′i-sis, eye″ri-) [*iris*; G. *dialysis*, separating]. The separation of the iris from its attachments.

ir″i-do-di″la-tor (irr″i-do-dye-lay′tur, eye″ri-) [*iris*; L. *dilatare*, to dilate]. Causing dilatation of the pupil.

ir″i-do-do-ne′sis [*iris*; G. *donein*, to shake]. Tremulousness of the iris; hippus.

ir″i-do-ki-ne′si-a (-ki-nee′see-uh, -zee-uh, -kigh-nee′), **ir″i-do-ki-ne′sis** (-ki-nee′sis, -kigh-nee′sis) [*iris*; G. *kinēsis*, movement]. Any movement of the iris, normal or otherwise, as in contracting and dilating the pupil.

ir″i-do-lep-tyn′sis [*iris*; G. *leptynsis*, attenuation]. Attenuation or atrophy of the iris.

ir″i-do-ma-la′ci-a (-ma-lay′shee-uh, -see-uh) [*iris*; G. *malakia*, softness]. Morbid softening of the iris.

ir″i-do-mo′tor [*iris*; L. *motor*, from *movere*, to move]. Promoting the motion of the iris.

ir″i-don-co′sis [*iris*; G. *onkōsis*, intumescence]. Thickening of the iris.

ir″i-don′cus [*iris*; G. *onkos*, mass]. A tumor or swelling of the iris.

ir″i-do-pa-ral′y-sis [*iris*; G. *paralysis*, paralysis]. Paralysis of the iris; iridoplegia.

ir″i-do-pa-ral″ky-sis [*iris*; G. *parelkysis*, from *parelkein*, to draw aside]. An induced prolapse of the iris to effect displacement of the pupil.

ir″i-do-pa-re′sis (-pa-ree′sis, -par′i-sis) [*iris*; G. *paresis*, letting go]. A slight or partial paralysis of the smooth muscle of the iris.

ir″i-do-per″i-pha-ki′tis [*iris*; G. *peri*, around; *phakos*, lens; *-itis*, inflammation]. Inflammation of the iris and the anterior part of the capsule of the lens. Obs.

ir″i-do-plat′i-num [*iris*; Sp. *plata*, silver]. An alloy of iridium and platinum; used in making electrodes, etc.

ir″i-do-ple′gi-a [*iris*; G. *plēgē*, stroke]. Paralysis of the sphincter pupillae of the iris.

ir″i-dop-to′sis [*iris*; G. *ptōsis*, falling]. Prolapse of the iris.

ir″i-do-pu″pil-lar″y (irr″i-do-pew′pi-lerr-ee, eye″ri-) [*iris*; L. *pupillaris*, from *pupilla*, pupil of the eye]. Pertaining to the iris and the pupil.

ir″i-do-rhex′is [*iris*; G. *rhēxis*, breaking]. 1. Rupture of the iris. 2. The tearing away of the iris from its attachment.

ir″i-dos′chi-sis (irr″i-dos′ki-sis, eye″ri-), **ir″i-do-schis′ma** (irr″i-do-skiz′muh, eye″ri-do-) [*iris*; G. *schisma*, to cleave]. Coloboma of the iris; iridocoloboma.

ir″i-do-scle-rot′o-my [*iris*; G. *sklēros*, hard; *tomē*, cutting]. Puncture of the sclera with division of the iris.

ir″i-do-ste-re′sis. See *iridectomy*.

ir″i-do-ta′sis [*iris*; G. *tasis*, stretching]. Stretching the iris, as in glaucoma; in place of iridotomy. The stretched iris is left in the wound, under the conjunctiva. If at the same time a piece of limbus is cut away to allow for better drainage of the aqueous into the areolar tissue of Tenon's capsule, the operation is called iridencleisis.

ir″i-do-tome [*iris*; G. *tomos*, cutting]. A cutting instrument employed in iridotomy.

ir″i-dot′o-my [*iris*; G. *tomē*, cutting]. An incision into the iris.

ir″i-dot′re-mor [*iris*; G. *tremor*, trembling]. Tremor of the iris. Also called *hippus*.

I′ris [G.]. A genus of plants of the Iridaceae. The dried rhizome of **Iris versicolor** (blue flag iris) has been used as a cathartic, emetic, and diuretic. **I. germanica florentina**. Orris root iris. See *orris*.

i′ris (pl. *irises*, *irides*) [G.]. A colored, circular disk, part of the uvea of the eye, suspended in the aqueous humor from the ciliary body. Its posterior surface rests on the lens, hence it separates the anterior and posterior chambers. It is perforated by the adjustable pupil. It consists of a mass of loose vascular connective tissue, the stroma, covered anteriorly by endothelium, posteriorly by heavily pigmented epithelium, the iridial part of the retina. Two sets of smooth muscle cells control the size of the pupil; one circularly arranged in the pupillary border forms the sphincter pupillae; the other, radially arranged, is the dilator pupillae. The color is governed by the number of melanophores in the stroma. See Plate 19.

heterochromic i. A condition in which the two irides are of different color or in which a portion of an iris is of different color from the remainder.

i. bombé. A condition in which the iris bulges forward at the periphery due to an accumulation of the intraocular fluid in the posterior chamber.

rubeosis of the i. Rubeosis iridis.

umbrella i. Synonym of *i. bombé*.

I′rish moss. See *Chondrus*.

i-ri′tis (eye-rye′tis, i-rye′tis) [*iris*; G. *-itis*, inflammation]. Inflammation of the iris, usually associated with inflammation of the ciliary body and often used for iridocyclitis. —**irit′ic**, *adj.*

rheumatoid i. Inflammation of the iris of the eye in conjunction with rheumatic fever, rheumatoid arthritis, and other collagen diseases.

ir"i to-ec'to-my (irr"i to-eck to-mee, eye ri-to-) [iris; G. ektomē, excision]. The removal of portion of the iris fo occlusion of the pupil.

i rit'o-my (i rit o-mee, eye-rit o-mee) See iridotomy.

i'ron [AS. iren] (ferrum) F = 55.85. A silver white or gray hard, ductile, malleable metal. I medicine, iron is used as the powder (reduced iron) or in the form of one of its salts in the treatment of certain anemias, especially of the hypochromic type. Iron compounds are generally astringent and styptic. Iron forms two classes of salts: ferrous, in which it has valence of two; and ferric, in which it has valence of three. See ferrous and ferric. See Table of Normal Values of Blood Constituents in the Appendix.

alcoholized i. Finely powdered iron.

black i. oxide. A mixture of ferric and ferrous oxides, approximating the formula Fe_3O_4 Syn., magnetic iron oxide. Also called magnetite.

dialyzed i. Prepared by adding ammonia water to concentrated ferric chloride solution and dialyzing the resulting solution until nearly free of ammonium salts. Contains about 3.5% iron.

dried i. sulfate. Exsiccated ferrous sulf te (ferri sulfas exsiccatus) Contains not less than 80% of $FeSO_4$ Dose, 0 06–0 2 Gm. (1 3 gr)

i. adenylate. Ferrous adenylate, used in treatment of secondary anemias See ironyl.

i. albuminate. Any one of variety of preparations made from egg albumen and an iron compound. A chalybeate.

i. alum. Iron and ammonium sulfate.

i. and ammonium acetate solution (liquor ferri et ammonii acetatis) Contains 0.18% of iron. A hematinic and diuretic. Dose, 8–15 cc. (2–4 fluidrachms) Also called Basham mixture.

i. and ammonium sulfate. $F NH_4(SO_4)_2 12H_2O$ An astringent.

i. and potassium tartrate. Ferric potassium tartrate; approximately $K(FeO)C_4H_4O_6.xH_2O$ brown powder or red to reddish-brown scales, very soluble in water

i. and quinine citrate (ferri et quininae citras) Contains 15% of anhydrous quinine and 13% of iron. Dose, 0 3–0.6 Gm. (5–10 gr)

i. arsenate. Ferrous arsenate $F_3(AsO_4)_2 6H_2O$. It has been used for its arsenic content in chronic skin affections.

i. ascorbate. Ferrous ascorbate A purple powder soluble in water used in anemia. It is claimed to be less toxic than other iron salts and to be readily absorbed. Dose oral, 0.2 Gm. (3 gr.) t i.d. Intravenous, 10 mg (1/6 gr) daily Syn., iron cevitamate.

i. by hydrogen. Reduced iron

i. cacodylate. Ferric cacodylate Approximately $Fe[(CH_3)_2AsO_2]_3$ Used in chlorosis and other anemias. Dose, oral, 0 06–0.12 Gm. (1 2 gr); subcutaneous, 10–30 mg (1/6–1/2 gr) in dilute solution.

i. cevitamate. See i. ascorbate

i. chloride. Ferric chloride, $FeCl_3$

i. gluconate. Ferrous gluconate. $[CH_2OH(CHOH)_4COO]_2Fe.2H_2O$ Well tolerated in hypochromic anemias. Dose, 0.3 Gm (5 gr.)

i. glycerophosphate. Ferric glycerophosphate (ferri glycerophosphas) Dose, 0 3–1.0 Gm. (5–15 gr)

i. hydroxide. Ferric hydroxide. $Fe(OH)_3$ When freshly precipitated, an antidote for arsenic.

i. iodide. Ferrous iodide $FeI_2 4H_2O$

i. lactate. Ferrous lactate $Fe(C_3H_5O_3)_2.3H_2O$ A greenish white, crystalline powder used as chalybeate Dose, 0.2–0 4 Gm. (3–6 gr)

i. oxide. Ferric oxide. Fe_2O_3. Color varies from red t yellow depending on the degree of hydration. See limonite, hematite

i. peptonate. Peptonized iron (ferrum peptonatum) Composed of iron oxide and peptone sol bilized by sodium citrate. Contains 16–18% of iron. Dose, 0.3–1.0 Gm. (5–15 gr.)

i. perchloride. Ferric chloride. $FeCl_3$

i. pheophytin. A chlorophyll derivative wherein the magnesium has been replaced by iron; it has been used in anemias.

i. sulfate. Ferrous sulfate (ferri sulfas) $FeSO_4 7H_2O$. Bluish green crystals of saline, styptic taste. Used in hypochromic anemia. Dose, 0.12–0.32 Gm. (2–5 gr) Syn., green vitriol, copperas.

i. tincture. See ferric chloride tincture.

magnetic i. oxide. See black i. oxide.

masked i. Organic compounds of iron, t one time thought to be preferable to the inorganic salts as means of administering iron.

reduced i. (ferrum reductum) A fine, grayish black powder obtained by the action of hydrogen on ferric oxide or by other means used as chalybeate. Dose, 0.12–0.6 Gm. (2–10 gr.) several times daily Also called i. by hydrogen, Quevenne i

saccharated i carbonate. Saccharated ferrous carbonate (ferri carbonas saccharatus) Contains 15% of $FeCO_3$ A nonastringent chalybeate. Dose, 0.6–2 0 Gm. (10–30 gr)

saccharated i. oxide. Saccharated ferric oxide (ferri oxidum saccharatum) Contains 3% of iron. A chalybeate. Dose, 2 Gm. (30 gr.) Also called solubl ferric oxide, eisenzucker

soluble i. phosphate. Soluble ferric phosphate (ferri phosphas solubilis) A ferric phosphate rendered soluble by the presence of sodium citrate and containing 12–15% of iron. Dose, 0 6 2.0 Gm. (10–30 gr)

soluble i. pyrophosphate. Sol ble ferric pyrophosphate (ferri pyrophosphas solubilis) A ferric pyrophosphate rendered sol ble by the presence of sodium citrate and containing from 10 5–12 5% of iron. Dose, 0 6–2.0 Gm. (10–30 gr.)

i rone (eye-rohn eye rohn) A cyclic ketone, $C_{14}H_{22}O$ which gives the characteristic odor to orris root.

i'ron lung. Lay term for respirator which induces breathing in patient with paralyzed respiratory muscles. The patient chest expands and contracts alternately in response to changes in air pressure in the respirator which encloses the body up t the neck. Also called Drinker respirator

ironyl. Trade-mark for ferrous adenylate solution used intramuscularly as hematinic

i-rot'o-my (eye-rot o-mee) See iridotomy.

i pex'in. An antibiotic substance isolated from cultures of species of the class Basidiomycetes.

ir ra di ate [L. irradiare, to cast forth rays]. I radiology to treat with radiation, either roentgen rays or radiation from radioactive isotopes.

ir ra di "ting [irradiare] 1. Radiating from center as pai arising from definite focus of irritation 2. Treating with roentgen or radium rays.

ir-ra di tion [irradiare]. Exposure to radiation of varying wavelengths, such as infrared, ultraviolet, roentgen rays, gamma rays.

intracavitary i. Irradiation by placement of radioactive substance within body cavity; e irradiation treatment by means of inserting radium into the uterine cavity

secondary corpuscular i. The interaction of or gamma rays and atoms of matter to produce high-speed electrons as the rays pass through matter

Irradol-A. Trade-mark for hematinic containing iron with vitamins A, B, and D

i -ra tion l (i-rash un ul) [L. irrationalis, without reason]. I psychiatry, outside the province of reason; void of mental behavior

ir·re·du′ci·ble [L. *irreduce*, that does not bring back]. Not reducible; not capable of being replaced in normal position.

ir·reg″u·lar′i·ty [L. *in-*, not; *regularis*, from *regula*, rule]. In medicine, a deviation from a rhythmic activity.

i. of pulse. See *arrhythmia*.

phasic i. See *phasic irregularity*.

ir″re·sus″ci·ta·ble [in-; *resuscitare*, to raise up again, to revive]. Not capable of being resuscitated or revived; irrevivable.

ir″re·ver′si·ble [in-; L. *reversum*, from *revert*, to return]. 1. Not capable of being reversed. 2. Irrecoverable; said of a stage of shock or nerve injury from which recovery cannot be achieved. —**irreversibil′ity**, *n.*

ir″ri·ga′tion [L. *irrigatio*, from *irrigare*, to conduct water to]. The act of washing out by a stream of water, as irrigation of the urinary bladder.

continuous i. A continuous stream of water washed over a surface to reduce or limit inflammation.

ir′ri·ga″tor, **ir′ri·ga″tor** (*irrigare*). An apparatus, or device, for accomplishing the irrigation of a part, surface, or cavity.

ir″ri·ta·bil′i·ty [L. *irritabilis*, from *irritare*, to irritate]. 1. A condition or quality of being excitable; the power of responding to a stimulus. 2. A condition of morbid excitability of an organ or part, when it reacts excessively to a slight stimulation.

muscular i. The inherent capacity of a muscle to respond to stimuli by contraction.

myotatic i. That seen in a muscle in response to mechanical stimulus, as stretching.

nervous i. The property of a nerve to respond to stimuli by conducting impulses.

ir′ri·ta·ble [*irritare*]. 1. Reacting to stimuli. 2. Easily excited; susceptible of irritation.

ir′ri·tant (*irritare*). Causing or giving rise to irritation.

ir′ri·tant. An agent that induces irritation.

ir″ri·ta′tion [L. *irritatio*, from *irritare*]. 1. A condition of undue excitement or irritability. 2. The act of irritating or stimulating. 3. The stimulus necessary to the performance of a function.

spinal i. A form of neurasthenia characterized by pain in the back, tenderness along the spines of the vertebrae, fatigue on slight exertion, and, occasionally, numbness and tingling in the limbs.

sympathetic i. Irritation of an organ arising from irritation of another related organ, as sympathetic irritation of one eye from irritation of the other.

ir″ru·ma′tion. Fellatio.

Isaacs, Raphael [American physician and hematologist, 1891–]. Described small single refractive granules seen in erythrocytes in unstained and vitally stained moist preparations (1925). *Isaacs' refractive granules* occur in about 1 per cent of normal red blood cells. They are considered the final stage in the maturation of the cells.

Isacen. Trade-mark for the diacetyl derivative of dihydroxyphenylisatin, a white, crystalline powder used as a laxative.

i″sa·del′phi·a (eye″sa-del′fee-uh, iss″) [G. *isos*, equal; *adelphos*, brother]. Conjoined twins united by unimportant union; each body is normal in the development of all essential organs.

Isambert, Emile [French physician, 1827–76]. Remembered as an authoritative writer on laryngeal tuberculosis. Described tuberculous ulceration of the larynx and pharynx, also called *Isambert's disease*.

Isarol. Trade-mark for a brand of ichthammol.

i′sa·tin. $C_8H_5NO_2$; 2,3-indolinedione, occurring in orange-colored crystals, soluble in boiling water; used as a reagent.

i″sa·tro″pyl·co·caine′ (eye″sah-tro-pil-ko-kayn′, -ko-kay′in, -ko′kay-in, -ko″kah-in). $C_{19}H_{23}NO_4$. An amorphous alkaloid from coca leaves. It has no anesthetic properties but is said to be an active cardiac poison. Also called *alpha-truxilline*.

i″sauxe·sis (eye″sawk-see′sis, -see′sis) [G. *isos*, equal; *auxesis*, increase]. A type of relative growth in which a part grows at the same rate as the whole organism or another part.

is·che′mi·a (is-kee′mee-uh) [G. *ischein*, to check; *haima*, blood]. Local diminution in the blood supply due to obstruction of inflow of arterial blood; local anemia. This condition is seen in Raynaud's disease, in frostbite, in angina pectoris. —**ischemic**, *adj.*

is·che′si·a (is-kee′see-uh, is-kee′zhuh) [*ischein*]. Retention of a discharge or secretion.

is″chi·ag′ra (is″kee-ag′ruh, -ay′gruh) [G. *ischion*, hip joint; *agra*, a catching]. Gout in the hip. *Obs.*

is″chi·al′gi·a (*ischion*; G. *algos*, pain). Sciatica. —**ischialgic**, *adj.*

is″chi·a·ti′tis [*ischion*; G. *-itis*, inflammation]. Inflammation of the sciatic nerve.

is″chi·dro′sis (is″ki-dro′sis) [G. *ischein*, to check; *hidrosis*, sweating]. Suppression of the secretion of sweat. —**ischidrot′ic**, *adj.*

is·chi·o- (is′kee-o-), **is′chi-** [G. *ischion*, hip joint]. A combining form denoting *the ischium* or *the hip*.

is″chi·o·bul″bo·sus. A variable part of the bulbocavernosus muscle.

is″chi·o·cap″su·lar [*ischium*; L. *capsula*, small box]. Pertaining to the ischium and the fibrous capsule of the hip, as the ischiocapsular ligament of the hip joint.

is″chi·o·cav″er·no′sus [*ischium*; L. *caverna*, cavern]. A muscle arising from the ischium, encircling each crus of the penis or clitoris, and inserted into the upper surface of the crus. See Table of Muscles in the Appendix.

is″chi·o·cav′er·nous [*ischium*; *caverna*]. Pertaining to the ischium and one or both of the corpora cavernosa of the penis or clitoris.

is″chi·o·coc·cyg′e·al (is″kee-o-cock-sidj′ee-ul) [*ischium*; G. *kokkyx*, cuckoo]. Pertaining to the ischium and the coccyx.

is″chi·o·coc·cyg′e·us (-cock-sidj′ee-us) [*ischium*; *kokkyx*]. The coccygeus muscle.

is″chi·o·did′y·mus [*ischium*; G. *didymos*, twin]. Conjoined twins united at the sacral or ischial region. Syn. *ischiopagus*.

is″chi·o·fe·mo·ra′lis. An occasional slip of the gluteus maximus muscle, attached to the ischial tuberosity.

is·chi·o′me·lus [*ischium*; G. *melos*, limb]. An individual with an accessory limb attached at the nates.

is″chi·o·my″e·li′tis (is″kee-o-migh-uh-lye′tis) [*ischion*; G. *myelos*, marrow; *-itis*, inflammation]. Lumbar myelitis; osphyomyelitis.

is″chi·o·neu·ral′gi·a [*ischion*; G. *neuron*, nerve; *algos*, pain]. Old term for sciatica.

is·chi·op′a·gus [*ischion*; G. *pagos*, that which is fixed]. Conjoined twins united by their sacral or ischial regions. The ischiopagus tetrapus has four legs, the ischiopagus tripus, three. See Plate 25.

is·chi·op′a·gy [*ischion*; G. *pagos*, anything that is fixed]. The monstrosity exhibited by the ischiopagus.

is″chi·o·pu·bi′cus. A variable part of the sphincter urethrae membranaceae muscle.

is″chi·o·pu″bi·ot′o·my (is″kee-o-pew″bee-ot′o-

mee) [ischion, L. pubes, private parts G. tomē, cutting]. Division of the ischial and pubic rami in otherwise impossible labor. Obs.

is chi o-pu'bis [ischion, pubes]. 1. The site of junction of the ischium and the pubis. 2. The ischium and pubis considered together. —**ischio-pu'bic**, adj.

is"chi-o-rec'tal [ischion, L. rectus, straight]. Pertaining to both the ischium and the rectum.

is'chi um (iss'kee-um) (pl. ischia) [ischion]. The inferior part of the os innominatum, the bone upon which the body rests in sitting. See Plate 2, and ossa in Table of Bones in the Appendix. —**ischiad'ic, is'chial**, adj.

isch"no-pho'ni (isk"no-f neeuh) [G. ischnos, feeble; phōnē, voice]. Stammering.

is'cho- (iss'ko-), **isch-** [G. ischein, to check]. In medicine, combining form denoting suppression, checking, stoppage, or deficiency.

is"cho-ga lac'ti (iss"ko-ga-lack tee-uh, -shee-uh) [ischein; G. gala, milk]. Suppression of the natural flow of milk.

is"cho-ga lac'tic [ischein, gala]. Suppressing the natural flow of milk.

is"cho-ga-lac'tic. An agent which suppresses the flow of milk.

is"cho-gy'ri a [ischein, G. gyros, circle]. A jagged appearance of the cerebral convolutions, produced by atrophy.

is cho me ni a [ischein, G. mēn, month]. Suppression of the menstrual flow.

is-chu ri-a (isk-yoor ee uh) [ischein, G. ouron, urine]. Retention or suppression of the urine. See anuria. —**ischuret'ic**, adj.

I-sedrin. A proprietary solution containing ephedrine gluconate. Used as a vasoconstrictor in the upper respiratory passages. **I-sedrin compound** also contains merthiolate.

Ishihara, Shinobu (1879–) Japanese ophthalmologist who introduced a test for color vision. The subject is shown a series of cards, on each of which figures or winding lines composed of colored dots are printed on a field of dots of another color. The normal and the colorblind make different readings from the card; thus one can easily judge the color vision of the person tested.

i'sin glass" (eye zing-glass, eye zin). See ichthyocolla.

vegetable i. Obsolete term for agar. 2.

Isle. See Duct de Isle.

is'land [AS. igland]. 1. An isolated structure; particularly a group of cells differentiated from the surrounding tissue by staining or arrangement. 2. The insula of the cerebral hemisphere. Formerly called i. of Reil. See Plate 17.

blood i. One of the masses of condensed splanchnic mesenchyme in the wall of the yolk sac that gives rise to the primitive erythrocytes of the embryo and to the vascular plexus of the yolk sac.

i. of Langerhans. See islet of pancreas.

pancreatic i. See islet of pancreas.

tonsil islands. See tonsil islands.

is'let (eye'lit) [OF. islette]. A small island.

blood i. See blood island.

i. of pancreas. A small, irregular island of cell cords, found in the pancreas. It has no connection with the duct system, and is delimited from the acini by a reticular membrane. It is of an endocrine nature as indicated by its great vascularity, and consists mainly of alpha and beta cells, the former secreting a hormone like lipocaic, and the latter secreting insulin. Syn. island of Langerhans.

-ism [G. -isma, -ismos]. Suffix indicating 1. Condition or disease from, as embolism, alcoholism. 2. Doctrine or practice of (often with a corresponding verb ending in -ize and noun ending in -ist), as Fletcherism, hypnotism.

i'so-, is- [G. isos, equal]. 1. A combining form denoting equality, similarity, uniformity, or identity. 2. In bacteriology, a combining form denoting for or from different individuals of the same species. 3. In chemistry, a combining form denoting a compound isomeric with another, or a compound with a straight chain of carbon atoms at one end of which two methyl groups are attached. Symbol, i.

i"so-ag glu'ti nin [isos, L. agglutinare, to glue]. An agglutinin which acts upon the red blood cells of members of the same species. Also called isohemagglutinin.

i"so-aj"ma line. An alkaloid from Rauwolfia serpentina.

i"so-al lox'a zine (eye so- lock'suh-zeen). 1. $C_{10}H_6N_4O_2$. The three-ring compound pyrimido [4,5-b] quinoxaline-2,4(3H,10H)-dione; an isomer of alloxazine. Derivatives of the compound are widely distributed in plants and animals and include such substances as riboflavin and the yellow enzymes; these substances are sometimes incorrectly named as derivatives of alloxazine. 2. A term loosely applied to derivatives of (1).

i"so al lox'a zine **a"de-nine di nu"cle-o-tide.** Flavin adenine dinucleotide sometimes incorrectly called alloxazine adenine dinucleotide.

i"so-al lox'a zine mon"o-nu'cle- tide. Riboflavin-5'-phosphate sometimes incorrectly called alloxazine mononucleotide.

i"so am yl ac'e-tate. $(CH_3)_2CH.CH_2.CH_2.COO.CH_3$. A colorless liquid having a pearlike odor and taste, soluble in 400 parts of water; it is used as a solvent. The technical product is known as pear oil or banana oil.

i"so-am yl al'co-hol. $(CH_3)_2CH.CH_2.CH_2OH$; 3-methyl-1-butanol or fermentation amyl alcohol. A colorless liquid of disagreeable odor, soluble in 40 parts of water. It constitutes the major portion of fusel oil, which name is commonly applied to technical isoamyl alcohol.

i"so-am"yl a mine (eye so-am il-uh meen, -am il-am een, -in) $C_5H_{11}NH_2$. A ptomaine formed by the putrefaction of yeast.

i"so-an-dros'ter-one. $C_{19}H_{30}O_2$. 3(β) Hydroxy-17-keto-androstane, an androgenic steroid found in the urine of men and women. See also androsterone.

i"so-an ti bod"ies [isos; G. anti, against; AS. bodig]. Antibodies, in certain members of a species, for cells of certain other members of the same species.

i"so- n ti gen [isos; anti, G. gennaein, from gignesthai, to be produced]. An antigen which is active only in serum of animals of the same species.

i'so-bar [isos; G. baros, weight]. 1. Any one of two or more atoms which have the same atomic mass but different atomic numbers. 2. A line drawn through points having equal barometric or manometric pressure. —**isobar'ic**, adj.

i"so-bes tic point. In applied spectroscopy, the wavelength at which the absorbance of two substances, one of which can be converted into the other, is the same; sometimes written isosbestic point.

i"so bil"i ru'bin ac'id. $C_{33}H_{44}N_4O_6$. A cleavage product obtained, along with the isomeric bilirubic acid, when bilirubin is reduced with hydriodic acid.

i"so-bor'nyl thi" -cy an-o-ac'e-tate. $C_{13}H_{19}NO_2S$. A yellow oily liquid, practically insoluble in water; the technical grade, which contains 82% or more of isobornyl thiocyanoacetate, is used as a pediculicide and insecticide.

i″so-bu′tyl. The univalent hydrocarbon radical $(CH_3)_2CH.CH_2$—.

i″so-bu′tyl al′co-hol. $(CH_3)_2CH.CH_2OH$; a colorless, flammable liquid, soluble in 20 parts of water; it is produced by fermentation of carbohydrates and is a constituent of fusel oil. It is used as a solvent.

i″so-cel″lo-bi′ose [*iso-*; L. *cella*, stall, chamber; *bis*, twice; *-ose*, chemical suffix]. A disaccharide formed during hydrolysis of cellulose.

i″so-cel′lu-lar [*iso-*; L. *cellula*, small storeroom]. Composed of cells of the same size or character.

i″so-cho-les′ter-ol (eye″so-ko-less′tur-ole, -ol). A substance isolated from wool fat; originally considered to be a sterol but now believed to consist of several complex terpene alcohols, including agnosterol and lanosterol.

i″so-cho′line (-ko′leen, -lin, -kol′een, -in). $(CH_3)_3N(OH).CHOH.CH_3$. An alkaloid, isomeric with choline, found in fungi of the genera *Amanita* and *Agaricus*. Syn., *amanitine*.

i″so-chore (eye′so-kor) [*iso-*; G. *chōra*, space]. The plotted curve showing the relationship between the temperature and pressure of a gas at constant volume. —**isochor′ic**, *adj.*

i″so-chro-mat′ic [*iso-*; G. *chrōma*, color]. Having the same color throughout.

i″so-chro-mat′o-phil, i″so-chro-mat′o-phile [*iso-*; *chrōma*; G. *philein*, to love]. Denoting cells and tissues which are equally stained by the same dye.

i-soch′ro-nal (eye-sock′ro-nul, eye″so-kro′nul), **i-soch′ro-nous** (eye-sock′ro-nus) [*iso-*; G. *chronos*, time]. Occurring at or occupying equal intervals of time. —**isochronism**, *n.*

i″so-chro′ni-a [*iso-*; *chronos*]. The condition of normal nerve-impulse transference; the chronaxie of a muscle and that of its nerve are of the same order; supposedly essential for transmission of impulse from nerve to muscle.

i″so-cit′ric ac′id. $COOH.CH_2.CH(COOH).CHOH.COOH$; an intermediate compound in the Krebs or tricarboxylic acid cycle by which metabolism of carbohydrate, fat, and protein is believed to occur.

i″so-co′ri-a [*iso-*; G. *korē*, pupil]. Equality in diameter of the two pupils.

i″so-cor′tex [*iso-*; L. *cortex*, bark]. Those parts of the cerebral cortex exhibiting the six characteristic layers or strata, each layer having certain predominant cells and histologic features common to all isocortical areas. Syn., *homogenetic cortex*, *homotypical cortex*.

i″so-cre-at′i-nine (eye″so-kree-at′i-neen, -nin) [*iso-*; G. *kreas*, flesh]. A substance of uncertain nature and questionable purity isolated from fish muscle.

i″so-cy′a-nide. Any organic compound of the formula RNC, isomeric with but differing from RCN which is a cyanide. On hydrolysis a cyanide (RCN) yields RCOOH and NH_3; an isocyanide (RNC) yields RNH_2 and HCOOH (formic acid). Syn., *carbylamine*, *isonitrile*.

i″so-cy-tol′y-sin (eye″so-sigh-tol′i-sin, -sigh-to-lye′sin) [*iso-*; G. *kytos*, cell; *lysis*, a loosing]. A cytolysin from the blood of an animal, capable of acting against the cells of other animals of the same species.

i″so-dac′ty-lism [*iso-*; G. *daktylos*, finger]. The condition of having fingers or toes of equal length. —**isodactylous**, *adj.*

i″so-di″ag-no′sis [*iso-*; G. *diagnōsis*, decision]. The diagnosis of a disease not apparent clinically by injecting the suspected individual's blood into a susceptible animal.

i″so-di′a-phere. One of two or more species of atoms which have the same difference between the numbers of neutrons and protons in their respective nuclei.

i″so-dont [*iso-*; G. *odous*, tooth]. In zoology, having teeth of the same size and shape.

i″so-do′ses (-do′seez) [*iso-*; G. *dosis*, a giving]. Surfaces of equal radiation intensities in irradiated tissue.

i″so-dul′ci-tol. Rhamnose.

i″so-dy-nam′ic (eye″so-dye-nam′ick, -di-nam′ick) [*iso-*; G. *dynamis*, power]. Having or generating equal amounts of force, as isodynamic foods. —**isodynamia**, *n.*

Iso-ephedrin. A proprietary solution of ephedrine sulfate, chlorobutanol, and sodium chloride.

i″so-e-lec′tric [*iso-*; G. *ēlektron*, amber]. Having the same electric properties throughout.

i. level. In *electrocardiography*, the zero position of the galvanometer when no current from the heart is flowing through it. It is the reference level from which all deflections except the QRS complex and ST junction are determined.

i. point. The pH at which the net electric charge on a particle or surface is zero.

i″so-feb″ri-fu′gine. An alkaloid, possessing some antimalarial activity, isolated from *Dichroa febrifuga*, which is the probable source of the Chinese antimalarial drug ch'ang shan. Isofebrifugine may be identical with α-dichroine.

i″so-flu′ro-phate. U.S.P. name for *diisopropyl fluorophosphate*.

i″so-gam′ete (eye″so-gam′eet) [*iso-*; G. *gamos*, marriage]. A reproductive cell, similar in form and size to the cell with which it unites; found in certain protozoans and thallophytes.

i-sog′a-mous (eye-sog′uh-mus) [*iso-*; *gamos*]. Characterized by the conjugation of gametes similar in size and shape. —**isogamy**, *n.*

i″so-gen′e-sis [*iso-*; G. *genesis*, production]. Identity of origin of development. —**isogenet′ic**, *adj.*

i″so-ger′mi-dine. An ester alkaloid isolated from *Veratrum viride*; on hydrolysis it yields germine.

i″so-ger′mine. An isomeric form of germine, obtained from the latter under certain conditions of chemical treatment. See also *pseudogermine*.

i-sog′na-thous (eye-sog′nath-us, eye″so-nath′us) [*iso-*; G. *gnathos*, jaw]. Having jaws of equal size.

i″so-graft. Homograft.

Isohalant. A proprietary containing ephedrine sulfate, chlorobutanol, and dextrose.

i″so-he″mag-glu″ti-nin (eye″so-hee″muh-gloo′ti-nin, eye″so-hem″uh-) [*iso-*; G. *haima*, blood; L. *agglutinare*, to glue]. Isoagglutinin.

i″so-he-mol′y-sin (eye″so-hee-mol′i-sin, -hem-ol′i-sin, -hee″mo-lye′sin, -hem″o-lye′sin) [*iso-*; *haima*; G. *lysis*, loosing]. A hemolysin produced by injecting red blood cells into an animal of the same species. An isohemolysin will destroy the red blood cells of any animal of the same species except the immunized individual. Syn., *isolysin*. —**isohemolyt′ic**, *adj.*

i″so-he-mol′y-sis [*iso-*; *haima*; *lysis*]. The hemolytic action of an isohemolysin.

i″so-hy′dric shift. An increase in the base-binding capacity of hemoglobin which occurs upon oxygenation. It is due to the fact that HbO_2 (oxygenated hemoglobin) is a stronger acid than Hb (reduced hemoglobin) and thus binds more base.

i″so-i-co′ni-a (eye″so-eye-ko′nee-uh) [*iso-*; G. *eikōn*, image]. A condition in which the images are of equal size in the two eyes. —**isoicon′ic**, *adj.*

i″so-i″lei-a. Isoiconia.

i″so-im″mu-ni-za′tion [*iso-*; L. *immunis*, free from public service]. Immunization of a species of animal with antigens of the same species; for example, the development of anti-Rh serum

may be produced by transfusing Rh-positive blood into an Rh-negative individual or by an Rh-negative woman being pregnant with an Rh-positive fetus.

I"so-i on'ic point. The pH at which the number of protons dissociated from proton donors in system equals the number of protons combined with proton acceptors. I solutions in which protein is the only ionic species present, the isoionic point is identical with the isoelectric point.

I"so la tose. A disaccharide synthesized by the action of lactase on solution of glucose and galactose.

I"so la'tion [It. *isolare*, to isolate, from L. *insula*, island]. 1. *I medicine*, the separation of patient from the rest of the community or from other patients because of contagious disease (as in an isolation ward) or for reasons of therapy. 2. *I psychoanalysis*, the dissociation of an idea or memory from its emotional content or the feelings attached to it, or from other facts related to it, so as to render it matter of indifference common defense mechanism against anxiety. 3. In social sense, the separation of person or group from others in the community: an inadequacy of personal contacts. —**I solate**, *v.*

I"so lec'i thal (eye so-lees'i thul) [G *isos*, equal *lekithos*, yolk]. Having yolk evenly distributed in the ovum, usually in small amount.

I so-leu'cine (eye so leu seen, -sin) α-Amino-β-methyl-valeric acid, $C_2H_5CH(CH_3)CH(NH_2)COOH$. An essential amino acid.

I"so-leu cyl. The univalent radical, $CH_3CH_2CH(CH_3)CH(NH_2)CO-$ of the amino acid isoleucine.

I'so log, I'so logue (eye so-log) One of series of compounds of similar structure, but having different atoms of the same valency and usually of the same periodic group.

I"so ly ser'gic ac'id. $C_{16}H_{16}N_2O_2$, parent constituent, along with lysergic acid, of certain ergot alkaloids. It may be obtained from such alkaloids by hydrolysis.

I"so-ly sin (eye so-lye sin, eye-sol'i-sin) See *isohemolysin*.

I"so mal'tose. An isomer of maltose claimed to be produced by the action of certain enzymes upon maltose. It may be identical with cellobiose.

I"so-mer [*isos*, G *meros*, part]. One of two or more compounds having the same percentage composition but differing in the relative positions of the atoms within the molecule. See *isomerism*.

I-so mer ase [*isos*; *meros*]. Enzyme involved in establishing equilibrium between glucose-6-phosphate and fructose-6-phosphate and possibly other biochemical reactions.

I"so mer'ic [*isos*; *meros*]. Pertaining to isomerism. Existing as an isomer of another substance.

I som er ide (eye-som ur-ide, -id) See *isomer*.

I-som er ism (eye-som ur iz-um) [*isos*, *meros*]. The relationship between two isomers. The phenomenon wherein two or more compounds possess the same percentage composition but differ in the relative position of the atoms within the molecule and have different properties.

geometric i. That evidenced when substances have the same constitutional formula but differ in the special arrangement of the atoms and, consequently, in all of their physical properties and in most of their chemical properties. See stereo-*i*.

optical i. That indicated by substances having similar structural formulas and general properties but differing in their action on polarized light. See stereo-*i*.

stereo-i. That involving compounds of the same constitution but different configurations. Two types are recognized: *geometric isomerism* and *optical isomerism*.

structural i. That involving compounds with the same molecular formulas but distinctly different structures, as butane, $CH_3CH_2CH_2CH_3$, and isobutane, $(CH_3)_3CH$; propylamine, $CH_3CH_2CH_2NH_2$ and trimethylamine, $(CH_3)_3N$.

I"so meth'a done. $(C_6H_5)_2C.COC_2H_5$
$\quad\quad CH_2CH(CH_3)CH_2N(CH_3)_2$
1 6-Dimethylamino-4 4-diphenyl-5-methyl-3-hexanone an oily liquid. The hydrochloride of the levorotatory isomer has been employed as an analgesic and narcotic, though it is not as active as methadone.

I"so met ric [*isos*; G *metron*, measure]. Of the same dimensions.

I"so-me-tro pi a [*isos*; *metron*, G *ops*, eye]. Equality of kind and degree in the refraction of the two eyes.

I'so morph. 1 *I chemistry* one of two or more substances of different composition which have the same crystalline form. 2. *I chemistry*, one of group of elements whose compounds with the same other atoms or radicals have the same crystalline form. 3. *I biology* an animal or plant having superficial similarity to another which is phylogenetically different.

I"so-mor'phic [*isos*; G *morphē*, form]. 1 *I genetics*, descriptive of genotypes of polysomic or polyploid organisms which, although containing the same number of linked genes in different combinations on homologous chromosomes, yet are similar in the series of gametes which they can produce. 2. *I chemistry*, pertaining to similar crystalline forms. —**isomor'phism**, *n.*; **isomor phous**, *adj.*

I"so-mor'phous pr"ri ta'tion ef fect. See isomorphous provocative *reaction*.

Isomyn. A trade name for amphetamine.

I"so-ni' zid. Generic name for the antituberculous drug isonicotinic acid hydrazide. See *cotinazin*, *dinacrin*, *ditubin*, *nydrazid*, *pyricidin*, *rimifon*.

I"so nic o-tin'ic ac'id hy'dra zide. $C_5H_4NCO.NH.NH_2$ isonicotinylhydrazide, forming nearly colorless crystals, soluble in water. It is employed as therapeutic agent in treating human tuberculosis, being administered orally or intramuscularly commonly along with either streptomycin or para-aminosalicylic acid or with both. Syn *isoniazid*, *N*-isonicotinylhydrazine. See *cotinazin*, *dinacrin*, *ditubin*, *nydrazid*, *pyricidin*, *rimifon*.

N I"so ni tin yl hy'dra zine Isonicotinic acid hydrazide.

1-I so-nic o-tin yl 2-I"so pro pyl hy'dra zide. $C_5H_4NCONH.NHCH(CH_3)_2$ the isopropyl derivative of isonicotinic acid hydrazide, used similarly but it is so much more toxic that it is available only for investigative purposes. Syn. *iproniazid*. See *marsilid*.

I"so-nip ecaine. Meperidine hydrochloride.

I"so-ni'trile. An isocyanide.

Isonorin sulfate. A trade-marked name for the sympathomimetic amine salt *isopropylarterenol sulfate*.

I"so-os mot'ic. Referring or pertaining to solution which has the same osmotic pressure as that of any reference physiological fluid, particularly that enclosed in red blood cells. An isosmotic solution is also isotonic only when the tissue concerned, by virtue of its lack of permeability to the solutes present or to any interaction with them, maintains its normal state or tone. Syn *isosmotic*.

I-sop thy (eye sop uth-ee) [*isos*; G. *pathos*, disease]. The treatment of disease by the adminis-

tration of the causative agent or of its products, as the treatment of smallpox by the administration of variolous matter.

i"so·pel"le·ti·er'ine (eye"so-pel"i-teer'een, -in, -pel-et-yair'een, -in, -pl let'l reen, -rin, -pel"i tee eh reen') One of the alkaloids of pomegranate bark. See *pelletierine*.

i"so·pen'ta·quine. $C_{18}H_{27}N_3O$; 8-(4-isopropylamino-1-methylbutylamino)-6-methoxyquinoline; a compound related to pamaquine and having similar antimalarial activity; also referred to as *SN 13,274*.

i"so·plasma·ra·tio. See under *ratio*.

i"so·phe'nic [*iso*; G. *phainein*, to show]. Pertaining to different genes which produce similar phenotypic effects.

i"so·pho'ri·a [*iso*; G. *phoros*, bearing]. A condition in which the eyes lie in the same horizontal plane, the tension of the vertical muscles being equal in both eyes, and the visual lines lying in the same plane.

i·so·pi·a (eye-so'pee-uh) [*iso*; G. *ōps*, eye]. Equal acuteness of vision in the two eyes.

i"so·pi"lo·car'pine (eye"so-pye"lo-kahr'peen, -pin) An alkaloid from jaborandi, stereo-isomeric with pilocarpine, and similar to it in physiologic effect.

i"so·plas'tic [*iso*; G. *plassein*, to form]. Transplanted from one individual to another of the same species, said of a graft. See *isograft* under *graft*.

i"so·pre·cip'i·tin [*iso*; L. *praecipitare*, to hurl against]. A precipitin which is active only against the serum of animals of the same species as that from which it is derived.

i"so·pren'a·line sul'phate. British Pharmacopoeia name for *isopropylarterenol sulfate*.

i"so·prene. $CH_2{:}CH.C(CH_3){:}CH_2$. Methyl butadiene, a hydrocarbon formed in the dry distillation of rubber.

i"so·pro·pa·nol. Isopropyl alcohol.

i"so·pro·pyl. The univalent hydrocarbon radical $(CH_3)_2CH—$.

i. vinyl ether $(CH_3)_2CH.O.CH{:}CH_2$; a volatile, colorless, mobile liquid; boils at 56° C. and has a specific gravity of approximately 0.75 at 20° C. It is an inhalation anesthetic, with a potency approximately twice that of ethyl ether.

i"so·pro"pyl·a·ce'tic ac'id. Isovaleric acid.

i"so·pro·pyl al'co·hol. $(CH_3)_2CHOH$. Dimethyl carbinol. A homolog of ethyl alcohol; used similarly to it externally but more poisonous if taken internally. Syn., *isopropanol*.

i"so·pro·pyl·ar·ter'e·nol. $(OH)_2C_6H_3CHOH.CH_2NH.CH(CH_3)_2$; α-(isopropylaminomethyl)protocatechuyl alcohol; a sympathomimetic amine closely related in its action to epinephrine and arterenol (norepinephrine) but whose action on the smooth muscle of blood vessels is much less pronounced than that of epinephrine or arterenol. The principal effects of isopropylarterenol occur in the bronchi; when administered sublingually or by oral inhalation isopropylarterenol salts are effective in treatment of asthma.

i. hydrochloride. $C_{11}H_{17}NO_3.HCl$, occurring as crystals, soluble in water. Syn., *isoproterenol hydrochloride*. See *aludrine hydrochloride*, *isuprel hydrochloride*.

i. sulfate. $(C_{11}H_{17}NO_3)_2.H_2SO_4$, occurring as crystals, soluble in water. Syn., *isoprenaline sulphate*. See *isonorin sulfate*, *norisodrine sulfate*.

i"so·pro·ter'e·nol hy"dro·chlo'ride. The United States Pharmacopeia name for *isopropylarterenol hydrochloride*.

i"so·pro"te·ver'ine. An isomeric form of protoverine, obtained from the latter under certain conditions of chemical treatment.

i·sop'ters (eye-sop'turz) [*iso*; G. *optēr*, observer]. The curves of relative visual acuity of the retina, at different distances from the macula, for form and for color.

i"so·quas'sin. $C_{22}H_{30}O_6$; a bitter principle of quassia, forming with neoquassin the molecular complex called *quassin*. Isoquassin is the lactone of neoquassin and is identical with picrasmin isolated from quassia by earlier investigators.

i"so·quin'o·line (eye"so-kwin'o-leen, -lin) C_9H_7N. White, hygroscopic crystals. Numerous natural and synthetic alkaloids are derivatives of this substance. Also called *2-benzazine*, *leucoline*.

i"so·rau·wol'fine. An alkaloid, sometimes called *serpentinine*, from *Rauwolfia serpentina*.

i"so·ri"bo·fla'vin. 5,6-Dimethyl-9-(D-1'-ribityl)-isoalloxazine; an isomer of riboflavin, which is 6,7-dimethyl-9-(D-1'-ribityl)-isoalloxazine. Isoriboflavin is an effective metabolite antagonist for riboflavin in the rat, but not in certain bacterial systems.

i'so·scope [*iso*; G. *skopein*, to examine]. An instrument consisting of two sets of parallel vertical wires, one of which can be superimposed on the other. It is designed to show that the vertical lines of separation of the retina do not correspond exactly to the vertical meridians.

i"so·ser'ine. $CH_2NH_2.CHOH.COOH$; α-hydroxy-β-aminopropionic acid, isomeric with serine. It is an analog of β-alanine and inhibits the growth-promoting action of the latter.

i"so·sor·bide. Isosorbide.

i·sos'po·ra (eye-sos'po-ruh) [*iso*; G. *spora*, spore]. A genus of coccidia.

I. hominis. A species parasitic in the small intestine of man, but of doubtful pathogenicity.

i"so·spo·ro·sis [*iso*; *spora*; G. *-osis*, condition]. Human infection by members of the genus *Isospora*, a coccidium. Only *I. belli* has been known to cause pathological symptoms.

i"so·stere. Generally, any of two or more compounds having essentially identical molecular configurations, including molecular volumes, and similar electrical fields. Criteria for deciding whether two dissimilar compounds are isosteres vary. —**isoster'ic**, *adj.*

i·sos'ter·ism. The relationship between two or more compounds which are isosteres. In *pharmacology* the concept of isosterism involves the possibility that compounds having such a relationship may have the same or quite similar pharmacologic actions.

i"so·sthe·nu'ri·a (eye"so-sthi-new'ree-uh, eye"sos-thi-) [*iso*; G. *sthenos*, strength; *ouron*, urine]. Inability of the kidneys to produce either concentrated or dilute urine.

i"so·tel [G. *isotelēs*, bearing equal burdens]. A food factor capable of replacing another in a given diet for a specified species; thus, for the human species, carotene is isotelic with vitamin A; for the cat, it is not, since the cat is incapable of converting carotene into vitamin A. —**isotel'ic**, *adj.*

i'so·therm. 1. A graph or curve representing the dependence of one quantity upon another at constant temperature, e.g., the dependence of gas pressure upon volume. 2. Specifically, **Freundlich's** or **Langmuir's adsorption isotherm** is a graph representing the dependence of the quantity of dissolved substance by a solid upon the concentration of the dissolved substance; a term encountered in discussions on the mechanism of drug action. —**i·sother'mal**, *adj.*

i"so·ther'mal, i"so·ther'mic [G. *isos*, equal; *thermē*, heat]. Of equal or uniform temperature without change in temperature.

i"so·thi"o·cy'a·nate. Any organic compound of

the formula RNCS, isomeric with but differing from RCNS, which is a thiocyanate.

i'so·tone. One of two or more species of atoms which contain the same number of neutrons.

i"so·ton'ic [*isos*; G. *tonos*, tension]. 1. Referring or pertaining to a solution in which tissues, especially red blood cells, maintain the normal state or tone. See also *isosmotic*. 2. *In physiology*, having uniform tension under pressure or stimuli.

i'so·tope [*isos*; G. *topos*, place]. An element which has the same atomic number as another but a different atomic weight. Many of the common elements have been shown to consist of several isotopes, the apparent atomic weight of the element actually representing an average of the atomic weights of the isotopes. —**isotop'ic**, *adj.*

i. dilution analysis, isotopic dilution analysis. A method of analysis for a component of a mixture in which a known amount of the same component, commonly labeled with a radioactive isotope of predetermined activity, is added to the mixture. A pure sample of the compound is then isolated, and from the decrease in activity of the tracer substance, the original concentration of the component may be calculated.

i. effect. The effect of difference of mass between isotopes of the same element on the rate of reaction, position of equilibrium, or both, of chemical reactions involving the isotopes; this effect may be particularly prominent in the case of an element of low atomic weight.

i. exchange reaction. A chemical reaction in which interchange of the atoms of a given element between two or more chemical forms of the element occurs, the atoms in one form being isotopically labeled so as to distinguish them from atoms in the other form. Thus study of the course of the reaction is made possible.

radioactive i. One exhibiting the property of spontaneous decomposition, usually referring to an element rendered radioactive by artificial means. Radioactive isotopes of C, N, P, Na, K, Cl, I, and some other elements, incorporated in the molecules of compounds which are fed or injected, can be traced readily because the radiations of such tagged atoms may be detected by sensitive apparatus such as the Geiger-Müller counter. Compounds isolated from the tissues can be shown, if radioactive, to be intermediary metabolic products of the material administered.

i"so·top'ic abun'dance. The relative number of atoms of a particular isotope in a particular sample of an element.

i"so·trop'ic (eye-so-trop'ick, -tro'pick) [*isos*; G. *tropos*, to turn]. 1. Having the same shape and appearance, from whatever point observed. 2. Being singly and uniformly refractive.

i"so·va·ler'ic ac'id (eye-so-va-lerr'ick, -va-leer'ick). $(CH_3)_2CHCH_2COOH$; the valeric acid of commerce, obtained from valerian root. It has been used medicinally in the form of the ammonium salt. See *valeric acid*. Syn., *isopropylacetic acid*.

i"so·va·ler"ic al'de·hyde. $(CH_3)_2CHCH_2CHO$. A pungent, oily liquid with an odor of apples; obtained from oxidation of amyl alcohol.

is'pa·ghul" (iss'pah-gull"). The seeds of *Plantago ispaghula*, used as a purgative in India; they contain mucilage and are used for recurring bacillary dysentery.

Israel, James Adolf [*German surgeon*, 1848–1926]. Made substantial contributions to renal surgery, especially in tuberculosis. Was first to describe the ray fungus in human lesions (1878).

is'sue [OF. from L. *exire*, to go out]. 1. Offspring. 2. A bloody or purulent discharge from a wound or cavity.

isth·mec'to·my (iss-meck'to-mee, isth-) [G. *isthmos*, isthmus, neck; *ektomē*, excision]. Excision of an isthmus, specifically excision of the isthmus of the thyroid gland in goiter.

isth'mus (iss'mus, isth'mus) [*isthmos*]. 1. The neck or constricted part of an organ. 2. The part of the brain which, situated axially, unites the forebrain, the cerebellum, and the spinal cord. —**isthmic**, *adj.*

aortic i. A constriction of the fetal aorta between the left subclavian and the ductus arteriosus.

gyral i. A narrow gyrus connecting two adjoining gyri; an annectant convolution.

i. hippocampi. See *i. of gyrus fornicatus*.

i. of fauces. The passage between the oral cavity and the oral pharynx.

i. of gyrus fornicatus. A narrow convolution connecting the hippocampal and callosal gyri.

i. of limbic lobe. See *i. of gyrus fornicatus*.

i. of thyroid gland. The narrow transverse part connecting the lobes of the thyroid gland. See Plate 45.

i. of uterine tube. That part of the uterine tube nearest the uterus.

i. rhombencephali. The constriction between the third primary brain vesicle and the midbrain.

Krönig's i. See Georg *Krönig*.

uterine i. The transverse constriction of the uterus, dividing it into two portions, the body and the cervix.

Istizin. Trade-mark for the laxative and cathartic substance 1,8-dihydroxyanthraquinone, or *danthron*.

Isuprel hydrochloride. A trade-marked name for the sympathomimetic amine salt *isopropylarterenol hydrochloride*.

i·su'ri·a (eye-sue'ree-uh, i-sue'ree-uh) [G. *isos*, equal; *ouron*, urine]. Excretion of equal amounts of urine in equal periods of time.

Itard, Jean Marie Gaspard [*French otologist*, 1775–1838]. Contributed to the knowledge of diseases of the ear. Invented a type of Eustachian catheter called *Itard's catheter*.

itch [AS. *giccan*]. 1. An irritating sensation in the skin. 2. Any of various skin diseases accompanied by itching, particularly scabies.

barber's i. See *tinea barbae*.

Bedouin' i. Miliaria.

Caripito i. (car-ry-pee'to). Itch caused by hairs from the wings and abdomen of moths of the genus *Hylesia* (family Saturniidae) common among seamen from the port of Caripito, Venezuela.

collector's i. Schistosome dermatitis.

coolie i. A dermatosis associated with ancylostomiasis; also called *water i.*

copra i. An episcocosis caused by the copra mite, *Tyroglyphus longior*.

cowlot i. See *schistosome dermatitis*.

Cuban i. A disease resembling a mild form of smallpox.

dhobie mark i. Dermatitis caused by a laundry-marking ink made from the anacardium or cashew nut.

frost-i. See *pruritus hiemalis*.

grain i. An eruption due to *Pediculoides ventricosus*, acquired by contact with grain or straw which harbors the parasite. See *acarodermatitis urticarioides*, *prairie i.*

grocer's i. The urticovesicular eruption of the skin caused by bites of the mite *Glyciphagus domesticus*.

ground i. Local irritation of the skin resulting from the entrance of the larvae of any variety of *Ancylostoma* into the skin.

jockey i. Tinea cruris.

mad i. Infectious bulbar paralysis.

Malabar i. See *tinea* imbricata.

Mazzamorra i. An itch caused by ancylostomiasis.

Norwegian i. A variety of scabies, usually severe in type; has been seen in many countries, including the United States.

Philippine i. Alastrim.

pineapple i. A dermatitis following contact with pineapples, possibly caused by acarus.

prairie i. See grain *i.*

sandbag' i. The patchy mottling of the skin with itching, found in decompression sickness (caisson disease)

Sawah i. Schistosome dermatitis of the Malay countries

swamp i. Schistosome dermatitis.

swimmer's i. Schistosome dermatitis.

washerwoman i. Dermatitis of the hands. general term for various eruptions, usually fungus infection or contact dermatitis seen in those who have their hands frequently in water

water i. Schistosome dermatitis.

itch'ing [*gicce*]. A sensation of tickling and irritation in the skin, producing the desire to scratch. Syn., *pruritus*.

itch mite. See *Sarcoptes scabiei.*

-ite [G. *-itēs*]. 1 *I mineralogy,* suffix denoting mineral or rock. 2. *I zoology,* suffix denoting *division of the body* or *of part.*

-ite [L. *-itum*]. *I chemistry* suffix denoting *the salt* or *ester* from an acid with the termination *-ous.*

i'ter (eye'ter it ur) [L., journey]. A passageway

i. ad infundibulum. The passage between the third ventricle of the brain and the infundibulum.

i.

i. chordae anterius. The perture through which the chorda tympani nerve leaves the tympanum also called *Huguier'* canal.

i. chordae posterius. The perture through which the chorda tympani nerve enters the tympanum.

i. dentium. An opening in the alveolar process lingual to or between the roots of deciduous tooth, occupied by an extension of the dental sac of the permanent (succedaneous) tooth

-i'tis (-eye'tis, -ee tis) [G., inflammation]. *I medicine,* suffix denoting *disease;* specifically an *inflammatory disease of* (specified) *part.*

Ito-Reenstierna test. See under *test.*

I.U. Immunizing unit; international unit.

I V., I. Abbreviation for intravenous.

i vo-ry [OF. *ivoire* from L. *ebur* ivory]. The dentin, particularly of commerce, such as that obtained from the tusks of the elephant, walrus, or hippopotamus.

i'vo-ry black. Animal charcoal.

Ivy Andrew Conway [*American physiologist,* 1893–]. Known for his researches concerning cancer gastric ulcer viation medicine, and geriatrics. Contributed greatly to the knowledge of the hormones of the digestive tract.

Ivy oak. Trade-mark for sol tion in peanut oil of equal parts of the toxic principles derived from *Toxicodendron radicans* (common poison ivy) and *T diversilobum* (Pacific poison oak) Used for prophylaxis and treating dermatitis produced by poison ivy and poison oak.

Ivyol. Trade-mark for solution in olive oil of the extracts of *Toxicodendron radicans* (common poison ivy); also the trade-mark for similar solution of the extracts of *T diversilobum* (Pacifi poison oak) Used for prophylaxis and treatment I poison-ivy and poison-oak dermatitis, respectively

I -o des (ick-so deez) [G *ixōdēs,* like birdlime]. A genus of parasiti ticks, some species of which cause tick paralysis and are important vectors of diseases of cattle, sheep, and dogs, as well as transmitters of encephalomyelitis and tularemia to man.

Ix o-di'a-sis [*ixōdēs;* NL. *-iasis,* condition]. Lesions or disease caused by infestation with ticks.

Ix od'ic [*ixōdēs*]. Caused by or relating to ticks.

I -od'i dae (ick-sod'i-dee) [*ixōdēs*]. A family of hard-bodied ticks, which includes the genera *Boophilus Amblyomma, Dermacentor Haemaphysalis, Hyalomma, Ixodes,* and *Rhipicephalus,* all of some pathologic significance to man.

Ix"y-o-my"e-li'tis [G *ixys,* waist; *myelos,* marrow; *-itis,* inflammation]. Inflammation of the lumbar portion of the spinal cord. *Rare.*

J

J Symbol for Joule equivalent, joule.

j Used as Roman numeral (in prescriptions) as the equivalent of i for one, or at the end of number as *j, ij, iij, vj vij* etc.

Ja ag-siek"te. A contagious disease of sheep, sometimes of goats and guinea pigs, resembling the more benign and diffuse forms of bronchiole carcinoma in man

jab o-ran di. See *Pilocarpus*

jab o-rine. A mixture of alkaloids, formerly believed to be single alkaloid, from *Pilocarpus jaborandi.*

Jaboulay Mathieu [*French surgeon,* 1860-1913]. Performed the first gastroduodenostomy (1892) Introduced sympathectomy to relieve vascular tension (1900) Introduced an operation for hydrocele in which he incised the sac and everted it about the spermatic cord. Invented device, consisting of two cylinders which fit together for use in lateral intestinal anastomosis; called *Jaboulay button.*

Jaccoud, Sigismond [*French physician,* 1830–1913]. Known for his special investigations of the causes of albuminuria. Described type of *fever in tuberculous meningitis,* with irregular slow pulse called *Jaccoud' dissociated fever* Described prominence of the aorta in the region of the suprasternal notch as diagnostic of aortic dilatation called *Jaccoud' sign.*

jack bean. 1. The seed of *Canavalia* from which urease is prepared for use in the estimation of urea. 2. A plant of the genus *Canavalia*

jack'et [F *jaquette* dim. from *jaque*]. 1. A short coat. 2. *I medicine,* supporting, therapeutic, or restraining apparatus covering the upper part of the body

celluloid j. One made principally of celluloid fashioned over plaster mold of the patient body

j crown. A artificial crown of tooth consisting of covering of metal, porcelain, or acrylic

leather j. One made of leather sometimes equipped with pparatus, made over body mold;

used principally in tuberculosis of the vertebrae and in flaccid paralysis.

plaster of Paris j. A casing applied by winding plaster of Paris bandages over padding, so as to encase the body in a hard mold from armpits to groin; used to immobilize the spine.

pneumonia j. A padded cotton or wool coat which may contain poultices and which encases the upper part of the body; sometimes employed in the care of patients with pneumonia.

strait j. A restraining apparatus, not always conforming to the jacket type, used to prevent violently insane or irresponsible persons from injuring themselves or others.

Jack'screw" [OF *Jaques*, LL. *Jacobus*, ultimately from the Hebrew; *escrewe*, from L. *scrofa*, sow]. *In orthodontia*, an appliance used for forcing apart the fragments of certain types of fractures and retaining them in a separated condition.

Jackson, Chevalier (1865–) American bronchoesophagologist and laryngologist who devised instruments and techniques for peroral endoscopy; contributed to laying the foundation for bronchoesophagology as a branch of medical science, and, with W. W. Babcock, introduced the Jackson-Babcock operation for radical removal of an esophageal diverticulum.

Jackson, Jabez North [*American surgeon*, 1868–1935]. Described a thin membrane extending from the parietal peritoneum on the right, across the anterior surface of the ascending colon to the inner side, from the cecum to the hepatic flexure. *Jackson's membrane* or *veil* sometimes gives rise to obstructive symptoms. Devised his incision for removal of the breast in carcinoma, in which he made a circular incision about the breast, prolonging the incision vertically to the axilla.

Jackson, John Hughlings (1835–1911) English neurologist who described seizures due to focal lesions of the cerebral cortex (1863); see Jacksonian *epilepsy*. He made a classic study of aphasia, and with J. A. L. Clarke, gave the first full description of syringomyelia (1867). He also described paralysis of half the palate, pharynx, and larynx, and flaccid paralysis of the homolateral sternocleidomastoid and part of trapezius (1872); called *Jackson's syndrome*, or *vagoaccessory-hypoglossal paralysis*. See also *revolution*.

Jackson's sign. See under *sign*.

Jacob, Arthur [*Irish ophthalmic surgeon*, 1790–1874]. Described rodent ulcer involving face and eyelid; called *Jacob's ulcer*. Described the layer of rods and cones in the retina; called *Jacob's membrane*.

Jacobaeus, Hans Christian [*Swedish surgeon*, 1879–1937]. Known for his ingenuity in adapting the cystoscope to other cavities of the body (1910), leading to the invention of the thoracoscope. Devised an operation of pneumonolysis in which he divided pleural adhesions with a galvanocautery (1916); called *Jacobaeus' operation*.
